PREFACE

163324

WHEN The American Society of Mechanical Engineers acquired THE ENGINEERING INDEX in 1918 it pledged itself to carry it on in the same spirit of service in which the work was first conceived over forty years ago, and which has always been its ideal. This volume, the sixth to be issued by the Society, has been prepared to furnish the profession with a convenient and satisfactory guide to the engineering literature of 1924.

In selecting the articles to be indexed in this volume, over 1300 periodicals, reports, and other publications received by the Engineering Societies Library during the year have been reviewed. Those who do not have direct access to these publications will find the photostatic service maintained by the Library and described on page xvi of great value.

In order to include foreign, irregular, and yearly publications of 1924 which were late in reaching the Library, all periodicals of that year received up to March 1, 1925, have been indexed in the present book. Many 1923 publications which came in too late for the last volume are also indexed. For current articles readers are directed to THE ENGINEERING INDEX section of the Society's monthly publication, *Mechanical Engineering*, in which nearly half of the items included herein appeared during 1924, and to a similarly entitled section of *The Engineering Journal*, the monthly publication of The Engineering Institute of Canada. The Engineering Index items dealing with foundry practice also appear in the quarterly *Bulletin* of The American Foundrymen's Association.

THE ENGINEERING INDEX

Volume I, 1884 to 1891 inclusive, 475 pages . . . . . Out of Print
Edited and published by the Association of Engineering Societies under the direction of Prof. J. B. Johnson.

Volume II, 1892 to 1895 inclusive, 474 pages . . . . . Out of Print
Edited by the Association of Engineering Societies under the direction of Prof. J. B. Johnson.

Volume III, 1896 to 1900 inclusive, 1030 pages . . . . Out of Print

Volume IV, 1901 to 1905 inclusive, 1234 pages . . . . Out of Print

THE ENGINEERING INDEX ANNUAL FOR					1906, 412	pages	. . .	$1.25

"	"	"	"	"	1914, 542	"	. . .	$3.00
"	"	"	"	"	1915, 420	"	. . .	$3.00
"	"	"	"	"	1916, 368	"	.	Out of Print
"	"	"	"	"	1917, 363	"	.	Out of Print
"	"	"	"	"	1918, 384	"	.	Out of Print
THE ENGINEERING INDEX					1919, 528	"	.	Out of Print
"	"	"			1920, 586	"	. . .	$6.00
"	"	"			1921, 584	"	. . .	$6.00
"	"	"			1922, 675	"	. . .	$6.00*
"	"	"			1923, 700	"	. . .	$7.00*
"	"	"			1924, 711	"	. . .	$7.00*

From 1892 to 1917 inclusive, THE ENGINEERING INDEX was published by The Engineering Magazine Co. In December, 1918, it was acquired by The American Society of Mechanical Engineers.

* A reduction of one dollar will be allowed A.S.M.E. members on each of these three volumes. The group of three may be obtained at a reduced combination price of $17.00 ($14.00 to members), and the 1923 and 1924 volumes at a price of $12.50 ($10.50 to members).

CONVENTIONS USED IN INDEXING

Abbreviations

In addition to the commonly accepted abbreviations, the following have also been employed in this volume of THE ENGINEERING INDEX:

Academy (Acad.)
American (Am.)
Associated (Assoc.)
Association (Assn.)
Bulletin (Bul.)
Bureau (Bur.)
Canadian (Can.)
Chemical, Chemistry (Chem.)
Electrical, Electric (Elec.)
Electrician (Elecn.)
Engineer [s] Engr.[s]
Engineering (Eng.)
Gazette (Gaz.)
General (Gen.)
Geological (Geol.)
Industrial (Indus.)
Institute (Inst.)
Institution (Instn.)
International (Int.)
Journal (Jl.)
London (Lond.)
Machinery (Machy.)
Machinist (Mach.)
Magazine (Mag.)
Management (Mgmt.)
Marine (Mar.)
Materials (Matls.)
Mechanical (Mech.)
Metallurgical (Met.)
Mining (Min.)
Municipal (Mun.)
National (Nat.)
New England (N. E.)
Proceedings (Proc.)
Public (Pub.)
Record (Rec.)
Refrigerating (Refrig.)
Review (Rev.)
Railway (Ry.)
Schweizerische (Schweiz.)
Scientific or Science (Sci.)
Society (Soc.)
State Names (Ill., Pa., etc.)
Supplement (Supp.)
Transactions (Trans.)
Ventilating (Vent.)
World (Wld.)
Zeitschrift (Zeit.)

Cross-References

Main headings of the INDEX are printed in bold-face capital letters; sub-headings in bold-face small letters. Cross-references printed in capital letters indicate main headings; those in small letters indicate sub-headings. Whenever a cross-reference is given in small letters only, it refers to a sub-heading under the same main heading as the cross-reference itself.

Cross-references enclosed in brackets apply to the main heading under which they appear, not to the item or group of items immediately following.

HOW TO OBTAIN COPIES OF ARTICLES INDEXED

The Engineering Societies Library, 29 West 39th Street, New York, will supply photostatic copies (white printing on black background) of any of the articles listed in THE ENGINEERING INDEX. The price of each print, up to 11 by 14 inches in size, is 25 cents plus postage. A separate print is required for each page of the larger periodicals, but, whenever possible, two pages will be photographed together on the same print. To avoid misunderstandings as to charges, orders for prints of certain long serial articles where only the page numbers at the beginning of the article are given, should not be placed until special inquiry as to the total number of pages has been made.

When ordering prints, identify the article by quoting from the Index item the following:

1 Title of article

2. Name of periodical in which it appeared

3 Volume, number, and date of publication of periodical

4 Page numbers.

Orders should be sent to { Engineering Societies Library,
29 West 39th Street, New York, N. Y.

THE ENGINEERING INDEX

1924

A

ABBREVIATIONS

Engineering, French. New French Abbreviations (Désignations abrégées à adopter pour l'unité de puissance). Revue de l'Industrie Minérale, no. 80, Apr. 15, 1924, p. 193. Number of leading engineering societies and periodicals in France have decided to adopt abbreviation "ch" for unit horsepower and "ch h" for unit horsepower-hour; these abbreviations are likely to be used generally in French technical literature.

ABRASIVE WHEELS

Balance. Grinding Wheel Balance, H. Darbyshire. Eng. Production, vol. 7, no. 146, Nov. 1924, pp. 319-324, 6 figs. Notes on dynamic balance; balancing a wheel; internal grinding wheels; balanced wheels for surface grinding; grinding copper; difficulty of grinding tubing; wheel crumbling; sizing devices; etc.

Manufacture. Grinding Wheels, H. Bentley. Mech. Wld., vol. 76, nos. 1958 and 1960, July 11 and 25, 1924, pp. 18-19 and 51-53, 3 figs. Discusses properties of abrasives, bonds, mounting, and protection of wheels and applications.

Making Vitrified Abrasive Wheels. Chem. & Met. Eng., vol. 31, no. 14, Oct. 6, 1924, pp. 531-533, 6 figs. Problems in production of abrasive wheels from carborundum grains.

Surface Grinding in Stone Work (Der Flächenschliff in der Gesteinsbearbeitung), C. Krug. Tonindustrie-Zeitung, vol. 48, no. 73, Sept. 10, 1924, pp. 791-795, 14 figs. Series of articles on grinding wheels, grain and hardness, production, evaluation of abrasives, grinding in grinding machines, safety regulations, roller grinding machines, natural and artificial abrasives, etc.

The Manufacture of Rubber-bond Grinding Wheels, E. Sheldon. Am. Mach., vol. 60, no. 21, May 22, 1924, pp. 777-780, 17 figs. Vulcanizing the wheels; static test to determine breaking strength; methods of dressing wheels; running test; wheels for various purposes.

Polishing. Preparing Wheels for Polishing, F. D. Bowman, Iron Trade Rev., vol. 74, no. 12, Mar. 20, 1924, pp. 796-797, 3 figs. Various grades should be used depending upon finish desired on work; properties and preparation of glue, application of abrasive, setting, temperature and storage are factors in wheel effectiveness.

Salvage Methods. Outline Wheel Salvage Methods, F. W. Brown. Abrasive Industry, vol. 5, no. 12, Dec. 1924, pp. 293-294, 3 figs. Wheels that heretofore went to scrap pile are reclaimed and put back in stock at plant of Continental Motors Corpn., Muskegon, Mich.; expensive equipment not necessary.

Selection and Uses. Grinding for Quick Repetition, W. Wilson. Commonwealth Engr., vol 11, nos. 4 and 5, Nov. 1 and Dec. 1, 1923, pp. 148-150 and 183-185, 4 figs. Discusses grinding wheels, including rating, selection for work, lubrication, speeds, mounting, and uses; drill grinding.

Truing, Diamonds for. See DIAMONDS, Industrial.

ABRASIVES

Carborundum. See CARBORUNDUM.

Emery. See EMERY.

Papers and Cloths. Finishing with Abrasive Paper, John M. Cook. Iron Trade Rev., vol. 74, no. 9, Feb. 28, 1924, pp. 613-615, 13 figs. Methods employed in making abrasive paper and cloth.

Pumice. See PUMICE.

Statistics. Abrasive Materials in 1922, L. M. Beach and A. T. Coons. U. S. Geol. Surv., no. II:25, Dec. 3, 1923, pp. 221-225. Statistics on natural and artificial abrasives, covering production, consumption, imports and exports, of United States.

Tripoli. See TRIPOLI.

ABUTMENTS

Concrete Bridge. Novel Abutment Effects Economy in Concrete Bridge, A. G. Hayden. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 26-27, 3 figs. Novel type abutment of Park Avenue bridge over Bronx River Parkway Reservation near Tuckahoe, N. Y. Horizontal thrust taken by wing walls; vertical thrust distributed through abutments acting as vertical beam.

Masonry Arched Bridges. Design of Abutments for Masonry Arched Bridges, K. D. Joshi. Mysore Engrs.' Assn.—Bul., vol. 1, no. 1, July-Sept. 1923, pp. 109-117, 3 figs. Discusses design of abutments, making calculations.

Movements of Elasticity in. The Movements of Abutments in Statically Indeterminate Supporting Structures. (Widerlagerbewegungen bei statisch unbestimmten Tragwerken), A. Troche. Beton u. Eisen, vol. 23, no. 8, Apr. 20, 1924, pp. 97-99, 5 figs. Describes simple and readily comprehended formulation of equations of elasticity in abutment movements.

Niagara Gorge Bridge. Michigan Central Niagara Bridge Abutments Completed. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, pp. 398-399, 3 figs. Excavation and concreting of abut-

ments and piers on American side of Niagara Gorge done in six months.

ACCELEROMETERS

Automobile Acceleration, Measurement. New Quantitative Method of Measuring the Riding Comfort of Automobiles, F. H. Norton. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 136-138, 3 figs. Discusses acelerations acting on passenger, and design of accelerometer; accuracy of readings; factors to be considered in further study.

Impact Tests on Roads. Accurate Accelerometers Developed by the Bureau of Public Roads, L. W. Teller. Pub. Roads, vol. 5, no. 10, Dec. 1924, pp. 1-7, 15 figs. Results of calibrations of three types of accelerometers, beam, coil-spring and sylphon types, characteristics of which are described; coil-spring type was shown to be best for impact studies.

Recording Linear Accelerations. A New Instrument for Recording Linear Accelerations, F. H. Norton. Franklin Inst.—Jl., vol. 198, no. 2, Aug. 1924, pp. 231-242, 7 figs. Describes how problems involved in design of accelerometer were solved.

ACCIDENT PREVENTION

Acetylene, Use of. See ACETYLENE, Accident Prevention in Use of.

Industrial. Prevention of Accidents. Maschinenbau, vol. 3, no. 22, Aug. 28, 1924. Contains following articles: Accident Prevention on Presses, W. leVrang, pp. 795-799; Accident Prevention on Eccentric Presses, R. Wittlinger, pp. 799-801, 7 figs.; Safety of Protective Screens, G. Weber, pp. 801-802; Accident Prevention in Wood Industry, W. Wiedemann, pp. 802-804, 5 figs.; Welding of Iron Containers of Flammable Liquids, M. Fischer, pp. 804-806, 1 fig.; Organization Work of Machinery Industry for Accident Prevention, J. Free, pp. 819-821, 3 figs.; Progress in Accident Prevention in Machine Shops, J. Bleick, pp. 822-823; Activity of Technical Committee in Breslau, M. Schindler, pp. 823-826; and Accident Prevention and Labor, H. Gottschalk, pp. 826-829. (In German).

ACCIDENTS

Boiler. See BOILERS, Accidents.

Coal Mines. See COAL MINES, Accidents.

Electric Currents. Accidents in High Tension Installations in Switzerland in 1923 (Unfälle an Starkstromanlagen in der Schweiz im Jahre 1923). Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 4, Apr. 1924, pp. 149-157. Tabular list of such accidents (excluding electric-railway installations); description of typical accident and discussion of causes.

Explosions. See EXPLOSIONS.

Eye Injuries. Nature and Cause of Eye Injuries, L. H. Carris and L. Resnick. Safety Eng., vol. 47, no. 3, Mar. 1924, pp. 121-123. Analysis of causes and nature of injuries.

Penetrating Injuries to the Eye in Industrial Occupations, F. Allport. Safety Eng., vol. 47, nos. 1 and 2, Jan. and Feb. 1924, pp. 5-7 and 74-76. Methods of removing foreign bodies from eye; glass most difficult; iron and steel may be drawn with a magnet; choice of magnets. Reprinted from Ill. Medical Jl., Oct. 1923.

Highway-Traffic. See HIGHWAYS, Traffic Accidents.

Industrial. Accident Frequency and Personal Idiosyncrasies (Unfallhäufigkeit und persönliche Eigenschaften), K. A. Tramm. Werkstattstechnik, vol. 18, no. 15, Aug. 1, 1924, pp. 395-398, 5 figs. Shows from statistics that 48 per cent of accidents are due to defective rules, 14.5 per cent to labor, 37.5 per cent to human elements like carelessness, disease, etc., left to right side accidents are 46.5 to 34, etc.

Industrial Accidents and Hygiene. Monthly Labor Rev., vol. 18, no. 1, Jan. 1924, pp. 142-156. Conference on industrial accident rates called by U. S. Dept. of Labor; record of industrial accidents in United States for 1922; coke-oven accidents during 1922; accidents on steam railroads; decline in tuberculosis death rate; health conditions among chemical workers with respect to earnings.

Industrial Accidents and Hygiene. Monthly Labor Rev., vol. 19, no. 6, Dec. 1924, pp. 124-140. Carbon tetrachloride as cure for hookworm disease; report of committee on industrial morbidity statistics; lead poisoning caused by sandpapering automobile bodies; mine-accident statistics; critical time of day for coal-mine explosions; mine fatalities due to explosives in 1923; industrial eye accidents in New York State, 1922-23; coal-mine accidents.

Locomotive. Chief Locomotive Inspector's Annual Report, A. G. Pack. Ry. Jl., vol. 30, nos. 1 and 2, Jan. and Feb. 1924, pp. 36-39 and 31-33. Twelfth annual report of Chief Inspector covering work of Bur. Locomotive Inspection during fiscal year ended June 30, 1923. Results of investigation of accidents due to failure of parts and appurtenances of locomotive and tender, including boiler. See also Boiler Maker, vol. 24, no. 1, Jan. 1924, pp. 7-10, 9 figs., and Ry. Age, vol. 76, no. 4, Jan. 26, 1924, pp. 285-288, 11 figs.

Materials Handling. See MATERIALS HANDLING, Accidents.

Metallurgical Works. See METALLURGICAL WORKS, Accidents.

Mines and Quarries. Mines and Quarries in 1923. Iron & Coal Trades Rev., vol. 119, no. 2959, Nov. 14, 1924, pp. 777-778. Storage-battery locomotives in mines; accidents. (Abstract.) Annual report of Chief Inspector of Mines (Britain).

The Cost of Accidents in Metal Mines as Measured by Compensation Insurance Premiums, B. O. Pickard. U. S. Bur. Mines—Reports of Investigations, no. 2625, July 1924, 9 pp. Estimate of cost of compensation insurance as affecting underground metal-mine operators.

See also MINES, Accident Statistics; Haulage Accidents; Metal, Accidents in.

Shipyard. See SHIPYARDS, Accidents in.

ACCOUNTING

Cost. See COST ACCOUNTING.

Public-Utility. Unit Plan of Accounting for Public Utilities, H. J. Johnson. Am. Gas Assn. Monthly, vol. 6, no. 3, Mar. 1924, pp. 147-153, 9 figs. Describes system which is a modification of plan known as "bookkeeping without books"; is exceedingly rapid in its operation as well as 100 per cent complete and is designed to meet most exacting requirements.

Railway. See RAILWAY MANAGEMENT, Accounting.

Systems, Installation of. Some Problems in the Installation of Accounting Systems, Wm. A. Ullrich. Jl. Accountancy, vol. 37, no. 3, Mar. 1924, pp. 193-201. Discusses problems showing how ingenuity of accountant is taxed to find new ways to solve difficulties which present themselves.

Tabulating Machines. See TABULATING MACHINES.

ACCUMULATORS

Electric. See STORAGE BATTERIES.

Hydraulic. See HYDRAULIC ACCUMULATORS.

Steam. See STEAM ACCUMULATORS.

ACETONE

Action on Metals. See METALS, Acetone and Methanol, Action of.

ACETYLENE

[See also CALCIUM CARBIDE.]

Accident Prevention in Use of. Prevention of Accidents in Using Acetylene (Verhütung von Unfällen bei Verwendung von Acetylen), M. Rimarski. Zeit. für angewandte Chemie, vol. 37, no. 32, Aug. 7, 1924, pp. 589-593, 6 figs. Details of new regulations to eliminate accidents, explosions, etc., in view of increasing use of acetylene, re-examination of materials for containers, examination of flasks five years in service, etc.

Benzol from. See BENZOL, Production from Acetylene.

Compressed - Dissolved. Compressed - Dissolved Acetylene, M. A. Dantzler. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 30-33. Discusses acetylene gas which has been compressed and dissolved into specially designed portable cylinders, which may be "tapped" at convenience of consumer at varying distances from source of manufacture.

Hazards. Work of Chemico-Technical Reichsanstalt on Acetylene, Especially Questions of Danger (Mitteilungen über die Arbeiten der Chemisch-Technischen Reichsanstalt auf dem Gebiete des Acetylens), Rimarski. Autogene Metallbearbeitung, vol. 17, nos. 19, 20, and 21, Oct. 1, 15, and Nov. 1, 1924, pp. 245-258, 261-268, and 283-287. Deals with filling of acetylene flasks, police regulations, safety in transportation, examination of porous substances, acetone and substitutes, ignition tests; back-firing of flame, automotive safety measures, etc.

Production, Carbide Residue Utilization. Utilization of Carbide Residue, J. J. Murphy. Acetylene Jl., vol. 26, no. 6, Dec. 1924, pp. 278-280. Results of tests. Estimated value of residue at various acetylene plants throughout United States, $1,750,000. Residue valuable in mortar and plaster industry, and for manufacture of brick, paper, pulp, etc.

Regulations, German. New Acetylene Regulations for Greater Berlin (Die neue Azetylenverordnung für Gross-Berlin zur Bekämpfung der Gefahren des Azetylens), V. Wendt. Gesundheits-Ingenieur, vol. 47, no. 42, Oct. 18, 1924, pp. 494-495. Regulations covering acetylene gas for illuminating, toxicity of acetylene, calcium carbide storage, etc.

ACIDS

Displacement by Diffusion. Displacement of Acids by Diffusion (Sur le déplacement des acides par diffusion), E. Demoussy. Académie des Sciences—Comptes Rendus, vol. 178, no. 2, Jan. 7, 1924, pp. 208-211. Displacement of strong acid (hydrochloric) by weaker one (formic) in presence of membrane is shown to be due to greater speed of diffusion of stronger acid, and to take place in absence of membrane.

ACOUSTICS

Architectural Interiors. The Acoustic Design of Architectural Interiors, V. O. Knudsen. Eng. & Contracting (Buildings), vol. 62, no. 6, Dec. 24, 1924, pp. 1371-1378, 3 figs. Principles involved and methods of assuring good acoustics. From Architect & Engr., Oct. 1924.

Auditoriums. Acoustics in Auditorium Design, P. E. Sabine. Am. Architect, vol. 125, no. 2448, June 18, 1924, pp. 579-586, 7 figs. Study of acoustical difficulties which may be classed under two general heads: those arising from concentration of sound reflected from extended concave surfaces and those arising from excessive reverberation.

Acoustics of Auditoriums, F. R. Watson. Franklin Inst.—Jl., vol. 199, no. 1, July 1924, pp. 73-83, 2 figs. Discusses mathematical equations for loudness of voice and tune of reverberation deduced from tabulations of acoustic data of auditoriums pronounced good by public opinion.

Ear. The Works of Fletcher, Wegel and Lane on the Acoustics of the Ear (Les travaux de MM. Fletcher, Wegel et Lane sur l'acoustique de l'oreille), Reynaud-Bonin. Annales des Postes Télégraphes & Téléphones, vol. 13, no. 1, Jan. 1924, pp. 26-36, 5 figs. Discusses works of investigators stationed at Research Laboratory of West. Elec. Co., who arrived at conclusion that total number of simple sounds that human ear is capable of distinguishing from one another is about 300,000.

Planning for Regulation. Planning for Good Acoustics, H. Bagenal. Roy. Inst. Brit. Architects—Jl., vol. 32, no. 2, Nov. 22, 1924, pp. 29-43, 4 figs. Lessons learned from Greek open-air theaters; use of resonators in Greek theater; churches; concert rooms; behavior of ceilings; modern parliament chambers; absorbing materials and their requirements.

Resonators. On the Determination of the Frequencies of the Resonant Tones of Some Compound Resonators used in Acoustical Instruments, E. T. Paris. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl., Sci., vol. 48, no. 287, Nov. 1924, pp. 769-799, 9 figs. Theoretical expressions are obtained by means of which resonance frequencies of several types of compound resonator employed in acoustical instruments can be calculated by use of graphical methods; experiments are described which show satisfactory agreement with theoretical results.

Sounding Devices. See AIR, Pressure and Velocity.

ADSORPTION

Electric Theory. Electric Nature of Forces of Adsorption (Ueber die elektrische Natur der Adsorptionskräfte), W. Tarassoff. Physikalische Zeit., vol. 25, no. 15, Aug. 1, 1924, pp. 369-374. Discusses dependence between heat of adsorption and dielectric constant of substance to be adsorbed, showing electric nature of adsorption.

Large Surface Areas. Adsorption of Large Surface Area (Beiträge zur Natur der Adsorption von grossoberflächigen Stoffen), E. Berl and E. Wachendorff. Zeit. für angewandte Chemie, vol. 37, no. 39, Sept. 25, 1924, pp. 747-750, 4 figs. Adsorption isothermals at 20 deg. for various charcoals and sample of active silica were determined by means of an arrangement in which benzol vapor, mixed with air, was led through constant thickness of adsorbent.

Theory. Modern Theory of Adsorption and Its Significance in Petroleum Technology (Die moderne Adsorptionslehre in ihrer Bedeutung für die Chemie und Technologie des Erdöls), M. A. Rakusin, Petroleum, vol. 20, nos. 31 and 32, Nov. 1 and 10, 1924, pp. 1695-1699 and 1761-1766. Reviews theory of adsorption of gases, vapors and liquids by porous substances; adsorption in petroleum solutions in laboratory and factory practice; adsorption of oil vapors; relation between adsorption and chemical reaction; adsorption and catalysis.

Theory of Adsorption and Related Phenomena (Theorie der Adsorption und verwandter Erscheinungen), J. Frenkel. Zeit. für Physik, vol. 26, no. 2, Aug. 8, 1924, pp. 117-138. When gas atoms or molecules of gas stream impinge on surface of a solid, they are in no way reflected but condense, and after certain time, they re-evaporate; author gives results to which quantitative development of this idea leads.

AERIAL NAVIGATION. See AIRSHIPS, Navigation; AVIATION.

AERIAL PHOTOGRAPHY

"Lean" in Photographs. Correcting the "Lean" in Aerial Photographs, E. H. Corlett. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 352-353, 2 figs. Mathematical explanation of how to obtain a true instrumental orientation when using air photos as plane-table sheets or for other field purposes.

Mapping, Use in. See Topographic Mapping; MAPPING, Aerial Photography in.

Surveying, Use in. See SURVEYING, Aerial.

Surveys. Some Features in the Present Position of Aerial Photographic Survey. Roy. Aeronautical Soc.—Jl., vol. 28, no. 163, July 1924, pp. 475-500, 7 figs. Discusses working out of methods for aerial survey on basis of vertical and oblique photographs; and scientific and economic information to be gained from photos.

Topographic Mapping. Topography from Aerial Photographs, H. C. Fiske. Military Engr., vol. 16, no. 89, Sept.-Oct. 1924, pp. 399-408, 13 figs. It is claimed that airplane, camera and stereoscope have made possible standard for mapping important details of topography which, from user's viewpoint, has never before been attained.

AERIAL TRAMWAYS. See CABLEWAYS.

AERIAL TRANSPORTATION. See AVIATION, Aerial Transportation.

AERODYNAMICS

Lilienthal Effect. The Lilienthal Effect and Some Writings of Lilienthal (Bemerkungen zu zwei neueren Schriften von G. Lilienthal), J. Ackeret. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 21-22, Nov. 28, 1924, pp. 242-244, 3 figs. Discusses some startling effects which are partially cleared up, such as so-called "stroke effect," and the ram's horn vortex, by which is meant that air may form vortices under hollow wings, these vortices having tendency to move toward tips. See also article by R. Fick, entitled, The Lilienthal Effect and Dynamic Soaring (Lilienthaleffekt und dynamisches Segeln), nos. 21-22 and 23, Nov. 28 and Dec. 31,, 1924, pp. 244-246 and 258-260, 9 figs. Discusses Knoller-Betz effect and the Lilienthal effect proper.

Magnus Effect. The Magnus Effect (Der Magnus-Effekt), P. Heyn. Schiffbau, vol. 25, no. 28, Nov. 19, 1924, pp. 803-806, 4 figs. Discusses principle of action of wind on a rotating cylinder, as used in Flettner rotor ship, to explain deviation of a cannon ball from straight course.

Photographic Measurements in. Photographic Measurements in Aerodynamics, R. Katzmayr. Aviation, vol. 17, no. 22, Dec. 1, 1924, pp. 1334-1337, 8 figs. Method of photographic measurement, according to which every photograph represents projection of photographed object on plate, and each point on image corresponds to point on object; example of use of photographic measurement in determining propeller profile; reproducing lines of air flow; photographing wing deformations; further uses of test; analyzing flight path. Translated from German.

Resistance of Bodies to Air. Law of Variation of Coefficient of Resistance to Air of Some Bodies (Sur la loi de variation du coefficient de résistance de l'air pour quelques corps), L. Marchis. Bul. Technique du Bureau Veritas, vol. 6, no. 6, June 1924, pp. 109-114, 6 figs. Reynolds number in aerodynamics; geometric form of bodies; resistance of cylinders, spheres, ellipsoids, circular disks, and other bodies.

Rotating Cylinders, Tests of. Tests of Rotating Cylinders, E. G. Reid, U. S. Nat. Advisory Com. for Aeronautics—Tech. Notes, no. 209, Dec. 1924, 17 pp., 17 figs. on supp. plates. Tests made in No. 1 (5 ft. atmospheric) wind tunnel at Langley Memorial Aeronautical Laboratory to determine air forces acting on rotating cylinders with axes perpendicular to direction of motion.

Water Channels for Research. The Case for the Revival of the Water Channel, N. S. Norway. Roy. Aeronautical Soc.—Jl., vol. 28, no. 167, Nov. 1924, pp. 647-652. Discusses ways in which improvement in design of airplanes may be effected; in author's belief, water channel is most suitable means of carrying out study of flow about machine.

AERONAUTICAL INSTRUMENTS

Airship. See AIRSHIPS, Instruments.

Compasses. See COMPASSES, Aircraft.

Developments. Some Recent Developments in Aircraft Instruments, H. E. Wimperis. Roy. Aeronautical Soc.—Jl., vol. 28, no. 157, Jan. 1924, pp. 3-29 and (discussion) 29-34, 15 figs. Appendix, with illustrations, no. 158, Feb. 1924, pp. 45-48, 5 figs. Discusses instruments for D. R. navigation and astronomical navigation, method of reducing sextant observations, determination of height, magnetic compass, etc.

Radiogoniometers. See DIRECTION FINDING.

Rate-of-Climb Recorders. Optical Rate-of-Climb Recorders—Their Uses, Theory, and Description, A. H. Mears and D. H. Strother. Optical Soc. of Am.—Jl., vol. 8, no. 6, June 1924, pp. 787-801, 7 figs. Describes instruments developed by staff of Bur. Standards at request and with financial assistance of Air Service, U. S. Army, and Bur. Aeronautics, U. S. Navy.

Wind Measurement. Objective Wind Measurement in Aircraft (Ueber objektive Windmessung im Luftfahrzeuge), H. Boykow. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 5-6, Mar. 26, 1924, pp. 40-42, 4 figs. Describes instrument, constructed by Goerz Works for airship oversea flight to America and for the Amundsen transpolar flight, which measures simultaneously luff angle and speed above ground.

AERONAUTICS

Developments. Aeronautics in 1923. Engineer, vol. 137, nos. 3549 and 3550, Jan. 4 and 11, 1924, pp. 22-24, and 36-38 and 44, 19 figs., partly on supp. plate. Civil aviation; light airplanes; military aeronautics; helicopters; airships; typical British airplanes.

The 13th Annual Meeting of the German Scientific Aeronautical Society [Bericht über den Verlauf der XIII. Ordentlichen Mitglieder-Versammlung der Wissenschaftlichen Gesellschaft für Luftfahrt (WGL)], G. Krupp. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 19, Oct. 14, 1924, pp. 198-201. Review of papers dealing with modern developments in airplane construction, especially with reference to design of very large planes; results of experiments at Aerodynamical Research Laboratories at Goettingen for study of mutual influence of propeller and plane, and investigations of Magnus effect; review of military-airplane developments the world over; protection of passengers in case of breakage; development of radiator; light airplanes; middle-weight machines; etc.

Flow, Theory of. Session on Flying of the VDI General Meeting (Tagung über Luftfahrt gelegentlich der Hauptversammlung des VDI, Hannover). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 36, Sept. 6, 1924, pp. 926-928, 6 figs. Series of papers discussing progress in theory of flow and calculations of flow round asymmetric bodies; wing forms; theory of airfoils or theory of circulation; light-weight construction.

Hydrodynamics, Application of. The Simplifying Assumptions, Reducing the Strict Application of Classical Hydrodynamics to Practical Aeronautical Computations, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes. no.

207, Nov. 1924, 16 pp. Deals with theory of lateral air forces on airship hulls, theory of wing sections in two-dimensional flow, theory of wings with finite span, and propeller theory.

Naval. Development in Naval Aeronautics, H. C. Richardson. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 412-417, 18 figs. Principal developments along lines of HS, H-16 and F-5-L types of airplane, used during war for convoy work, submarine patrol, and scouting, are represented by present types PN-7, equipped with Wright T-2 engines, and PN-8, having Wright T-3 engines, metal hull and metal tail surfaces; their construction and performance; discusses metal floats for airplanes; characteristics and performance of "training," scouting and other types of airplane; launching seaplanes from catapult; notes on aircraft engine, propeller, seagoing aircraft carriers, and lighter-than-air craft, etc.

Paris Show. The Ninth Aeronautic Show, Dec. 5-21, 1924 (Le Neuvième Salon de l'Aéronautique, 5-21 decembre 1924). Aéronautique, vol. 6, no. 67, Dec. 1924, pp. 273-328, 60 figs. A series of articles covering industrial conditions of aeronautic production, quantity production of metal airplanes, and industrial production of airplanes, followed by description of the different exhibits.

Ship Design, Application in. See SHIP DESIGN, Aeronautics Applied to.

AGRICULTURAL MACHINERY. See FARM MACHINERY.

AGRICULTURE

Farm Equipment, Research in. Agricultural Engineering Research in Farm Field Equipment, M. L. Nichols. Agricultural Eng., vol. 5, no. 2, Feb. 1924, pp. 35-38. Brief analysis of general subject of tillage for purpose of bringing to light some of more important investigational features involved in development and improvement of tillage methods and equipment. Bibliography.

AIR

Cleaning. See Dustiness Measurement; AIR CONDITIONING, Air Cleaners.

Compressed. See COMPRESSED AIR.

Conditioning. See AIR CONDITIONING.

Cooling. See AIR CONDITIONING, Cooling and; AIR COOLING.

Cooling Effect on Human Beings. See HEALTH, Physiological Reactions to Air Cooling.

Drying. See AIR CONDITIONING, Drying.

Dustiness Measurement. The Production and Measurement of Air Dustiness, M. Ingels. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 135-152, 15 figs. Describes dust liberator, an apparatus developed for adding dust to room air, for testing purposes; tests with Anderson and Armspach dust determinator for measuring efficiency of air-cleaning equipment; gives dust chart and explains its use; sampling moving air.

Dusts and Smokes Determination. The Use of Owens' Jet Dust Counter and of Electric Precipitation in the Determination of Dusts, Fumes, and Smokes in Air, P. Drinker and R. M. Thompson. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30. no. 11, Nov. 1924, pp. 695-710, 14 figs. Classification of dusts, fumes, and smokes is suggested and is based on size of particles and methods by which they are liberated into air. Describes Owens jet dust counter, and discusses its usefulness in general dust problems. Discusses electric precipitation in its theoretical and practical aspects as applied to small precipitators for determination of dusts, fumes, and smokes in air. Describes method of mounting transparent celluloid foils on which particles have been precipitated.

Filters. See AIR FILTERS.

Flow of. See FLOW OF AIR.

Heaters for. See AIR HEATERS.

Liquid. See LIQUID AIR.

Meters, Compressed-Air. See COMPRESSED AIR, Meters.

Moist, Changes of State. Changes of State in Moist Air (Zustandsänderungen feuchter Luft in zeichnerischer Darstellung), J. Huber. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 9 and 10, May 15 and 31, 1924, pp. 79-81 and 87-90, 9 figs. Gives new diagram for moist air, points out most frequent changes of state shown therein, and gives examples showing how diagram can be used to advantage.

Odor Elimination. See AIR CONDITIONING, Odor Elimination.

Pollution by Smoke. The Automatic Measurement of Atmospheric Pollution, J. S. Owens. Chem. & Industry, vol. 43, no. 35, Aug. 29, 1924, pp. 866-871, 7 figs. Describes automatic recording apparatus developed by author primarily designed for measurement of smoke pollution in city air; comparison between automatic filter and jet dust counter; results obtained with automatic filter.

Pressure and Velocity. Acoustical Sounding Devices (Sondes acoustiques), Z. Carrière. Jl. de Physique et le Radium, vol. 4, no. 11, Nov. 1923, pp. 413-419, 3 figs. Describes apparatus for recording instantaneous pressure and velocity of air in a space where air is in rapid periodic motion; industrial applications.

Refrigeration with. See REFRIGERATING MACHINES, Air.

Resistance of Moving Bodies in. See AERODYNAMICS, Resistance of Bodies to Air.

Temperature Measurement. See TEMPERATURE MEASUREMENT, Air.

AIR, COMPRESSED. See COMPRESSED AIR.

AIR COMPRESSORS

Angle Compound. An Angle Compound Air Compressor. Engineer, vol. 137, no. 3557, Feb. 29, 1924, pp. 224-225, 5 figs. New type of air compressor, manufactured by Sullivan Machy. Co., London, cylinders of which are set at right angles in horizontal and vertical positions, round single crank; engine is of uniflow class, but has valves to control exhaust.

Centrifugal. Centrifugal Compressors with Steam and Electric Drive (Kreiselverdichter mit Dampf- und elektrischem Antrieb), E. Blau. Technische Blätter, vol. 14, no. 29, July 19, 1924, pp. 217-218. Discusses construction of compressors and parts; pressure-volume curves of performance; steam driving by turbines and electric driving, and their advantages.

Coal Mines. See COMPRESSED AIR, Coal Mines.

Cylinder Lubrication. Air Compressor Cylinder Lubrication. Lubrication, vol. 10, no. 3, Mar. 1924, pp. 25-36, 14 figs. Temperatures involved; basic construction features of several types of air compressors; compressor-oil requirements; methods of air-cylinder lubrication; air-compressor explosions.

Development for Track Work. Development of the Air Compressor for Track Work and the Uses to Which It Can Be Put, W. F. Nichols. Compressed Air Mag., vol. 29, no. 9, Sept. 1924, pp. 993-994, 6 figs. Describes 4-tool, 8-tool and 12-tool machines for tamping ties, drilling holes for bond wires, running up track nuts on new rail, etc. Abstract of paper read before Int. Track Supervisors' Club, Buffalo, N. Y.

Diesel-Engine. Diesel-Engine Air Compressors, Rob. Melrose. Power, vol. 60, no. 21, Nov. 18, 1924, pp. 800-801, 1 fig. Common troubles and symptoms that precede them.

Electric Motors for. The Application of A. C. Polyphase Motors to the Drive of Piston Air Compressors (Remarques sur l'application des moteurs électriques à courants alternatifs polyphasés à la commande de compresseurs d'air à pistons), A. Barjou. Revue Générale de l'Electricité, vol. 15, no. 5, Feb. 2, 1924, pp. 167-173, 6 figs. Based on study of function of compressors of constant speed, author concludes that only self-starting synchronous and asynchronous induction motors are suitable for drive of such compressors, and in most cases, former is preferable.

Five-Stage. Five-Stage Air Compressor. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 498-499, 4 figs. Designed by Belliss & Morcom for supplying high-pressure air for coal-mine locomotives used for underground haulage.

Gas-Engine-Driven. Four-Cycle Gas-Engine-Driven Compressor. Min. & Oil Bul., vol. 10, no. 8, Aug. 1924, pp. 843-844 and 873, 2 figs. Describes new four-cycle gas-engine-driven compressor manufactured by Bessemer Gas Engine Co., Grove City, Pa.; combines simplicity and sturdiness with advanced engineering.

Heating of, Prevention. Prevention of Air Compressor Heating, R. A. Cultra. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 965-967, 4 figs. Dust drawn in with air mixes with oil and causes valves to stick, resulting in heating and loss of efficiency.

High-Speed. High-Speed Air Compressors, J. M. Walshe. Iron & Coal Trades Rev., vol. 108, no. 2916, Jan. 18, 1924, pp. 98-99. Automatic control of air output; air-cylinder lubrication; explosions in air receivers and pipes; air pipework; air receivers; turbo-compressors.

Impurities in Intake. Keeping Solid Impurities Out of the Air-Compressor Intake, Wm. V. Fitzgerald. Power, vol. 59, no. 16, Apr. 15, 1924, pp. 599-600, 1 fig. Points out that in analyzing troubles in air-compressor operation, single cause for all is frequently found, namely, impurities in intake air.

Lubrication. Air Compressor Lubrication. Southern Engr., vol. 41, no. 5, July 1924, pp. 44-46, 3 figs. Gives factors of correct lubrication, correct oils for common practice, and methods of application.

Motorships. Air Compressing Machinery. Engineering, vol. 117, no. 3043, Apr. 25, 1924, p. 541, 4 figs. on p. 542 and supp. plate. Describes twin 3-stage air compressor for motorships exhibited by Belliss & Morcum at Brit. Empire Exhibition.

Piston. Chart for Graphic Determination of Main Dimensions and Data of Piston Compressors (Rechentafel zur graphischen Ermittlung der Hauptabmessungen und daten von Kolbenkompressoren), H. Heinssen. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 364-366, 1 fig. Chart for graphic determination of piston strokes and average piston speeds of piston compressors with given suction performance, r.p.m., and cylinder conditions (relation of cylinder diam. to piston stroke).

Portable. Portable Air Compressor Sets. Engineering, vol. 117, no. 3039, Mar. 28, 1924, pp. 398-400, 8 figs. Modifications introduced by Globe Pneumatic Eng. Co., London., including new type of light-weight set on much improved frame and carriage, specially designed to conform to regulations regarding trailer vehicles.

Portable Compressors, F. A. McLean. Can. Min. Jl., vol. 45, no. 21, May 23, 1924, pp. 503-506, 5 figs. Notes on their use in mining and contracting.

Portable Gasoline-Driven Compressors Cut The Cost of Opening Up Isolated Mining Properties, F. A. McLean. Compressed Air Mag., vol. 29, no. 12, Dec. 1924, pp. 1082-1084, 4 figs. Describes work being done by Manley O'Reilly Gold Mines, Ltd., in opening up gold prospect in Northern Ontario, showing value of portable compressors for shaft sinking on isolated properties; also gives example showing results obtained in tunnel driving in copper-mining district, Marysville, Mont.

The "Broomaster" Portable Air Compressor. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 179, 1 fig. Shown at Wembley exposition by Broom and Wade, Ltd.; engine and compressor, having two cylinders each, combined in a single unit.

Pulsations in Power. Pulsations Due to Synchronous Motor Drives, Q. Graham. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 342-344, 4 figs. Use of synchronous motors for driving compressors may cause severe pulsations in power on line supplying motors; cause and effects of pulsations.

See also ELECTRICAL MACHINERY, Pulsations in Power.

Railway Compressor Car. See CARS, Air-Compressor.

Rotary. Rotary Compressors (Rotationskompressoren), Benedict. Praktische Maschinen-Konstrukteur, vol. 57, no. 33, Sept. 2, 1924, pp. 457-458. Discusses favorable efficiency of rotary machines and describes Demag-Wittig compressor; comparison of piston and rotary machines.

Semi-Portable. Semi-Portable Air Compressing and Pumping Sets. Engineering, vol. 117, no. 3040, Apr. 4, 1924, pp. 432-433, 6 figs. Describes self-contained air-compressing unit supplied by Parsons Co., with standard Parsons 3-cylinder engine, and single-cylinder kerosene engine for driving centrifugal pump, whole forming semi-portable pumping unit.

Steam-Driven. Two-Stage Steam-Driven Air Compressor. Engineering, vol. 118, no. 3072, Nov. 14, 1924, pp. 690-692, 3 figs. Plant constructed by Browett, Lindley & Co., consists of vertical compound steam engine, above which cylinders of 2-stage air compression are mounted.

Theory of. See PUMPS, Theory of.

Turbo. See High-Speed.

AIR CONDITIONING

Air Cleaners. Determining the Efficiency of Air Cleaners, A. M. Goodloe. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 115-119, 5 figs. Apparatus and method for determining by weight efficiency of average commercial cleaner, devised primarily for purpose of making a forced efficiency test of air cleaners in a laboratory or shop.

Bakeries. See BAKERIES.

Cooling and. Cooling and Conditioning of Air, H. J. Macintire. Southern Engr., vol. 41, nos. 1 and 2, Mar. and Apr. 1924, pp. 59-61 and 42-43, 3 figs. A problem is given and method of making calculations is worked out. Eliminator surface, coolers, and spray nozzles for cooling air.

Drying. Adjustment of Air to Certain Degrees of Dryness or Moisture by Means of Salts, etc., and the "Relative Drying Capacity" of the Substances as a Measure of Their Hygroscopicity (Die Einstellung von Luft auf bestimmte Trocknungs- oder Feuchtungsgrade mit Hilfe von Salzen und ähnlichen Stoffen, und das "relative Trocknungsvermögen" der Stoffe als Mass ihrer Hygroskopie), J. Obermiller. Zeit. für Physikalische Chemie, vol. 109, no. 3-4, May 5, 1924, pp. 145-164.

Humidifying Systems. Air-Conditioning Plant in Textile Works. Sulzer Tech. Rev., no. 2, 1924, pp. 8-14, 8 figs. Describes Sulzer system of air-humidifying plants.

The Andrew Humidifying System. Engineering, vol. 118, no. 3078, Dec. 26, 1924, pp. 873-874, 6 figs. Describes system and apparatus which can

be arranged to be entirely automatic in its action or to be controlled by hand; for use in textile factories.

Odor Elimination. Odor Elimination, A. L. Fales. Boston Soc. Civil Engrs.—Jl., vol. 11, no. 4, Apr. 1924, pp. 135-176 and (discussion) 176-186. Nature of odors in general, possible methods of odor elimination, principal sources of objectionable odors, including sewage-treatment plants, garbage-disposal works, and certain industrial plants, particularly packing houses and allied industries, and suggestions with reference to study and research as well as practical investigations and tests to advance art of odor elimination.

Sterilization. Importance of Bactericidol in Sterilizing Air (Die Bedeutung des Bactericidols für die Entkeimung der Luft). Rauch u. Staub, vol. 14, Sept. 22, 1924, pp. 85-87, 17 figs. Discusses simultaneous extraction of dust and germs from air and gives results of tests with Bactericidol.

Theaters. Downward-Diffusion Air Conditioning System For a Large Theatre. Heat. & Vent. Mag., vol. 21, no. 3, Mar. 1924, pp. 57-58, 16 figs. partly on pp. 64-65. How Grauman's Metropolitan Theater, Los Angeles, Cal., is heated, humidified, and ventilated in winter and cooled in summer.

AIR COOLING

Chocolate-Dipping Factory. Practical Notes On The Cooling of Air, H. J. Macintire. Heat & Vent. Mag., vol. 21, no. 5, May 1924, pp. 44-47, 3 figs. Data covering a typical mechanical refrigeration installation in a chocolate-dipping factory.

AIR CRAFT. See AIRCRAFT.

AIR FILTERS

Dust Separators. The Dry Filter as a Dust Separator, E. Vernon Hill. Sheet Metal Worker, vol. 15, nos. 20 and 22, Oct. 24 and Nov. 21, 1924, pp. 743-745 and 766, and 826-827, 9 figs. Oct. 24: How and why it works; tests showing efficiency with different characters and quantities of dust. Nov. 21: Comparative data from tests on installation and using both air washer and dry filter.

Types. Air Filters and Ventilating Plants (Luftfilter für Lüftungsanlagen), B. Richter. Rauch u. Staub, vol. 14, Sept. 22, 1924, pp. 88-94, 10 figs. Discusses types of pocket air filters and filtering plants, air preheating and ventilating plants.

AIR FURNACES

Pulverized-Coal-Fired. See PULVERIZED COAL, Malleable Furnaces.

AIR HEATERS

Weldex. The Weldex Air Heater. Engineer, vol. 138, no. 3579, Aug. 1, 1924, pp. 139-140, 2 figs. Describes air heater made by Victoria Tube Co., Ltd., of Great Bridge, Staffordshire, Eng., which is claimed to be particularly suited for use in factories, workshops, paper mills, dye houses, all descriptions of drying operations, air washing for theaters, etc., and for certain process work. Consists in a number of sets of vertical heating tubes arranged between a pair of top and bottom tubes to form a grid or section. Special advantages claimed by makers.

AIR LIFTS. See PUMPS, Air-Lift.

AIR MAIL. See AVIATION, Air-Mail Service.

AIR PREHEATERS. See FUELS, Liquid and Gaseous.

AIR PUMPS

Contraflo Reciprocating. Contraflo Reciprocating Air Pumps; Empire Exhibition. Engineering, vol. 118, no. 3069, Oct. 24, 1924, p. 573, 2 figs. Constructed by Vickers and specially designed for marine use, but can be applied to land installations where conditions are suitable.

Piston. Piston Air Pumps (Die Kolbenluftpumpen), Fördertechnik u. Frachtverkehr, vol. 17, no. 17, Sept. 3, 1924, pp. 232-234, 8 figs. Construction of valve and slide-valve pumps, pipe lines and parts.

Water vs. Steam-Jet. Water and Steam-Jet Air Pumps for Surface Condensers Especially on Board Ships (Wasser- und Dampfstrahl-Luftpumpen für Oberflächenkondensatoren insbesondere auf Schiffen). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 288-292. Contributions from representatives of steam-jet pumps, with and without intermediate coolers, challenging statements on superiority of water-jet pump contained in articles by Blaum and Richter in same journal (vol. 67, nos. 39-40 and 45, pp. 956 and 1042, 1923); replies from Blaum and Richter are included.

Water- vs. Steam-Jet Air Pumps (Wasserstrahl- oder Dampfstrahlluftpumpe?), S. v. Le Juge. Wärme, vol. 47, no. 3, Jan. 18, 1924, pp. 21-23, 2 figs. Shows by comparison that the steam-jet pump, because of inadequate sub-cooling of mixture, delivers a much poorer vacuum with same steam consumption than a water-jet air pump, as constructed by H. P. Müller.

AIR SEPARATORS. See BOILERS, Corrosion.

AIRCRAFT

Accessories. British Aeronautical Accessories. Flight, vol. 16, no. 22, May 29, 1924, pp. 340-346, 20 figs. Brief descriptions of accessories put out by the various firms.

Airplanes. See AIRPLANES.

Airships. See AIRSHIPS.

Balloons. See BALLOONS.

British Industry. Problems of Aircraft Production in Great Britain. Aviation, vol. 16, no. 6, Feb. 11, 1924, pp. 151-153. How Great Britain fosters her aircraft industry.

The British Aircraft Industry. Flight, vol. 16, no. 22, May 29, 1924, pp. 302-304. Brief outline of past history and present activities of the various British aviation firms and airplane-engine firms, with a short reference to those responsible for conduct of firms.

Carrier Ships. See NAVAL AIRCRAFT, Carriers.

Duralumin Columns for. Tests on Duralumin Columns for Aircraft Construction, J. G. Lee. U. S. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 208, Nov. 1924, 4 pp., 4 figs. on supp. plates. Notes based on results of tests, contained in two theses presented to Dept. Civil and Sanitary Engineering of Mass. Inst. Technology.

Engines. See AIRPLANE ENGINES.

Flying Boats. See FLYING BOATS.

French and German Industries. The French and German Aircraft Industries. Aviation, vol. 16, no. 24, June 16, 1924, pp. 643-644. Special reference to their dealings with governments.

Helicopters. See HELICOPTERS.

Instruments. See AERONAUTICAL INSTRUMENTS.

Kites, Man-Lifting. See KITES.

Metal Construction. The Metal Construction of Aircraft. Aeroplane, vol. 26, no. 4, Jan. 23, 1924, pp. 76 and 78 (includes discussion). Abstract of two papers on Materials in Aircraft Construction read by J. D. North and L. Aichison before Roy. Aeronautical Soc., together forming a whole, illustrating advantages to be derived from improved materials of construction and also some of the

difficulties and dangers which are to be encountered in pioneer work in this direction. See also Flight, vol. 16, no. 4, Jan. 24, 1924, pp. 48-52, 6 figs., giving a more detailed account of L. Aitchison's paper, dealing with physical qualities of metals and alloys, particularly from point of view of reliability of such materials as conditioned by margin between ideal or specification strength and real strength which is achieved in practice.

Naval. See NAVAL AIRCRAFT.

Paris Show. Ninth International Aeronautical Exposition, Paris, Dec. 5-21, 1924 (La IX^{e} Exposition internationale de l'Aéronautique, Paris, 5-21 décembre 1924), A. Lesage. Génie Civil, vol. 85, nos. 24 and 25, Dec. 13 and 20, 1924, pp. 539-548 and 571-579, 100 figs. Description of principal exhibits, including French airplanes and airplanes of other countries, dirigibles, French engines and engines of other countries, screw propellers, starters, carburetors, etc.

Safety Code for. See SAFETY CODES, Aeronautical.

Seaplanes. See SEAPLANES.

AIRCRAFT CONSTRUCTION MATERIALS

Aluminum Alloys. See ALUMINUM ALLOYS, Airplane Structural Work.

Cellulose Varnish. Cellulose and the Use of Cellulose Esters in Aeronautics (Ueber Zellulose und die Verwendung von Zelluloseestern in der Flugtechnik), E. Rackwitz. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 20, Oct. 28, 1924, pp. 219-220. Uses of cellulose varnishes in aircraft construction.

Dopes. Dopes and Fabric, J. E. Ramsbottom. Roy. Aeronautical Soc.—Jl., vol. 28, no. 161, May 1924, pp. 273-305 and (discussion) 305-314, 16 figs. Deals with dopes and fabric as far as they relate to problem of production of structural covering for aircraft which will maintain its tautness under varying conditions of humidity and also retain its strength after prolonged weathering.

Fabrics. Testing Airplane Fabrics, A. Pröll. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 186, Apr. 1924, 33 pp., 8 figs. Air pressure and tensions in fabric; requirements for fabric; determination of initial tension; interpretation of experiments with stretching frame; curves facilitating calculation of tensions and initial tensions; application of experiments on frames to investigation of wings; calculation for dropped-ball test. Translated from Technische Berichte, vol. 3, no. 7.

See also Dopes.

Light Metals. The Non-Ferrous Metals with Special Regard to Airplanes (Die Nichteisenmetalle unter besonderer Berücksichtigung der Luftfahrzeuge), E. H. Schulz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 545-550, 5 figs. Importance of light metals and alloys for construction of aircraft; properties and treatment; pure aluminum; duralumin; other alloys; cast aluminum alloys; silumin; magnesium alloys; electron metal; future prospects.

Metallic. Metals Used in Airplane Construction, F. O. Carroll. Iron Age, vol. 113, no. 17, Apr. 24, 1924, pp. 1203-1206, 6 figs. Duralumin all-metal planes; carbon and alloy steels for certain parts; advantages and disadvantages over wood; latest developments.

Metals Used in World Cruiser Airplanes, J. B. Johnson. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 994-995, 3 figs. Steel tubes and wire and aluminum alloys in fuselage; alloy steels and future planes.

Some Materials in Aircraft Construction. Roy. Aeronautical Soc.—Jl., vol. 28, no. 160, Apr. 1924, pp. 226-248 and (discussion) 248-259, 6 figs. First article, by J. D. North, discusses materials which should be used to give lightest structure. Second article, by L. Aitchison, deals with properties of metallic aircraft materials.

Metals. See AIRCRAFT, Metal Construction; AIRPLANES, All-Metal.

Plywood. Some Recent Developments in the Use of Wood in Airplane Construction, W. M. Moore. Jl. of Forestry, vol. 22, no. 4, Apr. 1924, pp. 353-371. Kinds of wood used, species of wood permitted by Air Service specifications, use of plywood, defects in wood which affect its suitability for airplane manufacture, storage of airplane parts, balloon baskets, and wood versus metal in airplane construction.

Three-Ply and Its Uses in Aircraft Construction, R. N. Liptrot. Instn. Aeronautical Engrs., Min. of Proc. No. 8, 1923, pp. 7-17 and (discussion) 18-22. Discusses physical properties of plywood; shrinkage and prevention of warping; effect of number of piles; figures for use in design; method of manufacture; true monocoque fuselage, semi-monocoque type, and three-ply braced fuselages.

Use of Balsa Wood in Plywood, R. L. Hankinson. U. S. Air Service Information Circular, vol. 5, no. 473, Sept. 1, 1924, 2 pp. Results of investigation to obtain a small amount of data to compare with data previously obtained on plywood in which cores were made from species of relatively high specific gravity.

Shock-Absorber Cord. Braided Rubber Shock Absorber Cord for Aircraft, L. Rowland. Instn. Aeronautical Engrs.—Proc., no. 12, 1924, pp. 7-15 and (discussion) 16-23, 4 figs. Problems which arise in its manufacture are chiefly due to fact that it consists of two materials which differ widely in physical and mechanical properties, namely, rubber and twine; it is on combined effect of these two materials that production of efficient or inefficient cords depends.

Steel and Duralumin Tubing. Torsional Strength of Nickel Steel and Duralumin Tubing as Affected by the Ratio of Diameter to Gage Thickness, N. S. Otey. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 189, Apr. 1924, 8 pp., 15 figs. on supp. plates. Tests to determine extent of variations of torsional modulus of rupture with ratio of diameter to gage thickness.

AIRFOILS

Theory of. See AERONAUTICS, Flow, Theory of.

AIRPLANE ENGINES

Accessories. Airplane Engine Accessories (Les accessoires des moteurs d'avions), J. A. Lefranc. Nature (Paris), vol. 52, no. 2639, Nov. 1, 1924, pp. 275-285, 13 figs. Discusses transmission of power to airscrews, two- and four-blade screws, motor starting, cooling and mounting of engines, and fuel feeding.

Air-Cooled. Air-Cooled Airplane Engines (Luftgekühlte Flugmotoren), E. Gosslau. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 36, Sept. 6, 1924, pp. 921-925, 15 figs. Details of some 50 engines; limiting number of cylinders; diameters of cylinders and engine capacity; saving weight by eliminating water cooling; fuel and oil consumption; increase of performance by higher compression and r.p.m., etc.

Radial Air-Cooled Aero Engines, A. H. R. Fedden. Roy. Aeronautical Soc.—Jl., vol. 28, no. 160, Apr. 1924, pp. 260-267. Outlines advantages and disadvantages of static air-cooled radial engine, and attempts to analyze problems peculiar to it.

Two Gages for Aero-Engine Cylinders, W. H. Thompson. Am. Mach., vol. 60, no. 8, Feb. 21, 1924, pp. 297-298, 3 figs. Describes combination gages for inspecting various dimensions on air-cooled cylinders.

Altitude Tests. The Testing of Aviation Engines under Approximate Altitude Conditions, R. N. DuBois. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 210, Dec. 1924, 7 pp., 5 figs. on supp. plates. Notes based upon tests made in altitude laboratory of Bur. of Standards to determine value of approximate method of test.

Anzani. See French Types.

Bristol Cherub. The New Bristol Cherub. Aeroplane, vol. 26, no. 23, June 4, 1924, pp. 474 and 476, 3 figs. Is of two-cylinder opposed type and has total cylinder capacity of just under 1100 cc.; bore 3.35 in., stroke 3.80 in., pistol displacement 66.8 cu. in., normal output 22 b.hp. at 2500 r.p.m.

Bristol-Jupiter. See Details.

British Types. British Aero Engines. Flight, vol. 16, no. 22, May 29, 1924, pp. 331-339, 24 figs. Particulars such as power, weight, consumption, etc., of all modern British airplane engines; details of two small engines which have proved suitable for light airplanes, and of one engine which is as yet experimental.

See also Rolls-Royce; Scorpion.

Clerget-Renault. See French Types.

Commercial-Airplane. The Use of Existing Engines on Commercial Planes (L'Utilisation des Moteurs d'Aviation existant sur les appareils civils). Aérophile, vol. 31, no. 23-24, Dec. 1-15, 1923, pp. 361-365, 4 figs. It is shown that by reducing torque, i.e., mean effective pressure, 10 per cent, life of engine is doubled; it is therefore concluded that existing military engines could be used with profit in commercial planes, provided they are not driven to maximum speeds and torques of which they may be capable. See also abstract in Génie Civil, vol. 84, no. 5, Feb. 2, 1924, p. 119.

Compression Ignition. The Influence of Inlet Air Temperature and Jacket Water Temperature on Initiating Combustion in a High Speed Compression Ignition Engine, R. Matthews and A. W. Gardiner. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 185, Mar. 1924, 12 pp., 7 figs. Deals with some tests to determine influence on initiating combustion in one-cylinder compression ignition engine of (1) inlet air temperature, and (2) jacket-water temperature.

Compression Pressure, Increasing. Increasing the Compression Pressure in an Engine by Using a Long Intake Pipe, R. Matthews and A. W. Gardiner. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 180, Feb. 1924, 9 pp., 5 figs. Investigation covering engine speeds between 500 and 1800 r.p.m.; data obtained are included in form of curves.

Results of Experiments on the Increase of Compression in Airplane Engines (Résultats d'expérience sur l'augmentation de la compression dans les moteurs d'aviation), P. Dumanois. Académie des Sciences—Comptes rendus des séances, vol. 178, no. 27, June 30, 1924, pp. 2236-2238. Confirmation of theory as to advisability of very high compression by using non-detonating fuel, like benzol, which does not detonate with oil.

Compression Variations and Efficiency. French Tests Show Effect of Compression Variations on Engine Efficiency. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, p. 856. Theoretical calculations checked up by practical experiments made with 8-cylinder aircraft engine. Abstracted from communication by P. Dumanois to Acad. of Sci.

Condor. The Rolls-Royce "Condor," Series III. Flight, vol. 16, no. 32, Aug. 7, 1924, pp. 494-500, 20 figs. Engine is of 12-cylinder water-cooled "vee" type, with cylinder banks placed at angle of 60 deg.; bore, 5½ in.; stroke, 7½ in.; normal b.hp., 650; maximum speed (crankshaft), 2100 r.p.m.

Connecting Rods. See CONNECTING RODS, Machining.

Cylinder Gages. See Air-Cooled.

Cylinders. See CYLINDERS, Oval, for Airplane Engines.

Design. Airplane-Engine Designing for Reliability, Geo. J. Mead. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 277-285, 13 figs. Recent performances; lessons learned from duration testing; design of connecting rod; defects developed by duration running; Wright T-3 engine; application of experience to future design; development, production, and operation of design.

The Airplane Engine: Actual Achievements and Tendencies (Le moteur d'aviation: résultats acquis et tendances actuelles), G. Lehr. Aéronautique (Aerotechnique), vol. 6, no. 56, Jan. 1924, pp. 3-10, 13 figs. Problems involved in improvement of design.

Details. New Aeronautical Engines (Les nouveaux moteurs d'aviation), J.-A. Lefranc. Nature (Paris), vol. 52, no. 2631, Sept. 6, 1924, pp. 147-157, 10 figs. Details of recent engines, including 400-hp. Bristol-Jupiter, 450-hp. Panhard, 600-hp. Farman, and others. See also (translation) Mech. Eng., vol. 46, no. 11, Nov. 1924, p. 705.

Electric Auto-Charging. Electric Auto-Charging of Aircraft Engines (Untersuchungen über die elektrische Selbstaufladung von Luftfahrzeug-Motoren), A. Wigand and T. Schlomka. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 13-14 and 17-18, July 26 and Sept. 26, 1924, pp. 153-156 and 185-192, 6 figs. July 26: New apparatus developed by authors makes possible measurement of charge potential; describes efforts to construct collector which would speedily assume potential of surrounding atmosphere; details and principle of form finally adopted. Sept. 26: Results of investigation.

Evolution. The Evolution of Aircraft Engines (L'évolution des moteurs d'aviation), Martinot-Lagarde. Technique Moderne, vol. 16, no. 7, Apr. 1, 1924, pp. 195-207, 19 figs. General characteristics; principal types—water-cooled and air-cooled engines; rôle of light metals; factors influencing efficiency of engines; compression; engines for high altitudes and high speeds; means of reducing power loss with altitude; setting and installation of engines; technical details of cylinder construction; new cycles for automobiles and aviation.

Farman. The Farman F. 62. Flight, vol. 16, no. 34, Aug. 21, 1924, pp. 523-524, 3 figs. Describes Farman aero engine, type 12 WD, which was fitted in F. 62; engine is of "broad arrow" type with 12 cylinders in three banks of four each; cylinder bore, 130 mm.; stroke, 160 mm.

See also Details.

French Developments. The Great Efforts of French Industry toward Development of New Engines (Le grand effort de l'industrie française vers les moteurs nouveaux). Aérophile, vol. 32, nos. 3-4 and 5-6, Feb. 1-15 and Mar. 1-15, 1924, pp. 61-64 and 102-105, 10 figs. Review of progress made in design of airplane engines and examination of different types, including nearly all of well-known French makes.

French Types. Some French Light 'Plane Engines. Flight, vol. 16, no. 8, Feb. 21, 1924, pp. 104-106, 7 figs. Principal characteristics and features of Anzani 2-cylinder, Clerget-Renault 2-A 2-cylinder, Gnome-Rhone 2-cylinder, Salmson A.D.-3 3-cylinder, Sergant 4-cylinder, and Vaslin 4-cylinder engines.

Fuel-Air Ratio, Relation to Performance. Relation of Fuel-Air Ratio to Engine Performance, S. W. Sparrow. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 189, 1924, 16 pp. 18 figs. Concludes that (1) with gasoline as fuel, maximum

power is obtained with fuel-air mixtures of from 0.07 to 0.08 lb. of fuel per lb. of air; (2) maximum power is obtained with approximately same ratio over range of air pressures and temperatures encountered in flight; (3) nearly minimum specific fuel consumption is secured by decreasing fuel content of charge until power is 95 per cent of its maximum value.

Fuel Pumps. Engine Driven Gear Fuel Pumps Type "C," H. C. Osborne. U. S. Air Service Information Circular, vol. 5, no. 464, May 1, 1924, 30 pp., 24 figs. Necessity for an engine-driven pump; history of engine-driven fuel pump development up to "C" pumps; history of type "C" pumps; gear pump theory; description of "C-5" pump, and its installation on engine; description of gear pump fuel system; gear pump in service; overhall of gear pump; comparison of "C-5" pump with other fuel pumps.

The Bellows (Sylphon) Fuel Pump for Liberty "12" and Wright "H" Engines, H. C. Osborne. U. S. Air Service Information Circular, vol. 5, no. 458, Mar. 15, 1924, 6 pp., 6 figs. Description of pump; overhaul; installation; precautions.

German Development. The Development of Airplane Engines Since the War (Die Entwicklung des Flugmotors seit dem Kriege), H. Baer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 539-544, 11 figs. Summary of types developed since war in Germany; construction parts, such as cylinders, pistons, bearings, lubrication, steering, ratio of compression, maximum cylinder dimensions, etc.; the light airplane engine.

Gnome-Rhone. See French Types.

High Power. Progress toward 1000 Hp. Aircraft Engines, G. D. Angle. Aviation, vol. 16, no. 8, Feb. 25, 1924, pp. 198-200, 2 figs. See also Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 181-184, 6 figs. Advantages of single engine; Rolls-Royce Condor; Fiat A14 engine; big engines in France; 1000-hp. Lorraine-Dietrich; Napier cub; American developments; Air Service W1A engine.

High Speed. Comparison of Three Types of Airplane Engines (Comparaison de trois types de moteurs d'aviation), M. Martinot-Lagarde. Technique Moderne, vol. 16, no. 15, Aug. 1, 1924, pp. 519-522, 4 figs. Details of design and construction of Renault, Lorraine-Dietrich and Farman engines of 400 to 600 hp., their equipment and efficiency; gives tables of principal characteristics.

Jaguar. See AIRPLANES, Siskin Fighting.

Light. A New Engine for Light Planes, G. D. Angle. Aviation, vol. 16, no. 6, Feb. 11, 1924, pp. 146-147. Engine built by Steel Products Eng. Co., Springfield, Ohio, is air-cooled 2-cylinder opposed type operating on 4-cycle principle; develops 12 to 20 hp. and weighs only 50 lb.

The Engines Used in the Competitions. Flight, vol. 16, no. 39, Sept. 25, 1924, pp. 625-628, 7 figs. Brief description of each of the four engines taking part in two-seater light-airplane competition to be held by British Air Ministry at Lympne, Sept. 29-Oct. 4, 1924, viz., A. B. C. "Scorpion," British Anzani, Blackburne radial and Bristol "Cherub."

See also British Types.

Mounting. Mounting of Air Screw Groups Considered From the Point of View of Security in Aerial Navigation (Le montage des groupes motopropulseurs considéré au point de vue de la sécurité de la navigation aérienne), Volmerange. Bul. Technique du Bureau Veritas, vol. 6, no. 11, Nov. 1924, pp. 211-212. Discusses engine vibrations, difficulty of inspecting and dismounting, leakages, pipe lines, danger of fire, etc.

Napier, Manufacture of. The Napier Aero Engines. Flight, vol. 16, no. 44, Oct. 30, 1924, pp. 698-701, 11 figs. Impressions of their manufacture.

Oil Cleaning. An Effective Method of Cleaning Engine Oil, G. D. Angle. Aviation, vol. 17, no. 24, Dec. 15, 1924, pp. 1398-1399, 3 figs. Results obtained on W1A engine, making use of centrifugal cleaning principle; advantages of use of oil plugs.

Panhard. See Details.

Paris Show. The Paris Aero Show. Aeroplane, vol. 27, no. 26, Dec. 24, 1924, 8 pp. between 610-624, 12 figs. Review of engine exhibits, arranged alphabetically according to makers; includes list of specifications of all engines exhibited.

Poppet Valves for. See VALVES, Materials, Tests of.

Power Measurements, Correction of. Correcting Horsepower Measurements to a Standard Temperature, S. W. Sparrow. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 190, 1924, 14 pp., 16 figs. Discusses relation between temperature of air at entrance to carburetor and power developed by engine; consideration of range of temperatures likely to result from changes of season, locality, or altitude.

Radial. See Air-Cooled.

Radiators. Modern Radiators for Aeronautical Engines. Aviation, vol. 16, no. 20, May 19, 1924, pp. 536-537, 4 figs. New Lamblin radiator consists of manifold fixed to front of wing spar or of strut of landing gear and it is divided into two parts by partition; advantages of 1924 over 1922 model.

The Andre Hexagonal Tube Radiator, R. F. Steidel. Aviation, vol. 16, no. 26, June 30, 1924, pp. 697-698, 7 figs. Basic feature of improved honeycomb radiator manufactured by French concern; results of official tests; how weight is saved.

Rolls-Royce Condor III. The Rolls-Royce Condor III Aero Engine, W. H. Sayers. Aeroplane, vol. 26, no. 11, Mar. 12, 1924, pp. 222, 224, 226 and 228-229, 12 figs. Description of a 12-cylinder engine developing a normal b.hp. of 650 at 1900 r.p.m.

Salmson. Salmson Aviation Engines (Les Moteurs d'aviation Salmson). Aérophile, vol. 32, no. 1-2, Jan. 1-15, 1924, pp. 33-34, 2 figs. Describes different types of air- and water-cooled engines constructed by Salmson firm.

See also French Types.

Sample Tests. Sample Tests of Aircraft Engines (Musterprüfungen von Flugmotoren), Rich. Roth. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 57-61, 6 figs. Brief outline of test regulations for aircraft engines and examples showing how they are carried out.

Scorpion. The A. B. C. "Scorpion." Flight, vol. 16, no. 28, July 10, 1924, pp. 441-443, 6 figs. Gives brief description of its main features and points out that with very small changes, apart from reduction in bore, "Scorpion" was converted from car engine into light-plane power plant; is two-cylinder opposed air-cooled engine with bore of 3.435 in. and stroke of 3.6 in.

Sergant. See French Types.

Specifications. Aircraft Engine Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, p. 463. American and British specifications.

Stedman Two-Stroke. A Novel Type of Two-Stroke. Flight, vol. 16, no. 17, Apr. 24, 1924, pp. 238, 5 figs. Describes engine patented and invented by L. B. Stedman which, in its simplest form, consists of a V-twin, in which one cylinder draws its charge from crankcase, while other is supplied initially from crankcase, but via a chamber surrounding crankcase.

Storage Preparations. Comparison Tests of Storage Preparations for Aviation Engine Storage

of Less than Six Months, S. A Christiansen. U. S. Air Service Information Circular, vol. 5, no. 451, Mar. 1, 1924, 9 pp., 15 figs. Test to investigate methods and make recommendations.

Supercharging. Airplane Turbo-Supercharger Development in the United States, D. Gregg. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 532-538, 17 figs. Supercharger types; supercharger operation; air cooler and fuel system; propeller types; oxygen-supply system; heating apparatus; sea-level pressure at great altitude; usefulness of turbo-supercharger.

Thermodynamics of. The Thermo-Dynamics of Aircraft Engines, H. R. Ricardo. Roy. Aeronautical Soc.—Jl., vol. 28, no. 158, Feb. 1924, pp. 49-75 and (discussion) 75-87, 17 figs. Deals with such factors as change of specific heat, interchange of heat, influence of latent heat, pre-burning, flame temperature and range of burning, influence of temperature and pressure of compression, stratified charge and supercharging.

Valves, Characteristics of Steels for. Characteristics of Material for Valves Operating at High Temperatures, J. B. Johnson and S. A. Christiansen. Am. Soc. for Testing Matls., Preprint of paper for meeting June 24-27, 1924, no. 19k, 19 pp., 12 figs. Requirements demanded of steels for service in valves of aircraft engines. Results of laboratory tests and single-cylinder and multiple-cylinder engine tests of steels proposed for valve use.

Valves and Guides. Exhaust-Valves and Guides for Aircraft Engines, S. D. Heron. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 122-132, 9 figs. Discusses valve cooling and valve and guide wear in connection with type-J air-cooled cylinder, developing 48 b.hp. at 1650 r.p.m., including internal valve cooling and methods of application, valve steels, valve guides, valve size, etc.

Vaslin. See French Types.

Water-Cooled. Water-Cooled Aero Engines, A. J. Rowledge. Automobile Engr., vol. 14, no. 186, Feb. 1924, pp. 50-54, 12 figs. Consideration of design; cooling system; cylinder construction; crankshafts; lubrication; engine suspension; gearing.

Wright. A New Type of Engine for Large Aircraft, G. D. Angle. Aviation, vol. 17, no. 5, Aug. 4, 1924, pp. 832-834, 4 figs. Gives main features of 80-deg. W-type engine of 18 cylinders.

Wright T-3. The Wright T-3 Engine. Aeroplane, vol. 26, no. 22, May 28, 1924, pp. 455 and 458, 4 figs. Twelve-cylinder V-type with an angle of 60 deg. between cylinders. Bore 5¾ in., stroke 6¼ in., piston displacement 1947 cu. in., normal output 600, normal speed 1900.

See also Design.

AIRPLANE PROPELLERS

Airfoil Theory and. Comparison of Model Propeller Tests with Airfoil Theory, Wm. F. Durant and E. P. Lesley. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 196, 1924, 26 pp., 61 figs. Examination of degree of approach which may be anticipated between laboratory tests on model airplane propellers and results computed by airfoil theory, based on tests of airfoils representative of successive blade sections.

Design. A Graphic Method for Determining Adaptability of Propellers to Airplanes (Méthode graphique pour l'adaptation des hélices aux avions), G. Delanghe. Génie Civil, vol. 84, no. 8, Feb. 23, 1924, pp. 185-187, 1 fig. Discusses elements of propellers, and develops method for determining, under given conditions, propeller with which maximum speed can be obtained with given course and altitude.

The Analysis of Free Flight Propeller Tests and Its Application to Design, M. M. Munk, U. S. Nat. Advisory Comm. for Aeronautics—Report no. 183, 1924, 12 pp., 20 figs. New and useful method suitable for design of propellers and for interpretation of tests with propellers.

The Application of Propeller Test Data to Design and Performance Calculations, W. S. Diehl. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 186, 1924. Study of test data on family of Durand's propellers (nos. 3, 7, 11, 82, 113, 139).

Development. Milestones in the Development of the Metal Air-Screw. Flight, vol. 16, no. 28, July 10, 1924, pp. 445-446, 2 figs. Progress made in development of metal airscrew covering period of seven years.

Micarta. Micarta Propellers, F. W. Caldwell and N. S. Clay. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, nos. 198, 199, 200, and 201, Aug. and Sept. 1924. Pamphlet No. 198: 9 pp., 4 figs., Materials. No. 199: 10 pp., 7 figs., partly on supp. plates., Method of construction. No. 200: 13 pp., 11 figs., partly on supp. plates., General description of design. No. 201: 17 pp., 15 figs., Technical methods of design.

Models, Turbine Drive for. Turbine Drive for Propeller Models, L. H. Crook. Franklin Inst.—Jl., vol. 199, no. 1, July 1924, pp. 85-91, 6 figs. Details of construction of air turbine for U. S. Navy aerodynamic laboratory to drive propeller in 8- by 8-ft. wind tunnel with air pressure of 90 lb. per sq. in. and its successful application.

Performance. See Design.

Slipstream Obstructions. The Effect of Slipstream Obstructions on Air Propellers, E. P. Lesley and B. M. Woods. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 177, 1924, 24 pp., 15 figs. Results of investigation show that combined efficiency of propeller with any obstruction in slipstream is less than that of propeller free and unobstructed.

Slipstream Theory. The Slipstream Theory in Its Practical Application (Die Strahltheorie in ihrer praktischen Anwendung), Wm. Hoff. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 51-53, 4 figs. Study of slipstream theory as basis for air-propeller dimensioning.

Theory. Aerodynamics of Driving Screws (Zur Aerodynamik der Treibschraube), H. B. Helmbold. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 13-14 and 15-16, July 26 and Aug. 26, 1924, pp. 150-153 and 170-173, 5 figs. Discusses profile and movement of propeller in air current; develops formulas for velocity, etc., and applies them to calculation of efficient propellers; performance loss through profile resistance; frictionless propeller; design of propeller and development of theory.

The Theory of Air Propellers (Zur Theorie der Luftschrauben), Th. Bienen and Th. v. Kármán. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 48, Nov. 29, 1924, pp. 1237-1242 and 1315-1318, 19 figs. Deals with calculation of airplane propellers, but results, when properly applied, also hold good for ship propellers.

Wind-Tunnel Tests. The Effect of Wind Tunnel Interference on a Combination of Airscrew and Tractor Body, C. N. H. Lock and H. Bateman. Aeronautical Research Committee—Reports and Memoranda, no. 919, Apr. 1924, 6 pp., 7 figs. on supp. plates. Result of testing small-scale body and airscrew successively in 7-ft. and 4-ft. tunnel.

AIRPLANES

A-1. Wind Tunnel Test of the A-1 (Ambulance) Airplane, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 463, May 1, 1924, 13 pp., 26 figs. Results of tests made in 4-ft. and 7½-ft. wind tunnel at Mass. Inst. Technology

AIRPLANES

on A-1 airplane, a single Liberty-motored single-bay biplane of diagonally braced, lower-wing, stub type, to determine aerodynamic characteristics.

Ailerons. Aileron Effectiveness, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 454, Mar. 15, 1924, 8 pp., 19 figs. Wind-tunnel tests of U. S. A.-35 (half-span) airfoil to determine aerodynamic efficiency of ailerons, hinge lines of which were skewed at various angles with transverse or y-axis.

On the Distribution of Lift Along the Span of an Airfoil with Displaced Ailerons, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 195, June 1924, 8 pp., 4 figs. Effect of aileron displacement on distribution of lift along span is computed for elliptic wing of aspect ratio 6 for three conditions.

Airfoils. Aerodynamic Characteristics of Airfoils. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 182, 1924, pp. 145-186, 132 figs. Continuation of reports on airfoil data.

Experimental Investigation of the Effect of an Oscillating Airstream (Katzmayr Effect) on the Characteristics of Airfoils, Toussaint, Merneis and Girault. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 202, Sept. 1924, 32 pp., 20 figs. on supp. plates. Experiments relating to action of air stream oscillating vertically on supporting surfaces, object of which was to verify results of Katzmayr's experiments, and, if possible, to obtain more complete data on effect of amplitude and velocity of oscillations of air stream.

Interesting New Glenn Martin Wings, Lessiter C. Milburn. Aviation, vol. 16, no. 1, Jan. 7, 1924, pp. 8-9, 3 figs. Medium thick and thick airfoils of high efficiency recently developed.

The Two-Dimensional Problem of the Flapping Wing (Das ebene Problem des schlagenden Flügels), W. Birnbaum. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 4, Aug. 1924, pp. 277-292, 8 figs. Supplementary to author's previous article in same journal, vol. 3, Aug. 1923, p. 290 (see reference in Eng. Index for 1923, p. 13) on supporting vortex surface, which forms basis of present investigation; attempts to show how methods developed in previous work can also be applied to air forces for a wing with laterally variable circulation; deals specially with theory of a periodically flapping wing in the manner of a bird's wing.

Wind Tunnel Test of 36" x 6" Airfoils, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 478, Oct. 1, 1924, 9 pp., 6 figs. Results of tests to obtain strictly comparable data on several promising airfoil sections at reasonably high values of (VL).

See also Wings.

Albatros. New Albatros Airplanes (Neue Albatros-Flugzeuge), G. Krupp. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 13-14, July 26, 1924, pp. 126-127, 3 figs. Details of L58 for seven passengers; 260-hp. Maybach engine; speed, 150km per hr.; L59 for sport, 55-hp. SH engine; L66 for two, with 30-hp. engine.

All-Metal. See Metal.

Ambulance. Development of Airplane Ambulances. Int. Aeronautics, vol. 1, no. 5, Dec. 1923-Jan. 1924, pp. 257-261, 8 figs. Notes on Liberty engine Fokker, a duplicate of Macready-Kelly transcontinental machine; carries 4 litter patients, 4 sitting patients and surgeon, in addition to pilot; medical equipment.

See also A-1.

Annular Type. The "Annular" Type of Aeroplane. Flight, vol. 41, no. 15, Apr. 10, 1924, pp. 204-207, 11 figs. Describes some early experiments with a wing form in which lifting surfaces were circular in plan, with a circular piece cut out of center so as to leave a wing of annular shape.

Armstrong-Whitworth. See Troop Carriers.

Automatically Piloted. See Manless.

Balancing Moments. Practical Method for Balancing Airplane Moments, H. Hamburger. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 179, Feb. 1924, 34 pp., 8 figs. Shows how methods described in previous paper (Technische Berichte, vol. 2, no. 3, p. 463) can be practically utilized in computations; it is shown what conclusions can be drawn from diagram of moments in regard to defects in airplanes under investigation and what steps may be taken to remedy them.

Beams. Deflection of Beams with Special Reference to Shear Deformations, J. A. Newlin and G. W. Trayer. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 180, 1924, 19 pp., 8 figs. Influence of form of wooden beam on its stiffness and strength.

Form Factors of Beams Subjected to Transverse Loading Only, J. A. Newlin and G. W. Trayer. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 181, 1924, 19 pp., 8 figs. Tests to determine factors to apply to usual beam formula in order that properties of wood based on tests of rectangular sections might be used as basis of design for beams of any section, and to develop formulas for determining such factors.

Biplanes. Pressure Distribution Over the Wings of, and Force Measurements on, a Model B. E. 2 C Biplane with Raked Wing Tips, A. S. Batson and H. L. Nixon. Aeronautical Research Committee, no. 891, May 1923, 31 pp., 21 figs. partly on supp. plate. Results of experiments show that in upper wing center sections reach critical angle before outer sections, causing relatively heavy loading near wing tips, etc.

Blackburn-Napier "Cubaroo." The Blackburn-Napier "Cubaroo." Flight, vol. 16, no. 35, Aug. 28, 1924, pp. 537-539, 7 figs. Also Automobile Engr., vol. 14, no. 193, Sept. 14, 1924, p. 274, 2 figs. Describes long-distance 3-seater torpedo-carrying plane with 1000 hp. Napier "Cub" engine; span of biplane wings, 88 ft.; overall length, 54 ft.; height, 20 ft.

Bleriot. See Commercial.

Boeing. See Training.

Bombers. See Gallaudet; Lioré-Olivier.

Braking Devices for Safe Landing. The Problems of Safe Landing for Airplanes, W. L. LePage. Aviation, vol. 16, no. 22, June 2, 1924, pp. 588-590, 1 fig. Deals with aerodynamic braking devices involving increase in drag and those involving increase of lift; mechanical braking devices.

Bristol. Aeronautics. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 550-553, 8 figs., partly on supp. plates. Describes exhibits of Vickers and of Bristol Aeroplane Co. at Brit. Empire Exhibition.

Bristol Brownie. The Bristol Brownie Light Plane. Aviation, vol. 17, no. 25, Dec. 22, 1924, p. 1434, 3 figs. Two-place plane with Bristol Cherub engine; high speed, 70 mi. per hr.; landing speed, 38 mi. per hr.; cruising range, 100 mi.

Brunet-Descamps. See Metal.

Caspar. The Caspar "C.17" Light Monoplane Two-Seater. Flight, vol. 16, no. 47, Nov. 20, 1924, pp. 730-731, 3 figs. Machine built by German firm, Caspar-Werke of Travemünde; A. B. C. "Scorpion" engine of 20 hp.

See also German Commercial.

Catron-Fisk. The Catron-Fisk "Constance" Touring Plane, Geo. B. Harrison. Aviation, vol. 17, no. 24, Dec. 15, 1924, p. 1402, 3 figs. Adoption of rigid-airship streamlines as model for fuselage of airplane; details of single-bay 4-place

biplane equipped with one 200-hp. Wright Tempest (E2) engine and having total wing area of 342.2 sq. ft.

Civil. British Civil Aircraft. Flight, vol. 16, no. 22, May 29, 1924, pp. 327-331, 13 figs. partly on pp. 324-325. Illustrates and describes commercial, racing, and school machines.

Climbing Time. The Climbing Ability of Airplanes (Die Steigleistungen von Flugzeugen), P. Brenner. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 61-65, 3 figs. New formula for calculation of climbing time, with aid of which, with known ceiling and engine performance, theoretical climbing curve of airplane can be found.

Commercial. Airplanes for Transportation (Les avions de transport), Martinot-Lagarde. Technique Moderne, vol. 16, no. 24, Dec. 15, 1924, pp. 849-856, 7 figs. Recent progress in construction of transport airplanes.

France Develops Multi-Motored Transport Planes, L. D'Orcy. Aviation, vol. 16, no. 3, Jan. 21, 1924, pp. 60-64, 4 figs. Particulars of competition instituted by French air department in fall of 1922, with a view to developing multi-engined airplanes specially designed to answer requirements of long-distance air transport; data on Farman F3X. Farman F4S, Bleriot type 115, Breguet type 22, and Potez type 22, which were among the entries.

The "Feiro I" Commercial Monoplane. Flight, vol. 16, no. 7, Feb. 14, 1924, pp. 86-87, 3 figs. First Hungarian machine; strut-braced monoplane with wing resting on top of fuselage; 120-hp. Le Rhône rotary engine; span, 46 ft. 9 in.; length, 28 ft. 11 in.; chord, 6 ft. 7 in.; wing area, 280 sq. ft.

The Glenn L. Martin Model 70 Commercial Plane. Aviation, vol. 17, no. 5, Aug. 4, 1924, pp. 835-836, 1 fig. New ship designed for either cargo or passenger carrying, 200-hp. Wright model E 4 engine with pay-load capacity of 750 lb. and cruising range of 550 mi.

See also Civil; Fokker; German Commercial; Stout Air Pullman; Swallow; Udet.

Construction. Building Government Airplanes, F. G. Steinebach. Iron Trade Rev., vol. 74, no. 10, Mar. 6, 1924, pp. 665-670 and 673, 11 figs. Difficulties encountered; fabrication of aluminum alloys important phase of construction; seasoned organization essential. Methods employed at plant of Glenn L. Martin Co., Cleveland.

Cox-Klemin C. K. 2. The Cox-Klemin C. K. 2 Training Biplane. Flight, vol. 16, no. 2, Jan. 10, 1924, p. 17, 1 fig. Two-seater side-by-side tractor biplane for training purposes built for U. S. Army Air Service; Wright model E 190-hp. engine; span, 29 ft.; chord, 5 ft. 6 in.; stagger, 2 ft.; wing area, 293 sq. ft.; speed range, 47-125 m.p.h.

Cubaroo. See Blackburn-Napier "Cubaroo."

Curvilinear Flight. See FLIGHT, Curvilinear.

Czechoslovak. See Prague Show.

Daimler. The Daimler L.15. Flight, vol. 16, no. 19, May 8, 1924, pp. 263-265, 6 figs. Description of a German two-seater light plane, with motorcycle engine of 7-9 rated hp.; wing span, 41 ft. 4 in.

The German Light Airplane Daimler L15 (Das deutsche Daimler-Leichtflugzeug L15), W. v. Langsdorff. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 11-12, June 26, 1924, pp. 121-122, 4 figs. Discusses development of light airplanes with low motive power based on successes of glider planes, and describes L15 glider with 7-9 hp. motor.

See also German.

Dayton Air Meet. The Dayton Air Meet. Aviation, vol. 17, no. 15, Oct. 13, 1924. Contains following articles: Editor's Story of Dayton Air Meet, L. d'Orcy, pp. 1110-1118, 6 figs.; The Mitchell and Pulitzer Trophy Race, pp. 1118-1121, 4 figs.; My First American Air Meet, C. C. Grey, pp. 1122-1123; An Engineer's View of the Races, E. P. Warner, 1124-1126, 1 fig.; A First Impression of the Races, A. Klemin, pp. 1127-1128, 1 fig.

De Havilland. The De Havilland Type D.H.51. Flight, vol. 16, no. 28, July 10, 1924, pp. 437-440, 8 figs. Describes two-three-seater biplane of low cost and economical in running; power plant provided with either 90-hp. R.A.F. 1A or 80-hp. Renault, both 8-cylinder air-cooled engines.

Design. Airplane Construction (Betrachtungen über den Flugzeugbau), O. Mader. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 40, Oct. 4, 1924, pp. 1041-1046, 16 figs. Discusses factors governing design and describes how special problems have been solved; comparison of airplane with other forms of transportation from technical viewpoint; future prospects.

Aviation and Technology (Luftfahrt und Technik), E. Everling. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 491-492, 2 figs. Points out that aircraft construction may be considered as light construction, that is, it is characterized by weight economy in design, material, and power plant; applications of aircraft technology to other fields of engineering, especially to automobile construction, in which great advantages have resulted from light construction; Rumpler streamline automobile is cited as example; results for industry and academic instruction.

Structural Weight of Aircraft as Affected by the System of Design, Chas. W. Hall. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 206, Nov. 1924, 21 pp., 5 figs. Various details of design or arrangement of parts of airplane structures are shown and discussed, use of these devices having resulted in production of structures of adequate strength, yet of weight less than one-half of usual construction.

The Construction of Airplanes in France and Other Countries (La construction des avions en France et à l'Etranger), P. Grimault. Aéronautique, vol. 5, no. 55, Dec. 1923, pp. 509-516, 11 figs. Policy in France, Great Britain, United States, and Germany; commercial planes; high-speed planes; military monoplanes and biplanes; medium and large planes.

Flying Boats. See FLYING BOATS.

Focke-Wulf. Focke-Wulf Service Airplane, Type A-16 (Focke-Wulf-Verkehrsflugzeug Typ A. 16). Luftfahrt, vol. 28, no. 9, Aug. 5, 1924, pp. 158-160, 6 figs. 75-hp. S & H engine; accommodation for four persons.

The Focke-Wulf Cabin Plane. Aviation, vol. 17, no. 23, Dec. 8, 1924, p. 1371, 2 figs. Machine is equipped with 75-hp. Siemens-Halske engine and carries 3 passengers besides pilot; it is a cantilever monoplane with wing built in single piece; fuselage is built entirely of wood.

Fokker. The Fokker C4 Commercial Airplane. Aviation, vol. 16, no. 12, Mar. 24, 1924, p. 310, 1 fig. Adaptation of 2-seater corps observation plane; equipped with 400-hp. Liberty engine.

Wind Tunnel Test of the Fokker PW-5 With the V-40 Wing and the PW-5 Wing, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 474, Oct. 1, 1924, 18 pp., 32 figs. Design characteristics of PW-5, single-seater single-motored parasol cantilever pursuit monoplane with usual type of continuous axle landing gear and a nose radiator, and results of test to determine aerodynamic characteristics.

See also Ambulance.

Fuselage, Stresses in. A Short Method of Calculating Torsional Stresses in an Airplane Fuselage, J. E. Younger. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 203, Sept. 1924, 23 pp., 10 figs. on supp. plates. Deals with investigation carried out in Civil Engineering Laboratory of University of California, to determine accuracy of existing methods of computing stresses in airplane fuselage when subjected to torsion, and to derive simple approximate formula for rapid calculation of these stresses.

Gallaudet. Wind Tunnel Test of the Original DB-1 Model, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 475, Oct. 1, 1924, 7 pp., 10 figs. Design characteristics of original Gallaudet DB-1, a cantilever tractor monoplane, day bomber, of 750 hp., and results of test to determine aerodynamic characteristics.

German. German Light Airplanes (Deutsche Leichtflugzeuge), W. v. Langsdorff. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 64-67, 5 figs. Structural and technical details of Daimler 7 to 9-hp. airplane and account of author's record flight with this machine.

German Commercial. Three New German Commercial Airplanes. Aviation, vol. 16, no. 6, Feb. 11, 1924, p. 155, 3 figs. Small-capacity passenger carriers with interesting features; details of Mark 4-seater; Udet 3-seater and Caspar 3-seater.

Gliders. A New Type of Glider (Ein neuartiges "Segel"-Flugzeug), R. Platz. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 1-2, Jan. 26, 1924, pp. 1-2, 5 figs. Also (translation) Flight, vol. 16, no. 10, Mar. 6, 1924, pp. 125-130, 4 figs. Describes design developed by author, which combines advantages of low cost of production, collapsibility so that it can be carried in railway passenger car, easy and cheap changeability of parts, and light weight, so that it can be carried by one man, and can be put together in 10 min.; results of tests with models and with full-size plane.

Conclusions and Results of the Rhoen Glider Competition (Erfahrungen und Ergebnisse des Rhön-Wettbewerbs 1924), W. Schlink. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 21-22, Nov. 28, 1924, pp. 232-234. Among new ideas appearing are a pair of Harth machines and a Breslau machine with pivoted wings; author considers pivoted wings an important innovation which may well lead to better utilization of gusts; a few machines had "wing-end control," which is criticized as offering too much head resistance; the glider, Charlotte, has all rudder organs located at wing tips, so that tail body has been done away with entirely; two planes were equipped with changeable wing profile.

Dimensions of Gliders at the Rhön Competition 1924 (Ueber die Vermessung der Segelflüge im Rhönwettbewerb 1924). Luftfahrt, vol. 28, no. 8, Mar. 15, 1924, pp. 33-47, 16 figs. Series of articles on gliders and gliding questions, dynamic gliding, gliding at sea and over plains, construction of gliders, etc.

Gliders: Their History and Uses, W. H. Sayers. Roy. Aeronautical Soc.—Jl., vol. 28, no. 161, May 1924, pp. 315-322. Review of development and discussion of possibilities.

Technical Considerations Regarding the 5th Rhön Competition, 1924 (Technische Betrachtungen zum 5. Rhön-Segelflug-Wettbewerb 1924), R. Eisenlohr. Luftfahrt, vol. 28, no. 11, Sept. 5, 1924, pp. 185-189, 11 figs. Critical review of a

number of gliders, including Moritz, Margarete, Konsul, Espenlaub, Charlotte, etc.

The Aerodynamical and Structural Characteristics of Russian Gliders (Von den aerodynamischen und konstruktiven Eigenschaften russischer Segelflugzeuge), A. Scherschevsky. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 21-22, Nov. 28, 1924, pp. 246-248, 4 figs. Account of first all-Russian glider competition, Nov. 1-18, 1924; details and performances of competing machines.

The Airplanes of the Rhoen Glider Competition 1924 (Die Flugzeuge des Rhön-Wettbewerbes 1924), W. Coulmann. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 21-22, Nov. 28, 1924, pp. 225-232, 19 figs. Details and performances of more important competing gliders.

The Magnan Monoplane Glider. Flight, vol. 16, no. 4, Jan. 24, 1924, pp. 43-44, 3 figs. See also Aviation, vol. 16, no. 10, Mar. 10, 1924, pp. 257-258, 1 fig. Description of a French machine designed for gust-soaring, known as Type Marin M.2; span, 37 ft. 9 in.; length, 16 ft. 3 in.; chord, 4 ft. 3 in.; wing area, 110 sq. ft.

The New Gliding Plane of the Hanover Technical High School (Das neue Segelflugzeug der Technischen Hochschule Hannover), W. Günter. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 11-12, June 26, 1924, pp. 122-124, 7 figs. Details of design; gliding angle, 1:28.8; soaring speed 0.448 m. per sec.; weight, 75 kg.; width, 15 m.; bearing surface, 15 sq. m.

Gourdou-Leseurre. A Bristol "Jupiter" Makes History in France. Flight, vol. 15, no. 45, Nov. 8, 1923, pp. 681-682, 3 figs. Particulars of Gourdou-Leseurre all-metal monoplane, designed as a single-seater fighter; streamlined Bristol "Jupiter" engine; speed of 223.7 m.p.h. attained.

Guiding by Radio Signals. See DIRECTION FINDING.

Handley Page W8.F. The Handley Page W8.F. Aeroplane, vol. 26, no. 18, Apr. 30, 1924, pp. 370, 372, and 374, 8 figs. Fitted with one Rolls-Royce Eagle IX engine of 360 hp. in nose of fuselage, and two Siddeley Puma engines each of 240 hp. on wings; span, 75 ft.; length, 60 ft. 1 in.; height, 17 ft.; wing area, 1456 sq. ft.; loaded weight, 12,000 lb.; max. speed, 102 m.p.h. See also Flight, vol. 16, no. 18, May 1, 1924, pp. 248-253, 17 figs.

Hangars. See HANGARS.

Helicopters. See HELICOPTERS.

High-Speed, Development of. The Development of High-Speed Aircraft, R. Mayo. Roy. Aeronautical Soc.—Jl., vol. 28, no. 159, Mar. 1924, pp. 158-182 and (discussion) 183-188, 9 figs. Early development; Gnome engines; French ascendancy and British awakening; British research period; war period; revival of rotary engine; postwar period; beginning of American supremacy; French and British postwar efforts; high-speed seaplanes and flying boats; future prospects; value of speed races.

Holland H-1. The "Holland" Light 'Planes. Flight, vol. 16, no. 46, Nov. 13, 1924, pp. 722-724, 4 figs. Principal characteristics of Holland H-2. Description of Holland H-1, a two-seater tractor biplane, fitted with 35-hp. 3-cycle Anzani engine; span, 25 ft. 6 in.; length, 21 ft.; wing area, 150.6 sq. ft.

Huff-Daland. The Huff-Daland Petrel 4 and TW5 Airplanes. Aviation, vol. 16, no. 23, June 9, 1924, pp. 614-615, 8 figs. Details of fuselage, wings, landing gear, control surfaces, seating arrangement and power plant of Wright-engined cantilever biplanes.

Induced Drag. Induced Drag of Multiplanes, L. Prandtl. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 182, Mar. 1924, 22 pp., 8 figs. Calculation is based upon assumption that lift on wings is distributed along wing in proportion to ordinates of semi-ellipse; formulas and numerical tables are given for calculating drag; most favorable arrangements of biplanes and triplanes are discussed and results are further elucidated by means of numerical examples. Translated from Technische Berichte, vol. 3, no. 7.

Klemperer-Aachen. An Interesting German Light Monoplane, A. Martens. Flight, vol. 16, no. 8, Feb. 21, 1924, p. 108, 1 fig. Principal details of Klemperer-Aachen, having 2-cylinder air-cooled Siemens engine with rated power of 5-11 hp.; length overall, 14 ft. 9 in.; span, 42 ft. 8 in.; height, 5 ft. 11 in.; wing area, 161.5 sq. ft.; speed, 43.6 m.p.h.

Landing and Launching Device. The Gibbons Landing and Launching Device. Aviation, vol. 16, no. 12, Mar. 24, 1924, pp. 308-309. Invention to solve terminal problem of civil aviation; consists of flat, unobstructed platform made up of wood flooring on light structural steel framework; platform is pivoted transversely in center to allow it to be tilted to any desired angle and is mounted on circular track allowing it to be revolved into wind for launching or receiving of airplanes.

Lift and Drag Forces. See AIRPLANES, Wind-Tunnel Tests.

Lifting Forces. The Forces which Lift Aeroplanes, V. K. F. Bjerknes. Nature (Lond.), vol. 114, nos. 2865 and 2866, Sept. 27 and Oct. 4, 1924, pp. 472-474 and 508-510, 4 figs. Direct geometric and inverse dynamic analogy between hydrodynamic and electromagnetic fields; direct geometric analogy; theoretical airplane; automatic production of lifting circulation; induced resistance.

Light. Light Airplane Construction (Leichtbau), A. Baumann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 551-555. Deals with materials, design, stress and arrangement conducive to light-weight construction; advantages and disadvantages of light construction and useful field. See also following article, pp. 555-556, 3 figs., entitled The Selection of Materials for Light Construction (Die Frage des Baustoffes im Leichtbau), P. Meyer.

Lympne Trials of Two-Seater Light Aeroplanes. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 525-526, 4 figs. Describes winner of first prize, a monoplane, named Wee Bee I, fitted with Bristol Cherub engine, and constructed by Beardmore & Co.

Royal Aero Club Light Aeroplane Competitions, J. S. Buchanan. Roy. Aeronautical Soc.—Jl., vol. 28, no. 168, Dec. 1924, pp. 676-690 and (discussion) 691-698. Gives facts ascertained by series of competitions and review of present position, with view to considering what steps are desirable for future development.

Tendencies of Light-Airplane Construction (Richtlinien des Leichtmaschinenbaus), A. Baumann. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 3-4, Feb. 26, 1924, pp. 17-19. Discusses factors and problems underlying development of light planes. See also articles entitled The Nature of Light-Airplane Construction (Das Wesen des Leichtbaues), Geo. König, p. 20; and Light-Airplane Construction and Its Future Development (Der Leichtbau und seine Fortentwicklung), H. Seehase, pp. 20-22, 7 figs.

The Light Aeroplane, A. H. Tiltman. Automobile Engr., vol. 14, no. 197, Dec. 1924, pp. 393-397, 7 figs. Lessons of trials at Lympne, 1924; trend of design; description of individual machines.

Two-Seater Light 'Plane Competitions at Lympne. Flight, vol. 16, no. 39, Sept. 25, 1924, pp. 588-624, 95 figs. Descriptions of airplanes entered for British Air Ministry's competition,

Sept. 29-Oct. 4, 1924. See also Aeroplane, vol. 27, no. 13, Sept. 24, 1924, 14 pp. between pp. 278 and and 303, 36 figs.

Use of the Light Planes in Aeronautical Research, W. L. LePage. Aviation, vol. 17, no. 16, Oct. 20, 1924, pp. 1169-1170. Notes on obtaining experimental data; flight tests of scale models; question of weight.

See also Bristol Brownie; Caspar; German; and Pixie.

Lioré-Olivier. The New Lioré-Olivier Airplanes and Hydroplanes (Les nouveaux Avions et Hydravions Lioré-Olivier). Aérophile, vol. 32, no, 1-2, Jan. 1-15, 1924, pp. 35-37, 3 figs. Details of 3-seater bomber, 2-seater pursuit and night-observation plane, and commercial and military hydroplanes.

Longitudinal Oscillation. Longitudinal Oscillation of an Airplane, R. Fuchs and L. Hopf. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 188, Apr. 1924, 45 pp., 10 figs. Problem and method of analysis of longitudinal oscillation. Translated from Technische Berichte, vol. 3, no. 7.

Low-Powered. Low-Powered Flying, M. E. A. Wright. Instn. Aeronautical Engrs., Minutes of Proc. No. 6, 1923, pp. 23-28 and (discussion) 28-36. Performance obtainable with low-powered machines 15 years ago; development of modern low-power airplane.

Magnan. See Gliders.

Mail-Service. See Metal.

Manless. Automatically Piloted Airplanes and Guidance by Radiotelegraphy (L'avion automatique et la direction des avions par T.S.F.), P. Hémardinquer. Nature (Paris), no. 2598, Jan. 19, 1924, pp. 39-43, 9 figs. Study of practical devices employed by M. Percheron and his co-workers which brought about good results obtained in tests at Etampes.

Mark. See German Commercial.

Martin. The Martin Model 70 Commercial Biplane. Flight, vol. 16, no. 43, Oct. 23, 1924, p. 685, 1 fig. Particulars of machine designed for either cargo or passenger carrying; fitted with 200-hp. Wright model E4 engine, has speed range of 45-112 m.p.h., with pay load of 750 lb., and cruising range of 550 miles; span, 38 ft.; overall length, 27 ft.; height, 12 ft.

See also Commercial.

Martinsyde A.D.C.I. The Martinsyde A.D.C.I. Single-Seater Fighter. Flight, vol. 16, no. 48, Nov. 27, 1924, pp. 742-746, 9 figs. 380-hp. Armstrong-Siddeley "Jaguar" engine; top speed, 160 m.p.h.; length, 25 ft.; span, 32 ft. 9 in.; area of main planes, 320 sq. ft.

Materials for. See AIRCRAFT CONSTRUCTION MATERIALS.

Metal. Development and Design of Dornier Metal and All-Metal Airplanes (Entwicklung und Konstruktion der Metall- und Ganzmetallflugzeuge von Dornier), H. Werner. Motorwagen, vol. 27, no. 14, May 20, 1924, pp. 246-248, 8 figs. Comparison with development of Junkers planes.

Metal Airplane Construction (Ueber Metallflugzeugbau). Motorwagen, vol. 27, no. 11, Apr. 20, 1924, pp. 190-194. Comparisons between metal and wooden airplanes, showing advantages of former; properties of metals employed; heat treatment for annealing and for refining. Abstracted and translated into German from Russian journal, Westnik Wosduschnogo Flota.

Metal Construction for Aviation (Le costruzioni metalliche in aviazione), R. Giacomelli. Ingegneria, vol. 3, no. 10, Oct. 1, 1924, pp. 348-356, 41 figs. Discusses wing construction; all-metal construction in Germany, France and other countries, including Junkers, Dornier, Rohrbach, Levasseur, etc.

New Metal Airplane for Mail Service, F. H. Colvin. Am. Mach., vol. 60, no. 4, Jan. 24, 1924, pp. 121-124, 14 figs. Details used in construction of all-metal fuselage; methods of forming channels and other special shapes with simple equipment.

Production Airplanes of Metal, E. B. Carns. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 733-738, 12 figs. Describes construction of airplane which author claims to be a production proposition; type best suited to this is stated to be biplane, and metal the most suitable material of which to make it; covers whole construction of airplane, together with cost of its production in lots of from 1 to 10; gives lists of things to do and to avoid in constructing metal airplanes and explanation of methods used in making fittings and certain parts.

Stout All-Metal Monoplane Is Designed Specially for Commercial Use, J. E. Schipper. Automotive Industries, vol. 50, no. 18, May 1, 1924, pp. 959-961, 4 figs. Carries fuel for average flight of 4½ hr.; equipped with 400-hp. Liberty engine with speed of 110 m.p.h.; three bulkheads between passengers and power plant deaden noise.

The Brunet-Descamps A2 Airplane (L'avion Brunet-Descamps A2) Aérophile, vol. 32, no. 9-10, May 1-15, 1924, pp. 157-159, 5 fig. A reconnoitering biplane; Lorraine motor of 400 hp.; surface, 44 sq. m.; total weight, 1900 kg.; highest speed, 240 km. per hr.; constructed by Descamps.

See also AIRCRAFT, Metal Construction.

Military. British Military Aircraft. Flight, vol. 16, no. 22, May 29, 1924, pp. 306-327, 52 figs. Land machines and seaplanes designed for warlike operations.

See also Lioré-Olivier; Martinsyde; Siskin; Troop Carriers.

Model. Model Aeroplanes, W. E. Schweitzer. Armour Engr., vol. 16, no. 1, 1924, Nov. 1924, pp. 16 and 30, 1 fig. Their design and construction.

Models, Pressure Distribution on. Investigation of the Distribution of Pressure on the Body of an Airplane Model (Onderzoek van de drukverdeeling op den romp van een vliegtuigmodel). Ingenieur, vol. 39, no. 4, Jan. 26, 1924, pp. 58-63, 9 figs. Pressure is measured at various points of model by means of sensitive micrometer; results plotted in diagrams.

Monoplane Theory. Monoplane Theory, N. K. Bose. Lond., Edinburgh & Dublin Philosophical Mag. & Jl., of Sci., vol. 48, no. 283, July 1924, pp. 113-125, 1 fig. Discusses theory of circulation of liquid round airplane equal and opposite to that of vortex formed and reduces it to mathematical basis.

Naval. See AERONAUTICS, Naval.

Nieuport-Delage Type 42. The Nieuport-Delage Type 42. Flight, vol. 16, no. 30, July 24, 1924, pp. 461-462, 4 figs. Hispano-Suiza engine of twelve-cylinder V-type with bore of 140 mm. and stroke of 150 mm.; power developed, 600 hp. at 2000 r.p.m.

Observation. Notes on the Design of a Corps Observation Plane, H. F. Marshall. Aviation, vol. 16, no. 21, May 26, 1924, pp. 561-563, 2 figs. Exhaust silences is said to be desirable; cockpit arrangement; provision for overload; cruising range; landing speed; reporting on observation.

Paris Show. The Paris Aero Show, 1924. Flight, vol. 16, nos. 49, 50, 51, and 52, Dec. 4, 11, 18, and 25, 1924, pp. 753-758, 766-777, 783-791, and 791-804, 67 figs. Description of exhibits at Ninth International Aero Show in Paris. See also Aeroplane, vol. 27, nos. 24 and 25, Dec. 10 and 17, 1924, 10 pp. between pp. 533-554, and 10 pp. between 568-590, 39 figs.

Performance. Comparing the Performance of Geometrically Similar Airplanes, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 190, Apr. 1924, 27 pp. Deals with model rules relating to aeronautical problems, and shows how characteristics of one airplane can be determined from those of another of different weight or size, and of similar type.

Performance Estimation. Charts for Graphical Estimation of Airplane Performance, W. S. Diehl. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 192, 1924, 12 pp. 19 figs. Gives charts for estimating propeller diameter and efficiency, maximum speed, initial rate of climb, absolute ceiling, climb in 10 min., time to climb to any altitude, maximum speed at any altitude, and endurance.

The Logarithmic Polar Curve—Its Theory and Application to the Predetermination of Airplane Performance, V. Cronstedt. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 205, Oct. 1924, 34 pp., 14 figs. Outlines theory and shows some of possibilities of Rith method, generally known as logarithmic polar curve for predetermination of airplane performance, and also shows modifications required by more recent conceptions of performance.

Pilotless. Latest Progress in Telemechanics. Pilotless Airplanes. (Les derniers progrès de la télémécanique. L'avion sans pilote.), E. Marcotte. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 201-204. Discusses progress in distance control by means of Hertzian waves, Sperry stabilizers, pilotless mail carriers, etc.

Pilotless Airplanes, E. Marcotte. Mech. Eng., vol. 46, no. 12, Dec. 1924, p. 898. Discusses recent progress in telemechanics, with particular application to problem of pilotless flight; problem of stability in air; automatic control in starting; other problems and possibilities. (Abstract.) Translated from Arts & Metiers, vol. 77, no. 45, June, 1924, p. 210.

Pixie. The Parnall "Pixie" Light 'Plane. Flight, vol. 15, no. 43, Oct. 25, 1923, pp. 653-654, 4 figs. Particulars of Pixie I, with 500 c.c. Douglas engine; wing area, 100 sq. ft.; span, 28 ft. 6 in.; and length, 18 ft.; and Pixie II, with 750 c.c. Douglas engine wing area, 60 sq. ft.; span, 17 ft. 10 in.; and length, 18 ft.

Plywood. See AIRCRAFT CONSTRUCTION MATERIALS, Plywood.

Potez. See Commercial.

Prague Show. The Third International Aero Show at Prague. Flight, vol. 16, nos. 23, 24, 25, and 26, June 5, 12, 19, and 26, 1924, pp. 356-365, 380-386, 395-401, and 408-409, 87 figs. June 5: Descriptions of Czechoslovak airplanes exhibited. June 12: Descriptions of French and German airplanes exhibited. June 19 and 26: Construction of machines that merit closer inspection. See also Aeroplane, vol. 26, no. 26, June 25, 1924, 9 pp. between pp. 544 and 562, 12 figs.

Pressure Distribution on Wings. Pressure Distribution Over the Wings of an MB-3 Airplane in Flight, F. H. Norton. U. S. Advisory Comm. for Aeronautics, Report no. 193, 1924, 17 pp. 15 figs. Investigation carried out to determine distribution of load over wings of high-speed airplane under all conditions of flight and pressure distribution, during level flight, over portions of wings in slipstream and, during violent maneuvers, over entire wing surface results obtained.

Propellers. See AIRPLANE PROPELLERS.

Pursuit. The Curtiss "P.W.8" Biplane. Flight, vol. 16, no. 45, Nov. 6, 1924, pp. 705-706, 8 figs. See also Aviation, vol. 17, no. 2, July 14, 1924, pp. 746-748, 5 figs. Describes single-seater tractor biplane of two-bay type; fitted with Curtiss D.12 (high or low compression) engine and wing radiators; span, 32 ft.; overall length, 23 ft. 1 in.; height, 9 ft. 1 in. Type in which R. L. Maughan flew from New York to San Francisco between dawn and dusk.

Two New Czecho-Slovak Pursuit Machines. Aeroplane, vol. 27, no. 19, Nov. 5, 1924, pp. 442 and 444, 3 figs. Data on single-seater pursuit machines constructed by Milos Bondy, of Prague, known as Avia B.H.17 and Avia B.H.19; both fitted with 300-hp. Hispano-Suiza engine.

See also Fokker; Lioré-Olivier; Thomas-Morse.

R.V/23. The Stahlwerk-Mark R.V/23 Commercial Monoplane. Flight, vol. 16, no. 3, Jan. 17, 1924, pp. 31-32, 3 figs. Particulars of German four-seater parasol monoplane; 100-hp. 6-cylinder-in-line Mercedes engine; span, 46 ft. 9 in.; length, 25 ft. 11 in.; wing area, 290.5 sq. ft.

Racing. Dayton Air Meet Shows Marked Progress in Civil and Commercial Flying, L. S. Gillette. Automotive Industries, vol. 51, no. 15, Oct. 9, 1924, pp. 636-639, 6 figs. Account of races and participating machines.

See also Civil.

Radio Equipment. See RADIOTELEPHONY, Airplanes.

Refueling in Flight. Practical Value of Refueling Airplanes in Flight, H. H. Arnold. Aviation, vol. 17, no. 2, July 14, 1924, pp. 750-751, 1 fig. Discusses desirability of refueling during flight from fuel-carrying planes.

Rolling Moment Due to Ailerons. The Induction Factor Used for Computing the Rolling Moment Due to the Ailerons, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 187, Apr. 1924, 5 pp., 1 fig. Induction factor is determined from result of model test, and compared with formula recently developed by author; the two results are found to be in substantial agreement.

Rotor-Winged. See Wings.

Scale Effect. The Work of the Aeronautical Research Committee's Panel on Scale Effect, W. S. Farren. Roy. Aeronautical Soc.—Jl., vol. 28, no. 164, Aug. 1924, pp. 526-544 and (discussion) 544-550, 14 figs. Discusses design panel of Aerodynamics Sub-Committee; plan underlying work from 1918 to 1924 and results.

Seaplanes. See SEAPLANES.

Sesefsky. A Roumanian Aeroplane. Flight, vol. 16, no. 1, Jan. 3, 1924, pp. 3-4, 2 figs. Describes Sesefsky tractor biplane, a military machine intended for reconnaissance work; vertical triangular fin built up of multi-ply wood integral with fuselage; 250-hp. Astra-Benz engine; speed, 115 m.p.h.; span, 41 ft. 4 in.; length, 28 ft. 2 in.; wing area, 394 sq. ft.

Siskin Fighting. The Siskin II Aeroplane and Jaguar Aero Engine. Engineering, vol. 118, no. 3078, Dec. 26, 1924, pp. 870-871, 17 figs. partly on supp. plate and p. 864. Represents type originally designed for and supplied to British Govt. and embodying experience gained with fighting machines during war and under peace conditions subsequently; single-engined tractor biplane with positive stagger to wings, and good dihedral angle; fitted with Armstrong-Siddeley Jaguar engine of 385 hp., details of which are given.

Slipstream Velocity. Investigation of Slipstream Velocity, J. W. Crowley, Jr. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 194, 1924, 7 pp. 9 figs. Results of experiments to investigate velocity of air in slipstream in horizontal and climbing flight to determine form of expression giving slipstream in terms of air speed of airplane.

Specifications. Airplane Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 458-462. Specifications for American and foreign airplanes.

Sport. New Lincoln Standard Sport Plane. Aviation, vol. 17, no. 25, Dec. 22, 1924, p. 1438, 1 fig. Single seater equipped with 35-hp. Anzani engine built to design of S. Swanson.

See also Dietrich-Gobiet.

Stability. Utilization of Laboratory Charts for Study of the Stability and Centering of Airplanes (L'Utilisation des Courbes de Laboratoire pour l'étude de la stabilité et du centrage des avions), J. Kernéis. Aérophile, vol. 32, nos. 3-4 and 5-6, Feb. 1-15 and Mar. 1-15, 1924, pp. 54-57 and 89-93, 12 figs. It is shown that with regard to stability, laboratory curves lead in very simple manner to desired result; it is essential, before using them, to change them with regard to center of gravity, which can be accomplished by aid of simple graphic method.

Statistics of Developments. Our Place in Aviation, L. T. Jones. Aviation, vol. 17, no. 26, Dec. 29, 1924, pp. 1454-1458, 17 figs. Author presents statistical information in such form that it will represent correctly present trend of development in aeronautics; engine development; French and American engines; speed, wing area, and horsepower; speed and airplane weight; future performance of racing airplanes.

Stout Air Pullman. The Stout Air Pullman. Aviation, vol. 16, no. 20, May 19, 1924, pp. 533-534, 3 figs. See also Flight, vol. 16, no. 42, Oct. 16, 1924, pp. 668-669, 2 figs. America's first all-metal commercial plane, built by Stout Metal Airplane Co., of Detroit, is 7-passenger-and-pilot cabin transport designed for air-line work; engine is standard Liberty 400-sp. model, but fitted with new intake manifold which is latest development of Air Service; equipped with new type jump-gap Delco distributing system.

Strength Tests. Static Elastic and Breaking Tests of a Falco-Dornier Airplane with a 300-Hp. Hispano-Suiza Engine (Prova statica di elasticita e rottura dell-apparecchio "Falco Dornier" con motore "Hispano Suiza" 300 HP). Note Tecniche di Aeronautica, Jan. 1924, pp. 3-13, 12 figs. Describes tests made at Pisa in Dec., 1923, and gives results obtained.

Surveying, Use in. See SURVEYING, Aerial.

Swallow. The 1924 Swallow Commercial Three-Seater. Aviation, vol. 16, no. 7, Feb. 18, 1924, p. 179, 1 fig. Machine is equipped with Curtiss OX5 engine and has desirable commercial features such as small dimensions, ease of control, low initial cost, and very low maintenance cost.

Swanson-Freeman. The Swanson-Freeman "SS 4" Two-Seater Biplane. Flight, vol. 16, no. 9, Feb. 28, 1924, p. 116, 1 fig. Also Aviation, vol. 16, no. 4, Jan. 28, 1924, pp. 93-94, 1 fig. Principal data and dimensions; length, 21 ft. 7 in.; height, 8 ft. 6 in.; span, 28 ft.; chord, 4 ft. 4 in.; 80-hp. Le Rhone engine.

TA-4. Wind Tunnel Test of the Original TA-4 With the Following Airfoils: USA-27C Large; USA-27C Small; Göttingen 387; Göttingen 255, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 455 (Appendix), Aug. 1, 1924, 14 pp. 24 figs. Design characteristics of TA-4, two-seater training cantilever monoplane, and results of test made to determine aerodynamic characteristics.

Thomas-Morse. Wind Tunnel Test of the Thomas-Morse MB-3 Airplane, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 468, June 1, 1924, 25 pp., 29 figs. Description of MB-3, single-seater pursuit biplane with 300-hp. Hispano-Suiza motor, and results of wind tunnel tests on original MB-3 and three modifications, to determine aerodynamic characteristics.

Training. Success of Boeing Naval Training Plane. Aviation, vol. 16, no. 10, Mar. 10, 1924, p. 261, 1 fig. New Wright-engined plane of 200 hp. which won Navy's training-plane competition at Pensacola naval air station.

See also Civil; Cox-Klemin; TA-4.

Triplane Tests. Triplane Tests, C. Wieselsberger. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 178, Feb. 1924, 20 pp., 18 figs. Experiments carried out in order to determine aerodynamic characteristics of various triplanes, which differed in relative positions of wings and, more especially, in relative incidence of wings (decalage), in stagger, and in shape of wing sections. Translated from Technische Berichte, vol. 3, no. 7.

Troop Carriers. The Armstrong-Whitworth "Awana" Troop-Carrier. Flight, vol. 41, no. 14, Apr. 3, 1924, pp. 187-190, 6 figs. Particulars of large biplane having two 450-hp. Napier Lion engines; span, 105 ft. 6 in.; length, 68 ft.; total loaded weight, 18,450 lb.; cabin accommodates 25 troops with their kit.

Tubing for. See AIRCRAFT CONSTRUCTION MATERIALS, Steel and Duralumin Tubing.

Udet. The New Udet Commercial Monoplane. Flight, vol. 15, no. 47, Nov. 22, 1923, pp. 709-710, 2 figs. Particulars of German three-seater of very clean design; a high-wing monoplane of streamline design; 70-hp. Siemens engine; span, 39 ft. 4 in.; length, 23 ft. 10 in.; wing area, 212 sq. ft.; maximum speed, 111.6 m.p.h.

See also German Commercial.

Vickers. See Bristol.

Vortices and Airfoil Lift. Note on Vortices and on Their Relation to the Lift of Airfoils, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 184, Mar. 1924, 15 pp., 2 figs. Discusses meaning of vortices, so often mentioned in connection with creation of lift by wings; action of wings can be more easily understood without use of vortices.

Vulture. The Vickers "Vulture" Amphibian. Flight, vol. 16, no. 13, Mar. 27, 1924, pp. 172-175, 9 figs. Particulars of flying boat with a Napier "Lion" 450-hp. engine; length, 38 ft. 2 in.; span, 49 ft.; top speed with full load and at sea level, about 104 m.p.h.; cruising speed, about 82 m.p.h.

Wind-Tunnel Tests. Tests on a Model of the D Airplane T 39 of the "Deutsche Flugzeug Werke" (German Airplane Works), W. Molthan. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 175, Jan. 1924, 23 pp., 7 figs. Results of experiments made in small wind tunnel of Göttingen laboratory. Translated from Technische Berichte, vol. 3, no. 7.

The Effect of Wind Tunnel Turbulence upon the Forces Measured on Models, W. L. LePage and J. T. Nichols. U. S. Nat. Advisory Comm. for Aeronautics, no. 191, May 1924, 11 pp., 2 figs. on supp. plates. Tests undertaken to find effect of turbulence in air stream upon lift and drag forces measured on models in 4-ft. wind tunnel at Mass. Inst. Technology; maximum lifts and minimum drags were measured on Göttingen-387 and R.A.F.-15 airfoils, minimum drag on streamlined strut, and static pressure gradients for different conditions of turbulence.

Wind Tunnel Test of CO-2A Model Airplane, C. E. Archer. U. S. Air Service Information Circular, vol. 5, no. 453, Mar. 15, 1924, 17 pp., 12 figs. Results of test to obtain full data on lift, drag, L/D, and moment curve about center of gravity for angles from below zero lift to above maximum lift (with and without tail plane and with and without elevator).

Wind Tunnel Test of Eight Model Fuselages, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 477, Oct. 1, 1924, 14 pp., 12 figs. Results of tests to determine lift and drag forces on eight models, viz., MB-3, PW-2, CO-1,

CO-2, TP-1, NBS-1, VE-7, and TW-2, at various angles of attacks and various speeds.

Wind Tunnel Test of the Original TA-4 with the Following Airfoils: USA-27C Large, USA-27C Small, Göttingen 387, and Göttingen 255, A. L. Morse. U. S. Air Service Information Circular, vol. 5, no. 455, Mar. 15, 1924, 27 pp., 31 figs. Test to determine aerodynamic characteristics.

Wind Tunnels. See WIND TUNNELS.

Wings. A Generalization of the Schukowsky Wing Model (Eine Verallgemeinerung der Schukowskyschen Flügelabbildung), A. Betz. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, p. 100, 2 figs. Points out that by slight change in original Schukowsky method, useful profiles can be obtained.

Aerodynamic Stresses in Airplane Wings (Sur la mesure des efforts aérodynamiques supportés par la voilure d'un avion), E. Huguenard, A. Magnan and A. Planiol. Académie des Sciences—Comptes Rendus, vol. 179, no. 22, Dec. 1, 1924, pp. 1246-1248, 1 fig. Deals with an instrument for continuously measuring deformations of wings during flight and recording them by diagrams near pilot.

An Investigation of the Movements of the Points of Inflection on Beams Under Various Combinations of Loads, H. A. Sutton and J. S. Newell. U. S. Air Service Information Circular, vol. 5, no. 471, Aug. 1, 1924, 7 pp., 4 figs. Results of investigation to determine whether or not location of points of inflection on a beam changed materially under different ratios of bending load to axial load and different degrees of restraint at points of support.

Calculation of Bearing Wings in Two- and Three-Ribbed Rigid-Frame Form [Zur Berechnung freitragender Flugzeugflügel in zwei- und dreiholmiger Steifrahmenform (Vierendeel-Rostträger)], K. Thalau. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, pp. 103-109, 15 figs. Calculations for both two-ribbed and three-ribbed wings.

Design of Profiles for Bearing Surfaces (Zur Konstruktion von Tragflächenprofilen), W. Müller. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 3, June 1924, pp. 213-231, 13 figs. Discusses profiles deduced from circular 2-gons, Joukowsky tip profiles, and mathematical calculations connected with profile design.

Development of Influence Lines as Applied to Statically Indeterminate Airplane Beams, R. J. Minshall and F. B. Farquharson. Univ. Wash. Eng. Experiment Station—Bul., no. 25, Feb. 15, 1924, 15 pp., 22 figs. partly on supp. plates. Graphical method of obtaining these influence lines by graphical calculus, and practical application; model method.

Elements of the Wing Section Theory and of the Wing Theory, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 191, 1924, 25 pp., 4 figs. Results of theory of wings and of wing sections which are of immediate practical value; results proved and demonstrated by use of simple conceptions of "kinetic energy" and "momentum."

Experimental Results with Slotted Wings (Neuere Versuchsergebnisse mit Spaltflügeln), G. Lachmann. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 10, 15-16 and 17-18, May 26, Aug. 26 and Sept. 26, 1924, pp. 109-116, 173-176 and 181-185, 39 figs. May 26: Influence of arrangement of slots; reduction of profile resistance with normal flight; improvement of steering capacity with lower speeds. Aug. 26: Results of tests for Udet Aircraft Works at Munich-Ramersdorf; improvements in lift-drift ratio as high as 95 per cent were obtained by subdivision of wing, which corresponds to reduction in landing velocity of 30 per cent. Sept. 26: Measurements and results.

Form and Buoyancy Invariables of a Special Class of Wing Profile (Ueber die Form- und Auftriebsinvarianten für eine besondere Klasse von Flügelprofilen), W. Müller. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 5, Oct. 1924, pp. 389-404, 22 figs. Calculation of a series of forms deduced from the circular with ellipses as intermediaries.

Further Notes on the Design of Wing Spar Sections, E. P. Warner. Aviation, vol. 16, no, 14, Apr. 7, 1924, pp. 358-360, 2 figs. Supplementary to article by author in same journal, May 29, 1922, and to critical remarks by A. J. S. Pippard, July 17, 1922.

Interference of Multiplane Wings Having Elliptical Lift Distribution, H. von Sanden. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 181, Feb. 1924, 3 pp. Examination as to whether calculation of mutual induction or interference of two-wing surfaces are substantially altered by assuming elliptical instead of uniform lift distribution. Translated from Technische Berichte, vol. 3, no. 7.

Note on the Relative Effect of the Dihedral and the Sweep Back of Airplane Wings, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 177, Jan. 1924, 4 pp. It appears from investigation that effect of sweep back is always smaller than that of dihedral.

Preliminary Study of the Influence of a Rotating Cylinder on a Wing (Voorloopig onderzoek naar den invloed van een draaiende rol aangebracht in een vleugelprofiel), E. B. Wolff. Ingenieur, vol. 39, no. 49, Dec. 6, 1924, pp. 971-974, 3 figs. Investigation to ascertain whether it would be possible to obtain increased lift from airplane wing by building into its leading edge a rotating cylinder; results of wind-tunnel tests. See abstracted translation in Flight, vol. 17, no. 3, Jan. 15, 1925, pp. 30-31, 2 figs.

Proposal for Standardization of the Method of Computing Wing Sections, A. Gv. Baumhauer. Int. Aeronautics, vol. 1, no. 5, Dec. 1923-Jan. 1924, pp. 274-276 and 292, 2 figs. Report of Ryks-Studiedienst Voor de Luchtvaart, Amsterdam, Holland.

Some Experiments on the Vibration of Bars, E. F. Relf. Lond. Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 286, Oct. 1924, pp. 646-653, 3 figs. Work undertaken to throw light on questions relating to practical problem of vibration in airplane wing spars.

Turbulent Layers and Circulation (Wirbelschichten und Zirkulation), W. Müller. Zeit. für Technische Physik, vol. 5, no. 10, 1924, pp. 450-458, 7 figs. Discusses Koukowsky wing profile and theory of turbulent layers, to determine formation of eddies and circulation on wing in flight.

See also Airfoils; Biplanes; Flexible Wings; AERODYNAMICS, Lilienthal Effect.

Wood Members, Stresses in. Stresses in Wood Members Subjected to Combined Column and Beam Action, J. A. Newlin and G. W. Trayer. U. S. Nat. Advisory Comm. for Aeronautics, Report no. 188, 1924, 13 pp., 9 figs. Results of tests to determine properties of wing beams of standard and proposed sections, conducted by Forest Products Laboratory and financed by Army and Navy.

Yawing Moment, Induced. A New Relation between the Induced Yawing Moment and the Rolling Moment of an Airfoil in Straight Motion, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Report, no. 197, 1924, 5 pp., 1 fig. Computation of induced yawing moment which is said to be greatest part of entire yawing moment encountered by wings.

AIRSHIPS

AIRSHIPS

Aerodynamic Forces on Hulls. The Aerodynamic Forces on Airship Hulls, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 184, 1924, 20 pp., 4 figs. New method for making computations in connection with study of rigid airships, used in investigation of Navy's ZR-1; attempt is made to develop results from very fundamentals of mechanics, without reference to some of modern highly developed conceptions.

Aerodynamical Characteristics. The Aerodynamical Characteristics of the Airship as Deduced from Experiments on Models, with Application to Motion in a Horizontal Plane, R. Jones. Roy. Aeronautical Soc.—Jl., vol. 28, no. 158, Feb. 1924, pp. 88-150, 21 figs. Considers aerodynamic forces directly measured in wind channel, that is, forces due to translation; directs attention to examination of forces due to rotation, and to combined forces and determination of positions of equilibrium in curvilinear flight with rudders inclined at various angles; and considers distribution of normal pressures over hull and fins in steady motion.

Atmospheric Electricity, Effect on. Airship Flight and Atmospheric Electricity (Luftschiffahrt und atmosphärische Elektrizität), E. Herrera. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 59-61, 6 figs. Study of storm hazard with regard to balloon and airship flight. Translated from Spanish.

Condensing Water in Exhaust Gas. See GASOLINE ENGINES, Water Condensation from Exhaust Gas.

Developments, 1923. See AERONAUTICS, Developments.

Dimensions and Horsepower Determination. A Method of Determining the Dimensions and Horsepower of an Airship for any Given Performance, C. P. Burgess. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 194, May 1924, 14 pp., 3 figs. on supp. plates. Method includes means for estimating changes in performance or in size when modifications or new features are introduced into design, involving increase or saving in weights, or changes in resistance or propulsive efficiency.

Dirigibles. Mooring Dirigibles at Sea. Flight, vol. 16, no. 37, Sept. 11, 1924, pp. 562-563, 2 figs. Describes experiment of anchoring rigid airship to mobile mast; "Shenandoah" was moored to "Patoka" lying in Narragansett Bay.

Forces Due to Gusts. Forces on Airships in Gusts, C. P. Burgess. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 204, 1924, 8 pp. It is shown that in determining instantaneous angle of pitch or yaw, acceleration of gust is as important as its maximum velocity; expression is obtained for this instantaneous angle in terms of speed and certain aerodynamic characteristics of airship, and of maximum velocity and acceleration of gusts, and application of expression to determination of forces on ship is illustrated by numerical examples.

Fuel Consumption. The Compensation in Weight of Fuel Consumption of Airships, G. A. Crocco. Int. Aeronautics, vol. 1, no. 5, Dec. 1923-Jan. 1924, pp. 277-278. Condensation of combustion water.

Gas Turbines for. See GAS TURBINES, Automobiles.

Hangars. See HANGARS.

Hydrogen vs. Helium for. Urges Hydrogen for Polar Flight. Aviation, vol. 16, no. 4, Jan. 28, 1924, pp. 95-96. Ralph Upson, in interview granted Detroit News, warns against inflation with non-inflammable helium and points out advantages of hydrogen over helium for polar flight of Shenandoah.

Instruments. Instruments for Navigating Dirigibles (Neuere Mittel zur Navigierung von Luftschiffen), Boykow. Luftfahrt, vol. 28, no. 14, Oct. 20, 1924, pp. 233-235, 6 figs. Particulars of navigating instruments of Z.R. 3 for measuring speed, distance and course, gyroscopic compasses, etc.

Italian. Recent Progress in Italian Airship Construction, Umberto Nobile. Aviation, vol. 16, no. 5, Feb. 4, 1924, pp. 118-122, 4 figs. The SCA, OS and PM airships; keel girder construction; power-plant arrangement; type N airship, shape of hull, and characteristics.

The Italian N-Airship (Das italienische N-Luftschiff), W. Scherz. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 62-64, 3 figs. Structural details of airship developed by U. Nobile, with carrying capacity of 20 passengers, and equipped with three 240-hp. Maybach engines; max. speed, 100 km. per hr.

Liners. The Aerial Liner, V. C. Richmond. Birmingham Met. Soc.—Jl., vol. 8, no. 11, July 1924, pp. 497-506. Deals with post-war period; question of handling and mobility; foreign airship activities, particularly those of Germany.

Man-Driven. A Man-Driven Dirigible, U. Nobile. Aviation, vol. 12, no. 9, Sept. 1, 1924, pp. 934-936. Conclusions reached by author in regard to new machine he has in mind, which he calls "cycle-airship," in which, by means of transmission devices analogous to those of bicycles, muscular force of passengers themselves would be utilized for propulsion.

Materials for. See AIRCRAFT CONSTRUCTION MATERIALS.

Meteorological Effects on. A Detailed Consideration of the Effect of Meteorological Conditions on Airships, G. H. Scott and V. C. Richmond. Roy. Aeronautical Soc.—Jl., vol. 28, no. 159, Mar. 1924, pp. 189-221, 7 figs. Considers meteorological effects on navigation of airships, on choice of sites for aerodromes, and physical and chemical effects on airships structure.

Motors for. See GAS TURBINES, Automobiles.

Navigation. The Airship's Position (Le Point en Aéronef), L. Garin. Arts et Métiers, vol. 77, no. 44, May 1924, pp. 161-170, 5 figs. Discusses navigation charts, gives a number of curves, and develops formulas for determining position.

Pressure Distribution over Ellipsoid Surface. Remarks on the Pressure Distribution over the Surface of an Ellipsoid, Moving Translationally Through a Perfect Fluid, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 196, June 1924, 8 figs. Describes easy and convenient way to determine magnitude of velocity and of pressure at each point of surface of ellipsoid of rotation; knowledge of such pressure distribution is of great practical value for airship designer.

Pressure over Hull of Elongated. Note on the Pressure Distribution over the Hull of Elongated Airships with Circular Cross Section, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 192, May 1924, 4 pp. Note containing demonstration that pressure around circular cross section of elongated airship, plotted against diameter of symmetry, can be expected to be represented by straight line.

Rigid. The Strength of Rigid Airships, C. P. Burgess, J. C. Hunsaker, and S. Truscott. Roy. Aeronautical Soc.—Jl., vol. 28, no. 162, June 1924, pp. 327-448, 26 figs. Presents present state of our knowledge with regard to general strength of rigid airships. Strength of girders, static forces affecting longitudinal strength, aerodynamic forces, longitudinal strength, secondary stresses resulting from primary shearing forces, effect of gas pressure, effect of tension in outer cover, transverse

strength, and factors of safety and comparative strength. Bibliography.

Schütte-Lanz Light Construction. Light Construction of the Schütte-Lamz Airships (Leichtkonstruktion des Luftschiffbaus Schütte-Lanz), Gentzcke. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 9, May 15, 1924, pp. 77-95, 73 figs. Application, improvement, treatment, strength, weight and qualities of construction materials; beams and joints of metal construction; beams and joints of wood construction.

Semi-Rigid. Building a Semi-Rigid Airship, J. Younger. Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 867-872, 20 figs. Design; manufacture of gas bag; use and fabrication of duralumin; assembling articulated keel; assembling pilot car.

The Italian "N" Type Semi-Rigid Airship. Flight, vol. 16, no. 12, Mar. 20, 1924, pp. 160-161, 3 figs. Fitted with three 250-hp. engines each located in a stream-lined nacelle built up of duralumin and communicating with interior of keel; capacity, 670,700 cu. ft.; length, 347 ft. 8 in.; maximum height, 85 ft. 3 in.; maximum diameter, 64 ft.; useful load, 10.5 tons; maximum speed, 62 m.p.h.

The Italian Semi-Rigid Airship "MR." Flight, vol. 16, no. 36, Sept. 4, 1924, pp. 550-551, 2 figs. Also Aviation, vol. 17, no. 8, Aug. 25, 1924, p. 913, 1 fig. Particulars of smallest airship in world: overall length, 105 ft.; diameter, 25 ft. 6 in.; capacity, 33,900 cu. ft.; useful load, 992 lb.; speed, 40 m.p.h. May be usefully employed for short-radius scouting, experimental work, etc.

Shenandoah. Rigid Airships—United States Ship "Shenandoah," H. T. Bartlett. U. S. Naval Inst.—Proc., vol. 50, no. 2, Feb. 1924, pp. 161-172, 3 figs. Description of the Shenandoah; length, 680 ft.; diameter, 78.8 ft.; height, 96 ft.; gas capacity, 2,150,000 cu. ft.; deadweight, about 74,000 lb.; speed, about 60 m.p.h.

Speed of. Speed of Airships with Minimum Fuel Consumption (Die Geschwindigkeit geringsten Brennstoffverbrauchs bei Luftschiffen), W. Bleistein. Zeit. für Flugetechnik u. Motorluftschiffahrt, vol. 15, no. 5-6, Mar. 26, 1924, pp. 42-44, 4 figs. Critical discussion of rule-of-thumb formulas developed by Munk and described in U. S. Nat. Advisory Comm. for Aeronautics, Tech. Note no. 89.

The Influences of Speed on the Economic Aspects of Commercial Airships (Der Einfluss der Geschwindigkeit auf die Wirtschaftlichkeit der Verkehrsluftschiffe), W. Bleistein. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 20, 23, and 24, Oct. 28, Dec. 13, and 27, 1924, pp. 214-219, 262-263, and 269-275, 1 fig. Details with economic performance; maximum transport performance; radius of action; speed of minimum fuel consumption; gas consumption; size of ship; profitableness; speed and time-saving factor; length of voyage in relation to required number of ships for sustained service and in relation to operating costs; total annual expenditures; economical expenditures; economical speed; conclusions.

Stability. A Study of Static Stability of Airships, F. Rizzo. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 204, Sept. 1924, 50 pp., 19 figs. on supp. plates. Theoretical discussion, dealing with conditions of equilibrium, longitudinal stability, horizontal flight, directional stability, critical speed and discussion of reversal of controls. Experimental investigation, comprising experiments for determination of effects due to change of tail area, aspect ratio, tail form, and tail thickness.

U. S. Navy ZR-3. The Rigid Airship ZR-3, C. P. Burgess. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 4, Nov. 1924, pp. 553-572, 27 figs. Speed and endurance; description of hull longitudinal girders; types of girder construction; bow mooring gear; passenger and control car; gas cells; outer cover; provisions for cargo; power plant; fins and rudders.

V.Z.-24. The French Zodiac Dirigible "Vedette." Flight, vol. 16, no. 22, May 29, 1924, p. 300, 3 figs. Particulars of V.Z.24, airship of non-rigid type; capacity, 141,280 cu. ft.; overall length, 190 ft. 6 in.; overall diameter, 38 ft. 9 in.; weight, empty, 6670 lb.; useful load, 2944 lb.; speed range, 49.6-52.7 m.p.h.

Water Ballast, Recovery from Engine Exhaust. Condensation of Water from Engine Exhaust for Airship Ballasting, Rob. F. Gohr. U. S. Air Service Information Circular, vol. 1, no. 44, May 1, 1924, 41 pp., 30 figs. Part I: Work of Bur. of Standards; description of condensers; test results. Part II: Theory. Part III: Design and construction.

Water Recovery for Airship, H. F. Parker. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 532-535, 2 figs. Describes how total weight of airship becomes less as its flight continues, and gives details of means used to counteract this rising tendency; reviews experimental work that led to equipment of Shenandoah with water-recovery apparatus, and results following its installation.

Weather Difficulties. The Rigid Airship and the Weather, Jos. B. Anderson. U. S. Nav. Inst.—Proc., vol. 50, no. 260, Oct. 1924, pp. 1629-1645. Points out difficulties of carrying ship from hangar to field preparatory to flight; points out that efficient operation will depend upon forecasting of weather changes and taking advantage of favorable conditions and avoiding dangerous ones.

Z.R.-3. See U. S. Navy ZR-3; Zeppelin.

Zeppelin. Largest and Fastest of the Zeppelins. Sci. Am., vol. 130, no. 4, Apr. 1924, pp. 238-239, 7 figs. Particulars of new German-built airship for Navy.

The Airship ZS-3 and Prospects for Future Development of Giant Airships (Das Zeppelin-Luftschiff Z. R. 3 und die Aussichten für die weitere Entwicklung der Riesenluftschiffe), R. Conrad. Motorwagen, vol. 27, no. 26, Sept. 20, 1924, pp. 457-463, 8 figs. Tabular data of some characteristic airships; gives review of developments, and their bearing on future prospects.

The New Transatlantic Dirigible (Le nouveau dirigeable transatlantique), R. Caillol. Technique Moderne, vol. 16, no. 19, Oct. 1, 1924, pp. 645-653, 20 figs. Detailed description of dirigible constructed in Germany by Zeppelin company for United States, including frame, envelope, engines, airscrews, fuel, controls, radio equipment, etc.

The Zeppelin L.Z. 126 (Le Zeppelin L.Z. 126), M. Foerster. Bul. Technique du Bur. Veritas, vol. 6, no. 2, Feb. 1924, pp. 24-27, 7 figs. Characteristics and design; nacelles; engines; rudders; passenger and crew facilities; nautical instruments. Translated from Werft-Reederei-Hafen, Nov. 22, 1923.

Twenty-Five Years of Zeppelin Airship Construction (Fünfundzwanzig Jahre Zeppelin-Luftschiffbau), L. Dürr. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 529-537, 31 figs. Details of airship LZ 126 built by Zeppelin Co. for the United States; deals with body of ship, machinery, propellers, gasoline storage, ballast, pilot's nacelle, electric lighting, landing gear, etc.

AKRIT. See STEEL, HIGH-SPEED, Akrit.

ALARM SIGNALING

Burglar, Patents for. Indicators and Burglar and Like Alarms. Abridgments of Specifications (Lond.), Class 118 (i), Period 1916-20, 28 pp. Patents for inventions.

Fire Alarms. Modern Fire Alarms (Moderne Feuermelder), F. Linke. Gewerbefleiss, vol. 103, nos. 8 and 9, Aug. and Sept. 1924, pp. 130-134 and 151-155, 15 figs. Discusses the various systems of Siemens & Halske since 1850.

ALBERTOL. See RESINS, Albertol Synthetic.

ALCOHOL

Benzyl. See BENZYL ALCOHOL.

Catalytic Decomposition. Catalytic Decomposition of Ethyl Alcohol in the Presence of Aluminum (Décomposition catalytique de l'alcool éthylique en présence d'alumine), J. E. Goris. Chimie & Industrie, vol. 11, no. 3, Mar. 1924, pp. 449-452, 1 fig. Systematic study of influence of principal factors governing reaction, namely, temperature, velocity of discharge of liquid on catalytic agent, and concentration of alcoholic liquid.

Coke-Oven Gas as Source. Recovery of Alcohol from Coke-Oven Gas and the Reaction of Ethylene with Sulphuric Acid (Zur Frage der Alkoholgewinnung aus Kokereigasen und die Umsetzung von Aethylen mit Schwefelsäure), B. Neumann. Gas- u. Wasserfach, vol. 67, nos. 1, 2 and 5, Jan. 5, 12 and Feb. 2, 1924, pp. 1-3, 14-15 and 53-55, 5 figs. Review of previous work, together with account of experiments on absorption of pure ethylene by concentrated sulphuric acid and preparation of alcohol from product; chief difficulty in application of process lies in cost of reconcentrating diluted acid, which renders process at present uneconomic.

Molasses as Source. Alcohol from Cane Blackstraps, W. L. Owen and J. D. Bond. La. Planter & Sugar Mfr., vol. 72, no. 17, Apr. 26, 1924, pp. 332-335, 8 figs. Acidification of wort is one of the most important stages of manufacture through which molasses passes in its conversion into alcohol. Results of investigation to determine effect of acid additions.

Alcohol Yields from Molasses, H. A. Tempany. Sugar, vol. 26, no. 4, Apr. 1924, pp. 189-190. Experiments made by Dept. of Agriculture of Mauritius. Comparison of percentage composition of exhaust molasses of Mauritius with that of Hawaii and Java; determination of quantities of sucrose in suspension in form of fine grain present in samples of molasses; etc.

Production. Absolute Alcohol, Its History, Production and Control (L'alcool Absolu. Son histoire, sa fabrication, son controle), B. Piqué. Association des Chimistes—Bul., vol. 61, no. 10, Apr. 1924, pp. 386-414, 7 figs. Discusses various processes of production, including Deroy, Mariller, Berley, Coppee, Neste, Ricard, Barbet, etc.

The Manufacture of Industrial Alcohol. S. African Jl. of Industries, vol. 7, no. 1, Jan. 1924, pp. 32-35. Discusses possibilities of industry in South Africa, dealing with nature and cost of raw materials, cost of producing alcohol, denaturants, and coloring of motor fuel.

ALIGNMENT CHARTS

Construction. Building Up Alignment Charts (Der Aufbau der Leitertafeln), H. Winkel. Praktische Machinen-Konstrukteur, vol. 57, nos. 24 and 25, July 1 and 8, 1924, pp. 339-342 and 349-352, 13 figs. Logarithmic multiplication and addition; calculation of functions; technical examples.

Graphic Charts for Calculating (Graphische Rechentafeln), H. Pfieger-Haertel. Dinglers Polytechnisches Jl., vol. 339, no. 16, Aug. 1924, pp. 151-154, 8 figs. Discusses Cartesian and general alignment charts and their construction and application.

Nomographic Solutions for Engineering Formulae, H. B. Muckleston. Can. Engr., vol. 47, no. 12, Sept. 16, 1924, pp. 329-333, 8 figs. Simplified method of constructing nomographic or alignment diagrams, with explanation of principles involved; alignment nomograms merit more attention than better known Cartesian nomogram; various arrangements of scales.

The Machine Cards of the AwF (Committee on Economic Production), Introduction to Nomography (Die Maschinenkarte des AwF, eine Einführung in die Nomographie), H. Winkel. Praktische Maschinen-Konstrukteur, vol. 57, nos. 19-20 and 21, June 4 and 10, 1924, pp. 261-265 and 291-293, 14 figs. Discusses mechanical addition, substraction, multiplication, and division; use of logarithmic paper; application in calculation of rotary piston engines, to rotary machinery, and to reciprocating movement.

Electrical Applications. Recent Applications of Alignment Charts (Neuere Anwendungen der Nomographie), D. Wehage. Elektrotechnische Zeit., vol. 45, no. 49, Dec. 4, 1924, pp. 1342-1346, 2 figs. Tabulation of alignment charts published, especially on electrotechnics, giving author, title, formulas, etc.

Foundry. Use of Graphic Means for Construction and Calculation (Ueber den Gebrauch graphischer Hilfstabellen beim Konstruieren und Rechnen). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 26, June 29, 1924, pp. 185-188, 9 figs. Discusses use of logarithmic tables, slide rules, sectional paper, sets of containers, etc.

Mathematical Principles. The Mathematical Fundamentals of Nomography (Ueber die mathematischen Grundlagen der Nomographie), L. Bieberbach. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 495-498, 7 figs. Mathematical principles of alignment charts in simple and somewhat more complicated cases; suggestions for further developments.

Reinforced Concrete. Nomography in Reinforced Concrete Calculation (Nomographie in der Eisenbetonrechnung), Rob. Jacki. Beton u. Eisen, vol. 23, no. 7, Apr. 5, 1924, pp. 77-82, 17 figs. It is shown how different frequently occurring calculations can be greatly accelerated with aid of alignment charts which can be easily plotted by any engineer.

Ship Steel Weights. A Steel Weight Nomogram, E. V. Telfer. Mar. Eng., vol. 29, no. 2, Dec. 1924, pp. 720-723, 4 figs. Describes nomogram worked out for British standards and practice; principle involved is said to be applicable to any others.

Surfaces and Volumes. Nomograms for Rapid Calculation of Surfaces and Volumes (Der Gebrauch von Nomogrammen zur Flächen- und Massenberechnung), J. Nemcsek. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 13, Oct. 15, 1924, pp. 294-296, 5 figs. Method for calculating surfaces of dams, cross sections of cuts, etc., based on geometric anamorphosis.

ALLOY STEELS

Boiler Plates. See BOILER PLATE, Alloy Steels for.

Brittle Range. Brittle Range in Low-Alloy Steels, M. A. Grossman. Iron Age, vol. 114, no. 3, July 17, 1924, pp. 149-151, 4 figs. Behavior of austenite during quenching and drawing a probable cause. Sensitive method of measuring change in volume.

Chrome. See CHROME STEEL.

Chrome-Nickel. See CHROME-NICKEL STEEL.

Chromium and Vanadium Determination. The Determination of Chromium and Vanadium in Alloy Steels, L. Lindemann. Metal Industry (Lond.), vol. 25, no. 18, Oct. 31, 1924, p. 431. Describes method which is founded on numerous estimations, and includes points from best of modern methods.

Cobalt Steel. See COBALT STEEL.

Copper Steel. Copper in Modern Steels, G. J. Fertig. Tech Eng. News, vol. 4, nos. 9 and 10, Mar. and Apr. 1924, pp. 352-353 and 378; and 8-9 and 30, 15 figs. Mar.: Details concerning hardness properties of copper steels. Apr.: Corrosion features of these steels.

Corrosion-and-Heat-Resistant. Alloys Resistant to Heat and Corrosion, J. H. G. Monypenny. Soc. Glass Technology—Jl., vol. 8, no. 31, Sept. 1924, pp. 150-162, 5 figs. Account of useful mechanical properties of some alloys, used for valves and other fittings for steam service and for such articles as rams, pump rods and valves for hydraulic pumps and presses, with indication as to how they may be utilized; deals principally with stainless steel.

Stainless, Non-Corrosive Alloy Steels Meet Exacting Chassis and Body Requirements. Automotive Industries, vol. 51, no. 22, Nov. 27, 1924, pp. 937-938. Abstract of booklet on non-corrosive and heat-resisting steels issued by Crucible Steel Co. of Am., in which various steels of this type manufactured by company are described and subject discussed in general way.

Development. The Development of Alloy Steels, R. Hadfield. Iron & Coal Trades Rev., vol. 108, no. 2939, June 27, 1924, pp. 1120-1122, 1 fig. Also (abstracts) Iron Trade Rev., vol. 74, no. 25, June 19, 1924, pp. 1627-1628, 1 fig, and Mech. Wld., vol. 76, no. 1968, Sept. 19, 1924, pp. 189-190. Gives comprehensive survey, largely historical, of development of alloy steels and important position they have attained in metallurgical and engineering industries.

Locomotive, Parts. Alloy Steels versus Carbon Steels for Locomotives. Ry. Engr., vol. 45, no. 533, June 1924, pp. 198-200. Review of subject of alloy steel, advantage sof "straight" carbon steels, case-hardening steel, special steels for locomotive work, and alloy-steel "defects."

Manufacture. See STEEL MANUFACTURE.

Molybdenum Steel. See MOLYBDENUM STEEL.

Nickel. See NICKEL STEEL.

Pearlite Point, Movement of. The Movement of the Pearlite Point through Nickel and Chromium (Die Verschiebung des Perlitpunktes durch Nickel und Chrom), N. H. Aall. Stahl u. Eisen, vol. 44, no. 10, Mar. 6, 1924, pp. 256-259, 10 figs. Verification of the Aall hypothesis on chrome and nickel steels; relations between pearlite line, pearlite point, and alloy content.

Silicon Steel. See SILICON STEEL.

ALLOYS

Acid Mine Water. Corrosion-Resisting Alloys for Use in Acid Mine Water, R. J. Anderson and G. M. Enos. Am. Soc. for Testing Matls.—Preprint of paper for meeting June 24-27, 1924, no. 19c, 15 pp. Importance of corrosion problem to coal-mining industry; nature of acid mine water from coal mines; typical analyses of acid mine waters from bituminous coal mines; impracticability of attempting to neutralize acid waters underground; nature of corrosion processes in mine water; results of tests carried out by U. S. Bur. Mines during past several years on corrosion of ferrous and non-ferrous materials in acid mine waters from coal mines; materials resistant to acid mine waters; some specific corrosion problems of coal-mine operator. Bibliography.

Acid-Resisting. See NITRIC ACID, Plants, Acid-Resisting Iron for.

Action of Lead on. Action of Lead Upon Alloys, Geo. A. Drysdale. Foundry, vol. 52, no. 9, May 1, 1924, pp. 349-350. Obstacles which have to be overcome in melting and production of satisfactory castings from alloys suitable for use in mine pumps and accessories.

Aluminum. See ALUMINUM ALLOYS; DURALUMIN.

Aluminum Bronze. See ALUMINUM BRONZE.

Antimony in. See ANTIMONY, Estimation in Ores and Alloys.

Bearing Metals. See BEARING METALS.

Brass. See BRASS.

British Practice. Useful New Alloys and Bronzes for Engineers, A. W. Jordon. Can. Foundryman, vol. 15, no. 3, Mar. 1924, pp. 13 and 15. British practice in engineering and foundry field.

Bronzes. See BRONZES.

Cadmium-Lead Zinc. The Cadmium-Lead-Zinc System, M. Cook. Inst. Metals—Advance paper no. 3, for meeting Mar. 12-13, 1924, 17 pp., 10 figs. Numbering of alloys; preparation of alloys and thermal method; liquidus surface; solidus; binary eutectics; region of partial miscibility; microscopic examination.

Casting Properties. Casting Properties of Iron and Metal Alloys (Giessereieigenschaften der Eisen- und Metall-Legierungen), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, no. 21, June 10, 1924, pp. 295-298, 13 figs. Discusses changes in volume during cooling, increase due to separation of graphite, etc.

Chromium. See CHROMIUM, Uses and Alloys.

Copper. See COPPER ALLOYS.

Corroded, Coatings Formed on. Coatings Formed on Corroded Metals and Alloys, G. M. Enos and R. J. Anderson. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1358-N, July 1924, 9 pp., 16 figs. As coating formed affects corrosion rate, duplicate samples of eight nonferrous alloys were placed in flowing mine water. Alloys tested were as cast or as rolled, and machined or polished. Describes tests and gives corrosion losses and appearance of samples at end of test.

Corrosion-Resistant. Corrosion-Resistant Alloys—Past, Present and Future—With Suggestions as to Future Trend, P. A. E. Armstrong. Am. Soc. for Testing Matls.—Preprint of paper for meeting June 24-27, 1924, no. 19b, 15 pp.

Symposium on Corrosion-Resistant, Heat-Resistant and Electrical-Resistance Alloys. Am. Soc. for Testing Matls.—Preprint of paper for meeting June 24-27, 1924, no. 19a, 4 pp. Contains tabulation on supplementary pages of manufacturers' data on composition and properties of the alloys.

Tabular Presentation of Chemical and Physical Properties of Corrosion-Resisting Alloys. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 79-83. Tables incorporating that part of systemized compilation made by a committee of members of Am. Soc. for Testing Matls. of available data regarding those alloys having iron, nickel or copper as predominating element and offering resistance to various destructive agencies, which is of value to chemical engineer.

Tests for Grading Corrosion-Resisting Alloys, Wm. E. Erickson and L. A. Kirst. Am. Electrochem. Soc.—Advance paper no. 27, for meeting Oct. 2-4, 1924, pp. 427-434. Results of experiments undertaken in hope of separating alloys into several groups according to their resistance to corrosion; of common metals, silicon and chromium appear to be most resistant to corrosion; addition of either or both of these elements to iron reduces corrodibility very appreciably.

See also Acid Mine Waters.

Die-Casting. See DIE CASTING, Machines, Alloys, and Dies.

Elasticity of Measurement. See METALS, Elasticity of, Measurement.

Electrical Resistance. Materials for Electric Resistances (Beiträge zur Kenntnis von Widerstandsmaterialien), Geo. Klein. Elektrotechnische Zeit., vol. 45, no. 14, Apr. 3, 1924, pp. 300-302, 3 figs. Research work with view to devising some inexpensive alloy suitable for general resistance use has led to discovery of nickel-manganese-steel combination which, with certain admixtures, has remarkable properties for such use and is very low in price; its specific resistance is 0.70 ohms per sq. cm. and its cost is one-sixth that of chromium-nickel alloy; it melts at 1250 dec. cent. and permits therefore very high specific load without being subject to undue oxidation.

Some Electrical Properties of High-Resistance Alloys, M. A. Hunter and A. Jones. Am. Soc. for Testing Matls: Preprint of paper for meeting June 24-27, 1924, no. 18m, 16 pp., 4 figs. Theoretical considerations; materials used for high-resistance alloys; thermal electromotive forces of alloys.

See also ALLOYS, Corrosion Resistant.

Ferro. See FERROALLOYS.

Fusible. Properties of Fusible Alloys, N. F. Budgen. Chem. & Industry, vol. 43, no. 27, July 4, 1924, pp. 200T-203T, 2 figs. Discusses properties of lead, bismuth, tin, cadmium, and mercury, used for fusible plugs in automatic fire-extinguisher systems, also manufacture of small statuary, etc.

Gun Metal. See GUN METAL.

Heat Conductivity. See METALS, Heat Conductivity.

Heat of Formation. Heat of Formation of Inter-Metallic Compounds (Ueber die Bildungswärmen intermetallischer Verbindungen), W. Biltz and H. Pieper W. Wagner. Zeit. für anorganische u. allgemeine Chemie, vol. 134, no. 1, Mar. 29, 1924, pp. 1-36, 1 fig. Series of articles dealing with calcium alloys, cerium alloys, cobalt-aluminum alloys and copper alloys.

Iron. See IRON ALLOYS.

Lead. See LEAD ALLOYS.

Light. Light Alloys, J. B. Swan. Automobile Engr., vol. 14, no. 194, Oct. 1924, pp. 293-300, 9 figs. General survey of modern practice; parts of automobile suitable for light-alloy castings; magnesium alloys; casting alloys suitable for stock loading; piston alloys; alloys suitable for forging purposes; duralumin magnalite; aluminum as bearing metal; light alloys and hardness; Air Board, U. S. Navy and other alloys.

Light Alloys for Pistons and Connecting-Rods, L. Aitchison. Automobile Engr., vol. 14, no. 189, May 1924, pp. 148-155, 5 figs. Discusses advantages and disadvantages of light alloys for automobile-engine pistons and connecting rods.

Light Metals in Alloys (Die Leichtmetalle in Legierungen), F. Regelsberger. Zeit. für angewandte Chemie, vol. 37, no. 17, Apr. 24, 1924, pp. 235-239. Discusses alloys of light metals with others and how properties of both classes are affected by alloying, especially alkali metals, magnesium, beryllium, aluminum, etc.

Recent Progress in Light Alloys (Les alliages légers. leurs récents progrés), L. Guillet. Revue Universelle des Mines, vol. 67, no. 1, Apr. 1, 1924, pp. 7-36, 14 figs. Examination of alloys of aluminum and magnesium, their properties, influence of impurities, etc.

See also ALUMINUM ALLOYS.

Light Metals. AIRCRAFT CONSTRUCTION MATERIALS, Light Metals.

Magnesium. See MAGNESIUM ALLOYS.

Monel Metal. See MONEL METAL.

Nickel. See NICKEL ALLOYS.

Nickel Silver. See NICKEL SILVER.

Non-Ferrous. Non-Ferrous Alloys in Marine Engineering—with Special Reference to Admiralty Gunmetal, Manganese Brass, and White Metals, A. E. Logan. Foundry Trade Jl., vol. 29, nos. 408 and 410, June 12 and 26, 1924, pp. 486-492 and (discussion) 550-552, 18 figs. Equilibrium diagram of copper-tin alloys; casting temperature; structure; heat treatment.

The Practical Value of Modern Non-Ferrous Alloys, S. F. Barclay. Foundry Trade Jl., vol. 29, no. 389, Jan. 31, 1924, pp. 85-87, 1 fig. Shows that if founder is to give best service to his customers he needs to know exact use to which his castings will be put, so that he can bring out relevant quality in highest degrees; discusses different alloys.

See also NON-FERROUS METALS.

Non-Ferrous, Contraction. Contraction and Shrinkage of Non-Ferrous Alloys, Rob. J. Anderson. Tech. Eng. News, vol. 4, no. 7, Jan. 1924, pp. 258, 294, 296, and 298. Notes on liquid, solidification, and solid shrinkage; linear contraction; factors affecting contraction of alloy on casting.

Non-Ferrous, Effect of Casting Temperatures. The Effect of Casting Temperatures on the Physical Properties of Non-Ferrous Alloys. Metal Industry (Lond.), vol. 25, no. 21, Nov. 21, 1924, pp. 498-500, 4 figs. Discussion at West Yorkshire Met. Soc.

Preparation. The Preparation of Pure Alloys, R. F. Mehl. Am. Electrochem Soc.—Advance paper no. 2, for meeting Oct. 2-4, 1924, pp. 9-36, 6 figs. Discusses metallographic data, with particular reference to effect of impurities upon electrical measurements; contamination; preparation of pure basic oxide crucibles; new method of making pure magnesia crucibles of high strength and density, for use up to 1200 deg. cent.; describes combined furnace and casting apparatus for preparation of very pure alloys in a form suitable for measurement of electrical properties; methods for measurement of thermoelectromotive force and temperature coefficient of resistance of aluminum-magnesium alloys; results of preliminary measurements of temperature coefficient of resistance and of thermoelectromotive force and its temperature coefficient, upon certain compositions of system Al-Mg.

Separation. Progress in Separation of Alloys Containing Precious Metals (Fortschritte in der Scheidung edelmetallhaltiger Legierungen), G. Eger. Zeit. für angewandte Chemie, vol. 37, no. 11, Mar. 13, 1924, pp. 137-144, 16 figs. Discusses electrolytic separation process for production of gold, silver, etc., in binary and ternary alloys; refining of gold; etc.

Silver. Equilibria between Sulphur and Metal Pairs in Ternary Alloys (Gleichgewichte zwischen Metallpaaren und Schwefel), E. Lüder. Metall u. Erz, vol. 21, no. 4, 2nd Feb. issue, 1924, pp. 65-69, 7 figs. The ternary system silver-iron-sulphur.

The Ternary System Silver-Copper-Iron (Das Dreistoff-System Silber-Kupfer-Eisen), E. Lüder. Zeit. für Metallkunde, vol. 16, no. 2, Feb. 1924, pp. 61-62, 2 figs. Limited solubility of the metals, silver, copper, and iron in liquid state; slight solubility of three components in solid state; solidification processes.

Structural Composition, Determination of. Determination of Structural Composition of Alloys by a Metallographic Planimeter, E. P. Polushkin. Am. Inst. Min. & Met. Engrs.—Trans., no. 1387-E, Dec. 1924, 19 pp., 11 figs. Shows that structural composition of alloy may be found by planimetric measurement of total area occupied by each of constituents on a few representative photomicrographs of this alloy; when area is determined, volume and proportional weight of constituent may be calculated; method has been used for determina-

tion of structural composition for binary eutectics and other binary alloys with known constituents; also composition of unknown constituents in binary alloys.

Tin. See TIN ALLOYS.

ALPAX. See ALUMINUM ALLOYS, Alpax.

ALTERNATORS. See ELECTRIC GENERATORS. A. C.; TURBO-ALTERNATORS.

ALUDUR. See ALUMINUM ALLOYS, Aludur.

ALUM

Manufacture. Cutting Cost with Continuous Operation, G. E. Walker. Chem. & Met. Eng., vol. 31, no. 20, Nov. 17, 1924, pp. 776-780, 8 figs. Manufacture of alum simplified and cheapened and product improved by applying modern operating methods.

ALUMINA

Precipitates. Constitution and Evolution of Precipitates of Alumina (Constitution et évolution des précipités d'alumine), P. Pascal. Académie des Sciences—Comptes Rendus, vol. 178, no. 5, Jan. 28, 1924, pp. 481-483. From measurements of magnetic susceptibilities of specimens of alumina precipitated under various conditions, author concludes that precipitate (a gel) formed by addition of aqueous ammonia to aluminum salt consists originally of anhydrous alumina, which at length is converted into hydrate, $Al_2O_3\ 3H_2O$; this is unstable and not identical with crystalline hydrate.

ALUMINUM

[See also NON-FERROUS METALS.]

Alkali Determination in. Determination of Alkali Metals in Aluminum and Its Alloys (Alkalibestimmung in Aluminium und Aluminiumlegierungen), Schürmann and Schob. Chemiker-Zeitung, vol. 48, no. 23-24, Feb. 23, 1924, pp. 97-98. Describes method which is suitable for separation of small quantities of lithium from large amounts of aluminum.

Analysis. Aluminum in Alloys, D. H. Brophy. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, p. 963. Simple and rapid method for analysis of aluminum.

Annealing. Soft Annealing of Aluminum (Das Weichglühen von Aluminium), H. Röhrig. Zeit. für Metallkunde, vol. 16, no. 7, July 1924, pp. 265-270, 10 figs. Discusses aluminum sheets, determination of relation between degree and velocity of becoming soft, and duration, temperature, and strength of heat transmission; also tensile strength, elasticity, and size of grain.

Bauxite. See BAUXITE.

Carbon Determination in. The Determination of Carbon in Aluminum (Die Bestimmung des Kohlenstoffs im Aluminium), R. Hahn. Zeit. für Metallkunde, vol. 16, no. 2, Feb. 1924, pp. 59-60. Also (abstract) Metal Industry (N. Y.), vol. 22, no. 8, Aug. 1924, pp. 318-319. Comparison of well-known methods of determination shows that best method entails combustion of metal with help of oxidizing reagent.

Castings. Aluminum Castings, C. Dicken. Foundry Trade Jl., vol. 30, no. 432, Nov. 27, 1924, pp. 466-468 including discussion. Selection of metal; melting details; temperature; patterns; running; molding; blow-holes.

Casting Aluminum Cycle Parts, H. R. Simonds. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 661-664, 8 figs. Congested condition of streets in business sections of cities has opened new fields for motorcycle. Many parts being made of aluminum to secure lightness. Notes on methods employed by Springfield Malleable Iron Co., Springfield, Mass., in modern aluminum and brass foundry recently started to care for increased demands for aluminum alloy castings and other nonferrous foundry business.

The Production of Aluminum Castings (Die Herstellung von Aluminiumguss), von Zeerleder. Metall u. Erz, vol. 21, no. 5, 1st Mar. issue, 1924, pp. 99-101. Describes recommendable working methods in aluminum foundries; melting arrangements; treatment of metal and production of molds.

Cerium, Influence. The Influence of Cerium on Aluminum (Der Einfluss des Cers auf Aluminium), K. L. Meissner. Metall u. Erz., vol. 21, no. 3, 1st Feb. issue, 1924, pp. 41-44. Critical discussion of previous investigations, and results of author's own investigations.

Chemical Agents, Effect of. Experiences with Aluminum in the Chemical Industry (Erfahrungen mit Aluminium in der chemischen Industries). Chemiker-Zeitung, vol. 48, no. 149, Dec. 11, 1924, pp. 921-922. Replies to questionnaire sent to various manufacturing firms giving effect of various agents on aluminum.

Chemical Industries, Use in. Experiences with Aluminum as a Material of Construction in Chemical Engineering Industries. Chem. & Met. Eng., vol. 30, no. 26, June 30, 1924, pp. 1022-1025. Results of questionnaire of German Met. Assn. show metal's advantages and limitations in wide variety of industrial equipment. Translated from Chemiker-Zeitung, vol. 16, Feb. 6 and 20, 1924, pp. 65 and 89.

Commercial Aspect. Case of Aluminum: The Commercial Aspect, Rob. J. Anderson. Brass World, vol. 20, no. 12, Dec. 1924, pp. 413-415. Foreign outlook; production, imports and exports; aluminum industry in 1923, in America and foreign countries.

Conductors. See ELECTRIC CONDUCTORS, Aluminum.

Corrosion. Recent Observations Regarding the Corrosion, Cleansing, and Protection of Aluminum, H. A. Gardner. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 206-207 and (discussion) 202, 2 figs. Experimental investigations; cleansers for aluminum alloys; gives table of results of corrosion tests on aluminum and aluminum alloys.

Electric Conductivity. Electrical Conductivity of Commercial Aluminum (Conductibilité électrique de l'aluminium commercial), L. Guillet. Revue de Métallurgie, vol. 21, no. 1, Jan. 1924, pp. 12-17, 5 figs. Influence of impurities and treatments; tests on cast, rolled, and drawn metal.

Electrical Equipment. The Use of Aluminum in Electrical Equipment (Emploi de l'aluminium dans la construction électrique), M. Dusaugey. Revue Universelle des Mines, vol. 67, no. 6, Mar. 15, 1924, pp. 362-372. Technical and economic comparison of aluminum and copper; technical qualities of aluminum; aluminum-steel cables; use of aluminum in electrical apparatus; standardization.

Foundry Practice and Working. Aluminum and Its Alloys. Metal Industry (Lond.), vol. 25, nos. 15, 18, and 20, Oct. 10, 31, and Nov. 14, 1924, pp. 351-353, 421-422, 4 figs., and 475-476, 3 figs. Oct. 10: Aluminum foundry practice. Oct. 31: Working of aluminum. Nov. 14: Corrosion and protection of aluminum.

Furnaces for Melting. See FURNACES, METALLURGICAL, Aluminum-Melting.

German Industry. Development of Aluminum Industry in Germany (Ueber die Entwicklung der Aluminiumindustrie in Deutschland), H. Specketer. Zeit. für angewandte Chemie, vol. 37, no. 27, June 25, 1924, pp. 447-451. Details of development arising from war and activity of works at Rummelsburg, Horrem, Bitterfeld, and Lauta.

Melted, Radiation Emission of. Radiation Emission of Melted Aluminum (Ueber die Strahlungsemission des geschmolzenen Aluminiums), M. Moeller and H. Miething. Giesserei-Zeitung, vol. 21, no. 20, Oct. 15, 1924, pp. 444-446, 3 figs. Discusses measurement of capacity of emission of a surface of melted aluminum at 700-1000 deg. exposed to free air at $\lambda = 0.65\ \mu$.

Melting, Use of Fluxes in. The Use of Fluxes in the Melting of Aluminum and its Alloys, W. Rosenhain and S. L. Archbutt. Foundry Trade Jl., vol. 29, no. 405, May 22, 1924, pp. 427-428. Paper read at symposium arranged by Faraday Soc., Inst. Metals, Inst. British Foundrymen, and Non-Ferrous Research Assn.

Metallurgy. The Metallurgy of Aluminum, F. A. Livermore. Foundry Trade Jl., vol. 30, nos. 417, 419, 420, 423, and 425, Aug. 14, 28, Sept. 4, 25, and Oct. 2, 1924, pp. 163-166, 187-189, 205-206, 265-267, and 311-313, 13 figs. Occurrence; natural compounds, including bauxite, cryolite, corundum, aluminum sulphate, etc.; chemical and electrochemical methods of production; physical and chemical properties; alloys; care of crucibles; melting conditions and melting furnaces.

Oxide. See ALUMINUM OXIDE, Production from Clay.

Oxy-Acetylene Welding. See OXY-ACETYLENE WELDING, Aluminum.

Paints. See PAINTS, Aluminum.

Powders, Manufacture. The Manufacture of High Grade Aluminum and Bronze Powders, O. Smalley. Metal Industry (Lond.), vol. 24, nos. 12, 13, 19, 21, and 24, and vol. 25, nos. 8 and 16, Mar. 21, 18, May 9, 23, June 13, Aug. 22, and Oct. 17, 1924, pp. 273-274, 297-298, 445-446, 493-494, 569-570, 169-170, and 369-371, 5 figs. Manufacture of powders; problems in selection of raw materials and their treatment and preparation in case of "silver" or aluminum powders; stamping operation; function of grease; polishing; dyeing or coloring; etc.

Production. Aluminum, Its Production and Use (Aluminium, seine Erzeugung und Verwendung), K. Arndt. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 2-6, 8 figs. Discusses history of aluminum, processes of production from bauxite, electrolysis of cryolite-alumina, aluminum alloys, etc.

Properties. Investigations of the Properties of Aluminum (Recherches faites au Laboratoire central d'Electricité sur les propriétés de l'aluminium), M. Jouaust. Société Française des Electriciens—Bul., vol. 3, no. 30, Dec. 1923, pp. 663-669. Results of investigations carried out at Central Laboratory of Electricity on samples of French, American, and English aluminum.

The Influence of Cadmium Upon the Mechanical Properties of Aluminum, N. F. Budgen. Metal Industry (Lond.), vol. 25, nos. 7 and 8, Aug. 15 and 22, 1924, pp. 145-147 and 172-174, 8 figs. From results of investigations it appears that cadmium has no beneficial influence on aluminum and is not comparable with zinc in this respect. Moreover, addition of cadmium to "burnt" aluminum has no recuperative effect.

Protective Coatings for. Protective Coatings for Aluminum, C. Commentz. Chem. & Met. Eng., vol. 31, no. 18, Nov. 3, 1924, p. 698, 1 fig. Two new electrical methods developed in Germany for providing aluminum articles with anti-corrosion oxide coatings.

Recrystallization Phenomena. Recrystallization Phenomena in Aluminum, E. Wetzel. Brass Wld., vol. 20, no. 10, Oct. 1924, pp. 335-337. Discusses coarse recrystallization due to overheating, coarse recrystallization following small deformation prior to anneal, and differential grain growth due to unequal deformation followed by anneal. Abridgement of paper before committee of German Met. Soc., translated from German.

Silicon and Iron in. Effect of Silicon and Iron on the Properties of Aluminum (Der Einfluss von Silizium und Eisen auf die Eigenschaften des Aluminiums), J. Czochralski. Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 162-173, 36 figs. Research work by committee of German Soc. of Metallography; discusses metallographic and mechanical examination of aluminum samples of different content of iron silicide and silicon eutectic; irregular distribution, capacity for rolling, etc.

Sodium in Determination of. The Determination of Sodium in Aluminum, D. M. Fairlie and G. B. Brook. Inst. of Metals—Advance paper no. 5, for meeting Sept. 8-11, 1924, 7 pp. Describes process evolved by authors which might be relied on to separate large percentages of sodium from aluminum with reasonable accuracy and which is comparatively simple to carry out.

Soldering. Aluminum Solder (Zur Frage des Aluminiumlotes), L. Rostosky. Zeit. für Metallkunde, vol. 16, no. 9, Sept. 1924, pp. 359-361. Discusses hard and soft soldering; progress in aluminum soldering and requirements of a good aluminum solder.

Can Aluminum Be Soldered? (1st Aluminium lötbar), F. Roberti. Automobil-Rundschau, vol. 23, no. 2, Feb. 1924, pp. 17-18, 4 figs. Describes aluminum soldering process, known as Conti process, which is result of many years' experimentation in special field of homogeneous aluminum jointing; examples are cited showing advantages of process.

Processes for Combining Aluminum with Aluminum and Other Metals (Verfahren zur Verbindung von Aluminium mit Aluminium und andaren Metallen. Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 21, May 24, 1924, pp. 57-58 (Metall). Discusses soft-soldering, autogeneous welding, and hard-soldering processes, their advantages and drawbacks.

Soldering Aluminum, O. Spengler. Chem. Age (N. Y.), vol. 32, no. 9, Sept. 1924, p. 366. Results obtained in Germany with material with trade name of Sudal 21; microscopic examination has shown that by use of this flux a perfect joint of solder and of aluminum is attained. (Abstract.) Translated from Zeit. für angewandte Chemie, 1924, p. 532. See reference to article by O. Bauer (Zeit. für Metallkunde) in Eng. Index 1923, p. 607.

Some Practical Notes on Jointing Aluminum. Mech. Wld., vol. 75, nos. 1949 and 1953, and vol. 76, nos. 1957 and 1959, May 9, June 6, July 4 and 18, 1924, pp. 295-296, 356-357, 7, and 39-40. Soldering of and solders for aluminum; soldering fluxes; oxy-acetylene and electric welding of aluminum; riveting of aluminum; etc.

Specific Heat. See METALS, Specific Heats.

Substitute for. Magnesium Alloy a Substitute for Aluminum. Can. Foundryman, vol. 15, no. 6, June 1924, pp. 22-23. Castings are stronger and lighter; easily machined and polished; proof against alkalies but not acids, reverse of aluminum; manganese deoxidizer of copper.

Tensile Strength. The Tensile Properties of Aluminum at High Temperatures, Thos. Martin. Inst. Metals—Advance paper no. 10, for meeting Mar. 12-13, 1924, 32 pp., 18 pp. Examination of tensile strength at all temperatures up to neighborhood of melting point of metal in its fully annealed state; tests on commercial metal; comparison of results with those for pure metal; practical significance of results.

Thin Plates, Thermal Tests of. Thermal Tests for Aluminum Thin Plate in Test Tubes (Thermische Proben für Aluminium-Dünnblech im Reagenzrohr), F. Mylius. Zeit. für Metallkunde,

vol. 16, no. 3, Mar. 1924, pp. 81-90, 4 figs. Extension of method of deep-etch test to classification of aluminum through flat-etch test; corrosion; elasticity test; thermal soda test; protective layers on aluminum; testing of protective layers.

Uses. Aluminum and Its Applications (L'Aluminium et ses applications), M. L. Guillet. Société Industrielle de Mulhouse—Bul., vol. 90, no. 6, June-Aug. 1924, pp. 454-470. Discusses method of manufacture from bauxite, properties and impurities of aluminum, its uses and alloys, duraluminum, alpax.

Aluminum and Its Applications in the Electric Industry (L'aluminium et ses applications dans l'industrie électrique), Ph. Ouspensky. Association des Ingénieurs Sortis des Ecoles Spéciales de Gand—Annales, vol. 14, no. 3, 1924, pp. 241-286. Principle of manufacturing process, physical and chemical properties, aluminum alloys; requirements of aluminum electric conductors and general principles to be observed in using them, aluminum conductors with steel cores, comparison of aluminum and copper cables; other applications of aluminum.

Field of Application of Aluminum With Special Reference to the Chemical Industry (Verwendungsgebiete des Aluminiums unter besonderer Berücksichtigung der chemischen Industrie). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 45, Nov. 9, 1924, pp. 357-358. Application of aluminum as a highly acid resistant light metal; other properties of aluminum; Nitorit process by means of which an exceptionally pure aluminum can be produced.

Occurrence, Production, Properties and Uses of Aluminum in Electrotechnical Industries (Vorkommen, Gewinnung, Eigenschaften und Verwendung des Aluminiums in der Elektrotechnik), W. Wunder. Elektrotechnische Zeit., vol. 45, no. 42, Oct. 16, 1924, pp. 1109-1115, 24 figs. Use of pure aluminum and of aluminum alloys in overhead lines, motors and generators, transformers, cables, switch plants, etc.

Use of Aluminum in Electrical Industries (Verwendung von Aluminium in der Elektrotechnik), W. Wunder. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 9-10, 5 figs. Discusses application of aluminum and aluminum alloys in motors, dynamos, transformers, cables, etc.

Welding. Aluminum Welding, How and Why, S. W. Henderson. Welding Engr., vol. 9, no. 12, Dec. 1924, pp. 21-22. Points to be observed for success in this process.

Gas Welding of Aluminum, S. W. Miller. Can. Machy., vol. 32, no. 6, Aug. 7, 1924, pp. 33-34 and 50. Discusses porosity in weld, aluminum brittle, character of flame, preheating casting, manipulation of welding rod, and welding sheet aluminum.

Soldering, Welding and Riveting of Aluminum (Löten, Schweissen, Nieten von Aluminium), H. Buschlinger. Praktische Maschinen-Konstrukteur, vol. 57, nos. 35 and 36, Sept. 16 and 23, 1924, pp. 481-482 and 492-495. Discusses most favorable conditions and gives suggestions for effective operation. Welding of aluminum castings.

The Fusion Welding of Aluminum, C. F. Nagle, Jr. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 35-44. Physical laws and fundamental principles involved.

See also ELECTRIC WELDING, RESISTANCE, Spot; OXY-ACETYLENE WELDING, Aluminum.

ALUMINUM ALLOYS

[See also AIRCRAFT CONSTRUCTION MATERIALS, Light Metals; ALLOYS, Light.]

Airplane Structural Work. Data on Aluminum Alloys for Airplane Structural Work, Fred H. Colvin. Am. Mach., vol. 60, no. 7, Feb. 14, 1924, pp. 235-238, 9 figs. Standardizing channels, struts and other parts for construction of all-metal planes, even in small quantities; sizes and strength of rivets; distribution of weight.

Alpax. Apply Patented Casting Metal, R. De Fleury. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 263-266. Properties and field of application of new alloy known as alpax, which is used for many automobile parts in France; claimed to have properties superior to usual foundry aluminum alloys; results of tests. Annual exchange paper of Assn. Technique de Fonderie of France submitted to Am. Foundrymen's Assn.

Aludur. Aludur (Aludur), K. Hallmann. Zeit. für Metallkunde, vol. 16, no. 11, Nov. 1924, pp. 433-435. Also Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1084-1085. Aludur metals are refined light aluminum alloys; basic metal is at least 99 per cent pure aluminum; describes different kinds of aludur, their properties and useful applications.

Aluminum Bronze. See ALUMINUM BRONZE.

Aluminum Copper. Heat Treatment of Aluminum-Copper Alloys, A. Portevin and F. Le Chatelier. Am. Soc. Steel Treating.—Trans., vol. 5, no. 5, May 1924, pp. 457-478, 14 figs. Study of properties of light aluminum alloys containing varying proportions of copper, manganese, and magnesium; characteristics of alloys containing copper, with and without magnesium; heat treatment and aging, and their effect upon physical properties; hypotheses explaining constitution of aluminum-copper-manganese-magnesium alloys.

The Aluminum-Copper Alloys. Alloys of Intermediate Composition, D. Stockdale. Inst. Metals—Advance paper no. 13, for meeting Mar. 12-13, 1924, 16 pp., 4 figs. Study of alloys by thermal and photomicrographic methods; results show that their behavior is even more complex than has been thought, and it is probable that diagram here put forward is only approximately correct.

The Heat Treatment for Light Alloys of Aluminum with Copper Base (Le traitement thermique des alliages légers d'aluminium à base de cuivre), A. Portevin and F. Le Chatelier. Revue de Métallurgie, vol. 21, no. 4, Apr. 1924, pp. 233-246, 14 figs. Gives characteristics of alloys containing magnesium and those containing no magnesium, and describes new process of heat-treating alloys without magnesium; influence of hardening temperature; mechanical properties of alloys, etc.; summary of advantages of alloy without magnesium. Bibliography.

Aluminum-Copper-Magnesium. Casting and Heat Treatment of Some Aluminum-Copper-Magnesium Alloys, S. Daniels and J. B. Johnson. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1350-N, July 1924, 22 pp., 6 figs. Deals with portion of work of Material Section, Engineering Division, Air Service, U.S.A., on casting and extended heat treatment of alloys of duralumin type (copper 2.5-5.0 per cent, magnesium 0.0-1.0 per cent, silicon 0.2-1.0 per cent, iron 0.3-1.5 per cent, manganese 0.0 to 1.0 per cent, chromium, etc.). This range of compositions includes an alloy recently placed on market in cast form and designated as Lynite 195.

Aluminum-Copper-Tellurium. Properties and Structure of Some Alloys of Aluminum-Copper-Tellurium, F. T. Sisco and M. R. Whitmore. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 838-841, 11 figs. Result of exploratory investigation on alloys of aluminum containing 5 per cent copper to which tellurium has been added in amounts from 0.25 to 5 per cent; physical properties of these alloys, and effect of tellurium on microstructure of aluminum; method of analysis for alloys.

Aluminum-Silicon. Aluminium-Silicon Alloys, J. B. Swan. Automobile Engr., vol. 14, no. 188, Apr. 1924, pp. 102-105, 10 figs. Their properties and

ALUMINUM ALLOYS

limitations; aluminum-silicon binary system; making up and casting alloy; reversion; aluminum-silicon as forging and cold-worked metal; effects of heat treatment.

The New Aluminum-Silicon Alloys, J. D. Edwards and R. S. Archer. Chem. & Met. Eng., vol. 31, no. 13, Sept. 29, 1924, pp. 504-508, 8 figs. Pacz' process of "modification" and remarkable improvement in properties it brings about.

Aluminum-Zinc. Behavior of Aluminum-Zinc Alloys (Das Verhalten der Aluminium-Zinklegierungen), O. Bauer and W. Heidenhain. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 221-228, 9 figs. Critical review of latest work on solidification and transformation of total shrinkage, resistance to shock and behavior in attack by acids, etc.; limits of range of instability of aluminum-zinc alloys, etc.

Studies in the Aluminium-Zinc System, T. Tanabe. Inst. of Metals—Advance paper no. 13, for meeting Sept. 8-11, 1924, 38 pp., 32 figs. partly on supp. plate. Describes investigation made to confirm new diagram of Hanson and Gayler, and to make clear nature of age-hardening. Mechanical properties also studied.

The Mechanical Properties of Aluminium-Zinc Alloys Containing Cadmium, N. F. Budgen. Chemistry & Industry, vol. 43, no. 33, Aug. 15, 1924, pp. 273T-276T. Range of alloys examined includes mixtures containing from 0 to 24 per cent Zn, 0 to 10 per cent Cd, and 66 to 100 per cent Al; from certain alloys containing 10 per cent Cd, small beads of more fusible constituent exude from surface after chill casting; under hammer all specimens cracked badly above 250 deg., but those containing less than total of 18 per cent Zn + Cd forged well below this temperature.

Casting and Heat Treatment. Casting and Heat Treatment of Some Aluminum-copper-magnesium Alloys, S. Daniels, A. J. Lyon and J. B. Johnson. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, p. 593. Treatment of duralumin; cast and heat-treated alloy. (Abstract.)

Casting-Temperature Effects. The Influence of Casting Temperature of Aluminum Alloys, F. H. Hurren. Foundry Trade Jl., vol. 29, no. 388, Jan. 24, 1924, pp. 75-79. Results of experiments.

Castings. Aluminum Alloy Castings from Sheet Scrap, H. C. Kneer. Am. Foundrymen's Assn.—Preprint of paper no. 417, for meeting Oct. 11-16, 1924, 12 pp., 7 figs. See also (abstracts) Metal Industry (N. Y.), vol. 22, no. 12, Dec. 1924, pp. 481-482, 2 figs., and Metal Industry (Lond.), vol. 25, no. 20, Nov. 14, 1924, pp. 470-472, 2 figs. Outlines methods by which a very small foundry, started on an experimental basis, succeeded in meeting requirements for sound and dependable aluminum alloy sand castings, only scrap aluminum sheet and copper available at factory being used. Castings made were required to meet government specifications corresponding approximately to S.A.E. specifications No. 30.

Castings, Hard Spots in. Study Aluminum Hard Spots, A. J. Lyon. Foundry, vol. 52, no. 10, May 15, 1924, pp. 396-397. Methods employed to identify inclusions, and determine effect on mechanical properties, and metallographic structure of oxidizing aluminum cast alloys during melting.

Castings, Salvage of. The Salvage of Aluminium-Alloy Castings by Soldering and Welding, R. J. Anderson and M. E. Boyd. Metal Industry (Lond.), vol. 25, no. 24, Dec. 12, 1924, pp. 571-574, 12 figs. Salvage specifications; metallurgical aspects of salvage problem. (Abstract.) Paper presented to Am. Foundrymen's Assn.

Copper-Aluminum. See COPPER ALLOYS, Copper-Aluminum.

Corrosion. See ALUMINUM, Corrosion.

Corrosion Prevention, Treatment for. Investigation of the Z-D Process for Treatment of Light Alloys to Inhibit Corrosion, to Minimize Porosity and to Effect Desired Physical Properties, A. C. Zimmerman and S. Daniels. U. S. Air Service Information Circular, vol. 5, no. 448, Mar. 1, 1924, 22 pp., 15 figs. Results of investigations show that process prevents corrosion of aluminum and its alloys more effectively and efficiently than any other inorganic coating process, but is not so effective in minimizing porosity as Norton process.

Die Casting. Aluminum Die Casting (Aluminium-Spritzguss), Frommer. Praktische Maschinen-Konstrukteur, vol. 57, nos. 45 and 49, Nov. 25 and Dec. 23, 1924, pp. 613-615 and 671-672, 1 fig. Discusses die casting of alloys of more than 75 per cent aluminum; properties and uses of die-cast parts; defects of castings; tensile-strength tests.

Duralumin. See DURALUMIN.

Foundry Practice. See ALUMINUM, Foundry Practice.

Lautal. Lautal (Lautal), V. Fuss. Zeit. für Metallkunde, vol. 16, no. 9, Sept. 1924, p. 343. Data on strength and properties of new aluminum alloy.

Light. See Microstructure and Properties; Production.

Magnesium-Free. New Light Alloys of High Resistance (Un nouveau type d'alliages légers à haute résistance), A. Portevin and F. Le Chatelier. Chimie & Industrie, special no., May 1924, pp. 337-340, 4 figs. Results of tests on light alloys with aluminum base without addition of magnesium; advantages of these alloys as compared with duralumin.

Magnesium in. Cast Alloys of Aluminium Containing Small Amounts of Magnesium, S. Daniels. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1243-1249, 19 figs. Small additions of magnesium progressively increase strength and hardness of aluminum, but more rapidly decrease its ductility; heat treatment is not economically justifiable; describes metallography of several alloys.

Metallography. Metallography of Sand Cast Aluminum Alloys, A. J. Lyon and S. Daniels. U. S. Air Service Information Circular, vol. 5, no. 449, Mar. 1, 1924, 19 pp., 54 figs. Defines technique employed in metallography of aluminum and its alloys by Material Section, Engr. Div., Air Service.; illustrates and describes common constituents and characteristic microstructure of cast-aluminum alloys used by Air Service.

Microstructure and Properties. Light Alloys of Aluminium, W. Rosenhain and S. L. Archbutt. Engineering, vol. 117, nos. 3049 and 3050, June 6 and 13, 1924, pp. 750-752 and 780-782, 14 figs. Also Metal Industry (Lond.), vol. 25, nos. 1 and 2, July 4 and 11, 1924, pp. 3-7, and 27-30 and 44, 14 figs. Specific tenacity; age hardening; casting alloys and wrought alloys in general use; microstructure and properties of chief alloys; heat treatment; application.

Production. History of Light Aluminum Alloys and Actual Status of Their Production (Historique des alliages légers d'aluminium et état actuel de leur fabrication), L. Guillet. Génie Civil, vol. 84, nos. 13, 14 and 15, Mar. 29, Apr. 5 and 12, 1924, pp. 298-303, 319-321, and 356-359, 9 figs. Traces history of development and describes latest improvements.

Properties. Aluminum and Some of Its Physical Characteristics. Metal Industry (N. Y.), vol. 22, no. 9, Sept. 1924, pp. 349-351. Discusses properties of alloys made by Aluminum Co. of America; aluminum die castings, and wrought aluminum.

Comparative Tensile Properties of Copper-Silicon-Aluminium and Other Aluminium Alloys

as Obtained on Separately Cast Specimens and Specimens Cut From a Crank-Case Casting, E. H. Dix and A. J. Lyon. Inst. of Metals—Advance paper no. 4, for meeting Sept. 8-11, 1924, 14 pp., 21 figs. on supp. plates. Particulars of investigation undertaken by Metallurgical Sec., Eng. Division U. S. Air Service, to furnish information on comparative physical properties to be expected in large castings to aircraft designers.

Quaternary. The Aluminum-Rich Mixed-Crystal Range in Quaternary System Aluminum-Magnesium-Silicon-Zinc. (Das aluminiumreiche Mischkristallgebiet im Vierstoffsystem Aluminium-Magnesium-Silizium-Zink), W. Sander and K. L. Meissner. Zeit. für Metallkunde, vol. 16, no. 1, Jan. 1924, pp. 12-17, 9 figs. Based on investigations, authors present their views on process of refining in self-refining aluminum alloys and describe refining phenomena observed in certain aluminum alloys.

Salt-Water Corrosion, Resistance to. Resistance of Various Aluminum Alloys to Salt-Water Corrosion, D. Basch and M. F. Sayre. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 199-201 and (discussion) 201-205, 3 figs. Results of tests of 24 different compositions under conditions analogous to service on shipboard, showing that corrosion troubles hitherto experienced have been due to use of unsuitable alloys.

Sand-Cast. Notes on a Sand-Cast Aluminum-Copper-Nickel-Magnesium Alloy, A. J. Lyon and S. Daniels. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 173-181, 12 figs. Describes foundry practice and tabulates physical properties of sand-cast aluminum-base alloy containing 4 per cent of copper, 2 per cent of nickel, and 1.5 per cent of magnesium; outlines methods of heat-treating this alloy to obtain maximum hardness and tensile properties; physical testing results were obtained in connection with manufacture of pistons and air-cooled cylinder heads for aircraft engines.

Scleron. Scleron Alloys (Scleron-Legierungen), O. Reuleaux. Zeit. für Metallkunde, vol. 16, no. 11, Nov. 1924, pp. 436-437, 1 fig. Aluminum alloys placed on market by Metallbank and Metallurgischen Gesellschaft, Frankfurt a.M., Germany, have aluminum content of not less than 85 per cent; composition, heat treatment, and strength properties of new alloy.

Steel, vs. Steel and Light Alloys as Engineering Materials, L. Aitchison. West of Scotland Iron & Steel Inst.—Jl., vol. 32, part 1, Oct.-Nov. 1924, pp. 10-15 and (discussion) 15-21. Comparison of steel on one side and light alloys on other, in order to see to what extent replacement of steel by light alloys can be expected.

Ternary. The Constitution of Ternary Alloys of Aluminum (Ueber die Konstitution von Dreistoffiegierungen des Aluminiums), V. Fuss. Zeit. für Metallkunde, vol. 16, no. 1, Jan. 1924, pp. 24-25, 3 figs. Determination of structure of 15 alloys with respect to influence of additional metals on basic aluminum.

Thermal Expansion. On the Measurement of the Coefficients of Thermal Expansion for Aluminium Alloys and Alloys of Nickel-Iron and Cobalt-Iron, K. Honda and Y. Okubo. Tohoku Imperial University—Sci. Reports, vol. 13, no. 1, Oct. 1924, pp. 101-107, 5 figs. partly on supp. plate. Results of measurement of different aluminum alloys commonly used in aeronautics in Europe and America, and of nickel iron and cobalt iron prepared in research institute.

Use on Board Ship. Aluminum and Aluminum Alloys for Use on Board Ship, E. M. Hewlett and D. Basch. Am. Soc. Nav. Engrs.—Jl., vol. 36, nos. 1 and 2, Feb. and May 1924, pp. 1-17 and 288-301. Feb.: Fabricated alloys; rolling; forging. May: Soldering of aluminum; welding; aluminum in contact with other metals; use for electrical purposes.

ALUMINUM BRONZE

Heat-Treated, Hardness of. Notes on the Hardness of Heat-treated Aluminum Bronze, G. F. Comstock. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1357-N, July 1924, 9 pp., 4 figs. and (abstract) Minn. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 596-597. Results of scleroscope and Brinell tests on specimens of cast 10 per cent aluminum bronze, quenched and reheated at various low temperatures.

ALUMINUM CHLORIDE

Clay, Preparation from. See CLAY, Aluminum Chloride from.

ALUMINUM OXIDE

Production from Clay. Production of Aluminum Oxide from Clay (Fremstilling av aluminiumoksyd av lere), Teknisk Ukeblad, vol. 71, nos. 8 and 9, Feb. 22 and 29, 1924, pp. 75-77 and 83-86. Enumerates available raw materials; describes Bayer and Morin methods: comparison of Bayer bauxite process and clay process; stages in production of aluminum oxide.

ALUMINUM WARE

Manufacture. Aluminum Tea Kettles. Metal Industry (N. Y.), vol. 22, no. 5, May 1924, pp. 187-188, 15 figs. Short summary of stages in manufacture of an aluminum tea kettle from ground to kitchen.

Stamping and Spinning Modern Aluminum Ware, H. P. Armson. Can. Machy., vol. 31, no. 11, Mar. 13, 1924, pp. 19-21, 3 figs. Brief description of methods employed at plant of Metal Stampings, Ltd., Toronto, Can., in manufacture of household utensils.

ALUNITE

Uses. Alunite, C. H. MacDowell. Armour Engr., vol. 15, no. 4, May 1924, pp. 134 and 153-154. A double salt of potassium sulphate and aluminum sulphate. A promising source of potash, refractories, and other important heavy chemicals.

AMALGAMS

Liquid, Use in Volumetric Analysis. Use of Liquid Amalgams in Volumetric Analysis (Die Anwendung von flüssigem Amalgam in der volumetrischen Analyse), K. Someya. Zeit. für anorganische u. allgemeine Chemie, vol. 138, no. 3, Sept. 1, 1924, pp. 291-303, 1 fig. Use of zinc and bismuth amalgams; reduction of ferric salts to ferrous state with bismuth amalgam.

X-Ray Examination. X-Ray Examination of Amalgams (Röntgenuntersuchungen an Amalgamen), C. v. Simson. Zeit. für Physikalische Chemie, vol. 109, no. 3-4, May 5, 1924, pp. 183-198, 8 figs. Results of examination of structure of amalgams of tin, zinc, cadmium, and lead by means of X-rays.

AMBULANCES

Airplane. See AIRPLANES; Ambulance.

AMERICAN ENGINEERING COUNCIL

Work of. See ENGINEERING SOCIETIES, American Engineering Council.

AMMETERS

High-Frequency. New High-Frequency Ammeter with Thermocouple (Nouvel ampèremètre H.F. à thermo élément), M. Pillier. Onde Electrique, vol. 3, no. 25, Jan. 1924, pp. 5-11, 5 figs. Describes new apparatus constructed by Chauvin & Arnoux which has advantage of making measurements with a single galvanometer of as small dimensions as desired, due to interchangeable shunts which permit measurement with same apparatus of from 5 to 500 amperes.

Milliampere. Milliampere Meter in the Anode Circuit of the Audion with Blocked Grid (Das Milliamperemeter im Anodenkreise des Audions mit blockiertem Gitter), H. G. Möller. Zeit. für Fernmeldetechnik, vol. 5, no. 10, Oct. 16, 1924, pp. 96-100, 12 figs. Measuring of waves and amplitudes. Theory of audion rectifier curves and of oscillation curves, and application to examples.

AMMONIA

Absorption. See CARBON DIOXIDE, Absorption from Gas Bubbles.

Anhydrous. Is Anhydrous Ammonia Combustible? W. F. Schaphorst. Nat. Engr., vol. 28, no. 5, May 1924, pp. 220-221. Opinions of authorities and experts, from which it appears that it is feebly combustible under certain conditions but normally incombustible and actually a retardent of combustion in many cases.

By-Product. By-Product and Synthetic Ammonia. Gas Engr., vol. 40, nos. 574 and 575, Feb. and Mar. 1924, pp. 24-25 and 48-49. Account and criticism of modern methods of by-product ammonia production. Discusses potential ammonia in coal, ammonia per ton carbonized, excessive addition of lime, heat interchange devices, and ammonium bicarbonate and chloride and their possibilities as commercial fertilizers.

Catalyst for Forming. See CATALYSTS, Ammonia-Forming.

Decomposition by Ultra-Violet Light. Influence of Temperature on the Decomposition of Ammonia by Ultra-Violet Light (Influence de la temperature de l'ammoniaque par les rayons ultra-violets), W. Kuhn. Academie des Sciences—Comptes Rendus, vol. 178, no. 8, Feb. 18, 1924, pp. 708-709. Rate of photochemical decomposition is independent of pressure (30 mm.-300 mm.) and rises with temperature (20-500 deg.), though more slowly than in most chemical reactions; rate falls off as decomposition proceeds; nitrogen does not affect rate, which is lessened by hydrogen.

Fixation in Coke-Oven Gas. Fixing of Ammonia in Coke-Oven Gas by Means of Calcium Sulphate (Ueber die Bindung des Kokerei-Ammoniaks durch Gips), G. E. Tunius. Gas- u. Wasserfach, vol. 67, no. 8, Feb. 23, 1924, pp. 91-92, 1 fig. Experiments on washing of gas, from which all tar had been removed, with suspension of calcium sulphate on counter-current principle in revolving column, showed that 98 per cent of ammonia present in gas could be recovered in this way; rest was washed out by treatment with water; process, however, requires careful chemical control, is costly, and in normal times cannot compete with usual sulphuric-acid process.

Formation from Nitrogen. Formation of Ammonia from Nitrogen in the Oxyhydrogen Flame (Ueber Ammoniakbildung in der stickstoffhaltigen Knallgasflamme), H. Tominaga. Zeit. für Elektrochemie, vol. 30, no. 21-22, Nov. 1924, pp. 528-534, 3 figs. Account and results of experiments; yield was greater, the smaller and cooler the oxyhydrogen flame was kept.

Oxidation to Nitric Acid. Catalytic Oxidation of Ammonia to Nitrous Gases and Nitric Acid (Ueber die katalytische Oxydation des Ammoniaks zu nitrosen Gasen und zu Salpetersäure), Geo. Kassner. Zeit. für angewandte Chemie, vol. 37, no. 25, June 19, 1924, pp. 373-382, 1 fig. Direct oxidation of ammonia to nitric acid by air is brought about by new catalyst, "nitroxan," composition of which is given; theory of reaction is considered in detail.

Specific Gravities of Solutions. A New Determination of the Specific Gravities of Solutions of Ammonia, N. J. Price and C. S. L. Hawkins. Chem. & Industry, vol. 43, no. 17, Apr. 25, 1924, pp. 113T-117T, 1 fig. Method developed by authors was to weigh ammonia solutions in sealed vessel and then to determine whole of ammonia contained in that vessel; comparison of table obtained by this method with Lunge table.

Synthetic. Catalyst Bombs for Synthetic Ammonia Production, E. K. Scott. Chem. Age. (Lond.), vol. 10, no. 256, May 10, 1924, pp. 482-483, 3 figs. Describes Haber-Bosch, Claude, and Casale catalyst bombs; catalyst material.

How I Effected the Synthesis of Ammonia by Means of Super-Pressures (Comment j'ai réalisé la synthèse de l'ammoniaque par les hyperpressions), G. Claude. Chimie & Industrie, vol. 11, no. 6, June 1924, pp. 1055-1066, 13 figs. Discusses development, including work of Haber, Nernst, etc.; describes his own work to overcome danger from bursting by removing heat of reaction by cold gases; liquefaction of nitrogen, etc.; application of Claude processes.

Increasing Ammonia Production with Improved Catalysts, A. T. Larson. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1002-1004. Review of important practical developments.

Industrial Processes of Direct Synthesis of Ammonia (Les procédés industriels de synthèse directe de l'ammoniac), L. Maugé. Revue Industrielle, vol. 54, no. 2182, Sept. 1924, pp. 261-266 and 311-317, 9 figs. Reviews developments, including work of Claude, Haber and Rossignol; particulars of Haber-Bosch, Claude, Casale, and Fauser processes.

Manufacture of Synthetic Ammonia at Coke Ovens, E. K. Scott. Gas World (Coking Section), vol. 80, no. 2067, Mar. 1, 1924, pp. 12-16 and (discussion) 16-17, 6 figs. Methods of fixing atmospheric nitrogen; Haber bomb for 200 atmos.; layout and cost figures of Claude plant; Claude catalyst bomb; Claude plant at coke ovens; uses of ammonia.

Synthesis of Ammonia at High Pressures (Ueber die Ammoniaksynthese bei hohen Drucken), W. Moldenhauer. Chemiker-Zeitung, vol. 48, no. 46, Apr. 15, 1924, pp. 233-234, 1 fig. Compares yield of synthetic ammonia obtained by Claude at very high pressures with theoretical yields deduced from Haber's ammonia equilibrium formula; discrepancies between actual and theoretical yields increase as temperature falls and as pressure rises; they are probably due to differences in compressibilities of ammonia and of more permanent gases, nitrogen and hydrogen.

Synthetic Ammonia Manufacture at Coke Ovens, E. K. Scott. Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1920, Mar. 7, 1924, pp. 283-284. Commercial development of Claude process; description of French plants designed by G. Claude.

Synthetic Ammonia Production in Coke Oven and Gas Works. Gas Engr., vol. 40, nos. 578 and 581, June and Sept. 1924, pp. 120-121 and 190-191. Discusses increased demand for fertilizers, Claude and Haber-Bosch processes, consumption of current, large power requirements, carbon monoxide and steam, and use of spathic iron ore.

The Nera Montoro Plant for the Production of Synthetic Ammonia and Its Derivatives (Lo stabilimento di Nera Montoro per la produzione dell'ammoniaca sintetica e suoi derivati). Industria, vol. 38, no. 18, Sept. 30, 1924, pp. 504-508, 18 figs. Describes equipment and operation of plant of Societa Italiana Ammoniaca Sintetica, using Casale process.

See also NITROGEN, Fixation and Fixation Proceses.

Tables, Use of. See REFRIGERATION, Ammonia Tables, Use of.

Temperature Entropy Chart. Temperature-entropy Chart for Ammonia, W. M. Griffith. Ice & Refrig., vol. 66, no. 5, May 1924, pp. 462-465, 3 figs. Describes new temperature-entropy chart based on U. S. Bur. of Standards ammonia tables.

Construction of chart; diagram to illustrate its use; solution of practical problems by means of data from new diagram.

AMMONIA COMPRESSORS

Bernat System. A New French Ammonia Compressor. Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 117-118, 1 fig. See also Cold Storage, vol. 27, no. 319, Oct. 16, 1924, pp. 423-424, 1 fig. Description, characteristics, and operation of Bernat system of compressor. Translated from Revue Générale du Froid.

Compound Compression. Effect of Compound Compression of Ammonia, J. E. Starr. Power Plant Eng., vol. 28, no. 8, Apr. 15, 1924, pp. 445-446, 1 fig. Cost of extra equipment, it is claimed, will in most cases offset thermodynamic gains which would result from compound compression.

Efficiency. Compressor Efficiency in Relation to Discharge-Pipe Temperature, E. Prestage. Ice & Cold Storage, vol. 27, no. 320, Nov. 1924, pp. 285-287, 3 figs. Reproduces and discusses indicator diagrams taken from a 15½-in. diameter by 30-in. stroke horizontal compressor working at Union Cold Storage Co.'s St. Petersburg store in 1911, with object of arriving at relative efficiency of compressor when working "wet" or "dry."

Flywheels. The Flywheel Problem in Compressors Direct Connected to Synchronous Motors, A. R. Stevenson, Jr. Refrig. Eng., vol. 11, no. 4, Oct. 1924, pp. 123-140 and (discussion) 140-142, 23 figs. Reasons for limiting current pulsation of synchronous motors driving ammonia compressors; outline of history of various methods of calculating flywheels; discusses set of curves used since November, 1921, for rapid and accurate calculation of flywheels. Am. Soc. Refrig. Engrs. specifications covering design of synchronous motors for direct connection to ammonia compressors.

High-Speed. See REFRIGERATING PLANTS, High-Speed Compressor Installation.

Multi-Effect Compression. A Gift of Extra Compressor Capacity, G. Grow. Power, vol. 59, no. 19, May 6, 1924, pp. 723-724, 4 figs. Ways of handling ammonia at two suction pressures; advantages of multi-effect compression; net saving of process.

AMMONIA CONDENSERS

Atmospheric and Vertical Tubular Types. Ammonia Condensers, N. H. Hiller. Ice & Refrigeration, vol. 67, no. 6, Dec. 1924, pp. 386-388, 8 figs. Paper presented before Nat. Assn. Practical Refrig. Engrs., in which author confines his remarks to handling of two types of condensers, viz., atmospheric and vertical tubular types; diagrams and illustrations of apparatus.

Brine Coolers and. Condensers and Brine Coolers, J. C. Goosman. Ice & Refrigeration, vol. 66, nos. 1, 2, 3, 4, 6 and vol. 67, no. 2, Jan., Feb., Mar., Apr., June and Aug. 1924, pp. 84-86, 183-184, 247-248, 350-351, 545-547, and 113-115, 20 figs. Standard heat conditions; conditions existing below and above critical temperatures; pressure-temperature curve for CO_2; selection of condenser type; development of CO_2 condensers; stages of condensation; increasing of efficiencies; effect of surface and water requirements upon condenser and horsepower; pressure heat content diagram for ammonia; temperature surface diagram; diseases of condensers; etc.

Investigation of. Investigations of Ammonia Condensers, T. Shipley. Ice & Refrigeration, vol. 66, no. 1, Jan. 1924, pp. 17-22, 2 figs. See also (abstract) Power, vol. 59, no. 10, Mar. 4, 1924, pp. 364-367, 4 figs. Discusses condensers used on ammonia compression plants. Results of earlier investigations; advantages of low condenser pressures; development of design of Hestonville condenser and author's reasons for assuming such a design would give better results than other types; results of tests.

Superheat at. Superheat at the Condenser, J. E. Starr. Ice & Refrig., vol. 66, no. 5, May 1924, pp. 461-462. Discussion of determination of amount of superheat in ammonia at condenser; effect of power requirements; a possible way of utilizing superheat by absorption system; means of reducing superheat.

AMMONIUM NITRATE

[See also EXPLOSIVES, Ammonium Nitrate; Mine.]

Explosion Hazard. Is Ammonium Nitrate an Explosive? R. Aufschläger. Chem. & Met. Eng., vol. 30, no. 16, Apr. 21, 1924, pp. 619-621. Points out that ammonium nitrate and its mixtures, although extremely insensitive, can be detonated with certainty under some conditions. Translated from Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 18, Nov.-Dec. 1923, p. 117. See also reviews by leading authorities, pp. 621-623, which may be regarded as survey of expert opinion, reflecting briefly present status of knowledge of properties and behavior of ammonium nitrate.

Use as Explosive. Ammonium Nitrate as an Explosive, R. M. Cook. Chem. & Met. Eng., vol. 31, no. 6, Aug. 11, 1924, pp. 231-233, 1 fig. Ammonium nitrate, NH_4NO_3, in its pure state, contains 20 per cent more oxygen than is required for its complete combustion—that is, to oxidize hydrogen to water, evolving nitrogen as gaseous element.

AMMONIUM SALTS

Volumetric Determination. Volumetric Determination of Ammonium Salts (Nouveau procédé de dosage titrimétrique des sels ammoniacaux), V. Auger. Académie des Sciences—Comptes Rendus, vol. 178, no. 13, Mar. 24, 1924, pp. 1081-1082. Method is based on fact that if caustic soda is added to solution of ammonium salt to which Nessler's reagent has been added, no brown coloration is produced until sufficient alkali has been added to decompose ammonium salt; slight excess of alkali then gives permanent brown coloration; method gives excellent results within usual limits of dilution.

AMMONIUM SULPHATE

Centrifuging. Centrifuging, Neutralizing and Drying Sulphate of Ammonia, G. Weyman. Gas Engr., vol. 40, no. 583, Nov. 1924, pp. 247-248. Filling centrifuge; presence of pyridine and iron. (Abstract.) Paper read before North of England Gas Mgrs.' Assn.

Effluent Liquor, Treatment of. Sulphate of Ammonia Works: Treatment of Effluent Liquors. Gas Wld., vol. 81, no. 2085, July 5, 1924, pp. 8-12, 4 figs. Gives results of analyses made of various samples of liquor; discusses research at London gas works, horizontal retort system, vertical retort systems, effect of contact with tar in storage well, and alterations in condensing system.

Manufacture and Neutralization. By-Product Sulphate of Ammonia Manufacture, P. Heigham. Chem. Age. (Lond.), vol. 10, no. 263, June 28, 1924, pp. 669-670. Reviews succinctly progress made in manufacture of by-product sulphate of ammonia in last ten years, particularly in production of neutral quality, and deals with methods of neutraliaztion, drying, and crushing.

Manufacture of Neutral Sulphate of Ammonia, G. Stephenson. Gas World (Coking Section), vol. 80, no. 2067, Mar. 1, 1924, pp. 18-22, 7 figs. Also Colliery Guardian, vol. 127, no. 3297, Mar. 7, 1924, p. 607. Deals with sulphate of ammonia produced by direct process; Saville neutralizer; effect of neutralizing on crystals.

Observations on the Manufacture of Neutral Dry Sulphate of Ammonia, H. J. Hailstone. Gas Jl., vol. 166, no. 3178, Apr. 9, 1924, pp. 102-104, 1 fig. Principles involved in manufacture of improved product; describes drying operation.

Plant Used in Sulphate of Ammonia Manufacture, S. Stonier. Gas World, vol. 80, no. 2063, Feb. 2, 1924, pp. 13-27, 6 figs. Manufacture and neutralization of sulphate of ammonia.

The Manufacture and Neutralization of Sulphate of Ammonia, C. Bateman. Gas Jl., vol. 166, no. 3187, June 11, 1924, pp. 750-752 and (discussion) 752-753, 5 figs. Describes methods of neutralization by means of caustic soda solution, solution of soda ash, and solution of ammonia.

The Production of Sulphate of Ammonia, G. Weyman. Gas Wld., vol. 81, no. 2101, Oct. 25, 1924, pp. 417-420 (includes discussion). See also Gas Jl., vol. 168, no. 3205, Oct. 15, 1924, pp. 166-168. Nitrogen in coal and its distribution, how nitrogen occurs, design and arrangement of scrubbing plants, design and working of saturators, centrifuging, neutralizing and drying, etc.

AMMUNITION

Patent Specifications. Ammunition and Ammunition Receptacles. Abridgments of Specifications (Lond.), Class 9(i), 1923, Period 1916-20, 202 pp. Patents for inventions.

ANEMOMETERS

Hot-Wire. The Measurement of Air Flow, R. O. King. Engineering, vol. 117, nos. 3031 and 3034, Feb. 1 and 22, 1924, pp. 136-137 and 249-251, 9 figs. The Callendar hot-wire anemometer, its arrangement for practical use in air measurement, calibration, and comparison with other methods from experimental results.

Maximum-Wind-Intensity. A Simple Anemometer for Determining Maximum Intensity of Wind (Un anémometre à maximum simple), P. L. Mercanton. Nature (Paris), no. 2601, Feb. 23, 1924, pp. 124-126, 2 figs. Describes instrument developed by author.

ANNEALING

Furnaces. See FURNACES, ANNEALING.

Steel. See STEEL, HEAT TREATMENT of, Annealing.

ANTIMONY

Early History. The Early History of Antimony, H. Hyman. Chem. & Industry, vol. 43, no. 41, Oct. 10, 1924, pp. 1006-1007, 1 fig. Part played by antimony in early history of chemistry.

Electrodeposition of. See ELECTRODEPOSITION, Antimony.

Estimation in Ores and Alloys. Applied Methods of Estimating Antimony in Ores, Slags, Alloys, etc. Metal Industry (Lond.), vol. 25, no. 22, Nov. 28, 1924, pp. 515-516. Estimation of antimony in rich ores by bigallate (Guyard) method; methods for impure ores, slags, mattes, etc.; estimating constituent metals in alloys by potassium-permanganate titration; potassium-bromate and iodine-monochloride methods for alloys.

Determination of Antimony (Antimonbestimmungen), A. Ecke. Chemiker-Zeitung, vol. 48, no. 92-93, Aug. 1, 1924, p. 537. In absence of lead antimony may be determined by dissolving portion of metal in warm hydrochloric acid containing a cupric salt, operation being carried out in atmosphere of CO_2; describes how to determine antimony in alloy also containing tin, lead, and copper.

Ore Concentration. The Lake George Antimony Ores and their Concentration, C. S. Parsons. Can. Min. Jl., vol. 5, no. 40, Oct. 3, 1924, pp. 984-985. History, geology, concentration, and flotation; tests.

APPRENTICES, TRAINING OF

Aircraft. Training of Aircraft Apprentices at Halton Camp. Engineer, vo . 137, nos. 3553 and 3554, Feb. 1 and 8, 1924, pp. 119-120 and 138-141, 7 figs. partly on p. 148. Describes barracks and camp in general, and refers to special training which is given youths while in residence. Choice of apprentices; method of training; heating arrangements; water supply; sanitary and mess arrangements.

Automobile Repair-Shop Mechanics. Training Men for Automobile Repair Work, J. Younger. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 423-425, 3 figs. Outline of plan used for training men for Buick service stations and showing how flat rates are set for automobile repairs.

Coöperative Plan. Making the Skilled Mechanic of Tomorrow, F. A. Pope. Indus. Mgmt. (N. Y.), vol. 67, no. 6, June, 1924, pp. 363-367, 5 figs. Coöperative plan for apprentice training in metal trades, developed by Natl. Metal Trades Assn.

Draftsmen and Patternmakers. Training Draftsmen and Patternmakers. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 787-789, 4 figs. Outline of courses given at Worcester Boys' Trade School.

Foundry. An Apprentice Tells His Thoughts. Iron Trade Rev., vol. 75, no. 25, Dec. 18, 1924, pp. 1641-1643. See also Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 917-919 and 928. Author gives pointers from his experience and portrays life on receiving end of foundry training course.

How Mesta Makes Molders, R. A. Peebles. Foundry, vol. 52, no. 21, Nov. 15, 1924, pp. 881-884, 3 figs. Plan adopted by Pittsburgh shop in training young men to supply deficiency; describes regular and special courses.

Recent Developments in Foundry Education and Training in France, J. G. Pearce. Foundry Trade Jl., vol. 30, no. 422, Sept. 18, 1924, pp. 248-249. Particulars regarding scheme recently put into operation by French Foundry Employers' Assn. to encourage entry of suitable youths to foundries by providing systematic apprenticeship and training courses for all, and means whereby any young man of capacity and intelligence may obtain knowledge and experience necessary to fit him for any position in the industry to which he may be promoted. Extracted from Bul. of Brit. Cast Iron Research Assn.

Solves Training of Apprentices. Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1018-1022, 6 figs. Wisconsin law requiring employed persons under 18 to spend one-half day each week in some school has enabled many workers to obtain trade training; foundry practice popular.

Training the Foundry Apprentices, R. A. Peebles. Iron Trade Rev., vol. 75, no. 24, Dec. 11, 1924, pp. 1570-1572 and 1578, 3 figs. Outline of course given at Pittsburgh shop.

Wisconsin Solves Apprentice Puzzle. Foundry, vol. 52, no. 19, Oct. 1, 1924, pp. 752-757, 5 figs. Describes plan, successful over a number of years' trial, evolved by state of Wisconsin, its industrial leaders, its educators, and its great army of workmen. Outline of how plan works at plant of Falk Corpn.

France. The Training of Apprentices (L'Apprentissage), Société des Ingenieurs Civils—Mémoires et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1172-1281. Account of what has been accomplished in 13th ward of Paris, by Ch. Quillard; laws and organization of Syndicate of Mechanics, Boiler Makers and Foundrymen with regard to training of apprentices and vocational instruction, J.

Quantin; training of apprentices from pedagogical viewpoint, M. Loffet; training of shop apprentices in its relation to rational organization of work, J. Androuin; rapid development of apprenticeship, M. Lacoin; the crisis in apprenticeship and its remedy, and technical instruction, J. Hiernaux; training of apprentices at steel works of Schneider, Jaquet & Cie, Strasbourg, and Cockerill Works, Belgium, E. Kern; theoretical vocational training and education during period of apprenticeship, M. Bostsarron; apprenticeship in the electrotechnical industry, Geo. Westercamp; school for training of apprentices at works of Dion-Bouton, M. Winder.

Germany. New Methods in the Education of Apprentices and Mechanics in Germany, Wm. F. Turnbull. Jl. Eng. Education, vol. 15, no. 3, Nov. 1924, pp. 195-196. Under auspices of Verein Deutscher Ingenieure (Assn. German Engrs.), joint committee of delegates from engineering society and shops and drafting rooms of principal industrial plants of Germany devised comprehensive system of instruction for apprentices and also for skilled workmen.

Workers' Education and Training. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 178-181. Apprenticeship on German State railroads and in Berlin metal industry.

Graduate Engineers. Duquesne Light Company Trains Engineers, R. L. Kirk. Elec. World, vol. 84, no. 26, Dec. 27, 1924, pp. 1354-1356. College graduates spend year in company departments; outline of course and results accomplished; a typical class.

Patternmakers and Molders. Apprentice Course Is Established, E. C. Kreutzberg. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 413-414, 2 figs. Foundrymen's Assn. of New Jersey inaugurates plan of instruction in practical foundry work to recruit ranks of iron molders in that district. Outline of course.

Modern Apprenticeship Training of Patternmakers and Molders (Neuzeitliche Ausbildung der Modelltischler- und Formerlehrlinge), R. Harm. Giesserei-Zeitung. vol. 21, no. 7, April 1, 1924, pp. 135-140, 6 figs. Development of industrial training of apprentices, and of so-called DATSCH charts worked out by German Committee for Technical Education; DATSCH instruction courses and their practical application.

Problem of. See MACHINE SHOPS, Apprenticeship Problem.

Railways. Apprenticeship Methods on the Santa Fe. Ry. Mech. Engr., vol. 98, nos. 6, 7, 8, and 9, June, July, Aug., and Sept. 1924, pp. 355-359, 415-418, 467-472, and 527-531, 28 figs. Description of apprenticeship methods followed on Atchison, Topeka & Santa Fe. How and why work was started; selection of apprentices; equipment; instructions given in shop schools, methods and schedule of shop work followed in the various departments of shops, tools furnished, qualifications of instructors and source of their supply, records maintained regarding work and qualifications of each apprentice, apprentice boards, instructors' conventions, moral training and discipline of apprentices, apprentice clubs, special apprentices, apprentice graduates, etc. Direct and indirect results derived from this apprentice training system.

Training Apprentices, H. L. Shipman. Car Foremen's Assn.—Proc., vol. 18, no. 7, Apr. 1924, 15 pp. between pp. 12 and 52 (including discussion). Basic elements that must be given consideration before an apprenticeship system is undertaken by a railroad. Suggestions regarding establishment of system and training of apprentices.

System. A Modernized Apprentice System. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 415-418, 6 figs. How apprentices are trained by Warner & Swasey Co. in shop and classroom work.

AQUEDUCTS

Tulsa, Okla. Building the 54-Mile Aqueduct for the City of Tulsa, Oklahoma. Contractors' & Engrs.' Monthly, vol. 8, no. 1, Jan. 1924, pp. 53-55, 3 figs. Water from Spavinaw Creek in the Ozarks to be brought through 54 mi. of concrete pipe; four 25-ton locomotive cranes on flanged-track wheels and one 10-ton locomotive crane on continuous chain treads are used to place pipe sections in trench.

ARCHES

Calculation. Calculation of Two-Hinged Arches Balanced by a Polygonal Anchorage (Calcul de l'arc à deux rotu es équilibrés par un chainage polygonal), C. Molitor. Génie Civil, vol. 84, no. 5, Feb. 2, 1924, pp. 105-109, 17 figs. Describes method of calculation for particular case; determination of fundamental lines of influence according to two methods.

Method of Finding Arch Outline of Equal Stresses (Verfahren zum Aufsuchen der Bogenlinie gleicher Anstrengungen), E. Proksch. Beton u. Eisen, vol. 23, no. 3, Feb. 5, 1924, pp. 33-36, 1 fig. Suggestions for solution of problem.

Concrete. An Economical Design for Arch Centres, A. E. Wynn. Engineering, vol. 118, no. 3060, Aug. 22, 1924, pp. 257-259, 4 figs. partly on supp. plate. Also in Eng. & Contracting (Buildings), vol. 62, no. 5, Nov. 26, 1924, pp. 1161-1166, 3 figs. Describes centering built in fall of 1922 for bridge over Salmon River at Pulaski in New York State. Design, being so successful in its first use, has been adopted practically as a standard by contractors, and this design, and same lumber is being used for third time. Pulaski Bridge is a two-rib open spandrel arch of 200 ft. clear span and rise of 26 ft. 6 in., distance from crown to river bed being about 40 ft.

Design of Symmetrical Concrete Arches, Chas. S. Whitney. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 9, Nov. 1924, pp. 1327-1425, 56 figs. Gives method of analysis believed to be considerably simpler than any accurate method of applying elastic theory to symmetrical arches heretofore published; results given by tables and diagrams may be used for final design since tney are as accurate as can be obtained by any other method of applying elastic theory.

The Design of Reinforced Concrete Arch Ribs, A. P. Mason. Concrete & Constructional Eng., vol. 19, no. 3, Mar. 1924, pp. 143-150, 5 figs. Describes accurate short-cut method of obtaining a preliminary design.

See also Skew.

Conical. Calculation of Conical Arches (Zur Berechnung konischer Gewölbe), F. Schleicher. Bauingenieur, vol. 5, no. 21, Nov. 10, 1924, pp. 681-686, 3 figs. Develops formulas and makes calculations. Shows that effect of conicity is increased movement at fixed end.

Design. The Design of Masonry and Concrete Arches, A. C. Hughes. Surveyor & Mun. & County Engr., vol. 66, no. 1709, Oct. 17, 1924, pp. 315-316, 1 fig. Reviews present position and, by a liberal reference to literature dealing with arches, presents a bibliography of information.

Elliptical. Formulas for Elliptical Arches, F. A. Smith. Eng. & Contracting (Water Works), vol. 61, no. 4, Apr. 9, 1924, pp. 769-770, 4 figs. How to change circular channel to elliptical shape.

Fixed-Ended. Statics of Fixed Arches (Zur Statik eingespannter Gewölbe), S. Kasarnowsky. Bauingenieur, vol. 5, no. 12, June 30, 1924, pp.

366-367, 4 figs. General method for simple calculation of tension due to own weight of arches, whose center line deviates from pressure ine of own weight.

Hinged. On the Calculation of Hinge Blocks (Ueber die Berechnung der Gelenkquader), E. Mörsch. Beton u. Eisen, vol. 23, no. 12, June 20, 1924, pp. 156-161, 16 figs. Discusses hinges of bridge arches, rolling contact joints, and calculation of stresses.

Multiple. The Design of a Multiple-Arch System and Permissible Simplifications, A. C. Janni. Am. Soc. Civil Engrs.—Proc., vol. 50, no. 6, Aug. 1924, pp. 755-794, 21 figs. Discusses permissible simplification or shortening of strictly theoretical method of designing multiple-arch system, arches of which cannot be considered as having fixed ends. See (discussion) in nos. 8, 9, and 10, Oct., Nov., and Dec. 1924, pp. 1315-1318, 1516-1526, and 1582-1595, and vol. 51, no. 1, Jan. 1925, pp. 93-129, 43 figs.

Skew. Analysis of the Stresses in the Ring of a Concrete Skew Arch, J. Chas. Rathbun. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 2, Feb. 1924, pp. 133-174, 10 figs. Mathematical analysis of stresses in arch with fixed ends, with examples of application of formulas derived. See also (discussion) in nos. 4 and 5, Apr. and May 1924, pp. 559-560 and 679-705, 11 figs.

Orthogonal Bonds of Skew Arches (Sur l'appareil orthogonal des voûtes biaises), A. Claeys. Assn. des Ingénieurs sortis des Écoles Spéciales de Gand—Annales, vol. 14, series 5, 1924, pp. 161-171, 3 figs. Details of methods of calculation.

Thrust, Calculation of. Calculation of Thrust of Arch on its Movable Bearings with or without Tie Rod (Calcul de la poussée d'un arc sur ses appuis mobiles avec ou sans tirant), G. Prudon. Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 203-205, 3 figs. Study of influence of instability of bearings on thrust of arch or beam resting upon these bearings, and rôle of a supplementary stiffening tie rod of bearings.

Two-Hinged. Axial Bending Moments of Parabolic Double-Hinged Arches (Die achsialen Biegungsmoments parabolisch gekrümmter Zweigelenkbogen). A. Troche. Beton u. Eisen, vol. 23, nos. 11 and 13, June 5 and July 5, 1924, pp. 138-142 and 170-173, 8 figs. Gives two tables for influence lines of moments and explains their use.

ARMATURES

Banding of. Modern Repair Shop Practice in Banding Armatures, E. C. Parham. Nat. Engr., vol. 28, nos. 1, 2, 3, and 4, Jan., Feb., Mar., and Apr. 1924, pp. 11-13, 60-61, 110-112, and 157-159, 8 figs. Practical discussion of factors to be considered in banding armatures of different types; tools and devices used in applying bands; detailed instructions for doing work.

Coils, Types of. Reconnecting Direct-Current Armatures, A. C. Roe. Power, vol. 59, no. 22, May 27, 1924, pp. 866-867, 8 figs. Types of armature coils.

Eddy-Current Losses. Calorimetric Measurement of Eddy-Current Losses (Kalorimetrische Messung von Wirbelstromverlusten), L. Lehrs. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 443-452, 10 figs. Account of experiments to determine a method of calorimetric measurement of current displacement at high frequency, and difficulties arising therewith. Shows how measurement can be carried out and instruments used, including mirror manometer, transmitter arrangement, and thermocouple.

Eddy Current Losses in Armature Conductors, R. E. Gilman. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 194-196; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1170-1173, 1 fig. Extension to author's paper published in vol. 39, pp. 997-1047, 1920, of Journal; additional formulas are given for cases where transposed coils are used and also methods for quickly estimating increased loss due to eddy currents.

Eddy Current Losses in Twisted Conductors, L. Fleischmann. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1062-1064, 4 figs. Gives method which shows elementary way by which to understand these phenomena.

Insulation. See INSULATION, ELECTRIC, Armatures.

Railway-Motor. Certain Essentials in Dipping and Baking Railway Motor Armatures, H. S. Day. Aera, vol. 13, no. 1, Aug. 1924, pp. 42-47, 3 figs. Certain stages of process must be carried out without deviation from approved practice if best results are to be obtained; practical suggestions that should be valuable to maintenance men.

Reconnecting. Reconnecting Direct-Current Armature Windings—Lap Wound Armatures, A. C. Roe. Power, vol. 59, no. 7, Feb. 12, 1924, pp. 246-247, 10 figs. Two-layer lap winding as used on drum-type armatures; armature-winding diagrams explained; single and double windings; use of equalizer connections and how they are made.

Reconnecting Direct-Current Armatures—Common Mistakes in Connections, A. C. Roe. Power, vol. 59, no. 12, Mar. 18, 1924, pp. 446-447, 5 figs. Effects in changing from right-hand to left-hand winding, or from progressive to retrogressive connection.

Reconnecting Direct-Current Armature—Fractional-Pitch Windings, A. C. Roe. Power, vol. 59, no. 25, June 17, 1924, pp. 983-984, 6 figs. Effects of reducing pitch of armature coils and how chording coils may make it possible to use coils that have been made too short for full pitch.

Reconnecting Direct-Current Armatures—Wave Windings, A. C. Roe. Power, vol. 59, no. 9, Feb. 26, 1924, pp. 331-334, 8 figs. Two-layer wave windings as used on drum-type armatures; comparisons between lap and wave windings; effects on speed and voltage when windings are reconnected.

Rotor Slot Wedges. See ELECTRIC MOTORS, A. C., Rotor Slot Wedges.

Slot-Wound, Skin Effect in. Skin Effect in Slot Wound Conductors, A. Press. Electrician, vol. 92, no. 2381, Jan. 4, 1924, pp. 4-5, 3 figs. Heavisidean solution of A. B. Field's problem, subject to boundary conditions set forth in Physical Rev. article of May 1920, assuming criticized Arnold method of calculating self inductances was true.

Testing. Testing Out Armatures During Rewinding, A. C. Roe. Indus. Engr., vol. 82, no. 8, Aug. 1924, pp. 373-377 and 401, 7 figs. Gives methods of testing hand-wound armatures and order in which tests should be conducted so that various faults and defects may be easily located and quickly eliminated at time they are most likely to occur.

Winding. Armature and Coil Winding From a Conversion Point of View, C. Sylvester. Electricity, vol. 38, nos. 1732, 1733, 1737, and 1741, Jan. 18, 25, Feb. 22, and Mar. 21, 1924, pp. 28-29, 49, 94-95, and 147, 9 figs. Calculations.

Figuring a New Winding for an Old Direct-Current Machine, A. C. Roe. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 757-761, 3 figs. Notes on developing new armature and field windings for d.c. machine when no winding data are available.

Winding, Theory of. A Contribution to the Theory of Direct Current Armature Winding, H. J. S. Heather. World Power, vol. 1, no. 3, Mar. 1924, pp. 158-163. Author seeks to show that formula for any ordinary winding and criteria as to possible construction can be simply and logically determined with help of trigonometrical theorem giving nth roots of unity.

Theory of Direct Current Armature Windings, K. C. Graham. Ry. Elec. Engr., vol. 15, no. 1, Jan. 1924, pp. 20-23, 9 figs. Explains method of locating and remedying trouble and analyzes such theory as is necessary to a complete understanding of method pursued.

Windings, Electromotive Force in. The Armature Field in the Pole Clearance and the Induced Electromotive Force in an Armature Winding (Das Ankerfeld in der Pollücke und die in einer Ankerwindung induzierte EMK), R. Richter. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 67-79, 10 figs. Investigation, based on work by Th. Lehmann, published in earlier issue of same journal.

ARSENIC

Deposits, United States. Arsenic Deposits Near Seattle, Washington, P. C. Stoess. Eng. & Min. Jl.-Press, vol. 118, no. 21, Nov. 22, 1924, pp. 821-822. Notes on mining districts of Snohomish and King counties.

Arsenical Ore Deposits in the United States, R. H. Sayre. Eng. & Min. Jl.-Press, vol. 118, no. 24, Dec. 13, 1924, pp. 929-932, 6 figs. Geological survey of some western prospects and mines.

Production. Arsenic Production from Non-Ferrous Smelting, A. B. Young. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 175-178, 1 fig. Anomalous situation regarding arsenic content of ores; effect of impurities on each other; bad effects of arsenic in blast furnace; arsenic difficulties increased by zinc.

Making White Arsenic at Toulon, Nev., George J. Young. Eng. & Min. Jl.-Press, vol. 117, no. 19, May 10, 1924, pp. 757-758, 5 figs. New independent company mines and roasts 15 per cent arsenical ores. Notes on deposit, mining operations, and ore treatment.

ARTILLERY

Fire-Control. The Standardization of Optical Fire Control Instruments, I. C. Gardner. Army Ordnance, vol. 5, no. 26, Sept.-Oct. 1924, pp. 512-514, 2 figs. Reviews history of production of optical instruments during war. Presents a plan for standardization, and gives its advantages. Pub. by permission U. S. Bur. Standards.

Guns. See GUNS.

Matériel. Artillery Matériel, J. B. Rose. Coast Artillery Jl., vol. 61, no. 4, Oct. 1924, pp. 302-312. Résumé of status of development.

Railway. Railway Development Since 1918, G. W. Ricker. Coast Artillery Jl., vol. 61, no. 4, Oct. 1924, pp. 313-333, 11 figs. Account of developments, difficulties and problems during time that railway artillery has been part of United States coast-defense system.

Recoil Mechanisms. Advantages of Hydro-Pneumatic Recoil Mechanisms, D. A. Gurney and W. C. Young. Army Ordnance, vol. 4, no. 22, Jan.-Feb. 1924, pp. 230-233, 3 figs. Greater range and less weight required; standardization; manufacture; service use.

Transport Wagons. Transport Wagons for Medium and Heavy Field Artillery, T. A. Conlon. Army Ordnance, vol. 4, no. 22, Jan.-Feb. 1924, pp. 251-254, 4 figs. Describes German, British, and American types.

ASBESTOS

Industry, Development of. The Development of the Asbestos Industry, 1871-1924. India-Rubber Jl., vol. 68, no. 5, Aug. 2, 1924, pp. 109-113. Review of progress and growth of industry.

Italy. Asbestiferous Deposits at Mount Plebi (Il giacimento amiantifero di Monte Plebi), G. Castelli. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 4, Oct. 15, 1924, pp. 99-100. Discusses preliminary work in Gallura zone of Sardinia, showing sufficient abestos rock to warrant larger operations.

Production and Uses. Asbestos, Its Production and Uses (Asbest, seine Gewinnung und Verwertung). Bergbau, vol. 37, no. 19, Sept. 18, 1924, pp. 528-535. Occurrence, mining, fiber, color, spinning; production of asbestos sheets, paints, slates for roofing, etc.

South Africa. Further Notes on the Asbestos Occurrences Near Kaapsche Hoop, in the Barberton District, A. L. Hall. Geol. Soc. S. Africa—Trans., vol. 26, Jan.-Dec. 1923, pp. 31-49, 4 figs. partly on supp. plates. Detailed geological description.

The Amianthus Asbestos Mine. So. African Min. & Eng. Jl., vol. 35, no. 1708, June 21, 1924, pp. 1139-1140, 2 figs. Discusses important chrysolite deposit in Barberton district near Kaapsche Hoop; gives mining methods and way of testing.

The Asbestos Resources of the Union of South Africa, A. L. Hall. S. African Jl. Industries, vol. 7, no. 11, Nov. 1924, pp. 724-731. Available varieties, distribution and mode of occurrence, local consumption, output, and general outlook of asbestos industry. List of producers. Bibliography.

ASH HANDLING

[See also COAL HANDLING.]

Apparatus for. The Disposal of Ashes in Power Plants, E. K. Scott. Power Engr., vol. 19, nos. 215, 216, and 217, Feb., Mar., and Apr. 1924, pp. 55-56, 90-92, and 145-147, 16 figs. Survey of present practice. Feb.: Trucks and skips; bucket and tray conveyors; scraper and belt conveyor. Mar.: Sluicing ash conveyor.

Boiler Plants. See COAL HANDLING, Boiler Plants.

Conveyors. See COAL HANDLING, Conveyors.

Power Plants. Ash Removing Plants (Entaschungsanlagen), H. Esselbach. Wärme, vol. 47, no. 22, May 30, 1924, pp. 255-256, 3 figs. Describes plants of Roath Power Works in Cardiff and of Underfeed Stoker Co.

See also COAL HANDLING, Power Plants.

ASHES

Coal Recovery from. See COAL, Recovery from Ashes.

ASPHALT

Composition. Composition of Asphalt (De constitutie van asphalt), F. J. Nellensteyn. Chemisch Weekblad, vol. 21, no. 4, Jan. 26, 1924, pp. 42-51. Detailed description of properties, composition, and methods of analysis.

The Constitution of Asphalt, F. J. Nellensteyn. Instn. Petroleum Technologists—Jl., vol. 10, no. 43, June 1924, pp. 311-325. Aims at formation of definition of asphalt as result of researches, and proceeds with synthesis of asphalt-like substances from hydrocarbon and carbon; considers solutions of asphaltenes to be very stable carbon oleosols.

Rock. See ROAD MATERIALS, Rock Asphalt.

Rock, Use for Floors. European Natural Rock Asphalt for Floors, W. H. Tait. Contract Rec.

& Eng. Rev., vol. 38, no. 14, Apr. 2, 1924, pp. 336-338. Reasons for failure of asphalt floors; stresses the exceptionally excellent qualities of European asphalt manufacture.

Roofing, Specifications. United States Government Master Specification for Asphalt for Unsurfaced Built-Up Roofing. U. S. Bur. Standards—Circular, no. 168, July 7, 1924, 10 pp., 3 figs. Specifications for grades, material and workmanship, requirements, methods of inspection, packing and marking, etc.

See also ROOFS, Asphalt.

Sands, Classifications of. Classifying Asphalt Sands by Graphical Method, W. C. D. Haarman. Eng. News Rec., vol. 92, no. 26, June 26, 1924, pp. 1090-1091, 2 figs. Triangular diagrams offering simple and rapid means of classifying sands and proportioning sheet-asphalt mixture.

Statistics, 1923. Asphalt and Related Bitumens in 1923, K. W. Cottrell. U. S. Geol. Surv., no. II:16, 1924, 135-142. Statistics of production, imports and exports, and list of producers.

Status of. The Status of Asphalt. Lubrication, vol. 10, no. 6, June 1924, pp. 61-66. Discusses economic value, determination of quality, refining, and uses of asphalt.

Tar. See TAR, Asphalt.

Waterproofing, Use for. See WATERPROOFING, Asphalt for.

ASSAYING. See ORES, Assaying.

ATMOSPHERE

Physical Structure. The Physical Structure of the Atmosphere, Regarded from the Dynamical Point of View, N. Shaw. Ingenieur, vol. 39, no. 41, Oct. 11, 1924, pp. 807-808. Normal wind can be approximately computed from air pressure and rotation of earth. Variation of temperature with height is fairly uniform all over world and prevailing winds in upper strata of atmosphere are therefore fairly uniform. At a level of about 8 km. density of air is same all over globe throughout year and so are isotherms and isobars (in English).

ATOMS

Atomic Weights. Atomic Weights and Isotopes, T. W. Richards. Chem. Reviews, vol. 1, no. 1, Apr. 1924, pp. 1-40. Methods of determining atomic weights; constancy of atomic weights; precision of Faraday's law; discovery of isotopes; atomic weights and cosmogonic theory. List of references.

Compositeness of. Chemical Combinations, J. Moil. Chem., Met., & Min. Soc. of S. Africa—Jl., vol. 24, no. 7, Jan. 1924, pp. 158-166 and (discussion) 166-167, 15 figs. Discussion on compositeness of atoms.

Compressibility. Compressibility, Internal Pressure and Change of Atomic Volume, T. W. Richards, Franklin Inst.—Jl., vol. 198, no. 1, July 1924, pp. 1-27, 11 figs. Shows that changes of volume occurring when two solids or liquids combine are due to changes of pressure resulting from chemical affinity and cohesion, and that when affinity is greater, volume-change is greater and also compressibility is greater; develops from this methods for determining diameter of atoms in compounds. Bibliography.

Disintegration, Action of γ-Rays on. The action of Gamma-Rays in Atomic Disintegration (Ueber die Rolle der γ-Strahlen beim Atomzerfall), L. Meitner. Zeit. für Physik, vol. 26, no. 3, Aug. 11, 1924, pp. 169-177. It has been found that radio-actinium and actinium X, when they disintegrate giving out alpha-particles, produce typical monochromatic gamma-radiations, as radium has been shown to do; with these two substances large number of monochromatic nuclear gamma-rays have been shown to be produced, instead of single one as in radium; when an alpha- or beta-particle is given out from nucleus of radioactive atom, remainder of nucleus must undergo rearrangement of its constituent parts.

Internal Mechanism. Putting the Atom to Work, Oliver Lodge. Sci. Am., vol. 130, no. 5, May 1924, pp. 306 and 358-359, 10 figs. Discusses attempt to isolate its energy and to find how it may be released for human use.

Isotopy. Isotopy and Isotopes (L'isotopie et les isotopes), Mme. Pierre Curie. Jl. de Physique & le Radium, vol. 4, no. 11, Nov. 1923, pp. 381-412, 4 figs. Isotopy in connection with radioactive elements; positive rays and analysis of crystals; structure of atoms; separation of isotopes.

Kinetic. The Kinetic Atom, Oliver Lodge. Nature, vol. 113, no. 2827, Jan. 5, 1924, pp. 15-17, 3 figs. Evidence for nuclear atom; varieties of possible orbits; effect of ellipticity on spectrum.

Movements in. Simple Cases of Movements under the Effect of the Newton-Coulomb Law of Attraction (Einige einfache Fälle von Bewegung unter der Wirkung der Newton-Coulombschen Anziehung), Alb. Forster. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 11, Nov. 1924, pp. 550-567, 3 figs. Author attacks the proposition of J. J. Thomson set forth in series of articles published in Gen. Elec. Rev. and in Jl. Franklin Inst., that Coulomb law be changed to a different relation; based on simple law of attraction and repulsion evolved by Newton and Coulomb, he examines series of circular and pendular movements along an ellipse, in focuses of which attractive and repulsive mass is found; refers to model proposed by Fajans for designating certain molecular movements.

Periodic Law. The Present Position of the Periodic Law, W. R. Cooper. World Power (formerly Beama), vol. 1, no. 1, Jan. 1924, pp. 18-24, 2 figs. Periodic law of Mendeléeff; discovery of atomic number; atomic structure; why there are fractional atomic weights.

Quantum States. The Probability of Quantum States (Ueber die Wahrscheinlichkeit der Quantenzustände), E. Fermi. Zeit. für Physik, vol. 26, no. 1, Aug. 5, 1924, pp. 54-56. Calculation of equilibrium between quantum states of same atom based on thermodynamic-volume considerations, from which it is concluded that quantum states seldom occur corresponding to greater volume than that given by ordinary statistics. Mathematical paper.

Recent Research on. Electrons, Atoms and Atomic Architecture, G. W. De Tunzelman. Electrician, vol. 92, no. 2384, Jan. 25, 1924, pp. 97-99. Recent work considered and criticized.

Structure of. Building Up and Destruction of the Atom (Atomaufbau und Atomzertrümmerung), M. v. Laue. Zeit des Vereines deutscher Ingenieure, vol. 68, no. 30, July 26, 1924, pp. 769-773, 9 figs. Discusses development up to Bohr's theory of spectral series and present-day views on composition of nucleus of atom.

Some Contemporary Advances in Physics, K. K. Darrow. Bell System Tech. Jl., vol. 3, no. 1, Jan. 1924, pp. 158-178, 13 figs. Deals principally with atomic structure.

Spectroscopy and Bohr's Theory of Atomic Structure, P. D. Foote. Franklin Inst.—Jl., vol. 198, nos. 3 and 4, Sept. and Oct. 1924, pp. 344-363 and 517-540, 15 figs. Consideration of schematic representations of models which are suggested by spectroscopic data.

The Natural and Artificial Disintegration of the Elements, E. Rutherford. Franklin Inst.—Jl., vol. 198, no. 6, Dec. 1924, pp. 725-744. Notes on structure of nuclei of atoms; dimensions of nuclei

and law of force; radioactive evidence; frequency of vibration of nucleus; velocity of escape of hydrogen nuclei; evolution of nuclei.

The Structure of the Atom, W. F. G. Swann. Franklin Inst.—Jl., vol. 197, no. 3, Mar. 1924, pp. 293-321, 6 figs. Discusses theories of atomic structure.

The Transformation of Atoms and the Study of Elements (Atomumwandlung und Elementenforschung), O. Hahn. Zeit. für angewandte Chemie, vol. 37, no. 12, Mar. 20, 1924, pp. 153-158, 7 figs. Basic principle underlying theory of atoms and elements; review of literature and developments relating to theories on structure of chemical compounds and of separate atoms; author points out that theory of core structure of atom is still very obscure.

Theories and Experiments. Outline of the Investigations of the Atom during the Last Decade (Grundragen av det senaste årtiondets atomforskning), A Westgren. Teknisk Tidskrift, vol. 54, no. 13, Mar. 29, 1924, pp. 104-108 (Allmänna Avdelningen), 5 figs. Reports, theories and experiments, particularly those of Ernest Rutherford in Cambridge, Eng.

Theory of the Atom (Ueber Atomtheorie), M. Born. Elektrotechnische Zeit., vol. 45, no. 34, Aug. 21, 1924, pp. 889-897, 7 figs. Summarizes present conception of atoms as kind of planetary systems, including periodic system of elements, fundamental laws of mechanics of the atom, quantum theory, laws of spectra, Bohr theory of the H atom, etc.

AUDIOMETERS. See SOUND, Waves, Photographing.

AUDITORIUMS

Acoustics of. See ACOUSTICS, Auditoriums.

AUTOGENOUS WELDING

[See also OXY-ACETYLENE WELDING.]

Boilers. Autogenous and Electric Welding in Repairing Steam Vessels (Les soudures au chalumeau ou à l'arc électrique appliquées aux réparations des appareils à vapeur), M. L. Cauchois. Associations Françaises de Propriétaire d'Appareils à Vapeur—Bul., vol. 5, no. 16, Apr. 1924, pp. 65-90, 23 figs. Discusses autogenous and electric welding as applied to iron and steel, especially for boilers; tests made on welds by various authorities; faulty welding; micrography.

Proposed Code of Rules to Govern Autogenous Welding on Steam Pressure Boilers. Boiler Maker, vol. 23, no. 9, Sept. 1924, pp. 257-262, 27 figs. Gives results obtained from tests and recommendations covering use of autogenous welding in steam boilers.

Coal-Gas. Welding with Coal Gas (Schweissungen im Leuchtgasfeuer), Fr. Messinger. Wärme, vol. 47, no. 4, Jan. 25, 1924, pp. 31-32, 6 figs. Autogenous welding and cutting; success of complete welds by means of coal gas without welding medium; welding tests to determine welding limit; experiences with welds in coal-gas fire; tests with low-pressure gas, compressed air, and compressed gas.

Definition of. What is Welding? (Was ist Schweissen?), R. Baumann. Wärme, vol. 47, no. 20, May 16, 1924, pp. 223-224. Shows that term "autogenous welding" is incorrect and proposes in its place "fusion."

Gases for. Relative Suitability of Various Kinds of Gas for the Purpose of Autogenous Welding (Ueber die Frage der relativen Eignung der verschiedenen technischen Gasarten für die Zwecke der autogenen Schweissung). Autogene Metallbearbeitung, vol. 17, nos. 15 and 16, Aug. 1 and 15, 1924, pp. 189-192 and 207-208. Calorific value of gaseous fuels and flame temperatures of Co, H, methane, etc.; thermic efficiency of flames; significance of chemical nature of gases for welding.

Safety in. Consideration of Safety and Economy in New Autogenous Welding Plants (Sicherheitliche und wirtschaftliche Gesichtspunkte bei neuen autogenen Schweissanlagen). Bergbau, vol. 37, no. 29, Dec. 4, 1924, pp. 727-731, 6 figs. Discusses safety as fundamental condition in construction of acetylene apparatus. Describes manufactures of Messer & Co., Frankfort.

AUTOMOBILE ENGINES

Air Cleaners. Air-Filters, L. L. Dollinger. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 66-68, and (discussion) no. 6, Dec. 1924, pp. 539-541. Effect of road dust and grit on cylinders and valves; benefits derived from filtering air; requirements of a filter.

California Air-Cleaner Tests, 1924 Series, A. H. Hoffman. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 140-148, 8 figs. Details of work of Univ. of Cal. Agricultural Experiment Station in continuation of 1922 tests, method of testing cleaners that cannot be tested by 1922 method, determining how much dust an auto or truck encounters in service, how air cleaners affect rate of engine wear; gives tabular summary of results.

Motor Vehicle Makers Give Increased Attention to Air Cleaners, W. L. Carver. Automotive Industries, vol. 50, no. 4, Jan. 24, 1924, pp. 180-183, 7 figs. Five passenger cars at New York show carried these units as standard equipment; claimed to eliminate various troubles by preventing dust from entering engine with carburetor air; four different types for car, truck, and bus use.

Recent Observations of Air-Cleaning Devices, C. P. Grimes. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 63-65, 1 fig., and (discussion) No. 6, Dec. 1924, pp. 541-543. Author summarizes his experiences and conclusions covering last 3 years. Reasons and experiences leading up to recommendation of self-ejecting centrifugal dry air cleaner.

Testing of Air-Cleaners, A. B. Squyer. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 33-37, 5 figs., and (discussion), no. 6, Dec. 1924, pp. 553-555. Requirements of a good air cleaner are maximum efficiency, minimum of attention from operator and minimum power-loss. Deals with development of laboratory methods to determine relative values of various air cleaners as such, especially first requirement, maximum efficiency.

Air-Cooled. The Future of the Air-Cooled Car, V. W. Pagé. Sci. Am., vol. 130, no. 1, Jan. 1924, pp. 22-23 and 71, 7 figs. Engineering and operating facts that call for its most serious consideration.

Anti-Detonator for. See AUTOMOBILE FUELS, Anti-Knock Compound.

Assembling Fixture. Special Fixture Used in Assembling Packard Cylinder Block to Crankcase. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 564-565, 3 figs. Preserves alignment standards of connecting rods, pistons, and rings previously installed; device is operated pneumatically and, by simplifying work, makes possible more rapid production.

Bagnulo. Oil Engines for Motor Vehicles, with Special Regard to the Bagnulo Engine (Oelmotoren für Kraftfahrzeuge unter besonderer Berücksichtigung des Bagnulo-Motors), L. Hausfelder. Wirtschafts-Motor, vol. 6, no. 2, Feb. 1924, pp. 1-8, 5 figs. Discusses different types of oil engines used in automobiles, and describes Bagnulo en-

gine as example of satisfactory solution of problem of automobile engine for heavy oils.

Will Surface-ignition Solve Automobile Oil-engine Problems? Oil Engine Power, vol. 2, no. 2, Feb. 1924, pp. 76-78, 2 figs. Describes Bagnulo heavy-oil hot-bulb type of surface-ignition automobile engine; invented by an Italian, and sponsored by Siemens-Schuckert Werke and Allgemeine Elektricitaets Gesellschaft of Berlin; that it requires only 20 lb. air per lb. of fuel, weighs only 18 lb. per b. hp., and regularly consumes 29 deg. B. fuel oil without coking up bulb and at rate of 0.58 lb. per b. hp-hr. is claimed for it.

Balancing. Balance of the Cadillac V-63 Engine, E. W. Seaholm. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 70-73, 5 figs. Points out that Gen. Motors Research Laboratories has investigated possibility of counteracting couples connected with this type of shaft and has arrived at solution through employment of compensating weights properly proportioned and disposed along crankshaft; this method of balancing had its first application in 8-cylinder engines built by Cadillac Motor Car Co.

Balancing of Automobile Engines, H. S. Rowell. Automobile Engr., vol. 14, no. 188, Apr. 1924, pp. 119-123, 17 figs. Results of author's researches, some of which are believed to be new and useful; deals with inertia balancing; rotating parts; reciprocating parts; connecting rods. Includes appendices on harmonic balancing, vee engines, and connecting-rod inertia.

Engine Balancing Calculations, M. Platt. Automobile Engr., vol. 14, nos. 192 and 193, Aug. and Sept., 1924, pp. 243-249 and 275-281, 42 figs. Discusses balance of rotating masses; crankshafts; engine-balancing calculations. Appendices. Bibliography.

Practical Balancing of Engine Components, A. A. Bull. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May, 1924, pp. 527-531, 9 figs. Discusses vibrations either felt or heard in car which are result of lack of balance. From a production standpoint, influence of mechanical unbalance of parts and variation in their weight that may create different unbalanced forces are of principal concern; specific instances. Commercial balancing of crankshafts, flywheels, clutches and propeller-shaft assemblies; six- and eight-cylinder engine balance; vibration-test results, in terms of actual measurement on dynamometer and in car.

Practical Methods of Engine-Balancing, L. L. Roberts. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 452-456, 8 figs. Author divides into three major groups units of automobile that require particular attention and treatment to assure smooth-running mechanism and gives details of actual methods employed by Packard Motor Co. to balance parts that constitute each group.

The Harmonic Balancer, J. N. Morris. Autocar, vol. 52, no. 1478, Feb. 15, 1924, pp. 283-284, 8 figs. Description of device originally introduced by F. W. Lanchester for obtaining, in a 4-cylinder engine of orthodox type, perfection of balance attainable in 6-cylinder engine, and its action.

See also Inherent Vibration and Balance.

Carbureting and Distributing System. New Device Enriches Charge for High Speed and Heavy Pull, and Leans It Otherwise, W. L. Carver. Automotive Industries, vol. 51, no. 25, Dec. 18, 1924, pp. 1049-1050, 1 fig. Describes new carbureting and distributing system, comprising, in addition to usual carburetor, modified intake and exhaust manifolds and special auxiliary air valve which is controlled by vacuum in intake manifold and also mechanically through cam on stem of throttle valve.

Carburetors. See CARBURETORS.

Connecting Rods, Light-Alloy. See ALLOYS, Light.

Constant-Compression. Economy of Fuel Attained by Means of Constant Compression Engine. Automotive Industries, vol. 50, no. 24, June 12, 1924, p. 1278, 1 fig. Gas mixture and air are drawn in successively so that they will remain on different levels of combustion chamber, and so that stratification replaces turbulence of charge in Burtnett 4-cycle engine.

Construction. Special Problems in the Construction of Medium- and High-Pressure Automobile Engines (Sonderaufgaben beim Bau von Mittel- und Hochdruck-Kraftfahrzeugmotoren), F. E. Bielefeld. Wirtschaftsmotor, vol. 6, no. 7-8, Aug. 25, 1924, pp. 9-12, 7 figs. Discusses question of weight, least weight without reducing safety and life; high number of revolutions; further development of two-stroke engine.

Cooling Systems. Engine-Cooling Systems and Radiator Operating Characteristics, N. S. Diamant. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 396-406, 14 figs., and (discussion), vol. 15, no. 3, Sept. 1924, pp. 229-232. Quantitative comparison of air, water, and oil-cooled cylinders as it relates to subject of heat transfer and temperature drop; comprehensive discussion of radio-condenser type of cooling is given under headings of steam cooling systems and characteristics, cooling capacity of radiators used to condense steam, and present state of development; discussion of performance of operating characteristics of radiators from viewpoint of car, truck, or tractor designer.

Latest Cooling System Employs Small Gear Pump with ⅝ in. Discharge Tube, H. Chase. Automotive Industries, vol. 51, no. 18, Oct. 30, 1924, pp. 770-771. Functions much like steam boiler, but water is cooling medium; if jacket with free outlet and no pockets is used overheating is impossible; system is being tried on three different passenger-car engines in experimental service.

Corrosion. Undue Wear of Engine Parts Is Caused by Rust. Automotive Industries, vol. 50, no. 18, May 1, 1924, pp. 956-958, 2 figs. Three hypotheses analyzed in research work conducted in Gen. Motors Corpn., namely acid, oxide, and electrolytic theory, all of which agree that presence of moisture is necessary.

Crankcase Drainage Facilities. Crankcase Drainage Facility and Oil-Pump Capacity, T. A. Waerner. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 260-262. Discusses means of reducing percentages of fuel dilution as follows: (1) greater accessibility for draining engine-lubricating oil; (2) greater accessibility for cleaning vital parts before reassembling, after draining used lubricating oil; and (3) more adequate consideration of crankcase oil-sump design.

Crankcase-Oil Dilution. A Possible Solution of the Crankcase-Oil Dilution Problem, I. L. Anderson. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 43-46, 6 figs. Describes method which consists of removing gasoline from crankcase by ventilation; apparatus used and results of tests.

Consumption and Dilution of Automobile Engine Oils. Lubrication, vol. 10, no. 6, June 1924, pp. 66-72, 13 figs. Description of dynamometer apparatus and test routine; discusses dilution, lubricating system, oil viscosity requirements, of road tests, and oil consumption.

Crankcase-Oil Dilution, E. F. Hallock, Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 57-62. Presents tabular data to show how end points have risen since 1910, together with data showing effects of various percentages of fuel dilution with relation to Saybolt viscosities

and pour points of high-grade oils; point contamination, not dilution, necessitates oil drainage; use of heavier-bodied oils decried; how to avoid crankcase dilution, and oil sluding; proper oil specification.

Determination of Dilution of Crank-Case Oil, H. H. Knoch, P. A. Crosby and R. R. Matthews. Indus. & Eng. Chem. vol. 16, no. 11, Nov. 1924, p. 1153. Shows results of using vacuum distillation as method of determination.

Dilution of the Crank Case Oil of Automotive Engines, C. M. Larson. Armour Engr., vol. 15, no. 2, Jan. 1924, pp. 53-54 and 63, 6 figs. Causes and prevention; results of tests; describes Lilut-O-Meter, and Vis-Gage, instruments for testing life of crankcase oil.

Factors Affecting the Rate of Crankcase-Oil Dilution. J. O. Eisinger. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 69-74, 11 figs., and (discussion) No. 4, Oct. 1924, pp. 333-336. Progress in Coöperative Fuel Research since last report was presented to Soc. Automotive Engrs. Shows that temperature of jacket water has a marked influence upon rate of dilution, and that this influence is due to difference in rate at which diluent is added to or eliminated from oil-film. Gives evidence demonstrating that under certain conditions diluent may be eliminated from oil at a fairly rapid rate, and discusses bearing that this has upon posibility of an equilibrium state being reached. Other factors discussed with reference to their probable influence upon rate of dilution.

The Danger Point of Dilution. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 117-121. Twenty-six makers report views on dilution factors and propose remedies.

The Serious Evils of Crankcase-Oil Dilution, W. F. Parish. Automotive Mfr., vol. 65, no. 11, Feb. 1924, pp. 24-25. Effect of dilution on wear of motor-vehicle engines; statistics of recent replacements; practical improvements in methods; preventing contamination.

Winter Tests Show Greater Dilution with Heavy Fuels, J. A. C. Warner. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 151-161, 10 figs. Report on results of winter tests by Bur. of Standards; discusses results of analyses of fresh crankcase oils and dilution results before making comparison between those obtained under summer and under winter condition; notes on dilution vs. mileage; distillation of composite oil samples; comments upon crankcase-oil consumption.

Crankcase Oil, Rectification of Diluted. Rectification of Diluted Crankcase-Oil, R. L. Skinner. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 51-59, 9 figs., and (discussion) no. 4, Oct. 1924, pp. 340-343. Traces engineering development of a rectifying device and system designed to combat crankcase-oil dilution problem. Gives temperatures prevailing throughout system when it is in operation. Amount of oil handled by device in ordinary service. Describes comparative tests to determine engine wear with and without device.

Crankcase Oils, Water in. Water in Crankcase Oils, A. L. Clayden. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July, 1924, pp. 47-50, 3 figs., and (discussion) no. 4, Oct. 1924, pp. 329-333. Effect of using an emulsifying oil; amounts of water actually deposited because of cylinder-wall condensation; effects on lubrication; determination of water-deposition rate.

Crankcase. See CRANKCASES.

Crankshaft. See CRANKSHAFTS, Balancing; Forging; Machinery.

Cylinder Blocks. See MACHINING METHODS, Automobile Cylinder Blocks.

Cylinders. See IRON CASTINGS, Automobile Cylinders.

Cylinders, Machining. See CYLINDERS, Automobile, Machining.

Cylinders, Wall Coating of. New Substance for Coating Cylinder Walls Said to Promote Fuel Economy. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, pp. 680-681, 2 figs. Locomobile Co. adopts process called kataliting which is claimed to accelerate combustion and thus render more efficient conversion of thermal to mechanical energy; test results.

Design, Influence of Fuel on. Fuels and Engine Evolution, W. R. Ormandy. Motor Transport (Lond.), vol. 30, no. 1030, Nov. 24, 1924, pp. 613-614. How present-day fuel conditions and requirements are likely to influence engine design.

Detonation Control. Control of Detonation, G. A. Young and J. H. Holloway. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 315-318, and (discussion) vol. 15, no. 3, Sept. 1924, pp. 235-237. Discusses methods of controlling temperature of charge before and after mixture enters combustion chamber, and before normal ignition occurs; results of tests are that, when care is exercised in maintaining mixture, spark plugs, valves and combustion chamber at proper temperature, compression pressure of 125 lb. per sq. in. can be used without detonation by addition of small amount of anti-knock compound to fuel with enough increase in efficiency of engine to warrant additional expense.

Developments. Automobile Engines: Evolution, Improvements, and Tendencies (Le moteur d'automobile: Evolution, perfectionnements, tendances), Martinot-Lagarde. Technique Moderne, vol. 16, nos. 19 and 20, Oct. 1 and 15, 1924, pp. 629-632 and 669-675, 10 figs. Discusses fuels, two- and four-stroke engines, compressions, form of explosion chambers, speed of rotation, construction of a normal engine, and present state of automobile construction.

Dorner. See Heavy-Oil.

Eight-Cylinder V. Smooth Running and Mass Balancing in Eight-Cylinder V Engines with Symmetrical and Asymmetrical Crankshafts (Gleichgang und Massenausgleich bei symmetrischer und unsymmetrischer Kurbelwelle), H. Schrön. Motorwagen, vol. 27, nos. 33 and 36, Nov. 30 and Dec. 31, 1924, pp. 612-616 and 739-744. Comparison of standard shaft with special constructions (Cadillac and others) with regard to uniform torsional moment and mass effects; numerical examples.

Eight-in-Line. Excelsior Offers New Eight-in-Line Overhead Valve Engine. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, pp. 715-717, 4 figs. Product of Chicago concern has nine-bearing crankshaft, aluminum rods and pistons, and high-pressure lubricating system; it reported to develop 93 b. hp. at 2500 r.p.m.; bore is 3⅜ in. and stroke 4½ in.

8-in-Line Engine Is Latest Product of Lycoming. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1066-1067, 4 figs. Cylinders are cast in single block and are of L-head type; dimensions will be varied for particular cars, but on first models built bore is 3⅛ in. and stroke 4¼ in.; pistons are of cast iron; inlet and exhaust manifolds are combined.

Falls Eight-in-Line Has Crankcase and Cylinders Cast Integral. Automotive Industries, vol. 50, no. 22, May 29, 1924, pp. 1182-1183, 2 figs. Valve in head-type engine has five-bearing crankshaft lubricated by pressure, integral inlet manifold, and two additional cylinders have same bore and stroke as six of same make.

The First German Straight Eight Has Aluminum Engine. Automotive Industries, vol. 50, no.

21, May 22, 1924, pp. 1111-1115, 8 figs. New Hansa-Lloyd features include fan blades on flywheel to discharge smoke and fumes from engine underneath chassis, novel method of venting crankcase, and dummy radiator built to give effect of V-type, but which has flat core.

Excelsior. See Eight-in-Line.

Exhaust Gases, CO in. See CARBON MONOXIDE, Automobile Exhaust Gases in.

Falls. See Eight-in-Line.

Fins, Cooling Capacity of. How to Determine the Cooling Capacity of Fins on Crankcase or Engine, C. B. Dicksee. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 206-210, 11 figs. Substitution of copper for cast iron or steel does not yield great increase in heat dissipation unless number of fins is multiplied and their thickness decreased.

Fuel-Feeding Apparatus. Magnetically Operated Bellows Pump Used as New Fuel Feeding Device, D. Blanchard. Automotive Industries, vol. 51, no. 21, Nov. 20, 1924, pp. 890-891, 3 figs. Device known as Autopulse magnetic fuel pump operates off storage battery on same principle as electric bell; is mounted directly on carburetor and is said to maintain full supply regardless of grade or temperature.

Tests with Fuel-Feed Apparatus (Einige Versuche mit Brennstoff-Förderapparaten), R. Conrad. Motorwagen, vol. 27, no. 5, Feb. 20, 1924. pp. 65-75, 16 figs. Measurements results with underpressure apparatus and with a combined undepressure and overpressure suction apparatus.

Fuel Heat-Loss Elimination. How to Get the Most Out of the Gasoline You Pay for, G. W. Jones and A. A. Straub. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 212-213, 1 fig. Average motor vehicle wastes 30 per cent of heat value of fuel used. Changing from low- to higher-grade fuel and use of air preheater requires readjustment of carburetor.

Fuels. See AUTOMOBILE FUELS.

Fuels and Oils, Effects of. Laboratory Tests Show Effects of Different Fuels and Oils on Engine Performance. Automotive Industries, vol. 51, no. 14, Oct. 2, 1924, pp. 608-610, 3 figs. Dynamometer laboratory of The Texas Co. in Long Island City given over to research on performance and engine wear. Nature and arrangement of testing equipment.

Godet-Vareille. A Diminutive "Six." Autocar, vol. 52, no. 1492, May 23, 1924, pp. 935-936, 6 figs. Six-cylinder 745 c.c. Godet-Vareille engine; outstanding features are positive valve operating mechanism, a supercharger, distinctive type of cylinder construction, and use of roller and ball bearings.

Foreign Maker Increases Engine Speed and Decreases Piston Displacement, W. F. Bradley. Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1225-1226, 3 figs. Godet & Vareille (Paris) 45.4-cu. in. six incorporates novel jacket construction, built-up crankshaft with roller bearings on crankpins and supercharger; cylinders are cast separately; brakes are on front wheels and gear-set only.

Hansa-Lloyd. See Eight-in-Line.

Heavy Oil. A New Heavy Oil Automobile (Ein neuer Schweröl-Kraftwagen), R. C. V. Gorrissen. Allgemeine Automobile-Zeitung, vol. 25, no. 47, Nov. 22, 1924, pp. 19-20, 3 figs. See also Wirtschaftsmotor, vol. 6, no. 11, Nov. 25, 1924, pp. 6-7, 1 fig. Particulars of Dorner engine for heavy oils; fuel consumption 275 grams per hp-hr., remaining proportional to r.p.m., 400-1400 and 1800 maximum.

Heavy-Oil Engines for Vehicles with Special Reference to Economy (Schweröl-Motoren für Fahrzeuge unter besonderer Berücksichtigung ihrer Wirtschaftlichkeit), F. E. Bielefeld. Wirtschaftsmotor, vol. 6, no. 5, May 25, 1924, pp. 3-15, 34 figs. Discusses low-pressure carburetors, hot-bulb engines, Diesel engines, atomizing and injection of fuel; compares various types of engines, their advantages and disadvantages.

The Thermokrat System of Using Heavy Oil in Internal-Combustion Engines (Schweröl betrieb in Verbrennungsmotoren "System Thermokrat"), H. Hardt. Allgemeine Automobil-Zeitung, vol. 24, no. 51-52, Dec. 22, 1923, pp. 23-24, 2 figs. Describes crude-oil ignition system which is said to give perfect satisfaction for use in automobile engines in summer and winter.

See also Bagnulo.

Ignition. See IGNITION, Automobile Engines.

Inherent Vibration and Balance. Inherent Vibration and Inherently Balanced Engines, D. Ferguson. Rochester Engr., vol. 3, no. 6, Dec. 1924, pp. 104-106, 2 figs. Discusses inherent out-of-balance condition of 4-cylinder vertical engines.

Lubricants for. See LUBRICATING OILS, Automobile-Engine.

Lubricants, Frictional Losses Due to. Engines for Oil versus Oil for Engines. Soc. Automotive Engrs. Jl., vol. 14, no. 3, Mar. 1924, pp. 307-314, 2 figs. Contains following articles: Mechanical Friction as Affected by the Lubricant, L. H. Pomeroy; The Function of Lubricants, A. L. Clayden.

Lubrication. Engine Lubrication for Automobiles and Boats (Zur Schmierung der Motoren für Land- und Wasserfahrzeuge), Praetorius. Motorwagen, vol. 27, nos. 25 and 27, Sept. 10 and 30, 1924, pp. 441-448 and 477-483, 21 figs. Describes various types of lubricating systems, including that of Daimler, Benz, N. A. G., Dirci-Kardan, Maybach, and other engines.

Some Experiments in the Lubrication of Commercial-Vehicle Engines, H. D. Nickinson. Automobile Engr., vol. 14, no. 185, Jan. 1924, pp. 24-29, 12 figs. Record of commercial tests, carried out in order to ascertain if there is any difference in results obtained when using different brands of lubricating oils for internal-combustion engines, and to see if, for commercial work, it is good policy to buy expensive oil, or otherwise.

Lycoming. See Eight-in-Line.

Machining Methods. The Production of Rickenbacker Motor Parts, H. Campbell. Am. Mach., vol. 61, no. 16, Oct. 16, 1924, pp. 609-612, 11 figs. How cylinders are bored, reamed, and ground; babbitting connecting rods; grinding pistons; lapping piston pins and rings; utilizing power generated on test block.

See also MACHINING METHODS, Automobile-Engine Parts.

Magnetos. See MAGNETOS.

Manifolds. Fundamental Improvements in Manifold Design, A. M. Dean, J. W. Swan and C. A. Kirkham. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 139-147, 13 figs., and (discussion) June, pp. 602-607, 3 figs. Points out shortcoming of present manifolds and describes principle of Swan manifold, based on equal distribution of wet-fuel mixtures in exactly same ratio as that delivered to manifold by carburetor; advantages claimed for manifold of this type.

Hot Spot Temperature Requirements Determined by Purdue Research. Automotive Industries, vol. 50, no. 3, Jan. 17, 1924, pp. 120-123, 7 figs. Results of tests carried out at Purdue Univ. by C. S. Kegerreis and O. C. Berry to determine temperatures required to vaporize present-day fuel by means of so-called hot-spot manifold, and temperatures available in exhaust under different running conditions.

Intake-Manifold Distribution, H. W. Asire. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 387-395, 22 figs. Investigation to determine following questions: (1) how bad is distribution; (2) how do different types of manifold compare; (3) why is liquid distribution in some manifolds poor; (4) how can trouble be corrected.

Manufacture. Unusual Tool Grouping Lowers Cost of Nash Engine Production. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 559-563, 14 figs. Extra operations resulting in superior finish are made possible on this account; many special machines are employed; cylinders are bored three times, reamed once and honed; 600 blocks can be completed without renewing stones.

Mercedes. Sweeping Changes Made in New Six Cylinder Mercedes, P. M. Heldt. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, pp. 845-847, 2 figs. All six cylinders and top half of crankcase made of single aluminum casting; detachable cylinder heads contain valves operated from overhead camshaft; Root-type supercharger used.

Motor-Bus. See MOTOR BUSES, Engines.

Motor-Truck. See MOTOR TRUCKS, Engines.

New York Show. Distinct Progress Shown in Engine Design, A. Ludlow Clayden. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 61-64, 8 figs. Greater output per cu. in. of piston displacement secured; power plants are superior to those of year ago; larger bearing areas and lighter stresses have increased durability.

Oil Aerator and Filter. New Device Designed to Remove Water, Gas and Dirt from Lubricating Oil. Automotive Industries, vol. 51, no. 25, Dec. 18, 1924, pp. 1052-1053, 1 fig. Fuel diluent and water are evaporated in heating element while other foreign matter is filtered out; device is known as Kingston oil aerator and filter tank.

Oil Consumption and Dilution. Engine-Oil Consumption and Dilution, N. MacCoull. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July, 1924, pp. 93-100, 15 figs., and (discussion) no. 4, Oct. 1924, pp. 337-340. First results of tests made by Texas Co., New York City, on five 7½-ton trucks during regular course of business deliveries. Curves plotted from data obtained. Details of dynamometer tests. Description of dynamometer apparatus and engine used, and analysis of result of wear of test engine.

See also Crankcase-Oil Dilution.

Oil Rectifiers. Rickenbacker Incorporates Skinner Rectifier in All New Models. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1086-1087, 2 figs. Oil drawn from around piston by inlet suction is subject to distillation process by hot exhaust gases, fuel driven off being returned to intake manifold.

Pistons. See PISTONS.

Powell. Powell Engine May Prove to be Epochal Design, M. A. Hall. Automotive Mfr., vol. 66, no. 9, Dec. 1924, pp. 5-7, 2 figs. Novel arrangement of crankshaft and connecting rod doubles stroke, carries combustion to end, producing marked increase in power and economy.

Radiator Non-Freeze Liquid. Honey as Anti-Freeze for Automobile Radiators, T. P. G. Shaw and G. L. Robertson. Can. Chem. & Metallurgy, vol. 8, no. 3, Mar. 1924, pp. 63-64. Discussion from standpoint of viscosity at low temperatures and crystallization-point angles, giving results of experiments.

Radiators. Constructing Automobile Radiators, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 6, Feb., 1924, pp. 454-459, 13 figs. Building up tubular radiator cores of flat-fin type from brass stampings and tubes.

New McCord Radiator Core Stamped from Ribbon Brass. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1084-1085, 4 figs. Entire structure with integral fins is built up by means of progressive multiple die which forms tubes that project from strips running continuously through press; tinned sections are stacked, forced together, and baked to sweat all joints.

See also Cooling Systems.

Simson. Small High Speed Engine Used in New German Car, B. R. Dierfeld. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, pp. 726-730, 5 figs. Simson car has 4-wheel brakes, connected diagonally in pairs; 4-cylinder power plant is overhead valve type, carries two camshafts, and has two inlet and two exhaust valves for each cylinder; wheelbase is 118 in.

Spark Plugs. See SPARK PLUGS.

Specifications. American Stock Engine Specifications. Motor Transport (N Y), vol. 29, no. 12, Jan. 15, 1924, p. 415. Also Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 442-445. Specifications of the different makes for buses, trucks, tractors, passenger cars, and rail passenger cars.

Starting, Cold-Weather. Danger of Scuffed Pistons and Oil Dilution Reduced by Gasoline Preheating Devices, P. M. Heldt. Automotive Industries, vol. 51, no. 22, Nov. 27, 1924, pp. 928-933, 10 figs. In starting a car cold only most volatile portions of present-day fuels form ignitable mixtures; flooding engine is necessary unless preheating arrangement is provided; describes several types of electric primers.

Superchargers. Automobile Superchargers, D. Gregg. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July, 1924, pp. 38-39, 1 fig. Determination of supercharger capacity. Engine power-output comparisons. Fuel consumption; power developed.

Supercharger Permits Use of Smaller Engines with Surplus Power, P. M. Heldt. Automotive Industries, vol. 50, no. 25, June 19, 1924, pp. 1329-1332. Experience gained with airplane and racing engines shows that supercharger can be used to increase speed at which horsepower curve peaks.

Superchargers. Autocar, vol. 53, no. 1505, Aug. 22, 1924, p. 3, 322, 2 figs. Explains type of blower used for most modern racing engines.

Supercharging. Supercharging at Low Speeds. Autocar, vol. 53, no. 1519, Nov. 28, 1924, pp. 1103-1106, 6 figs. Improving top gear performance and acceleration of a touring car. Actual results of careful tests on road and track.

Thermostat for. See THERMOSTATS, Automobile.

Twin-Cylinder. A New Twin-Cylinder Engine (Ein neuer Zwillingsmotor). Motor u. Auto, vol. 20, no. 23, Dec. 10, 1923, pp. 200-201, 3 figs. Describes engine developed by J. Schneeweiss, which has detachable cylinder heads, and suspended valves of maximum cross-section for rapid and complete charge and scavenging of cylinders.

Two-Cycle. Two-Cycle Engines (Dolf, Bekamo, Garelli), C. Hanfland. Motorwagen, vol. 27, no. 14, May 20, 1924, pp. 239-242, 13 figs. Describes three types of 2-cycle engines, namely, the Dolf, Bekamo and Garelli engines.

Two-Cylinder. Two-Cylinder Sport Plane Engine Is Built to Morehouse Design, G. D. Angle. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 342-343, 2 figs. Light weight per hp. with rugged conventional construction said to be combined in new 3x3-in. air-cooled unit which weighs under 50 lb.; has roller bearings on big ends of connecting rods.

Two-Stroke, Rattle in. Two-Stroke Engine Rattle, G. Funk. Automobile Engr., vol. 1, no.

192, Aug. 1924, pp. 235-236, 5 figs. Examination of its cause and remedy.

V-Type Four-Cylinder. V-Type Four Cylinder Engine Permits Compact Design, P. M. Heldt. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 337-339, 6 figs. Difficult problems involved in balance; cylinders may be placed opposite to one another or staggered; two crankshaft arrangements are possible with latter construction; size of angle determines irregularity in sequence of explosions.

White-Wall. The White-Wall Engine. Autocar, vol. 53, no. 1500, July 18, 1924, p. 116, 2 figs. Interesting air-cooled, four-cylinder two-cycle motor, with special features of scavenging, fuel charging, and exhaust extraction.

Willys-Knight. Willys-Knight Adds Lanchester Balancers and Increases Engine Torque, D. Blanchard. Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 435-436, 2 figs. Unbalanced rotating weights located in bottom of crankcase compensate for secondary unbalanced forces on reciprocating masses. Valve timing changed and compression increased.

Wisconsin Six. Latest Wisconsin Six designed to Meet Exacting Demands of Bus Service, W. L. Carver. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, pp. 848-849. New engine of 4½-in. bore and 5-in. stroke develops 105 hp. at 2400 r.p.m.; overhead valves are operated from camshaft in crankcase; drive for compressor and large generator provided.

AUTOMOBILE FUELS.

[See also INTERNAL-COMBUSTION ENGINES, Fuels.]

Alcohol. See Alcohol-Gasoline; Benzol-Alcohol; Gasoline-Alcohol.

Alcohol-Gasoline Mixtures. Alcohol-Gasoline Mixtures, A. C. Zimmerman, U. S. Air Service Information Circular, vol. 5, no. 450, Mar. 1, 1924, 3 pp., 5 figs. Investigation of properties of mixtures of aviation gasoline and 198-proof alcohol which has been denatured with one per cent of aviation gasoline.

Anti-Knock Compounds. A Suggested Mechanism for Anti-knock Action. G. L. Wendt and F. V. Grimm. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 890-893, 1 fig. Experiments show that tetraethyl lead and other anti-knock compounds actually have marked effect in recombining gaseous ions at ordinary pressures and temperatures while knock inducers similarly tested have no effect.

Tetra-Ethyl Lead as an Anti-Detonator in High-Compression Engines, H. K. Thomas. Automobile Engr., vol. 1, no. 194, Oct. 1924, pp. 308-311, 9 figs. Results of author's experiments.

Atomizing. On Atomizing of Liquid Fuels (Ueber die Zerstäubung flüssiger Brennstoffe), M. Kuehn. Motorwagen, vol. 27, nos. 19, 28, 29, 34, and 35, July 10, Oct. 10, 20, Nov. 30, and Dec. 10, pp. 326-330, 499-505, 519-529, 616-624, and 650-657, 31 figs. Discusses relation between atomization and combustion; methods for determining size of droplets and small particles. Oct. 10: Testing equipment. Oct 20: Fuels tested; how spray tests were carried out. Nov. 30: Measurements of quantity of flow. Dec. 10: Critical study of experimental results.

Benzine. Rational Standardization of Qualities of Motor Benzine, L. G. Gurvie. Petroleum & Oil-Shale Industry (Russian), vol. 6, no. 2, 1924, pp. 290-296. Deals with temperature at which benzine begins to boil, separate fractions, homogeneity of benzine composition, chemical nature of benzine hydrocarbons, and mixtures of benzine with other combustibles. (In Russian.)

Benzol. See BENZOL.

Benzol-Alcohol. The New Benzol-Alcohol Fuel 20 + 80 (Der neue Benzolspiritus 20 + 80). Allgemeine Automobil-Zeitung, vol. 25, no. 46, Nov. 15, 1924, p. 13. Discusses new fuel, a state monopoly, and its management.

Conveying. Experiments with a Vacuum Conveying Apparatus for Large Conveying Heads at Low Vacuum (Versuche mit einem Unterdruck-Förderapparate für grosse Förderhöhe bei geringem Vacuum), R. Conrad. Motorwagen, vol. 27, no. 19, July 10, 1924, pp. 330-334, 7 figs. Describes vacuum apparatus by Hemrich & Ratzel, Mahlsdorf-Berlin, for use in automobiles, which has minimum of size and weight, acts without levers and without springs.

France. Automobile Fuel Problem from the French Point of View (Le Problème des carburants du point de vue français), A. Mailhe. Technique Modern, vol. 16, no. 22, Nov. 15, 1924, pp. 773-781. Discusses petroleum, synthetic petroleum, shale oils, lignite oils, vegetable oils, alcohol, and products of coal carbonization. Bibliography.

Crisis of Automobile Fuels and Remedies Proposed (La crise des carburants et les remèdes proposés), M. Travers. Société Industriel e de l'Est—Bul., no. 173, Apr.-May-June 1924, pp. 31-68, 2 figs. Discusses French situation, oils available, cracking process, Bergius process, hydrogenation by means of nascent hydrogen, synthesis of liquid hydrocarbons starting from $CO + H$, CH_4, etc., hydrogenation of naphthalene, etc.

Economic Considerations as to the Future of Artificial Liquid Fuels in France (Considérations économiques sur l'avenir des combustibles liquides artificiels en France), M. DeConinck. Chaleur et Industrie, vol. 5, no. 50, June 1924, pp. 269-276. Discusses gasoline problem, especially in connection with coke; manufacture of liquid hydrocarbons by fixation of hydrogen on organic fossil materials; hydrogenation of solid fuel, etc.

The Automobile Fuel Problem. Makhonine's Solution. (Le problème du carburant: La solution de M. Makhonine). A. Baule. Technique Modern, vol. 16, no. 23, Dec. 1, 1924, pp. 825-827. Details of new process for producing fuel from heavy oils, using up heavy oils completely, with which any carburetor may be used.

Gasoline. See Alcohol-Gasoline; Gasoline-Alcohol Mixture; GASOLINE.

Gasoline-Alcohol Mixture. Bench Experiments on Mixtures of Alcohol and Heavy Motor Fuels (Essais au banc des melanges alcool + essences lourdes), O. W. Watson and W. R. Ormandy. Chimie & Industrie, special no., May 1924, pp. 276-280, 5 figs. Experiments show that addition of alcohol causes large increase in proportion volatile below 90 deg., and raises curve during whole course of distillation; increased volatility at 90 deg. doubtless improves running of engine; it is apparently advantageous to add alcohol to poor spirits, and difficulties due to separation of liquids were not experienced; results obtained on buses in regular service with gasoline-alcohol mixture confirmed those obtained on test bench.

Lead Tetraethyl Estimation. The Estimation of Lead Tetraethyl in Motor Spirit, S. F. Birch. Instn. Petroleum Technologists—Jl., vol. 10, p. 46, Nov. 1924, pp. 816-817. Describes method which gives sufficiently accurate and trustworthy results for most purposes.

Lignite as Source of. Lignites and the Manufacture of Automobile Fuel (Les lignites et la fabrication des carburants), E. Marcotte. Revue Industrielle, vol. 54, no. 2178, May 1924, pp. 85-94, 5 figs. Notes on extraction of light products; classification of possible treatments; recovery of benzol— objections against distillation of lignite; hydrogenation; Bergius process and its industrial application; liquefaction direct from

coal; Mélamid process; Fischer and Schrader processes.

Producer Gas. Producer Gas for Road Transport. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, p. 580, 1 fig. Details of gas-producer plant; question of cost; results of recent French trials with charcoal as fuel.

Production from Solid Fuels. The Bergius Process. Motor Transport (Lond.), vol. 38, no. 990, Feb. 18, 1924, pp. 183-184, 1 fig. Principle of newly developed method of oil-distillate production from solid fuels.

Resources and Supplies. Fuel Resources and Supplies for Road Transport, E. J. W. Slade. Instn. Petroleum Technologists—Jl., vol. 9, no. 40, Dec. 1923, pp. 452-468, 3 figs. Discusses world production of crude petroleum, amount of petroleum exported from each producing area, world consumption of petroleum products and motor spirit, etc., giving tables.

Tetralin. Tetralin, Fred. Nathan. Fuel, vol. 3, no. 10, Oct. 1924, pp. 346-349. Its history, manufacture, and use as fuel for internal-combustion engines; produced by process of hydrogenating naphthalene.

Theory. Theory of Fuels for Internal-Combustion Engines (Zur Theorie der Brennstoffe für die Brennkraftmaschinen), M. Brutzkus. Brennstoff- u. Wärmewirtschaft, vol. 6, nos. 6, 7, and 8, June, July, and Aug. 1924, pp. 129-138, 154-160, and 181-185, 1 fig. Discusses theory of combustion at variable pressure, calculation of variability, volume changes, heat of combustion, etc., of various liquid and gaseous fuels; most important technical fuels; theory and practice.

Volatility. Economic Motor-Fuel Volatility, R. Birdsell. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 267-273, 9 figs. Results obtained from acceleration tests made on road and in laboratory, to determine whether rates of acceleration obtainable at any given temperature are different for fuels compared, and whether, when carburetor settings are such as to give maximum acceleration with each fuel, fuel consumption under constant speed and load conditions will be greater with one fuel than with other. Appendix contains analytical description by W. S. James of design of disk used to simulate inertia of car.

AUTOMOBILE INDUSTRY

Austria. The Austrian Automobile Industry (Aus der österreichischen Kraftfahrzeugindustrie), J. Zoller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 243-245, 9 figs. Development of industry; results of war; examples of Austrian types.

National Defense, and. The Automotive Industry and National Defense, C. L'H. Ruggles. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 319-322, 1 fig. Position of automotive industry; dependence of army on transportation; methods of preparation; War Department plans for meeting contingencies; ideal solution.

S. A. E. Standards Reports. Standards Committee Division Reports. Soc. Automotive Engrs. Jl., vol. 14, no. 6, June 1924, pp. 625-640, 15 figs. Gives following Division Reports: Parts and fittings; agricultural power equipment; ball and roller bearings; lighting; non-ferrous metals; screw threads; springs.

Standards Committee Meeting. Soc. Automotive Engrs. Jl., vol. 14, no. 2, Feb. 1924, pp. 189-194. Report of Electrical Equipment Division on magnet-wire specifications; and of Tire and Rim Division on balloon tires.

Tentative Standardization Work. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 338-341. Color code for cable proposed; wire-cloth standard revision; bolt and nut standardization; sheet steel problems; revision of tube fittings. Reports of Standards Committee of S. A. E.

Standardization in. See STANDARDIZATION, Automobile Parts.

United States. 15,281,295 Cars and Trucks Registered in United States, N. G. Shidle. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 86-89. Gain of 2,916,918 over 1922 is increase of 23.6 per cent; one car for every 7.2 persons.

AUTOMOBILE MANUFACTURING PLANTS

Car Remanufacturing. Plant Opens to "Remanufacture" Cars on Production Basis. Automotive Industries, vol. 50, no. 17, Apr. 24, 1924, pp. 914-915, 3 figs. Twyman Co. employs teardown and assembly conveyors for complete rebuilding of Nash and Buick models; new closed bodies fitted if desired.

Central Europe. Production Methods in Central Europe. Automobile Engr., vol. 14, no. 188, Apr. 1924, pp. 106-111, 21 figs. Review of present situation in automobile industry in Germany and adjacent countries; mass-production methods; machine-tool equipment; tool room; inspection and testing apparatus; storage; utilization of waste materials; training apprentices.

Chevrolet Bodies. Chevrolet Tarrytown Plant Assembles 600 Complete Cars a Day, H. Chase. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, pp. 666-671, 3 figs. Plant for building, enameling, and trimming all open bodies required; most operations are performed on continuously moving conveyors; tunnel baking ovens employed; maximum temperature held at 350 deg. fahr.

Conveyors, Use in. See CONVEYORS, Automobile Factory.

Design. Processes Affect Design of Automobile Factories, F. A. Fairbrother. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 834-836, 4 figs. Neither multi-story nor single-story building best for all cases; heating easier in former, natural lighting and ventilation in latter.

England. Intensive Production. Automobile Engr., vol. 14, no. 191, July 1924, pp. 203-210, 21 figs. Describes modern works located at Aylesbury, Bucks, planned and equipped for large outputs.

Modern Production Methods. Automobile Engr., vol. 14, no. 185, Jan. 1924, pp. 15-19, 14 figs. Methods and equipment employed in manufacture of Sunbeam cars at Wolverhampton, England.

Tooling the New 14 h.p. Bean Car. Machy. (Lond.), vol. 23, nos. 590, 591, 592, 594, 595, and 596, Jan. 17, 24, 31, Feb. 14, 21, and 28, 1924, pp. 505-508, 537-542, 569-574, 633-638, 665-670, and 697-701, 61 figs. Details of equipment used by A. Harper, Sons & Bean, Dudley, in production of engine and chassis parts.

Fiat, Italy. The Impressive Story of Fiat, J. A. Lucas and F. E. Bardrof. Serial article in Am. Mach., vols. 60 and 61, beginning Apr. 24 and ending Aug. 21, 1924. Apr. 24: Plants and products of large automobile company in Turin, Italy. May 1 and 8: Manufacture of ball bearings. May 22: Lingotto automobile plant; shop arrangement and management; apprenticeship system. June 19: Raw-material handling at Lingotto plant; forging and stamping departments; molding and machining operations in foundry. July 3: Methods employed in machining pistons for Fiat motor. July 10: Methods and tools used in making connecting rods. July 24: Methods employed in machining 4-cylinder block at Lingotto plant. Aug. 7: Machining methods for upper section of crankcase. Aug. 21: Final operations on crankcase.

Trial Runs on Top of the Fiat Factory in Lingotto (Die Einfahrbahn über der Fabrik Fiat im Lingotto). Allgemeine Automobil-Zeitung, vol. 25, no. 45, Nov. 8, 1924, pp. 19-21, 5 figs. Details of Fiat factory building on top of which a course has been built for trial runs of all automobiles built at factory up to their maximum speed.

Ford Lincoln. What Ford Has Done in the Lincoln Plant, F. H. Colvin. Am. Mach., vol. 59, nos. 25 and 26, Dec. 20 and 27, 1923, pp. 897-901 and 943-947, and vol. 60, no. 1, Jan. 3, 1924, pp. 5-8, 26 figs. Details of methods used to build better car at less cost. Dec. 27: Assembling and inspecting Lincoln motor parts; honing cylinders and polishing gear teeth. Jan. 3: How chain or continuous, assembly is combined with trucks for carrying chassis forward for various operations.

Ford Motor Company of Canada. Building a Car a Minute at Ford City, H. P. Armson. Can. Machy., vol. 31, no. 26, June 26, 1924, pp. 41-48 and 80, 9 figs. Description of 15-acre machine shop of Ford Motor Co. of Canada, and of some operations.

Ford's New $10,000,000 Factory at Ford. Can. Mfr., vol. 44, no. 6, June 1924, pp. 11-15, 5 figs. Layout of plant, construction of buildings, and description of machine shop.

Foundries. See FOUNDRIES, Automobile Castings.

Grinding Parts in. See GRINDING, Automobile Parts.

Lighting. See LIGHTING, Automobile Factory.

Location. The Factor of Plant Location in Automobile Production, J. A. Piquet. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 297-304, 10 figs. Analysis of factors which determine location of plants both established and contemplated.

Lumber Handling in. See LUMBER, Handling.

Machine-Shop Economies. Possible Economies in Automotive Machine-Shop Operations, A. L. DeLeeuw. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 418-425. See also Am. Mach., vol. 61, nos. 19 and 20, Nov. 6 and 13, 1924, pp. 735-738 and 765-770. Indicates by examples certain important economies that might be introduced in shops, especially those which can be effected without much capital outlay; discusses auxiliaries and one definite operation, drilling, has been chosen as chief example.

Machine Shops. See MACHINE SHOPS, Ford Motor Co.

Machine Tools for. Large Fixtures and Tools for Building Twin City Tractors, H. Campbell. Am. Mach., vol. 60, no. 25, June 19, 1924, pp. 907-910, 13 figs. Details of operations on large automotive units at plant of Minneapolis Steel & Machy. Co., Minneapolis.

Materials Handling in. See MATERIALS HANDLING, Automobile Manufacturing Plants.

Methods and Machinery. Workers, Machinery, and Production in the Automobile Industry, M. W. La Fever. Monthly Labor Rev., vol. 19, no. 4, Oct. 1924, pp. 1-26. Study made by Bur. of Labor Statistics of changes in methods and machinery in automobile industry; data obtained from 25 automobile manufacturing plants regarding actual production per man before and after inauguration of improved methods, systems, machinery, devices, etc.

See also MACHINING METHODS.

Oil-Fuel-Burning. Burning Oil Fuel in a Ford Motor Co. Plant, A. Murphy. Power House, vol. 17, no. 4, Feb. 20, 1924, pp. 20-21 and 38, 4 figs. Oil-burning forced-circulation hot-water-type heating system installed; high-pressure steam provides source of heat for drying ovens.

Organization. See INDUSTRIAL ORGANIZATION, Automobile Manufacturing Plant.

Service-Parts Department. Durant Service is Aided by Prompt Shipment of Parts. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, pp. 768-771, 5 figs. Over 95 per cent of orders are filled on day of receipt, hence dealers need carry less stock; requisitions on factory placed four months in advance tend to prevent shortages.

Steam Trucks. The Sentinel Steam Wagon Works. Engineer, vol. 137, no. 3559, Mar. 14, 1924, pp. 280-282, 16 figs, partly on p. 284. Describes works erected near Shrewsbury; shops consist of fitting and erecting shops, where engines are erected; smiths' shop, in which all smaller forgings are produced; body shop; sheet metal-working and frame shop; machine shop; running shop; and physical and chemical laboratories.

AUTOMOBILES

A. C. Racing. Maximum Power for Minimum Weight. Autocar, vol. 53, no. 1499, July 11, 1924, pp. 63-64, 3 figs. New A. C. racing car with "crab" track, which has been specially built for rapid acceleration.

Acceleration Measurement. See ACCELEROMETERS, Automobile Acceleration, Measurement.

Accessories. The Olympia Motor Show, 1924—Accessories to Be Seen. Auto-Motor Jl., vol. 29, no. 41, Oct. 9, 1924, pp. 845-858, 67 figs. See also Autocar, vol. 53, nos. 1511 and 1514, Oct. 3 and 24, 1924, pp. 605-616 and 898-901, 97 figs. Brief descriptions of exhibits of different firms.

Adler. See German.

Air Resistance. The Automobile in Air Current (Das Auto im Luftstrom), E. Rumpler. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 3-4, Feb. 26, 1924, pp. 22-25, 9 figs. Discusses progress made in recent years in application of airplane theories to automobile design; introduction of streamline automobile developed by author in 1921; results of experiments carried out at Aerodynamic Experimental Station in Göttingen. See also article entitled Air Resistance and High-Speed Automobiles (Luftwiderstand und Schnellkraftwagen), A. Persu, pp. 25-27, 3 figs., discussing future design of streamline automobiles.

Albatros. The 8 H.P. Albatros Car. Auto-Motor Jl., vol. 29, no. 19, May 8, 1924, pp. 393-395, 10 figs. British-built car. Four-cylindered monobloc engine built up as one unit with clutch case and gear box and an entirely enclosed propeller shaft in a tubular torque member transmits power to newly designed rear axle.

Alfa Romeo. The Alfa Romeo Cars. Auto-Motor Jl., vol. 29, no. 47, Nov. 20, 1924, pp. 1020-1022, 10 figs. Particulars of four-cylinder and six-cylinder models of Italian vehicle; former is known as the 15-50 hp., and other the 21-70 hp.; overhead valves and four-wheel brakes.

All-Weather Enclosures. Inexpensive All-Weather Enclosures Aim of British Car Makers, M. W. Bourdon. Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 22-24, 5 figs. 80 per cent of users dislike riding under cover; framed side curtains are much used; many of these are employed as wind screens when top is folded.

Alvis. The Alvis Car. Auto-Motor Jl., vol. 29, no. 37, Sept. 11, 1924, pp. 765-768, 12 figs. Monobloc engine is mounted in chassis on subframe of pressed steel, camshaft is carried in three large-diameter bearings and driven by timing gear wheels of hard phosphor bronze; overhead-valve engine; plungers are spring-pressed and lower ends of push-rods descend into them.

Amsterdam Show. The Automobile Show in Amsterdam, Holland, February, 1924 (''De Teotoonstelling van Automobilen'' in Amsterdam), W. Hirschfeld. Motorwagen, vol. 27, nos. 10, 11, and 12, Apr. 10, 20, and 30, 1924, pp. 161-166, 179-183, and 206-209, 37 figs. Details of most important exhibits of automobiles, motor trucks, and auxiliary parts.

Ansaldo. The Ansaldo Chassis. Automobile Engr., vol. 14, no. 197, Dec. 1924, pp. 384-392, 16 figs. Details of two models of typical Italian design.

The 14 H.P. Ansaldo Car. Auto-Motor Jl., vol. 29, no. 3, Jan. 17, 1924, pp. 49-52, 9 figs. Four-cylinder engine of capacity of 1987 c.c., having cylinder bore of 72.5 mm. and stroke of 120 mm.; develops 47 h.p. at 2900 r.p.m.

Armstrong-Siddeley. The 14 H.P. Armstrong-Siddeley. Auto-Motor Jl., vol. 29, no. 21, May 22, 1924, pp. 435-437, 11 figs. A roomy family touring car; four cylinders; speed, efficiency, and economy.

Assembly. See MATERIALS HANDLING, Automobile Manufacturers' Plants.

Austin. New Austin Seven Horsepower Model Has Frameless Body, M. W. Bourdon. Automotive Industries, vol. 51, no. 16, Oct. 16, 1924. pp. 674-677, 5 figs. British light car intended as substitute for motorcycle and side car, also has unusual chassis construction; capable of carrying four passengers.

Axle Bearings. See BEARINGS, Automobile Axles.

Axle Housings. Machining Motor Bus Axle Housings, H. Campbell. Am. Mach., vol. 60, no. 19, May 8, 1924, pp. 699-700, 7 figs. Machining largest rear-axle housing forging yet developed; using gun-drilling machine in automotive plant; multiple drilling operation in engine lathe.

Axles. A British Method of Building Axles, A. J. Aiers. Am. Mach., vol. 60, no. 12, Mar. 20, 1924, pp. 421-423, 10 figs. Fixtures employed in machining malleable-iron axle housing for 11-hp. car; double-duty fixtures minimize chances for making errors.

American Rear and Front Axle Specifications. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, pp. 422-423. Specifications of different makes for passenger cars, buses, and trucks.

Manufacturing the Ruckstell Two-Speed Axle, H. P. Armson. Can. Machy., vol. 31, no. 14, Apr. 3, 1924, pp. 31-35, 5 figs. Producing and heat treating housings, ring gears, bronze supports, sliding and plate gear clutches, for passenger car and truck axles, at plant of Russel Gear and Machine Co., Toronto, Can.

New Columbia Axles Designed for Use with Four-Wheel Brakes. Automotive Industries, vol. 50, no. 9, Feb. 28, 1924, pp. 508-509, 2 figs. Steering knuckle is reversed Elliott type and is formed with circular flange to which brake cover plate is secured by six rivets; feature of rear axle is one-piece gear carrier.

Outstanding Tendencies in Axle Design, W. F. Rockwell. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 189-194, 7 figs. Discusses semi-floating type of axle, worm-drive passenger-car axles, motor-truck rear-axle types, unsprung weight, and future car and truck axles.

See also AXLES, Automobile.

Baer. See German.

Ball Bearings. See BEARINGS, BALL, Automobile.

Bean. The 14 H.P. Bean Chassis. Automobile Engr., vol. 14, no. 191, July 1924, pp. 188-195, 16 figs. on supp. plate. 14-hp. chassis manufactured by A. Harper, Sons & Bean, Ltd., of Dudley and Tipton has four-cylinder engine built in one unit with four-speed gear box; 75 mm. bore by 135 mm. stroke.

The New 20-25 cwt. Bean Chassis. Motor Transport (Lond.), vol. 39, no. 1029, Nov. 17, 1924, pp. 591-593, 8 figs. Overall length, 14 ft. 1½ in.; overall width, 5 ft. 5½ in.; wheelbase, 10 ft. 6 in.; track, 4 ft. 8 in.; 4-cylinder engine, 13.9 R.A.C. rating.

Beardmore. The 12.30 H.P. Beardmore Car. Auto-Motor Jl., vol. 29, no. 18, May 1, 1924, pp. 367-370, 14 figs. Four-cylinder monobloc overhead valve engine, with clutch and gear integral, and propeller shaft drive to spiral bevel-driven silent live axle, with Hotchkiss type of torque taking semi-elliptic underslung springs.

Bentley. The Three-Litre Bentley. Auto-Motor Jl., vol. 29, no. 7, Feb. 14, 1924, pp. 137-140, 13 figs. Mechanical details, and equipment. Two inlet and two exhaust valves arranged in each cylinder; 4-cylinder engine of monobloc construction; cylinder bore 80 mm. and piston stroke 149 mm., carrying an R.A.C. rating of 15.9 hp., and capable of propelling standard model vehicle at 75 m.p.h.

Benz. New 6-Cylinder 40-hp. Car Brought Out by Benz, B. R. Dierfeld. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 332-336, 7 figs. Engine is L-head type; cylinders 13/16-in. bore and 4⅝-in stroke; radiator is V-type; oil tightness of rear bearing on gear housing is secured in novel manner; maximum speed, 53 m.p.h.

Berliet. A New Passenger Chassis. Motor Transport (Lond.), vol. 39, no. 1017, Aug. 25, 1924, pp. 235-236, 6 figs. Discusses engine details, bearings and lubrication, transmission, etc. Gives outcome of experiences with coaches in mountainous districts.

See also Charcoal-Producer-Gas-Burning.

Berlin Show. Automobiles Exhibited at the Berlin Show. Motorwagen, vol. 27, no. 34, Dec. 10, 1924, pp. 689-698, 12 figs. Describes Brennabor 6-hp. and 8-hp., and Simson Supra automobiles, and Mannesmann-Mulag 5-ton truck.

Passenger Cars at the Berlin Automobile Show (Die Personenwagen auf der Berliner Automobilausstellung), R. C. v. Gorrissen. Allgemeine Automobil-Zeitung, vol. 25, nos. 50, 50a, 51, and 52, Dec. 12, 15, 17, and 27, 1924, pp. 47-50, 34-38, 45-49, 19-23, and vol. 26, no. 1, Jan. 3, 1925, pp. 20-23, 25 figs. Review of exhibits, tendencies of design, and special features.

Bignan Sport. Unusual Body Design of Bignan Sport Car Permits Increased Speed. Automotive Industries, vol. 50, no. 17, Apr. 24, 1924, pp. 910-911, 7 figs. New type characterized by special streamlining; constructed to provide additional comfort and economy; seats mounted on chassis frame; body designed by P. Forostovsky, Jr.

Bodies. Carriages at the Salon. Autocar, vol. 53, no. 1512, Oct. 10, 1924, pp. 699-702, 15 figs. New features in bodywork at Paris show. Covered cars in favor; fabric-covered saloons a feature.

Coachwork at the Show. Autocar, vol. 53, no. 1514, Oct. 24, 1924, pp. 883-897, 75 figs. Description of exhibits at 1924 Olympia show, England, arranged in alphabetical order.

Low Priced Closed Cars, Increase in Number, H. Chase. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 72-77, 27 figs. Better-looking radiators have improved frontal appearance and hood lines; sport models still popular.

1924 in Automobile Body Engineering, K. Forbes. Automotive Mfr., vol. 66, no. 7, Oct. 1924, p. 15. Difficulty of body standardization and reasons therefor; body development compared to that of chassis and mechanical parts; closed cars. (Abstract.)

Why Not Build All-Purpose Bodies with Rear Doors?, H. W. Perry. Automotive Industries, vol. 50, no. 3, Jan. 17, 1924, pp. 126-127. Suggests design for style of body that is obviously first a private passenger car body, but that is adapted for secondary purpose of carrying light loads of miscellaneous articles; side entrance for passengers would be retained and back seat cushions arranged to be folded quickly against rear of front seat.

Bodies, Design. Symmetry in Car Contours. Autocar, vol. 52, no. 1484, Mar. 28, 1924, pp. 555-562, 19 figs. Views on balance of outline necessary to secure gracefulness and beauty in outward appearance combined with individuality of design.

Bodies, Fabric. Rover Develops Modified Type of Weymann Fabric Body, M. W. Bourdon. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 104-107, 12 figs. New design incorporates some metal panels where rounded corners are desired, but entire structure is covered with leather fabric. Lining materials are waterproofed. Door pillars have inward curve. Air gap or cloth strip used at all joints to prevent squeaks.

Bodies, Finishing. Automobile Body Finishing With Abrasives. Abrasive Industry, vol. 5, no. 7, July 1924, pp. 171-173, 6 figs. Notes on methods followed by Chandler Motor Car Co., Cleveland.

China Wood Oil Is Used as Base for Baked Color Enamel, W. L. Carver. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 324-326. New process developed at Olds Motor Works to produce several shades; only slight variation necessary from regular routine of black enameling department. Tung tree nuts, found only in inaccessible parts of China, is base of enamel.

Egyptian Lacquer Develops New Nitrocellulose Automobile Finish, H. Chase. Automotive Industries, vol. 50, no. 15, Apr. 10, 1924, pp. 828-829. Differs from other products in same general class by employing priming, filler and glaze coats which have same pyroxylin base and quick air-drying qualities as final colors; exceptional durability and rapid completion of work among chief claims made.

High Brake Pre-Enameled Panels Used in Body Construction. Automotive Mfr., vol. 66, no. 1, Apr. 1924, pp. 9-11, 4 figs. Details of new type of construction which permits easy application of hard permanent finish to metal panels applied over conventional wood frame.

More Durable Car Finishes Are Making Their Appearance. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, pp. 777-779, 5 figs. Cellulose nitrate coating is said to last as long as vehicle and retains permanent luster; better undercoats double life of ordinary varnish jobs; black and color enamels, when dulled, are easily restored by rubbing and polishing.

New Valentine Varnish System Said to Double Life of Finish. Automotive Industries, vol. 50, no. 18, May 1, 1924, pp. 968-969, 1 fig. Only six coats required on best grade of work with new system; durability attributed to high and balanced elasticity and use of two clear final coats giving film of unusual thickness; used on Cadillac, Lincoln, and Packard.

Ultra-Violet Rays Used to Test Body Fabrics and Finishes, W. L. Carver. Automotive Industries, vol. 50, no. 19, May 8, 1924, pp. 1011-1014, 5 figs. Few hours of exposure under suitable conditions may be equal to many months of natural weathering; utilization of quartz-tube mercury vapor lamp which emits ultra-violet rays, which may also be employed to dry varnish.

What Basic Materials Go Into Automobile Finishes? Automotive Industries, vol. 51, no. 1, July 3, 1924, pp. 34-38. Information regarding nature of materials used in finishing of automobile bodies and chassis.

Wood Framed Bodies Finished in High Bake Enamel by New Process, W. L. Carver. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, pp. 718-720. Special coating, placed on frame prior to enameling, protects wood members from intense heat; commercial use of China wood oil makes possible this method, known as Oxvar system.

Bodies, Manufacture. Automobile Body Engineering, W. F. Brown. Automotive Mfr., vol. 66, nos. 3 and 4, June and July 1924, pp. 12-14 and 13-15. Describes strength, lines and general outline, vertical stresses, frame and window framing, quarters and roof, longitudinal stresses, body iron work, panel work, aluminum moldings and general use of light-weight metals, body framework, reducing weight and standards of weight.

Manufacturing All-Steel Automobile Bodies, J. W. Meadowcroft. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 24-26. Particulars of welding operations.

Packard Bodies Assembled in Metal Jigs to Minimize Hand Fitting. Automotive Industries, vol. 50, no. 24, June 12, 1924, pp. 1272-1273, 4 figs. Production methods similar to those used in chassis manufacture are employed in putting together wood frames and units from which they are constructed.

See also Wood for Bodies.

Bodies, Repairs. Fisher System Places Body Repairs on Par with Chassis Service, W. L. Carver. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 572-574, 1 fig. Units and bodies so numbered that replacements can be made on short notice; car distributors are supplied with parts books from which stocks are ordered.

Bodies, Steel, Welding. See OXY-ACETYLENE WELDING, Automobile Bodies.

Brakes. Action of New Air Brake Dependent on Motion of Vehicle. Automotive Industries, vol. 51, no. 3, July 17, 1924, pp. 165-169, 8 figs. See also Motor Transport (Lond.), vol. 39, no. 1028, Nov. 10, 1924, pp. 559-561, 6 figs. Describes new air brake brought out by Knorr Bremse A. G. of Berlin-Lichtenberg. Road wheels cannot lock; horn is sounded automatically with brakes in emergency position; designer has worked out types for various classes of motor vehicles and also for trailers.

Automobile Brakes (Le freinage des automobiles). Vie Technique & Industrielle, vol. 6, no. 52, Jan. 1924, pp. 226-234, 12 figs. Notes on problem and difficulties of braking; principles of servo brakes, and advantages of Hallot system of servo brakes; effect of Hallot automatic regulator on automobile brakes; Perrot, Birkigt and Isotta-Fraschini brake systems; control of brakes in Renault automobile.

Difficult Problems Involved in Power Braking for Motor Vehicles, P. M. Heldt. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, pp. 656-666, 8 figs. Describes Westinghouse air-brake equipment for rail cars and Simplex vacuum brake for passenger cars and trucks; problems involved in design of efficient power-braking systems.

Hydraulic Brake Operation. Autocar, vol. 52, no. 1482, Mar. 14, 1924, pp. 465-467, 6 figs. Consideration of a system, remarkable for its simplicity and efficacy, which was first tried over twelve years ago.

Lockheed Develops Internal Brake of the Three-Shoe Type. Automotive Industries, vol. 51, no. 23, Dec. 4, 1924, p. 975, 1 fig. Actuated in same manner as in external hydraulic equipment, new device utilizes wrapping action between brake and drum to reduce required pedal pressure.

Notes on Automobile Brakes, D. Roesch. Armour Engr., vol. 15, nos. 3 and 4, Mar. and Apr. 1924, pp. 91-94 and 112, and 135-139 and 151, 15 figs. Brake requirements, and performance obtainable with different systems; discusses representative types and gives data pertaining to brake design; highway capacity and influence of various conditions upon stopping distances, with legislative requirements in mind.

Recent Patents Reveal Tendencies in Brake Design. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 520-522, 8 figs. Outlines some recently issued foreign brake patents. Among features covered are equalization without loss of all brakes should linkage break, simultaneous operation of transmission and rear-wheel brakes, and servo mechanism.

Servo-Mechanisms Perfected So That Slightest Pedal Pressure Slows Car, P. M. Heldt. Automotive Industries, vol. 51, no. 25, Dec. 18, 1924, pp. 1035-1039, 9 figs. Describes various types of servo brakes.

Special Apparatus Tests Rickenbacker Brakes on Assembly Line. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, pp. 621-623, 2 figs. Rods are adjusted to permanent length which is not altered during road test; equipment involves set of power-operated drums which contact with wheels and elevating mechanism.

Study of Gripper Brakes for Automobiles and Lifting Devices (L'étude des freins à machoires pour automobiles et appareils de levage). Génie Civil, vol. 84, no. 19, May 10, 1924, pp. 452-454, 4 figs. General considerations on functioning of brakes; elementary calculation; distribution of pressure; determination of bending.

The Hallot Servo Brakes for Automobiles (Le servo-frein Hallot, pour automobiles). Génie Civil, vol. 84, no. 8, Mar. 1, 1924, pp. 212-213, 2 figs. Discusses action of servo brakes and describes Hallot brake which is one of most widely used of this type.

The Rolls-Royce Six-Brake System. Autocar, vol. 53 no. 1511, Oct. 3, 1924, p. 590, 1 fig. Some details of operation. Oil servo mechanism employed.

The Theory and Advantages of Balanced Brake-Forces, Geo. L. Smith. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 111-116, 4 figs. Describes two methods of brake application in use in United States, and expounds theory of balanced brake forces; practical applications of equalizing mechanism used in road tests of automobile; tests on wet pavements with study of skidding and skid-checking effects; results of tests on hills and effects of speed and pressure.

Two Types of Brakes for Front Axles Produced by Salisbury. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 344-345, 3 figs. Expanding device intended for cars weighing up to 2400 lb. and contracting for somewhat heavier models; unusual feature is use of Elliott-type steering knuckles.

See also Brakes, Four-Wheel.

Brakes, Four-Wheel. Advantages and Disadvantages of 4-Wheel Brakes (Licht- und Schattenseiten der Vierradbremsen), v. Löw. Automobil-Rundschau, vol. 23, no. 5, May 1924, pp. 51-53, 11 figs. Critical discussion of advantages and disadvantages.

Four-Wheel Brakes, H. Perrot. Soc. Automotive Engrs.—Jl., vol. 14, nos. 2 and 4, Feb. and April 1, 1924, pp. 101-106, 4 figs., and (discussion) 432-436. Discusses servo-brake with special reference to Perrot system, advantages of which are set forth specifically; discusses brake-system design in general and comments on brake lining, front springs and various precautionary measures that must be incorporated; explains non-use of equalizers and cites seven specific important items that should govern all four-wheel-brake design; future development of automobile chassis, as affected by present trend of brake-system practice.

Four-Wheel Brakes and Low Pressure Tires Prove Worth in Grand Prix, W. F. Bradley. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 364-365, 1 fig. Discusses 14-mile course requiring twenty gear changes per lap; superchargers give considerably more power.

Four-Wheel Brakes Are Most Striking Mechanical Feature of (New York) Show, P. M. Heldt. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 64-70, 25 figs. Standard equipment on 44 models and optional on 37 hydraulically operated systems strongly represented; new braking methods affect front axles; clutch improvements.

Four-wheel Braking for Cabs, W. F. Bradley. Motor Transport (Lond.), vol. 38, no. 984, Jan. 7, 1924, pp. 17-18, 5 figs. Experiences in Paris taxicab work; describes newest Parisian taxicab design, the Serex braking system, giving some details of experiences of which it is the outcome.

Four-Wheel Braking Systems, F. A. Stepney Acres. Automobile Engr., vol. 14, no. 188, Apr. 1924, pp. 115-118, 4 figs. Arrangement of brakes; brake-power ratio; mechanical difficulties; pedal leverage; central steering; compensation; front springs; brake-rod layout.

Hydraulic Brakes on Test, H. F. Blanchard. Autocar, vol. 52, no. 1495, June 13, 1924, pp. 1070-1072, 5 figs. Further details of Lockheed four-wheel system with data gleaned from actual trials.

New Hydraulic Brake System. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, p. 615, 1 fig. New 4-wheel hydraulic-brake system worked out by Mattingly Automatic Valve Co. of St. Louis, claimed to possess advantage that if connection to any of four brake cylinders should break or otherwise become seriously defective, remaining three brakes will not be prevented from functioning.

See also MACHINING METHODS, Automobile Brake Parts.

Braking. Difficult Problems Involved in Power Braking for Motor Vehicles, P. M. Heldt. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, pp. 616-620, 11 figs. First application of air brakes, most extensively used type, was in 1906; electric unit on car in 1914; recent development work, eliminating many troubles.

British Empire Exposition. At the British Empire Exhibition. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 581-585, 9 figs. Reviews features of transport vehicle exhibits and gives details of tires, accessories, and component parts.

Cars at the British Empire Exhibition. Autocar, vol. 52, no. 1489, May 2, 1924, pp. 785-792, 46 figs. Summarized specifications of models on view; 80 cars, ranging from 749-cc. to 7413-cc. cylinder capacity, represent 47 different manufacturers.

The British Empire Exhibition. Automobile Engr., vol. 14, no. 190, June 1924, pp. 175-181, 14 figs. Notes on automobile manufacturers' exhibits.

Bugatti. The Four-Cylindered Bugatti. Auto-Motor Jl., vol. 29, no. 28, July 10, 1924, pp. 581-583, 11 figs. 11.5-hp. monobloc, four-cylinder engine, 1452 and 1496 c.c.; road speed, 60 m.p.h.; touring, 20 to 25 m.p.h.; 1 gal. gasoline required for 40 miles.

See also Grand Prix.

Buick. Buick Adds a New Six to Its Line with Slight Changes in Design. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 92-96,

9 figs. Particulars of Standard Six, having 3x4½-in. cylinders, giving it a displacement of 191 cu. in., and 114¾-in. wheelbase. New Fisher self-ventilating windshield used on Buick closed cars.

The New 20 H.P. Buick. Auto-Motor Jl., vol. 29, no. 34, Aug. 21, 1924, p. 708, 2 figs. Design and construction of two models of six-cylindered engines.

Bumpers. Low Weight and Great Shock Absorption Chief Aims of Bumper Design, P. M. Heldt. Automotive Industries, vol. 51, nos. 15 and 16, Oct. 9 and 16, 1924, pp. 642-645 and 690-694, 11 figs. Object of design is to secure greatest capacity for absorbing energy within defined limits of weight and deflection; modern methods give severe test under shock and static load. Static tests and methods of calculating results; height from ground and standards given for mounting.

Motor-Car Bumpers, J. R. Reyburn. Soc. Automotive Engrs.—Jl., vol. 15, No. 4, Oct. 1924, pp. 359-362, 9 figs. Characteristics of early bumpers; designing most protective bumper; importance of easy application, etc.

Burford-Kegresse. The Burford-Kegresse Chassis. Motor Transport (Lond.), vol. 39, no. 1018, Sept. 1, 1924, pp. 257-259, 7 figs. Constructional details and particulars of performance in strenuous drawbar tests; engine with all four cylinders in single casting has bore and stroke of 100 and 140 mm., respectively.

Calcott. A Completely New Calcott. Autocar, vol. 53, no. 1507, Sept. 5, 1924, pp. 421-424, 10 figs. Specifications: 12.8 hp., four-cylinder, 72-by 120-mm. detachable-head engine; single dry-plate clutch, separate four-speed gear-box transmission; detachable steel wheels with low-pressure tires.

The 12-24 H.P. Calcott, Auto-Motor Jl., vol. 29, no. 51, Dec. 18, 1924, pp. 1109-1112, 12 figs. Engine and clutch form one unit, while 4-speed gear box is mounted as separate unit upon cross members of frame; engine is of monobloc 4-cylinder type with detachable head.

Calthorpe. The 12-20 H.P. Calthorpe Chassis. Automobile Engr., vol. 14, no. 185, Jan. 1924, pp. 2-9, 15 figs. See also Auto-Motor Jl., vol. 29, no. 5, Jan. 31, 1924, pp. 97-100, 11 figs. Four-cylinder engine with cylinders cast in block is bolted to four-speed gear box, power being transmitted through exposed propeller shaft to spiral bevel-driven rear axle; will develop 30 hp. at 3200 r.p.m.

Cars for Shipping. See CARS, FREIGHT, Standard, Pennsylvania R. R.

Castings. See CASTINGS, Automobile.

Change Gears. Change Gear for Automobiles (Wechselgetriebe für Kraftwagen), v. Soden. Maschinenbau, vol. 3, no. 8, Jan. 24, 1924, pp. 200-203, 7 figs. Deals with number and stepping of gears.

Charcoal-Producer-Gas-Burning. A Compact Producer Gas Plant. Motor Transport (Lond.), vol. 38. no. 996, Mar. 31, 1924, p. 385, 2 figs. Brief particulars of Berliet-Imbert apparatus with which satisfactory demonstrations have been given before French military and civic authorities; in this case plant was fitted to a 15.9-hp. Berliet touring car; does not use steam in production of gas.

Charcoal-Burning Automobiles (L'Automobile à charbon de bois), A. Troller. Nature (Paris), no. 2601, Feb. 9, 1924, pp. 94-96, 4 figs. See also Technique, Moderne, vol. 16, no. 4, Feb. 15, 1924, pp. 116-118, 8 figs. Describes Berliet system of using charcoal producer gas for automobiles and motor trucks; shows Berliet car equipped with gas producer which is placed in rear and does not alter general appearance of car.

Chassis Construction. Lighter Chassis Is Not Likely Until Body Weight Is Decreased, W. L. Carver. Automotive Industries, vol. 51, no. 1, July 3, 1924, pp. 30-33, 4 figs. Advent of leather in place of steel panels among promising possibilities. Balloon tires, smaller wheels, and tubular axles help decrease mass of unsprung parts. Present stiff and heavy frames considerd necessary to prevent wearing and rattles.

Chassis Design. American Passenger Chassis. Motor Transport (Lond.), vol. 39, no. 1030, Nov. 24, 1924, pp. 617-619, 6 figs. Review of their outstanding features of design and divergencies from British practice.

Chassis Dimensions. Table of Chassis Dimensions for Body Building. Motor Transport (Phila.), vol. 30, no. 8, July 10, 1924, pp. 303-310. Table giving dimensions of different models of various makes.

Chassis, Experimental. A Novel Experimental Chassis. Automobile Engr., vol. 14, no. 186, Feb. 1924, p. 45, 2 figs. Complicated design embodying 4-wheel driving, steering, and braking.

Chassis Lubrication. Chassis Lubrication. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924. Contains following papers: Notes on Chassis Lubrication and Maintenance, A. F. Masury, pp. 641-646, 14 figs; Magazine Oiling System of Chassis Lubrication, C. T. Myers, pp. 646-648, 5 figs.

Chassis Lubrication, F. H. Gleason. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 422-430 and 445, 12 figs. Classification of means generally employed for chassis lubrication; referring to respective characteristics of grease and of oil, those of oil are summarized and preferred; describes centralized oil-lubrication system, composed of central oil reservoir and pump, main-supply line and delivery tubes; advantages of system.

Chassis Lubrication Is Simplified by Bowen System. Automotive Industries, vol. 50, no. 16, Apr. 17, 1924, pp. 876-878, 9 figs. Designed to deliver accurately measured quantities of oil to each bearing slowly for several hours after pump plunger is depresesd; air domes over each header valve serve important purpose in metering and controlling flow; special tubing used.

Tecalemit. Auto-Motor Jl., vol. 29, no. 9, Feb. 28, 1924, p. 187, 1 fig. Description of a new high-pressure lubrication system for motor-vehicle chassis, introduced by Tecalemit, Ltd., Lon.,Eng., consisting of a grease gun of special type and a special grease plug for parts to be lubricated; can be installed in all cases where usual type of screw-down grease lubricators have been used.

Chicago Show. Chicago Salon Shows Present Trends in Body Design, J. E. Schipper. Automotive Industries, vol. 50, no. 6, Feb. 7, 1924, pp. 272-275, 13 figs. Pullman exhibits all-steel model built in accordance with railway practice; Berline type seems likely to replace limousine.

Chrysler. The Chrysler Six. Auto-Motor Jl., vol. 29, no. 33, Aug. 14, 1924, pp. 685-687, 9 figs. Describes automobile having six-cylindered 68-hp. engine designed monobloc construction with bore of 3 in. and stroke of 4¼ in.

Cleveland. New Cleve'and Model Has Centralized Chassis Lubricating System. Automotive Industries, vol. 50, no. 25, June 19, 1924, pp. 1314-1318, 5 figs. Nearly all mechanical units are redesigned and wheelbase is lengthened; 31x5.25-in. balloon tires are standard equipment.

Cluley. Cluley Cars. Auto-Motor Jl., vol. 29, no. 49, Dec. 4, 1924, pp. 1065-1068, 13 figs. Two examples of 1925 models, the 10-20-hp. 4-seater and 14-30-hp. model.

Clutches. See CLUTCHES, Automobile.

Clyno. The 11 H. P. Clyno Light Car. Auto-Motor Jl., vol. 29, no. 17, Apr. 24, 1924, pp. 347-350, 10 figs. Comfortable body-work, ease of operation and economy in running; 66-mm. bore and 100-mm. stroke; capable of an output of 16 hp. on brake at 1500 r.p.m. and 25 hp. at 2950 r.p.m.

The 11 H.P. Clyno Light Car. Auto-Motor Jl., vol. 29, no. 39, Sept. 25. 1924, pp. 810-812, 10 figs. Particulars of an improved model. Four cylinders arranged monobloc, 66-mm. bore and 100-mm. piston travel.

Construction, Cast Iron in. Cast-Iron in Motor Car Construction, F. H. Hurren. Foundry Trade Jl., vol. 29, no. 405, May 22, 1924, pp. 423-426. Considers technical and metallurgical aspects of production of automobile parts, and extent to which science can assist.

Crossley. The 14 H.P. Crossley Car. Auto-Motor Jl., vol. 29, no. 26, June 26, 1924, pp. 539-541, 9 figs. Has wheelbase of 9 ft. 4½ in.; 4 cylinders; engine is supported in chassis frame by 2 arms; cylinder heads are detachable in one water-jacketed casting; carburetor is vertical type Solex.

Crouch. The 12-30 H.P. Crouch. Auto-Motor Jl., vol. 29, no. 36, Sept. 4, 1924, pp. 745-747, 10 figs. Features of design of small car; engine is 20-30 hp. British Anzani, having four cylinders of 69 mm. bore and piston stroke of 100 mm.; cylinders are cast en bloc and have detachable head.

Cushions, Pneumatic. Riding on Air. Auto-Motor Jl., vol. 29, no. 9, Feb. 28, 1924, p. 189, 3 figs. Describes novel system of upholstery put forward by Self-Controlled Air Cushion Co., Ltd., Manchester, Eng., in which a rubber bag filled with air takes place of springs.

Daimler. His Majesty's New Cars. Autocar, vol. 53, no. 1500, July 18, 1924, pp. 105-107, 9 figs. Details of 57-hp. 6-cylinder special Daimler model, of which four have been built to order of King George.

Darracq. The 12-23 H.P. Darracq. Auto-Motor Jl., vol. 29, no. 6, Feb. 7, 1924, pp, 117-120, 12 figs. Monobloc 4-cylindered engine; four-wheel brakes of simple design. Complete description.

Delage. See Grand Prix.

Delaunay-Belleville. The 15.9 H.P. Delaunay-Belleville. Auto-Motor Jl., vol. 29, no. 9, Feb. 28, 1924, pp. 181-184, 10 figs. Description of French touring car, having 4-cylinder monobloc engine with 80 mm. bore and a crank throw of 130 mm.; wheelbase, 10 ft. 6 in.; total length, 14 ft.; track, 4 ft. 8 in.

Design. Direction of Developments. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 685-686. Modern tendencies of automobile designs for 1925 and after. Comments on new features of Olympia Show cars.

Improvements in Automobile Construction (Fortschritte im Kraftwagenbau), A. Heller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 50, Dec. 13, 1924, pp. 1281-1288, 25 figs. Notes on general arrangement; fuel problem; and ignition.

Racing's Effect on Design, W. F. Bradley. Autocar, vol. 52, no. 1491, May 16, 1924, pp. 865-866, 4 figs. Florio races (Sicily) indicate that famous continental constructors will offer production models with superchargers and dry sump lubrication as results of racing experience.

Diatto. The Two-Litre Diatto. Automobile Engr., vol. 14, no. 190, June 1924, pp. 158-164, 13 figs. Details of medium-power Italian chassis, with 4-cylinder overhead valve engine, assembled in one unit with gear box, and enclosed propeller shaft transmitting power to spiral bevel axle.

Differentials. New Type Differential Prevents Traction Loss on Slippery Ground. Automotive Industries, vol. 50, no. 6, Feb. 7, 1923, p. 289, 2 figs. Permits driving wheels to rotate at unequal speeds whenever required; marketed under name of Bement drive.

Dixie. See German.

Dodge. The Dodge Brothers Touring Car. Auto-Motor Jl., vol. 29, no. 27, July 3, 1924, pp. 559-561, 11 figs. Long chassis, roomy body, and excellent equipment features of latest Dodge car. Four cylinders have bore of 98 mm. and piston stroke is 114 mm.

Door Hinges, Manufacture. Cold Drawn Manganese Steel is Used in Latest Type Door Hinge, W. L. Carver. Automotive Industries, vol. 51, no. 16, Oct. 16, 1924, pp. 687-689, 5 figs. Simplified production methods are employed in manufacture of this body part.

Duesenberg. Duesenberg Race Car Resembles Stock Product in Many Particulars, B. M. Ikert. Automotive Industries, vol. 51, no. 3, July 17, 1924, pp. 156-160, 7 figs. Car is much smaller and lighter and has entirely different frame construction, but engine, clutch, gear set, and axles are very similar in design. Supercharger not needed in larger machine.

The Duesenberg Straight Eight. Automobile Engr., vol. 14, nos. 192 and 193, Aug. and Sept. 1924, pp. 220-223 and 252-261, 27 figs. Detailed description of racing engine and standard model adapted from it.

Electric. Electric Storage-Battery Automobiles (Les automobiles électriques à accumulateurs), A. Billaz. Vie Technique et Industrielle, vol. 5, no. 58, July 1924, pp. 232-239, 11 figs. Discusses lead and iron-nickel batteries, construction and prices, battery motors, battery trucks and their construction, operation and control.

Electric Storage Battery Automobiles (Les automobiles électriques à accumulateurs), S. Iglésis. Arts et Métiers, vol. 77, no. 48, July 1924, pp. 256-260. Discusses lead and iron-nickel storage batteries, determining distance of run without recharge, cost of current and of upkeep of batteries per km.

Present State of the Storage Battery Question for Electric Vehicles (Etat actuel de la question des accumulateurs pour véhicules électriques). Revue Industrielle, vol. 54, nos. 2181 and 2182, Aug. and Sept. 1924, pp. 236-242 and 276-282, 11 figs. Discusses lead storage batteries and their properties, construction, wear, etc. Sept.: Iron-nickel batteries, their construction and properties; comparison of two types, charging of batteries and charging apparatus.

Test of Electric Storage-Battery Vehicles (Essais de véhicules à traction électrique par accumulateurs), M. Rossignol. Arts et Métiers, vol. 77, no. 48, July 1924, pp. 260-265. Gives details of French competition and tables of data on principal French makes.

The Electric Road Vehicle, D. E. Batty. Engineering, vol. 118, nos. 3072 and 3073, Nov. 14 and 21, 1924, pp. 688-692 and 719-720, 13 figs. Its characteristics and its economic field of usefulness. (Abstract.)

See also Storage-Battery.

Electric, Small. Small Electric Motorcars. Eng. Progress, vol. 5, no. 6, June 1924, pp. 117-119, 7 figs. Describes two types of small electric automobiles manufactured in Germany, one by SB-Automobil-Ges. of Charlottenburg, and Hawa car, made by Hannoversche Waggonfabrik, Hannover-Linden.

Electric, Specifications for. American Electric Car and Truck Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 422-423. Tables of statistics.

Electric Speed Change. Electric Speed Change by Cotal System (Le changement de vitesse élec-

trique "Cotal"), E. Weiss. Nature (Paris), no. 2632, Sept. 13, 1924, pp. 174-176, 2 figs. Details of design and operation, assuring greater automaticity and rapidity of speed change.

Electrical Equipment. New Electrical Equipment Line Designed for Higher Priced Cars, P. M. Heldt. Automotive Industries, vol. 51, no. 7, Aug. 14, 1924, pp. 326-329, 4 figs. Details of electrical equipment for automobiles, manufactured by De Jon Elec. Corpn. of Poughkeepsie, N. Y. Generators and starting motors made with 4½, 5, and 5½ in. frame diameters; head at commutator end is an aluminum casting; third-brush control and magnetic output employed; closed-circuit ignition system comprises interrupter, distributor, and coil.

Problems of Motor-Vehicle Electrical Equipment Maintenance, P. J. Durham. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 162-164. Facts regarding present obstacles to proper maintenance of automotive electrical equipment; among difficulties presented are: diagnosis, headlamps, accessibility, terminal connections, fuses, wiring color code, storage battery, starting motor, and generator.

Electrical-Equipment Repairs. The Engineer's Duty in Simplifying Electrical-Equipment Repairs, J. W. Tracy. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 11-12. Selection and application of apparatus is stated to be starting point in simplifying repairs to electrical equipment; notes on maintenance of repair-parts stock; dissemination of technical information and explicit service instructions for new apparatus.

Enameling. See ENAMELING, Automobiles; Electric Ovens for.

Eric Campbell. The Eric-Campbell Cars. Auto-Motor Jl., vol. 29, no. 11, Mar. 13, 1924, pp. 225-228, 13 figs. Description of a light, fast and efficient small vehicle; good road-holding and gallon-mileage properties are features; 4-cylinder monobloc engine; bore 66 mm. and piston stroke 109.5 mm.

Essex. A Six-Cylinder Essex for 1924. Autocar, vol. 52, no. 1477, Feb. 8, 1924, pp. 248-249, 7 figs. 16.5-hp. engine.

European Grand Prix. The European Grand Prix. Autocar, vol. 53, no. 1503, Aug. 8, 1924, pp. 247-256, 19 figs. Italian success on Lyon circuit; Campari (Alfa-Romeo) averages 71 m.p.h.

Faum. See German.

Fiat. Fiat Automobile Production Methods, J. A. Lucas and F. E. Bardrof. Am. Machinist, vol. 61, no. 6, Aug. 7, 1924, pp. 223-225, 10 figs. Methods used in machining top section of crankcase; all crankcase parts are aluminum castings; various milling, drilling, and reaming operations.

See also Racing.

Fittings. On Door, Window and Ventilation Fittings. Motor Transport (Lond.), vol. 38, no. 993, Mar. 10, 1924, pp. 301-303, 7 figs. Notes on detai's that influence economy of working and make for safety and comfort of passengers.

Four-Wheel Driving, Braking and Steering. All-Wheel Driving, Braking and Steering, B. Joy. Motor Transport (Lond.), vol. 38, no. 1008, June 23, 1924, pp. 761-762, 5 figs. Considers its advantages and disadvantages.

France. The Municipal Automobile in Paris, W. F. Bradley. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 31-33, 5 figs. How passenger transport, refuse collecting, street cleansing, and fire fighting services are organized in French capital.

Franklin. Franklin Increases Power 33 Per Cent by Changes in Air Cooling System, P. M. Heldt. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 101-103, 7 figs. Improvements include quickened acceleration, greater maximum speed and a more plentiful supply of oil to cylinder walls. Balloon-type tires on all models.

Frazer Nash. The New Frazer Nash. Autocar, vol. 53, no. 1500, July 18, 1924, pp. 121-122, 4 figs. Light car of 1500 c.c., four-cylinder with 3-bearing crank and overhead valves, vertical dynamo and starting motor, built by Frazer Nash, Ltd.

See also Axles.

Front Axles. The Faudi System of Standard Front Axles (Normal Vorderachsen, System Faudi). Motorwagen, vol. 27, no. 34, Dec. 10, 1924, pp. 684-689, 2 figs. Advantages of standardized front axle, developed by German engineer, are: independent springing of each of the two front axles; complete shock absorption of axle weight; reduction to minimum of forces acting upon axles, and reduction of weight of axles; elimination of tractive effort on springs; and resulting reduction of production costs and wear on rubber.

Front-End Drives. 1924 Models Show Changing Trends in Front End Drives, J. E. Schipper. Automotive Industries, vol. 50, no. 6, Feb. 7, 1924, pp. 290-291, 7 figs. Attention has been concentrated on problem of silence and balance; of manufacturers building own engines, 47 per cent use chain and 53 per cent gear type.

Fuel Consumption. Factors in Fuel Economy, Autocar, vol. 52, no. 1472, Jan. 4, 1924, pp. 17-23, 13 figs. Describes some factors that have a distinct influence on good or bad fuel consumption; results of tests carried out on Brooklands track. (Eng.)

G. W. K. The 1924 G. W. K. Car. Auto-Motor Jl., vol. 29, no. 10, Mar. 6, 1924, pp. 203-206, 12 figs. Efficient friction-drive car; 4-cylinder monobloc engine; 10.8 hp., with bore of 66 mm. and piston stroke of 100 mm.

Garages. See GARAGES.

Gas Turbines for. See GAS TURBINES, Automobiles.

Gear Boxes. New Morris Production Methods. Machy. (Lond.), vol. 24, no. 602, Apr. 10, 1924, pp. 33-38, 11 figs. Machines and methods used by Morris Engines, Ltd., Coventry, in grinding spline shafts and gears for automobile gear boxes.

Gear Sets. See GEARS, Gear Sets, Specifications.

German. A New German Two-Seater (Ein neuer deutscher Kleinauto-Zweisitzer), H. Werner. Motorwagen, vol. 27, no. 8, Mar. 20, 1924, pp. 135-136, 1 fig. 1.9/6.5-hp. BZ small car with light-metal body.

German Small Auto Industry (Die deutsche Kleinauto-Industrie). Allgemeine Automobil-Zeitung, vol. 25, no. 23, June 7, 1924, pp. 24-27, 10 figs. Details of design and construction of number of small motor-car types, including Helios, Dixie, Faum, Adler, and Baer.

Small German Automobiles (Neue "Berufs-Kleinkraftwagen"), E. Meyer. Motorwagen, vol. 27, no. 15, May 31, 1924, pp. 262-264, 2 figs. Details of new 4/14 hp. Tatra small car.

The Light Car (Der kleine Wagen), F. Pelikan. Allgemeine Automobil-Zeitung, vol. 25, nos. 37, 39 and 41, Sept. 13, 27 and Oct. 11, 1924, pp. 15-18, 23-25 and 18-20, 30 figs. Describes two French types, Citroen and Renault, a number of German light cars, and the German "autolettes."

The Simson Super-Car (Der Simson-Supra-Wagen), M. Mierwald. Allgemeine Automobil-Zeitung, vol. 25, nos. 34 and 35, Aug. 23 and 30, 1924, pp. 18-20 and 12-14, 10 figs. Supra-sport type, four-cylinder 70 by 128-mm. engine,

gears in one piece; each cylinder has four suspended valves; front and rear axle brakes.

Glasgow Show. The Scottish Motor Exhibition. Autocar, vol. 52, no. 1475, Jan. 25, 1924, pp. 167-180, 28 figs., and no. 1476, Feb. 1, 1924, pp. 207-211, 20 figs. See also Auto-Motor Jl., vol. 29, no. 4, Jan. 24, 1924, pp. 77-82, 40 figs. Data on exhibits at Glasgow show, Jan. 25-Feb. 2, 1924; representative display of British, French, Italian, American, and Canadian cars.

The Scottish Motor Exhibition. Autocar, vol. 53, no. 1518, Nov. 21, 1924, pp. 1049-1056, 30 figs. See also Auto-Motor Jl., vol. 29, no. 47, Nov. 20, 1924, pp. 1023-1027, 7 figs. Review of cars exhibited at 23rd annual show held at Glasgow, Nov. 21-29, 1924, together with analysis of latest improvements incorporated in many of the 1925 models.

Grand Prix. Three Grand Prix Cars. Autocar, vol. 53, no. 1498, July 4, 1924, pp. 19-23, 9 figs. Gives details of 12-cylinder Delage, 8-cylinder Bugatti, and 6-cylinder Sunbeam cars to compete in 2-liter race at Lyons. Delage: 12 cylinders are in 2 groups of 6, mounted on aluminum base-chamber, cylinder bore is 51.3; Bugatti: 8 cylinders of 60x88 mm. bore and stroke with 3 valves per cylinder; Sunbeam: 6-cylinder of 67x99 mm. bore and stroke.

Gwynne "Eight." The Gwynne "Eight." Auto-Motor Jl., vol. 29, no. 13, Mar. 27, 1924, pp. 265-268, 12 figs. Particulars of light car, capable of speed of from 55 to 60 m.p.h., yet at normal running it can cover 45 to 50 miles to a gallon of fuel; 4-cylindered engine.

Hampton. The Hampton Car. Auto-Motor Jl., vol. 29, no. 8, Feb. 21, 1924, pp. 159-162, 11 figs. Describes two models of English car, one of 9/21 hp. and other of 11/35 hp., both similar in general design; both have monobloc 4-cylinder overhead valve engines and clutch and speed gear integral with engine; 9/21-hp. model has 63-mm. bore and 100-mm. stroke, and 11/35-hp. model, 69-mm. bore and 120-mm. stroke.

Headlights. Desirable Road-Illumination, C. A. Michel. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 511-516, 10 figs. Laboratory approval-test specifications; specifications for desirable illumination; specially designed reflectors and lens; parabolic-reflector disadvantages; photometric-test values.

Elliptical Reflectors in Egg-Shaped Casing Feature of New Headlamp. Automotive Industries, vol. 50, no. 9, Feb. 28, 1924, p. 520, 3 figs. Beam of light is deformed by lens to inverted fan-shaped section in new headlight brought out by Edmunds & Jones Co., Detroit, Mich.; upwardly diffused light, of amber hue, shows objects in road above lamp level but does not glare.

Headlights of Vehicles and Glare (I fanali di testa dei veicoli e l'abbagliamento), G. Peri. Industria, vol. 38, no. 10, May 31, 1924, pp. 274-276, 8 figs. Discusses regulation of glare by changing position of light in reflector.

New Lamp for Headlights (Nouvelle lampe électrique pour projecteurs), A. Marsat. Revue Générale de l'Electricité, vol. 16, no. 15, Oct. 11, 1924, pp. 575-577, 7 figs. Describes Yoel Norma lamp which, by means of very exacting optical process, permits location of filament in all lamps in exactly same relation to lamp base; process of reassembling these lamps can be readily performed on routine quantity-production basis; they are in great demand by French automobile manufacturers and Parisian traction systems.

Report of Committee on Automobile Headlights —International Commission on Illumination, C. H. Sharp. Illuminating Eng. Soc.—Trans., vol. 19, no. 8, Oct., 1924, pp. 801-817. Suggested general principles of headlighting; standard specifications for headlight control and reasons for their adoption.

Specification of Laboratory Tests for Approval of Electric Headlighting Devices for Motor Vehicles, U. S. Bur. Labor Statistics—Bul., no. 350, Jan. 1924, 5 pp., 1 fig. Tentative American standard approved Nov. 11, 1922, by Am. Eng. Standards Committee.

Helios. See German.

Hillman. Hillman Cars for 1925. Autocar, vol. 53, no. 1508, Sept. 12, 1924, pp. 467-468, 4 figs. Specifications: 11-hp. engine, four cylinders, 65 by 120 mm., detachable head, side valves, semi elliptic front and rear springs.

The Hillman Car. Auto-Motor Jl., vol. 29, no. 25, June 19, 1924, pp. 517-519, 9 figs. Describes well-designed all-weather vehicle with most efficient power and transmission plant; 4-cylinder engine, with bore of 65 mm. and piston travel of 120 mm.; R. A. C. rating of 10.4 hp.

Hispano-Suiza. See Racing.

Humber. Humber Car Refinements. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 583-584, 6 figs. Improved editions of 8, 12 and 15.9 hp. models; four-wheel brakes on latter, and a new form of side panel for touring bodies.

The 11.4 H.P. Humber, E. N. Duffield. Auto-Motor Jl., vol. 29, no. 26, June 26, 1924, pp. 531-533, 5 figs. Car is smaller edition of 15.9; the four cylinders have their inlet valves overhead and lower section of crankcase is flared to form clutch pit, continued to constitute lower portion of gear box.

Imperia. The 11-24 H.P. Imperia Car. Auto-Motor Jl., vol. 29, no. 45, Nov. 6, 1924, pp. 981-983, 9 figs. Particulars of Belgian vehicle, having new type of slide-valve engine and a distinctive frame construction. Capable of speed of 60 m.p.h. and a gasoline mileage of 35 miles to gallon, with oil consumption of a gallon to 1000 miles.

Indianapolis Race. Reliability Is Outstanding Characteristic of Cars in This Year's Race, P. Dumas. Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1213-1215, 6 figs. All but five of 22 entrants were running at finish of 1924 Indianapolis; average total time at pits is only 6.5 min. per car; Duesenberg supercharger proves worth.

Inspection. Inspection Methods Symposium, C. S. Stark, A. H. Frauenthal and C. J. Jones. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 156-162, 4 figs. Series of papers on inspection of processed materials, influence of numerous handlings on inspection cost, and maintenance of high-quality production.

Interchangeable Manufacture. Interchangeable Manufacture in the Automobile Industry (Austauschbare Fertigung im Automobilbau), P. Wolfram. Werkstattstechnik, vol. 18, no. 24, Dec. 15, 1924, pp. 729-736, 63 figs. Describes practice of the Rhenish Automobile Corpn. (Rabag), manufacturers of Bugatti cars, Mannheim, Germany; machining of bearing linings, claw couplings, connecting rods, striker clutches, camshaft casings, main bearings on crankcase, and cylinders.

Isotta Fraschini. The Isotta Fraschini Car. Auto-Motor-Jl., vol. 29, no. 46, Nov. 13, 1924, pp. 1001-1003, 9 figs. Particulars of latest model of an Italian vehicle, the 44.8-hp. straight eight.

Jordan Eight. Jordan Eight, Added to Lines of Sixes, Now in Production, D. Blanchard. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 352-354, 3 figs. L-head design is used in new engine, which has piston displacement of 268.6 cu. in. and N. A. C. C. rating of 28.8 hp.; actual hp. 74 at 3000 r.p.m.; crankshaft is carried in five bearings.

Lambda. See Lancia.

Lancia. The Lancia "Lambda" Car. Auto-Motor Jl., vol. 29, no. 4, Jan. 24, 1924, pp. 71-74, 12 figs. Outstanding features are construction of frame and body as one unit, and arrangement of 4-cylinder engine with pairs of cylinders set at an angle, thus keeping crankshaft very short and stiff, with minimum of whip on bearings. Weight, 21 cwt. complete, 2.12-liter engine, speed 70 m.p.h. with torpedo body and 60 m.p.h. with saloon top.

Lea & Francis. See Light.

Light. The German Light-Automobile Industry (Die deutsche Kleinauto-Industrie). Allgemeine Automobil-Zeitung, vol. 25, nos. 16 and 17, Apr. 19 and 26, 1924, pp. 17-28 and 24-28, 45 figs. Details of different German makes in alphabetical order; tabular data on German light automobiles up to 6 hp.

The 9.8 H.P. Lea and Francis Chassis. Automobile Engr., vol. 14, no. 188, Apr. 1924, pp. 94-101, 17 figs. Light car in which good performance has been secured by reducing dead weight.

See also German; Rover; Windsor.

Light Metals, Use of. Light Metals at the Automobile Show of 1924 (Les métaux légers au Salon de l'Automobile de 1924), R. de Fleury. Technique Moderne, vol. 16, no. 23, Dec. 1, 1924, pp. 811-814, 2 figs. Discusses increased use of light metals in automobile construction for lightening masses in motion, such as connecting rods, pistons, wheels, brakes, etc.

Locomobile. Locomobile Makes Many Detailed Changes to Lengthen Life of Car, P. M. Heldt. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 393-396, 8 figs. Six-cylinder engine now develops as high as 107 hp. on brake at 2150 r.p.m. and four-passenger stock car said to be capable of speed of 76 m.p.h.; frame stiffened and potential sources of noise eliminated; aluminum pistons, full pressure lubrication, and self-adjusting spring shackles adopted.

Lubrication. Saving Lubricant. Motor Transport (Lond.), vol. 39, no. 1017, Aug. 25, 1924, pp. 245-247, 8 figs. Details of system that eliminates need for lubricating many parts of chassis.

Machining of Parts. The Machining of Automobile Parts. Werkstattstechnik, vol. 18, nos. 23 and 24, Dec. 1 and 15, pp. 708-728 and 748-775, 342 figs. Contains articles on machining of aluminum pistons, connecting rods, crankshafts, grinding practice in automobile industry; production of steel plate for bodies; machine tools in automobile industry; production of steel plate for bodies; machine tools in automobile industry; machining of front and rear axles; boring of automobile parts; making molds for automobile tires, etc.

Manufacture. Building 80 Cars a Day in Toronto's Ford Plant, H. P. Armson. Can. Machy., vol. 31, nos. 7 and 8, Feb. 14 and 21, 1924, pp. 15-19 and 13-17, 6 figs. Description of progressive operations involved in assembling cars at new Danforth Ave. plant of Ford Motor Co. of Toronto, Can., and labor-saving devices used to aid production.

Marmon. Changed Body Lines Characterize New Marmon Model, B. M. Ikert. Automotive Industries, vol. 51, no. 19, Nov. 6, 1924, pp. 796-798, 4 figs. Engine has integral inlet manifold; control members rearranged, solid propeller shaft adopted and steering gear redesigned to meet requirements of balloon tires.

Mathis. A New Mathis. Autocar, vol. 53, no. 1510, Sept. 26, 1924, p. 537, 3 figs. Particulars of a French production of which four cylinders, four speeds, double lubrication system, and soft tires are prominent features.

Markwell. Maxwell Practice Illustrates a New Method of Engine Mounting, P. M. Heldt. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, pp. 761-763, 4 figs. Vibration is reduced in new Maxwell car; at rear power plant has swivel support on frame about which it is free to move, since it is not secured rigidly at forward end.

Maybach. German-Built Automobile Operates Without Shifting Gears, B. R. Rierfeld. Automotive Industries, vol. 51, no. 19, Nov. 6, 1924, pp. 810-815, 14 figs. Maybach car uses planetary low-speed gear only under extremely difficult road conditions; electric starter normally stars car on direct drive; engine and carburetor possess original features.

The Maybach Car, 1924 Model (Der Maybachwagen Modell 1924). Motorwagen, vol. 27, no. 30, Oct. 31, 1924, pp. 550-552, 5 figs. Details of chassis.

The 22/70 Hp. Gearless Passenger Automobile by Maybach Motorenbau Co. (Der 22/70 PS-Personenkraftwagen ohne Schaltung der Firma Maybach-Motorenbau G. m. b. H., Friedrichshafen, a.B.). Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 33, Aug. 16, 1924, pp. 841-848, 22 figs. New design for high average speed with four-wheel brakes; speed-change gear is replaced by coupling with planetary gears; four-stroke six-cylinder gasoline engine; details of chassis and engine.

The 22/70 Maybach Motorcar. Eng. Progress, vol. 5, no. 10, Oct. 1924, pp. 209-213, 12 figs. Purpose of design; engine and carburetor; gear; frame; brakes; brake compensation; accessories.

Mercedes. See Racing.

Minerva. The 30 H.P. Minerva. Auto-Motor Jl., vol. 29, no. 34, Aug. 21, 1924, pp. 705-707, 9 figs. Design and construction of six-cylindered 30-hp. Minerva automobile with silent sleeve-valve engine and four-wheel braking.

Mölkamp. The Mölkamp Six-Cylinder Sporting Car (Der Mölkamp-Sechszylinder-Sportwagen), Mierwald. Allgemeine Automobil-Zeitung, vol. 25, nos. 46 and 47, Nov. 15 and 22, 1924, pp. 15-17 and 25-26, 10 figs. Design and construction of sport car built by Möllenkamp A. G., Düsseldorf; 10/50 hp. at 2900 r.p.m.

Moon. The Latest 20 H.P. Moon. Auto-Motor Jl., vol. 29, no. 33, Aug. 14, 1924, p. 688, 2 figs. Describes latest model of Moon car, including four-wheel brakes operated on Lockheed hydraulic system, six-cylindered Continental motor, bore 3⅛ in. and stroke 4¼ in., of 54 hp. at 2500 r.p.m.; power transmitted through Borg & Beck 10-in. dry-plate clutch and three-speed Warner gear box.

Morris-Cowley. Morris Cars. Auto-Motor Jl., vol. 29, no. 24, June 12, 1924, pp. 499-501, 10 figs. Particulars of latest models. Made in two types, the Cowley, having 11.9-hp. engine, 69.5 bore and 102 stroke, and the Oxford, rated at 14.28 hp., and having bore of 75 and a stroke of 102.

The 11.9 H.P. Morris-Cowley Chassis. Automobile Engr., vol. 14, no. 187, Mar. 1924, pp. 64-72, 13 figs. Four-cylinder engine, with cylinders cast in block with upper half of crankcase, is bolted to 3-speed gear box, power being transmitted to bevel-driven rear axle through enclosed propeller shaft; frame is intended to take four-seater body.

Nash. Nash Adds Smaller Six and Drops Four Cylinder Models, D. Blanchard. Automotive Industries, vol. 51, no. 5, July 31, 1924, pp. 231-236, 10 figs. Four-wheel brakes and balloon tires on disk wheels, steering gear redesigned with larger ratio.

New York Show. Dull Finishes Gaining in Favor, Closed Car Exhibit Shows, H. Chase. Automotive Industries, vol. 51, no. 14, Oct. 2, 1924,

pp. 589-593, 26 figs. Body design trends brought out at Closed Car Show of New York Automobile Merchants Assn., Sept. 27-Oct. 4, 1924. Great increase in number of semi-lustrous satin finishes; number of one-piece windshields increases; more greens and grays for body colors used; more nickel parts; more decorative visors.

Interest Focuses on New Car Announcements. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 78-81, 3 figs. Details of new models shown for first time at New York Show; features of improvements.

1925 Cars. Advance Details of 1925 Cars. Autocar, vol. 53, No. 1509, Sept. 19, 1924, pp. 505-512, 16 figs. Particulars of new cars of British, French, Belgian, and American manufacture produced as 1925 models, including Lea-Francis, Imperia, Sunbeam, Reo, Berliet, Austin, and Bean.

Oakland. The New Oakland Six. Auto-Motor Jl., vol. 29, no. 1, Jan. 3, 1924, pp. 7-10, 11 figs. Fine example of 6-cylinder design; four-wheeled braking; low running costs.

Olympia Show, England. Front Brakes and Balloon Tires Chief Novelties at Olympia Show, M. W. Bourdon. Automotive Industries, vol. 51, no. 19, Nov. 6, 1924, pp. 799-802, 13 figs. Only a few servo-mechanisms in evidence; fabric bodies and others with steel frames have increased in popularity; reappearance of drop base rims.

Motor Car Show at Olympia. Engineer, vol. 138, nos. 3590 and 3591, Oct. 17 and 31, 1924, pp. 434-436 and 470-473, 22 figs. Outstanding features are 4-wheel brakes, more comfortable body work, and increase in 6-cylinder models; details of different exhibits.

The Automobile Show. Autocar, vol. 53, nos. 1513 and 1514, Oct. 17 and 24, 1924, pp. 754-778 and 831-882, 401 figs. A stand-to-stand description of car and chassis exhibits at Olympia Exhibition.

The Olympia Motor Show, 1924. Auto-Motor Jl., vol. 29, nos. 42 and 43, Oct. 16 and 23, 1924, pp. 875-900 and 917-939, 186 figs. List, alphabetically aranged, of the various cars exhibited, giving in a suminarized form their special features.

The Olympia Show. Automobile Engr., vol. 14, no. 195, Nov. 5, 1924. Review of exhibits under following heads: Summary of trend of design, p. 314; engines, pp. 315-332, 46 figs.; gear boxes, pp. 332-336, 20 figs.; rear axles, pp. 336-338, 7 figs.; frames, pp. 338-339, 5 figs.; steering gears, pp. 340-341, 4 figs.; front axles, pp. 341-343, 8 figs.; brakes, pp. 343-348, 17 figs.; springs and suspension, pp. 348-350, 8 figs.

See also Accessories; Bodies.

Overland. Overland Cars. Auto-Motor Jl., vol. 29, no. 12, Mar. 20, 1924, pp. 245-248, 9 figs. Particulars of latest models. Four-cylinder high-speed engine with 3⅝-in. bore and 4-in. stroke.

Oxford. See Morris-Cowley.

Painting and Varnishing. Automatic Equipment Cuts Painting Cost. Iron Age, vol. 114, no. 10, Sept. 4, 1924, pp. 555-557, 4 figs. How frames for Ford cars are cleaned, painted, dried, and delivered to freight-car door at rate of 10 a minute by means of a new painting and conveying unit recently placed in operation.

The Painting and Varnishing of Motor Bodies, W. L. Lewis. Automotive Mfr., vol. 66, nos. 8 and 9, Nov. and Dec., 1924, pp. 5-7 and 25, and 23-25. Essential differences in present conditions and those in coach-builder's time; me hanical methods of painting; paint-shop equipment; dipping processes.

Palladium. The 12 H.P. Palladium Chassis. Automobile Engr., vol. 14, no. 194, Oct. 1924, pp. 284-292, 16 figs. Details of component-built vehicle.

Panhard. A New 10 H.P. Panhard. Autocar, vol. 53, no. 1508, Sept. 12, 1924, pp. 460-461, 3 figs. Specifications: 10-hp. engine of four cylinders, 65 by 105 mm.; four-speed gear box in unit with engine; brakes on all four wheels.

The 14-20 H.P. Panhard. Auto-Motor Jl., vol. 29, no. 2, Jan. 10, 1924, pp. 29-32, 11 figs. Details of French-built sleeve-valve-engined car.

Paris Show. Four-Wheel Brakes and Fabric Car Bodies Stand Out as Features of French Production, W. F. Bradley. Automotive Industries, vol. 51, no. 18, Oct. 30, 1924, pp. 765-769, 19 figs. Features of exhibits at Paris show; 122-cu. in. car popular; numerous servo-mechanisms; duralumin connecting rods; light alloys for chassis construction.

19th International Automobile Show (La XIX^{e} Exposition Internationale de l'Automobile, Paris, Oct. 2-12, 1924), Martinot-Lagarde. Technique Moderne, vol. 16, no. 21, Nov. 1, 1924, pp. 765-767. Review of exhibits, including engines, chassis, transmissions, suspensions, brakes, bodies, and accessories.

Novel Brake Mechanism and Dozen New Models Are Paris Show Features, W. F. Bradley. Automotive Industries, vol. 51, no. 15, Oct. 9, 1924, pp. 633-634, 1 fig. Great increase in fabric bodies and gain in overhead valve engines.

Paris Automobile Show, 1924 [Le XIX^{e} Salon de l'Automobile et du Cycle. Véhicules de tourisme (Paris), 1924)], G. Delanghe. Génie Civil, vol. 85, nos. 16, 17 and 18, Oct. 18, 25 and Nov. 1, 1924, pp. 333-343, 360-371 and 394-403, 94 figs. Review of exhibits, including cycle cars, small and light cars, medium and high-power cars; carburetors; electric starters; lighting equipment; transmissions; suspensions; accessories.

The Paris Automobile Show. Automobile Engr., vol. 14, no. 196, Nov. 1924, pp. 368-371, 17 figs. Few novelties; concentration on manufacture of standard models.

The Paris Salon. Autocar, vol. 53, no. 1512, Oct. 10, 1924, pp. 691-698, 23 figs. French automobile industry in a flourishing condition. Rival schools of thought as regards future developments. Balloon tires controversy; question of world trade. Particulars of small cars at show. Renault oil purifier.

See also Bodies.

Parts. Parts Manufacturers Exhibit New Products. Automotive Industries, vol. 50, no. 2, Jan. 10, 1924, pp. 81-84, 5 figs. Seven-speed gearset, taxicab engine, new drag-link design, oil purifier, car heater, brake equalizer, and windshield cleaner are among new units presented at New York Show.

Parts, Swaging of. Swaging with Special Reference to Automobile Parts (Das Schmieden im Gesenk unter besonderer Berücksichtigung der Gesenkschmiedeteile für die Automobilindustrie), C. Müller. Kruppsche Monatshefte, vol. 5, Dec. 1924, pp. 249-257, 24 figs. Compares proper and defective methods of swaging as applied to multiple throw cranks and other parts.

Peerless. Straighter Body Lines and Re-designed Engine Characterize New Peerless Eight, D. Blanchard. Automotive Industries, vol. 51, no. 21, Nov. 20, 1924, pp. 875-878, 6 figs. Detachable cylinder-head construction adopted, and timing and explosion sequence changed; heavier crankshaft with counterweights and larger bearings used.

Peugeot. See Racing.

Pierce-Arrow. Pierce-Arrow added to List of Cars Fitted with Front-Wheel Brakes. Automo-

tive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 5-6, 2 figs. Adopts construction in which operating shafts are carried on axle center; reverse Elliott knuckle has vertical axis which meets ground more than 2 in. from central point of tire contact; provision against locking front wheels considered unnecessary.

Pierce-Arrow Announces Lighter Six with L-Head Engine, D. Blanchard. Automotive Industries, vol. 51, no. 5, July 31, 1924, pp. 237-240, 4 figs. Piston displacement and weight are 30 per cent less than that of larger model which is continued. Four-wheel brakes, balloon tires, and torque bar are features.

Plate Glass for. See GLASS MANUFACTURE, Automobile Plate Glass.

Pressed-Metal Parts. The Use of Pressed-Metal Parts for Saving in Weight and Manufacturing Costs of Automobiles (Gewichtsersparnis und Verbilligung der Konstruktion von Kraftwagen durch Verwendung von Blechpressteilen), P. Friedmann. Motorwagen, vol. 27, no. 28, Oct. 10, 1924, pp. 506-510, 28 figs. Examples of pressed-metal parts which can be used in automobile construction.

Producer-Gas. See Charcoal-Producer-Gas-Burning.

Race Track for. See RACE TRACKS.

Racing. Mercedes with Supercharger Engine Wins Sicilian Classic, W. F. Bradley. Automotive Industries, vol. 50, no. 21, May 22, 1924, pp. 1116-118, 8 figs. Results of 395-mi. race; air filters and dry sump lubricating systems employed on some cars entered; those who use servo mechanisms find them advantageous; details in brief of Fiat, Peugeot, Mercedes, and Hispano-Suiza cars.

Straight Eight, Supercharged Car Wins Grand Prix, 503 Mile Race, W. F. Bradley. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 276-279, 4 figs. Details of Sunbeam, Fiat, Alfa, Bugatti, Delage, Schmid, and Miller cars and their behavior.

See also A. C. Racing; Duesenberg.

Radio Equipment. See RADIOTELEPHONY, Automobiles.

Railways, Use by. See RAILWAYS, Automobile Service.

Rear-Axle Production. Maxwell Methods of Making Rear-Axle Parts, F. H. Colvin. Am. Mach., vol. 60, nos. 15, 16, and 18, Apr. 10 and 17, and May 1, 1924, pp. 529-532, 9 figs.; 569-572, 8 figs., and 661-663, 7 figs. Apr. 10: By use of heavy swaging machines, Maxwell company has eliminated all turning except at ends, has saved 7 lb. of high-grade steel per car, and secured axle that is 25 per cent stronger than one it replaces. Apr. 17: Drilling, boring and reaming fixtures; inspection gages, and running-in of complete rear end. May 1: Rear-axle housing and drive pinion; fixtures used in production; grinding two diameters at once; special mounting for truing diamonds.

Production and Assembly of Rear Axles, H. P. Armson. Can. Machy., vol. 32, no. 26, Dec. 25, 1924, pp. 144-149, 5 figs. Account of manufacturing operations in building of Willys-Overland cars in Toronto.

Rear-Axle Shafts. Hot-Swaging of Rear-Axle Shafts, R. A. DeVlieg. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 507-510, 4 figs. Description of machines used and their mode of operation, and difficulties attendant upon their development.

See also Axles.

Renault. The Second and Third Trips Across the Sahara Desert by Automobile (Les 2e et 3e traversées du Sahara en automobile), G. Delanghe. Génie Civil, vol. 84, no. 2172, Mar. 29, 1924, pp. 293-297, 13 figs. Renault automobiles with six double wheels; details of chassis; comparison of different systems of 6-wheel chassis.

Repair Service. How Engineers Can Coöperate to Make Flat-Rate Service a Success, J. Willard Lord. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 20-22. Points out need of coöperation of engineering and maintenance; development of special tools; reduction of parts expense; price of repair parts.

Providing the Engineer with Service Data, O. T. Kreusser. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 63-67 and 73, 2 figs. Tendencies of industry; maintenance troubles; field information; recording service data; coöperation between factory and service men.

Research Laboratory. See LABORATORIES, Automobile Research.

Rickenbacker. New Rickenbacker Vertical Eight Will Supplement the Six, J. E. Schipper. Automotive Industries, vol. 50, no. 26, June 26, 1924, pp. 1369-1372, 5 figs. Airplane type of oil tubing, radiating fins on cast-aluminum oil pan, cold blast for cooling oil in summer, duplex carburetor and camshaft always immersed in oil are features.

Riding Comfort. Automobile Riding-Comfort, S. P. Hess. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 82-85, 7 figs. Important factors that determine correct chassis spring suspension. Analysis of motions of a car; periodicity machine designed to determine value of interleaf friction as a damping medium, and results obtained from tests.

Riding-Comfort Factors. Soc. Automotive Engrs. —Jl., vol. 14, no. 3, Mar. 1924, pp. 335-337 and 341. Outline of factors involved in question of riding comfort and discussion thereof.

See also ACCELEROMETERS, Automobile Acceleration, Measurement.

Riding Qualities. A Riding-Quality Indicator, E. H. Lockwood and L. B. Kimball. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 40-42, 2 figs, and (discussion), no. 6, Dec. 1924, pp. 548-553, 6 figs. A portable instrument of seismograph type designed for measuring vertical acceleration produced by body springs; employs a suspended weight from which instrument readings are made; belongs to integrating type, wherein displacements of suspended weight are automatically summed up as fast as they occur; observer has only to read recording dial at intervals to obtain a measure of total displacement, which, in turn, is translated into riding quality on an arbitrary scale; construction and uses.

Air-Springs and the Measurement of Automobile Riding-Quality, J. J. McElroy. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 211-226 and (discussion) 227-228, 29 figs. Discusses load curves, and friction characteristics; describes field tests made of front-axle movements, and apparatus for these and other tests; factors that are important in measuring riding-comfort; air-spring design and construction; manufacture of air springs; installation and service.

Riding-Qualities Research, J. A. C. Warner. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 75-81, 9 figs and (discussion), no. 6, Dec. 1924, pp. 556-561, 3 figs. Ascertaining of factors that determine riding-qualities of automobiles and methods employed in studying these factors, and consideration of lines along which research should be directed in effort to improve riding conditions, are proposed with a view to encouraging further helpful discussion of riding-qualities problem.

Riley. The Eleven-Forty Riley. Auto-Motor Jl., vol. 29, no. 22, May 29, 1924, pp. 455-457, 9 figs. Light car of English manufacture; me-

chanical accuracy and efficiency have been brought to a high pitch; great comfort and roominess; engine is of monobloc construction with detachable head.

Roads, Influence on Development. The Influence of Road Conditions on the Development of the Modern Motor Vehicle, H. G. Burford. Engineering, vol. 118, no. 3078, Dec. 26, 1924, pp. 874-876, 1 fig. Consideration of nature of development of design which may be attributed largely, if not entirely, and indirectly, if not directly, to influence of road conditions.

Rover. A New 14-45 h.p. Rover. Autocar, vol. 53, no. 1510, Sept. 26, 1924, pp. 553-558, 11 figs. See also Auto-Motor Jl., vol. 29, no. 40, Oct. 2, 1924, pp. 829-831, 7 figs. Details of novel two-liter, 4-cylinder, four-speed model with four-wheel brakes.

Care and Maintenance of the 12 h.p. Rover. Autocar, vol. 52, no. 1473, Jan. 11, 1924, pp. 59-62, 10 figs. Hints and tips prepared to enable owner-drivers to secure longest and most efficient service from 12-hp. and the more recent 14-hp. Rover cars.

Oil Cooled Pistons and One Overhead Camshaft Used in New 14-45 Hp. Rover, M. W. Bourdon. Automotive Industries, vol. 51, no. 21, Nov. 20, pp. 880-885, 6 figs. Single-point lubrication for engine, clutch, and gearset; valves inclined at angle of 45 deg.; cylinder head is internally machined and detachable.

The 14 H.P. Rover. Auto-Motor Jl., vol. 29, no. 20, May 15, 1924, pp. 413-416, 11 figs. Also Automobile Engr., vol. 14, no. 189, May 1924, pp. 126-134, 14 figs. Monobloc engine with detachable head and side-camshaft-operated side-by-side valves; cylinders of 75 mm. bore and stroke 130; 40 b.hp. obtained.

The Rover Eight. Auto-Motor Jl., vol. 29, no. 29, July 17, 1924, pp. 599-601, 9 figs. Latest model of light car, horizontal opposed cylinder, twin engine, 1300 cc.; gearing, three forward and one reverse; made by Rover Co., Ltd., Coventry.

The Rover "Nine." Auto-Motor Jl., vol. 29, no. 23, June 5, 1924, pp. 477-479, 10 figs. New model, with 4-cylindered overhead-valve motor-cooled engine in 1100-cc. class; develops 20 hp. at 3000 r.p.m.

Rumpler. The Rumpler Cars 1924 (Die Rumplerwagen 1924), R. Conrad. Motorwagen, vol. 27, no. 34, Dec. 10, 1924, pp. 673-684, 10 figs. Describes latest model of Rumpler streamline car, first model of which was developed in 1922.

Sangiusto. New Type of Automobile (Nuovo tipo di automobile). Industria, vol. 38, no. 8, Apr. 30, 1924, pp. 224-225, 2 figs. Details of 8-hp. car made by Sangiusto Company, Milan; car has box-birder type of chassis, with engine mounted at rear.

Screens. Rear Screen Equipment. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 621-623, 10 figs. Brief review of latest developments in fittings for protection of rear seat occupants.

Service Methods. A Modern Motor-Car Service-System, H. N. Davock. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 562-566, 5 figs. Problems encountered in dealing with service at factory and in field; evolution and inauguration of standard specifications and prices; how proper use of them has been successfully met; education of dealers in use of standard specifications and prices.

Shafts, Stiffness of. Calculating the Stiffness of Shafts, F. A. W. Livermore. Automobile Engr., vol. 14, no. 191, July 1924, p. 197. Gives simplified formula.

Sheet Steel for. See STEEL, Automobile.

Shimmying, Balloon-Tire. Cause and Effects of Shimmying. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 501-510, 4 figs. Contains following two papers; Adapting Motor Cars to Low-Pressure Tires, J. E. Hale; Correction of Balloon-Tire Shimmying, R. B. Day; and discussion.

Shipping. Ppreparing and Loading Automobiles for Shipment, B. R. Moore. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 511-515, 9 figs. Procedure at plant; double and half decking; "side" and combination loading; inspection methods; oversea shipment; loss and damage.

Shock Absorbers. Making Shock Absorber Parts for Light Cars. Can. Machy., vol. 32, no. 16, Oct. 16, 1924, pp. 19-20 and 42, 4 figs. Metal working operations at Hamilton, Ont., plant of Hassler Co. Spiral telescoping spring used is made from chrome vanadium steel 7/16-in. hot rod, wire drawn to a diameter of 25/64 in.

Shock-Absorbing Devices. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 587-589, 19 figs. Consideration of some of the various types of mechanism used to damp vibration of springs.

The D. N. Shock Absorber. Auto-Motor Jl., vol. 29, no. 27, July 3, 1924, pp. 562-563, 2 figs. Principle underlying D. N. device is that of allowing compression or extension of spring to be always free and unrestrained while rebound only and in each direction is checked or damped.

Singer. The Singer Six. Auto-Motor Jl., vol. 29, no. 16, Apr. 17, 1924, pp. 327-331, 14 figs. 15-hp. 6-cylindered model of British firm; cylinders bored to 65 mm. diam., and crank throw of 100 mm.

Specifications and Design. Trends in Passenger Car Design. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 393-418, 9 figs. Statistics on prices; progress of design shown by trend studies; American passenger-car chassis specifications; engine specifications; taxicab, steam-passenger-car and gasoline-railcar specifications; British and Continental European specifications.

Speed and Movement Recorder. The Controlograph. Auto-Motor Jl., vol. 29, no. 52, Dec. 25, 1924, p. 1132, 3 figs. Device for recording movements and speed of motor vehicle; record is produced by three means, clockwork, transmission of car, and vibration arising from passage of vehicle over road.

Speedometers. See SPEEDOMETERS.

Sport. See Bignan Sport; Mölkamp; Sunbeam.

Springs. See SPRINGS, Automobile; Leaf.

Stability. Conditions of Stability of an Automobile (Ueber die Stabilitätsbedingungen des Motorwagens), P. Jaray. Motorwagen, vol. 27, nos. 17 and 18, June 20 and 30, 1924, pp. 291-294 and 305-308, 3 figs. Properties of stability and factors determining it, including equations of motion; disturbing conditions during run, aerodynamic effects, acceleration; braking; etc.

Standard. The 14 H.P. Standard. Auto-Motor Jl., vol. 29, no. 41, Oct. 9, 1924, pp. 861-863, 9 figs. Particulars of latest model of a Coventry (Eng.) firm. Engine has four cylinders arranged in monobloc construction, bore 75 mm. and piston travel 110 mm.

Standards. Standards Committee Divisions Reports. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 37-56, 13 figs. Reports of Divisions on agricultural-power equipment, axle and wheels, frames, lubricants, non-ferrous metals, motorboats, passenger-car bodies, parts and fittings, storage batteries, screw threads, tires and rims.

Star. New 14-30 hp. Star. Autocar, vol. 53, no. 1510, Sept. 26, 1924, pp. 532-533, 6 figs. Medium-powered 4-cylinder car of modern design available in extended range. Four-wheel brakes standardized.

Starting and Lighting Equipment. Electric Starting and Lighting Equipment, A. C. Burgoine. Automobile Engr., vol. 14, no. 186, Feb. 1924, pp. 54-61, 19 figs. What a lighting set consists of; electric starter; standardization of equipment; dynamo drives and regulation; starter mounting and drives; dynamo-coil ignition; future developments.

Electrical Manufacturers and Service Men Adjust Differences, C. P. Shattuck. Automotive Industries, vol. 51, no. 13, Sept. 25, 1924, pp. 563-566, 4 figs. Report of standards committee of Automotive Elec. Assn., on classification of standard lighting generators, starting motor, and recommended practice in wiring.

Steel for. See STEEL, Automobile.

Steering Gears. New Lavine Steering Gear Moves Wheels Faster Near End of Range of Motion, B. M. Ikert. Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 440-441, 2 figs. Features of new series Lavine steering gears recently brought out by Lavine Gear Co., Milwaukee. Provision made for taking up both circumferential and axial lost motion. Variable reduction ratio takes care of new conditions arising from adoption of low-pressure tires.

Steering-Gear Analyses, F. F. Chandler. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, pp. 585-590 and 648, 8 figs. Describes set of automatic recording instruments being developed by author assisted by H. A. Huebotter, that will record not only physical effort needed to steer automobile, but simultaneously, forces and shocks imposed upon entire steering system, so that such records will constitute basis for steering-system design; study of helix characteristics; possibilities of producing variable-ratio helix that gives great mechanical advantage in extreme positions.

The Graphic Determination of the Coefficients of Transmission of Rocking-Lever Steering Gear (Beiträge zur graphischen Ermittlung der Bewegungsgrössen von Schwinghebelsteuerungen), Rob. Kluger. Motorwagen, vol. 27, no. 34, Dec. 10, 1924, pp. 674-678, 7 figs. Calculations based on two articles by Prof. Doerfel published in Zeit. des Vereines deutscher Ingenieure, vol. 67, no. 20, and Maschinenbau, vol. 3, no. 8.

Storage-Battery. Verified Tests of Storage-Battery Vehicles (Les essais controlés de véhicules électriques à accumulateurs, octobre 1924), Ch. Dantin. Génie Civil, vol. 85, no. 26, Dec. 27, 1924, pp. 589-596, 22 figs. Rules and results of tests by Union des Syndicats de l'Electricité; details of competing vehicles, storage batteries, governing apparatus, power consumption, etc.

Streamline. A Streamlining Development. Autocar, vol. 52, no. 1486, Apr. 11, 1924, pp. 662-664, 7 figs. Unconventional body designed by a Danish engineer, P. Forostovsky, Jr., and fitted to a 2-liter Bignan chassis; head resistance diminished, resulting in reduced power and gasoline consumption, but with no loss of comfort.

The Future High-Speed Automobile (Der künftige Schnellkraftwagen), A. Persu. Allgemeine Automobile-Zeitung, vol. 25, no. 18, May 3, 1924, pp. 25-26, 2 figs. Author states future high-speed car will be streamline type, in which all four wheels are built within streamline form, the two rear driving wheels will be less distance apart than front wheels, passenger seats will be in front and power plant in rear.

See also Rumpler.

Studebaker. New Features Involved in Studebaker Brake Linkage and Transmission. Automotive Industries, vol. 51, no. 13, Sept. 25, 1924, pp. 570-571, 3 figs. Details of four-wheel brake system which operates through a servo mechanism, and which is optional on all models. Transmission on Standard Six is very similar to that on other models.

New Studebaker Models Have Pressure Lubrication and More Power, D. Blanchard. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 512-518, 10 figs. Balloon tires, transmissions integral with engines and automatic spark timing are regular features, while four-wheel brakes with servo mechanism come as an extra. Bodies and radiators changed.

The Studebaker Light Six. Auto-Motor Jl., vol. 29, no. 35, Aug. 28, 1924, pp. 725-727, 11 figs. Describes latest models of Canadian-built car; wheelbase is 9 ft. 4 in.; engine and clutch are one unit, and gear box separately mounted with universally jointed shaft transmitting power to semi-floating live axle; engine has its six cylinders cast en bloc with detachable head; bore, 79 mm.; stroke, 114 mm.

Three Studebaker Sixes. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 641-643, 10 figs. Standard six rated at 27.2 hp., special six rated at 29.3 hp., and big six 35.9 hp.; hydraulic four-wheel brakes and low-pressure tires.

Sunbeam. Three-Litre Super-Sports Sunbeam. Autocar, vol. 52, no. 1489, May 2, 1924, pp. 782-784, 7 figs. Standardization of a new edition of 6-cylinder 16/50-hp. car for high speed touring; improvements to 20/60-hp. model.

See also Grand Prix.

Suspension. A Promising Spring Suspension System. Motor Transport (Lond.), vol. 38, no. 1006, June 9, 1924, pp. 703-704, 2 figs. Details of Farnsworth design. Improved riding qualities obtained by eliminating unsprung weight and providing independent springing for each wheel.

Road Spring Lubricant Bath. Autocar, vol. 53, no. 1510, Sept. 26, 1924, p. 551, 2 figs. Describes a new form of quickly removable spring cover called Metalligator, which makes instant inspection possible. Made of steel, aluminum, or nickel silver

The Gattie Suspension System. Automobile Engr., vol. 14, no. 196, Nov. 1924, pp. 362-363, 1 fig. Modified design based on road experiences; has both vertical and lateral flexibility.

Talbot. The 16-50 H.P. Six-Cylindered Talbot. Auto-Motor Jl., vol. 29, no. 30, July 24, 1924, pp. 619-621, 10 figs. Also Autocar, vol. 53, no. 1498, July 4, 1924, pp. 24-25, 5 figs. New monobloc design with detachable head and overhead valves; cylinders have bore of 70 mm. and piston stroke of 110 mm.

Tatra. See German.

Templar. New Templar Has Four-Wheel Brakes and 6-Cylinder Engine. Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 15-16, 1 fig. Reorganized company brings out model with little resemblance to old line; power plant is L-head type with 3½-in. bore and 5-in. stroke; 7 bearing crankshaft used; braking system built by U. S. Axle Co.

Tires. See TIRES, RUBBER.

Torque, Caring for. Taking the Torque. Auto-Motor Jl., vol. 29, no. 3, Jan. 17, 1923, pp. 55-57, 10 figs. Some examples of design in connection with taking of torque reaction in motor power transmission.

Trailers. A Dumping Trailer for Use With a Light Car, G. A. Luers. Am. Blacksmith & Motor Shop, vol. 23, no. 3, Mar. 1924, pp. 19-20, 4 figs. Describes trailer for use with light passenger automobile; capacity 1 cu. yd., which in gravel is about 1800 lb.

Transmissions. A Mechanical Continuous-Torque Variable-Speed Transmission, E. B. Sturges. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 86-92 and 104, 16 figs.

and (discussion) no. 4, Oct. 1924, pp. 343-345. Describes variable-speed power transmission which consists primarily of a power-transmitting body called the mutor, inclosed in and concentric with a metallic sphere. Its characteristics and advantages. General discussion of kinematics of subject, and detailed descriptions of single-sphere heavy-duty-type transmission and medium-duty type.

A New Type of Constant-Mesh Transmission, W. A. McCarrell. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 101-104, 2 figs. Resembles conventional three-step-and-reverse type, but differs from it in that slip collars rather than gears on upper shaft are moved to engage the various reduction sets. Details of construction and characteristics. Views shown of both helical and spur-gear types.

A Study of an Unusual Transmission, J. Younger. Am. Mach., vol. 61, nos. 9 and 10, Aug. 28 and Sept. 4, 1924, pp. 337-340 and 375-377, 17 figs. Description of method of functioning of Chandler transmission and some of the manufacturing operations on it.

Continuously Variable Transmission Developed in America. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, pp. 674-675, 2 figs. Weiss invention has driving member in form of hemispherical shell within which is body known as mutor; latter unit is of ring, wheel, or disk form and rotates about its own axis on anti-friction bearing; stops car on hill without use of brakes.

McCarrell "Constantmesh" Transmission, W. A. McCarrell. Am. Mach., vol. 61, no. 21, Nov. 20, 1924, pp. 809-811, 2 figs. Transmission by which changes of speed can be effected without appreciable noise or shock; either spur or helical gears can be used.

Modern Transmission Design, P. M. Heldt. Automotive Industries, vol. 61, no. 1, July 3, 1924, pp. 2-21, 31 figs. Sliding-pinion change gear has many good points but involves some disadvantages; study of theory and practice reveals possibilities of other types. Automatic and continuously variable transmissions. Transmission development. Inertiamass type of transmission. Trend of recent designs toward gear box weight reduction.

New Transmission Allows for Changing Gears Without Interrupting Torque. Automotive Industries, vol. 51, no. 3, July 17, 1924, pp. 144-145, 3 figs. New Clutch-transmission combination developed by Automatic Clutch & Transmission Co. Direct and hydraulic drive combined in such a way that latter works automatically at low speeds in starting and under heavy load.

The Chandler Transmission. Auto-Motor Jl., vol. 29, no. 2, Jan. 10, 1924, p. 35, 4 figs. Describes new type of gear which will be incorporated in 1924 models of Chandler car; wheels always in mesh.

Variable Transmission. Autocar, vol. 52, no. 1485, Apr. 4, 1924, p. 602, 3 figs. Describes device now under test to simplify gear box and back axle of car.

Variable Transmission, G. Constantinesco. Automobile Engr., vol. 14, nos. 185, 186, and 187, Jan., Feb. and Mar. 1924, pp. 10-14, 39-44 and 76-81, 43 figs. Jan.: Discusses principle of Constantinesco converter; application to traction purposes. Feb.: Analysis of converter from automobile point of view. Mar.: Analysis of behavior of converter with regard to remaining conditions.

Tropical. Design of Cars for Use in the Tropics Needs to be Changed, F. A. S. Acres. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 286-290. Describes types of cars best suited for British colonies.

Two-Wheeled. A Revolutionary Proposal, P. Schilovsky. Autocar, vol. 52, no. 1490, May 9, 1924, pp. 833-835, 3 figs. Advantages and possibilities of gyroscopic two-wheeled car, and its main principles of design and operation. Details of an experimental model.

Unic. The 12-23 H.P. Unic. Auto-Motor Jl., vol. 29, no. 38, Sept. 18, 1924, pp. 787-789, 9 figs. Particulars of touring-car chassis of an old-established French firm. Four cylinders, 70-mm. bore and 120-mm. piston stroke.

Upholstery Leather. See LEATHER, Automobile Upholstery.

Varnishes. See VARNISHES, Automobile.

Varnishing Troubles. See WOOD, Varnish-Drying Troubles.

Vauxhall. Care and Maintenance of the 14 Hp. Vauxhall. Autocar, vol. 53, nos. 1505 and 1506, Aug. 22 and 29, 1924, pp. 323-325 and 383-385, 10 figs. Advice on upkeep of four-cylinder car.

Velie. Five New Body Designs Are Featured in Velie's Line for 1925, D. Blanchard. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 409-410, 3 figs. Four-wheel brakes and balloon tires are now offered as standard equipment, radiator has been changed to improve appearance and multi-leaf chassis springs have been adopted to lessen rebound.

Wembley Exposition. See BRITISH Empire Exposition.

Wheel Manufacture. Oakland Concern Manufactures Disk Wheels. West. Machy. Wld., vol. 15, no. 3, Mar. 1924, pp. 95-96 and 108, 7 figs. Notes on manufacture of wheels produced by Westgate Metal Products Corpn. of Oakland, Cal., engaged in quantity production of disk wheels for light and heavy passenger cars, trucks and tractors.

Wheel Slip, Testing. Testing Wheel Slip. Autocar, vol. 52, no. 1474, Jan. 18, 1924, pp. 96-98, 3 figs. Results of trials with special instrument evolved to register action of differential.

Willys-Knight. The Willys-Knight Car. Auto-Motor Jl., vol. 29, no. 14, Apr. 3, 1924, pp. 285-288, 12 figs. Sleeve-valve 4-cylindered engine with cylinders of 3⅝-in. bore and 4½-in. piston stroke, developing, on the brake, 40 hp.

Windshield Design. Many Faults Are Found in Present Day Windshield Design, K. Feilcke. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 202-205, 17 figs. Convenient and quickly operated adjusting device is one most important need today. Location and angular position of panels must be correct to insure clear vision.

Windsor. The 10-15 H.P. Windsor Car. Auto-Motor Jl., vol. 29, no. 15, Apr. 10, 1924, pp. 305-309, 11 figs. British-built car designed with a view to comfort and mechanical efficiency; 4-cylinder engine with 65-mm. bore and 102-mm. piston stroke.

Wood for Bodies. Wood for Automobile Bodies, A. T. Upson and L. N. Erickson. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 165-170, 3 figs. Results of survey made by U. S. Forest Products Laboratory of species, kinds, grades, sizes and amounts used by automotive industry; woods used for running boards and top bows; grades of lumber used; present status of body-part standardization; quality of stock required; utilization of lumber in body plants; suitability of woods for bodies.

AUTOMOTIVE FUELS. See AUTOMOBILE FUELS.

AVIATION

[See also FLIGHT.]

Aerial Navigation. Accuracy in Aerial Navigation (Ueber die Genauigkeit der Luftnavigierung),

J. Van der Hoop. Luftfahrt, vol. 28, no. 7, July 5, 1924, pp. 117-120, 8 figs. Discusses advantages of flying below and above clouds, navigation by compass, by astronomic data and by radio, and advocates radio navigation combined with flying above clouds. Translated from Het Vliegveld.

Astronomical Methods in Aerial Navigation, K. Hilding Beij. U. S. Nat. Advisory Comm. for Aeronautics—Report no. 198, 1924, 52 pp., 30 figs. Outlines various methods of determining positions and their application and value; résumé of theory of astronomical method; describes observation instruments; rapid method of finding position from altitudes of two stars; maps and map cases. Bibliography.

See also Long-Distance Navigation.

Aerial Transportation. Air Transport and Its Uses, G. H. Thomas. Inst. of Transport—Jl., vol. 5, no. 6, Apr. 1924, pp. 245-256 and (discussion) 256-261, 3 figs. Shows that this form of transport is of vital interest to British trade and commerce.

Some Technical Aspects of Air Transport, I. A. Edwards. Inst. of Transport—Jl., vol. 5, no. 2, Dec. 1923, pp. 82-87. Discusses performance, reliability, and economy of operation, the main factors which go to make a commercial machine which can be run to show profit.

Air-Mail Service. The Air Mail and the Banker. Aviation, vol. 17, no. 7, Aug. 18, 1924, pp. 886-887, 1 fig. Details of airplane arrangements for transcontinental mail service; lighting system of powerful beacons.

British Mission to Japanese Navy. The British Aviation Mission to the Imperial Japanese Navy. Roy. Aeronautical Soc.—Jl., vol. 28, no. 165, Sept. 1924, pp. 553-582 and (discussion) 582-584, 14 figs. Influences leading to formation of mission; air organization in Japanese Admiralty; organization of mission; preparations in Japan; flying section of mission; technical section; aircraft; engines; aircraft carriers; timbers; propellers; dope; etc. Aeronautical research in Japan; aircraft and airplane-engine manufacturers in Japan.

Charting Airways, United States. Charting America's Airways. Aviation, vol. 16, no. 14, Apr. 7, 1924, pp. 364-366, 3 figs. Work of Airways Section of Army Air Service in systematically charting various sections of proposed national airway system of United States; thousands of miles of flying routes and more than 100 airports surveyed.

Civil. Civil Aviation, W. S. Brancker. Eng. Jl., vol. 7, no. 5, May 1924, pp. 223-227 and (discussion) 227-230, 6 figs. Present status of aerial transportation, plans for near future and possible developments.

Civil, Great Britain. Progress of Civil Aviation in Great Britain. Aviation, vol. 17, no. 22, Dec. 1, 1924, pp. 1338-1339. British civil transport aircraft in 1923-24 flew 1,000,000 mi. carrying 15,000 passengers and 427 tons of goods.

Commercial. Adequate Landing-Fields Will Develop a Commercial-Aviation Industry, A. A. G. Fokker. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 504-506 and 510. Shows that great progress in commercial aviation has been made in America during last three years, especially with reference to Air-Mail Service. Gives instances where additional airplane routes are feasible even now in United States. European aviation development. Urges necessity for attaining ability for aircraft to fly at night and specifies advantages secured in Europe now by combined over-night railroad-and-airplane service. "Wild" flying; classification of aerial transport. Provision of landing fields throughout United States urged as a present necessity. Future aviation probabilities and development of aerial traffic.

Commercial Aviation in 1923, E. P. Warner. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 457-462. Technical developments lacking; obstacles to passenger traffic; viewpoint of public safety vs. stunting; European business method; advantages and disadvantages of subsidy; value of large-scale operation.

The Commercial Possibilities of the Airplane, A. Black and D. R. Black. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 133-137, 6 figs. Estimated capital required for financing air lines and cost of their operation; curves showing rapid drop in operating costs with increased operations; possible further increases; figures are given to show that night air service could practically eliminate competing night-letter telegraph services for distances up to about 1200 mi.; it is concluded that large-scale operations will bring airplane into direct competition with extra-fare train.

The Practical Difficulties of Commercial Flying, F. T. Courtney. Roy. Aeronautical Soc.—Jl., vol. 28, no. 157, Jan. 1924, pp. 35-41. Considers conditions under which modern commercial airplane flies; difficulties of flying an airplane through bad weather; concludes that commercial flying, before it can be a success, must operate in any weather in which other forms of transport can operate.

What Is the World Flight Going to Mean to Commercial Aviation?, A. Klemin. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 397-400, 1 fig. Fire hazard has largely been eliminated, heavy loads have been carried, variegated climates with abrupt changes can be negotiated, and speed and endurance are proved.

Commercial Aircraft Association. The Commercial Aircraft Association Plan. Aviation, vol. 16, no. 26, June 30, 1924, pp. 699-700. Code of regulations drafted for permanent organization of Commercial Aircraft Assn. of Akron, Ohio.

Developments, Canada. Further Notes on Aviation in Canada, C. W. Stedman. Roy. Aeronautical Soc.—Jl., vol. 28, no. 165, Sept. 1924, pp. 585-594, 8 figs. New fields of work; progress of research.

Developments, 1923. See AERONAUTICS, Developments.

Engineering Problems. Flying from an Engineering Standpoint, G. Loening. Aviation, vol. 17, no. 18, Nov. 3, 1924, pp. 1224-1227. Discusses safety of flying; figuring out an airplane; suppression of engine noise; etc.

High-Speed, Dangers of. Dangers of High Speed and Acrobatic Flying, L. H. Bauer. Aviation, vol. 16, no. 7, Feb. 18, 1924, pp. 174-176, 2 figs. Problems involved; what may happen at high speeds; sensitiveness to motion; sickness from ears.

Instruments Used in. See AERONAUTICAL INSTRUMENTS.

Legislation. National and International Air Legislation, P. Crichton. Aviation, vol. 16, nos. 16 and 17, Apr. 21 and 28, 1924, pp. 418-420 and 448-451. Points out legal questions involved in connection with aeronautics; summarizes progress made by common law in solving questions; and analyzes international convention relating to air navigation and also statutes heretofore passed by some of individual states in United States, as well as Winslow bill now pending before Congress.

Opinions on National Air Legislation. Aviation, vol. 17, no. 24, Dec. 15, 1924, pp. 1400-1401. Opinions of people prominent in aeronautical world.

Long-Distance Navigation. Recent Developments in the Navigation of the Air, H. B. Good-

win. U. S. Nav. Inst.—Proc., vol. 50, no. 251, Jan. 1924, pp. 68-76. Abstract of memoir of voyage by airplane accomplished by two Portuguese naval officers in spring of 1922; consideration of effect of "drift"; astronomical navigation; alternative method for zenith distance in Tropics.

Naval. Naval Aviation Today, F. W. Wead. U. S. Naval Inst.—Proc., vol. 50, no. 254, Apr. 1924, pp. 561-574. Use of individual types of lighter-than-air machines, with certain observations as to material and general doctrine.

Points to be Observed in the Advancement of Naval Aviation, T. T. Craven. U. S. Nav. Inst.—Proc., vol. 50, no. 258, Aug. 1924, pp. 1233-1248. Use of aviation to and by Navy; housing of personel; operations; anti-aircraft defense; improvement in instruments, weapons, and accessories; fire hazards, etc.

The United States Naval Air Service, 1922-23, Wm. A. Moffett. Aviation, vol. 16, no. 2, Jan. 14, 1924, pp. 34-37. Numerous new types of aircraft and engines developed for naval requirements. (Abstract.) Report of activities of U. S. Nav. Air Service during fiscal year ended June 30, 1923.

Net-Cost Calculation. The Net Cost of Aerial Transportation (Le prix de revient des transports aériens), V. Carle. Aéronautique, vol. 6, no. 56, Jan. 1924, pp. 5-12, 8 figs. Method of calculating cost and studying influence of elements of cost, such as depreciation, volume of traffic, speed, etc.

Night-Flying Equipment. Night-Flying Equipment and Operation, H. R. Harris and D. L. Bruner. Mech. Eng., vol. 46, no. 5, May 1924, pp. 274-278, 9 figs. Nonmathematical discussion of portion of work carried on by Engineering Division of Air Service; much of equipment developed has been adopted by Air Mail Service. (Abridged.)

Progress. Some Aspects of Aviation. Flight, vol. 16, no. 6, Feb. 7, 1924, pp. 78-79. General discussion on interesting aviation matters, including development of light airplanes in England and progress of aviation in United States.

Sea Power, Relation to. Relation of Air Power to Sea Power, D. W. Knox. Aviation, vol. 16, no. 9, Mar. 3, 1924, pp. 225-227. Consideration of question as to whether aviation should be taken from cognizance and control of services and be formed into independent air force; air power vs. sea power; effectiveness of aircraft and operating range; accuracy of aerial bombing.

Terminals. The Future of the Air Terminal, D. Huntington. Aviation, vol. 16, no. 16, Apr. 21, 1924, pp. 423-425, 3 figs. Importance of air terminals; influence of carriers on terminal design; evolution of field-type terminal; location with respect to community; ideal location of airport; municipal terminal idea; detail problems.

Wind, Effect in. The Effects of Wind in Aviation (Les effects du vent, en aviation), A. Lainé. Génie Civil, vol. 84, no. 5, Feb. 2, 1924, pp. 112-113, 2 figs. Effects of wind on taking off and landing; effects of wind in flight; fog and storms; drag.

AVIATORS

Breathing Apparatus for. See BREATHING APPARATUS, Oxygen, for Aviators.

AXLES

Automobile. Induced Stresses in Axles. India & East. Motors, vol. 16, no. 9, Sept. 1924, pp. 429-430, 2 figs. Determination of stress intensity; fixed axle bending; combined twisting and bending.

Automobile, Machining. See AUTOMOBILES, Axles.

Fractures. Axle Fractures and Their Causes (Ueber Achsbrüche und die Erforschung ihrer Ursachen), M. Bermann. Organ für die Fortschritte des Eisenbahnwesens), vol. 78, no. 10, Oct. 15, 1923, pp. 198-202, 1 fig. Deals with fractures in case of uniform and non-uniform steel; fractures caused by steel of unequal chemical composition.

Motor-Truck, Manufacture. See MOTOR TRUCKS, Axles, Manufacture of.

AZIMUTH

Determination. The Measurement of True Azimuths, E. M. Douglas. Military Engr., vol. 16, no. 87, May-June 1924, pp. 197-199, 3 figs. Discusses variation and uncertainty of compass bearings; advantages of recording true bearings; Polaris and Solar observations for azimuth and instruments used.

B

BAGASSE

Boiler Furnaces for. See BOILER FURNACES, Dutch Ovens for Bagasse.

Drying with Flue Gases. Calculation of the Economy of Fuel Realized on Drying Bagasse with Flue Gases, E. Mooyaart. Int. Sugar Jl., vol. 26, no. 305, May 1924, pp. 252-254. According to given calculations, if bagasse having 47 per cent of water be dried by means of flue gases to material having 15 per cent of water, an economy of 15 per cent of fuel can be realized.

Weight Obtained Per Cent Cane. Calculation of the Bagasse Obtained Per Cent Cane, A. C. Snyers. La. Planter & Sugar Mfr., vol. 72, no. 2, Jan. 12, 1924, pp. 31-33. Method of calculating weight of bagasse obtained per cent cane, when grinding with saturation, intended as indirect way of attaining per cent sucrose in can .

BAKELITE

Electrical Properties. The Electrical Properties of Bakelite (Die elektrischen Eigenschaften des Bakelits), O. Mannel. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 497-510, 13 figs. Investigation of electrical properties of bakelite at different temperatures.

BAKERIES

Materials Handling in. See MATERIALS HANDLING, Cake Bakery.

Refrigeration and Air Conditioning Refrigeration and Air Conditioning in the Bakery, C. A. Glabau. Refrig. Eng., vol. 2, no. 1, July 1924, pp. 18-21, 7 figs. Discusses place of refrigeration and air conditioning in modern bakery organization and operation.

BALANCING

Crankshafts. See CRANKSHAFTS, Balancing.

Engines. See AUTOMOBILE ENGINES, Balancing.

Large Rotating Apparatus. Balancing Large Rotating Apparatus, I. C. Fletcher. Elec. Jl., vol. 21, no. 1, Jan. 1924, pp. 5-10, 5 figs. Describes modern design of balancing machine and method of balancing.

Rotating Masses. See INTERNAL-COMBUSTION ENGINES, Balancing of Masses.

Turbine Rotors. Balancing L. P. Turbine Rotor on Board U. S. S. Detroit, H. C. Dinger. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 4, Nov. 1924, pp. 648-654, 2 figs. Gives example showing possibilities to which balancing machines of Akimoff type may be put.

See also MARINE STEAM TURBINES, Balancing Rotors.

BALANCING MACHINES

Dynamic. A New Balancing Apparatus (Ein neuer Auswuchtapparat), F. Punga. Elektrotechnische Zeit., vol. 45, no. 27, July 3, 1924, pp. 713-714, 5 figs. Describes new apparatus for balancing rapidly rotating bodies in which weight wanting is determined without stopping.

Balancing of Rotating Masses (Das Auswuchten Umlaufender Massen), M. Krause. Praktische Maschinen-Konstrukteur, vol. 57, no. 17, May 13, 1924, pp. 229-232, 20 figs. Shows that static balancing of machine parts is by no means adequate; describes machine which enables correct dynamic balancing.

Lawaczeck-Heymann. Balancing Machines (Gross-Auswuchtmaschinen), E. Lehr. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1025-1028, 6 figs. Describes operation of machine built on basis of many years' shop experience and giving entire satisfaction.

Odén-Keen. An Automatic and Continuous Recording Balance (The Odén-Keen Balance.), J. R. H. Coutts, E. M. Crowther, B. A. Keen, and S. Odén. Roy. Soc.—Proc., vol. 106, no. A735, July 1, 1924, pp. 33-51, 11 figs. Describes improved form of automatic self-recording balance in which control is effected electromagnetically with no loss of sensitivity up to maximum load balance is designed to carry.

BALL BEARINGS. See BEARINGS, BALL.

BALLOONS

Atmospheric Electricity and. The Free Balloon and Atmospheric Electricity (Le ballon libre et l'électricité atmospherique), A. Baldit. Nature, nos. 2635, 2636, and 2637, Oct. 4, 11, and 18, 1924, pp. 209-213, 225-228, and 241-246, 14 figs. Discusses decreasing electric field with altitude, cloud electrification, conducting and non-conducting spheres in a uniform electric field, fogs and clouds in electric field, balloon in a storm, etc.

Manila Rope for. Development of Manila Balloon Rope. U. S. Air Service Information Circular, vol. 1, no. 41 (Addendum), Mar. 1, 1924, 2 pp. Test results show effect of continuous weathering on three types of rope, namely, Italian, standard manila bolt, and special loose-lay manila.

BALLS

Hardness. See HARDNESS, Steel Balls, Magnetic Test.

Hollow Seamless, Manufacture. Hollow Seamless Balls, F. D. Jones. Machy (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 255-260, 10 figs. How seamless balls are made from single piece of metal; rolling operation, which follows press work, is important step in process, patented by Hollow Ball Co., Baltimore, and developed to insure accuracy of form and balance, combined with lightness and strength. See also description in Iron Age, vol. 114, no. 24, Dec. 11, 1924, pp. 1544-1545, 5 figs.; and description, by F. Dantzig, in Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 877-880, 6 figs.

Steel, Manufacture. See HARDNESS, Brinell Ball Testing Method; JOINTS, Balls and Sockets for, Machinery.

BALSA WOOD

Use of. See AIRCRAFT CONSTRUCTION MATERIALS, Plywood.

BANKS

Vaults, Heating. See HEATING AND VENTILATION, Bank Vaults.

BARGES

Channel-Steel Construction. Build Barges of Steel Channels. Iron Trade Rev., vol. 74, no. 11, Mar. 13, 1924, pp. 736-737, 4 figs. New method of construction employing ordinary channels bolted together; gaskets are applied between flanges to make hull watertight; great strength is claimed.

Derrick. The Government Derrick Boat "Monallo." Pit & Quarry, vol. 8, no. 11, Aug. 1924, pp. 93-96, 3 figs. U. S. Gov. operates 50-ton derrick boat on Monongahela and Ohio Rivers in construction work handling heavy steel in connection with locks and dams, and handling 5 cu. yd. bucket dredging and in filling coffer dams full-circle revolving type designed for dredging, lifting, and pile driving.

BARK

Fuel. See FUELS, Pulpwood Bark.

BAROMETERS

Standard. A Standard Barometer of New Design, T. H. Laby. Jl. Sci. Instruments, vol. 1, no. 11, Aug. 1924, pp. 342-345, 1 fig. Describes barometer in which distance between mercury surfaces is measured by means of equivalent of 30-in. steel screw micrometer; design eliminates cathetometer commonly used with such instruments, and difficulties and errors of reading mercury surfaces enclosed in glass tubes.

BARRAGES. See DAMS.

BARRELS. See CASKS.

BARYTES

Canada. Barytes Situation in Canada (1923). Can. Min. Jl., vol. 45, no. 46, Nov. 14, 1924, pp. 1119-1120. Data on sources, mining, uses, production, imports and exports, and Canadian and United States tariff.

Canada's Barytes Resources, H. S. Spence. Can. Min. Jl., vol. 45, no. 46, Nov. 14, 1924, pp. 1116-1118, 2 figs. Distribution of deposits, review of mining operations, prospects for establishing a barytes mining industry, and conditions of success.

BATTERIES

Primary. An Efficient Primary Cell. Engineer, vol. 137, no. 3571, June 6, 1924, pp. 636-637, 6 figs. New cell, which is invention of Belgian engineer, L. Darimont, is of two-fluid type.

Modern Primary Batteries, H. Ward and L. D. Goldsmith. World Power (formerly Beama), vol. 1, no. 1, Jan. 1924, pp. 35-41. Account of functioning and construction of present-day batteries.

The Nyberg Primary Cell (Das Nyberg-Element), H. D. Nyberg. Zeit. für Elektrochemie, vol. 30, no. 11, Nov. 1924, pp. 549-552, 1 fig. Cell consists of heavily amalgamated zinc cathode and anode of porous carbon impregnated with paraffin wax, immersed in 10-per cent solution of caustic soda; to protect latter, container is fitted with air-tight cover with provision for intake of air; initial electromotive force is 1.18 volts; dry cell may be constructed with aid of cellulosic absorbents.

Storage. See STORAGE BATTERIES.

Weston Standard Cells. Portable Unsaturated Weston Cells, W. C. Vosburgh and M. Eppley. Optical Soc. America & Rev. Sci. Instruments—Jl., vol. 9, no. 1, July 1924, pp. 65-74, 2 figs. Discusses construction, hysterisis, effect of acidity of electrolyte and of grain size of mercury sulphate, temperature coefficients, etc.

The Effect of Various Preparations of Mercurous Sulfate on the Electromotive Force and Hysterisis of Weston Standard Cells, W. C. Vosburgh and Marion Eppley. Am. Chem. Soc.—Jl., vol. 46, no. 1, Jan. 1924, pp. 104-111. Weston standard cells made with finely divided mercurous sulphate had electromotive forces 40 to 100 mv. higher than cells made with coarser mercurous sulphate; addition of acid to cells lowered hysterisis considerably.

BATTLESHIPS. See WARSHIPS.

BAUXITE

British Columbia. Discovery of Bauxite in B. C. R. Dunn. Can. Min. Jl., vol. 44, no. 48, Nov. 30, 1923, pp. 947-948. Deposits located near Stony and Demaniel Creeks, Sooke District of Vancouver Island, reported on by government mining engineer.

German. Bauxite Deposits, (Aluminium-Lagerstätten), H. Harrassowitz. Metal u. Erz., vol. 21, no. 14, July 2, 1924, pp. 325-328. Details of principal deposits, especially bauxites, kaolin, German resources, etc.

Mississippi. The Bauxite Deposits of Mississippi, P. F. Morse. Miss. State Geol. Surv., Bul. No. 19, Dec. 1923, 208 pp., 13 figs. partly on supp. plates. Bauxite deposits of Europe, South America, Asia, Africa, and Australia; bauxite deposits of United States exclusive of Mississippi; study of bauxite deposits of Mississippi, discussing physiography, stratigraphy, geographic and geologic distribution; technology of bauxite; methods of chemical analysis.

Occurrence and Supply. Occurrence and Supply of Bauxite, E. C. Eckel. Cement, Mill & Quarry, vol. 24, no. 12, June 20, 1924, pp. 23-25. A hydrated oxide of aluminum. Composition and impurities of bauxite; use as a cement material.

Petroleum Refining Agent, Use as. Bauxite as a Refining Agent for Petroleum Distillation, A. E. Dunstan, F. B. Those and F. G. P. Remfry. Chem. & Industry, vol. 43, no. 24, June 13, 1924, pp. 179T-188T, 2 figs. Experimental verification of Freundlich law as applied to adsorption of sulphur and color compounds from kerosene by bauxite; bauxite as polymerizing agent; influence of liquids other than kerosene on ergometer reading; filters and filtration; furnacing. See also following article, by A. M. Brien, on Technical Use of Bauxite in Connection with Petroleum Refining, pp. 188T-189T.

See also OIL, Refining.

Prospecting, Dutch Guiana. Prospecting for Bauxite in Dutch Guiana, L. T. Emory. Eng. & Min. Jl.-Press, vol. 118, no. 2, July 12, 1924, pp. 45-48, 7 figs. Describes peculiar features of the work. Bauxite is hydrated oxide of aluminum, containing certain impurities, iron, silica, and titanium in varying amounts.

Purification. The Purification of Bauxite, W. A. C. Newman. Chem. Age (Lond.), vol. 10, no. 260, June 7, 1924, pp. 42-43. Bayre, Peniakoff, Serpek, and Deville-Pechiney or dry soda processes.

BEACHES

Coney Island, N. Y., Improvements. Coney Island Public Beach and Boardwalk Improvement. Mun. Engrs. Jl., vol. 9, 4th Quarterly Issue, 1923, pp. 136.1-136.24 and (discussion) 136.25-136.32, 8 figs. Description of improvement which consisted of construction of an elevated highway, or boardwalk, making of a public bathing beach exterior to walk, construction of a bulkhead several thousand feet in length along interior line of beach, and of a series of groynes and jetties for protection of new beach and adjacent upland, including methods used.

Erosion. Beach Erosion: Its Causes and Cure, H. C. Ripley. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 1, Jan. 1924, pp. 13-18, 1 fig. and (discussion), nos. 4 and 5, Apr. and May, 1924, pp. 529-542 and 657-659, 2 figs. Explains principal causes of beach erosion and accretion and determines principles which control these actions; gives two examples, one in France and other in Brazil, where works have been constructed that illustrate principles enunciated and confirm conclusion reached.

Esplanade, San Francisco. Ocean Beach Esplanade, San Francisco, California, Am. Soc. Civ. Engrs.—Proc., vol. 50, nos. 3 and 5, Mar. and May 1924, pp. 351-372 and 651-656, 22 figs. Discussion by M. Haupt on paper by M. M. O'Shaughnessy.

BEAMS

Airplane. See AIRPLANES, Beams.

Bending and Shearing Stress. Bending and Shear in Straight Beams (Biegung und Schub in geraden Balken), C. Weber. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 4, Aug. 1924, pp. 334-348, 32 figs. Thorough investigation of bending of beams disregarding the usual assumption that cross sections remain even; deals with bending through transverse force, main and additional shearing stresses, etc.

Buckling of, Lateral. Beams without Lateral Support, S. Timoshenko. Am. Soc. Civil Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 239-254, 4 figs. Considers sidewise buckling of I-beams under different loadings and differing kinds of end fastenings; calculation of critical values of maximum stresses, with tabulated results; by use of these tables, necessary reduction in working stresses can be easily calculated; general method used in solution of problem; method of calculating critical loads beyond elastic limit; calculations show that actual safety of I-beams is less than that indicated by approximate formulas now in use.

Calculation. Combined Flexure and Direct Stress. Ferro-Concrete, vol. 16, nos. 4 and 6, Oct. and Dec. 1924, pp. 79-82 and 135-138, 2 figs. Trigonometric method of calculation proposed by Prof. H. Spangenberg, of Higher Technical School of Munich, applicable as well to case of tension as to that of compression in combination with flexure.

The Calculation of Beams Fixed at Both Ends, with Special Regard to Longitudinal Strength (Zur Berechnung des beiderseits eingemauerten Trägers unter besonderer Berücksichtigung der Längskraft), F. Takabeya. Kyushu Imperial University, College of Eng.—Memoirs, vol. 2, no. 7, 1922, pp. 277-326, 28 figs. and supp. tables. Development of general equations.

Concrete. See FLOORS, Concrete Beams as Ceiling.

Continuous. Calculation of Rigid Continuous Beams with Joints and Loaded Axilly (Il calcolo della trave continua con cerniere, inflessa e sollecitata assialmente), M. Castoldi. Ingegneria, vol. 3, no. 7, July 1, 1924, pp. 235-236, 5 figs. Discusses Albenga equations of three moments, insertion of joints to get better distribution of flexion, and eliminates influence of central deformation of beam (airplanes).

Graphical Method of Solving Continuous Beams, F. W. Davey. Concrete & Constr. Eng., vol. 19, no. 12, Dec. 1924, pp. 751-754, 3 figs. Discusses Claxton Fidler's method of "characteristic points."

Moments in Continuous Beams Having a Varying Moment of Inertia, Chas. S. Gray. Concrete & Constr. Eng., vol. 19, no. 10, Oct. 1924, pp. 621-626, 3 figs. Author uses graphical solution of question.

Moments in Two-Span Continuous Beams With Various Span Ratios, C. S. Gray. Concrete & Constructional Eng., vol. 19, no. 2, Feb. 1924, pp. 91-99, 4 figs. Gives values of bending moments at support and in both spans for all cases of uniformly distributed loading where ratio of spans varies from 1:1 to 1:0.1.

Solving Elasticity Equations of Five Members and Their Relation to Continuous Beams on Elastically Depressible Supports (Die Auflösung fünfgliedriger Elastizitätsgleichungen und ihre Beziehungen zum durchlaufenden Träger auf elastisch senkbaren Stützen), G. Kapsch. Zeit. für Bauwesen, vol. 74, nos. 4-6 and 7-9, 1924, pp. 47-58 and 80-86, 17 figs. Discusses method of solving equations of many members, based on Gauss' method of elimination, and gives examples. Practical application in calculation of continuous beams.

Tables for Calculating Beam Over Three Unequal Openings (Hilfstafeln zur Berechnung des Balkens über drei ungleichen Oeffnungen), E. Kammer. Beton u. Eison, vol. 23, nos. 16 and 17, Aug. 20 and Sept. 5, 1924, pp. 219-223 and 233-235, 7 figs. Discusses influence lines of static values for determination of cross section; maximum and minimum values of moments and shearing forces; table of ordinates of influence lines of beams; numerical examples.

Curved. The Bending Moments of Parabolically Curved Beams (Die Biegungsmomente parabolisch gekrümmter Träger), A. Troche. Beton u. Eisen, vol. 23, no. 5, Mar. 5, 1924, pp. 50-52, 3 figs. It is shown that axial bending moments in cross-sections of such beams are independent of rise of arch (when influence of normal and transverse forces are disregarded), so that lines of influence of moments as well as their maximum, minimum, and surface value curves can be analytically determined irrespective of rise of arch.

Tipping Load of Curved Beams (Ueber die Kipplast krummer Stäbe), K. Federhofer. Bautechnik, vol. 2, no. 26, June 17, 1924, pp. 306-312, 13 figs. Mathematical discussion showing how to arrive at tipping load by using graphic integration methods starting from general formulas for tipping curved beams.

Deflection. Calculating Deflections of Beams By a Simple Method, P. G. Laurson. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 424-425, 1 fig. Describes method for computing deflection at any point of a beam resting on two supports or of a cantilever beam, requiring no calculus. Procedure based on Fraenkel's formula. Summation of products of two moments along beam gives deflection.

Elastic Line, Determination of. Graphic Determination of the Elastic Line of an Elastically Supported, Statically Indeterminate Beam (Zeichnerische Ermittlung der elastischen Linie eines federnd gestützten, statisch unbestimmten Balkens), C. B. Biezeno. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 93-102, 4 figs. Simple iteration method for determining reaction of support of such beams.

Girders. See GIRDERS.

I-Beams. Curving of Cross-Section in I Beams (Die Querschnittswölbung im Verdrillten I-Träger), KK. Huber. Bauingenieur, vol. 5, no. 13, July 15, 1924, pp. 394-397, 3 figs. Discusses torsional loading, and bending of cross-sections by special law; gives results of experiments.

Torsional Strength of Steel I-Sections, C. R. Young and C. A. Hughes. Can. Engr., vol. 46, no. 24, June 10, 1924, pp. 593-597, 5 figs. Working formula established for maximum torsional shearing stress. Critical stress generally in flange. Effective polar moment of inertia of standard I-beams from 5.2 to 14.8 per cent of tabular polar moment of inertia.

Impact and Internal Damping. Influence of Internal Damping on Resistance to Impact (Einfluss der inneren Dämpfung auf die Festigkeit gegenüber Stössen), Th. P. Lesch. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 124-142, 2 figs. Investigation of beams to determine modifying influence of internal damping on impact.

Impact on. Effect of Impact of Falling Bodies on Simple Beams (Beitrag zur Beurteilung der Stosswirkung herabfallender Körper auf einfache Balken), W. Kaufmann. Bauingenieur, vol. 5, nos. 16 and 17, Aug. 31 and Sept. 15, 1924, pp. 498-502 and 545-546. Discusses methods for reducing dynamic problem to a static problem, and develops equations for calculating impact.

Influence-Line Diagrams. Influence Line Diagrams for Shearing Force, Bending Moment, Slope, and Deflection for Single-Span Girders, W. N. Thomas. Concrete & Constr. Eng., vol. 19, nos. 11, Nov. 1924, pp. 687-696, 8 figs. Shows how influence lines may be derived in case of simple beam, simply supported at its two ends, fixed, fixed at one end and supported at other, and fixed at one end and unsupported at other.

Influence Lines. Influence Lines (Lignes d'Influence), P. J. Rullens. Assn. des Ingénieurs sortis de l'École Polytechnique de Bruxelles—Bul. Technique, vol. 19, nos. 4 and 5, 1923, and vol. 20, no. 1, 1924, pp. 117-170, 179-196, and 6-38, 63 figs. partly on supp. plates. Detailed study of this method of calculation, as follows: Part I: Influence lines in statically determinate systems. Part II: Influence lines in statically indeterminate systems. Part III: Applications, Bascule bridges, Vierendeel beams. Part IV: Fixed beams, bridges, etc.

Rectangular Beam and Column System. Study of the Continuity in a Rectangular System of Beams and Columns (Etude de la continuité dans un réseau rectangulaire de poutres et de piliers), H. Bordier. Génie Civil, vol. 84, no. 11, Mar. 15, 1924, pp. 248-254, 22 figs. Purpose of study is to show that in a framework of beams and columns, moments on support of loaded trestle can be calculated with the same formulas as those in continuous beams.

Reinforced-Concrete. Chart for Designing Beams in Compression or Tension, E. M. Roydes-Jones. Concrete & Constructional Eng., vol. 19, no. 2, Feb. 1924, pp. 83-85. Gives chart, expressing graphically results of calculations by writer, which will be found very useful in designing beams or slabs subjected to compression or tension as well as bending moment.

Dimensioning of Rectangular Reinforced-Concrete Profiles Under Bending Moment, Compression or Tensile Load. Single and Double Reinforcement (Bemessung von rechteckigen eisenbetonquerschnitten, beansprucht durch biegungsmomente und Druck- oder Zugkräfte. Einfache und Doppelbewehrung), M. Janser. Bauingenieur, vol. 5, nos. 13 and 14, July 15 and 31, 1924, pp. 411-413 and 435-438, 12 figs. Details of very simple and accurate method, resulting often in considerable saving of iron.

Electric-Cement Concrete and Shearing Force in Reinforced Concrete (Le béton au ciment électro-fondu et l'effort tranchant en béton armé), G. Magnel. Assn. des Ingénieurs sortis des Écoles Spéciales de Gand—Annales, vol. 14, series 5, 1924, pp. 183-198, 9 figs. Discusses electric-cement concrete, its resistance to compression and to traction; results of experiments with Portland cement and alumina cement beams with and without reinforcement.

Further Experiments and Construction Work with High Class Portland Cement (Weitere Versüche und praktische Bauausführungen mit hochwertigem Portlandzement), G. Rüth. Beton u.

Eison, vol. 23, no. 16, Aug. 20, 1924, pp. 213-217, 8 figs. Tests of concrete beams, etc., 250 kg. cement (Dyckerhoff Doppel) to 1 cu. m. gravel sand or 1:5.5 in volume; measurement of shrinkage, etc.

Reinforced-Concrete Beams With Double Reinforcement (Travi di cemento armato con doppia armatura), E. Lo Cigno. Rivista Tecnica delle Ferrovie Italiane, vol. 26, no. 4, Oct. 15, 1924, pp. 109-121, 9 figs. partly on supp. plates. Discusses more convenient distribution of irons in case of bending, compression, and eccentric loads in rectangular beams, and makes calculations.

Shearing Strength of Reinforced Concrete Beams Under Bending Load (Schubfestigkeit in Eisenbetonbalken, welche auf Biegung beansprucht sind), O. Hausen. Beton u. Eisen, vol. 23, nos. 18 and 19, Sept. 20 and Oct. 5, 1924, pp. 243-247 and 256-258, 21 figs. Discusses distribution of shearing forces over concrete and reinforcement and makes calculations.

Stresses in a Rectangular Reinforced-Concrete Cross Section due to Bending Axis Oblique to Sides of Rectangle (Die Spannungen im rechteckigen Eisenbetonquerschnitt infolge einer schräg zu dep rechteckseiten liegenden Biegungsachse), M. Preuss. Bauingenieur, vol. 5, no. 14, July 31, 1924, pp. 427-429, 4 figs. Discusses quadratic or cubic equations of sufficient approximation, direction of zero line of angle B being precalculated.

Stresses in T-Beams With Compression Steel, J. Rieger. Concrete & Constructional Eng., vol. 19, no. 3, Mar. 1924, pp. 181-187, 5 figs. Gives a logarithmic slide rule for calculating reinforced-concrete structures, and explains its use.

Statically Indeterminate Systems. The Determination of Statically Indeterminate Systems through Measurement (Beitrag zur Lösung statisch unbestimmter Systeme durch Messung), F. Kann. Beton u. Eisen, vol. 23, no. 20, Oct. 20, 1924, pp. 268-273, 23 figs. Investigation to determine excess number of statically indeterminate systems through measurement of deflections on cardboard models.

Wooden. Tests With Wooden Beams According to the Hetzer Method (Versuche mit Holzbalken nach Bauweise Hetzer), F. Hübner. Schweizerische Bauzeitung, vol. 84, nos. 5 and 6, Aug. 2 and 9, 1924, pp. 51-55 and 65-67, 10 figs. Details of tests of beams for construction by Hetzer method in connection with official bureau for testing materials, showing satisfactory results.

See also AIRPLANES, Beams.

BEARING METALS

Anti-Friction. Anti-Friction Bearing Metals, P. W. Priestley. Automobile Engr., vol. 14, no. 192, Aug. 1924, pp. 225-230, 2 figs. Considers chemical, thermal, and physical characteristics of tin-base alloys.

Characteristics. Bearings and Characteristics of Bearing Metals, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 3, Mar. 1924, pp. 106-108. Composition and characteristics of different bearing metals; hints on proper procedure in babbitting bearings; points to be considered in selecting a bearing metal.

Durex. Durex, a Bearing Material Which Holds Oil Like a Sponge. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1072-1074, 14 figs. Copper-tin-graphite bronze which absorbs up to one-fourth its own volume by capillarity through myriads of tiny, evenly distributed pores, and maintains oily bushing surface; offers insurance against shortage or stoppage of lubrication.

Gun Metal. See GUN METAL.

Hardness. Rate of Cooling Determines Hardness of Alloy. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, p. 723. Results of researches into structure of ternary bearing-metal alloys by Dr. L. Kaul; it is shown that rate of cooling rather than pouring temperature determines hardness of alloy.

Rapid Analysis. Method for the Rapid Analysis of Bearing Metals (Eine analytische Schnellmethode für Lagermetalle), A. Bartsch. Chemiker-Zeitung, vol. 48, no. 99, Aug. 16, 1924, p. 577. Determination of antimony and tin; filtrate from copper is titrated with ferrocyanide for zinc, using acetic-acid solution of iron alum as external indicator.

Testing. See LUBRICATING OILS, Investigating Method.

Thermit. Thermit, the Universal Bearing Metal (Das Universal-Lagermetall "Thermit"), G. v. Hanffstengel. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1075-1076, 2 figs. A bearing metal containing besides lead, tin, antimony, copper, some nickel and other ingredients for hardening, with lower solidification point at 245 deg. Treatment and uses.

BEARINGS

Anti-Friction. Advanced Practice in Anti-Friction Bearings, P. B. Liebermann. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 533-534. Anti-friction favored over plain bearings in most cases; data on two important conveyor installations; application to electric motors; desirability of making comparative tests in laboratory. (Abstract.)

Anti-Friction Bearings Lower Transportation Costs from Face to Railroad Car, F. H. Kneeland. Coal Age, vol. 25, no. 17, Apr. 24, 1924, pp. 603-606, 5 figs. Need only one-fourth as many applications of lubricant as plain bearings and have nearly twice as long life; lubrication cost reduced by two-thirds; save power and equipment.

Journal Boxes with Anti-Friction Bearings, O. R. Wikander. Ry. Mech. Engr., vol. 98, no. 1, Jan., 1924, pp. 33-35, 3 figs. Discusses possible standardization of ball and roller bearings for railway cars.

Operating Characteristics of Anti-Friction Bearings. Wood Worker, vol. 43, no. 8, Oct., 1924, pp. 57-59. Discusses friction, reliability, lubrication, precision, thrust loads, and proportions.

The Application of Anti-friction Bearings, Fred G. Whipp. Machy. (Lond.), vol. 25, no. 637, Dec. 11, 1924, pp. 329-336, 14 figs. Applications to factory transporting and haulage gear.

Automobile Axles. The Friction Losses in Journal and Roller Bearings in Automobile Axles (Die Reibungsverluste der Gleitlager und der Rollenlager bei Automobilachsen), G. Becker. Motorwagen, vol. 27, no. 12, Apr. 30, 1924, pp. 201-206, 10 figs. Report of Experimental Station for Automotive Vehicles of Tech. High School, Berlin-Charlottenburg.

Babbitted. Tests Show Breakdown Pressure of Oil Films in Babbitt Bearings, L. N. Linsley, Automotive Industries, vol. 51, no. 26, Dec. 25, 1924, pp. 1084-1085, 2 figs. Results of experimental work carried out at Johns Hopkins University show that limiting bearing load in pounds per square inch of projected bearing surface increases with cricumferential speed of journal and with viscosity of lubricant; effect of adding oleic acid. (Abstract.) Paper read before Am. Soc. Mech. Engrs.

Babbitting. Pointers in the Casting of Babbitt Bearings, J. V. Romig. Can. Machy., vol. 31, no. 1, Jan. 3, 1924, p. 34, 4 figs. Metal must be well stirred and hot enough to ignite a dry pine sliver; white lead or smoke on shaft provides necessary clearance. See also Can. Foundryman, vol. 15, no. 1, Jan. 1924, p. 19, 4 figs.

Ball. See BEARINGS, BALL.

Brasses, Babbitting. Babbitting Brasses for Subway Trains, F. H. Colvin. Am. Mach., vol. 60, no. 17, Apr. 24, 1924, pp. 629-630, 4 figs. Methods and equipment in babbitting room of New York 148th St. shop; simple mandrels used for holding brasses in position for babbitting; two men handle four tons of babbit per month.

Cylindrical. The Design and Performance of Complete Cylindrical Bearings From Mathematical Theory of Lubrication, G. B. Upton. Sibley Jl. of Eng., vol. 38, nos. 3 and 4, Mar. and Apr. 1924, pp. 56-60 and 76, and 97-100, 6 figs. Presentation and discussion of Harrison's equations; and modifications brought about by finite length and its consequences in end leakage of lubricant and lengthwise variation of pressure in lubricating film.

Experiments. Some Bearing Investigations, E. G. Gilson. Gen Elec. Rev., vol. 27, no. 5, May 1924, pp. 318-327, 20 figs. Results of investigation made by Research Laboratory of Gen. Elec. Co. into phenomena of bearings.

Friction in. Coefficient of Friction of Bearing Pins (Wie kommt es dass die Reibungszahl eines Walzlagers so gering ist), H. Stellrecht. Praktische Maschinen-Konstrukteur, vol. 57, no. 41, Oct. 28, 1924, pp. 555-556. Discusses friction in bearings generally and in ball bearings particularly. Shows that if ball impressions keep within limit of elasticity, balls will never be injured.

Journal. Survey of Armature, Axle and Journal Bearings Practice. Elec. Ry. Jl., vol. 64, nos. 7 and 17, Aug. 16 and Oct. 25, 1924, pp. 227-235 and 725-729, 25 figs. Analysis of types of bearings favored, methods of determining wear and removal of bearings, removing old babbitt, cleaning and tinning shells; practices of 20 electric railways. Oct. 25: Methods employed for machining bearings, cutting oil grooves, and other work necessary to produce finished bearing.

See also Michell Journal.

Journal, Pad System Applied to. The Pad Systen Applied to Journal Bearings, Johnstone-Taylor. Am. Mach., vol. 60, no. 1, Jan. 3, 1924, pp. 9-10, 4 figs. Also Mar. Eng. & Shipping Age, vol. 29, no. 8, Aug. 1924, pp. 476-478, 5 figs. Design of bearings constructed on pad system and their advantages.

Locomotive. Lining of Locomotive Bearings With Lead Alloy, Hardened by the Addition of Calcium (Das Ausgiessen von Lokomotivlagern mit den durch Zusatz von Erdkali-Metallen gehärteten Bleilegierungen Calcium und Lurgi, H. Münter. Glasers Annalen, vol. 95, no. 7, Oct. 1, 1924, pp. 155-159, 16 figs. Discusses the various advantages of hardened lead alloy for lining of locomotive bearings, as compared to tin alloys, and describes necessary equipment for carrying out of process.

Lubrication. Achieving Safety in Lubrication, R. W. A. Brewer. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 857-859, 6 figs. Fundamental principles which underlie art of correct lubrication; results of tests; fatty acids prevent seizure of heavily loaded bearings; normal working friction more important than abnormal conditions.

Some Types of Applications of Babbitt, Ball and Roller Hanger Bearings, F. E. Gooding. Indus. Engr., vol. 82, no. 5, May 1924, pp. 229-231 and 257, 9 figs. Methods of lubricating bearing surfaces and reducing friction losses.

The Mechanism of Lubrication, D. P. Barnard, H. M. Myers and H. O. Forrest. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 347-350, 8 figs. Effect of oiliness on behavior of journal bearings.

The Proper Lubrication of Modern Industrial Bearings, A. F. Brewer. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 177-183, 9 figs. Discusses characteristics and requirements of each type of bearing.

See also LUBRICATION, Journals.

Machining. See MACHINING METHODS, Bearings.

Michell Journal. Notes on the Michell Journal Bearing. Machy. (Lond.), vol. 25, no. 638, Dec. 18, 1924, pp. 371-376, 7 figs. From data presented it is quite clear that there is most marked economy in use of Michell journal bearing so far as frictional losses are concerned.

Motor. Economies in Selection of Motor Bearings, A. C. Turtle. Ry. Elec. Eng., vol. 15, no. 3, Mar. 1924, pp. 88-91, 5 figs. Consideration of advantages of oil ring bearings and ball bearings; oiling considerations.

See also Sleeve.

Oil-Engine. White Metal Bearings for Oil Engines, F. J. Taylor, Gas & Oil Power, vol. 19, no. 225, June 5, 1924, pp. 155-156, 2 figs. Causes and prevention of engine-shaft failure.

Oil Ring. See Motor.

Paper-Mill Machinery. The Most Efficient Type of Bearing for Paper Machinery, G. H. Spencer. Paper Mill, vol. 48, no. 15, Apr. 12, 1924, pp. 65-66, 68, 70 and 72f, 13 figs. Construction of plain babbitt bearing; functions and operations on paper machines of anti-friction bearing.

Railway-Motor, Lubrication of. Packing Railway Motor Bearings for Oil Lubrication, C. Bethel. Elec. Ry. Jl., vol. 63, no. 16, Apr. 19, 1924, pp. 605-609, 13 figs. Method of packing bearings; wood waste is most satisfactory, but care must be used to insure feeding proper quantity of oil; essentials are to keep shell tight and clearance small; proper designs of oil grooves necessary.

Roller. See BEARINGS, ROLLER.

Sleeve. Sleeve Bearing Keeps Oil From Spattering Motor, R. Pruger. Coal Age, vol. 25, no. 26, June 26, 1924, pp. 945-947, 4 figs. Describes "sealed-sleeve" bearing which excludes dirt and prevents oil leakage.

Some Ways to Cure Sleeve Bearing Troubles, R. Pruger. Indus. Engr., vol. 82, no. 3, Mar. 1924, pp. 113-117, 10 figs. Design and construction of motor sleeve bearings, their advantages, and improvements which have been made to overcome troubles that are sometimes encountered.

Steam-Turbine, Re-Metalled, Boring of. Boring Re-Metalled Bearings of Turbines and Gear Cases. Mar. Engr., vol. 47, no. 559, Apr. 1924, pp. 137, 138, 2 figs. Outlines proposed method for more accurate boring after re-metalling of journal bearings of high-speed turbines.

Tests. Bearing Tests (Lagerversuche), G. Meyer-Jagenberg. Werkstattstechnik, vol. 18, no. 3, Feb. 1, 1924, pp. 41-46, 27 figs. Gives proof of agreement between test results and theory; numerical dependence of bearing friction on working conditions; determination of most suitable oil and calculation of friction corresponding to given working conditions.

Tests on Bearings (Lagerversuche), G. Meyer-Jagenberg. Werkstattstechnik, vol. 18, nos. 7 and 8, Apr. 1 and 15, 1924, pp. 214-217, and 229-236, 23 figs, Apr. 1: Investigation of two kinds of ball bearings; influence of load, speed, and lubrication on friction conditions; importance of felt packing of ball-bearing housings. Apr. 15: Investigations of same bearings as transmission bearings; comparison of test-bed and transmission results; comparison of journal and ball-bearing transmission.

Thrust. See BEARINGS, THRUST.

Use and Maintenance. Possible Improvements in Bearing Service, G. A. Van Brunt. Indus.

Engr., vol. 82, no. 6, June 1924, pp. 264-270 and 304, 11 figs. Manufacturers of sleeve, ball, and roller bearings give their viewpoint on things to be considered in connection with use and maintenance of bearings.

Waste-Packed. Waste-Packed Bearing Design and Operation, C. Bethel. Elec. Jl., vol. 21, no. 3, Mar. 1924, pp. 115-118, 4 figs. Information regarding oil flow and action of waste packing.

BEARINGS, BALL

Automobile. How and Why Ball Bearings are Used on Car and Truck Crankshafts, P. M. Heldt. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 282-285, 9 figs. Discusses application and advantages of ball bearing and describes number of cars and trucks using them for crankshafts.

Making Ball Bearings for Automobiles, H. R. Simonds. Iron Trade Rev., vol. 74, no. 5, Jan. 31, 1924, pp. 345-349, 9 figs. Describes manufacture of radial bearings at Chicago plant of U. S. Ball Bearing Mfg. Co.

Precision Ball Bearings (Erzeungnisse der Schweinfurter Präzisions-Kugellager-Werke Fichtel & Sachs A.-G.). Automobil-Rundschau, vol. 23, no. 5, May 1924, pp. 56-59, 11 figs. Types of precision ball bearings made by firm of Fichtel & Sachs Corpn. for automobile and motorcycle construction.

Calculation of. Formulas for and Properties of Ball and Roller Bearings (Alcune formole e proprieta notevoli nella cinematica dei cuscinetti portanti a sfere e a rulli), S. R. Treves. Industria, vol. 38, no. 9, May 15, 1924, pp. 242-245, 5 figs. Formulas for calculating peripheral speed, coefficient of resistance, etc.

Development. Development of Rolling Bearings (Die Entwicklung der Wälzlager), Hönicke. Praktische Maschinen-Konstrukteur, vol. 57, nos. 25 and 27, July 8 and 22, 1924, pp. 357-358 and 386, 7 figs. Design and development of ball and roller bearings made by Berlin-Karlsruher Industrie Werke A. G.

Electrical Machinery. Selection of Ball and Roller Bearings for Electrical Machines, T. D. Trees. Instn. Elec. Engrs.—Jl., vol. 62, no. 333, Sept. 1924, pp. 782-790, 6 figs. Lines on which selection of bearings should proceed. Observations of a general character regarding capacities, costs, types, etc. Bibliography.

Friction in. See BEARINGS, Friction in.

Heat Treatment. Heat Treatment of Ball and Roller Bearings, Jos. K. Wood. Am. Mach., vol. 61, no. 24, Dec. 11, 1924, pp. 929-931. Required properties of materials for ball bearings; chrome steel for bearings and its heat treatment; manufacturing processes; shortcomings of stainless steel.

Housings. Design of Ball Bearing Closures, T. C. Delaval-Crow. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 453-457, 39 figs. Description of a variety of ball-bearing housing arrangements to prevent leakage of lubricant and entrance of foreign matter.

Life. **The Life of Ball Bearings (Die Lebensdauer von Kugellagern, A. Palmgren. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 14, Apr. 5, 1924, pp. 339-341. Shows that life of ball bearings subjected to axial or combined stresses depends partly on maximum developed ball pressure and partly on fatigue phenomena which have changed in comparison to conditions with purely radial load.**

Loads. **Ball-bearing Loads. Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 788-789, 8 figs.** Details of new formula for determining ball-bearing loads in pamphlet issued by Tormo Mfg. Co., London; no actual formula is given, necessary data beng supplied by three charts.

Machine Tools. **Application of Ball Bearings to Machine Tools. Machy. (N. Y.), vol. 30, no. 10, June, 1924, pp. 776-781, 9 figs.; also Machy. (Lond.), vol. 24, no. 609, May 29, 1924, pp. 257-262, 9 figs.** Method of applying ball bearings to **lathes, grinding machines, drilled-machine spindles, and transmission shafts.**

Application of Ball Bearings to Machine Tools, B. M. W. Hanson. Machy. (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 355-361, 15 figs. Thread-milling machine spindle equipped with ball bearings; ball-bearing bevel-gear transmission, vertical milling machine grinder spindles, lathe centers, lineshaft hangers, etc.; roller bearings for heavy duty.

Manufacture. The Production of Ball Bearings. Eng. Production, vol. 7, no. 147, Dec. 1924, pp. 357-363, 8 figs. Methods and organization of Shefko Co.

See also Automobile.

Mine-Locomotive Motors. **The Use of Ball Bearings on Mine Locomotive Motors, C. A. Atwell. Elec. Jl., vol. 21, no. 11, Nov. 1924, pp. 513-516, 8 figs. Reasons for their use; lubrication;** amount and renewal of lubricant; removal and reapplication of ball bearings.

Motor. Ball Bearings for Motors, C. Huey. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 4, Nov. 1924, pp. 624-647. Presents advantages, disadvantages, limitations, and design data.

Mounting. **Ball Bearings: Their Proper Function and Methods of Mounting, F. J. Taylor. Mech. Wld., vol. 75, no. 1953, June 6, 1924, pp. 353-354, 9 figs.**

Roller and. Ball and Roller Bearings. Iron & Steel Engr., vol. 1, no. 5, May 1924. Contains following papers: Application of Taper Rollers Bearings, T. V. Buckwalter, pp. 210-214, 1 fig.; Application of Anti-Friction Bearings, F. W. Gurney, pp. 214-217; Mounting and Maintenance of Roller Bearings on Electric Motors, D. E. Batesole, pp. 217-220, 7 figs.; Ball Bearing Applications and Maintenance, H. R. Reynolds, pp. 221-224, 5 figs.; Application of Anti-Friction Bearings, H. E. Brunner, pp. 225-229, 7 figs.; Selection, Installation and Operation of Anti-Friction Bearings, J. T. R. Bell, pp. 229-234, 8 figs.; Mounting and Maintenance of Roller Bearings in Electric Motors, U. B. Wachtler, pp. 234-244, 7 figs.; Design and Application of Ball Bearings, T. D. Crow, pp. 245-248, 9 figs. See also Discussion, pp. 256-278.

Swedish Disk and Ball Bearings of High Carrying Capacity. Automotive Industries, vol. 51, no. 22, Nov. 27, 1924, pp. 918-919, 5 figs. Describes ball and roller bearings of Swedish manufacture, known as N. K. A., said to possess unusually high carrying capacity for given size and to be well adapted for high speed.

Spiro. The Spiro Ball Bearing. Machy. (Lond.), vol. 25, no. 633, Nov. 13, 1924, pp. 210-213, 7 figs. Bearing with spiral series of balls for heavy loads at high speeds.

Stainless-Steel. Carrying Capacity of Ball Bearings Made of Stainless Steel, A. Hultgren. Am. Soc. for Testing Mats.—Reprint of paper for meeting June 24-27, 1924, no. 19g, 7 pp. Brief summary of series of tests of stainless steel as a ball-bearing material conducted during past six years in Gothenburg Laboratory of Aktiebolaget Svenska Kullagerfabriken; stainless steels from an American, a British, and a Swedish source were used.

BEARINGS, ROLLER

Ball and. See BEARINGS BALL, Roller and.

Bridge. Permissible Loading on Rollers Between Plane Surfaces (Sur la charge limite ad-

missible de rouleaux en contact avec des chemins de roulement plans), A. Dumas. Bulletin Technique de la Suisse Romande, vol. 50, no. 12, June 7, 1924, pp. 148-152, 2 figs. Results of tests to determine load that can be applied without producing permanent deformations.

Recommendations for Standard Bridge Bearings (Vorschläge für ein einheitliches Brückenlager), H. Kirchner, Bautechnik, vol. 2, no. 18, Apr. 25, 1924, 2 figs. Discusses Karig's recommendations for economical roller bearing, published in same journal, Sept. 7-Oct. 5, 1923; author makes recommendations for calculation and dimensioning of separate bearing parts.

Repairing a Skewed and Displaced Bridge Roller Bearing, Chas. F. Draper. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, p. 810, 2 figs. New rollers placed in bearing of 250-ft. span with cam teeth engaging shoe plates to maintain alignment.

Colliery Equipment. Roller and Ball Bearings for Colliery Equipment, R. H. Boyd. Colliery Eng., vol. 1, nos. 2, 3 and 5, Apr., May and July, pp. 93-95, 121-122 and 236-239, 24 figs. Discusses various types of anti-friction bearings available for use underground. Adoption of anti-friction bearings to above-ground machinery.

Connecting Rods. Roller Bearings for Connecting Rods (Rollenlager für Pleuel stangen), J. Dauben. Motorwagen, vol. 27, no. 30, Oct. 31, 1924, pp. 541-545, 8 figs.; and (translation in abstract) in Automotive Industries, vol. 51, no. 23, Dec. 4, 1924, pp. 964-965, 7 figs. Designs used and proposed for mounting connecting-rod-head roller bearings; motorcycle, racing and dirigible engines have been successfully fitted with anti-friction bearings at crankpin; problem not solved for automobile engines.

Design. Roller Bearings Facilitate Speed, D. E. Batesole. Iron Trade Rev., vol. 75, no. 3, July 17, 1924, pp. 164-166, 6 figs. High-precision units of roller type withstand heavy load capacity and resistance to severe shock. Choice of bearing depends upon operating conditions and design. Describes principle of construction.

Development. See BEARINGS, BALL, Development.

Electrical Machinery. See BEARINGS, BALL, Electrical Machinery.

Manufacture. The Manufacture of Tapered Roller Bearings, M. T. Lothrop. Am. Mach., vol. 61, nos. 21 and 22, Nov. 20 and 27, 1924, pp. 803-807 and 833-857, 31 figs. Nov. 20: Practice at Timken roller-bearing plant continuous process from ore pile to finished product; uniform control of material processes, assembly, installation, and use; grinding and inspecting to quarter-thousandth limits. Nov. 27: Hardness tests; inspecting 39 types of defects; automatic machines for grinding and gaging.

Motors. Roller Bearing Service in Mill-Type Motors, L. J. Hess. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 164-168, 6 figs. Methods of installation and results obtained from use of roller bearings in 300 heavy-duty motors.

Railway Journal Boxes. Standardization of Journal Boxes with Roller Bearings for Railway Cars (Normung von Achsbuchsen mit Rollenlagern von Schienenfahrzeugen), O. R. Wikander. Zeit. des Vereines deutscher-Ingenieure, vol. 68, no. 19, May 10, 1924, pp. 474-475, 3 figs. Reasons for installation of only one roller bearing in railway journal boxes; advantages of journal box standardization for simple determination of suitable roller bearing, based on proposed international standard dimensions and tolerances of roller bearings.

Railway Motor Cars. New Tests with Roller Bearings on Railway Motor Cars (Neuere Versuche mit Rollenlagern an Oeltriebwagen), W. Bethge. Motorwagen, vol. 27, no. 1, Jan. 10, 1924, pp. 6-7, 1 fig. Advantages and economy of roller bearings compared with journal bearings.

Railway Rolling Stock. Comparison of Ball and Roller Bearings (Comparaison des paliers à billes et à rouleaux), A. Bijls. Génie Civil, vol. 84, no. 7, Feb. 16, 1924, pp. 159-161, 6 figs. Comparison of two systems in their application to railway rolling stock, showing advantages of roller bearings.

Roller Bearings for Railway Rolling Stock (Rollenlager für Eisenbahnfahrzeuge), W. Linder. Kruppsche Monatschefte, vol. 5, Aug.-Sept. 1924, pp. 187-189, 2 figs. Design of Krupp bearings, function of parts, lubrication, etc.

Rolling-Mill. Rolling-Mill Bearings (Neue Walzenlagerungen), C. Holzweiler. Stahl u. Eisen, vol. 44, no. 16, Apr. 17, 1924, pp. 425-430, 13 figs. Also Iron Age, vol. 114, no. 8, Aug. 21, 1924, pp. 442-443, 5 figs. Design of bearings made by Witkowitz Steel Works; automatic Stauffer lubrication; treatment of bushings; SKF roller bearings (made in Gothenburg, Sweden); combination of roller and ball bearings; results of tests.

Shipbuilding. Rolling Bearings in Shipbuilding and Ship-Machinery Construction (Das Wälzlager im Werft- und Schiffsmaschinenbau), Muller-Rentzsch. Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 242-247, 16 figs. Describes different types of roller bearings and their applications, especially to cranes.

Steel Tubes for. See TUBES, Steel.

Tapered. Production and Application of Tapered Roller Bearings. Machy. (Lond.), vol. 24, nos. 604, 605, and 606, Apr. 24, May 1, and 8, 1924, pp. 108-111, 129-131, and 161-165, 21 figs. Timken bearing and its production by Brit. Timken Ltd., Birmingham, Eng.

Taper Roller Bearings. Automobile Engr., vol. 14, no. 191, July 1924, pp. 196-197, 10 figs. New type with rollers guided from race.

BEARINGS, THRUST

Michell. Thrust Blocks for the SS. "Empress of Australia." Engineering, vol. 117, no. 3035, Feb. 29, 1924, pp. 268-269, 9 figs. on p. 272. Describes installation of modified form of Michell thrust, utilizing existing thrust shaft, and fitting into existing housing.

Pad Type. Thurst Bearings of Pad Construction, F. Johnstone-Taylor. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 619-621, 5 figs. Construction of pad thrust collars; pad system applied to thrust washers; thrust washer for vertical shaft; end thrust bearings of pad construction; etc.

Propeller. Modern Shaft Bearings (Moderne Wellendrucklager), J. Schowalter. Wärme, vol. 47, no. 31, Aug. 1, 1924, pp. 359-361, 6 figs. Comparison of design and working of a collar thrust bearing and a Vulcan single-disk segmental bearing for a propeller running at 75 r.p.m. and for 20,000 kg. thrust, and their field of application.

BELLS

Founding. Modern Bell Founding, W. Lambert and G. Hall. Am. Foundrymen's Assn.—Preprint of paper no. 419, for meeting, Oct. 11-16, 1924, 29, pp. 13 figs. See also Foundry, vol. 52, nos. 22, 23 and 24, Nov. 15, Dec. 1 and 15, 1924, pp. 885-887, 924-926 and 978-979, 14 figs. and Foundry Trade Jl., vol. 30, no. 429, Nov. 6, 1924, pp. 391-395, 3 figs. Historical notes on bells and early methods used in founding; description of number of best-known bells; molding practice in modern bell founding; metallurgical notes on

bell metal. Exchange paper between Inst. Brit. Foundrymen and Am. Foundrymen's Assn.

BELT DRIVE

Arc of Contact, Increasing. Methods That May be Appied for Increasing Arc of Contact With Low Belt Tension, F. E. Gooding. Indus. Engr., vol. 82, no. 9, Sept. 1924, pp. 417-422 and 455, 16 figs. Describes special mechanical means whereby distance between shafts may be shortened and pulley ratios increased over usual recommended practice.

Group vs. Individual Drive. A Comparison of Group and Individual Drive, R. W. Drake. Indus. Mgt. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 178-183, 6 figs. Analysis of factors which govern a choice.

Principles. Power Transmission by Belting, J. E. Rhoads. Paper, vol. 33, no. 21, Mar. 13, 1924, pp. 11-12. Some of the principles entering into power transmission by belting.

Short-Center. Short Belt Drives, V. Sahmel. Paper Trade Jl., vol. 78, no. 19, May 8, 1924, pp. 61-64, 7 figs. Fundamental formula for belt drives; advantages of short-center drive; floating idlers, beaters, etc.

Short-center Belt Drives, G. A. Frenkel. Machy. (N. Y.), vol. 30, nos. 10, 11, and 12, June, July, and Aug. 1924, pp. 747-753, 876-882, and 956-958, 23 figs. Deals with efficient transmission of power by belting, as determined by numerous experiments and extensive research. June: General characteristics, advantages, and methods of arrangement to meet different requirements. July: Determining coefficient of friction and procedure in designing drive for transmitting given amount of power. Aug: Tension rollers and their bearings; arms, equalizing weights, fulcrum stands and shock absorbers. See also Machy. (Lond.), vol. 24, nos. 612, 615, and 620, June 19, July 10, and Aug. 21, 1924, pp. 353-358, 457-462 and 645-647, 23 figs.

BELTING

Conveyor. See Lumber Industry.

Creep of. A Discussion of Belt Creep and Its Effect on the Application of the Fundamental Formula, R. F. Jones. Sibley Jl. of Eng., vol. 38, no. 7, Oct. 1924, pp. 173-175 and 185, 3 figs. Discusses slippage caused by elastic give and return of belt, called creep; slippage not due to elastic action, called true slip; and total slip, which is a combination of both creep and true slip; their effect in calculation.

Electric Sparks from. Spark Formation on Driving Belts (Funkenbildung an Treibriemen, M. Jürgensen. Gas- u. Wasserfach, vol. 67, no. 28, July 12, 1924, pp. 411-412. Discusses electric potential on gas compressor belt, due not to slip of belt, but to presence of wax, etc.

Endless. See Leather.

Installation and Care. Installation and Care of Belting, C. O. Streeter. Paper, vol. 34, no. 3, May 8, 1924, pp. 90-91, 11 figs. Points in the purchasing of leather belting; approved types of belt drives; aligning and care of belts to avoid injury.

Leather. Chrome Leather for Belts, L. Balderston. Am. Leather Chemists Assn.—Jl., vol. 19, no. 9, Sept. 1924, pp. 521-525 and (discussion) 525-527. Discusses chrome belts and divergent views as to their keeping quality, some behaving as well as oak belts, others failing. Question of free H_2SO_4.

Making Leather Belts Endless, L. W. Arny. Paper Trade Jl., vol. 79, no. 10, Sept. 4, 1924, pp. 43-47, 18 figs. Tools required; describes making of laps, shortening narrow belts which have been endless, making an endless joint in a belt which has been laced or hooked, making new belts endless, cements, etc.

Slip, Friction and Stretch Tests for Leather Belting, L. C. Morrow. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 469-471, 8 figs. Describes tests performed in plant of J. E. Rhoads & Sons, Philadelphia, Pa.

Lumber Industry. Transmission and Conveyor Belts in New Long-Bell Lumber Mill, W. A. Scott. Belting, vol. 25, no. 3, Sept. 1924, pp. 21-24, 9 figs. Large new plant of Long-Bell Lumber Co., Longview, Wash., contains latest improved design of modern equipment; belting installations highly efficient.

Materials. Belting Materials, G. A. Frenkel. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 14-16, 1 fig. See also Machy. (Lond.), vol. 25, no. 637, Dec. 11, 1924, pp. 337-341, 1 fig. Physical properties and general characteristics of leather, rubber, cotton, and steel belting.

Rubber. How Much Power Is That Rubber Belt Transmitting? W. F. Schaphorst. Belting, vol. 25, no. 3, Sept. 1924, pp. 29-30, 1 fig. Gives table for determining horsepower being transmitted by rubber belt.

Rubber Belting, G. A. Frenkel. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 122-124. Data and formulas required in designing rubber-belt transmissions.

Standardization. How Belting Was Standardized in a Large Automotive Plant, H. A. Flogaus. Belting, vol. 24, no. 6, vol. 25, nos. 1, 2, 3, 4, and 5, June, July, Aug., Sept., Oct., and Nov., 1924, pp. 19-24, 17-21, 17-22, 25-27, 23-25, and 17-20, 25 figs. Transmission survey covered 18 months; power-transmitting property of leather belting depends chiefly on pulley-side finish and stuffing; methods of making power and slip tests; wide variations in characteristics of belts of same type; belt-splicing methods; belt-dressing problem; economies obtained through idlers; example of savings from belting some machines alike; reclamation of leather and rubber belting; effect of shaft misalignment on belt life; economy of crown pulleys, etc.

Testing. The Scientific Testing of Belting for Power Transmission, C. D. Miller. Belting, vol. 25, no. 5, Nov. 1924, pp. 25-29, 1 fig. Principles relating to mechanics and properties of matter that should govern such testing.

Types. Characteristics and Attributes of Certain Classes of Belting, W. Staniar. Belting, vol. 25, no. 3, Sept. 1924, pp. 17-20, 2 figs. Combination of oak and special tannage declared "last word" in leather belting; other types also show improvement; discusses leather, rubber, metallic stitched fabric, and solid woven hair belting.

Means for Power Transmission (Einiges über Kraftübertragungsmittel), A. Stehlik. Sparwirtschaft, nos. 15-16 and 17-18, Aug. and Sept. 1924, pp. 79-80 and 89-95 (AWB). Discusses rope and belt drives, including kinds of ropes and belting, and care and management.

BELTS. See BELTING.

BENDING

Theory. The Center of Shear (Der Schubmittelpunkt), Rob. Maillart. Schweizerische Bauzeitung, vol. 83, no. 10, Mar. 8, 1924, pp. 109-111, 5 figs. Refers to author's previous articles in same journal on bending problem, and by experimental determination of shearing center, it is shown that an unsymmetrical profile conforms to law of classic bending theory the same as symmetrical.

BENZENE. See BENZOL.

BENZOL

Content in Coal Gas, Measurement of. Apparatus for Measuring Benzol Contents of Coal Gas

in Benzol Factories (Ein Benzolbestimmungsapparat für den Betrieb), A. Bürger. Chemiker-Zeitung, vol. 48, no. 35, Mar. 20, 1924, p. 161, 1 fig. Describes apparatus consisting of U-tube containing activated charcoal, and two stopcocks at either end; U-tube is placed in connection with source of steam on one side and condenser and measuring flask on other.

Production from Acetylene. Benzol Produced from Acetylene. Automotive Industries, vol. 50, no. 3, Jan. 17, 1924, p. 123. Produced by polymerization, i.e., three molecules of acetylene (C_2H_2) can be combined into one molecule of benzene (C_6H_6), which later is chief constituent of commercial benzol. Experiments described in recent note by N. D. Zelinsky presented to French Acad. Sciences.

Recovery. Action of Benzol Wash Oils on Lead, A. Schneider and E. Jenniger. Am. Gas Jl., vol. 120, no. 3, Jan. 19, 1924, pp. 51-52. Results of investigation to determine whether normal wash oil (or its constituents) is able to corrode and dissolve lead; carried out as result of report from a certain gas works where benzol was recovered from gas by absorption in wash oils and where wash oils, containing benzol, were stored and subjected to further treatment to remove their benzol content, that oils appeared to have some effect on lead packings and, in fact, seemed to possess power of destroying lead. Translated from Gas u. Wasserfach, 1923, p. 369.

Activated Carbon for Recovering Benzene from Gas, M. Steding. Am. Gas Jl., vol. 121, no. 1, July 5, 1924, pp. 611-612 and 625, 2 figs. Discusses advantages and drawbacks of recovery by wash oil process and by activated charcoal or Bayer process, German patent no. 310,092. Translated from Gas u. Wasserfach.

Benzole Extraction and Naphthalene. Gas Jl., vol. 165, no. 3167, Jan. 23, 1924, pp. 203-204, 1 fig. Solubility and vapor pressure of naphthalene.

Determination of Benzol in Illuminating Gas by Means of Active Charcoal (Beitrag zur Benzolbestimmung in Leuchtgas mittels aktiver Kohle), W. Gollmer. Zeit. für angewandte Chemie, vol. 37, no. 40, Oct. 2, 1924, pp. 773-775, 2 figs. Describes apparatus in which 98 per cent of adsorbed benzol is recoverable by steaming for one-half hour at 300 deg., without any catalytic action of charcoal on light oil vapor being observed.

Present Process of Benzol Recovery From Gas (Les Procédés actuels de débenzolage du gaz), Ch. Dantin. Génie Civil, vol. 85, no. 21, Nov. 22, 1924, pp. 472-475, 4 figs. Discusses debenzolizing by cooling, by liquid absorbents, and by solid absorbents, and plants used, and gives comparative results.

The New Raschig Process for the Recovery of Benzol (Das neue Benzolgewinnungsverfahren von Raschig), B. Neumann. Glückauf, vol. 60, no. 5, Feb. 2, 1924, pp. 69-75, 2 figs. Also Iron & Coal Trades Rev., vol. 108, no. 2923, Mar. 7, 1924, p. 392, 2 figs. Describes new vacuum process and points out advantages resulting from its use.

Sulphonation. The Sulfonation of Benzene, A. W. Harvey and G. Stegeman. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 842-845, 7 figs. Study of sulphonation of benzene resulting from passage of vaporized benzene through sulphuric acid.

Vapor, Specific Volume. See VAPORS, Specific Volumes.

Washing. Direct and Indirect Cooling of Benzol Wash Oil (Ueber direkte und indirekte Waschölkühlung), H. Kiemstedt. Gas- u. Wasserfach, vol. 67, no. 28, July 12, 1924, pp. 406-407. Principles of direct and indirect cooling are compared; direct coolers are simpler in design, more efficient, and have lower capital and maintenance charges than indirect coolers, but they require large volume of cooling water from which heat is not recovered, calculations are made showing saving of steam in indirect process which far outweighs its disadvantages; recommends combination of the two systems.

Direct Cooling of Benzol Wash Oil (Unmittelbare Kühlung des BenzolWaschöls), T. Werner. Gas- u. Wasserfach, vol. 67, no. 5, Feb. 2, 1924, pp. 49-51, 4 figs. Benzol wash oil, from which benzol has been distilled, is fed into top of closed cooling tank and flows down over series of shelves to bottom of cooler; stream of water is there introduced and flows on top of heavier oil in opposite direction to top of cooler; special pipes are provided to prevent water from mixing with oil; apparatus is said to be cheaper to build, more economical, and to have longer life than indirect coolers, and to be more efficient in action; water does not extract any constituents of value from wash oil.

Lignite Paraffin Oil, a Benzol Wash-Oil Not Requiring Regeneration (Braunkohlenparaffinöl ein nicht regenerierbedürftiges Benzolwaschöl), A. Thau. Gas- u. Wasserfach, vol. 67, no. 13, Mar. 29, 1924, pp. 163-165. Fraction of lignite tar containing paraffin wax, after removal of wax, forms very suitable solvent for benzol recovery, in place of customary "heavy oil" from coal tar; oil retains its fluidity over long periods, does not require regeneration by distillation, and separates sharply from water; sharp separation of the oil from water renders possible use of direct-water cooling.

Limitation of the Consumption of Wash Oil in a Benzol Plant, and Cause of the Thickening of the Oil (Wodurch wird der Waschölverbrauch einer Benzolanlage bedingt und welche Ursachen führen zur Verdickung des Oeles?). Gas- u. Wasserfach, vol. 67, no. 6, Feb. 9, 1924, pp. 67-69, 2 figs. Experiments on full-sized benzol recovery plant show that loss of wash oil occurs during its treatment with steam to recover benzol; this loss is made up of any oils with boiling point below 240 deg., naphthalene, and phenols; it is therefore of advantage to have these constituents as low as possible in fresh oil, with proviso that initial naphthalene content is not less than 10 per cent; explains cause of thickening and tells how to avoid it.

Operation of Benzol Washer (Aus der Praxis der Benzolwäsche), E. Schumacher and J. Becker. Gas- u. Wasserfach, vol. 67, no. 39, Sept. 27, 1924, pp. 583-585. Points out that gas passing to benzol washer should be well cooled and free from tar and ammonia, and as far as possible from naphthalene; fresh wash oil must not contain anthracene, and naphthalene content ought not to exceed 12 per cent; throughout process careful temperature control is necessary.

Thickening of Benzol Wash Oil (Beiträge zur Kenntnis des Verdickungsvorganges bei dem Benzol-Waschöl), R. Kattwinkel. Gas- u. Wasserfach, vol. 67, no. 32, Aug. 9, 1924, pp. 474-475. Examination of incrustation which forms on heating elements of wash-oil heaters indicates that thickening is due to polymerization under action of heat and sulphuric acid; formation of sulphuric acid is due to oxidation of hydrogen sulphide by air present in wash oil, any iron salt present promoting oxidation; sulphonic acids are also produced.

BENZYL ALCOHOL

Manufacture. The Manufacture of Benzyl Alcohol. Chem. Trade Jl. & Chem. Engr., vol. 75, no. 1961, Dec. 19, 1924, pp. 733-734. Details of a British war-time process.

BERYLLIUM

Extraction from Beryl. Extraction of Beryllium from Beryl, E. A. Engle and B. S. Hopkins. Eng. & Min. Jl.-Press, vol. 118, no. 2, July 12, 1924, pp. 49-50. Describes method of sintering with sodium fluosilicate followed by solution in water. Beryl is a beryllium aluminum silicate with beryllium content varying from 10 to 14 per cent beryllium oxide.

Metallurgy. The Metallurgy and Alloys of Beryllium, E. A. Engle and B. S. Hopkins. Am. Electrochem. Soc.—Advance Paper, no. 17, for meeting Apr. 24-26, 1924, pp. 255-262. Critical study of electrometallurgy of beryllium. See also Advance Paper no. 18, pp. 263-268, 1 fig., entitled, The Electrolytic Production of Beryllium, B. S. Hopkins and A. W. Meyer.

BISMUTH

Alloys. On the Thermo-Electric Properties of Bismuth Alloys, with Special Reference to the Effect of Fusion. With a Note of Thermo-Electric Re-Inversion, C. R. Darling and R. H. Rinaldi. Physical Soc. of Lond.—Proc., vol. 36, part 4, June 15, 1924, pp. 281-287, 4 figs. Investigation to obtain new data regarding thermoelectric properties of alloys in liquid state and note changes in region of melting point.

Determination in Copper Precipitate. The Determination of Bismuth in Copper Precipitate. Metal Industry (Lond.), vol. 25, no. 18, Oct. 31, 1924, pp. 417-418. Particulars of method employed by author.

Electrolytic Determination. Rapid Electrolytic Determination of Bismuth and Its Use in the Analysis of Bismuth Ores and Products (Die Bestimmung des Wismuts durch Schnellelektrolyse und ihre Anwendung bei der Analyse von Wismuterzen und -produkten), K. Seel. Zeit. für angewandte Chemie, vol. 37, no. 30, July 24, 1924, pp. 541-543. Accurate method for determining bismuth, in presence or absence of lead, based on methods of Sand and A. Fischer, using controlled cathode potential; method has been tested with number of bismuth ores.

Spain. Production of Bismuth in Spain (España, productora de bismuto), A. Carbonell and Trillo-Figueroa. Ingeniería y Construcción, vol. 2, no. 19, July 1924, pp. 310-313. Discusses production in Cordoba district, analyses, prices, and prospects.

BITULOID. See COAL DUST, Treatment.

BITUMENS. See BITUMINOUS SANDS.

BITUMINOUS SANDS

Alberta, Canada. Bituminous Sands of Northern Alberta, S. C. Ells. Can. Min. Jl., vol. 45, nos. 13 and 17, Mar. 28 and Apr. 25, 1924, pp. 298-304 and 400-403, 5 figs. Also Petroleum Wld., vol. 21, nos. 283 and 287, Apr. and Aug. 1924, pp. 152 and 328-336, 1 fig. General description of area underlaid by bituminous sand; general description of deposits; prospecting; sampling and laboratory determination; characteristics of sand; use of bituminous materials for pavement construction; recovery of hydrocarbons and bitumen; production of petroleum. Pub. with permission Ottawa, Can., Dept. Mines.

Bitumen Separation from. Making Bituminous Sands of Practical Use, K. A. Clark. Contract Rec., vol. 38, no. 44, Oct. 29, 1924, pp. 1072-1076, 1 fig. Scientific and Indus. Research Council of Alberta has conducted and operated a plant for separation of bitumen; details of scheme and cost of process.

BLAST-FURNACE GAS

Cleaning. Dry Cleaning Blast Furnace Gas by Filtration Through Flue Dust, Geo. B. Cramp. Blast Furnace & Steel Plant, vol. 12, no. 2, Feb. 1924, pp. 101-103, 2 figs. Careful tests and investigation of conditions at each individual blast furnace necessary in determining area of dry cleaner.

Electric Cleaning of Blast Furnace Gas. Iron Age, vol. 114, no. 9, Aug. 28, 1924, pp. 502-503. Analysis of losses incurred by releasing latent and sensible heat of gases. Comparison with manufactured gas and its sales value.

Electrical Cleaning of Blast Furnace Gases, N. H. Gellert. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 423-426. Discussion of different methods.

Experiments With Electric Cleaning of Gas at Lübeck Blast Furnaces (Versuche an einer elektrischen Gasreinigung beim Hochofenwerk Lübeck), J. Dreher. Stahl u. Eisen, vol. 44, no. 30, July 24, 1924, pp. 873-879, 6 figs. Discusses experimental plant of Lurgi type and gives results of tests showing that cleaning of blast-

furnace gas by means of electricity is possible technically even under unfavorable circumstances. Difficulty of dust question, general conclusions as to advantages of electric cleaning over previous systems.

Practical Tests on a Blast-Furnace-Gas Wet-Cleaning Plant (Betriebsversuche an einer Hochofengas-Nassreinigungsanlage), M. Steffes. Stahl u. Eisen, vol. 44, no. 4, Jan. 24, 1924, pp. 92-96, 14 figs. Results of six-day tests; determination of best operating conditions; degree of purification; water and power consumption and efficiency of different plants.

Purifying Blast Furance Gas by the Dry Process. Eng. Progress, vol. 5, no. 4, Apr. 1924, pp. 65-67, 2 figs. Properties of blast-furnace gas; development of gas cleaning; dry-cleaning process.

Recent Results of Electric Gas Purification (Neuere Ergebnisse mit der elektrischen Gasreinigung), R. Durrer. Stahl u. Eisen, vol. 44, no. 28, July 10, 1924, pp. 809-814, 9 figs. Describes plant for electric purification of iron blast-furnace gas at Dillinger Iron Works and results obtained.

Removing Dust from Blast Furnace Gases, N. H. Gellert. Iron Age, vol. 113, no. 6, Feb. 7, 1924, pp. 422-425, 1 fig. Electrolytic process installed by Colorado Fuel & Iron Co.; corona discharge produces ionized field which precipitates dust. (Abstract.)

The Cleaning of Blast Furnace Gas, G. M. Hohl. Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1563-1564. Savings from clean gas; preliminary cleaning; heat saved by dry cleaned gas; flue dust as washer sludge. (Abstract.)

See also PRECIPITATION, Cottrell Process.

Composition. Composition of Blast-Furnace Gas (Sur la composition des gaz de hauts fourneaux), J. Seigle. Académie des Sciences—Comptes Rendus, vol. 178, no. 17, Apr. 22, 1924, pp. 1426-1429, 2 figs. With aid of graphic presentation author discusses possible proportions of carbon dioxide and monoxide in gas at mouth of blast furnace, Gruner's ideal point, extreme values of volume of oxygen reduced per kg. of carbon, possible compositions of gas produced when dry air containing 20 per cent of oxygen, or air enriched in oxygen, or pure oxygen is used for blast, etc.

Control Apparatus. Control Tests of Blast-Furnace-Gas Apparatus: Air Heaters, Gas Engines and Boilers (Regulierversuche an den Hochofengasverbrauchern: Winderhitzer, Gasmaschinen und Kessel), M. Steffes. Wärme, vol. 47, no. 43, Oct. 24, 1924, pp. 503-506, 11 figs. Discusses excess air and efficient combustion; characteristics of combustion; gives in diagrams and tables results of tests carried out.

Economical Use. Blast-Furnace Gas Economy in German Iron Works, K. Rummel. Iron & Coal Trades Rev., vol. 109, no. 2943, July 25, 1924, pp. 156-157, 6 figs. Discusses economic uses of gases, gas-fired vs. coal-fired boilers, gas-engine power stations vs. steam-turbine power stations with gas-fired boilers, waste-heat boilers behind gas engines, etc. (Abstract.)

Purification. Effect of Method of Purification on the Value of Blast-Furnace Gas (Influence du mode d'épuration sur la valeur du gaz de haut-tourneau), E. Lavandier and M. Gangler. Revue de Métallurgie, vol. 29, no. 9, Sept. 1924, pp. 501-512, 5 figs. Results of experiments show that wet purification reduces temperature of gas, but in spite of this loss thermic potential of cooled gas is superior even to that of gas escaping from throat (110 to 130 deg. cent.).

Steel Works. Economical Use of Blast-Furnace Gas in Steel Works (Die Hochofengaswirtschaft auf Eisenhüttenwerken), K. Rummell. Zeit. des Vereines deutscher Ingenieure, vol. 44, no. 68, Nov. 1, 1924, pp. 1137-1144, 12 figs. Heat and energy distribution; distribution of blast-furnace gases; steam-turbine plant with gas or coal firing; gas-engine power plants and steam-turbine plants with gas firing; waste-heat boiler for gas engines; distribution and storage of gas; measures for obtaining good gas distribution.

Utilization. See STEEL WORKS, Blast-Furnace-Gas Utilization.

BLAST FURNACES

Air Heaters. Results of Operations With Stone Filler at the Sophien Works of Burderuss Iron Works (Ueber die Betriebsergebnisse mit Semmelsteinen auf der Sophienhütte der Buderusschen Eisenwerke in Wetzlar a. d. Lahn), K Harnickell. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Hochofenausschuss), no. 66, May 10, 1924, 8 pp., 9 figs. Details of tests carried out with air heater having a stone filler or checker work 5.5 m. in height (consisting of small pieces of hollow pipe), considerably increasing heating surface.

The Development of Air-Heater Apparatus in Blast Furnaces (Die Entwicklung der Winderhitzer-Apparate beim Hochofen), Illies. Feuerungstechnik, vol. 12, nos. 16 and 17, May 15 and June 1, 1924, pp. 133-136 and 144-145, 9 figs. The beginning of air heating in Germany; steel air-heating apparatus; introduction of checker-brick heaters; the Pfoser-Strack-Stumm process.

Blowing Engines. See BLOWERS.

British Practice. Modern British Blast Furnaces, F. Clements. Iron & Coal Trades Rev., vol. 108, nos. 2936 and 3937, June 6 and 13, 1924, pp. 959-965 and (discussion) 1024, 9 figs. Description with statistics of certain blast-furnace plants in England of a more modern type as representing position to which British design and practice has advanced.

Charge, Behavior of. The Behavior of the Charge in Blast Furnaces (Ueber das Verhalten der Beschickung in Hochofen), E. Diepschlag. Stahl u. Eisen, vol. 44, no. 16, Apr. 17, 1924, pp. 430-432. Heating and reactions; lowering and suspension of charges; wastes. See translated abstract in Iron & Coal Trades Rev., vol. 109, no. 2961, Nov. 28, 1924, p. 871.

Charging. Automatic Charging Devices for Blast Furnaces (Aufgebe-Vorrichtungen für Hochöfen), D. H. Dresler. Stahl u. Eisen, vol. 44, no. 33, Aug. 14, 1924, pp. 973-976, 8 figs. Discusses importance of uniform distribution of gases; favorable operating results with charcoal furnaces in Steiermark and Sweden; details of new devices for any desired distribution of charge; results obtained.

Progress in Charging Blast Furnaces (Fortschritte auf dem Gebiet der Hochofen-Beschickungsanlagen), J. Strudthoff. Siemens-Zeit., vol. 4, no. 9, Sept. 1924, pp. 285-296, 27 figs. Discusses developments due to change from steam to electricity and describes modern equipment such as used by Georg-Marien works for five blast furnaces.

Cowper Stoves. Progress Made in Construction and Operation of Cowpers (Progrès réalisés dans la construction et la conduite des appareils Cowper), A. Cousin. Revue Universelle des Mines, vol. 4, no. 1, Oct. 1, 1924, pp. 6-16, 3 figs. Discusses application of forced draft, and arrangement of the various parts so as to reduce heat loss by radiation, and gives results thus obtained.

Recording and Measuring Composition of Cowper Waste Gases (Zur registrierenden Messung der Zusammensetzung von Cowperabgasen), H. Pinsl. Feuerungstechnik, vol. 13, nos. 1 and 2, Oct. 1 and 15, 1924, pp. 1-2 and 14-16, 6 figs.

Discusses ambiguity of CO_2 indication, relation between gas and waste gas in incomplete combustion, and describes apparatus for automatic CO analysis made by Mono Co. of Hamburg.

Design. Interior Profiles of Modern Blast Furnaces (Die inneren Formen neuzeitlicher Hochöfen), G. Jantzen. Stahl u. Eisen, vol. 44, no. 24, June 12, 1924, pp. 681-684. Examples of old and new cross-sectional profiles; dropping of charge, conclusions for interior profile of furnace, gasification of coke and diameter of hearth, uniform sizing of elements of charge, etc.

Progress in Blast Furnaces (Considérations sur les progrès réalisés dans les hauts-fourneaux), R. Jordan. Revue de Métallurgie, vol. 21, nos. 3 and 4, Mar. and Apr. 1924, pp. 127-142 and 223-232, 20 figs. Critical examination of problems and soluntions relating to progress in blast-furnace design during last 20 years. Mar.: Charging apparatus. Apr.: Determination of cross-section; details of construction.

Progress Made in the Production of Pig Iron and the Construction of Blast Furnaces (Progrès réalisés dans la fabrication de la fonte et la construction des hauts fourneaux), J. Estour. Technique Moderne, vol. 16, no. 9, May 1, 1924, pp. 309-319, 13 figs. Notes on constitution of pig iron; manufacture and combustibility of coke; enrichment, briquetting and sintering of ore; cross-section and dimensions of blast furnaces; design; charging apparatus.

Dismantling. Dismantling Old Stacks by Blasting, J. R. Briggs. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 484-486, 5 figs. Methods employed in dismantling blast furnaces.

Electric. Gas Economics in Operation of Electric Blast Furnaces (Betrachtungen über die Gaswirtschaft im Elektrohochofenbetriebe), R. Durrer. Stahl u. Eisen, vol. 44, no. 26, June 26, 1924, pp. 748-750. Calculation of gas conditions in electric blast furnaces; proposes to conduct operations in such way that whole of gas is used in electric blast furnace itself.

Evolution. The Blast Furnace. Metal Industry (Lond.), vol. 24, no. 6, Feb. 8, 1924, pp. 129-130 and 134, 3 figs. Deals with evolution of blast furnace, with object of showing large number of variables that have to be controlled in modern practice in order to produce regular irons of both satisfactory analysis and fracture.

Fuel Economy. The Law of Heat Concentration and Fuel Economy in Blast Furnaces (La loi de la compression de la chaleur et l'économie de combustible dans les hauts fourneaux), A. Korevaar. Chimie & Industrie, vol. 11, no. 4, Apr. 1924, pp. 642-650, 2 figs. Deduction of law of heat concentration; variations of factors depending on carbon; problem of combustibility of fuels; factors depending on air and concentration of heat, and on furnace and concentration of heat; influence of conduction; analysis of fuel consumption in blast furnace; influence of inflammability of coke on fuel consumption; influence of preheating of air and of furnace diameter.

Fuel Regulation. Uniform Coking Coal Is Needed, W. Mathesius. Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1422-1424, 3 figs. Regulation of blast-furnace fuel in accordance with principles of iron-ore trade; author urges analysis as basis of accounting for furnace fuel. (Abstract.)

Gas. See BLAST-FURNACE GAS.

Gas-Engine Plant. See GAS ENGINES, Blast-Furnace Plant.

Hearth Temperature. Significance of the Hearth, P. H. Royster, T. L. Joseph and S. P. Kinney. Blast Furnace & Steel Plant, vol. 12, no. 3, Mar. 1924, pp. 154-158, 4 figs. Second series of Bur. of Mines report of data secured from experimental blast furnace, bearing on temperatures attained by slag, metal, and coke, in bottom of furnace.

Hot-Blast Stoves. Recent Experiences with Accelerated Heating of Hot-Blast Stoves, A. Wefelscheid. Fuels & Furnaces, vol. 2, no. 1, Jan. 1924, pp. 83-84, 2 figs. (Abstract.) Translated from Stahl u. Eisen, vol. 43, 1923, p. 1339.

Theory and Calculation of Hot-Blast Stoves (Zur Theorie und Berechnung der Winderhitzer), H. Gröber. Stahl u. Eisen, vol. 44, no. 2, Jan. 10, 1924, pp. 33-39, 9 figs. Discusses physical laws according to which heat circulates in stove, and describes method by which a scientifically perfect theory and calculation can be developed; results of this work are also applicable to regenerators of open-hearth furnaces and similar industrial furnaces.

Lead, Thermal Balance in. Thermal Balance in a Lead Blast Furnace, E. H. Hamilton. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 181-182, 1 fig. Results of 3-day test of furnace 48 by 160 in. in continuous operation during test; production and distribution of heat in lead blast furnace.

Linings. Reducing Lining Disintegration, H. E. Townsend. Iron Trade Rev., vol. 75, no. 3, Jan. 17, 1924, pp. 232-234, 2 figs. After two linings high in iron oxide had failed prematurely, a third lining low in iron oxide satisfactorily withstood disintegration on same furnace during 12-month campaign.

Low- vs. High-Pressure Blowing. Relation Between Cross Section of a Blast Furnace and Its Manner of Blowing (Relation entre le profil d'un fourneau et son mode de soufflage), M. Derclaye. Revue Universelle des Mines, vol. 1, no. 3, Feb. 1, 1924, pp. 146-184, 7 figs. Investigation to determine whether manner of blowing, that is, at low or high pressure, has relation to cross-section of blast furnace; characteristics of different types of blast furnaces; comparison between low-shaft and tall-shaft furnaces, showing advantages of former, with low-pressure blowing.

Mazout as Fuel for. See OIL FUEL, Mazout.

Metallic Obstructions, Formation of. Formation of Metallic Obstructions in Blast Furnaces (Sur la formation des loups dans les fours à cuve), B. Bogitch. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1177-1179. Formation of obstructions in blast furnaces in which matte is produced by melting oxides or silicates with calcium sulphate is invariably preceded by separation of melt into two layers, upper of high sulphur content and highly fusible, lower of small sulphur content and of higher melting point; latter sinks and, on cooling, forms obstruction; construction of furnace to avoid obstructions.

Modern Theories. The Practical Success of New Theories of the Blast Furnace (Ueber praktische Erfolge neuer Theorien des Hochofens). Stahl u. Eisen, vol. 44, no. 12, Mar. 20, 1924, pp. 311-317. Correspondence between K. Feist and W. Mathesius with reference to article by latter published in same journal (vol. 43, 1923, p. 873).

New Zealand. A Blast Furnace in New Zealand. Engineer, vol. 137, no. 3573, June 20, 1924, pp. 690-691, 9 figs. Particulars of plant put into operation at Onakaka, with productive capacity of 30 tons of pig iron every 24 hours.

Operation. Results of Experiments with Hollow Stone at the Sophein Works of the Buderns Iron Works in Wetzlar (Lahn) (Ueber die Betriebsergebnisse mit Semmelsteinen auf der Sophienhütte der Buderusschen Eisenwerke in Wetzlar a.d. Lahn), K. Harnickell. Stahl u. Eisen, vol. 44, no. 29, July 17, 1924, pp. 846-854, 9

figs. Communicated by Blast Furnace Committee of Verein Deutscher Eisenhüttenleute. Discusses experiments with air heaters or cowpers with stone filler, increase of resistance with height of filler; shows that even small quantities of stone filler considerably increase heating surface.

Practical Management. The Practical Management of Blast-Furnace Plants in Cleveland (Eng.), H. G. Scott. Iron & Coal Trades Rev., vol. 119, nos. 2959 and 2960, Nov. 14, and 21, 1924, pp. 784-785 and 826-828. Examines means of obtaining control of furnace; notes on the water evil; soft and dirty coke; Cleveland blast-furnace practice.

Practice, Alabama. Blast-Furnace Practice in Alabama, H. E. Mussey. Am. Inst. Min. & Met. Engrs.—Trans., no. 1376-S, Oct. 1924, 15 pp., 8 figs. In summarizing practice of district it may be stated that southern practice is disposed to carry higher stove temperatures than northern plants, also, blast volume for given size of stack is higher; increased production may be expected as result of even larger furnaces than those now classified as large.

Blast Furnace Practice in Birmingham District, R. H. Ledbetter. Iron Age, vol. 114, no. 18, Oct. 30, 1924, pp. 1128-1130. Number of furnaces and their features; cleaning gas; Bessemer iron from scrap. (Abstract.) Paper read before Am. Iron & Steel Inst.

Regenerators, Reversing. Theoretical Considerations Respecting Certain Features in the Working and Efficiency of Reversing Regenerators, J. Seigle. Iron & Steel Inst.—Advance Paper no. 14, for meeting May 1924, 47 pp., 28 figs. Author seeks to show that certain relations which have been accepted in metallurgical investigations on influence of mass of refractory bricks of checkerwork, and on amount of calories which are exchanged per sq. m. of heated surface, have been somewhat too roughly approximated.

Slag. See SLAG, Blast-Furnace.

Stock Descent in. Effect of Coke Combustibility on Stock Descent in Blast Furnaces, P. H. Royster and T. L. Joseph. Am. Inst. Min. & Met. Engrs.—Trans. no. 1307-S, Mar. 1924, 10 pp., 3 figs. Stock descent in blast furnace is affected by size of combustion zone which varies inversely with coke combustibility; predominating tendency is for coke to feed downward into space where combustion is taking place; discusses three types of combustion.

Superoxidized Air, Use of. The Use of More or Less Superoxidized Air in Blast Furnaces (Emploi d'air plus ou moins suroxygéné au haut-fourneau), J. Seigle, Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 260-264, 6 figs. Remarks based on note by M. Derclaye published in same journal, Dec. 1923.

Tuyeres. Number, Form, Diameter, and Position of Blast-Furnace Tuyeres. Effect of Their Number on the Efficiency of Blast Furnaces (Nombre, forme, diamètre et position des tuyères de hauts fourneaux. Influence du nombre des tuyères sur la marche du fourneau), M. M. Derclaye. Revue de Métallurgie, vol. 21, nos. 6, 7 and 8, June, July and Aug. 1924, pp. 315-337, 396-421, and 450-461, 14 figs. Calculation of tuyeres for any blast furnace; considerations limiting number of tuyeres, position of tuyeres round crucible, etc. Determination of total and partial heat balances. New theory of Mathesius and its application to heat balances.

BLASTING

Aluminum Cap. A New Aluminium Blasting Cap, W. H. Pay. Can. Min. Jl., vol. 45, no. 25, June 20, 1924, pp. 604-605, 1 fig. Aluminum detonator is superior to copper detonators. Remarkable features of cap is its moisture-resisting qualities; in point of fact, it is practically waterproof.

Coal Mines. See COAL MINING, Blasting.

Concrete Foundations. Blasting in Closed Spaces (Sprengungen in geschlossenen Räumen). Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 19, no. 9, Sept. 1924, pp. 139-140. Discusses application of disruptive explosives for removing machinery and other foundation work in manufacturing plants.

Drilling and. See QUARRIES, Drilling and Blasting.

Electric. Electric Blasting in Mines (Die elektrische Zündung im Bergbau), W. Vogel. Elektrischer Betrieb, vol. 22, no. 5, Mar. 10, 1924, pp. 37-40, 8 figs. Electric ignition of blasts in mines is accomplished almost exclusively by glow-wire detonators, any number of which may be connected in series for simultaneous shots; parallel connection of detonators is less and may cause unexploded shots; methods used of connecting individual blasts; in mines with electric traction and rail return, blasting accidents caused by erratic return currents are liable to occur; recommendations for prevention of mishaps.

Explosives. See EXPLOSIVES.

Hercoblasting. Hercoblasting, J. Barab. Explosives Engr., vol. 2, no. 2, Feb. 1924, pp. 41-43 and 48, 3 figs. Experience of a number of explosives users who have profitably employed this method on various kinds of work.

Hydraulic Cartridge. Hydraulic Cartridge Does Away with Explosives in Construction Operations. Contract Rec. & Eng. Rev., vol. 38, no. 17, Apr. 23, 1924, pp. 396-397, 1 fig. Details of new British machine, known as "hydraulic mining cartridge," especially applicable to removal of heavy concrete where effect of explosives cannot be accurately controlled. Wide range of usefulness.

Liquid-Air. Electric Firing of Liquid Air Cartridges (Die elektrische Zündung von Sprengluftpatronen), L. Lisse. Zeit. für das gesamte Schiess- und Sprengstoffwesen, vol. 19, no. 5, May 1924, pp. 65-68, 20 figs. Discusses electric time-firing apparatus and firing of shot holes.

Liquid Air Blasting Process (Das Sprengluftverfahren), F. v. Rössing. Bauingenieur, vol. 5, no. 12, June 30, 1924, pp. 359-362, 6 figs. Discusses manufacture of liquid air, preparation and soaking of cartridges, electric shot firing, efficiency and economy of blasting.

Present Method of Liquid Air Blasting in Germany (Das gegenwärtige Sprengluftverfahren in Deutschland), A. Stettbacher. Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 19, no. 9, Sept. 1924, pp. 129-136, 21 figs. Discusses liquid-air plants, vessels for transportation, cartridges, shot firing, accidents, etc.

Liquid-Oxygen. Economical Liquid Oxygen Blasting, F. W. O'Neil. Cement & Eng. News, vol. 36, no. 8, Aug. 1924, pp. 19-20 and 42-43, 7 figs. Two successful demonstrations in Pennsylvania quarry show value of new explosive.

Liquid-Oxygen Explosives in Epoch-Making Blast, F. W. O'Neil. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 913-916, 8 figs. 4500 tons of rock lifted in Pennsylvania quarry with less than 800 lb. of new explosive.

The Effect of the Temperatures of Liquid Oxygen Explosives on Cordeau-Bickford, D. B. Gawthrop. U. S. Bur. Mines—Reports of Investigations, serial no. 2619, June 1924, 5 pp. Results of experiments show that Cordeau-Bickford can be used with liquid oxygen as with other explosives.

Methods. Blasting as a Fine Art, W. Weiss. Explosives Engr., vol. 2, no. 9, Sept. 1924, pp.

306-308, 7 figs. Describes three examples of problems the explosives engineer is called upon to solve, viz., blasting of stone bridge situated close to occupied houses, blasting of iron blocks for shipment, and quarry chamber shooting.

Quarry. Loading Well Drill Holes in Quarry Blasting, J. B. Stoneking. Rock Products, vol. 27, no. 18, Sept. 6, 1924, pp. 33-35, 1 fig. Describes how to compute drill-hole spacing, size and charge.

Record L. O. X. Blast at Pennsylvania Quarry, F. W. O'Neil. Eng. & Min. Jl.—Press, vol. 118, no. 1, July 5, 1924, pp. 16-18, 3 figs. 4500 tons of rock were broken with 721 lb. of liquid oxygen explosive in 12 holes on 30-ft. bench.

The Largest Blast Ever Made in America, H. Petersen. Explosives Engr., vol. 2, no. 4, Apr. 1924, pp. 115-117, 5 figs. Methods followed in blast made at Lakeside quarry of Southern Pacific Railroad Co., 47 miles west of Ogden, Utah; satisfactory results accomplished at low cost.

World's Record Quarry Blast! Rock Products, vol. 27, no. 10, May 17, 1924, pp. 21-25, 12 figs. Notes regarding largest non-accident dynamite explosion in world which was carried out at million-dollar crushed stone quarry of Blue Diamond Co., in Hoag's Canyon, near Corona, Cal., to reduce menace of high cliffs to quarry operations and obtain a maximum volume of rock in a single shot for commercial purposes. 182 tons of explosives yielded 2,000,000 tons of rock.

Safe Firing of Charges. The Safe Firing of Blasting Charges in an Inflammable Atmosphere, E. Audibert. Colliery Guardian, vol. 128, nos. 3333 and 3335, Nov. 14 and 28, 1924, pp. 1251-1252 and 1374-1375, 6 figs. Nov. 14: Mechanism of explosive reactions; detonation of nitroglycerine. Nov. 28: Gases produced by detonation; mechanism of decomposition; application of results. Translated from Industrie Minérale.

Shales. Proper Blasting Procedure, E. Godfrey. Contract Rec. & Eng. Rev., vol. 38, no. 8, Feb. 20, 1924, pp. 179-180. How to drill and shoot holes in shale that is too hard for easy digging; correct arrangement of holes.

Tunnels. Delay Electric Blasting Caps in Tunnel-Driving, L. R. Watts and W. R. Ellis. Explosives Engr., vol. 2, no. 8, Aug. 1924, pp. 259-265, 13 figs. Describes methods developed during past five years in Sierra Nevada mountains.

BLEACHING

Ozone in. See OZONE, Industrial Application.

Process. The Bleaching Process (Ueber den Bleichvorgang), P. Waentig. Zeit. für angewandte Chemie, vol. 37, no. 8, Feb. 21, 1924, p. 97. Author considers explanation put forward by Schwalbe and Wenzl to account for greatly increased rate of bleaching obtained when nitrogen or air-free carbon dioxide is passed through material under treatment is insufficient, and process appears to need further investigation.

BLEACHING POWDER

Explosions. Bleaching Powder Explosions, A. H. Gill. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 577-578. Investigation of cause of explosions shows that oxygen is evolved from bleaching powder under ordinary commercial conditions in 12-oz. cans and larger air-tight packages, in quantities sufficient to produce serious explosions.

BLOWERS

Blast-Furnace, Reconstruction of. Reconstruction of Blast-Furnace Blowing Engines, W. Benedict. Powder, vol. 60, no. 8, Aug. 19, 1924, pp. 290-291, 4 figs. By substitution of plate spring valves for heavy rotary valves and gearing, speed was increased from 75 to 95 r.p.m. and capacity correspondingly increased on six 3200-hp. twin blowing engines.

Diesel-Engine Scavenging. See DIESEL ENGINES, Scavenging Blowers for.

Mine Ventilation. Symposium: Mine Ventilation, S. de Smidt and H. Pirow. Chem., Met. & Min. Soc. S. Africa—Jl., vol. 24, no. 9, Mar. 1924, pp. 213-223 and (discussion) 224-228, 7 figs. Notes on Venturi blowers.

Regulations. Report of Committee on Blower Systems. Nat. Fire Protection Assn.—Advance Publication, 1924, 13 pp., 6 figs. Regulations for installation of blower and exhaust systems for heating and ventilating systems, systems for removal of flammable vapors, and stock and refuse-conveying systems, presented for final adoption.

Turbo. Turbo-Blowers for the New Royal Dutch Works, P. Ostertag. Iron & Coal Trades Rev., vol. 108, no. 2917, Jan. 25, 1924, pp. 133-134, 7 figs. Describes construction and enumerates results of tests carried out on one of three blast-furnace blowers delivered by Escher, Wyss & Co., Zurich, Switzerland, to order of Kon. Ned. Hoogovens & Staalfabricken at The Hague. Translated from Schweizer Bauzeitung.

BLUEPRINTS. See DRAWINGS, Blueprint System.

BOARDWALKS. See BEACHES, Coney Island, N. Y., Improvements.

BOAT LIFTS. See CANALS, Boat Lifts.

BOATS

[See also SHIPS.]

River. River Boats for Internal Navigation in Italy (Barconi e rimorchiatori per la navigazione interna in Italia), A. Bassi. Ingegneria, vol. 3, no. 7, July 1, 1924, pp. 228-234, 3 figs. Details of design and construction of boats, barges, etc., of 600 ton load, dimensions, equipment and cost of upkeep, transportation of freight, etc.

BOILER EXPLOSIONS

British Legislation. Steam Boiler Explosions. Colliery Guardian, vol. 128, no. 3324, Sept. 12, 1924, pp. 674-675. Abstract of memorandum prepared by C. E. Stromeyer, chief engineer of Manchester Steam Users' Assn. for Prevention of Steam Boiler Explosions, dealing exclusively with steam boilers clauses of new British Factories Bill.

Germany, 1922. Boiler Explosions in Germany during 1922 (Die Dampfkesselzerknalle im Deutschen Reiche während des Jahres 1922 mit einem Nachtrage des Jahres 1921). Zeit. des Bayer. Revisions-Vereins, vol. 28, no. 1-2, Jan. 31, 1924, pp. 4-7. Statistical data on nature and causes of explosions, including report on one explosion which occurred in December, 1921.

Locomotives. Boiler Explosion Caused by Failure of Crown Sheet. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 76-78, 4 figs. Particulars regarding Chicago & North Western locomotive No. 2455 explosion at Belle Plaine, Iowa, July, 1923; indicates importance of equipping boilers with water columns to check water level.

Low Water Causes Fatal Crown Sheet Explosion. Boiler Maker, vol. 24, no. 5, May 1924, pp. 136-138, 3 figs. Report of Bur. of Locomotive Inspection investigation of A. T. & S. F. Locomotive 1455 disaster which occurred on Feb. 13, 1924.

Marine Boilers. Boiler Explosion on the Cross-Channel SS. "Engadine." Mar. Engr., vol. 47, no. 565, Oct. 1924, pp. 367-370 and 373, 2 figs. Extracts from report of formal investigation of Board of Trade into cause of accident, which occurred Apr. 11, 1924, in boiler room of vessel owned by South Ry. Co.

BOILER FEEDWATER

Air Separator. The Hickman Air Separator. West. Machy. World, vol. 15, no. 1, Jan. 1924, p. 42, 1 fig. Describes simple mechanical device which extracts air bubbles from feedwater just after water has passed through feedwater heater, practically eliminating interior corrosion.

Analysis. Standard Methods of Water Analysis. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 559-561. Appendix E, report of Water Service Committee, Am. Ry. Eng. Assn., submitted for publication in manual. Covers only method of analysis directly applicable to boiler waters.

Circuits. See CENTRAL STATIONS, Boiler-Feedwater Circuits.

Concentration Control. Systematic Control of Boiler-Water Concentration, C. M. Ware. Power, vol. 60, no. 17, Oct. 21, 1924, pp. 650-651, 2 figs. Describes three methods, any one of which can be applied according to its relative merit for plant concerned.

Conditioning. The Prevention of Scale Formation by Boiler Water Conditioning, R. E. Hall, C. Fischer and G. W. Smith. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 312-327, 18 figs. Discusses conditioning of boiler water based on sulphate concentration and pressure of boiler water, removal of precipitated sludge and suspended insoluble matter, prevention of droplets (moisture) entrained in steam.

Examination. The Necessity of Testing Purified Boiler Feedwater (Ueber die Notwendigkeit der Prüfung des gereinigten Kesselspeisewassers), Schweisgut. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 10, May 31, 1924, pp. 83-85. Practical examples are cited to show purpose and necessity of feedwater examination.

Feed Regulation. Boiler Feed-Water Regulation. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 44-51, 6 figs. Describes several designs of regulators.

Foaming. Foaming of oiler Water, C. W. Foulk. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1121-1125. Advances theory according to which soluble salts in water, by creating difference in concentration between surface and mass of liquid, make possible formation of films; experiments with various mixtures in flasks showed no exceptions to this theory.

Heaters. See FEEDWATER HEATERS, Locomotive.

Heating. Savings Effected by Heating Boiler Feed Water, W. A. Taller. Nat. Engr., vol. 28, no. 7, July 1924, pp. 322-324. Value of feedwater heaters and economizers in utilizing waste heat.

See also Regenerative Feed Heating.

Heating by Extraction. Economy Characteristics of Stage Feedwater Heating by Extraction, E. H. Brown and M. K. Drewry. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 118-122, 5 figs. Authors point out influence of each possible factor in computations, present practical method for computing extraction cycles, and deal with various factors affecting turbine-room economy. (Abridged.)

Economy Secured by Heating Feed Water, C. E. Colborn. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 946-947, 3 figs. Recent practice has shown that improvement in plant economy can be obtained by feedwater heating with bled steam.

The Heating of Boiler Feedwater by Means of Steam Extracted from the Turbine (Réchauffage de l'eau d'alimentation de la chaudière au moyen de vapeur extraite de la turbine), A. Schlag. Revue Universelle des Mines, vol. 67, no. 1, Jan. 1, 1924, pp. 7-18, 6 figs. Calculation of actual saving of heat effected by this method.

Measurement. Measuring the Feed Water in a Boiler Test, J. W. Gavett, Jr. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 567-568, 3 figs. Discusses arrangement of apparatus for measuring feedwater; necessary apparatus; best method of computing quantity of water from readings of head.

Oil Removal. Purification of Feed Water Containing Oil, C. E. Joos. Power Plant Eng., vol. 28, no. 24, Dec. 15, 1924, pp. 1244-1247. Sources of contamination; effect of foaming and priming; corrosion; methods of detection and estimation; methods of elimination.

Removal of Oil from Condensate, A. E. Walden. Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 594-595. Tests indicate successful use of steam separators and filters in preparing condensate for boiler feed.

Pumps. See PUMPS, Boiler-Feed.

Regenerative Feed Heating. See SUPERHEATED STEAM, Regenerative Feed Heating by.

Regulators. Automatic Feed Water Regulation. Eng. & Boiler House Rev., vol. 38, nos. 1, 3, and 5, July, Sept., and Nov. 1924, pp. 14-18, 104-106, and 198, 201 and 203, 11 figs. Describes principal automatic regulators in use, and points out economic importance. Crosby feed regulator.

Mechanical Control of Boiler Feed Water, C. E. Wolff. Power Plant Eng., vol. 28, no. 5, Mar. 1, 1924, pp. 277-278, 4 figs. Points out that diverse demands of engineers in feedwater-regulation practice are being met by modern regulators, and sets forth requirements which must exist in regulators for effective results.

System, Sugar Refinery. Boiler Feed System in Sugar Refinery, Claude C. Brown. Power Plant Eng., vol. 28, nos. 8 and 9, Apr. 15 and May 1, 1924, pp. 428-431, 1 fig., and 482-485, 4 figs. Apr. 15: Analysis of feedwater and condensate return system; general layout of feedwater system; regulations. May 1: Freshwater make-up, storage systems, filters, softeners, testers.

Temperature, Increasing. Effect of Increased Feed Water Temperature, J. R. Darnell. Power Plant Eng., vol. 28, no. 2, Jan. 15, 1924, pp. 131-132. Boiler efficiency is not increased by raising feedwater temperature; effect is to give boiler less work to do.

Testing. Experiences in Checking Boiler Feedwaters (Erfahrungen bei der Kontrolle von Kesselspeisewässern), M. O. Wurmbach. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 14 and 15, July 31 and Aug. 15, 1924, pp. 123-126 and 135-138, 6 figs. During periodic examinations extending over months a periodic increase in hardness was found, caused by reabsorption of CO_2 on stoppage of boiler, which solved part of boiler scale to basic carbonate, mixing with water. Discusses methods for determining hardness and recommends that by Blacher for waters of unknown composition.

Treatment. Boiler Corrosion and the Treatment of Boiler Feed Water, A. Winstanley. Colliery Guardian, vol. 127, nos. 3289 and 3290, Jan. 11 and 18, 1924, pp. 90-91 and 158. Pitting; lime-soda process for pitting; general thinning; grooving, and other mechanical damage; treatment of boiler feedwater. From paper read before Past and Present Min. Students' Assn.

Boiler Feedwater (Kesselspeisewasser), Wimmelmann. Bergbau, vol. 37, nos. 8, 9 and 10, Apr. 17, May 1 and 15, 1924, pp. 141-144, 173-176, and 205-208, 8 figs. Describes in detail the various methods to prevent or remove boiler scale, also a number of devices used for this purpose.

Electrolytic Boiler Protection (Der Elektrolytkesselschutz), H. Manz. Wärme, vol. 47, nos. 28 and 29, July 11 and 18, 1924, pp. 325-327 and 338-340. Discusses results of experiments with Renger-Fuhrmann process on number of boiler plants showing that out of twenty cases only four were satisfactory. Suggests combination of electrolytic with chemical process.

Feed Water for Efficient Boiler Operation, M. F. Newman. Combustion, vol. 10, no. 1, Jan. 1924, pp. 39-40. A principle of treating boiler feedwater to reduce to a minimum difficulties arising from impurities in water.

Feed Water Treatment. Eng. & Boiler House Rev., vols. 37 and 38, nos. 8, 9 and 1, Mar., Apr. and July 1924, pp. 281-282, 323-324, and 5-7, 1 fig. Notes on recent papers read before Instn. Mech. Engrs. Boiler feedwater and scaling; present-day practice with lime-soda process; zeolite process.

Investigation of Boiler-Water Treatment, R. E. Hall. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 843-845, 2 figs. Boiler-water conditioning viewed from standpoint of chemical equilibria of inorganic salts; details of tests, 42 days with permanently hard water and 76 days of temporary hard water.

The Boiler-Water Problem, W. M. Booth. Power, vol. 60, no. 1, Sept. 9, 1924, pp. 410-412. Outlines in non-technical language some of the principal things engineer should consider in insuring a supply of suitable feedwater for his boilers.

The Chemistry of Interior Boiler Water Treatment, E. M. Partridge. Am. Water Wks. Assn.—Jl., vol. 12, no. 3, Nov. 1924, pp. 288-294. Cause and prevention of scale in steam boilers by use of compound.

The Cost of Boiler Feed Water, J. T. Beard, 2nd. Paper, vol. 33, no. 16, Feb. 7, 1924, pp. 5-7, 2 figs. Cost of impurities in boiler feedwater, and notes on methods of treatment, including softening.

The Scientific Treatment of Boiler-Water, Introducing the Colloidal Aspect, H. W. Bannister. North of England Inst. Min. & Mech. Engrs.—Trans., vol. 74, part 4, June 1924, pp. 113-120. Discusses problems and suggests remedies in treatment of feedwater; application of principles of colloid chemistry to feedwater treatment.

The Sphere of Boiler Compound—Colloid Chemistry and Scale Prevention, E. M. Partridge. Power, vol. 60, no. 2, July 8, 1924, pp. 56-59, 3 figs. Points out as erroneous the reasoning on which attitude that employment of boiler compound should be limited to treatment of water of but low degrees of hardness is based, and shows why hardest waters may sometimes be treated by boiler compound with better results than if an external method of treatment be adopted.

Use of Linseed as Water Softener (Emploi de la graine de lin comme anti-tartre), M. Courdurier. Chaleur et Industrie, vol. 5, no. 51, July 1924, pp. 325-329, 3 figs. Test carried out by French Navy; linseed is boiled in steam and used for reducing salt content of sea water; details of process and apparatus used.

Water Purification at the Gennevilliers Central Station (L'épuration de l'eau d'appoint à la Centrale de Gennevilliers), Chaleur et Industrie, vol. 5, no. 50, June 1924, pp. 277-279, 4 figs. Details of feedwater treatment and apparatus used, based on two years' practical working and giving entire satisfaction.

Water Treatment for Continuous Steam Production, R. E. Hall. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 810-817, 13 figs. Particulars regarding investigation in which water treatment is considered in its relation to prevention of scale formation, corrosion control, delivery of dry steam, and maintenance of minimum blow-down.

See also LOCOMOTIVES, Feedwater Treatment; WATER TREATMENT, Methods.

BOILER FIRING

Anthracite-Burning. Burning Anthracite in a Modern Steam Plant, E. E. Rowe. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 292-294, 4 figs. Shows special design of furnace at Amsterdam plant of Adirondack Power & Light Corpn. and gives results of series of boiler tests with anthracite.

Anthracite Slush. See STEAM POWER PLANTS, Anthracite-Slush-Burning.

Coal vs. Oil Fuel. Fuel Oil or Coal for Steam Generation, F. H. Daniels. Steam Coal Buyer, vol. 1, no. 2, Feb. 1924, pp. 11-15, 8 figs. Shows that fuel oil cannot compete with coal for generation of steam in land plants except for short periods of time.

Down-Draft Furnace. Firing a Hand-Fired Down-Draft Furnace, J. F. Barkley. U. S. Bur. Mines—Reports of Investigations, no. 2609, May 1924, 6 pp. Also Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 890-891. Method used and results obtained in testing a hand-fired down-draft furnace at a plant in Wash., D. C., in order to determine method of firing that would give best results with a minimum of smoke.

Excess-Air Calculation. Calculation of Excess Air, P. Verbeck. Combustion, vol. 10, no. 1, Jan. 1924, p. 61. Method of calculating excess air in boiler installations. Translated from Chemiker Zeitung, Aug. 9, 1923, pp. 681-682.

Flue-Gas Control. See FLUE-GAS ANALYSIS.

Gas. Gas Firing-Flame Control, A. C. Ionides, Jr. Gas Jl., vol. 166, no. 3179, Apr. 16, 1924, pp. 176-178 and (discussion) 178-179, 2 figs. See also Gas Wld., vol. 80, no. 2073, Apr. 12, 1924, pp. 334-336 and (discussion) 336-337, 1 fig. Author claims that principles of gas firing mostly employed hitherto are fundamentally wrong; discloses grounds for such a conclusion and establishes an alternative method.

See also Oil.

Lignite. Causes of Clinker Formation in Lignite Firing (Die Ursachen der Schlackenbildung bei der Braunkohlenfeuerung), F. Wirth. Wärme, vol. 47, no. 46, Nov. 14, 1924, pp. 541-542, 1 fig. Discusses ash ingredients and their melting point; melting point reduction of ash by complex compounds and fluxes; chloride, sulphate, alkalies and poor screening as causes of clinker formation.

Large Scale Firing with Crude Lignite (Grossfeuerungen für Rohbraunkohle), M. Pradel. Elektrotechnischer Anzeiger, vol. 41, nos. 121, 122-123, and 124, July 29, 31, and Aug. 2, 1924, pp. 641-642, 649-650, and 657-658, 11 figs. Discusses difficulties due to high water content, drying methods by means of flue gases; lignite furnace by J. A. Topf & Sons and its construction. July 31: Details of three tests carried out showing efficiency of 67 to 68 per cent. Aug. 2: Details of Aetna, Völker, and Ludwig Furnaces.

Refitting Central Heating Plants for Lignite Firing (Die Umstellung von Zentralheizungsanlagen auf die Verwendung von Rohbraunkohle),

Flügge. Deutsche Bauzeitung, vol. 58, no. 76, Sept. 20, 1924, pp. 159-160, 2 figs. Discusses increase of grate area to 3.5 times that for coke, drying and gasification of fuel, uniform and ample air supply, drawing ashes without disturbing fire, etc.

Lignite-Biquet. See HEATING, STEAM, Central.

Mixed. Boiler Operation with Coal-Dust Addition (Dampfkesselbetrieb mit Kohlenstaub-Zusatzfeuerungen), G. Maas. Archiv für Wärmewirtschaft, vol. 5, no. 8, Aug. 1924, pp. 151-152, 4 figs. Discusses pulverized-coal firing used in addition to regular coal firing for equalizing load fluctuations of boiler and gives example of such secondary dust firing with vertical boiler of 500 cu. in.

Oil. Burning Oil and Gas Under Steam Boilers. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 12-28, 37 figs. Coal versus fuel oil; oil-burning systems; types of burners and their application to boiler furnaces; operating data.

Oil Firing of Steam Boilers, F. Dawson. Eng. & Boiler House Rev., vol. 37, no. 7, Feb. 1924, pp. 226, 228, 230 and 232, 10 figs. Deals with fundamental economic factors in order to show advantages which oil firing offers steam user.

Pulverized-Coal. See PULVERIZED COAL, Boiler Firing.

Refuse. Refuse Power Plants and Steam Production From Refuse (Müllkraftwerke und Dampferzeugung aus Müll), A. Reich. Städtereinigung, vol. 16, no. 19, Oct. 1, 1924, pp. 177-182, 6 figs. Describes Berlin-Schöneberg power plant, firing refuse with an addition of coal; cascade grate of Vesuvio A. G. for low-grade fuels; table of tests with various kinds of fuel.

Wet Fuel. High-Pressure Steam and Boiler Firing With Special Reference to Wet Fuel (Hochdruckdampf und Kesselfeuerung unter besonderer Berücksichtigung der nassen Brennstoffe), D. J. Hudler. Feuerungstechnik, vol. 13, no. 2, Oct. 15, 1924, pp. 9-14, 3 figs. Discusses predrying of fuel by means of flue gases as most favorable, and gives calculations for lignite and peat.

BOILER FURNACES

Air Infiltration Losses. The Magnitude and Prevention of Air Infiltration Losses in Power Plants, C. H. S. Tupholme. World Power, vol. 2, no. 12, Dec. 1924, pp. 348-351. Gives list of causes to which furnace air-infiltration losses are usually due; methods of preventing furnace air leaks.

Air Preheaters. Air Preheaters and Their Application. Power, vol. 60, no. 23, Dec. 2, 1924, pp. 884-889, 10 figs. Summary of conditions which lead to interesting sidelights on preheating of air; describes types of air preheaters.

Experiments on a Cylindrical Steam Boiler with and without Preheated Air, W. H. Owen. Inst. Mar. Engrs.—Trans., vol. 36, June 1924, pp. 1-37, 12 figs. Discusses preheating air of combustion; describes new form of preheater extracting 65 to 70 per cent of heat in waste gases, and tests made.

Ljungström's Preheater (Ljungströms Luftforvarmer), J. F. Johansen. Ingeniören, vol. 33, no. 28, July 12, 1924, pp. 329-333, 9 figs. Device for continuous transmission of heat of combustion product to fresh air on its way to combustion chamber. Superiority of this device as compared to economizer is emphasized.

The Ljungström Air Preheater, B. G. Brolinson. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 351-358 and (discussion) 358-360, 22 figs. Discusses application of this preheater based on principle of carrying heat continually in mechanical way from flue gases to incoming air, apparatus being self-contained, compact in design, simple in operation and permits of ready application.

The Preheating of Combustion Air, J. B. Bullock. So. African Inst. Elec. Engrs.—Trans., vol. 15, part 5, May 1924, pp. 388-396, 4 figs. and (discussion by W. H. Badger, part 8, Aug. 1924, pp. 437-438). Describes latest system of recovering and putting to beneficial use maximum amount of heat available in coal as fired to boiler or furnace, and gives some account of results obtainable with system and of their bearing on present boiler practice.

The Preheating of Combustion Air (Sur le préchauffage de l'air de la combustion), Ch. Roszak. Chaleur & Industrie, vol. 4, no. 43, Nov. 1923, pp. 825-834, 8 figs. Discusses problems and results, advantages and disadvantages of process, and design of air heaters.

See also Design.

Air Preheating for. Air Preheating, F. Dawson. Eng. & Boiler House Rev., vol. 37, no. 8, Mar. 1924, pp. 274-276, 5 figs. Brief review of present state of development.

Boiler-Test Results with Preheated Air, C. W. E. Clarke. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 64-72, 10 figs. Data on elaborate tests recently carried out on units of Colfax station of Duquesne Light Co., showing that efficiency of unit is increased from 5 to 7 per cent by use of preheater. (Abstract.)

The Preheating of Combustion Air (Le préchauffage de l'air de la combustion), Roszak. Société des Ingénieurs Civils—Mémoires et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1145-1170, 8 figs. See also Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 66-70. Study of question as to whether preheating of air of combustion offers same advantage when applied to evaporators as to metallurgical furnaces; derivation of calorific equation and analytical relation between preheating of air and increase of combustion temperature; advantages and disadvantages of process.

The Use of Preheated Air and Exhaust Gases for Boiler Furnaces (Ueber die Verwendung von vorgewärmter Luft und von Abgasen für Kesselfeuerungen), W. Deinlein. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 5, Mar. 15, 1924, pp. 29-33. Numerical determination of furnace and waste-gas temperatures, fuel consumption, etc., when heating with crude lignite, Bavarian and Ruhr coal.

Anthracite, Dust and Small-Sized. Furnaces for Burning Small Sizes of Anthracite, A. R. Mumford. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 138-142, 7 figs. Design as indicated by results of systematic investigation of furnace of water-tube boiler of 10,000 sq. ft. heating surface, fired by two chain-grate stokers. (Abridged.) See also Power, vol. 59, no. 8, Feb. 19, 1924, pp. 284-287 and discussion by A. A. Cary, no. 9, Feb. 26, 1924, pp. 326-328, 3 figs.

New Furnace Solves Problem of Burning Anthracite Dust, C. H. S. Tupholme. Coal Age, vol. 25, no. 5, Jan. 31, 1924, pp. 175-176, 4 figs. Difficulty in ignition and tendency to clog air passages overcome; piles at Welsh pits hitherto considered only waste now valuable.

Arches. Flat Furnace Arches. Eng. & Boiler House Rev., vol. 38, no. 6, Dec. 1924, pp. 243-244 and 246, 3 figs. Principal features of flat suspended arch in comparison with ordinary sprung arch for boiler furnaces.

Suspended Arches Gaining in Favor. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 38-41, 10 figs. Proper ignition and combustion de-

mand careful consideration of arch design; construction details.

Combustion Control. Control of Combustion Processes in Furnaces (Excess Air and Efficiency) [Beurteilung und Kontrolle der Verbrennungsvorgänge bei Feuerungen (Luftüberschuss und Leistung)], A. Dosch. Feuerungstechnik, vol. 12, nos. 13 and 14, Apr. 1 and 15, 1924, pp. 107-109 and 116-117, 9 figs. Control device for excess air and stress; scale diagrams.

Controlling Combustion by Temperature, G. Simmons. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 906-908, 4 figs. Furnace and exit gas temperatures control dampers and fuel feed through thermocouples.

Design. Furnace Construction. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 35-37, 4 figs. Notes on proportions, special baffling, arches and linings.

Problems in Boiler Furnace Design, E. B. Ricketts. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 473-476, 5 figs. Changes in stoker design, high ratings, high capacities, etc.; value of air heaters; materials for furnace-wall construction; effect of high combustion efficiency on superheat; mixing of boiler-furnace gases.

Stokers and Furnaces. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, Aug. 1924, 45 pp., 70 figs. See also (abstract) Combustion, vol. 11, no. 5, Nov. 1924, pp. 372-377, 8 figs. Developments during year; test data on three furnace air preheaters; mixing of gases in boiler furnaces; water-cooled and air-cooled furnace walls; rate of coal burning on various types of stokers; furnace construction; tests of refractories as to size and physical characteristics. Manufacturers' statements.

See also COAL, Low-Grade and Waste.

Draft. Artificial Draft and Its Application (Künstlicher Zug und dessen Anwendung), E. Blau. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 12, Nov. 1924, pp. 243-248, 2 figs. Reduction of resistances in flue-gas channels; forced draft arrangement of boiler plants; gives examples.

Draught and Its Effects on the Working and Efficiency of Boilers, J. T. Ruddock. Eng. & Boiler House Rev., vol. 37, no. 8, Mar. 1924, pp. 279-281, 1 fig. Deals with plants working with induced or chimney draft only; shows necessity for securing necessary draft pressure in combustion chamber itself. From paper read before Elec. Power Engrs.' Assn.

Dutch Ovens for Bagasse. Dutch Ovens for Bagasse, J. O. Frazier. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 682-683, 3 figs. Practical experiences with three types of settings; Dutch oven with auxiliary combustion chamber gave best results; formation of "moss" on roofs and walls of Dutch ovens.

Electric Waste-Gas Cleaning. The Elimination of Chimney Discharges by Means of Electric Gas Cleaning (Die Beseitigung des Schornstein-Auswurfs mittels elektrischer Gasreinigung), H. Schroeder. Feuerungstechnik, vol. 12, nos. 9 and 10, Feb. 1 and 15, 1924, pp. 65-66 and 73-77, 7 figs. Losses through soot, coke- and flue-dust particles, and their removal by means of flue-dust separators; describes Oski process and installation for gas cleannig and dust removal; its advantages, working costs, arrangement, and useful scope.

Firing. See BOILER FIRING.

Forced-Draft. The Burning of Colliery Refuse Fuels. Colliery Engr., vol. 1, no. 3, May 1924, pp. 148-149, 4 figs. Describes important modification of turbine forced-draft furnace.

Gas-Fired. Combustion in Gas-Fired Boiler Furnaces, Heat Transmission in Refractory Brick, and the Problem of Heat-Storage Linings (Ueber die Verbrennung in Gasbrennern, den Wärmeübergang an feuerfesten Stein und über die Frage der Wärmespeicherausmauerung), H. Lent. Wärme, vol. 47, nos. 3, 4 and 5, Jan. 18, 25 and Feb. 1, 1924, pp. 24-26, 33-37 and 45-49, 18 figs. Describes experimental pipe section for investigating phenomena in furnace and in combustion chamber in the burning of blast-furnace gas under different conditions; also temperature along pipe section and heat-transmission conditions.

German. Recent Developments in German Furnace Construction for Steam Boilers (Die neuere Entwicklung des deutschen Feuerungsbaues für Dampfkessel), H. Franke. Archiv für Wärmewirtschaft, vol. 5, no. 7, July 1924, pp. 121-126. Discusses developments before, during, and after war, lignite firing, pulverized-coal firing, etc.

Grates. Rocking and Dumping Grates. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 44-47, 11 figs. Principles of operation with general description and details of makes.

Stationary, Shaking, Dumping Grates and Hand Stokers. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 64-74, 24 figs. Points to be remembered when selecting a grate; adaptability of various designs, how they are handled and their application to boiler furnaces.

Grates, Clinker Dam for. New System of Clinker Dam for Grates Using a Movable Ash Door, W. Lulofs. Elec. Times, vol. 65, no. 1705, June 19, 1924, pp. 721-723, 6 figs. Describes adjustable clinker dam system of Du Croo and Brauns and its advantages.

Ground Firebrick for Repair. Ground Firebrick for Furnace Repair, Jos Harrington. Power, vol. 59, no. 25, June 17, 1924, pp. 976-978, 10 figs. Results from experience with special bond made principally from old firebrick for laying up new walls and of mortar for facing or patching; thick joints of this bond show saving of 35 per cent over thin cement joint construction.

Induced-Draft Installations. Calculation of Induced-Draft Installations (Berechnung einer Saugzug-Anlage), H. R. Karg. Fördertechnik u. Frachtverkehr, vol. 17, no. 6, Mar. 20, 1924, pp. 76-79. Calculation of induced-draft plant and auxiliary exhauster; determination of excess air.

Develops New System of Induced Draft. Mar. Rev., vol. 54, no. 11, Nov. 1924, pp. 422-424, 3 figs. Details of system developed by German engineer Hans Haas. Gases are forced up and out of stack, thus increasing air suction in furnace, accomplishing by artificial means much same effect as that due to provision of suitably high chimneys for stationary plants.

Lignite. Improvements in the Construction of Lignite Furnaces (Neue Wege im Bau von Braukohlen-Grossfeuerungen), Pradel. Feuerungstechnik, vol. 12, no. 15, May 1, 1924, pp. 121-126, 7 figs. Extension grates and furnaces; drying on grate; drying in shaft in self-feed furnace with trough grate; step-grate half-gas furnaces; extension drying shafts; arrangements for low-temperature-tar production.

The Vesuv and Aetna Half-Gas Furnaces for Lignite (Die Halbgas-Grossfeuerungen Vesuv und Aetna für Rohbraunkohle), Pradel. Wärme- u. Kälte-Technik, vol. 26, no. 22, Nov. 15, 1924, pp. 205-207, 5 figs. Design and construction of furnaces built by Adler & Henszen; mechanical stoking and hand firing.

Linings. Boiler Furnace Economies, W. H. Gaylord, Jr. Ariz. Min. Jl., vol. 7, no. 16, Jan. 15, 1924, pp. 30-32, 5 figs. How old linings are used for repairs and reconstruction.

Fire Brick Lining for Combustion Chambers, R. June. Gas Age-Rec., vol. 53, no. 14, Apr. 5,

1924, pp. 426-428, 6 figs. Firebrick furnace wall construction; notes on quality of brick.

Improvements in Furnace Lining Material. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 41-42, 2 figs. Methods used to reduce maintenance cost of linings.

Plastic Material for Lining Boiler Furnaces. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 9-11, 6 figs. Application of plastic materials for complete lining of new furnaces, facing of bridgewall and arches in Dutch-oven furnaces, making or lining of fire-door arches and rear arch for return tubular boilers, and baffles for all forms of water tube boilers, as well as repairing of these parts.

Reducing the Cost of Relining Boiler Furnaces. Power, vol. 59, no. 26, June 24, 1924, pp. 1028-1030, 5 figs. Most successful and economical lining material has been found to be combination of crushed used firebrick, fireclay and sodium silicate (water glass) applied by means of air gun in form of spray.

Low-Grade Fuel. Heat Generation and Heat Balances of Furnaces, Especially for Low-Grade Fuels (Wärmeerzeugung und Wärmebilanzen von Feuerungen, besonders für minderwertige Brennstoffe), Fr. Ebel. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 39 and 42, Sept. 27 and Oct. 18, 1924, pp. 1031-1036 and 1106-1108, 34 figs. Points out that method of calculating chimney losses and losses due to unburned gases depends to great degree on extent of carbon losses; new method of determining actual losses and plotting correct heat balances graphically; suggestions for firing of low-grade fuels and application of same method to gas furnaces.

Investigation of Chain Grates and Ignition Arches for Low-Grade Fuels (Untersuchungen an Wanderrosten und Zündgewölben für minderwertige Brennstoffe), F. Ebel. Glückauf, vol. 60, nos. 25, 26, and 27, June 21, 28, and July 5, 1924, pp. 507-516, 541-544, and 561-566, 27 figs. Gives results of 3 series of experiments for evaporation tests, analysis of fuel, heat balance, fluegas analysis; tables of observed and calculated data; conclusions as to requirements of boiler plant firing low-grade fuel.

Low-Temperature-Tar Plant. Boiler Furnace with Low-Temperature-Tar Recovery Plant (Dampfkesselfeuerung mit Urteergewinnungsanlage). Wärme- u. Kälte-Technik, vol. 26, no. 5, Mar. 1, 1924, pp. 33-35, 4 figs. Grate furnace with distillation shaft installed in front for production of low-temperature tar from combustion gases of boiler furnaces, according to process developed by B. Meyer; advantages of system.

Oil-Fired. Burning Oil Under Power Boilers, R. F. Burke. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 328-330, 3 figs. Points out that localization of heat in furnace must be avoided if brickwork and boiler maintenance are to be kept low; flame impingement causes tube failures; short flame may result from high per cent of excess air.

Efficiency in Oil Burning Installations, F. A. Rothwell. Power Plant Eng., vol. 28, nos. 10 and 12, May 15 and June 15, 1924, pp. 526-528 and 639-641, 3 figs. May 15: Furnace design and location of burners. June 15: Selection of burners; method of supplying fuel to burners; necessary auxiliary equipment; operation of fuel-oil-burning furnace.

Furnace Design Important in Burning Oil. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 63-66, 11 figs. Furnace volume and amount of combustion air important factors; types of oil burners.

Use of Oil Firing (Die Verwendung von Oelfeuerungen), G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 36, Sept. 23, 1924, pp. 495-496, 4 figs. Discusses advantages of oil firing and furnaces, furnace operation, atomizers, burners, and gives examples of application.

Operation. The Control of Power Production, C. L. Hubbard. Factory, vol. 33, no. 3, Sept. 1924, pp. 350-354, 15 figs. What it pays to know about boiler furnaces.

The Economical Operation of Boiler Furnaces, R. June. Power House, vol. 17, no. 9, May 5, 1924, pp. 21-22, 5 figs. Stresses fact that development of flat suspended arch has been an important factor in reducing maintenance costs.

Pedagogical Systematizing. The Pedagogical Systematizing of Furnace Equipment (Die Pädagogische Systematisierung der feuerungstechnischen Einrichtungen), C. Blacher. Feuerungstechnik, vol. 12, no. 11, Mar. 1, 1924, pp. 81-84, 2 figs. Points out necessity of pedagogical development of technical studies through introduction of easily understood general aspects; aim of engineering is development of uniform, continuous, and, so far as possible, automatic processes, without too great regard to complicity of apparatus; systematizing of boiler furnaces and gas producers, based on this viewpoint.

Refuse-Burning. See FUELS, Factory Refuse.

Smoke Preventer. An Automatic Smoke Preventing Apparatus. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 27-28, 3 figs. Device for prevention of smoke from Lancashire and Cornish-type boilers.

Stokers. See STOKERS.

Turbine. The Modern Turbine Furnace. Eng. & Boiler House Rev., vol. 37, nos. 5 and 6, Dec. 1923, and Jan. 1924, pp. 149-150 and 152 and 198-200, 8 figs. Scientific principles underlying design and working of most modern type of steam jet furnace as represented by installation of Turbine Furnace Co., Ltd., London.

The "Turbine" Forced Draught Furnace. Electrician, vol. 92, no. 2386, Feb. 8, 1924, p. 164, 2 figs. Description of a steam jet furnace made by Turbine Furnace Co., employing low-grade fuel.

Walls, Reconstruction of. Reconstruction of Boiler Furnace Walls. Elec World, vol. 84, no. 25, Dec. 20, 1924, pp. 1312-1313, 1 fig. Complete side-wall and front-wall patches, using crushed linings from old furnaces as refractory base, are being successfully used on oil-burning boiler furnaces at Glenwood power station of N. Y. Central R. R. Co.

Water-Cooled. The "Murray" Water-Cooled Furnace Wall, D. Brownlie. Elec. Times, vol. 66, no. 1721, Oct. 9, 1924, pp. 413-415, 3 figs. Describes water-cooled steel-tube furnace wall for operation with water-tube boilers and any type of mechanical stoker.

Water-Cooled Furnaces Make Records at Hell Gate, W. E. Caldwell. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 354-358, 6 figs. Side walls made of 4-in. tubes with overlapping fins; furnace deterioration greatly reduced; combined efficiency of 92.7 per cent obtained.

Water-Tube Boilers. Precautions Necessary in Installing Furnaces of Water-Tube Boilers and Closing Them (Quelques précautions nécessaires à observer dans l'installation des fourneaux de chaudières aquatubulaires et de leurs fermetures), M. L. Bochet. Annales des Mines, vol. 6, no. 7, July 1924, pp. 32-50, 1 fig. Details of number of boiler accidents, explaining faulty construction.

Wood-Waste-Burning. Furnaces for Burning Wood Refuse. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 68-70, 7 figs. Difficulties encountered in burning refuse from woodworking plants and principles governing furnace design.

BOILER HOUSES. See BOILER ROOMS; BOILER PLANTS.

BOILER OPERATION

Combustion Control. Combustion Control for Boilers, R. J. S. Pigott. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 590-592, 1 fig. See also Combustion, vol. 10, no. 6, June 1924, pp. 432-436; Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 694-695, 2 figs.; and Paper, vol. 34, no. 9, June 19, 1924, pp. 368-371. Functions involved in operation; possibilities and methods of regulation; design, insulation; human factor in system.

Electrical System of Combustion Control for Boiler Plants. Power, vol. 59, no. 2, Jan. 8, 1924, pp. 46-48, 4 figs. Boilers automatically controlled by master regulator at throttle valve, which adjusts voltage of exciter generators connected to field windings of stoker, forced- and induced-draft fan motors.

See also CENTRAL STATIONS, Combustion Control; COMBUSTION, Control.

Combustion Problems Calculation. The Relation of Ash Pit Loss to Flue Gas Analysis, R. Brown. Combustion, vol. 10, no. 6, June 1924, pp. 436-438, 2 figs. Two charts which furnish short-cuts in boiler calculations.

Control. Control of Boiler Room Operation, E. G. Bailey. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1095-1097, 4 figs. Outline of instrument and control application.

Modern Systems of Boiler Control, J. B. C. Kershaw. Engineer, vol. 137, no. 3554, Feb. 8, 1924, pp. 141-144, 5 figs. Bonus systems in the boiler house and how they are applied in certain British industrial and power plants; a German scheme of bonus payments; an American method of control.

Scientific Control of Steam Generation in Factories, H. S. Rowe. Mech. World, vol. 76, nos. 1976, 1977, and 1978, Nov. 14, 21, and 28, 1924, pp. 315-317, 332-333, and 348-349, 2 figs. Shows that application of principles of scientific control to continuous working under every-day conditions may be made to give results in keeping with high standard stated to be possible.

Costs and Economies. Boilers—Operation Cost and Economies, J. A. Whitlow. Elec. Light & Power, vol. 2, no. 10, Oct. 1924, pp. 18-19, 80, 82, and 84. Notes on grate area; kinds of grates and furnaces; feedwater heaters; economizers; superheat; and operating data.

Draft Regulation. The Craig System of Better Draft Control. Steam Power, vol. 2, no. 12, Jan. 1924, pp. 7 and 10, 1 fig. Describes Craig regulator and its operation; automatically maintains a constant over-fire draft by controlling position of uptake damper.

Efficiency. Boiler-House Efficiency, Jas. T. Beard, 2nd. Power, vol. 59, no. 5, Jan. 29, 1924, pp. 168-170. Points out that high CO_2 is only one element of high overall efficiency; consideration must also be given to loss of fuel through grate, incomplete combustion and poor heat absorption due to soot, scale and leaky baffles.

Economy in the Generation and Utilisation of Steam, Chas. F. Wade. Chem. & Industry, vol. 43, nos. 45 and 49, Nov. 7 and Dec. 5, 1924, pp. 1098-1100 and 1204-1207. Nov. 7: Desirable properties to be looked for when selecting suitable fuel for economical steam raising. Dec. 5: Boiler furnaces; fire grates; areas; air-supply arrangements; draft control; mechanical stokers.

Experiences and Requirements in Practical Boiler Operation (Erfahrungen und Forderungen des praktischen Kesselbetriebes), M. Guilleaume. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 9 and 10, Mar. 1 and 15, 1924, pp. 185-193 and 255-264, 57 figs. Experiences in field of boiler-plate testing; influences of design and construction; stresses in material through temperature changes during operation; observations on water circulation.

Increases in Boiler Efficiency, V. Z. Caracristi. Combustion, vol. 10, no. 1, Jan. 1924, pp. 32-36, 3 figs. How they should be considered in relation to other factors to obtain lowest cost per unit of boiler output; relationship of various factors can be determined by means of three carefully prepared charts (as ones illustrated).

Increasing Boiler Economy by Modern Methods, H. K. Blanning. Power Plant Eng., vol. 28, no. 24, Dec. 15, 1924, pp. 1236-1243, 6 figs. Describes work which has been going on at 60,000-kw. station at Lowellville, Ohio, with aim of increasing efficiency and of raising power-producing capacity without additional installation of boilers or generators; clear view of operating floor from control house; gages placed for guidance of fireman; records are posted on blackboard; steam pressure is maintained practically constant.

Influence of the Excess of Air on the Boiler Efficiency (Kedelvirkningsgradens afhaengighed af den til forbraendingen anvendte luftmaengde), K. Bak. Ingeniören, vol. 33, no. 26, June 28, 1924, pp. 311-315, 8 figs. Test results, illustrated by number of curves.

Operation of Steam Boiler Plants, E. B. Ricketts. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 749-751. Discussion of some of the more important factors which contribute to efficient boiler operation. Emphasizes fact that basis of good boiler operation is a thorough knowledge on part of all men in plant of materials and apparatus with which they must deal and thorough and consistent coöperation of management and men in common aim of stopping all leaks and keeping them stopped.

The Control of Power Production, C. L. Hubbard. Factory, vol. 33, no. 1, July 1924, pp. 26-29, 96, 98 and 100, 13 figs. Fundamental functions of a good boiler.

Excess Air, Effect of. Effect of Excess Air on Flue Temperatures and on Efficiency, A. K. Bak. Power, vol. 59, no. 17, Apr. 22, 1924, pp. 634-636, 8 figs. Variation in air quantity has direct effect upon mass of gas discharged and also gives rise to changes in flue-gas temperature; air quantity thus has important bearing on boiler losses and efficiency. Results of tests made at Connors Creek to establish relation between excess air and stack-gas temperature for particular boiler and setting.

Factors Influencing. Elasticity in Boiler-House Operation (Die Betriebelastizität im Kesselhausbetriebe), E. Bergmann. Feuerungstechnik, vol. 12, nos. 11 and 12, Mar. 1 and 15, 1924, pp. 84-86 and 98-100, 1 fig. Influence of different factors on boiler-house reserve, namely, fuels, boiler plant, boiler feed, waste heat and chimney.

Flue-Dust Removal. Boiler Flue Cleaning Plant. Engineer, vol. 137, no. 3567, May 9, 1924, p. 520, 2 figs. Apparatus in which partial vacuum is created by steam ejectors, but where that arrangement is not convenient, exhausters driven by any suitable means may be employed.

Flue Dust Removal Plant. Eng. & Boiler House Rev., vol. 38, no. 5, Nov. 1924, pp. 196 and 198, 1 fig. Describes simple and convenient method of removing flue dust from Lancashire boilers.

Fuel Economy in. See FUEL ECONOMY.

High Ratings. Boiler Operation at High Ratings, H. A. Reichenbach. Blast Furnace & Steel Plant, vol. 12, no. 8, Aug. 1924, pp. 354-359, 10 figs. Trumbull Steel Co. combines pulverized coal methods in power and heating furnaces; discusses pulverized-coal preparation plant; crushing

and raw-coal storage; drying; pulverizing; conveying; remote control for distribution system, etc.

Parsons' Line. Parsons' Line, E. K. Scott. Combustion, vol. 11, no. 3, Sept. 1924, pp. 207-211, 7 figs. Summary or controversy which has been going on regarding Parsons' Line (coal and water consumption per kw.-hr.), way it should be drawn, and its value. Includes report of interview with R. Parsons.

Rules for. Rules for Operating Steam Boiler Plants (Betriebsvorschriften für Dampfkesselanlagen), M. Guilleaume. Wärme, vol. 47, nos. 10 and 11, Mar. 7 and 14, 1924, pp. 97-99 and 107-110. Union of Large Scale Steam Boiler Users has collected operating rules among its members and examined them critically with result that legal regulations are found to require addenda, as well as rules of boiler manufacturers. Rules observed in individual boiler plants.

Sugar Factories. Sugar Industry and Modern Heat-Economy Methods (Zuckerindustrie und neuere Wärmetechnik), Berner. Wärme, vol. 47, nos. 46 and 48, Nov. 14 and 28, 1924, pp. 543-547 and 576-579, 19 figs. Discusses grates and pulverized-coal firing, decreasing waste-heat losses, advantages of central-power generation, choice of boilers, etc.; fluctuating losses and heat accumulators; steam pressure and boiler design.

BOILER PLANTS

[See also BOILER ROOMS.]

Ash Handling. See ASH HANDLING.

British Empire Exhibition, England. The Boiler House at the British Empire Exhibition, Wembley, London, J. D. Troup. Combustion, vol. 11, no. 1, July 1924, pp. 36-39, 5 figs. Description of boiler plant which is not only an exhibit of a number of different types of equipment, but actually furnishes power used at the Exhibition.

Wembley Boiler House. Eng. & Boiler House Rev., vol. 37, nos. 6, 7, 8, and 9, Jan., Feb., Mar., and Apr. 1924, pp. 191-193, 236-238, 284, and 316-318, 12 figs. Description of installations at British Empire Exhibition, Wembley. Jan.: Babcock & Wilcox boilers. Feb.: Installation by John Thompson Water-Tube Boilers, Ltd. Mar. and Apr.: Instruments for recording coal, water, and steam used, and for recording temperatures, draft, and flue-gas contents.

Chimneys. See CHIMNEYS.

Coal Handling. See COAL HANDLING, Power Plants.

Colenso, Africa. The Boiler House Plant at Colenso. So. African Power Engr., vol. 9, no. 75, July 1924, pp. 41-42, 1 fig. Design and equipment; eight boiler units; Babcock & Wilcox installation; chain-grate stokers; mechanical-draft system; compressed air and water service.

Economics. Boiler-House Economics (Die Wirtschaftlichkeit im Dampfkeseelhaus), O. Rühl. Wärme- u. Kälte-Technik, vol. 26, no. 18, Sept. 15, 1924, pp. 150-156, 20 figs. Discusses steam production and utilization, suitability of furnaces for fuels, types of grates and their operation, superheating, stacks, flue gas, heat recovery, etc.

Equipment. Boiler House Exhibits at Wembley. Eng. & Boiler House Rev., vol. 38, nos. 2, 3, and 5, Aug., Sept., and Nov. 1924, pp. 47-60, 109-111, and 184-185, 17 figs. Some recent developments in boiler-house equipment shown at Wembley Exhibition, London. Complete coal-handling plant at Wembley boiler house.

Increasing the Life of Equipment in Power Plants (Erhöhung der Lebensdauer maschineller Einrichtungen in Kraftanlagen), Braunkohle, vol. 23, no. 20, Aug. 16, 1924, pp. 382-392, 20 figs. Boilers and their safety, rules for acceptance tests, care of boilers, signs of wear, action of steam and pressure.

Flue-Dust Conveyors. Pneumatic Flue Dust Conveyors, K. Wagner. Eng. Progress, vol. 5, no. 4, Apr. 1924, pp. 61-64, 7 figs. Suction plant designed by Seck Bros., Dresden, erected in boiler room; experience gained in service.

Flue-Dust Separator. Flue Dust and Forced Draught. Engineer, vol. 137, no. 3573, June 20, 1924, p. 696, 3 figs. Describes "cindervane" fan for Stepney power house which combines dual functions of dust separator and induced-draft fan.

Fuel Economy. Fuel Economy in Steam Boiler Plants, Power Station Design and Operation, J. B. C. Kershaw. Power Engr., vol. 19, no. 224, pp. 411-413, 3 figs. Impartial examination of arguments for superpower stations.

Fuel Economy Questions, H. Womersley. Chem. & Industry, vol. 43, no. 28, July 11, 1924, pp. 715-718. Discusses calorific value of fuels, losses or efficiency of conversion, amount of steam delivered; also water treatment.

Specific Thermal Efficiency as a Measure of the Cost of Steam Production in a Boiler Plant (Der spezifische thermische Wirkungsgrad als Massstab für die Kosten der Dampferzeugung einer Kesselanlage), K. Deimler. Braunkhole, vol. 23, no. 34, Nov. 22, 1924, pp. 625-634, 4 figs. Graphic presentation of calorific value of fuels transmitted or converted to steam and determination, from this coal consumption and price of coal to produce steam, of condition obtaining at plant.

Instruments. Boiler and Turbine Room Instruments. Nat. Elec. Light Assn.—Serial Report (Prime Movers Committee), publication no. 24-84, Dec. 1924, 15 pp., 17 figs. Reports recent developments and describes new adaptations of older instruments; survey of CO_2 indicating and recording instruments and description of apparatus used for checking instruments; descriptions of types of operating-result reports and methods used to check operating performance by use of instruments were received from 32 companies and are summarized.

Boiler Room Instruments as an Aid to High Efficiency, E. G. Bailey. Nat. Engr., vol. 28, no. 12, Dec. 1924, pp. 591-595, 4 figs. Instrument readings showing operating conditions; advantages of steam-flow-air-flow method.

Boiler-Room Practice, J. Bruce. Elec. Rev., vol. 94, nos. 2414, 2515 and 2420, Feb. 29, Mar. 7, and Apr. 11, 1924, pp. 324-325, 365-367, 3 figs., and 564-566, 4 figs. Use of boiler-room instruments for efficient operation. Analysis of operating results.

Modern Boiler-room Instruments, J. Wolf. Combustion, vol. 11, no. 1, July 1924, pp. 40-42. Discussion of place held by instruments in modern boiler room and of particular functions and advantages of some of the more important types.

Iron and Steel Industry. The Generation and Utilization of Steam in the Iron and Steel Industry, J. A. Hunter. Mech. Eng., vol. 46, no. 6, June 1924, pp. 325-328 and 342, 3 figs. Equipment employed in iron and steel industry for generating and using steam; quantities and cost of fuel, and cost of converting heat in fuel to steam; present-day tendencies toward design and size of equipment, and refinements in control; describes two of latest installations; probable savings which could be made if all of steam required in industry were made and consumed in most efficient apparatus now in use.

Oil Refinery. New Vacuum Oil Co. Plant at Olean, N. Y. Illustrates Refinery Practice. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1082-1088, 10 figs. Central boiler plant of

5341 hp. capacity distributes steam to works; hot water from stills is treated in central water-treatment plant.

Remodeling. Remodeling a Large Boiler Room. Power Plant Eng., vol. 28, no. 4, Feb. 15, 1924, pp. 221-225, 11 figs. Replacement of old boilers at St. Louis pumping station and unusual engineering problems involved.

Smoke - Abatement Equipment. Manchester Smoke Abatement Exhibition. Eng. & Boiler House Rev., vol. 38, no. 6, Dec. 1924, pp. 231-236, 10 figs. Notes on boiler-house exhibits in relation to smoke abatement.

Steam Accumulators. See STEAM ACCUMULATORS.

BOILER PLATE

Alloy Steels for. Boiler Plate (Die Kesselbaustoffe), P. Goerens. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 3, Jan. 19, 1924, pp. 41-47, 11 figs. Deals with properties of unalloyed low-carbon steel and alloyed boiler plate at different temperatures, and influences of aging and recrystallization on these, which demonstrate advisability of using materials of higher limit of elongation, such as alloy steels; points out that boiler drums of maximum size and wall thickness can now be made of plain and alloy steels.

Punching and Shearing. Why A. S. M. E. Code Prohibits Punching and Shearing. Power, vol. 60, no. 25, Dec. 16, 1924, p. 982, 5 figs. Gives reasons for prohibiting of punching and shearing of boiler plates.

Strength of. The Distribution of Strength Properties in a Sheet-Iron Plate (Die Verteilung der Festigkeitseigenschaften innerhalb einer Blechtafel), E. Koch. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 3-4, 5 and 6, Feb. 29, Mar. 15 and 31, 1924, pp. 13-19, 33-38, and 44-47, 17 figs. Results of experimental investigation begun two years ago and still in progress; account of tests carried out in ammonia works of Dr. Wyszomirsky in Merseburg. Contains appendix, giving supplementary test regulations for boiler plate.

Testing. The Testing of Boiler Plates, Chas. L. Huston. Power, vol. 59, no. 21, May 20, 1924, pp. 820-822, 3 figs. Proposed revival of Tetmajer formula for using unit stresses instead of factor of safety in determining allowable stresses on steel boiler plate in construction of steam boilers and other pressure vessels.

BOILER ROOMS

Control. Measurement of Input and Output in Boiler Rooms, J. M. Spitzglass. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 299-309 and (discussion) 309-311, 11 figs. Shows how material quantities can be measured accurately and conveniently in steel-plant boiler rooms, including practical application of measuring flow of fluids and of coal; determination of constants.

Records and Efficiency at a London Power Station. Eng. & Boiler House Rev., vol. 37, no. 8, Mar. 1924, pp. 269-270 and 272, 4 figs. Notes on methods of boiler house control at Central Elec. Supply Co., Ltd., London.

To Regulate Fuel Expense, Control Draft, Jas. T. Beard. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 331-334, 6 figs. Points out that height of stack limits strength of draft; stokers are more efficient than grates; correctness of air supply indicated by CO_2 percentage.

Efficiency in. Boiler-Room Practice, J. Bruce. Elec. Rev., vol. 94, nos. 2424 and 2425, May 9 and 16, 1924, pp. 736-738 and 809-811, 3 figs. Furnace efficiency, excess air, and critical point of combustion.

Electric Drive. Motor Applications in the Boiler Room, H. W. Smith. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 700-703, 6 figs. D. c. motors and control for stoker and clinker grinders; 2- and 4-speed squirrel-cage motors; wound rotor moters; forced- and induced-draft fans; boiler feed pump; coal-handling equipment.

Standardization of. Standardized Steam Generating Units, A. J. T. Taylor. Combustion, vol. 11, no. 1, July 1924, pp. 64-66. A plan suggested for purchase of boiler-room equipment as a complete unit.

BOILER TUBES

[See also TUBES, Charcoal-Iron.]

Expanding. Effective Expanding of Fire and Water Tubes in Boiler Heads (Befestigung und Haften von Heiz- und Wasserröhren in Kesselrohrwänden), O. Berndt. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 31, Aug. 2, 1924, pp. 809-810, 3 figs. Discusses various methods of fixing with special reference to increased boiler pressure; describes Steinmüller ball roller by which tubes can be expanded outside of wall.

Welding. See ELECTRIC WELDING, Boiler Tubes.

BOILERMAKING

Crown Stay Angles, Sine Determination. Method of Finding the Sines of the Angles Formed by Crown Stays, E. Hall. Boiler Maker, vol. 24, No. 3, Mar. 1924, pp. 80-81, 1 fig. Shows how sine of each of the different angles which crown stays make with vertical axis of boiler may be found and how to use value so found in formula where term $\xi \sin \alpha$ is used.

Drilling Machines for. See DRILLING MACHINES, Boiler-Shop.

Flanging Machine. Furnace Mouth Flanging Machine. Machy. (Lond.), vol. 23, no. 590, Jan. 17, 1924, pp. 521-523, 4 figs. Machine specially designed for flanging furnace mouths and manholes of marine boiler-end plates, which is used where ordinary flanging machine is not of sufficient power to flange furnace mouths or where it is fully employed on plain flanging.

French Shops. Important Boiler Construction in French Shops, G. L. Carden. Boiler Maker, vol. 23, no. 9, Sept. 1924, pp. 249-251, 5 figs. Describes Fives-Lille boiler works which have been enlarged since war and improvements made in Delaunay-Belleville boiler.

The French Babcock and Wilcox Boiler Works, G. L. Carden. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 95-98, 4 figs. Description of plant located at La Courneuve on northern outskirts of Paris.

The Trend in French Boiler Construction, G. L. Carden. Boiler Maker, vol. 24, no. 1, Jan. 1924, pp. 1-3, 2 figs. Progress as shown at Y. & A. Niclausse works; tendency to larger units; noteworthy installations.

Locomotive Boilers. Building the Longest Locomotive Boilers in the World. Boiler Maker, vol. 24, no. 5, May 1924, pp. 127-133, 13 figs. Details of construction of boilers recently built by Am. Locomotive Co. for an order of 25 simple 2-8-8-2 Mallet locomotives for Chesapeake & Ohio R. R.; overall length of boiler 56 ft. 11⅛ in.; 205 lb. steam pressure.

See also LOCOMOTIVE BOILERS, Manufacture.

Machines and Methods. Boilermaking Machines and Methods (Maschinen und Herstellungsverfahren im Dampfkesselbau), F. Loch. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 9, Mar. 1, 1924, pp. 194-197, 13 figs. Modern

boiler factory; testing, planing and bending of plates; assembling and riveting of boilers; construction of maximum-pressure boilers.

Modern Boilermaking Methods. Eng. Production, vol. 7, no. 138, Mar. 1924, pp. 78-81, 8 figs. Describes works and procedure of Davey, Paxman & Co., Ltd., Colchester, Eng., makers of all types of steam boilers.

The Construction of a Steam Boiler. Southern Engr., vol. 41, no. 2, Apr. 1924, pp. 35-41, 26 figs. Successive steps in construction of a steam boiler; how boiler tubes are made.

Riveting. Modern Demands on Hydraulic Boiler Riveting (Neuzeitliche Forderungen an die hydraulische Kesselnietung und die Möglichkeiten ihrer Erfüllung in der Praxis), H. Müller. Werkstattstechnik, vol. 18, no. 19, Oct. 1, 1924, pp. 538-543, 7 figs. Production of faultless riveted joints, water-tight and steam-tight; types of riveting; riveting control apparatus, etc.

Standards. Standards Adopted by the American Boiler Manufacturers' Association. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 107-109 and 123-124. Report presented at meeting of Am. Boiler Mfrs.' Assn.

Welding. See ELECTRIC WELDING, Boiler Construction and Repair.

BOILERS

Accidents. Peculiar Cases of Accidents to Containers and Boiler Parts (Eigenartige Zerstörungen von Gefässen und Kesselteilen), M. Grellert. Gesundheits-Ingenieur, vol. 47, no. 7, Feb. 16, 1924, pp. 49-52, 4 figs. Gives a number of concrete examples showing that accidents are often due to causes other than those assumed or anticipated; all the cases cited were due to inadequate calculation of design or to careless construction.

A. S. M. E. Codes. American Steam Boiler Code (Amerikanische Dampfkesselvorschriften), Rich. Baumann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 47, Nov. 22, 1924, pp. 1219-1223, 18 figs. Discusses important sections of new code and compares them with corresponding German specifications; specifications for plate, water tubes, copper and brass; specifications for design of boiler parts.

Transposing A. S. M. E. Boiler Code Formulas, J. E. Londregan. Boiler Maker, vol. 23, no. 11, Nov. 1924, pp. 324-327. Explains terms of formulas commonly used in boiler work and their use in solving for unknown factors.

Atmos. See Circulation.

Baffles. Designing Boiler Baffles, A. W. Patterson, Jr. Combustion, vol. 11, no. 2, Aug. 1924, pp. 122-124, 7 figs. Some problems brought about by incorect baffle design, and methods by which conditions in particular plants were remedied.

Benson High-Pressure. Steam Generation at the Critical Temperature. Chem. & Industry, vol. 43, no. 10, Mar. 7, 1924, pp. 249-250. Describes Benson 3200-lb. pressure boiler.

Testing the Benson Superpressure Generator, D. Brownlie. Power House, vol. 17, no. 11, June 5, 1924, pp. 43 and 60. Success of coil boiler operated at approximately 3200 lb. pressure per sq. in. and 706 deg. Fahr. in Rugby Works of English Elec. Co.

The Benson Boiler. Electrician, vol. 92, no. 2391, Mar. 14, 1924, p. 324. Theoretical principles of steam generator with a working pressure of 3200 lb. per sq. in.

The Scientific Principles of the Benson High pressure boilers; development of design of first Boiler House Rev., vol. 37, no. 10, May 1924, pp. 358-360, 2 figs.

Circulation. The Circulation Boiler (Der umlaufende Dampfkessel), Wintermeyer. Feuerungstechnik, vol. 12, nos. 15 and 16, May 1 and 15, 1924, pp. 127-128 and 137-138, 6 figs. High-pressure boilers; development of design of first Atmos boiler; present aims in design of circulation boilers.

Code, Indian. An Examination of the New Indian Boiler Regulations, 1924, D. R. Macintosh. Instn. Engrs. (India)—Jl., vol. 4, Apr. 1924, pp. 93-147. Examination of new regulations for material, design, construction and inspection of land boilers in India.

Codes. See A. S. M. E. Codes.

Compounds. See BOILER FEEDWATER, Treatment.

Construction. See BOILERMAKING.

Construction Materials, Examination of. From the Border Line of Boiler Making and Iron Metallurgy (Aus dem Grenzgebiete zwischen Kesselschmiede und Eisenhüttenwerk), M. Roeckner. Archiv für Wärmewirtschaft, vol. 5, no. 7, July 1924, pp. 127-136, 28 figs. Discusses metallographic examination of boiler material and its results, welding seams, tests, consequences to be drawn from them for choice and treatment of boiler materials.

Corrosion. Corrosion and Scaling in Modern Boiler Practice. Chem. Age (Lond.), vol. 10, no. 251, Apr. 5, 1924, pp. 26-27. Notes on causes and prevention.

Corrosion in Steam Boiler Plant, G. E. Swett. Pac. Mar. Rev., vol. 21, no. 7, July 1924, p. 383, 1 fig. Describes apparatus known as Hickman air separator, an automatic method of eliminating chief cause of depreciation in steam-generating equipment.

Rusting, Corrosion and Water Purification (Abrostung, Korrosion und Wasserreinigung), P. Hermann. Archiv für Wärmewirtschaft, vol. 5, no. 9, Sept. 1924, pp. 177-178. Discusses action of dissolved oxygen in rusting, corrosion due to free acids, part of carbonic acid.

Tests for Corrosion of Boiler Material at High Pressure, W. Lulofs. Elec. Times, vol. 66, no. 1730, Dec. 11, 1924, pp. 689-690, 3 figs. Results of tests carried out in author's laboratory, from which it is concluded that there is more corrosion at 40 than at 16 atmos.

See also BOILER FEEDWATER, Treatment.

Dampers. Notes on Boiler-flue Dampers, D. Wilson. Mech. Wld., vol. 76, no. 1968, Sept. 19, 1924, pp. 184-185, 6 figs. Discusses design of dampers for flues conveying gases of combustion in connection with steam-boiler and high-temperature furnace installations.

Developments. An Outline of Boiler Development, H. Webster. Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 367-369. Considers briefly multiplicity of fuels available for steam generation, great number of methods of burning such fuels which have been developed, and the various feedwater conditions that have been encountered, and outline of development of boiler.

Boilers and Boiler Auxiliaries. Power, vol. 59, no. 1, Jan. 1, 1924, pp. 6-9. Foreign designs for high pressure; use of electric boilers increasing; developments in radiant heat; large combustion space favored; economy of stage bleeding; new instruments.

Electrically Heated. Electric Boilers (Les chaudières électriques), P. Bergeon. Revue Universelle des Mines, vol. 67, no. 4, Feb. 15, 1924, pp. 241-248. Discusses resistance boilers, induction boilers, and electrode boilers; comparison of cost of steam in electric and other boilers; application of electric boilers.

Electric Boilers (Elektriska ångpannor, deras driftförhällanden och senaste utveckling), O. Stälhane. Teknisk Tidskrift (Elektroteknik), vol. 54, no. 12, Dec. 6, 1924, pp. 227-234, 15 figs. Discusses two different types, the resistance type, where elements of metallic resistance are placed in tubes, and the electrode type, where water itself furnishes resistance; use of former is restricted to relatively low voltages; of latter type there are a considerable number in use, but great deal of trouble has been encountered, principal sources of which seem to be variations in composition of feedwater and deterioration of electrodes; describes modification of electrode type which seems to possess very promising features; instead of using entire water volume as heat and steam generator, current is carried through jet of water.

Electrically Heated Steam Boilers. Eng. & Boiler House Rev., vol. 38, no. 5, Nov. 1924, pp. 186-188, 3 figs. Their possibilities for increasing load factor.

Experience with Electric Boilers in Textile Mills. (Erfahrungen mit einem Elektrokessel im Textilbetriebe), V. R. Pietsch. Sparwirtschaft, no. 13-14, July 1924, pp. 64-66 (GW). Discusses efficiency, insulation, possibility of effective regulation, economics, distribution of electric energy, etc.

Tests on Electric Boilers, C. Dantsizen and E. H. Horstkotte. Elec Wld., vol. 84, no. 22, Nov. 29, 1924, pp. 1156-1157, 2 figs. Liberation of hydrogen in 5000-ky., 6600-volt unit found to be small and to cause no detrimental action.

Using Intermittent Energy of Hydroelectric Plants for Electric Boilers (Utilisation par les chaudières électriques de l'énergie intermittente des usines hydro-électriques), Bergeon. Société Française des Electriciens—Bul., vol. 4, no. 37, July 1924, pp. 653-657. Cites various examples in France where such energy is being successfully employed.

See also STEAM GENERATORS.

Equipment. Boiler Equipment. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924. Includes following articles: Description of Standard Types of Water Columns, Steam Gages, Fusible Plugs, Safety Valves, Steam Outlet Valves and Blowoff Valves, pp. 73-76, 9 figs.; Types and Details of Safety Valves, pp. 76-79, 10 figs.; Steam Outlet and Blowoff Valves, pp. 79-85, 22 figs.

Evaporative Capacity. Evaporative Capacity of Boilers, A. A. Arnold. Mech. Wld., vols. 75 and 76, nos. 1956, 1961, 1963, and 1966, June 27, Aug. 1, 15 and Sept. 5, pp. 405, 69-70, 104-105 and 151. Considers normal evaporative capacity of boilers which may be obtained under usual conditions of working and when circumstances may be regarded as moderately favorable. Gives table showing average evaporation from Lancashire and Cornish boilers according to their heating surface. Stationary locomotive-type boilers, vertical cross-tube boilers, vertical Cochrane boilers, and their performances.

Exhaust-Gas. Waste Exhaust Gases of Low-Powered Oil Engines. Oil Engine Power, vol. 2, no. 3, Mar. 1924, pp. 78-79 and 91-92, 1 fig. Conresults of two types of small exhaust-gas boilers, one for a 2-cycle surface-ignition unit and other for a 4-cycle Diesel engine.

See also Waste-Heat.

Explosions. See BOILER EXPLOSIONS.

Feed Pumps. See PUMPS, Boiler-Feed.

Feeding. Important Factors in Boiler Feeding. Chas. F. Wade. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 136-137, 1 fig. Aspects of boiler-feeding arangements which are often overlooked.

Feedwater. See BOILER FEEDWATER.

Fire Tube, Refractory Spiral Inserts for. Helically Bladed Refractory Inserts for Fire-Tube Boilers (Einbau und Wirkungsweise von Drallsteinen in Flammrohrkesseln), H. von Unger. Wärme, vol. 47, no. 32, Aug. 8, 1924, pp. 374-377, 5 figs. Results of experiments carried out at Gutehoffnungshütte, using helically bladed firebrick inserts in the fire tubes to improve heat transmission, eliminate flue dust, increase velocity of flue gases, observe effect of cores on draft, effect on combustion, etc.

Firing. See BOILER FIRING.

Flue Replacement. Saving Time and Labor on Flue Jobs, C. A. Chincholl. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 78-79 and 91-92, 1 fig. Construction and usefulness of three devices necessary wherever boiler flues are replaced in boilers, viz., a flue swaging machine for 2-in. flues, a flue cutter for cutting flues to length, and an attachment for an air motor to cut flues in front end.

Furnaces. See BOILER FURNACES.

Fusible Plugs. See LOCOMOTIVE BOILERS, Fusible Plugs.

Gas-Fired. Gas-Fired Boiler Feed System. Gas Age-Rec., vol. 54, no. 24, Dec. 13, 1924, pp. 835-836, 1 fig. Operating procedure of new automatic electrically operated return feedwater system for gas-fired boilers developed by Thomas Pump Works, Inc., of New York City.

Gas-Fired Boilers, J. D. Troup. Combustion, vol. 10, no. 2, Feb. 1924, pp. 110-113, 4 figs. Discussion of increasing importance of gaseous fuel as a possible or probable development of future, and of experience obtained and equipment available in use of gas for generating steam.

Gas Guide Vanes. Influence of Refractory Gas Guides in Boilers (Die Wirkung von Einbauten in Flammrohrkesseln), Unger. Archiv für Wärmewirtschaft, vol. 5, no. 4, Apr. 1924, pp. 61-69, 17 figs. Propeller-shaped devices of refractory material are inserted in fire tubes and give flue gases a spiral-shaped movement that improves combustion as well as heat transmission. Economy of old and new plants is greatly improved by simple and inexpensive means.

Heads, Damages to. Damages to Heads of Boilers (Avaries à des fonds emboutis de chaudières), E. Allar. Associations Françaises de Propriétaires d'Appareils à Vapeur—Bul., vol. 5, no. 17, July 1924, pp. 149-162, 3 figs. Describes test on boiler heads showing that damage was due to change in metal, quality and treatment of metal having been satisfactory.

Heat-Balance Calculation. Calculation of the Boiler Heat Balance. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 991-995, 9 figs. Solution of a problem and an analysis of conditions which affect boiler economy over various periods of operation.

Discussion of the Heat Balance in Boiler Tests, A. Linguet. Paper Trade Jl., vol. 78, no. 5, Jan. 31, 1924, pp. 49-53. Paper Trade Jl., vol. 78, no. 5, Jan. 31, 1924, pp. 49-53. Discusses value of heat-balance calculations in making boiler tests. Translated from Chimie et Industrie, vol. 10, No. 5, Nov. 1923.

Heat Losses. Heat Loss Due to Sensible Heat in Boiler Refuse, E. Ogur. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 287-289, 3 figs. Demonstrates that loss due to sensible heat in fuel is appreciable and gives method for determining loss by test, computation or diagram.

Heat Transmission in. See HEAT TRANSMISSION, Boilers.

Heating. See Ratings.

Heating, Acceptance of. Acceptance of Heating Plants (Sul collaudo degli impianti di riscaldamento), A. Marolda. Industria, vol. 38, no. 14,

July 31, 1924, pp. 391-398, 14 figs. Discusses systems of boiler acceptance in use in Italy; first, that of Associazione Impiantatori generally used, consisting of operating boiler at maximum temperature stipulated, whatever the outside temperature; and second, that of Associazione Termotecnica Italiana, based on "conventional temperature." Proposes modified and more accurate procedure.

Heating, Smokeless. Smokeless Heating Boilers, T. N. Thomson. Plumbers Trade Jl., vol. 77, no. 1, July 1, 1924, pp. 26-28 and 92, 3 figs. Development and manufacture of Utica Imperial smokeless boiler.

Heating-Surface Arrangements. The Numerical Evalution of Heating-Surface Arrangements (Die zahlenmässige Bewertung von Heizflächenanordnungen), W. Otte. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 3-4, Feb. 29, 1924, pp. 19-23, 11 figs. Investigates influence of geometrical arrangement of boiler heating surface on heat transmission through radiation and contact; derivation of numerical values; examples.

High Pressure. See Benson High-Pressure; Circulation; 3200-lb. Pressure.

High Pressure, Dry Steam Production in. Dry Steam and How to Produce It in High-Pressure Boilers (La vapeur sèche et les moyens de la produire dans les générateurs à haute vaporisation), M. Bussac. Société les Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 262-278, 4 figs. Describes a new boiler in which steam is much drier than usual, being produced by a much higher rate of evaporation.

Horizontal Return Tubular. Horizontal Return Tubular Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 19-21, 2 figs. Due to influence of standardization selection depends largely upon boiler-shop practice. See also article entitled, Setting the Horizontal Return Tubular Boiler, pp. 21-23, 4 figs.

Hydrostatic Tests. Hydrostatic Pressure Tests on Boilers, W. H. Fittus. Power Plant Eng., vol. 28, no. 4, Feb. 15, 1924, pp. 219-220. Points out that many defects are not revealed by hydrostatic test; inspector must depend on visual examinations and hammer test.

Inspection. Boiler Inspecting in Afghanistan, G. Cecil. Boiler Maker, vol. 23, no. 11, Nov. 1924, pp. 318-319. Difficulties encountered in introducing and successfully operating steam power and machinery in a distant part of world.

Coöperation of Inspectors and Power-Plant Engineers in Associations for Steam-Boiler Inspection (Die Zusammenarbeit der Revisions- und Wärmeingenieure bei den Dampfkessel-Ueberwachungs-Vereinen), M. Berner. Wärme, vol. 47, no. 26, June 27, 1924, pp. 301-302. Proposes inspection and thermotechnical work by engineers; points out increased efficiency obtained by employing heat engineers; discusses coöperation between groups of associations, etc.

Proposed Rules for the Inspection of Material and Boilers. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 100-103, 1 fig. Preliminary report of sub-committee of A. S. M. E. boiler code committee on rules for inspection of material and boilers.

Lap Joints, Danger of. Danger of Lap-Joints (Note sur un danger éventuel des joints à clins), M. Flaissier. Bul. Technique du Bureau Veritas, vol. 6, no. 9. Sept. 1924, pp. 171-175, 18 figs. Discusses additional stresses due to asymmetry of joint and demonstrates them by calculatior

Large-Capacity Boilers at Cleveland Rate 3060 Hp. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 517-524, 8 figs. New boilers in Cleveland Elec. Illuminating Co. plant have 30,592-sq. ft. heating surface requiring 8 mi. of tubes; fired by pulverized coal; automatic-combustion control by steam pressure and flowmeters.

Large-Capacity Boilers for Central Stations. Pulverized-Coal-Fired Boilers (Chaudières à grande capacité pour centrales électriques. Les chaudières au charbon pulverisé), M. Demoulin. Génie Civil, vol. 84, no. 20, May 17, 1924, pp. 465-471, 7 figs. Characteristics of large boiler types; evolution of boilers; the Ladd-Belleville in Vitry (Seine) central station; new boilers of the Union d'Electricité for burning of pulverized coal.

Large Steam Boilers and Steam Storage in Germany. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 86-89, 5 figs. Review of German technical publication by Fried. Münzinger, on American and German large steam boilers.

Loading for Maximum Efficiency. Loading the Boilers to Obtain Maximum Efficiency, Chas. E. Coburn. Power, vol. 60, no. 17, Oct. 21, 1924, pp. 642-643, 3 figs. Points out that by properly dividing load among boilers in service and by strict attention to keeping controllable losses at their lowest, boiler load may always be maintained at its reasonably highest efficiency.

Locomotive. See LOCOMOTIVE BOILERS.

Manufacture. See BOILERMAKING.

Marine. See MARINE BOILERS.

Maximum-Pressure. See STEAM, Maximum-Pressure.

Mercury-Vapor. Mercury Boiler in Successful Operation. Power Plant Eng., vol. 28, no. 2, Jan. 15, 1924, pp. 136-138, 5 figs. Combination mercury and steam cycle shows remarkable savings at Hartford Elec. Light Co. plant.

The Emmet Mercury Vapour Plant. Engineer, vol. 137, no. 3551, Jan. 18, 1924, pp. 65-68, 4 figs. General arrangements and details of plant installed at Hartford Elec. Light Co.'s station at Hartford, Conn.

The Emmet Mercury-Vapor Process, W. L. R. Emmet. Mech. Eng., vol. 46, no. 5, May 1924, pp. 235-240 and 305, 13 figs. Early experiments; thermodynamic possibilities of process; Hartford installation; boiler problems; mercury turbines; packings and leakage; economies attainable; mercury supply.

The Mercury-Vapor Boiler and Turbine. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 91-93, 3 figs. Describes plant installed at Hartford and basic idea of plant; properties of mercury vapor which make it advantageous for use in binary-vapor system; difficulties with use of mercury; recent discussion on mercury-vapor system.

See also MERCURY-VAPOR PROCESS.

Multitubular. Results of Tests of Multitubular Boilers with Direct Flow (Résultats d'esai de chaudières multitubulaires à flux direct), M. P. Pourchot. Outillage, vol. 8, no. 8, Aug. 1924, pp. 276-281, 5 figs. Describes recent installation at Louire Mines and Houillères de Montrambert Mines, where special difficulties had to be met; gives evaporation tests with low-grade fuels, etc.

Oil-Burning, Preparing for. See OIL FUEL. Burning.

Operation and Types. Boilers, Superheaters and Economizers. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, Sept. 1924, 57 pp., 80 figs. Principal features of many boiler installations made during past year in old as well as new stations. Describes combined boiler, superheater, economizer and air heater manufactured by Stahl Turbine Co. of Sweden. Effectiveness of soot blowing equipment. Operating results obtained at Lakeside Station of Milwaukee Elec. Ry. & Light Co. with a Foster economizer and radiant-heat-type superheater installed in

connection with an Edge Moor boiler fired with pulverized fuel. Manufacturers' statements. Bibliography.

See also BOILER OPERATION.

Parts. Strength of. Strength of Boiler Parts. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 30-34, 6 figs. Strength of riveted joints; welded joints; heads and stays in boiler shells; boiler tubes; steam nozzles.

Piping. Boiler Piping Arrangements. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 86-88, 4 figs. Feedwater, blowoff, drip and drain safety valve and steam piping. See also article entitled, Safety First Should Be Feature of Boiler Piping, pp. 88-89, 2 figs.

Portable, Inefficient Handling of. Inefficient Handling of Field Boilers Source of Waste and Expense, F. G. D. Muller. Nat. Petroleum News, vol. 16, no. 29, July 16, 1924, pp. 77-79, 4 figs. Discusses improving efficiency of boilers, preheating feedwater, driller's ear attuned to exhaust, water filter for field boilers and uses for old boilers.

Priming. Priming of Boilers, A. A. Pollitt. Gas Engr., vol. 40, no. 576, Apr. 1924, pp. 74-76, 1 fig. Discusses problem of priming and necessity for maintaining low concentrations in feedwater.

Ratings. Progress in the Rating of Heating Boilers. Heating & Vent. Mag., vol. 21, no. 10, Oct. 1924, pp. 46-47, 1 table. Comparison of three methods, including that announced by Chicago Master Steamfitters' Assn.

Repairing. See OXY-ACETYLENE WELDING, Boilers.

Scale Prevention. See BOILER FEEDWATER, Treatment.

Scale-Removal. Apparatus for the Prevention of Boiler Scale. Engineering, vol. 117, no. 3045, May 9, 1924, p. 623, 4 figs. Apparatus exhibited at Brit. Empire Exhibition consists of cast-iron cylinder within which perforated cylinder is placed which is filled with ordinary linseed and small amount of common soda.

Boiler Scale and Scale Cleaners. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 38-44, 21 figs. Formation of scale in boilers, its dangers, methods of removing scale and preventing its formation.

Boiler Tubes and Boiler Scale. Eng. & Boiler House Rev., vol. 37, no. 10, May 1924, pp. 370 and 372-373, 3 figs. Some of the most modern methods of scale removal.

Removal of Scale with Carbon Dioxide, C. L. Jones. Power, vol. 60, no. 15, Oct. 7, 1924, pp. 578-579, 1 fig. Factors affecting removal of deposits. Suggestions in connection with problems in removal of deposit from pipe lines, etc.

See also Corrosion.

Seams, Brittleness and Cracks in. Brittleness and Cracks in Seams of Steam Boilers, H. Kriegsheim. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 792-795, 6 figs. Causes and prevention of so-called caustic embrittlement.

Settings. Boiler Setting for Economical Steaming, Z. Kogan. Sugar, vol. 26, nos. 1 and 2, Jan. and Feb. 1924, pp. 8-9 and 77-78, 15 figs. Analysis of problem from sugar engineer's standpoint.

Construction of Boiler Settings in Devon Station (Conn.), Power, vol. 59, no. 20, May 13, 1924, pp. 763-765, 6 figs. Furnace walls for 16,800-sq. ft. boilers constructed entirely of firebrick; arches built in walls to relieve loading on brick; expansion joints filled with asbestos fiber divide walls into vertical sections and allow for horizontal expansion; no heat-insulating bricks are used below lower tube line.

Soot Blowers for. See SOOT BLOWERS.

Specifications. Technical Specifications for the Supply of Forged or Stamped Pieces of Extra-Soft Rolled Steel for Boilers and Other Steam Vessels (Spécification technique pour la fourniture de pièces forgées ou embouties, en acier laminé extra-doux pour chaudières et autres appareils à vapeur). Assns. Françaises de Propriétaires d'Appareils à Vapeur—Bul., vol. 5, no. 17, July 1924, pp. 171-176. Rules established by French Steam Boiler Users' Assn.

Standardization. Sixteen Years of Boiler Standardization, J. A. Stevens. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 217-218. Details of work of Boiler Code Committee.

Staybolts. The Expanded Boiler Bolt (Der Aufdornstehbolzen), A. Tross. Hanomag-Nachrichten, vol. 11, no. 128, June 1924, pp. 96-105, 25 figs. Older design, in which oversize threaded bolt was riveted at both ends, has been substituted by new type hollow bolt, which has an easy-fitting thread, and is expanded to a tight fit after being screwed in place between two boiler plates. Complete description of all processes involved.

Steam Accumulators. See STEAM ACCUMULATORS.

Superheaters. See SUPERHEATERS.

Tests. Boiler-Room Economy (L'économie dans la chaufferie), H. Carra. Chaleur & Industrie, vol. 5, nos. 48 and 49, Apr. and May 1924, pp. 182-188 and 238-242, 5 figs. Methods of conducting evaporation tests on steam boilers and their auxiliaries.

Evaporation Tests (Les essais de vaporisation), V. Kammerer. Société Industrielle de Mulhouse —Bul., vol. 90, no. 1, Jan. 1924, pp. 27-56. Classification of tests into scientific, performance, industrial and comparative tests; duration and conducting of tests; determination of efficiency and heating value; distribution of losses; heat balance; presentation of results. Author points out difficulties in formulating concise rules for conducting evaporation tests and presenting results.

Importance of Boiler Plant Test, H. Seymour. Electrician, vol. 92, no. 2392, Mar. 21, 1924, pp. 351 and 357. How to conduct a test to find out how well boilers are doing their work.

See also Heat-Balance Calculations; Hydrostatic Tests.

3200-Lb.-Pressure. The World's Largest Steam Boiler, A. C. Blackall. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 420-422. Describes boiler recently constructed by English Elec. Co. at Rugby which raises steam at a pressure of 3200 lb. per sq. in. Is practically a "flash" boiler on a large scale. Steam generated will be reduced to a pressure of 1500 lb. for use in a turbine running at 25,000 r.p.m.

Transportation. Boiler Cars for Boilers That Can Be Run on to a Krupp Delivery Truck (Kesselwagen mit abfahrbaren Kesseln zum Umschlag des Ladegutes auf Krupp-Sattelschlepper), F. Finckh. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 167-171, 6 figs. Details of a freight car carrying four boilers crossways, and a motor truck or tractor onto which boilers can be rolled endwise, for more economic transportation.

Tubes. See BOILER TUBES.

Types. Steam Boiler Manufacture in Germany and America. La. Planter & Sugar Mfr., vol. 72, no. 11, Mar. 15, 1924, pp. 216-217. Different types of boilers used in various manufacturing concerns. Translation of article by K. Schiebl in Centralblatt für die Zuckerindustrie.

Vertical. Adaptability of Vertical Tubular Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1,

1924, pp. 24-26, 5 figs. Suited for installations where compactness and low first cost are of prime importance.

Stresses in Unevenly Heated Boiler Drums (Spannungen in ungleich erwärmten Kesseltrommeln), W. Otte. Wärme, vol. 47, no. 46, Nov. 14, 1924, pp. 553-555, 2 figs. Damages due to uneven heating of drums; rigid and elastic drums; remedies.

Wadurf. The Wadurf Boiler (Der Wadurfkessel), P. Zwiauer. Stahl u. Eisen, vol. 44, no. 16, Apr. 17, 1924, pp. 435-438, 3 figs. Description of Wadurf system and results of tests.

Waste-Heat. Generating Steam from Waste Heat, C. H. S. Tupholme. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 943-945, 2 figs. Discussion of design of and results of tests on waste-heat boilers, which must be designed to evaporate water almost wholly from heat of convection.

Good Results from New Type Fire-Tube Waste-Heat Boilers in Open-Hearth Plant. Power, vol. 60, no. 22, Nov. 25, 1924, pp. 832-834, 3 figs. Bettendorf Co., manufacturer of railway cars and material, has installed six waste-heat boilers of high-velocity, single-pass, fire-tube type of new design; results of 8-hr. tests; exceptional economies attributed to straight flow and high gas velocity in relatively small tubes; scrubbing action of gases keeps surface clean, and strong agitation results in high heat transfer.

Practical Experiences with Waste-Heat Boilers Back of Open-Hearth Furnaces (Betriebserfahrungen mit Abhitzekesseln hinter Siemens-Martin-Oefen), W. Schuster. Stahl u. Eisen, vol. 44, no. 3, Jan. 17, 1924, pp. 65-71, 4 figs. Describes four different types of boiler for waste-heat utilization in open-hearth furnaces, and gives operating results of three types; problem of superheater and preheater; prospects.

Some Notes on Waste Heat Boilers, C. H. Sonntag. Concrete, vol. 25, no 5, Nov. 1924, pp. 88-90 (Cement Mill Section). Notes on feedwater, baffles, dust removal, suction fan and fan motor, and flue design.

Utilizing Waste Heat, K. W. Heinrich. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 376-377, 3 figs. Describes fire-tube steam or hot-water generator especially adapted for reclaiming heat from exhaust gases of Diesel engines, developed by Davis Eng. Corpn. Possibilities of application.

Waste-Heat Boilers, C. H. Bamber. Gas World, vol. 80, no. 2059, Jan. 5, 1924, pp. 19-20. Waste-heat versus solid fuel and convection versus radiation; waste-heat boiler design; water-tube boiler for waste heat; fire-tube boiler.

Waste-Heat Boilers and Vertical Retort Installations. Gas. Jl., vol. 167, no. 3190, July 2, 1924, pp. 106-122, 20 figs. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 633-647, 5 figs., and Gas Engr., vol. 40, no. 579, July 1924, pp. 145-147, 4 figs. Twelfth Report of Research Sub-Committee of Gas Investigation Committee. Investigation conducted on water-tube waste-heat boilers attached to installations of Woodhall-Duckham continuous vertical retorts at Windsor Street works of Birmingham Gas Dept.

Waste-Heat Boilers at Weirton Steel Plant, W. E. Groume-Grjimailo. Iron Age, vol. 113, no. 6, Feb. 7, 1924, pp. 443-444, 2 figs. Analyzed according to hydraulic theory of furnaces; belief expressed that waste-heat boilers are undesirable.

Waste Heat Boilers for Vertical Retort Benches, C. H. S. Tupholme. Gas Age-Rec., vol. 53, no. 12, Mar. 22, 1924, pp. 351-352. British progress in waste heat recovery from flue gas as seen in a London works.

Waste Heat from Internal-Combustion Engines. Power Engr., vol. 19, no. 218, May 1924, pp. 176-177, 3 figs. Describes Clarkson boiler which is said to be well suited to small engines; its application to semi-Diesel engine.

See also Exhaust-Gas; WASTE HEAT, Industrial Furnaces, Recovery from; Utilization.

Water Circulation. Chasing Bubbles in a Boiler. Power, vol. 59, no. 8, Feb. 19, 1924, pp. 288-289, 6 figs. Outline of where steam forms in boiler and path of water circulation; describes glass model boiler used in study.

Increasing the Efficiency of Boiler Plants (Zur Leistungssteigerung von Dampfkesselanlagen), P. Fessler. Wärme- u. Kälte-Technik, vol. 26, no. 4, Feb. 15, 1924, pp. 23-25, 4 figs. Study of water circulation; it is shown that artificial water circulation through so-called water-circulating apparatus is effective in increasing efficiency of boiler and at same time increasing economy of plant.

Water Circulators, Testing of. Report on Testing of Water Circulating Apparatus (Bericht über die Prüfung von Wasser-Umlaufapparaten), W. Deinlein. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 16, 17, 18, and 19, Aug. 31, Sept. 15, 30, and Oct. 15, 1924, pp. 148-149, 158-161, 167-170, and 177-178, 3 figs. Details of experiments with two apparatus to determine their effect.

Water-Level Gages. A New Level Indicator. Engineer, vol. 138, no. 3597, Dec. 5, 1924, p. 647, 5 figs. Describes two types of gages made by Aster Eng. Co., Wembley, one for boiler work, and other for showing level in open tanks.

Progress in Design of Feedwater Level Indicators for High-Pressure Boilers (Fortschritte im Bau von Wasserstandsanzeigern für Dampfkessel mit hohen Betriebsdrücken), E. Edler. Praktische Maschinen-Konstrukteur, vol. 57, no. 34, Sept. 9, 1924, pp. 470-471, 5 figs. Design and operation of level indicators for boiler pressures of 12 to 30 atmos. or more, such as Escowa type.

Water-Level Indicators (Verschobene Wasserstandsanzeiger), K. Schreber. Wärme, vol. 47, no. 49, Dec. 5, 1924, pp. 585-587, 3 figs. Requisites of a water-level indicator; Hanomag indicator; differential manometer; Igema indicator.

Water-Tube. See BOILERS, WATER-TUBE.

Water-Tube-Fire-Tube. The Findlay Boiler. Power Engr., vol. 19, no. 224, Nov. 1924, pp. 427-428, 3 figs. Special features of new design of water-tube-fire-tube boiler.

Welded. See OXY-ACETYLENE WELDING, Pressure Vessels.

Welding. See AUTOGENOUS WELDING, Boilers.

Yarrow. Yarrow Boilers at Londonderry Power Station. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 177-178, 3 figs. Details of Yarrow boilers (large combustion space and straight tubes) and test data; heating surface, 3255 sq. ft.; superheating surface, 410 sq. ft.; economizer surface, 1550 sq. ft.; total grate area, 88.7 sq. ft.

BOILERS, WATER-TUBE

Baffling. Increased Efficiency Through Changes in Boiler Baffling, H. E. Osgood. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 769-770, 4 figs. Changes made in well-known type of water-tube boiler illustrate influence exerted by baffling of boiler on its efficient operation.

British Developments. British Developments in Water Tube Boilers, F. Johnstone-Taylor. Power Plant Eng., vol. 28, no. 3, Feb. 1, 1924, pp. 173-174, 3 figs. New designs provide for independent circulation of water in tubes nearest fuel bed.

Cammell-Laird. Building a Straight Tube Watertube Boiler, F. G. Bailey. Boiler Maker, vol. 23, no. 12, Dec. 1924, pp. 344-347, 3 figs.

Development of Cammell-Laird three-drum type boiler and practical details of its construction.

Clayton. The Clayton Water Tube Boiler. Eng. & Boiler House Rev., vol. 37, no. 9, Apr. 1924, p. 328, 1 fig. Notes on boiler which is development of Clayton & Shuttleworth, Ltd.; made in two distinct types, straight-tube sectional and curved-tube drum type.

The Clayton Water-Tube Boilers, W. S. Findlay. Power Engr., vol. 19, no. 215, Feb. 1924, pp. 52-53 and 62, 4 figs. Critical discussion of special features, and particularly of circulation.

Kidwell. See Two-Flow Ring-Circuit.

Maas. Tests with the Maas Boiler, a New Sectional Vertical High-Power Boiler (Versuche an dem neuen Sektional-Steilrohr-Hochleistungskessel Bauart Maas), F. Kaiser. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 15 and 16, Aug. 15 and 31, 1924, pp. 133-135 and 145-148, 1 fig. Details of design, construction and operation of Maas boilers for Franken central station in connection with acceptance test carried out by the association. Describes tests.

Marine. See MARINE BOILERS, Water-Tube.

Möller Vertical. Temperature Distribution and Water Circulation in Möller Vertical-Tube Boilers (Temperaturverteilung und Wasserumlauf beim Möller-Steilrohrkessel), O. Berner. Wärme, vol. 47, no. 10, Mar. 7, 1924, pp. 93-97, 6 figs. Discusses temperature distribution in starting and in operating, water circulation in state of inertia. Effect of feeding and suddenly increased drawing off of steam on water circulation.

Power-Station. Notes on the Origin and Development of Water-Tube-Boilers for Power Stations, E. Kidwell. Combustion, vol. 11, nos. 2 and 3, Aug. and Sept. 1924, pp. 146-152 and 214-216, 15 figs. Shows origin of a few leading types of boilers used today in American plants and principal influences which shaped their development.

Standard American. Details of Standard Water-Tube Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 7-18, 36 figs. Descriptions and illustrations showing best practice of modern American design and construction.

Temperature Variation, in. Temperatures in Water-Tube Boilers. Power, vol. 60, no. 16, Oct. 14, 1924, p. 604, 1 fig. Investigations at Rensselaer Inst. show little variation throughout boiler.

Two-Flow Ring-Circuit. The Kidwell Two-Flow Ring-Circuit Boiler. Pac. Mar. Rev., vol. 21, no. 2, Feb. 1924, p. 119, 1 fig. Boiler is said to introduce entirely new principle of arrangement in water-tube boilers.

Types. Water-Tube Boilers, C. C. Pounder. Mech. World, vol. 75, nos. 1932 and 1936, Jan. 11 and Feb. 8, 1924, pp. 26-27 and 84-86, 6 figs. Description of various types.

Vertical. Foreign Practice in Vertical Water-Tube Boilers, F. Johnstone-Taylor. Power Plant Eng., vol. 28, no. 22, Nov. 15, 1924, pp. 1140-1141, 3 figs. Describes number of European types of boilers, together with their relative advantages; the Nesdrum boiler, a British design.

Loading of Materials in Various Types of Vertical Boilers (Die Materialbeanspruchungen bei verschiedenen Steilrohrkesselbauarten), G. Beck. Zeit. des Bayerischen Revisions-Vereins, vol 28, nos. 11 and 12, June 15 and 30, 1924, pp. 93-96 and 106-108, 9 figs. Formulas for calculating thickness of plates; shows how to reduce loads to minimum during operations.

Waste-Heat. See BOILERS, Waste-Heat.

Water Circulation. Studies of Water Circulation in Vertical-Tube Boilers (Studien über Wasserumlauf in Steilrohrkesseln), Schirmer. Wärme, vol. 47, no. 8, Feb. 22, 1924, pp. 73-76, 12 figs. Observations made on two model boilers from heating until first production of steam, with uniform and varying steam generation; conclusions from results obtained.

BOLTS

Flange, Initial Tension in. Effect of Initial Tension in Flange Bolts, M. D. Casler. Am. Mach., vol. 60, no. 10, Mar. 6, 1924, pp. 369-370, 1 fig. Mathematical treatment for determination of stresses in bolts under various load conditions; method of deriving formulas; numerical example to illustrate solution.

Standardization. International Standardization of Bolts and Nuts. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, p. 314. Account of conference held in New York under auspices of Am. Eng. Standards Committee, at which representatives of German, Czecho-Slovakian, and American national standardizing bodies were present.

Tension Calculation. Charts for Tension in Bolts and Torsion in Shafts, E. Patterson. Am. Mach., vol. 60, no. 11, Mar. 13, 1924, pp. 401-402, 2 figs. Two simple alignment charts intended to provide quick solutions for problems in stresses.

BOMBING

Aerial. Aerial Bombing, A. H. Hobley and H. B. Inglis. Mech. Eng., vol. 46, no. 6, June 1924, pp. 309-316, 8 figs. Early practice and conditions; bombing moving targets; theory of bomb trajectory; principles of various sights; ground-speed determination; sources of error and methods of overcoming them.

Aerial Bombing. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 542-545, 1 fig. Further information on subject, dealing with damaging distances for various sizes of bombs, yawing and sight stabilization, tactical requirements for service bomb sights, etc.

BOMBS

Aircraft. Modern Aircraft Bombs and their Use. Aviation, vol. 16, no. 15, Apr. 14, 1924, pp. 390-393, 2 figs. Importance of bomb sights; how a bomb drops; successful bomb sights; errors in bombing; altimeter errors; influence of bank on bomb; bomb-carrying and releasing devices; heavy demolition bombs; 300-lb. bomb rack; safety device; anti-battleship bombs.

Design. Bombs, W. A. Borden. Army Ordnance, vol. 4, nos. 22, 23, and 24, Jan.-Feb., Mar.-Apr., and May-June 1924, pp. 209-218, 324-327, and 391-394 and 408, 29 figs. Bomb design; bomb carrying devices; bomb ballistics; types of bombs; discusses fragmentation, demolition, anti-submarine, torpedo, antiaircraft, sub-caliber, incendiary, and smoke bombs; bomb fuses.

BONUS SYSTEMS

Boiler-Room. See BOILER OPERATION, Control.

Efficiency Bonus. The Efficiency Bonus as a Combined Group and Individual Incentive, T. C. Eckstein. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 105-106, 1 fig. Method of paying bonus which has value of rewarding all workers who contributed to production with increased effect of having individual reward to those who could affect production seriously by their individual efforts.

Foremen. Making a Bonus System Pay Dividends, A. W. Rowley. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 357-361. Describes design and operation of bonus system which encourages coöperation between foremen; consists of production, cost-reduction, and suggestion bonus.

The Safety Bonus in Metal Mining, F. C. Gregory. U. S. Bur. Mines—Reports of Investiga-

tions, serial no. 2617, June 1924, 3 figs. Discusses safety bonus, paid to foremen or bosses for keeping accident rate down to specified minimum, applied also to coal mining, oil-field work, and other mineral industries.

Fuel Saving. Saving Fuel by Bonus System (Economies de combustible réalisées par l'application d'un système de primes), H. Benner. Chaleur & Industrie, vol. 5, no. 55, Nov. 1924, pp. 579-585, 3 figs. Discusses a premium system for economic operation of machinery and fuel saving, being payment of bonuses proportional to pay per hour.

Maintenance of. Maintenance of a Standard Time and Bonus System, C. W. Setter. Soc. Indus. Engrs.—Bul., vol. 6, no. 7-8, July-Aug. 1924, pp. 10-14. Details as practiced at works of Republic Metalware Co., Buffalo, N. Y.

Power-Plant. See STEAM POWER PLANTS, Bonus Systems for.

Practical Application. Applying the Bonus System to Diversified Operations, Chas. E. Bassett. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 47-51, 5 figs. Practical wage-incentive plant.

Tool-Room Application. Bonus System Applied to Tool Department. Iron Age, vol. 114, no. 19, Nov. 6, 1924, p. 1219. Bonus system for tool-room use; making of dies expedited with resultant lower cost.

United Verde Copper Co., The United Verde Copper Company's Bonus Mehtods, W. V. DeCamp. Min. Congress Jl., vol. 10, no. 12, Dec. 1924, pp. 541-549, 3 figs. General discussion of bonus methods, and detailed interpretation of application of bonus methods to plant of United Verde Copper Co. This plant has applied bonus system with particularly satisfactory results both in labor and management.

BORAX

Deposits, California and Nevada. The World's Biggest Borax Deposits, W. F. Foshag. Eng & Min. Jl.-Press, vol. 118, no. 11, Sept. 13, 1924, pp. 419-421, 6 figs. Describes deposits in desert areas of California and Nevada.

BOREHOLES

Measuring Devices. A New Device for Measuring the Obliquity of Boreholes (Ein neuer Bohrlochneigungsmesser), O. Martienssen. Petroleum, vol. 20, no. 14, May 10, 1924, pp. 595-603, 14 figs. Describes a method and an equipment for measuring angularity of drill holes.

Springing. Springing Bore Holes Correctly, C. S. Hurter. Cement & Eng. News, vol. 36, no. 7, July 1924, pp. 22-23. Recommendations for increasing efficiency and insuring safety of quarry operation.

Surveying. Borehole Surveying by the Kiruma Method, S. Lundberg. Eng. & Min. Jl.-Press, vol. 117, no. 17, Apr. 26, 1924, pp. 690-693, 8 figs. Describes reliable method for measuring deviations in drill holes, developed and, it is claimed, successfully used in Sweden, employing electrolytic deposition of copper instead of etching by acid.

BORING MACHINES

Cylinder. The Early History of the Cylinder Boring Machine, E. A. Forward. Engineer, vol. 138, nos. 3599 and 3600, Dec. 19 and 26, 1924, pp. 686-687 and 714-715, 7 figs. Review of early developments, from which it would appear that by about 1830 the cylinder boring machine had arrived at its final form, and main principle of machine is due to Wilkinson.

Multiple-Spindle. Boring and Tenoning Machines. Engineering, vol. 118, no. 3061, Aug. 29, 1924, pp. 297-298, 8 figs. partly on p. 296. Describes combined vertical hollow-chisel mortising and multiple-spindle boring machine, and small tenoning machine.

Multi-Spindle Attachment for Horizontal. Multi-spindle Attachment for Horizontal Boring Machine, H. C. Town. Machy. (Lond.), vol. 25, no. 627, Oct. 2, 1924, pp. 15-16, 3 figs. Attachment for covering horizontal boring machine into multiple-spindle machine for operating simultaneously on bores of gear cases or cylinder blocks.

Semi-Automatic Chain-Cutter. A New and Improved Mortising and Boring Machine. Ry. Gaz., vol. 41, no. 22, Nov. 28, 1924, pp. 702-703, 2 figs. Machine is specially adaptable to needs of railway-car building shops. Built by J. Sagar & Co., Halifax.

BORING MILLS

Giant. Giant Boring Mill Built in Canada. Iron Age, vol. 113, no. 21, May 22, 1924, pp. 1508-1510, 7 figs. Machine of unusual size for use in manufacture of electrical generating equipment; massive design and convenient control.

Tires. New Tire-Boring Machine. Engineer, vol. 137, no. 3553, Feb. 1, 1924, pp. 126-127, 6 figs. New type of machine for boring and recessing locomotive and car tires.

BORNITE

Furnace Product. Bornite as a Furnace Product, F. N. Guild. Am. Mineralogist, vol. 9, no. 10, Oct. 1924, pp. 201-205. From consideration of stated facts, it would seem that bornite has developed both from condition of dry fusion and lower temperature conditions; transformations may all roughly be grouped under term of unmixing.

BOXES

Fiber Shipping Cases. Fiber Shipping Case Economies, Wm. A. Vollmer, Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 187-193, 10 figs. Notes on standardization of packing; coördinating speed of production and packing; machinery for making packing; demonstration of best design; corrugated containers.

Manufacture. Applying Machine Shop Methods to a Woodworking Job, D. A. Hampson. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 52-55, 2 figs. Describes method employed in machine shop for making specially designed box.

Shipping Containers. Formulas for Shipping Box Construction, M. L. Oglesby. Mgmt. & Administration, vol. 7, no. 3, Mar. 1924, pp. 323-328, 8 figs. Forces acting and sizes of material required to withstand them.

BRAKES

Air. Air Brake Association Meets at Montreal. Ry. Age, vol. 76, no. 23, May 10, 1924, pp. 1149-1154, 4 figs. Report on passenger-train handling: coördinating throttle and brake valve; slack adjustment; graduated release. Report, by J. P. Stewart, on interesting employees in study of air brakes.

Air Brake Investigation by I. C. C. Completed. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 521-523. See also Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 296-297. Report of Interstate Commerce Commission investigation on power brakes for both passenger and freight trains. Adoption of more complete specifications for maintenance and operation are recommended.

I. C. C. Continues the Brake Investigation. Ry. Age, vol. 76, no. 10, Mar. 8, 1924, pp. 551-554. Am. Ry. Assn. observers disagree with Bur. of Safety report on Norfolk & Western tests of automatic straight air brakes.

The Air Brake Problem. Car Foremen's Assn. of Chicago—Proc., May 1924, pp. 15-35 and (discussion), 35-55. Deals with maintenance, discussing fundamentals of air brakes to the end that proper significance be applied to relative parts.

A. R. A. Committee Report. Report on Brakes and Brake Equipment. Ry. Age (Daily Edition), vol. 76, no. 36, June 19, 1924, pp. 1729-1730, 5 figs. Failure of brake-beam hangers; 12-in. air-brake equipment; recommendations.

Automobile. See AUTOMOBILES, Brakes; Four-Wheel Brakes; Braking.

Electrically-Operated. Construction of Brakes Used to Retard or Hold Rotating Parts, A. J. Whitcomb. Indus. Engr., vol. 82, no. 6, June 1924, pp. 271-274 and 304-305. Details of construction, operation, and maintenance of electrically operated brakes.

Freight-Train. See Hand.

German-Railway Trials. Brake Trials on the German State Railways. Ry. Gaz., vol. 41, no. 17, Oct. 24, 1924, pp. 550-554, 10 figs. Tests made for demonstrating capabilities of newly developed brake apparatus for express trains; trials took place between Grunewald, near Berlin, and Belzig, and vice versa, with trains of heavy coaches hauled by two 4-6-0-type locomotives.

Hand. Getting Full Value from Hand Brakes on Air-Brake Cars, J. S. McWhirter. Elec. Ry. Jl., vol. 64, no. 11, Sept. 13, 1924, pp. 383-385, 2 figs. As auxiliary to air-brake equipments hand-brake parts should be designed and maintained so that full braking pressure, equivalent to that supplied by air-brake cylinder, will be available throughout entire travel of piston.

Hand Brakes on Goods Trains, E. Choquet. Int. Ry. Congress Assn.—Bul., vol. 6, no. 3, Mar. 1924, pp. 220-238, 5 figs. Solution of problem of hand brakes for goods trains which consists in determining, for a train of any composition, weight which must be braked in order that stops may be made from any given speed within a certain distance, gradients of line being taken into consideration.

Machining. See MILLING, Brakes.

Operation. See BRAKING.

Passenger-Train. Passenger Train Handling. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 219-222, 4 figs. Discusses brake effect from brake pipe reduction, graduated release, and mountain-grade braking.

See also Air.

Power. A Review of Power Brake Operation and the Results Obtained on the Southern Pacific, J. Kruttschnitt. Ry. & Locomotive Eng., vol. 37, no. 3, Mar. 1924, pp. 72-74. Developed in testimony before Interstate Commerce Commission.

Power Brakes on British Railway, W. E. Symons. Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 281-282, 2 figs. Reviews power-brake situation in Great Britain; vacuum and air brakes.

The Commission's Report on Power Brakes. Ry. Rev., vol. 75, no. 7, Aug. 16, 1924, pp. 251-257. Mandatory conclusions enunciated by Interstate Commerce Commission as result of its extended investigation of power brakes and appliances.

See also Air.

Switching Service. Improving the Gravity Switching Service by Better Braking (Verbesserung des Schwerkraft-Verschiebedienstes durch verbesserte Bremstechnik), Wenzel. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 38, Sept. 20, 1924, pp. 986-990, 16 figs. Details of Thyssenhütte gravity braking device for railway switching service in which braking action is exerted on wheels by means of braking rails at each side of rail which are actuated by weight of cars passing.

Track. "Thyssenhütte" Track Brake at the Cologne-Nippes Railway Station (Die Gleisbremse "Thyssenhütte" auf Bahnhof Köln-Nippes), Derikartz. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 15, Nov. 15, 1924, pp. 341-344, 12 figs. partly on supp. plate. Design and operation of brake consisting of rails applied at each side of both wheels, used in shunting cars to eliminate damage by colliding of cars.

Train. The Braking of Railway Trains With Counter Steam (Das Bremsen von Zügen durch Gegendampfgeben). Hanomag-Nachrichten, vol. 11, no. 123, Jan. 1924, pp. 10-12, 2 figs. Theoretical calculation of braking action of counter steam and its limitation by adhesive forces between wheels and rails.

Vacuum. Vacuum Brakes for Electric Rolling Stock (Freinage par le vide du materiel des chemins de fer à traction électrique), J. Netter. Technique Moderne, vol. 16, no. 17, Sept. 1, 1924, pp. 577-582, 8 figs. Design and construction of automatic vacuum brakes, and application to electric locomotives.

See also Power.

BRAKING

Automatic Valve Operation. Improvement of Air Apparatus in Train Control. Ry. Age, vol. 76, no. 7, Feb. 16, 1924, pp. 425-427, 3 figs. Indiana Equipment Corpn. develops valves to give graduated reduction of brake-pipe pressure.

Pneumatic. Hump Yard Operates Without Car Riders. Ry. Age, vol. 77, no. 20, Nov. 15, 1924, pp. 895-898, 8 figs. All car riders have been eliminated on north hump of Indiana Harbor Belt freight classification yard at Gibson, Ind., as result of installing pneumatic braking system.

Rail-Brake Apparatus for Freight Yard. A New System of Braking Wagons in Gravity Shunting Yards. Ry. Gaz., vol. 41, no. 18, Oct. 31, 1924, pp. 575-578, 8 figs. System, which has been laid down at several points on German State railways, has as its basis hydraulically operated braking apparatus applied at track level from operating tower.

Regenerative. The Characteristics of a D. C. Series Machine Self-Excited by Rectified Current for Purposes of Regenerative Control, R. D. Archibald. Instn. Elec. Engrs.—Jl., vol. 62, no. 327, Mar 1924, pp. 233-242, 11 figs. Discusses present position of regenerative control for street cars and describes method of self-exciting field of series motor with low-voltage rectified current transformed from a.c. tappings in armature; calculations for finding conditions of sparkless commutation of rectifier, and tests which corroborate calculations; practical application of device.

BRASS

[See also COPPER ALLOYS, Copper-Zinc; NON-FERROUS METALS.]

Annealing, Effect of. Effect of Anneal on Brass Surfaces, J. L. Christie. Iron Age, vol. 113, no. 11, Mar. 13, 1924, pp. 783-785, 6 figs. High ductility obtained only by losing smoothness; grain size under microscope a measure of both ductility and amount of annealing.

Brittle Ranges. The Brittle Ranges in Brass as Shown by the Izod Impact Test, D. Bunting. Inst. Metals—Advance paper no. 2, for meeting Mar. 12-13, 1924, 22 pp., 15 figs. Investigates (1) brittle ranges of brass varying in composition from 100 to 50 per cent copper; (2) effect of rapid cooling on brittle ranges; (3) cause of brittle ranges.

Cadmium in, Estimation of. The Estimation of Cadmium in Brass, A. T. Etheridge. Analyst, vol. 49, no. 585, Dec. 1924, pp. 572-576. Describes use of electrolytic methods which is said to have great advantages over chemical methods.

Constitution. The Constitution of Brass (Zur Konstitution des Messings), G. Masing. (Zeit. für Metallkunde, vol. 16, no. 3, Mar. 1924, pp. 96-98, 9 figs. partly on supp. plate. Points out that β-brass is formed below 470 deg. cent. through diffusion and is therefore constant at lower temperatures; the Carpenter diagram of state, it is claimed, does not hold true.

Corrosion. See COPPER, Corrosion.

Dezincification. A Further Study of the Dezincification of Brass, C. F. Nixon. Am. Electrochem. Soc.—Advance paper no. 3, for meeting Apr. 24-26, 1924, pp. 29-41, 2 figs. From experimental evidence it is concluded that, with exception of 90 per cent, or more, copper alloys, commercial brasses are subject to dezincification.

Extrusion of Rod. See EXTRUSION OF METALS, Brass Rods.

Foundries. See FOUNDRIES, Brass.

Foundry Mixtures, Nickel Additions to. The Advantage of Nickel Additions to Brass Foundry Mixtures, W. M. Corse. Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 79-80. Discusses advantages of nickel additions and gives typical examples of benefit derived.

Heat Treatment. Experiments on the Heat Treatment of Alpha-Beta Brass, O. W. Ellis and D. A. Schemmitz. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1348-N, July 1924, 11 pp., 2 figs. and (abstract) Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 593-594. Details of experiments carried out mainly with view to determining whether precipitation of soft particles within a supersaturated solid solution would not enhance its hardness. Effect of reheating quenched alpha-beta brass on its microstructure; results of reheating quenched alpha-beta brass at 100 deg., 200 deg. and 300 deg. cent.; aging at room temperature.

Relation of Heat Treatment, Mechanical Properties, and Microstructure of 60-40 Brass, V. O. Homerberg and D. N. Shaw. Am. Inst. Min. & Met. Engrs.—Trans., no. 1334-N, Mar. 1924, 10 pp., 16 figs. Results obtained when test pieces were given a double heat treatment and then tested for mechanical properties, and microstructure studied.

Relation of Heat Treatment to the Microstructure of 60-40 Brass; R. S. Williams and V. O. Homerberg. Am. Inst. Min. & Met. Engrs. —Trans., no. 1305-N, Mar. 1924, 15 pp., 40 figs. Description of a double heat treatment of 60-40 brass; gives photomicrographs showing changes that take place in microstructure on reheating water-quenched specimens.

Lead and Tin, Influence of. Lead and Tin in Brass (Blei and Zinn im Messing Ms 60), K. Hanser. Zeit. für Metallkunde, vol. 16, no. 3, Mar. 1924, pp. 91-95, 7 figs. Based on existing investigations and author's own tests, influence of lead and tin on strength, elongation, shrinkage, hardness, and hot and cold working of 60-40 brass is shown.

Melting. See ELECTRIC FURNACES, Brass.

Plates, Casting. See CASTING, Brass.

Pressed. Pressed Brass in Place of Red Bras and Bronze for Metal Parts of High Load (Pressmessing anstelle von Rotguss und Bronzen für hochbeanspruchte Metallteile), Peter. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1071-1074, 9 figs. Discusses tensile strength, machinability, conductivity, economic production and uses.

Properties, Determination of. Methods of Determining Physical Properties of Brass, A. A. Baldwin. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 77-79, 9 figs. Physical properties of brass, and tests for each.

Season Cracking. Cracking of Brass Due to Internal Stresses (Das Aufreissen von Messing durch innere Spannungen), G. Masing. Zeit. für Metallkunde, vol. 16, nos. 7 and 8, July and Aug. 1924, pp. 257-264 and 301-307, 10 figs. Discusses cracking or splitting of brass due to internal stresses caused by cold working; annealing to avoid it; connection between internal stresses and compression or deformation.

Season Cracking of Brass and Bronze (Om självsprickor i gulmetall), O. Forsman. Teknisk Tidskrift, vol. 54, no. 42, Oct. 18, 1924, pp. 115-120 (Mekanik), 5 figs. This cracking, according to author, is produced either by excessive cold working of metal or by impurities. Annealing is proper remedy. Bibliography.

Sheet, Purchasing of. Ordering the Right Kind of Sheet Brass, J. L. Christie. Metal Industry (N. Y.), vol. 22, no. 2, Feb. 1924, pp. 69-70, 6 figs. Mistakes that are made by purchasers in ordering sheet brass; how to specify desired grades for various requirements.

Special. Special Brasses (Bronze Substitutes) [Ueber Sondermessing (Ersatz für Bronze)], P. Reinglass. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1090-1092. Discusses steel-bronze (Cu 52-59 per cent, Z 36-43 per cent, Mn 2.5-3 per cent, Fe 1 per cent, Al 1 per cent), manganese bronzes, including deltametal and durnametal. Effect of additions of Al, Fe, and Ni on brass.

Tubes, Fatigue Failure. See METALS, Fatigue of.

Welding. See ELECTRIC WELDING, ARC, Copper, OXY-ACETYLENE WELDING, Brass.

BRASS FOUNDRIES

British. Impressions of British Brass Foundries, T. Harper. Metal Industry (N. Y.), vol. 22, no. 2, Feb. 1924, pp. 60-63. British efficiency as seen by an American brass foundryman and jobbing foundry operator.

Improving Conditions in. Humanizing Brass Foundries, Chas. Vickers. Foundry, vol. 52, no. 5, Mar. 1, 1924, pp. 185-189, 5 figs. Points out that unattractive features often serve to deter men from taking up brass casting work; suggests eliminating noise and fumes.

Operation of. The Operation of a Brass Foundry under Scientific Control, F. W. Rowe. Foundry Trade Jl., vol. 29, no. 399, Apr. 10, 1924, pp. 291-294 and (discussion) 294-296, 5 figs. Layout of brass foundries, provision of suitable stores, recording stocks, charge sheets, inspection of castings of new design, melting and casting procedure, casting temperature, etc.

Record Keeping. Controlling Brass Shop Detail, F. W. Rowe. Foundry, vol. 52, no. 6, Mar. 15, 1924, pp. 226-229, 7 figs. Close tab on weights, mixtures and other data is checked on operations in non-ferrous foundry; charts shown which help to record operations and metal compositions and properties.

BRASSES

Babbitting. See BEARINGS, Brasses, Babbitting.

BRAZING

Production. Production Brazing, B. Heyman. Welding Engr., vol. 9, nos. 3, 5 and 6, Mar., May and June 1924, pp. 19-21, 19-21 and 17-20, 9 figs. Underlying principles. Description of devices and methods employed in carrying through

a series of machine-brazing operations on a single product in which numerous difficulties were encountered both from an engineering standpoint in design and also from operating standpoint in shop.

BREAKWATERS

Sand-Filled Caissons. The Breakwater at Helsingborg (Sweden) (Der Wellenbrecher bei Helsingborg). Bauingenieur, vol. 5, no. 1, Jan. 15, 1924, pp. 4-5, 5 figs. Construction details of breakwater 340 m. long, consisting of 13 reinforced-concrete caissons filled with sand.

BREATHING APPARATUS

[See also MINE-RESCUE APPARATUS.]

Carbon-Monoxide. Observations on Respirators for Absorbing Carbon Monoxide, J. I. Graham. Iron & Coal Trades Rev., vol. 109, no. 2065, Dec. 26, 1924, pp. 1046-1047. Results of tests carried out on two types of carbon-monoxide respirators, viz., Burrell All-Service Canister No. CO-10 and M.S.A. "Self-Rescuer," to ascertain their efficiency under conditions of hard work and during rest. Abstract of paper read before S. Staffordshire and Warwickshire Inst. Min. Engrs.

Diving. Diving Apparatus (Le scaphandre autonome). Nature (Paris), no. 2613, May 3, 1924, pp. 275-279, 7 figs. Portable apparatus designed by M. Boutan, permits diver to remain several hours under water without making use of habitual pump and tube.

Liquid-Air. Mines Rescue Apparatus; Empire Exhibition. Engineering, vol. 117, no. 3045, May 9, 1924, p. 619, 4 figs. Apparatus exhibited by Guest & Chrimes uses liquid air in distinction from other types using compressed oxygen.

Mines, Application in. Application of Breathing Apparatus in Mines, J. A. S. Ritson. Colliery Guardian, vol. 127, nos. 3307 and 3308, May 16 and 23, 1924, pp. 1249 and 1318. Discusses way rescue or recovery operations should be carried out at a mine following an explosion or underground fire, and organization that should be established at a colliery prior to and after an explosion or underground fire. From paper read before Leeds Univ. Min. Soc.

Oxygen, for Aviators. Oxygen-Breathing Apparatus for Aviators. Engineering, vol. 117, no. 3042, Apr. 18, 1924, p. 506, 3 figs. Describes two types of apparatus, one carrying oxygen in liquid form in vacuum-walled metal vessel; other with steel container for carrying oxygen gas at pressure of 120 atmos.

Self-Contained. Notes on Self-Contained Breathing Apparatus in Nova Scotia, J. McMahon. Can. Inst. Min. & Metallurgy—Monthly Bul., no. 152, Dec. 1924, pp. 837-851. Description of each type and results of tests; efforts of Brit. Empire Steel Corpn. to secure most modern type of apparatus. See also article entitled, Practical Use of Self-Contained Breathing Apparatus, A. McEachern, pp. 852-857.

The Practical Use of Self-Contained Breathing Apparatus, A. McEachern. Can. Min. Jl., vol. 45, no. 38, Sept. 19, 1924, pp. 922-924, 1 fig. Describes various methods of using rescue breathing apparatus. Abstract of paper read before meeting of Min. Soc. of Nova Scotia.

Self-Rescuer. The Carbon Monoxide Self-Rescuer, A. C. Fieldner, S. H. Katz and D. A. Reynolds. U. S. Bur. Mines—Reports of Investigations, no. 2591, Apr. 1924, 10 pp., 5 figs. on supp. plates. Describes construction and details of M.S.A. self-rescuer, a pocket-size respirator which protects wearer from air contaminated with poisonous carbon monoxide gas, and discusses its performance under test conditions.

Types. New Auxiliary Apparatus for Mine Rescue Work (Neuere Hilfsgeräte im Grubenrettungswesen), Tübben. Braunkohle, vol. 23, no. 37. Dec. 13, 1924, pp. 691-695, 3 figs. Describes Audos, Inhabad, and other types of respirators.

BRICK

Manufacture. See BRICKMAKING.

Porosity Determination. A Simple Brick Porosimeter, E. E. Pressler. Am. Ceramic Soc.—Jl., vol. 7, no. 3, Mar. 1924, pp. 154-159, 1 fig. Describes a brick porosimeter based upon air-expansion principle for determining open pore space, and discusses various considerations of design. Adapted for testing refractory brick. Porosity values obtained by porosimeter and water absorption methods are compared to values calculated from true specific gravity, to indicate relative accuracy of methods. (Pub. by permission U. S. Bur. mines).

Refractory, Porosity and Specific Gravity of. Comparative Tests of Porosity and Specific Gravity on different Types of Refractory Brick, E. E. Pressler. Am. Ceramic Soc.—Jl., vol. 7, no. 6, June 1924, pp. 447-451. Results obtained. Apparent porosity is obtained directly by water absorption and air expansion methods. Total porosity is calculated from true specific gravity and apparent specific gravity is calculated from observed porosity values. Pub. by permission U. S. Bur. Mines.

Sand-Lime. Recommended Specification for Quicklime and Hydrated Lime for Use in the Manufacture of Sand-Lime Brick. U. S. Bur. Standards—Circular no. 150, Dec. 28, 1923, 6 pp. Brief description of way in which lime is used in manufacture of sand-lime brick, and general statement as to quality of lime required; directions for sampling and testing.

Silica-Lime. See MOLER, Properties and Uses.

Slag. See SLAG, Blast-Furnace.

Transverse Tests. Equalizer Apparatus for Transverse Tests of Bricks, H. L. Whittemore. U. S. Bur. Standards—Technologic Paper no. 251, Feb. 5, 1924, pp. 107-113, 6 figs. Describes new apparatus for transverse tests of building bricks; designed to insure proper loading, even if surfaces of brick are warped or irregular, and to maintain proper distance and alignment of bearings. Time required for testing with this apparatus was found to be about 58 per cent of that required with A.S.T.M. apparatus.

BRICKMAKING

Georgia Kaolins. Utilization of Georgia Kaolins in the Manufacture of Face Brick, R. T. Stull and G. A. Bole. Am. Ceramic Soc.—Jl., vol. 7, no. 5, May 1924, pp. 347-358. Details of tests made showing that light cream and light gray face brick can be made from Georgia kaolin, aplite and sand.

Holland. Brickmaking in Holland. Clay-Worker, vol. 82, no. 1, July 1924, pp. 19-26, 12 figs. Describes clay banks, their origin and extent; making of brick, setting and burning, burning of brick with turf, and drawing.

Kilns. See KILNS, Brick; Tunnel.

Materials Handling. Economy in Handling Materials in Brick Manufacture—Baltimore Plant, C. B. Bryant. Concrete, vol. 24, no. 3, Mar. 1924, pp. 97-100, 12 figs. Describes equipment and practice of Arundel-Shope Brick Co., Baltimore, Md.

Sand-Lime Brick. Heat Economy in Sand-Lime Brick Yards (Wärmewirtschaft in Kalksandsteinfabriken), Chr. Eberle. Tonindustrie-Zeitung, vol. 48, nos. 26 and 27, Mar. 29 and Apr. 1, 1924, pp. 279-281 and 289-290, 6 figs. Comparative figures of steam consumption for a production of 1,000

bricks for various methods of operation and in two different plants.

The Utilization of Spent Shale. Oil Eng. & Finance, vol. 5, no. 104, Dec. 1924, pp. 676-678, 4 figs. Discusses methods for manufacture of bricks on sand-lime (calcium-silicate) principle, for efficient utilization of spent shale residues.

Tunnel Kilns. See KILNS, Tunnel.

BRICKYARDS

Materials Handling in. See MATERIALS HANDLING, Brick Plants.

BRIDGE CONSTRUCTION

Steel Bridges. See BRIDGES, STEEL, Construction.

BRIDGE DESIGN

Arches, Calculation of. Design of Arch-thickness for Masonry Arched Bridges, K. D. Joshi. Mysore Engrs.' Assn.—Bul., vol. 2, no. 1, Jan.-Mar. 1924, pp. 22-32, 5 figs. Graphic method of testing arch thickness.

Determination of the Size of Arches (Considerazioni sulla determinazione della grossezza delle volte), C. Ceradini. Annali dei Lavori Pubblici, vol. 62, no. 7, July 1924, pp. 641-656, 10 figs. Calculation of symmetric arches of bridges, symmetrically loaded, with circular intrados.

Concrete Bridges. See BRIDGES, CONCRETE, Design.

Developments and Prospects. Bridge Engineering, Gustav Lindenthal. Eng. News-Rec., vol. 92, no. 16, Apr. 17, 1924, pp. 652-657, 18 figs. Author considers what have been distinctive features in progress of design and construction of bridges in different countries during last 50 years, and prospect for future.

Pedestrian River Crossing. Contest to Obtain Tentative Plans for the Erection of a Crossing over the Weser River in Bremen (Der Ideenwettbewerb zur Erlangung von Vorentwürfen für die Herstellung einer Verkehrsanlage über die Weser in Bremen), M. Contag. Bautechnik, vol. 2, no. 12, Mar. 18, 1924, pp. 89-100, 13 figs. Conditions called for structure crossing Weser River to accommodate about 2,000,000 pedestrians annually; details of prize-winning and purchased plans, including plans for steel bridges, aerial ferries and lift bridges.

Plate-Girder Bridges. See BRIDGES, RAILWAY, Steel.

Rhine River. Notes on the Construction of Railway Bridges Over the Rhine, R. Desprets. Int. Ry. Congress Assn.—Bul., vol. 6, no. 7-8, July-Aug. 1924, pp. 495-552, 91 figs. Short account of railway bridges over Rhine from Dutch frontier up to Worms, describing direct methods employed in designing these consecutive bridges, very instructive evolution in ideas that prompted their general design, and various details of their construction.

Steel Bridges. See BRIDGES, STEEL, Design.

Stresses in Girders. The Interaction in Bridgework of the Deck System on the Main Girders and the Consequent Modification of Stresses Therein, D. H. Remfry. Engineering, vol. 117, no. 3038, Mar. 21, 1924, pp. 380-381. (Abstract.) Paper read before Instn. Civ. Engrs.

BRIDGE ERECTION

Arch Closure. Closing 640-Ft. Michigan Central Arch Over Niagara Gorge. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 716-718, 3 figs. Cantilevered halves lowered to junction by 39-in. jacks in backstays; centralized jacking control facilitates operation.

Cantilevering. Cantilevering a Heavy Bridge Span In Northern Quebec, J. P. Chapleau and C. M. Goodrich. Eng. News-Rec., vol. 93, no. 3, July 17, 1924, pp. 94-95, 2 figs. Special conditions surrounding construction of a railway bridge across Saguenay River led to a remarkable use of cantilever erection method. A 220-ft. double-track span was cantilevered for its full length from a 90-ft approach span, because of rapid current in river. Construction data.

Erecting by Longitudinal Rolling. Erecting a Bridge in Palestine by Longitudinal Rolling, P. W. Etkes. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 16-17, 6 figs. Steel deck span, 165 ft. long and weighing 120 tons, of Yarmuk River railway bridge was transported to site in sections, erected on bank, and moved into place by longitudinal rolling.

Falsework, Elimination in. Erecting Seven Simple Spans Without Falsework. Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 630-632, 4 figs. Describes how Union Pacific replaces Howe trusses in Columbia River Bridge; new bridge consists of three 192-ft. through trusses, three 242-ft. through trusses, three 90-ft. through plate girders, 280-ft. center bearing swing span, 304-ft and 418-ft. trestle approaches.

Skew Bridge. Skew Bridge for Fly-Over Junction at Chicago: I.C.R.R. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 748-750, 5 figs. Bridge replaces main track grade crossing; ball bearings for girders; derrick cars place long heavy girders.

BRIDGE PIERS

Bracing. Causes of Deformation of Stone Piers of the Sitter Viaduct of the Bodensee-Toggenburg Railroad (Ueber die Ursachen der Verbiegungen der steinernen Pfeiler am Sitterviadukt der Bodensee-Toggenburgbahn), M. Ros. Schweizerische Bauzeitung, vol. 83, nos. 25 and 26, June 21 and 28, 1924, pp. 287-289 and 301-304, 19 figs. Discusses loading tests and calculations made to determine necessary bracing to be carried out.

Cofferdam Wreckage. Cofferdam Wrecked by Splitting of Concrete Seal, C. B. McCullough. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 460-461, 3 figs. Foundation for bridge pier in Oregon damaged by remarkable accident attributed to effect of heavy storm.

Construction. Foundations for Bridges in Pueblo Flood Control Project (Colo.). Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924, pp. 903-905, 5 figs. Diversion requires 8 new bridges; substructures in main channel built in caissons sunk to rock.

Hollow Concrete. Hollow Concrete Bridge Piers Built Like Chimneys. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, p. 757, 3 figs. Piers 181 ft. and 221 ft. high of reinforced concrete to carry highway bridge over Dix River gorge.

Renewal. Bridge Spans Rolled 43 ft. Endwise to Place Them on New Piers. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 150-151, 5 figs. Substructure of Des Moines River bridge of Santa Fe renewed in novel manner.

Steel-Encased Reinforced-Concrete. Work on Rigolets Bridge Is Progressing Rapidly, W. H. Courtenay. Ry. Age, vol. 76, no. 16, Mar. 22, 1924, pp. 777-780, 8 figs. Unique pier construction adopted by Louisville & Nashville to resist effect of gulf storms; constructed of reinforced concrete placed inside of steel shell.

BRIDGES

Abutments. See ABUTMENTS.

Arches. See ARCHES.

Bascule. See BRIDGES, LIFT, Bascule.

Concrete. See BRIDGES, CONCRETE.

Construction. See BRIDGE CONSTRUCTION.

Design. See BRIDGE DESIGN.

Erection. See BRIDGE ERECTION.

Suspension. See BRIDGES, SUSPENSION.

Sydney Harbor Bridge. Sydney Harbour Bridge. Indus. Australian & Min. Standard, vol. 72, nos. 1868, 1869, 1870, and 1871, Sept. 25, Oct. 2, 9, and 16, 1924, pp. 466-469, 505-509, 539-541, and 573-575, 12 figs. Report on tenders, which were called for cantilever and arch bridges only, but tenders submitted for suspension bridges were given same consideration as the others; tendered cost and type of bridge; engineering aspects governing choice of type.

The Competitive Designs for the Sydney Harbour Bridge. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 129-132, 18 figs. Discussion of the different designs submitted for construction of Sydney Harbor Bridge. Proposals are of five general types, viz., arch, cantilever-arch, cantilever, suspension, and cantilever-suspension.

Trestles. See TRESTLES.

Viaducts. See VIADUCTS.

BRIDGES, CONCRETE

Abutments. See ABUTMENTS, Concrete Bridge.

Arch. Building a Concrete Arch Around an Old Iron Bridge, E. H. Harder. Eng. News-Rec., vol. 92, no. 8, Feb. 21, 1924, pp. 320-323, 7 figs. Lower chord used for rib reinforcement and upper chord for concrete floor forms; trestle approach designed as continuous structure with considerable saving.

California Begins Construction of Douglas Memorial Bridge, H. D. Miller. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 506-567, 1 fig. Design considerations, physical features, pier design, and loading of half-million-dollar memorial bridge to be constructed over Klamath River in northern California; will consist of five 210-ft. open-spandrel reinforced-concrete arch spans, supported on a wood-pile foundation.

Concrete Bridge with Longest Arch Completed in France. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 476-479, 4 figs. Clear span of 432.44 ft. provided in structure bridging Seine River near Rouen; twin ribs of large section are hollow; precast floor beams hung from arch by concrete-encased steel hangers. See also editorial on p. 474.

Design and Construction of the Hill-to-Hill Bridge, Bethlehem, Pa., F. W. Skinner. Mun. & County Eng., vol. 66, no. 6, June 1924, pp. 286-292, 7 figs. Bridge, chiefly of concrete-arch construction, serves 70,000 residents of city, crosses Lehigh River, Monocacy Creek, several streets and railway tracks design; pile foundations; coffer dams; forms and false work; mixer plants, etc.

Design of LaBalme Concrete Arch Bridge, J. Polivka. Cornell Civ. Engr., vol. 32, nos. 2, 3, 4, 5, and 6, Nov. and Dec. 1923, and Jan., Feb. and Mar. 1924, pp. 17-19 and VIII, 33-36 and VII, 50-52 and 56, 56-68 and IX, and 82-84, 11 figs. Describes highway bridge which crosses Rhone at Yenne; computation of roadway stresses and stresses in arch rib; results of experiments with glass model.

Hill to Hill Bridge, Bethlehem, Pa. Ry. Rev., vol. 75, no. 3, July 19, 1924, pp. 77-84, 13 figs. Long viaduct replaces wooden bridge over Lehigh River and eliminates 8 grade crossings. Bridge is of high level or viaduct type; except for 2 through truss spans and 8 through girder spans, entire structure is of reinforced concrete design.

Long Span Concrete Arch Design in France, C. S. Whitney. Eng. News-Rec., vol. 93, no. 12, Sept. 18, 1924, pp. 463-466, 1 fig. Special methods adopted by Freyssinet, noted French Engineer, to reduce shrinkage, rib shortening, and abutment deflection in concrete spans approaching 600 ft.

Reinforced Concrete Bridge of 432 Ft. Span, P. Calfas. Concrete & Constructional Eng., vol. 19, no. 5, May 1924, pp. 281-288, 5 figs. Describes new bridge which replaces old road bridge connecting St. Pierre-du-Vauvray with Andé across Seine, consisting of two arches imbedded in abutments and having a clear span of 432 ft. 6 in.; rise above level of spandrel is 82 ft.

Reinforced Concrete Bridge with Arches of 590 ft. 6 in. Span, P. Calfas. Concrete & Constructional Eng., vol. 19, no. 6, June 1924, pp. 352-357, 4 figs. Particulars of new bridge to be built across estuary of Elorn between Brest and Daoulas, consisting of 3 huge reinforced-concrete arched bays supported by 2 piers built in stream and 2 abutments on banks. Will have total length of about 2,625 ft.

Six-Span Concrete Arch Highway Bridge at Danville, H. H. Edwards. Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 896-898, 5 figs. Bridge is 1037-ft. reinforced-concrete structure, consisting of 6 arches and 7 short approach spans; details of foundation and arch centering.

The New Bridges of Freiburg (Switzerland) [Les nouveaux ponts de Fribourg (Suisse)], Ch. Dantin. Génie Civil, vol. 84, no. 14, Apr. 5, 1924, pp. 317-319, 14 figs. partly on supp. plate. Details of two concrete arch bridges, the Pérolle and the Zähringen bridges.

Two New Bridges over the Ihle Canal (Zwei neue Brücken über den Ihle-Kanal), W. Nakonz. Bautechnik, vol. 2, no. 6, Feb. 8, 1924, pp. 41-44, 15 figs. Both are highway bridges with concrete arches, one 46 m. and other 44.2 m. wide; construction details.

Unusual Spandrel-Braced Arch Bridge Built at Portland, O. Laurgaard. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 328-330, 5 figs. Design of Alexandra Ave. bridge in Portland, Ore. Dead loads reduced by use of high-strength concrete and short-span floorbeams. Trestle used as falsework in constructing arches.

Construction. Construction of Lorne Bridge, Brantford, Ont., F. P. Adams. Can Engr., vol. 47, no. 20, Nov. 11, 1924, pp. 493-497, 11 figs. Reinforced-concrete bridge built over Grand River to replace steel structure. Has a clear waterway of 400 ft. and three concrete arches one with 140-ft. and two with 130-ft, span; deck is 64 ft. wide overall.

Ferro-Concrete. Indian & East. Engr., vol. 54, no. 1, Jan. 1924, pp. 25-32, 20 figs. Its application to brige work and some notes on recent works.

Design. Development of Reinforced Concrete Bridge Design, A. E. Lindau. Ry. Rev., vol. 74, no. 13, Mar. 29, 1924, pp. 613-617. Historical review showing that invention of reinforced concrete permitted stone and concrete culverts to develop into bridges.

The Design of Steel and Concrete Bridges, A. C. Hughes. Surveyor & Mun. & County Engr., vol. 65, no. 1678, Mar. 14, 1924, pp. 277-279, 7 figs. Stress calculations.

Development. The Development of Reinforced Concrete Bridge, Mangold. Eng. Progress, vol. 5, no. 3, Mar. 1924, pp. 41-47, 10 figs. Reinforced-concrete slabs and girder bridges; arched bridges; erection of reinforced-concrete bridges.

East Prussia. Reinforced-Concrete Bridge Over the Alle River near Wehlau (Eine Eisenbeton brücke als Ersatz der kriegszerstörten Strassenbrücke über die Alle bei Wehlau), v. Zychlinski. Zentralblatt der Bauverwaltung, vol. 44, no. 42, Oct. 15, 1924, pp. 359-363, 11 figs. Details of design, reinforcement, falsework, and construction.

Elbe River, Hamburg. The Third Bridge Over Elbe at Hamburg (Die dritte Elbbrücke bei Hamburg (sogenannte Freihafen-Elbbrücke), M. Sperber. Bautechnik, vol. 2, no. 26, June 17, 1924, pp. 289-305, 48 figs. on supp. plates. Description and details of construction of new bridge within free port area for railroad, elevated, vehicular, and passenger traffic.

Erection Over Old Bridge. Building a Reinforcer Concrete Bridge Around an Old Steel Structure, A. E. Wynn. Concrete & Constructional Eng., vol. 19, no. 3, June 1924, pp. 360-368, 8 figs. Description of new bridge at Pulaski, N. Y., consisting of 2-ribbed open-spandrel arch over river and beam-and-girder trestle over part, and details of construction work.

Leam River, England. Prince's Bridge over the River Leam, Leamington, Spa. Surveyor & Mun. & County Engr., vol. 65, no. 1671, Jan. 25, 1924, pp. 87-88, 1 fig. Reinforced-concrete bridge consisting of a center span of 44 ft. and two side spans of 42 ft.

Load Tests. The Aa Bridge of the Wäggital Power Plant, Rempen, Switzerland, (Aa-Brücke Rempen des Kraftwerks Wäggital). Schweizerische Bauzeitung, vol. 83, no. 21, May 24, 1924, pp. 241-243, 3 figs. Reinforced concrete bridge, spanning valley over impounding reservoir, has three spans and length of 66 m.; results of load tests.

Long-Span. See Suspension.

Manitoba. Reinforced Concrete Bridges, Manitoba. Can. Engr., vol. 46, no. 16, Apr. 15, 1924, pp. 435-437, 11 figs. Various types of bridges built as a result of Manitoba Good Roads Act; provincial government pays one-half cost for steel or concrete bridges and municipalities other half. From Mun. Improvements.

Multiple-Arch, Distortion Measurements. Measured Changes in Shape of Multi-Arch Bridge, P. L. Brockway. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 304-306, 2 figs. Measurements were made on Maple St., bridge over Arkansas River, Wichita, and expected distortion from progressive filling not verified. No changes found after two years' service.

Pouring Method. How to Pour Concrete Bridges with Special Reference to Construction Joints, A. R. Carter. Mun. & County Eng., vol. 66, no. 5, May 1924, pp. 229-231. Relates policy adopted in Winnebago County, Ill., in pouring concrete structures.

Railway. See BRIDGES, RAILWAY, Concrete; DAMS, Concrete.

Standard Types, Spain. Official Spanish Types of Reinforced-Concrete Railway and Highway Bridges (Types officiels espagnols de ponts en béton armé pour routes et chemins vicinaux), J. E. Ribera. Génie Civil, vol. 84, no. 2, Jan. 12, 1924, pp. 39-41, 10 figs. Specifications adapted by Director of Pub. Works, with special reference to arch bridges.

Steel vs. Steel or Concrete Bridges? (Pontes de aço ou Pontes de concreto?), G. Ribeiro. Revista Brasileira de Engenharia, vol. 8, no. 5, Nov. 1924, pp. 205-208, 1 fig. Discusses materials and labor required for steel or reinforced-concrete bridges, and gives diagram for graphic calculation.

Suspension. Longest Concrete Bridge Span Includes Deck Suspended From Arch Ribs, H. J. Harms. Concrete, vol. 24, no. 4, Apr. 1924, pp. 138-140, 10 figs. See also Successful Methods, vol. 6, no. 2, Feb. 1924, pp. 10-11, 3 figs. Describes bridge at Saint-Pierre-du-Vauvray, France, over the Seine, in Eure Department; span 131.80 m., rise of arch 25 m.; consists of two fixed arches 8.90 m. center to center.

Toronto, Canada. Governor's Bridge in the Township of York, Ont., is Unique in Many Respects. Contract Rec. & Eng. Rev., vol. 37, no. 6, Feb. 6, 1924, pp. 121-127, 12 figs. See also Concrete, vol. 25, no. 2, Aug. 1924, pp. 55-58, 11 figs. and Can. Engr., vol. 46, no. 14, Apr. 1, 1924, pp. 389-392, 6 figs. Details of reinforced-concrete bridge 672 ft. overall length with main arch of 200 ft. span, across Belt Line Ravine, Toronto; by reason of flat arches, thin walled piers and abutments and electrically-welded reinforcing, it was built for only $100,000.

Viaducts. See VIADUCTS, Concrete-Arch.

BRIDGES, HIGHWAY

[See also BRIDGES, CONCRETE.]

Bear Mountain, N. Y. See Suspension.

Berlin, Germany. Rebuilding the Weidendamm Bridge in Berlin (Der Wiederaufbau der Weidendammer Brücker in Berlin), M. Cornehls. Bautechnik, vol. 2, nos. 33, 35, and 36, Aug. 1, 15, and 22, 1924, pp. 361-364, 377-379, and 388-390, 19 figs. Reconstruction due to tunneling for North South Ry. line; details of design and construction.

Concrete. Concrete Pile Trestle Highway Bridges in Texas, G. G. Wickline. Eng. & Contracting (Roads & Streets), vol. 61, no. 6, June 4, 1924, pp. 1224-1226. Design and construction features.

Descriptive Notes on the Construction of a Reinforced Concrete Highway Bridge, T. P. Francis. Surveyor & Mun. & County Engr., vol. 66, no. 1698, Aug. 1, 1924, pp. 99-101. Details of reconstruction of Town bridge, Pontypool.

Reading Bridge, Ferro-Concrete, vol. 15, no. 6, Dec. 1923, pp. 126-137, 6 figs. Main arch crosses river in single span of 180 ft.; total length, including approach viaduct, abutments and wing walls, is nearly 600 ft.

Reinforced Concrete Bridges for Large Spans (Eisenbetonbogenbrücken für grosse Spannweiten), H. Spangenberg. Bauingenieur, vol. 5, nos. 15 and 16, Aug. 15 and 31, 1924, pp. 461-468 and 503-512, 35 figs. Details of recent constructions and proposals, showing effect of reinforced-concrete construction on development of long spans. Proposes new method of construction enabling use of high grade ingot steel for long-span-reinforced-concrete-arches.

The Reinforced-Concrete Pasteur Bridge over the Rhone River at Lyons (Le pont Pasteur, en béton armé, sur le Rhône à Lyon). Génie Civil, vol. 84, no. 3, Jan. 19, 1924, pp. 53-57, 16 figs, partly on supp. plate. Construction details of bridge, 225 m. long, including 2 abutments, 13 m., and two arches, 62 m., 2 piers, 4 m. at base and center arch of 66 m.

BRIDGES, HIGHWAY

"Victoria Bridge" at Cremeno over the Pioverna on the Ballisio-Cremeno Road ("Ponte della Vittoria" a cremeno, sul Pioverna per la strada Ballisio-Cremeno). Industria, vol. 38, no. 13, July 15, 1924, pp. 358-365, 23 figs. Details of design and construction of reinforced concrete bridge, calculation of arch, erection work, etc.

See also BRIDGES, CONCRETE.

Construction. Highway Bridge Construction, P. Allan. Indus. Australian & Min. Standard, vol. 72, nos. 1862, 1863, 1864, 1865, 1866, and 1867, Aug. 14, 21, 28, Sept. 4, 11 and 18, pp. 243-246, 281-285, 318-322, 336-338, 394-396, and 432-435, 45 figs. Discusses practice in New South Wales; low and high level plain beam bridges. Aug. 21.

Timber truss bridges, Macdonald type and Allan type. Aug. 28: Timber truss bridges with overhead bracing. Sept. 3: Composite and steel truss bridges. Sept. 11 and 18: Movable bridges.

Design. Arrangement of Municipal Bridges at Limited Height and Medium Width (Ueber die Anordnung von städtischen Strassenbrücken bei gedrängter Bauhöhe und mittlerer Weite), Herbst. Bautechnik, vol. 2, nos. 45 and 47, Oct. 17 and 31, 1924, pp. 514-515 and 535-538, 28 figs. Bridging of rivers of 30 to 150 meters width; design and construction, esthetics, types of bridges, etc.

Bridges and Culverts for Highways, H. H. Shaw. Can. Engr., vol. 47, no. 10, Sept. 2, 1924, pp. 303-304. Practice followed in Prince Edward Island; concrete and corrugated iron culverts; steel bridges over estuaries. Abstract of paper read before Can. Good Roads Assn.

Outstanding Problems in Highway Bridge Design, E. F. Kelley. Eng. & Contracting (Roads & Streets), vol. 61, no. 2, Feb. 6, 1924, pp. 296-302, 3 figs. Also Can. Engr., vol. 46, no. 13, Mar. 25, 1924, pp. 374-376; Good Roads, vol. 66, no. 4, Apr. 1924, pp. 106-108. Discusses live loads, roadway widths, approaches, bridge floors, wearing surfaces, protection of structures and traffic.

Effects on Local Transit Conditions. The Secondary Effect of Certain Important River Bridges on Local Transit Conditions, J. A. Miller. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 4, Apr. 1924, pp. 389-400, 6 figs. Study of effect of construction of important vehicular bridges on transit conditions in adjacent communities; consideration of situation created by erection of new Delaware River bridge between Philadelphia and Camden; analysis of traffic movement across East River, N. Y., indicates that existing transportation lines in New Jersey should be extended across new bridge into Philadelphia.

Failure. Building Accident in Flensburg (Bauunfall in Flensburg). Bautechnik, vol. 2, no. 46, Oct. 24, 1924, pp. 524-526, 4 figs. Discusses collapse of three-hinge concrete arch after removing falsework, due to faulty withdrawing of falsework from ribs of arch.

Impact Studies. Impact Tests on Highway Bridges. Pub. Roads, vol. 5, no. 7, Sept. 1924, pp. 10-13, 3 figs. Progress report of coöperative research conducted at Ames, Ia.

Loading. Proposed Loading for Highway Bridges. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 291-295, 5 figs. Discussion of paper by H. D. Hussey.

Louisiana. Building a Bridge on Shifting Sands. N. E. Lant. Successful Methods, vol. 6, no. 4, Apr. 1924, pp. 8-10, 5 figs. Construction data of highway bridge recently completed over Thompson Creek, between Baton Rouge and St. Francisville, Louisiana; composed of twin spans, each 225 ft. long, and resting on reinforced-concrete abutments and center pier; designed to withstand unfavorable conditions in bed of stream.

Sapinero, Colorado. Erecting the Highest State Highway Bridge in Colorado. Eng. & Contracting (Roads & Streets), vol. 61, no. 6, June 4, 1924, pp. 1209-1211, 1 fig. Design, location and construction features of 130 ft. high, 230 ft. clear span Sapinero arch.

Steel. Completion of Humber Bridge Opens New Highway Entrance into City of Toronto. Contract Rec. & Eng. Rev., vol. 38, no. 38, Sept. 17, 1924, pp. 923-926 and 931-932, 11 figs. Steep, winding grades eliminated by erection of long bridge over Humber Valley; steel structure with concrete piers and abutments, comprising four arch and two truss spans.

Specifications for Steel Highway Bridge Superstructure. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 267-290, 6 figs. Final report of special committee on design and construction; deals with loads and stresses; details of design; workmanship; full-size eye-bar tests; weighing and shipping; structural steel for bridges; structural nickel steel.

Standard Specifications for Steel Highway Bridges. U. S. Dept. Agriculture—Bul., no. 1259, Oct. 9, 1924, 48 pp., 7 figs. Adopted by Am. Assn. State Highway Officials and approved by Secretary of Agriculture for use in federal-aid road work.

Tentative Specifications for Steel Highway Bridge Superstructure. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 329-342. Submitted as progress report of special committee on specifications for bridge and construction.

Switzerland. Bridge Building in St. Gall and Appenzell (St. Gallische und Appenzeller Brückenbauten). Schweizerische Bauzeitung, vol. 84, no. 20, Nov. 15, 1924, pp. 243-245, 7 figs. Details of bridges over Hundwilertobel and Rotbach, and of Sitter bridge of Swiss Federal Railways.

Sydney, Australia. Form Development of Sydney Bridge (Die Gestaltung der Sydney-Brücke), G. Müller. Bauingenieur, vol. 5, no. 18, Sept. 30, 1924, pp. 559-575, 48 figs. Compares principal types of large bridges; competitive designs for Sydney bridge; mathematical statics; engineering esthetics; etc.

Toronto, Can. Construction of Gerrard Street Bridge, J. S. Burgoyne and G. Alison. Can. Engr., vol. 46, no. 23, June 3, 1924, pp. 573-575, 6 figs. Further details describing construction of new highway bridge over River Don at Toronto. Erection of steel grillages for steel spans; falsework for arches; laying concrete deck and sidewalk slabs.

Humber River Highway Bridge, Toronto, A. B. Crealock. Can. Engr., vol. 47, no. 17, pp. 431-437, 13 figs. Describes new bridge on Bloor Street West provincial highway, having a total length of 745 ft. face to face of abutments and composed of 4 arch spans of 135 ft., two truss spans of 67 ft. 6 in. each, four piers with a width of 10 ft. at top and two abutments.

Vienna. Construction and Upkeep of Municipal Bridges in Vienna (Zwei Jahre Bau und Erhaltung städtischer Brücken in Wien), F. Musil. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 41-42, Oct. 17, 1924, pp. 353-360, 12 figs. Details of bridge construction, especially over Danube river, and upkeep work.

BRIDGES, LIFT

Bascule. American Bridge Type Bascule Bridge, A. Reichmann. West. Soc. Engrs.—Jl., vol. 29, no. 4, Apr. 1924, pp. 177-181, 5 figs. Outline of the more characteristic types of bascules that have been developed in past 50 years. Describes heel trunnion of American Bridge Type bascule bridge.

Bascule Bridge and Viaduct at Coleraine. Ry. Engr., vol. 45, no. 535, Aug. 1924, pp. 265-271, 10 figs. Also Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, pp. 411-414, 7 figs. Engineering details and drawings of 11-span viaduct recently completed on L. M. & S. R. (Northern Counties Committee), Ireland. One section of structure includes first Strauss underhung counterweight bascule bridge in British Isles, erected over River Bann to replace old viaduct.

Completion of Johnson Street Bridge, F. H. Allwood. Can. Engr., vol. 46, no. 26, June 24, 1924, pp. 633-635, 5 figs. Describes construction of bascule bridge connecting Victoria and Esquimalt, B. C. Oxy-acetylene torch employed for demolishing old swing bridge; important features in erection of superstructure of highway and railway sections of bridge.

Floating Bridges (Über Schwimmbrücken), S. Kiehne. Bauingenieur, vol. 5, no. 11, June 15, 1924, pp. 355-356, 3 figs. on supp. plate. Describes bascule bridge with counterweight crossing harbor of Kiel, with facilities to allow ships of various sizes to pass.

Segmental Girder Construction As Applied to the Scherzer Rolling Lift Bridge, C. P. Hazelet. West. Soc. Engrs.—Jl., vol. 29, no. 4, Apr. 1924, pp. 187-194, 8 figs., partly on p. 208. Deals with segmental and track girder construction.

Strauss Bascule Bridge over the Bann River, Ireland, E. S. Needham. Engineering, vol. 118, no. 3075, Dec. 5, 1924, pp. 758-759, 24 figs., partly on supp. plate. Construction details of new movable span on main line of Lond. Midland & Scottish Ry.; length between abutments is 800 ft.; total length of bascule portion is 105 ft.

The Johnson Street Bridge, F. M. Preston. Eng. Jl., vol. 7, no. 12, Dec. 1924, pp. 717-721, 3 figs. Details of construction methods and comparative costs of Johnson Street Bridge in Victoria, B. C.; bascules are erected on solid concrete piers carried on piles driven to rock.

The New Brown Bascule Bridge, T. E. Brown, Jr. West. Soc. Engrs., vol. 29, no. 4, Apr. 1924, pp. 195-208, 14 figs. Describes new design of bascule invented by author for which certain claims of economy are made, and principles on which design is based.

The Rall Bascule Bridge, E. Haupt. West. Soc. Engrs.—Jl., vol. 29, no. 4, Apr. 1924, pp. 182-186, 4 figs. Describes Rall type of bascule bridge, and adaptation of its general features to a vertical lift bridge design.

Vertical. The Vertical Life Bridge, J. A. L. Waddell. West. Soc. Engrs.—Jl., vol. 29, no. 5, May 1924, pp. 209-216, 7 figs. Describes progress of vertical lift bridge designs with which author has been intimately associated for many years. References are given to other publications in which will be found more detailed information including statistics of bridges erected and detailed analysis of economics of movable spans.

BRIDGES, MASONRY

Abutments. See ABUTMENTS, Masonry Arched Bridges.

BRIDGES, MOVABLE

Bascule. See BRIDGES, LIFT, Bascule.

Swing. Construction of a Swing Bridge at the President Wilson Basin at Marseilles (Construction d'un pont tournant au bassin "Président Wilson" à Marseille), H. Descans. Assn. des Ingénieurs sortis des Ecoles spéciales de Gand—Annales, vol. 13, no. 4, 1923, pp. 267-350, 24 figs. on supp. plates. Bridge is 103 m. long and 14 m. wide, and weighs 2000 tons; local conditions and principal dimensions; estimate and plan of project; details of design and swinging mechanism.

BRIDGES, PONTOON

Cable-Operated. Cable-Operated Pontoon Bridge Over Chicago River. Eng. News-Rec., vol. 93, no. 22, Nov. 27, 1924, pp. 864-865, 3 figs. Temporary draw span completes important new thoroughfare; safety barrier protects highway traffic.

BRIDGES, RAILWAY

Cantilever Arch. New Niagara Gorge Arch Nearing Completion. Ry. Age, vol. 77, no. 19, Nov. 8, 1924, pp. 830-836, 10 figs. Bridge has span of 640 ft. from center to center of hinge pins and rise of 105 ft.; planned to carry two railway trucks on deck at 13-ft centers, and designed for cantilever method with pin bearing between two halves of lower chord at crown; noteworthy features of erection; closing operations.

Concrete. Long Girder Spans for Reinforced Concrete Bridge. Ry. Rev., vol. 75, no. 6, Aug. 9, 1924, pp. 202-205, 6 figs. Pennsylvania Ry. uses spans of unusual length for new structure which replaces steel bridge at Becks Run, Pa., Monongahela River.

Design. See BRIDGE DESIGN, Rhine River.

Erecting. See BRIDGE ERECTION, Cantilevering; Erection by Longitudinal Rolling.

Germany. Renovation and Protective Work of Railway Bridge at Rummelsburg, 30 Meters High (Instandsetzungs- und Schutzarbeiten an dem 30m. hohen Eisenbahnviadukt bei Rummelsburg i. Pom.), A. Wolfsholz. Deutsche Bauzeitung, vol. 58, no. 74, Sept. 13, 1924, pp. 145-147 (Konstruktion u. Bauausführung), 5 figs. Details of work at bridge 105 meters long over Stiednitz river, consisting of four middle piers of granite and five main spans of 16 meters.

Impact Allowances. See Vibrations.

Reconstruction, Virginia. B. & O. Replaces Bridges of Historic Interest, G. Lang, Jr. Ry Age, vol. 77, no. 4, July 26, 1924, pp. 145-148, 6 figs. Description of three bridges reconstructed by Baltimore and Ohio on Valley Railroad of Virginia, bridges being located in Shenandoah Valley between Harrisonburg and Lexington, and known as Bridges 117, 120, and 129. Construction details.

Steel. Admissible Load of Steel Bridges (Zur Frage der zulässigen Beanspruchung der eisernen Brücken), J. Melan. Zeit. des Osterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 27/28, July 11, 1924, pp. 243-248, 4 figs. Discusses development of methods for calculation, formulas used for impact, and their verification by locomotive tests, calculations for various lengths of spans, etc.

Remarkably Heavy Plate Girders in Skew Railroad Bridge. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 710-711; 3 figs. Buffalo road crossing required girders weighing 130 tons each; heavy flange sections and web reinforcement.

Replacement of Steel Railroad Bridges (Auswechslung eiserner Bahnbrücken), M. Schaechterle. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 3, Mar. 15, 1924, pp. 47-51, 3 figs. Introduction of heavier locomotives has necessitated reinforcement or replacement of numerous structural-steel bridges in Germany. Photos and line drawings of broken beams are given. New method to replace bridges is described.

The Design of a 50-Ft. Deck Span Plate Girder Railway Bridge, H. F. Cornick. Ry. Engr., vol. 45, nos. 533 and 534, June and July 1924, pp. 193-195 and 252-255, 10 figs. Details of design of typical girder bridge, using modern methods of calculation. Summary of bending moments; proportions of main girders; calculation of shear stresses; girder bracing.

Sweden. The New Lindingö Bridge in Stockholm (Die neue Lindingö-Brücke in Stockholm), H. Kulka. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 621-630, 18 figs. Design and construction of bridge connecting island of Lindingö with Stockholm; calculated traffic load 6.45 tons per linear meter; double track; one span of 140 meters, floated into position.

Testing. Dynamic Examination of Bridges (Dynamische Untersuchungen von Brücken), J. Geiger. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 606-611, 13 figs. Discusses vibrations due to mass effect of locomotive driving, its mass pressure moment, deviation of wheels from circular shape, deviation of track from straight line, measuring apparatus for vibrations, methods and results of measurement.

Traffic Load, Influence of. Investigation of the Dynamic Influence of the Traffic Load on Railway Bridges (Undersökning av trafiklastens dynamiska inverkan a järnvägsbroar), E. Nilsson. Teknisk Tidskrift, vol. 54, no. 17, Apr. 26, 1924, pp. 39-47 (Väg- och Vattenbyggnadskonst), 14 figs. Historical review of subject. Description of "extensometer" of Okhuizens in The Hague. Occurring stresses are measured by elastic deformations under load. Dynamic influences are shown to increase material stresses more than had been assumed.

Vibrations. The Vibration of Bridges. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 462-465. Report by C. W. L. Jones to Indian Ry. Bridge Committee, embodying opinions and experiences of American engineers on impact allowances in railway bridge design.

BRIDGES, STEEL

[See also BRIDGES, RAILWAY.]

Arch. Eads Bridge Completes Fifty Years' Service, Chas. E. Smith. Ry. Age, vol. 77, no. 18, Nov. 1, 1924, pp. 783-786, 3 figs. See also Ry. Rev., vol. 75, no. 18, Nov. 1, 1924, pp. 647-654, 8 figs. Description of structure over Mississippi River at St. Louis shows few changes made since opening; early problems recounted.

Construction. Bridge Construction at Isle Maligne, J. P. Chapleau and C. M. Goodrich. Contract Rec. & Eng. Rev., vol. 38, no. 37, Sept. 10, 1924, pp. 892-895, 5 figs. Great power project of Quebec Development Co. on upper Saguenay involved construction of three steel bridges; cold weather concreting was feature of interest.

Erection. See BRIDGE ERECTION.

Girder. Replacing Railway Truss Span with Two Girder Spans. Eng. News-Rec., vol. 93, no. 22, Nov. 27, 1924, pp. 870-871, 4 figs. New masonry built clear of old span; falsework supported old deck while new girder spans were erected in renewal of Bluff Creek bridge on Chicago, Rock Island & Pac. Ry. near Caldwell, Kan.

Highway. See BRIDGES, HIGHWAY, Steel.

Painting of. Bases for Contracts for Protective Painting of Steel (Grundlagen für die Vergebung von Eisenschutzanstrichen), L. Herzka. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 612-614. Discusses placing of contracts by surface as superior to placing by weight; local knowledge as basis of prices; separation of shop work from painting is necessary.

Railway. See BRIDGES, RAILWAY, Steel.

Specifications. See BRIDGES, HIGHWAY, Steel.

Stresses. Secondary Stresses in Steel Riveted Bridges, O. H. Ammann. Eng. News-Rec., vol. 93, no. 17, Oct. 23, 1924, pp. 666-668, 5 figs. Notes on comprehensive series of tests and analytical studies carried out by Assn. Swiss Steel Fabricators.

Wind Bracings. Multiple Flange Frames for Wind Bracings of Long Span Steel Bridges (Mehrgurtige Fachwerke als Windverband weitgespannter eisener Brücken), J. Fritsche. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 618-621, 5 figs. Discusses calculation of bracings for full loads, and their application in long spans, giving examples.

BRIDGES, SUSPENSION

Bear Mountain, Hudson River. Bear Mountain Suspension Bridge Over Hudson River, H. C. Baird. Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924, pp. 914-918, 13 figs. Design of longest suspension span yet built.

Construction Progress on Bear Mountain Bridge. Eng. News-Rec., vol. 93, no. 17, Oct. 23, 1924, pp. 672-673, 3 figs. Describes physical features of work on suspension bridge in course of construction across Hudson River at Anthony's Nose.

Budapest, Reconstruction of. Rebuilding the First Budapest Suspension Bridge, J. Beke. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1096-1099, 3 figs. Reconstruction of oldest fixed bridge across Danube at Budapest, the Szechenyi suspension bridge, built in period of 1839-1849. Except for towers and anchorages, a completely new structure was built, to outlines of old bridge. Heavier eyebar chains, movable saddles, and accessible anchor bars.

Cables. See CABLES, Suspension Bridges.

Concrete. See BRIDGES, CONCRETE, Suspension.

Concrete Anchorage-Foundations Construction. Constructing Reinforced Concrete Foundations of Delaware River Bridge Anchorages, C. Carswell. Concrete, vol. 24, no. 3, Mar. 1924, pp. 103-110, 16 figs. Details of construction of foundations for anchorages of a two-cable stiffened suspension bridge connecting Philadelphia, Pa., and Camden, N. J. Constructed by means of reinforced-concrete caissons sunk by open dredging to rock 60 to 100 ft. below.

Florianopolis, Brazil. Design of the Florianopolis Suspension Bridge, D. B. Steinman. Eng. News-Rec., vol. 93, no. 20, Nov. 13, 1924, pp. 778-782, 3 figs. Main span of bridge under construction in Santa Catharina province, Brazil, is 1113 ft; longest eyebar suspension span in world; new stiffening truss produces more rigid bridge with less material; main chains made of heat-treated eyebars with yield point above 75,000 lb. per sq. in.; towers designed to rock on base.

Hudson River. Mid-Hudson Bridge to Be 1500-Ft. Suspension Span. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, p. 452, 3 figs. General features outlined by Modjeski & Moran, engineers for recommended bridge at Poughkeepsie; unusual tower design; piers to go 125 ft. to rock.

Menai Straits. An Account of an Examination of the Menai Suspension Bridge, H. T. Tudsbery

and A. R. Gibbs. Engineering, vol. 117, no. 3027, Jan. 4, 1924, pp. 23-24. Examination of bridge built in 1820-26, which is still only road connection between Anglesey and mainland. (Abstract.) Paper read before Instn. Civ. Engrs.

Self-Anchored Chain. Three New Allegheny River Bridges to be of Unusual Type. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 995-997, 3 figs. Self-anchored chain suspension type selected for down-town bridges in Pittsburgh which require rebuilding; only other example of type is bridge over Rhine River at Cologne, Germany.

Tower Erection. Towers of First Suspension Bridge Over Hudson River Completed. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 568-569, 2 figs. Erection of 350-ft. steel towers for highway bridge; approaches and anchorage tunnels under way.

BRIQUETS

Pressure Resistance Determination. Device for Determining Resistance to Pressure of Briquets (Ein Hilfsmittel zur Druckfestigkeitsbestimmung von Briketts), C. Hütter. Braunkohle, vol. 23, no. 23, Sept. 6, 1924, pp. 449-450, 1 fig. One of the briquets is crushed between two equal and parallel surfaces of known section by means of two hydraulic jacks, one of which has a manometer for reading off water pressure, used for calculation.

BRIQUETTING

Coal. See COAL, Briquetting.

Lignite. See LIGNITE, Briquetting.

BRONZES

[See also COPPER ALLOYS, Copper-Tin; NON-FERROUS METALS.]

British Practice. See ALLOYS, British Practice.

Characteristics. Mechanical Bronzes, E. G. Jarvis. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 81-83. Discussion of characteristics of various bronzes.

Cold Drawing and Annealing, Effect of. Note on the Effect of Cold-Drawing and Annealing on Some Electrochemical Properties of a Low-Tin Bronze, S. H. J. Wilson. Inst. Metals—Advance paper no. 14, for meeting Mar. 12-13, 1924, 11 pp., 5 figs. Investigation which is result of discovery by Alkins of a critical range in curve relating the amount of cold work received by copper or bronze wire to several physical properties.

Coloring. See COPPER, Coloring.

Copper-Tin-Graphite. See BEARING METALS, Durex.

Gun Metal. See GUN METAL.

High-Tin. Some Experiments on the Effect of Casting Temperature and Heat-Treatment on the Physical Properties of a High-Tin Bronze, F. W. Rowe. Inst. Metals—Advance paper no. 11, for meeting Sept. 8-11, 1924, 7 pp., 12 figs. partly on supp. plates. Describes experiments carried out to gain some idea of mechanical properties of a high-tin bronze under various methods of handling. Alloy used had following nominal percentage composition: copper, 84.00; tin, 15.95; phosphorus, 0.05.

Japanese. Japanese Bronzes (Japanische Bronzen. Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 33, Aug. 17, 1924, pp. 105-106 (Metall). Discusses their characteristics, furnaces used, coloring of alloys, analyses of some old and new bronzes.

Manganese. See MANGANESE BRONZE.

Manganese and Phosphorus in. See CAST IRON, Manganese and Phosphorus in.

Powders, Manufacture. See ALUMINUM, Powders, Manufacture.

Sand-Cast Zinc Bronze. The Effect of Casting Temperature on the Physical Properties of a Sand-Cast Zinc-Bronze, F. W. Rowe. Inst. Metals—Advance paper no. 12, for meeting Mar. 12-13, 1924, 6 pp., 18 figs. Investigation to determine, for works use, optimum casting temperature to give required mechanical properties in gun metal of composition specified.

Welding. See ELECTRIC WELDING, ARC, Copper.

BROWN COAL. See LIGNITE.

BRUSHES

Carbon. Commercial Methods of Carbon Resistance Measurement, R. Wilmeth. Elec. Jl., vol. 21, no. 7, July 1924, pp. 309-315, 9 figs. Discusses several methods from point of view of inspection, not technical laboratory; speed with which measurements can be made, reliability and accuracy.

Position against Commutator. Brush Angle and Direction of Commutator Relation, W. C. Kalb. Power, vol. 60, no. 25, Dec. 16, 1924, pp. 973-975, 5 figs. Answers question whether commutator should rotate against or away from sharp angle of brush face, and shows that specific direction of rotation is preferable for almost every individual case.

BUDGETING. See INDUSTRIAL MANAGEMENT, Budgeting Control; Budgeting.

BUILDING CONSTRUCTION

British Empire Exhibition. The Construction of the British Empire Exhibition, E. O. Williams. Concrete & Constructional Eng., vol. 19, no. 7, July 1924, pp. 420-432, 5 figs. Details of concrete construction work, proportion of mixes, tests on concrete cubes; detailed specifications for mass concrete, reinforced concrete, pre-cast construction. Abstract of paper read before Instn. Mun. & County Engrs.

Chemical Plants. Structural Teachings of the Oppau Explosion, E. G. Friedrich. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 66-67, 3 figs. Teachings concerning behavior of structural elements and structures derived from study of wreckage of ammonia plant in Oppau, Germany, after great explosion of Sept. 21, 1921.

Compressed Air in. See COMPRESSED AIR, Construction Work.

Concrete, Cold-Weather. Costs and Precautions in Winter Construction of Concrete Buildings, R. E. Egelhoff. Concrete, vol. 25, no. 6, Dec. 1924, pp. 211-215, 10 figs. Cost data, precautions to be taken, including use of canvas covers, and suggested specification for winter protection.

Conveyors. See CONVEYORS, Building-Construction.

Cost Estimating. Short Cut Methods of Estimating, C. E. Dingham. Contract Rec. & Eng. Rev., vol. 38, no. 14, Apr. 2, 1924, pp. 332-335. How to make preliminary estimates of building costs with a reasonable degree of accuracy.

Craftsmanship, Revival of. How Can the Spirit of Craftsmanship be Revived in the Building Industry, E. J. Mehren. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 837-838. Considers benefits that would result from revival of craftsmanship spirit; present conditions and their causes; effect of specialization; remedies; plans to reach workers and public.

Day-Labor. See CONSTRUCTION WORK, Day-Labor Construction.

Earthquake Protection. Lessons in Building Taught by the Japanese Earthquake Disaster.

Eng. World, vol. 24, no. 1, Jan. 1924, pp. 22-25. Abstract from report of extensive investigation of structures of various types under supervision of R. F. Moss, Trucson Steel Co. of Japan.

Estimating. The Principles and Practice of Estimating, T. S. Smith. Surveyor & Mun. & County Engr., vol. 65, no. 1672, Feb. 1, 1924, pp. 153-156, 1 fig. See also Concrete & Constructional Eng., vol. 19, no. 2, Feb. 1924, pp. 103-109, 1 fig. Views on estimating for concrete and excavation; methods of estimating, analysis of consistuents of concrete, determination of voids of a unit volume of aggregate, and pricing.

See also Steel Estimating.

Fire Protection in. See FIRE PROTECTION, Building Design.

Fireproof. Analysis of Cost of Types of Fireproof Construction, A. F. Klein. West. Soc. of Engrs.—Jl., vol. 29, no. 7, July 1924, pp. 290-300, 10 figs. Gives unit costs of different methods of fireproof construction of 3 types of buildings; analyzes 4 types of construction for 16-story hotel, 3 for light manufacturing building and 3 for heavy warehouse.

Comparison of Types of Fireproof Construction, C. L. Post. West. Soc. of Engrs.—Jl., vol. 29, no. 7, July 1924, pp. 278-289, 11 figs. Compares types of fireproof construction covering foundations, columns and floor construction, hollow clay tile arches, reinforced-concrete joist construction, flat-slab construction, etc., recognizing fact that no universal rules can be laid down.

Floor Areas, Limitation of. Building Code Limitations on Floor Areas in Buildings, R. G. Kimball. Am. Architect & Architectural Rev., vol. 125, no. 2442, Mar. 26, 1924, pp. 301-308, 9 figs. Discussion of present practices and presentation of a new and logical method of limiting areas of floors in buildings.

Foundries. See FOUNDRIES, Building Design.

Framework Calculations. Calculation of Symmetric Framework by Means of the Four-Moment Theorem (Die Berechnung symmetrischer Stabwerke mit Hilfe des Viermomentensatzes), P. Abeles. Beton u. Eisen, vol. 23, nos. 9 and 10, May 5 and 20, 1924, pp. 110-114 and 123-125, 30 figs. Discusses four-moment theorem by Bleich; angle of rotation of right-angled frames with symmetric and asymmetric loading; lattice girders; etc.; develops formulas and makes calculations; numerical examples.

German Regulations. New Technical Regulations for Building Construction (Neuordnung der technischen Vorschriften für Bauleitungen). Beton u. Eisen, vol. 28, no. 21, Nov. 5, 1924, pp. 285-286. Details of regulations for specifications issued by German Committee of Adjudications regarding concrete construction work.

Java. European Architecture in Java (Die europäische Baukunst auf Java). Zentralblatt der Bauverwaltung, vol. 44, no. 41, Oct. 8, 1924, pp. 347-349, 14 figs. Details and examples of Javanese buildings and architecture. From Ingenieur, no. 22, 1924.

London Building Law. The Proposed Reform of the London Building Law, C. A. Daubney. Roy. Inst. British Architects—Jl., vol. 31, no. 16, June 28, 1924, pp. 525-533, 10 figs. Gives proposed modifications of law.

Machine Shops. See MACHINE SHOPS, Construction.

Machinery For. Machinery for Building Construction (Baumaschinen). Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 27 and 28, July 5 and 12, 1924, pp. 689-720 and 735-739, 74 figs. Series of articles describing types of dredges and excavators, automatic unloaders, cranes, locomobiles; compressed air and electricity as power; foundations, etc.

Metal Lath for Fire Protection. Metal Lath as a Protection from Fire, Wharton Clay. Eng. & Contracting (Water Works), vol. 61, no. 1, Jan. 23, 1924, pp. 185-187. Value of metal lath as protection for lumber; vast increase in safety of frame buildings at about 2 per cent increased cost. From address before First Nat. Fire Prevention Congress, Oct. 8-13, 1923.

Metal-Lath Reinforcement. Metal Lath in the Construction of Industrial Buildings, E. M. Lurie. Safety Eng., vol. 47, no. 3, Mar. 1924, pp. 124-133, 12 figs. Fire resistive qualities of metal lath in reinforcing cement columns, girders, steel and wooden beams, floor joists, roof trusses, partitions, elevator and stair enclosures.

Office Buildings. How a Contractor Schedules Operations for a Large Office Building, W. J. Lynch. West. Soc. Engrs.—Jl., vol. 29, no. 6, June 1924, pp. 265-272. Description of sequence of operations in construction of typical large office building, of steel construction and assuming provisions on lower floors for special uses, such as banking floor or large auditorium.

Pisé. Houses of Mud, J. W. Porter. Sci. Am., vol. 130, no. 4, Apr. 1924, p. 233, 4 figs. Describes method of pisé construction, in which earth is converted into walls by means of molds made of shuttering, into which earth is rammed by means of a pisoir or rammer; advantages and economy of method.

Pressed Steel in. Pressed Steel Construction for Fire Safety, A. I. Curtis. Eng. World, vol. 24, no. 1, Jan. 1924, pp. 10-12, 8 figs. Discusses reasons and claims for fireproof value of metal-lumber construction.

Reinforced Brickwork. Reinforced Brickwork, T. W. D. Miller. Roy. Engrs. Jl., vol. 38, no. 1, Mar. 1924, pp. 108-115, 11 figs. partly on supp. plates. Describes construction of Officers' Hostel at Chaklala, near Rawalpindi (British India), employing reinforced brickwork instead of reinforced concrete, also method of calculation, testing, and cost data.

Reinforced-Concrete. A Note on Concrete Buildings, M. Ayrton. Roy. Inst. Brit. Architects—Jl., vol. 31, no. 10, Mar. 22, 1924, pp. 298-302, 6 figs. Discusses problems of reinforced-concrete building construction.

Fast Work Is Feature of Buffalo Winter Construction. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 368-371, 7 figs. Large 8-story reinforced-concrete and brick building closed in less than 3 months in midwinter. Notes on methods employed. Old structure used as part of housing; unusual formwork.

Fireproof Quality of Reinforced Concrete Buildings (Ueber die Feuerbeständigkeit von Eisenbetonbauten), M. Silomon. Beton u. Eisen, vol. 23, no. 9, May 5, 1924, pp. 114-117. Traces damage done by fire back to its physical causes with view to increase further fireproof quality of reinforced concrete.

The Earthquake Disaster in Japan From the Standpoint of the Civil Engineer (Das Erdbebenunglück in Japan vom Standpunkt des Bauingenieurs), M. Briske. Bauingenieur, vol. 5, no. 11, June 15, 1924, pp. 327-334, 28 figs. Illustrates and describes damaged buildings and other structures, including reinforced-concrete structures; destruction due mainly to static behavior toward oscillations produced by earthquake.

Reinforced-Concrete, Winter-Weather Protection. Winter Weather Protection for Buildings, R. E. Egelhoff. Eng. & Constructing (Buildings), vol. 62, no. 6, Dec. 24, 1924, pp. 1356-1362, 11 figs. Methods of and equipment developed by Turner Construction Co., a concern with 15 years' experience.

Safety in. Safety in Building Construction, W. E. Welch. Safety Eng., vol. 46, no. 6, Dec. 1923, and vol. 47, nos. 1 and 2, Jan. and Feb. 1924, pp. 284-287, 26-31 and 70-74, 7 figs. Dec.: Sub and super structure steel erection and other erection about four stories above street level. Jan.: Caisson excavation under air pressure for building fundations. Feb.: Outside and inside protection; scaffolding, etc.

Statics. Recent Works on Statics of Building Construction in 1923 (Die Neuerscheinungen in der Statik der Baukonstruktionen im Jahre 1923), G. Worch. Beton u. Eisen, vol. 23, nos. 12 and 14, June 20 and July 20, 1924, pp. 161-164, and 184-188, 32 figs. Critical review of more recent literature on subject and gives examples as illustrations.

Steel. Standardizing Iron Construction and Reducing it to Types (Normung und Typung im Eisenbau), H. Schmuckler. Bauingenieur, vol. 5, no. 22, Nov. 25, 1924, pp. 744-748, 11 figs. Deals with standardization committees and their work, including building codes. Advantages of "types" of iron construction or structural steel buildings such as halls or sheds for workshops, exhibitions, etc.

Steel, Code for. See STRUCTURAL STEEL, Construction Code.

Steel Estimating. Estimating the Structural Steel of Buildings, R. Fleming. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 387-390. Hints from experience with problems and difficulties of estimating; approximate and close estimates; influence of specifications; common errors and recommended cautions.

Steel-Framework Collapse. Unbraced Steel Frame Collapses in Spokane. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1066-1067, 2 figs. Report of C. A. Burnette and B. J. Garnett, official investigating commission, on causes of collapse of nearly-completed steel framework of four-story Masonic Temple Annex in Spokane, Wash., on May 9, 1924. Found to be chargeable to absence of proper bracing of steel frame.

Thermotite Method. Thermotite Construction Method Offers Interesting Variation in Concrete Building Units. Cement & Eng. News, vol. 36, no. 6, June 1924, p. 27, 2 figs. Units used are solid slabs with faces 15 in. long by 8 in. high, with thicknesses varying from 2½ in. to 4 in., to meet load requirements under various conditions, made tongue-and-grooved on all edges and produced by "semi-dry" tamping process.

Tribune Tower, Chicago, Ill. The Tribune Tower, H. J. Burt. West. Soc. Engrs.—Jl., vol. 29, no. 12, Dec. 1924, pp. 451-464, 10 figs. General description of structural work in connection with new Chicago building. See also Mechanical Equipment of the Tribune Tower, J. A. Sutherland, same journal, pp. 465-467.

Tubular-Steel System. Steel Construction with the Use of Tubular Members. Engineering, vol. 118, no. 3072, Nov. 14, 1924, pp. 674-675, 16 figs. Examples of structures built in Holland making use of tubular members; advantages claimed for method.

Weather Conditions Affecting. Weather and Construction. Eng. & Contracting (Buildings), vol. 62, no. 5, Nov. 26, 1924, pp. 1175-1187, 2 figs. Results of study to determine average and extreme weather conditions affecting building construction in nine large cities. Gives tables of climatic conditions in these nine representative construction centers, with explanation of their use in planning all-year construction, prepared by Division of Building and Housing, Dept. Commerce, Wash., D. C.

Winter Construction. Winter Construction, C. S. Hill. Eng. News-Rev., vol. 93, nos. 14, 15, 16, and 17, Oct. 2, 9, 16, and 23, 1924, pp. 532-535, 588-590, 632-635, and 674-675, 12 figs. Responsibilities and difficulties of contractor. Oct. 2: Labor and climate. Oct. 9: Processes and plant. Oct. 16: Methods and costs. Oct. 23: Coördinate services.

See also Concrete, Cold-Weather.

Wooden. Examples of Modern Wooden Construction (Exemples de charpentes modernes en bois), F. Cretin. Génie Civil, vol. 84, no. 11, Mar. 15, 1924, pp. 256-260, 22 figs. Gives examples showing possibilities of permanent or semi-permanent constructions, following usual types, such as straight or parabolic beams, solid webb arches, trussed beams and arches, and triangular systems of large bays.

BUILDING MATERIALS

Basic, Works for Making. Blue Diamond Materials. Rock Products, vol. 27, no. 1, Jan. 12, 1924, pp. 40-52, 43 figs. Describes works of Blue Diamond Materials Co., Los Angeles, Cal., manufacturers, producers, and distributors of basic building materials; equipment of the different buildings; Hay mixed mortar process.

Heat Conductivity of. See MATERIALS, Heat Conductivity of.

Heat Transmission in. See HEAT TRANSMISSION, Building Materials.

Hollow Tile. Strength, Absorption and Freezing Resistance of Hollow Building Tile, H. D. Foster. Am. Ceramic Soc.—Jl., vol. 7, no. 3, Mar. 1924, pp. 189-199, 7 figs. Describes test methods and gives summary of compressive strength and absorption determinations of nearly 350 tests of tile selected from 25 representative sources. Preliminary report of resistance to freezing and thawing of tile from 17 representative sources. (Pub. by permission U. S. Bur. Standards.)

Limestone. See LIMESTONE.

Magnolite. "Magnolite," a New Building Material (Un nuovo materiale da costruzione, la "Magnolite"). Industria, vol. 38, no. 7, Apr. 15, 1924, pp. 195-197, 11 figs. Particulars of uses of blocks, plates and hollow tiles composed of wood shavings and a fireproof binder and formed under pressure.

Mortars. See MORTARS.

Plaster. See PLASTER.

Structolite. Structolite, a Gypsum Concrete. Rock Products, vol. 27, no. 25, Dec. 13, 1924, pp. 26-27, 2 figs. New plastic material especially adapted for walls of dwellings and one-story commercial structures.

Structural Steel. See STRUCTURAL STEEL.

Stucco. See STUCCO.

Testing. Relative Efficiency of Building Materials, L. E. Allen. Mich. Architect & Engr., vol. 6, no. 11, Nov. 1924, pp. 138-140, 2 figs. Describes absorption or porosity test, strength tests, and fire resisting tests developed to determine relative merits of building materials.

Testing Machine for. Torsional Oscillating Machine, a New Testing Machine for Determining Quality of Building Materials (Die Drehschwingungsmaschine, eine neue Prüfmaschine zur Gütebestimmung von Werkstoffen), O. Föppl. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 9, Mar. 1, 1924, pp. 203-205, 4 figs. Discusses newly found property of building materials, the damping capacity, which is observed with torsional oscillating stress; damping capacity can be determined in connection with shear intensity, and plotted in curves.

Wood Composition Blocks. See Magnolite.

BUILDINGS

[See also STRUCTURES.]

Acoustics. See ACOUSTICS.

Atmospheric Impurities, Effect on. The Effect of Atmospheric Impurities on Buildings, F. Baines. Gas Jl., vol. 168, no. 3211, Nov. 26, 1924, pp. 575-577. Effect involves disfigurement of building and decay of material.

British Empire Exhibition, Wembley. The British Empire Exhibition Buildings. Engineering, vol. 117, nos. 3034, 3035, and 3036, Feb. 22, 29, and Mar. 7, 1924, pp. 225-228, 263-266, and 291-293, 59 figs. partly on supp. plates. Construction features and layout of exhibition. Structural details of Palace of Engineering, which probably covers larger area than any other reinforced-concrete building in world. Mar. 7: Palace of Industry.

Ceilings. See CEILINGS.

Columns. See COLUMNS.

Concrete. Large Concrete Flat Buildings. Erected in Thirteen Weeks. Eng. News-Rec., vol. 92, no. 13, Mar. 27, 1924, pp. 531-532, 4 figs. Columns of Emperger type; all members of uniform size; plant and forms; concreting averaged two stories daily.

See also Hamburg, Germany; Hospital.

Concrete, Failure of. Further Data on Benton Harbor Concrete Building Failure. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 556-559, 3 figs. Tests clear concrete materials but show concrete itself very weak; inadequate cold weather precautions in mixing of concrete and in protection of floors after pouring.

Reinforced-Concrete Hotel Under Construction Fails by Progressive Collapse, T. L. Condron. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 239-242, 6 figs. 8-story Benton Harbor structure completely wrecked by slow failure continuing 30 hours after removal of fifth-floor shores; cause not determined but materials and cold weather suspected.

Construction. See BUILDING CONSTRUCTION.

Department Stores, France. The New Department Store Du Printemps, Paris (Les nouveaux magasins du Printemps, à Paris), J. Michaut. Génie Civil, vol. 85, nos. 4 and 5, July 26 and Aug. 2, 1924, pp. 81-89 and 108-113, 32 figs. Details of rebuilt stores, new design, reinforced concrete construction, Chicago Underwriters Specifications for protection against fire, alarm system, heating and ventilating, elevators and traffic arrangements, pneumatic carriers, etc.

Domes. See DOMES.

Earthquake-Proof. See EARTHQUAKES, Characteristics of.

Electric Heating of. See HEATING, ELECTRIC, Buildings.

Electrical Mechanical Equipment. Electrical Mechanical Equipment, F. G. Turnbull. Am. Architect, vol. 125, no. 2438, Jan. 30, 1924, pp. 123-126, 6 figs. Discusses equipment for water pumping, refrigeration, elevator service, and heating and cooking in buildings.

Esthetic. See INDUSTRIAL PLANTS, Construction.

Factories. See FACTORIES.

Floors. See FLOORS.

Foundations. See FOUNDATIONS.

Foundries. See FOUNDRIES.

Girders. See GIRDERS.

Hamburg, Germany. Ballin House in Hamburg (Das "Ballinhaus" in Hamburg), H. & O. Gerson. Zentralblatt der Bauverwaltung, vol. 44, no. 32, Aug. 6, 1924, pp. 267-269, 9 figs. Details of design and construction, reinforced-concrete construction on 1400 wood piles.

Heat Insulation of. See HEAT INSULATION, Buildings.

Heat Transmission in. See HEAT TRANSMISSION, Buildings; Walls.

Heating. See HEATING, Buildings.

Height of. See CITY PLANNING, Height of Buildings.

Hospital. Structure and Facilities of a Modern Hospital, A. Peabody. Eng. News-Rec., vol. 92, no. 15, Apr. 10, 1924, pp. 608-611, 7 figs. Wisconsin State Institution at Madison has concrete frame with slab and joist floors; wood, tile, and concrete flooring; natural ventilation with windows of transom type; pipe arrangements.

Hotels. See HOTELS.

Houses. See HOUSES.

Industrial, Planning Construction Program. Planning the Construction Program, A. G. Anderson. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 595-598, 6 figs. Value of specialized knowledge in industrial building.

Japan, Resistance to Earthquake. On the Various Influences of the Destructive Force of the Earthquake and the Resistance of Buildings, S. Uchida. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 426, Jan. 1924, pp. 19-32, 75 figs., partly on supp. plates. (In Japanese.)

Layout, Hosiery Mill. Special Design for Hosiery Mill on Pacific Coast, J. R. Poteat. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 707-708, 3 figs. Axis of line of buildings chosen to eliminate excess sunlight; bracing against vibration and to withstand earthquake tremors; layout and column spacing to fit machine sizes.

Machine Shops. See MACHINE SHOPS.

Materials for. See BUILDING MATERIALS.

Moving. Moving the Seven Story Dowie Building, H. Filippi. West. Soc. Engrs.—Jl., vol. 29, no. 1, Jan. 1924, pp. 13-22, 8 figs. Describes moving of large building in connection with terminal improvement in Chicago; notes on construction plant; underpinning; arrangement of tracks; general cribbing; cable and capstan arrangement; total distance through which building moved was 85 ft.

Railway Stations. See RAILWAY STATIONS.

Raising. Recent Examples of Raising Buildings (Neuzeitige Hebung von Bauwerken), A. Moritz. Bauingenieur, vol. 5, no. 15, Aug. 15, 1924, pp. 479-482, 8 figs. By means of example shows how to avoid troublesome and expensive procedure by using simple but improved hydraulic devices.

The Settlement and Righting of a Factory Building in Holland. Engineering, vol. 117, no. 3032, Feb. 8, 1924, pp. 174-176, 12 figs. Describes settling of oil-hardening building situated alongside of Maas River, and its righting, by lifting the whole in such manner as not to interfere with continuous operation of plant; how 3-story building with 82-ft. tower was raised.

Roofs. See ROOFS.

Schools. Fireproof School Building Contains Novel Features, F. A. Naramore. Concrete, vol. 25, no. 6, Dec. 1924, pp. 216-222, 8 figs. Description and construction details of new James A. Garfield High School, Seattle, Wash. Building is of skeleton type; floor slabs, beams, columns and walls are of reinforced-concrete, and exterior of face brick and terra-cotta trimming.

Skylights. See SKYLIGHTS.

Stairs. Economic Construction of Reinforced-Concrete Stairs (Die Wirtschaftlichkeit der Bauformen von Eisenbetontreppen), A. Habel. Beton

u. Eisen, vol. 23, nos. 13 and 15, July 5 and Aug. 5, 1924, pp. 173-176 and 197-200, 9 figs. Discusses types of stairs and their design and calculation.

Stairways. See STAIRWAYS.

Steel-Frame. Growth of Steel Frame Buildings, H. J. Burt. Eng. News-Rec., vol. 92, no. 16, Apr. 17, 1924, pp. 680-684, 7 figs. Origin and problems of skyscraper.

Steel Framework, Stresses in. Measured Stresses in Columns of 18-Story Building. Eng. News-Rec., vol. 94, no. 14, Oct. 2, 1924, pp. 540-542, 5 figs. Results of series of strain-gage measurements of dead-load stresses in steel framework of Equitable Life Insurance Co. of Iowa Building, Des Moines. Readings taken during erection show close check with computed loads and moderate bending effects. Abstract from Bul. 71, Eng. Experiment Station, Iowa State College.

Theaters. See THEATERS.

Ventilation. See VENTILATION.

Vibrations. See VIBRATIONS, Buildings.

Warehouses. See WAREHOUSES.

Wind Pressures, Effect of. Investigations of Wind Pressure and Suction Acting on Buildings (Undersögelser af vindens tryk og sugning paa bygningsvaerker), Fr. Jahnsen. Ingeniören, vol. 33, no. 19, May 10, 1924, pp. 229-232, 6 figs. Results of experiments made on small models.

The Effect of Wind Suction on Buildings (Windsaugwirkungen an Gebäuden), R. Sonntag. Deutsche Bauzeitung (Konstruktion & Bauausführung), vol. 58, nos. 17-18 and 21-22, Mar. 1 and 15, 1924, pp. 38-39 and 43-46, 5 figs. Review of investigations of wind suction on building models and discussion as to what extent results of model tests can be applied to actual buildings; examples of accidents due to suction effect of wind on roofs and hangars.

BULKHEADS

Concrete. See CONCRETE CONSTRUCTION, Bulkheads.

BUOYS

Gas and Bell. Modern Gas and Bell Buoy Built by Lighthouse Service. Eng. News-Rec., vol. 93, no. 20, Nov. 13, 1924, pp. 783-784, 3 figs. Bell operated by carbonic-acid gas; flashing acetylene gas light; buoy designed to minimize rolling.

BUSBARS

Calculation. Determining the Cross Section of Conductors in Switching Plants (Die Bestimmung des Leiterquerschnittes in Schaltanlagen), Waltjen. Siemens-Zeit., vol. 4, nos. 9 and 10, Sept. and Oct. 1924, pp. 302-307 and 336-340, 20 figs. Discusses calculation from standpoint of cheapness, economy, and voltage drop. Figures for round and flat copper. Examples.

Zinc. Damages to a Zinc Supply Busbar for Current Transformers (Ueber eine Zerstörung von Stromwandlerzuführungsschienen aus Zink), U. Retzoe. Werkstattstechnik, vol. 18, no. 9, May 1, 1924, 66. 257-260, 6 figs. Account of damages occurring in a special case and investigation of causes.

BUSES

Lighting. Lighting the Bus Interior, W. C. Brown. Bus Transportation, vol. 3, no. 9, Sept. 1924, pp. 399-401, 15 figs. Well-known types of fixtures are compared according to illumination, glare, maintenance, and other factors; requirements outlined for good wiring, sockets, and switches.

Motor. See MOTOR BUSES.

Operating Results. Bus Operating Results in Providence, R. I. Elec. Ry. Jl., vol. 64, no. 2, July 12, 1924, pp. 43-45, 3 figs. Figures of operating costs and revenue possibilities in various kinds of service on United Elec. Rys. of Providence, R. I., a company which operates buses in coöperation with railway service. Only one line of seven made profit although others substituted for rail lines show less than rail operation.

Trolley. Railless Trolley Cars at Ipswich. Tramway & Ry. World, vol. 55, no. 3, Jan. 17, 1924, pp. 9-13, 11 figs. Description of three single-deck trolley buses with seating capacity of 30 passengers each, loaned to Ipswich Corporation Tramways (Lond.) by Railless Ltd. for demonstration purposes, because of company's considering replacement of tramway system with railless system; experiment successful.

The Scope of the Trolley 'Bus, C. O. Silvers. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 13-14, 2 figs. Its advantages and disadvantages; traffic and mechanical requirements.

The Trolley-Bus Line between Modane and Lanslebourg (France) (La ligne d'electrobus de Modane à Lanslebourg), A. Chardin. Industrie des Tramways, vol. 18, no. 206, Feb. 1924, pp. 41-46, 4 figs. Brief description of installations, including two substations, trolley lines, passenger buses, and trucks; results of tests and economic advantages of system.

Trackless Trolleys Give Improved Service to Cohoes, N. Y. Elec. Ry. Jl., vol. 64, no. 24, Dec. 13, 1924, pp. 985-988, 9 figs. New route passes through main business section, replacing railway belt line; residents in large area now can reach central section in 4 minutes, as against 15 minutes previously.

Trolley Omnibuses at West Hartlepool. Tramway & Ry. Wld., vol. 55, no. 19, Apr. 17, 1924, pp. 176-179, 5 figs. Particulars of single-deck type bus with saloon body providing accommodation for 36 passengers; overall length, 28 ft. 6½ in.; overall width, 7 ft. 6 in.; equipped with a single electric-traction motor of 42 b.hp. at 525 volts on tramway rating at 1100 r.p.m.

BUSHINGS

Cast-Iron. Close Work on a Cast Iron Bushing, D. T. Hamilton. Am. Mach., vol. 60, no. 25, June 19, 1924, pp. 915-917, 5 figs. Accurate guide bushing for gear-shaper spindle; tolerance of 0.0002 in. in bore; unsuccessful methods; grinding operations.

Condenser-Type. Condenser Type Bushings, K. Humburg. Electrician, vol. 93, no. 2414, Aug. 22, 1924, pp. 198-199, 7 figs. Gives design and calculation. Abstract of article in Archiv für Elektrotechnik.

Electric. Calculation of Electric Bushings (Calcul des isolateurs de traversée), J. Labouret. Revue Générale de l'Electricité, vol. 15, no. 6, Feb. 9, 1924, pp. 222-225, 6 figs. Safety against puncture of bushings mounted in grounded parts, such as oil switches, transformers, or building walls, will depend upon configuration and density of electro-static field between live part and grounded portion. How equipotential lines of electric field may be calculated and how these theoretical results may be used to determine actual shape of insulation on a bushing.

C

CABLE TRAMWAYS

Military. Military Cable Tramways (Teleferiche di guerra), M. Michelini. Industria, vol. 38, nos. 2 and 3, Jan. 31 and Feb. 15, 1924, pp. 33-38 and 68-76, 72 figs., partly on pp. 80-81. Describes various Italian and Austrian types used in mountainous country during war.

CABLES

Electric. See CABLES, ELECTRIC.

Hoisting. See CABLES, HOISTING.

Manufacture. Torsion in the Manufacture of Metallic Cables (Les questions de torsion dans la fabrication des cables métalliques), J. Seigle. Revue de l'Industrie Minérale, no. 93, Nov. 1, 1924, pp. 514-522, 10 figs. Principles of cable stranding machines and review of construction and operation of various machines.

Suspension Bridges. Study of Cables with Special Regard to Cables for Suspension Bridges (Etude sur les cables et spécialement sur les câbles de ponts suspendus), G. Pigeaud. Génie Civil, vol. 84, nos. 15, 16, 17, and 18, Apr. 12, 19, 26, and May 3, 1924, pp. 345-350, 374-378, 399-402, and 421-423, 6 figs. Bridge cables connected to non-rigid roadway. Bridge cables connected to a rigid girder and their calculation; windbrace cables supporting only their own weight.

CABLES, ELECTRIC

Aerial. See Construction.

Aluminum, Heating of. See ELECTRIC CONDUCTORS, Heating of.

Aluminum-Steel-Cored. Aluminium Steel Cored Cables. Australasian Elec. Times, vol. 3, no. 1, Jan. 27, 1924, pp. 47-48. Tests carried out on samples of 7-strand cable containing 1 central galvanized steel and 6 aluminum wires each approximately 0.146 in. in diam.

General Tables for Calculating Load and Sag of All Compound Cables (Allgemeine Rechentafeln zur Bestimmung von Beanspruchung und Durchhang sämtlicher Verbundseile), K. Riedlinger. Elektrotechnik u. Maschinenbau, vol. 42, no. 27, July 6, 1924, pp. 421-427, 5 figs. Gives alignment charts and graphs for calculation, and shows application on practical example.

Steel-Aluminum Cables (Stahlaluminiumseile), A. Bürklin. Elektrotechnische Zeit., vol. 45, no. 43, Oct. 23, 1924, pp. 1143-1146. Results of tests to determine breaking loads and coefficients of elasticity; comparative tests to determine heat-expansion coefficients of steel-aluminum and copper cables; determination of sag and tensile stress.

Armored. Alignment Charts for Calculating Variation in Price of Armored Cables (Abaques pour le calcul des variations de prix des câbles armés), A. Castel. Électricien, vol. 40, no. 1352, July 15, 1924, pp. 313-319, 7 figs. Gives charts for copper and aluminum cables and explains their use.

See also Submarine.

Charge and Discharge. Cable Charge and Discharge, Chas. P. Steinmetz. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 525-530. It is shown that phenomenon of "soaking in of charges" or "electrification of cable" is true electric-circuit transient, has nothing to do with hysteresis effects, but is result of inductance and capacity, i.e., is in no essential different from usual rapid starting or stopping transient of ordinary circuit, except that it is many thousands of times slower; conclusions are derived, some of which may be pertinent with regard to mechanism of breakdown of insulation.

Coils for. See COILS, Petersen; Pleijel; Pupin.

Compounds for, Dielectric Losses of. Dielectric Losses of Cable Compounds (Dielektrische Verluste von Kabeltränkmassen), H. W. Birmbaum. Elektrotechnische Zeit., vol. 45, no. 12, Mar. 20, 1924, pp. 229-232, 9 figs. Results of large number of dielectric test measurements on various cable compounds made in laboratories of cable company; about 15 different materials, some of American origin, were investigated, showing greatly varying characteristics; with none of these substances was critical voltage observed as long as they contained no trace of air; if air is introduced, certain ionization voltage can be found for every compound.

Construction. Report of Sub-Committee on Aerial Cable Construction, T. W. Snell. Jl. of Elec., vol. 52, no. 11, June 1, 1924, pp. 443-445, 3 figs. Relative merits of various types of insulation for overhead conductors, and comparative costs of several types of construction designed to obviate trouble from accidental "grounds" or "shorts" caused by trees in line.

See also High-Tension.

Current-Carrying Capacity. See High-Tension.

Dielectric Losses, Measurement of. Methods of Measuring Dielectric Losses in Three-Phase Current of Very High Tension (Méthodes de mesure des pertes diélectriques en courant triphasé à très haute tension), P. Dapdeville and R. Laroche. Revue Générale de l'Electricité, vol. 16, no. 23, Dec. 6, 1924, pp. 917-922, 5 figs. Describes three-phase installation of Société La Canalisation Electrique, for testing cables under operating conditions, and reviews methods used for measuring dielectric losses.

Faults, Locating of. Finding Defects in Cables (La récherche des defauts de câbles), L. Lagron and P. Mondet. Électricien, vol. 40, no. 1353, Aug. 1, 1924, pp. 337-340, 8 figs. Discusses defects due to contact or to rupture and how to locate them for repair.

Locating Faults in Armored Cables by Means of Electric Oscillations (Localisation des défauts sur les câbles armés au moyen d'oscillations électriques), A. Rauth. Revue Générale de l'Electricité, vol. 16, no. 14, Oct. 4, 1924, pp. 557-558, 1 fig. Use of measure of wave lengths for locating certain defects.

New Measuring Devices for Locating Cable Defects (Nouvelles boites de mesures pour la recherche des défauts de câbles), T. Pausert. Revue Générale de l'Electricité, vol. 16, no. 18, Nov. 1, 1924, pp. 713-716, 5 figs. Particulars of two devices made by Petrier, Tissot & Raybaud Co., one for finding contact of cable with ground or other cable, other for finding breaks in cables.

New Method of Locating Faults With High Intermediate Resistance (Eine neue Fehlerortsmessung bei hohem Uebergangswiderstand), K. Grootoonk. Elektrotechnische Zeit., vol. 45, no. 40, Oct. 2, 1924, pp. 1054-1055, 6 figs. Discusses present methods of locating faults and describes a new method which has given excellent results with very high variable intermediate resistance.

See also Underground.

High-Tension. Current-Carrying Capacity of High-Tension Cables (Contributo agli studii sulla portata dei cavi ad alta tensione), L. Selmo.

Elettrotecnica, vol. 11, no. 8, Mar. 15, 1924, pp. 165-169, 9 figs. Refers to regulations in force in various countries relating to permissible maximum temperatures for paper-insulated high-tension cables, and notes lack of uniformity among them and wide range of values covered. Describes experiments made at Naples upon a 3-phase 9000-volt cable of 60 sq. mm. core section, with object of determining rate of temperature rise under a known current.

High-Tension-Cable Construction (Sui cavi ad alta tensione), E. Soleri. Elettrotecnica, vol. 11, no. 3, Jan. 25, 1124, pp. 54-56, 4 figs. Deals with latest developments of construction; considers specially dielectric rigidity, dielectric losses and power factor and describes different methods of measuring dielectric losses; different materials necessary to manufacture cable and how they should be selected.

High Tension Cables, L. B. Atkinson. World Power, vol. 2, no. 10, Oct. 1924, pp. 218-225, 4 figs. Summary of situation as regards cables up to 11,000 volts, illustrated by two diagrams; properties of dielectrics; process of manufacture of cables; problems arising from geometrical form of cables; economic uses of high-voltage cables; present state of practice. (Abridged.) Paper presented at World Power Conference.

High-Voltage Cables. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1087-1901, 2 figs. Paper-cable insulation, cable splices and splicing methods, and cable operation. Report presented before Nat. Elec. Light Assn.

Installation and Testing of 66-Kv. Cable. Elec. World, vol. 83, no. 14, Apr. 5, 1924, pp. 667-669, 6 figs. Two subway circuits laid by Cleveland Co. extend 8¼ mi. across city; detailed description of conductors and method of laying; new joint proves very satisfactory.

See also Paper-Insulated; Testing; Underground.

High-Tension, Disconnection of. The Connection and Disconnection of a High-Tension Cable by Means of an Oil Circuit Breaker (Enclenchement et déclenchement d'un câble à haute tension au moyen d'un interrupteur à contacts dans l'huile), J. Fallou. Revue Générale de l'Electricité, vol. 15, no. 11, Mar. 15, 1924, pp. 468-472, 6 figs. Account of series of tests made in Paris on cables of Gennevilliers power system to investigate nature and magnitude of overvoltage created in connecting and disconnecting cable to supply circuit; by means of three-vibrator oscillograph bus voltage, voltage across oil switch, and loading current through cable were measured simultaneously; no overvoltages were recorded upon closing switch; opening, however, gave rise to transient phenomena; author believes that, under certain circumstances, dangerous overvoltages could be eliminated or reduced with step resistance switch.

Installation. Armored Cable Installation Methods, A. L. Abbott. Elec. News., vol. 33, no. 23, Dec. 1, 1924, pp. 37-39, 7 figs. Results of investigation carried out with coöperation of 35 contractors; materials and installation methods for armored cable; installation of boxes; cost records.

Insulating Papers. See PAPER, Insulating.

Joints. Design of High-Tension Cable Joints, C. G. Watson. Elec. World, vol. 84, no. 17, Oct. 25, 1924, pp. 896-897. Points out that original design of cable should be followed when making joints; outlines methods of properly insu'ating conductors.

Kfarup Submarine. See also TELEGRAPHY, Submarine.

Laying. Cable-Laying Under Difficulties. Elec. Rev., vol. 94, no. 2410, Feb. 1, 1924, p. 172, 2 figs. Describes example of electric power cable laying under unusual circumstances and exceptionally difficult conditions, carried out at Lydney, on Severn River.

See also High-Tension; Norway; Submarine; Telephone; Underground.

Lighting. Cables and Conductors for Lighting Circuits With Lamps in Series (Cavi e conduttori per circuiti di illuminazione con lampade in serie), E. D'Angelo. Elettrotecnica, vol. 11, no. 26, Sept. 15, 1924, pp. 635-640, 18 figs. Discusses overhead and underground lines and line losses, different types of cables, and accessories.

Magnetic Field Around. See Submarine.

Maintenance. See Telephone.

Manufacturing Problems. Modern Cable Practice. Elec. World, vol. 83, no. 7, Feb. 16, 1924, pp. 328-331, 8 figs. Comments by representatives of American manufacturers; need of research into insulation problem conceded by leading engineers in this field; latest data on characteristics and test procedure.

Mine Shafts, Suspending. See MINE SHAFTS, Cables, Suspending.

Norway. Laying High-Tension Marine Cables in Norway (Verlegung von Hochspannungs-Seekabeln in Norwegen), F. Hanff. Elektrotechnik u. Maschinenbau, vol. 42, no. 34, Aug. 24, 1924, pp. 513-520, 18 figs. Discusses cable for supplying Aalesund and district with light and power, connecting number of small islands; production of cable by Siemens-Schuckert Works; special protection and anchoring arrangement, cable laying, etc.

Paper-Insulated. High-Voltage Impregnated Paper Cables, Wm. A. Del Mar and C. F. Hanson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 950-957, 18 figs. Shows that useful conception of danger of air films is that they promote internal surface leakage, and that it is not the case that air films can be detected by slope of voltage-power-factor characteristic; testing of raw and process materials; compounds with and without rosin; hot spots in cables.

Making High-Tension Cables, F. A. Westbrook. Sci. Am., vol. 130, no. 5, May 1924, pp. 324-325 and 367-368, 7 figs. Describes manufacture of paper-wound, oil-impregnated electric cable for underground transmission.

See also High-Tension; Telephone.

Patents. Electricity, Conducting and Insulating. Abridgments of Specifications (Lond.), Class 36, Period 1916-1920, no. 100,001-155,800, class 36 covering electric cables and conductors, electric insulation, lightning conductors, posts and spring drums.

Permalloy-Loaded. Important New Cable Development, F. B. Jewett. Telegraph & Telephone Age, no. 4, Feb. 16, 1924, pp. 83-84. Invention of new alloy called permalloy, and permalloy loaded cable.

Pupin Coils. See CABLES, ELECTRIC, Telephone.

Research Laboratory. See LABORATORIES, Cable Research.

Sag of. Sag of Cables with Double Insulator Chains in Case of Chain Breakages (Durchhang von Seilen mit Doppelabspannketten bei Kettenbruch), H. Bittler. Praktische Maschinen-Konstrukteur, vol. 57, no. 12, Apr. 8, 1924, pp. 156-158, 5 figs. Present approximate methods to calculate sag in case of chain breakages give generally too large values. Using the more exact method described, smaller sags are found and greater distance between cable supporting poles may be permitted.

Single-Conductor, Grounded Sheath Losses. Losses in Grounded Sheaths of Single-Conductor

Cables. H. B. Dwight. Elec. Jl., vol. 21, no. 2, Feb. 1924, pp. 62-66, 2 figs. When sheaths of single-conductor underground cables are grounded or connected together at more than one point, they form closed circuits through which may pass comparatively heavy currents, induced by main currents in power conductors. Describes methods of calculating loss due to these induced sheath currents for non-magnetic sheaths, giving formulas.

Submarine. Installing Cable Across Hudson River, F. A. Westbrook. Elec. Wld., vol. 84, no. 8, Aug. 23, 1924, pp. 355-357, 3 figs. Rocky bottom and swift tidal current necessitate spiral armor of steel tape reinforced with steel wires. Cable laid by tugboat especially adapted to cope with difficulties met in this type of work. Is 2700 ft. in length, and is to carry current from cast side of river to west side for local distribution in immediate vicinity of Garrison.

Laying Submarine Cable Across the Mississippi, L. D. Moore. Ry. Elec. Engr., vol. 15, no. 3, Mar. 1924, pp. 77-80, 9 figs. Describes submarine cable installation made by Missouri Pacific Ry. so that current could be purchased from Union Elec. Light & Power Co., of St. Louis, and transmitted across Mississippi river to Dupo, Ill., where Missouri Pacific's freight yards are located; description of land line connections.

New Method for Repairing Sea Cables (Neue Wege für die Instandsetzung von Seekabeln), A. Kunert. Telegraphen- u. Fernsprech-Technik, vol. 13, no. 7, July 1924, pp. 87-90, 2 figs. Discusses locating of faulty cables by means of a. c. signals, as in pilot cables, and application of apparatus for removing sand when necessary, and gives examples from practice.

The Distribution of the Magnetic Field and Return Current Round a Submarine Cable Carrying Alternating Current. Roy. Soc. of Lond.—Philosophical Trans., vol. 224, nos. A618 and A619, 1924. Part I, by C. V. Drysdale, pp. 95-140, 26 figs.: Importance of knowledge of field round cable for leader gear, and of propagation of electromagnetic impulses in a sea in connection with signalling; propagation of plane electromagnetic waves in a conducting isotropic medium; table of theoretical velocities, wavelengths, and attenuation for various frequencies in sea water; theory of cylindrical conductors; Butterworth's theory for thin conducting lamina; details of recent systematic experimental investigation carried out at Shandon, and account of earlier experiments. Part II, by S. Butterworth, pp. 141-184, 17 figs. partly on supp. plates: Theory of distribution of magnetic field above a submarine cable carrying alternating currents, and its experimental verification by means of a lead model; comparison of theory with measurements made on sea.

The Latest Development of the German Krarup Submarine Cable (Ueber die neueste Entwicklung der deutschen Krarup-Seekabel), E. Schürer. Elektrotechnische Zeit., vol. 45, no. 7, Feb. 14, 1924, pp. 119-120. Discusses latest improvements as exemplified in multicore long Krarup cable recently laid in Baltic Sea.

The New Shisakajima Submarine Cable, K. Kawakami and K. Shimizu. Elec. Communication, vol. 2, no. 4, Apr. 1924, pp. 235-237, 2 figs. Describes power cable 13 miles in length laid in autumn of 1922 between town of Niihama and Shisaka Island; entirely of Japanese design and manufacture and installed by Japanese engineers; physical and electrical properties of cable.

Verification by Calculation of the Effective Locking of Submarine Cable Armoring (Vérification par le calcul de la bonne jointivité de l'armature d'un câble sous-marin), M. Bochas. Annales des Postes Télégraphes & Téléphones), vol. 13, no. 2, Jan. 1924, pp. 183-191, 1 fig. Relation is given which serves to guarantee that cable will not suffer excessive elongations of a damaging nature, while being laid or repaired.

See also Norway; Telegraph; Telephone.

Supertension. Super-Tension Cables, M. C. Timms. Elec. Engr., vol. 1, no. 8, Nov. 15, 1924, pp. 285-289, 3 figs. Considers features of design when single-core cables are intended for operation at supertensions.

Telegraph. Switching on of Homogeneous Cables, with Any End Connection (Das Einschaltproblem für das homogene Kabel bei beliebiger Endschaltung), F. Pollaczek. Elektrische Nachrichten-Technik, vol. 1, no. 3, Sept. 1924, pp. 80-97, 6 figs. Calculations as to current and voltage conditions at any point of cable, and especially in end branches of a cable.

The Application of Radio Engineering Principles to Submarine Telegraph Cables, G. O. Squier. Franklin Inst.—Jl., vol. 199, no. 1, July 1924, pp. 29-56, 10 figs. Discusses adaptation of basic principles and means of radio and application to sub-audio band of frequencies or cable practice; Seattle-Ketchikan cable already shows marked progress; development of automatic telegraph transmitter applicable to radio, land lines and submarine cables, etc.

Telephone. Cable Development and Research, F. L. Rhodes. Bell Telephone Quarterly, vol. 3, no. 1, Jan. 1924, pp. 30-40, 3 figs. Telephone development, pioneer cable experiments, cable construction, and reduction in cost.

Dry-Core Paper Insulated Telephone Cables. Australasian Elec. Times, vol. 3, no. 4, Apr. 28, 1924, pp. 233-235, 6 figs. Describes operations in their manufacture at plant of Mental Manufactures Pty., Ltd., Port Kembla, N. S. W., including materials used.

New Anglo-Dutch Telephone Cable. Electrician, vol. 93, no. 2416, Sept. 5, 1924, pp. 256-257, 4 figs. See also Elec. Rev., vol. 95, no. 2442, Sept. 12, 1924, pp. 384-385, 5 figs. Details of design and methods of manufacture of cable laying in Channel and North Sea establishing telegraphic communication between England and France.

New Telephone Cable in the Simplon (Il nuovo cavo telefonico del sempione), R. A. Mack. Telegrafi e Telefoni, vol. 5, no. 4, July-Aug. 1924, pp. 196-202, 9 figs. Details of cable construction and armoring for lines connecting Milan with Bern and Berlin, etc.

Proper Maintenance of Cable Plant, H. B. Nelson. Telephony, vol. 86, no. 22, May 31, 1924, pp. 12-15, 32 and 34. History of development of telephone cable; construction and maintenance of a modern cable plant; necessity for making periodic inspections; suggestions for preventing trouble.

Telephone Cables for Long Distances and Their Extension (Los cables teléfonicos a gran distancia y su amplificación), D. A. Ebeling. Boletin de la Asociación Argentina de Electrotécnicos, vol. 10, nos. 1-2, 3-4, and 5-6, Jan.-Feb., Mar.-Apr., and May-June 1924, pp. 6-12, 53-56, and 109-114, 9 figs. Discusses introduction of Pupin coils, pupinization of cables; induction, dominant and intercalated; limits of Pupin and Kramp systems, use of cables for long distances.

The Anglo-Dutch Telephone Cable, E. F. Petritsch. Post Office Elec. Engrs.' Jl., vol. 16, Pt. 4, Jan. 1924, pp. 362-379, 8 figs. Describes coil-loaded submarine cable laid between Aldeburgh, Eng., and Domburg, Holland, end of June, 1922; 82.329 naut. miles long; each of the four conductors of cable weighs 160 lb. per naut. mile and dielectric of each conductor 150 lb. Discusses velocity of propagation, attenuation, characteristic impedances of side and phantom circuits, and over-hearing and cross-talk.

The Design and Technical Characteristics of Telephone Cables (Die Bauart und technischen

Eigenschaften der Fernkabel), K. Dohmen. Elektrotechnische Zeit., vol. 45, no. 6, Feb. 7, 1924, pp. 89-91, 3 figs. Describes modern part of 360-mi. subterranean telephone cable between Berlin and Cologne, for which wire sizes of 0.9 mm. and 1.4 mm. diam. were selected; two types of cable have been standardized for new inter-German telephone network, namely, 98-pair and 166-pair cables; innermost two pairs of wires are inclosed in individual lead sheath and represent emergency conductors in case of damage to cable; main data of two cables are given in table.

The London-Bristol Telephone Cable. Elec. Rev., vol. 94, no. 2431, June 27, 1924, pp. 1034-1035, 1 fig. Description of cable, brought into service on June 2, 1924, which is one of main links in network of underground cables which is being laid all over United Kingdom, and of Taplow Station, first repeater station completed for amplifying and relaying by means of thermionic values, current transmitted from terminal telephones.

The Paris-Villecresnes-St. Assise Telephone Cable (Les câbles téléphonignes Paris, Villecresnes, Sainte-Assise), L. Cahen. Revue Générale de l'Electricité, vol. 16, no. 21, Nov. 22, 1924, pp. 833-826, 4 figs. Results of two years' operation of overhead and underground long-distance cables, former giving entire satisfaction mechanically and electrically. Simultaneous telegraphy and telephony, using ground for return.

The Stockholm-Gothenburg Long-Distance Cable (Das Fernsprechkabel Stockholm-Gothenburg), Halden. Elektrotechnische Zeit., vol. 45, no. 40, Oct. 2, 1924, pp. 1057-1059, 5 figs. Particulars of cable laying, ditching machine, transportation of cable, cable specifications, etc.

The Stockholm-Gothenburg Telephone Cable, E. Ekeberg. Elec. Communication, vol. 2, no. 4, Apr. 1924, pp. 202-225, 30 figs. Discusses loading, and telephone repeaters; general considerations of toll cables in Sweden; description of Stockholm-Gothenburg cable, its installation, and repeater stations.

The Testing, Balancing and Jointing of the 160 Pr. 40 Lb. Multiple Twin Telephone Cables Between Germiston and Benoni, A. H. A. Lyle, M. Hewitson, R. C. Hendrie and E. O. Tibbits. S. African Inst. Elec. Engrs.—Trans., vol. 14, Pt. 12, Dec. 1923, pp. 279-294, 8 figs. Notes on loading; cable testing; phantom to side balance; cable balancing, jointing, etc.

The Work of Installation of the Underground Telephone Cable—Milan—Turin—Genoa, G. Magagnini. Elec. Communication, vol. 2, no. 3, Jan. 1924, pp. 192-200, 9 figs. Cable is placed in vitrified clay duct in its passage through cities and through inhabited centers in general, in special iron tubing over numerous bridges, and through other constructions met with along route, and in terra cotta troughing in ordinary road routes.

Transmission Characteristics of Coil Loaded Telephone Cables, K. Ogawa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 431, June 1924, pp. 545-558, 4 figs. Approximately equivalent circuit of loaded cable is derived and it is shown that assumption that capacity of cable between two consecutive loading coils is concentrated at middle point of cable leads sometimes to results with considerable errors. (In Japanese.)

Trunk Telephone Cables, E. A. Beavis. Electrician, vol. 92, no. 2392, Mar. 21, 1924, pp. 348-350, 6 figs. Method of balancing depending upon systematic reduction of "resultant capacity" differences between wires by means of cross-jointing.

Twenty-five Years of German Submarine Telephone Cables. Eng. Progress, vol. 5, no. 4, Apr. 1924, pp. 71-72. Summary of cables put down by German firms in North and Baltic seas, within last 25 years.

Telephone-Telegraph. New Cable for Lake Constance (Ein neues Bodenseekabel), R. Feist. Telegraphen- u. Fernsprech-Technik, vol. 13, no. 8, Aug. 1924, pp. 105-110, 3 figs. Describes connections by wire between Germany and Switzerland by way of Lake Constance; new cable of 28 telephone wires and 6 telegraph wires between Friederichshafen and Romanshorn; construction and testing.

Testing. New Method of Testing High-Tension Cables (Betrachtungen über die von niederländischer Seite vorgeschlagene neue Methode zur Prüfung von Hochspannungskabeln), J. C. van Staveren. Elektrotechnische Zeit., vol. 45, nos. 8 and 9, Feb. 21 and 28, 1924, pp. 129-132 and 159-162, 12 figs. Review of methods heretofore in use, based on investigations of Dutch Standardization Committee; discusses influence of voltage, duration of test, temperature and current load on dielectric losses, based on numerous tests; it is shown that, above all, ionization phenomena should be avoided; describes new testing method proposed by Dutch Standardization Committe, and gives results of tests therewith.

Testing Cable Insulation with High Voltage, M. C. Timms. Elec. Engr., vol. 1, no. 5, Aug. 15, 1924, pp. 163-168, 1 fig. Submarine-cable practice; application to power cables.

See also High-Tension; Telephone.

Testing Sets. D. C. High Voltage Cable Testing Sets, R. Nakamura. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 429, Apr. 1924, pp. 427-442, 16 figs. Describes mechanical rectifier constructed by author and gives results of tests. (In Japanese.)

Three-Core. On the Thermal Resistance Formula of Three Core Sector Shaped Cables, K. Shimizu. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 431, June 1924, pp. 559-563, 3 figs. Approximate expression for calculating thermal resistance of such cables is found theoretically and compared with experimental and graphical values. (In Japanese.)

Underground. Laying Cables Under Highways by Thrust Boring Method, F. G. Bailey. Highway Engr. & Contractor, vol. 11, no. 5, Nov. 1924, pp. 31-32, 2 figs. Describes device developed for boring hole in firm soil for purpose of forming a conduit for cables. By this device it is possible to lay lengths of cables, lead water pipes, etc., without disturbing top surface of a highway, without disorganizing traffic, and without detriment to pavement.

Locating Faults in Underground Cables, V. Truant. Elec. Wld., vol. 84, no. 13, Sept. 27, 1924, pp. 687-688, 4 figs. Application of Wheatstone bridge arrangement to complex networks. Description of apparatus required and general layout. Usefulness of method shown by practical examples.

Transmission Problems, A. M. Taylor. Electrician, vol. 92, no. 2385, Feb. 1, 1924, pp. 128-131, 7 figs. Description of author's hexaphase system by means of which, he claims, transmission of power by underground cables at a cost comparable with that of transmission by overhead lines can be accomplished; designed so that pressures of 120,000 to 150,000 volts can be utilized with underground cables without maximum stress on insulation reaching appreciably higher values than now obtaining on 33,000-volt transmissions; discusses resonance.

Underground Cable Practice in Europe, D. W. Roper. West. Soc. Engrs.—Jl., vol. 29, no. 5, May 1924, pp. 217-224, 7 figs. Outlines European practice with impregnated-paper insulated, lead-covered, underground cables, describing their

methods of installation and operation, processes of manufacture, and cable tests, and gives comparative information from American practice.

Underground Cables of Very High Tension (Cables souterrains à très haute tension), R. Couffon. Revue Industrielle, vol. 54, no. 2175, Feb. 1924, pp. 477-486, 11 figs. Difficulties encountered in production of cables for large systems, with special reference to experiences and results obtained with 3-phase cables for network of l'Union d'Electricité, 137 km. of which are actually in service; comparison of advantages and disadvantages of use of three single-wire cables or a single triple-wire cable in three-phase systems.

Wear at Duct Endings. Comparative Cable Wear with Different Types of Duct Endings, F. L. Rohrbach. Elec. World, vol. 84, no. 16, Oct. 18, 1924, pp. 845-846, 2 figs. Account of experiment made by Wash. Water Power Co. to determine comparative amount of wear on lead sheath of cables with different types of duct endings.

Winding. Winding Machines for Flexible Cables (Note sur les enrouleurs de câbles souples), L. Sabatier. Revue Générale de l'Electricité, vol. 16, no. 7, Aug. 16, 1924, pp. 265-271, 25 figs. Discusses present apparatus used and gives principle of new one characterized by absence of all sliding contact.

CABLES, HOISTING

Dynamic-Load Determination. Dynamic Load of Winding Cables (Die dynamische Beanspruchung der Förderseile), G. Berg. Glückauf, vol. 60, no. 20, May 17, 1924, pp. 400-402, 8 figs. Discusses operations for measuring mechanical course of cable, also processes and trials for determining dynamic forces acting on cables.

Manufacture. Torsion in the Manufacture of Metal Cables (Les questions de torsion dans la fabrication des câbles métalliques), J. Seigle. Revue de l'Industrie Minérale, no. 92, Oct. 15, 1924, pp. 485-501, 30 figs. Principle of cabling machines. Stranding; geometric and physical torsion; fatigue due to torsion.

Safety Factors. Safety Factors for Hoisting Cables (Ein Beitrag zur Frage der Sicherheitszahlen für Förderseile), H. Herbst. Glückauf, vol. 60, no. 17, Apr. 26, 1924, pp. 323-329. Demands of existing German regulations on lifting power of cable; actual safety as compared to calculated safety with large capacities; modification of safety factor in cases of low dynamic stresses.

Wear. Effect of Bending on the Wear of Metal Cables (Influence de l'incurvation sur l'usure des cables métalliques), E. Marc. Arts et Métiers, vol. 77, no. 48, July 1924, pp. 251-255, 1 fig. Discusses bending of cables on pulleys or drums and gives calculation for cables of elevators of Eiffel tower.

CABLEWAYS

Aerial. Cableways and Suspended Railways (Schwebende Drahtseilbahnen und Schienenhängebahnen), M. Buhle. Bautechnik, vol. 2, no. 26, June 17, 1924, pp. 268-288, 88 figs. Describes and illustrates number of types manufactured by A. Bleichert & Co., Leipzig, for passengers and freight, on land and water, and installed in various parts of world.

Bulk-Goods Conveying. Conveying Bulk Goods by Suspended Railways and Cableways (Massengüterbeförderung durch Hänge- und Seilbahnen), E. Singer. Tonindustrie-Zeitung, vol. 48, no. 76, Sept. 20, 1924, pp. 831-834, 6 figs. Describes equipment for conveying materials from open workings, such as clay mines and quarries.

Cable Tramways. See CABLE TRAMWAYS.

Coal-Handling. Taking Coal by the Air Route to Coaling Station. Coal Trade Bul., vol. 51, no. 9, Oct. 1, 1924, pp. 397-399, 4 figs. Aerial tramway at Williamson, W. Va., eliminates two bridges, much track and trestling, cuts hauling costs, and easily handles thousand tons in eight hours.

See also COAL HANDLING, Ropeway System.

Coal-Mine. Aerial Wire Ropeways. J. W. White. Instn. Min. Engrs.—Trans., vol. 67, Pt. 2, May 1924, pp. 114-128, 13 figs. Details of different types designed principally for colliery purposes.

See also COAL MINING, Rock Disposal, Aerial Tramway for.

Coal-Storage Plants. See COAL STORAGE, Systems.

Colliery. See COAL MINES, Refuse Disposal.

Construction. Cableways and Their Importance (Drahtseilbahnen und ihre Bedeutung), W. Landgraeber. Fördertechnik u. Frachtverkehr, vol. 17, no. 23, Dec. 3, 1924, pp. 321-324. Discusses development and construction of overhead cableways, suspended railways, cableways for mine conveying, and overhead railways for mountains.

Electric Suspension. Details of Electric Suspension Railways (Einzelheiten der Elektrohängebahnen), P. Stephan. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 28, June 7, 1924, pp. 606-609, 11 figs. Discusses modern examples of rails, switches and cars.

Explosives, Handling. A Ropeway for Explosives. Engineer, vol. 138, no. 3578, July 25, 1924, pp. 102-104, 15 figs. partly on supp. plate. Describes arrangement of ropeway installed at explosives factory of Cookes Explosives, Ltd., Penrhyndeudraeth, North Wales, for purpose of conveying materials from one to another of the several isolated huts where the various processes are carried on, and also for taking finished materials to a magazine on top of a hill. Difficulties which had to be overcome in designing line.

Jig-Back. Up-to-Date Jig-Back Ropeways, Geo. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 17, Nov. 1924, pp. 475-478, 6 figs. Describes jig-back line built for formation of spoil dumps which, it is claimed, would be efficient in vast majority of cases of spoil disposal; consists of driving terminal, steel lattice mast, intermediate trestle supports, rail and haulage ropes, and automatic tipping carriage.

Longitudinal Profile. The Equilibrium Profile of Cableways (Das Gleichgewichtsprofil der Seilbahn), H. H. Peter. Schweizerische Bauzeitung, vol. 83, no. 5, Feb. 2, 1924, pp. 58-59. Simplified method of determining advantageous longitudinal profile, the so-called theoretical (ideal, compensated) or equilibrium profile.

Portable. "Artex" Portable Ropeway. Indus. Mgmt. (Lond.), vol. 11 (new series), no. 12, June 1924, pp. 325-326, 2 figs. Discusses artex system built on mono-cableway system of transportation, including rope coupling by means of which endless rope track can be shortened or lengthened for altering scope and position of conveyor.

Types. Cables for Aerial Conveying (Etude sur les cables transporteurs aériens), G. Catella. Arts et Métiers, vol. 77, no. 48, Sept. 1924, pp. 321-335, 32 figs. Discusses types of cableway arrangements, types of cable construction, suspended cars, switches, supporting masts, stations, etc.

Cableways (Drahtseilbahnen), Fr. Wernekke. Praktische Maschinen-Konstrukteur, vol. 57, no. 8, Mar. 1, 1924, pp. 79-81, 4 figs. Development of transportation on wire rope is discussed and a few successful installations described, both for passenger and material haulage.

CADMIUM

Compounds, Applications of. Cadmium Compounds in Industry, N. F. Budgen. Chem. Trade Jl. & Chem. Engr., vol. 75, no. 1958, Nov. 28, 1924, pp. 641-643. Use in paints, colors, and glazes. Production of and trade in cadmium sulphide.

Copper-Cadmium Alloy. See COPPER ALLOYS, Copper-Cadmium.

Crystals. See CRYSTALS, Zinc and Cadmium.

Marketing. Marketing of Cadmium, F. E. Wormser. Eng. & Min. Jl.—Press, vol. 118, no. 16, Oct. 18, 1924, pp. 611-612. By-product of smelting operations; applications.

Thermal Expansion. See ZINC, Thermal Expansion.

Uses. The Uses of Cadmium, H. C. Urquhart. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 207-221. Discusses occurrence, physical and chemical properties, cadmium alloys, bearing and antifriction metals, copper alloys, solders and substitute solders, cadmium pigments, etc.

Volumetric Estimation of. Notes on the Volumetric Estimation of Cadmium, J. E. Clennell. Min. Mag., vol. 30, no. 5, May 1924, pp. 270-274. Iodometric method; method developed by author; experimental results; separation of zinc and cadmium.

CAISSONS

[See also FOUNDATIONS, Sinking in Water-Bearing Material.]

Breakwater. See BREAKWATER, Sand-Filled Caissons.

Sinking. Sinking Pier Caissons for Four Missouri River Bridges, L. J. Sverdrup. Eng. News-Rec., vol. 93, no. 16, Oct. 16, 1924, pp. 628-630, 6 figs. Subaqueous difficulties met by Missouri State Highway Dept. on structures now under construction.

Slim Pneumatic Caissons Penetrate Stone-Filled Crib, C. S. Rindsfoos. Eng. News-Rec., vol. 92, no. 22, May 29, 1924, p. 936, 1 fig. In building foundations for new grain elevator for State of New York, 57 caissons were sunk 45 ft. through riprap, in 70 days, some as close together as 12 in.

CALCIUM CARBIDE

Analysis. The Analysis of Calcium Carbide. Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1936, June 27, 1924, p. 769, 1 fig. Describes new American accurate method.

Manufacture. Calcium Carbide Works of the Carbide and Electro Products, Ltd. Indus. Australian & Min. Standard, vol. 71, no. 1834, Jan. 31, 1924, pp. 164-166, 5 figs. Describes the various processes of manufacture at Australian plant.

CALCULATING MACHINES

Cost Accounting. The Mechanical Compilation of Costs. Eng. Production, vol. 7, no. 140, May 1924, pp. 139-141, 5 figs. Describes machines in connection with Powers system, and their performance; system where one clerical entry is required to produce a master from which all subsequent work may be done by mechanical means.

Monroe. Every Machine Piece Given Hardness Test, L. S. Love. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 854-856, 3 figs. Describes some machining operations in manufacture of Monroe calculating machine built by Monroe Calculating Machine Co., Orange, N. J.; carbonized parts subject to test before assembly in machine.

Principles. Calculating Machines (Les machines à calculer), M. D'Ocagne. Annales des Postes Télégraphes et Téléphones, vol. 13, no. 7, July 1924, pp. 726-742. Historic summary dealing with principle of successive machines.

CALORIMETERS

Iron-Mercury. An Iron-Mercury Calorimeter, F. H. Schofield. Jl. of Sci. Instruments, vol. 1, no. 5, Feb. 1924, pp. 141-144, 4 figs. Describes calorimeter which is specially suitable for measuring specific heat of materials of low thermal conductivity which react with water.

Jet. A Jet Calorimeter, W. Payman. Fuel, vol. 3, no. 11, Nov. 1924, pp. 406-407, 1 fig. Instrument consists of two parts, observation chamber, containing burner and scale, and differential manometer.

Measuring Small Heat Intensities. Measurement of Small Heat Intensities: Use of Compensating Microcalorimeter (Mesure des intensités des petites sources de chaleur: emploi d'un microcalorimètre à compensation), A. Tian. Académie des Sciences—Comptes Rendus, vol. 178, no. 8, Feb. 18, 1924, pp. 705-707. Thermally insulated vessel immersed in bath at constant temperature serves as calorimeter; temperature differences between bath and vessel are measured using thermopile and galvanometer.

Micro. Micro-Combustion Bomb and Micro-Calorimeter (Mikroverbrennungsbombe und Mikrocalorimeter), W. A. Roth, H. Ginsberg and R. Lassé. Zeit. für Elektrochemie, vol. 30, no. 9, Sept. 1924, pp. 417-420, 1 fig. Bomb, which has capacity of 21½ cc., is constructed of steel or bronze with inset of superficially brominated silver and has screwed-on head of usual type; special attention is given to compact design of calorimeter vessel, which holds 500 cc. of water, and to efficiency in stirrer; with this apparatus determinations can be carried out on very small quantities of substances.

Recording. A Recording Calorimeter of French Design. Gas. Jl., vol. 165, no. 3175, Mar. 19, 1924, p. 697, 2 figs. New type of calorimeter for determining automatically calorific power of gaseous fuel, introduced in France.

Steam, Bureau of Standards. Calorimeter for Steam Investigations Developed by Bureau of Standards, P. W. Swain. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 246-248, 7 figs. Developed for A. S. M. E. steam research program, insuring utmost reliability.

CALORIMETRY

Saturated Fluids. Calorimetry of Saturated Fluids, N. S. Osborne. Optical Soc. Am.—Jl., vol. 8, no. 4, Apr. 1924, pp. 519-540. Deals with theory of certain calorimetric processes for determination of important thermal properties of saturated fluids, and with interpretation of theory as bearing upon its experimental application.

CALORIZING

Results and Savings Due to. See OIL, Still Tubes, Calorizing of.

Steel. See STEEL, Calorizing.

CAMERAS

Motion-Picture. See MOTION PICTURES, Cameras.

Photographing Moving Projectiles. A Camera for Studying Projectiles in Flight, H. L. Curtis, W. H. Wadleigh and A. H. Sellman. U. S. Bur. Standards—Technologic Papers, no. 255, Mar. 19, 1924, pp. 189-202, 10 figs. partly on supp. plates. Describes camera which will take pictures of objects moving with high speed, and also measure their velocity. Number of pictures depends on number of lenses, 50 pictures per second per lens being easily obtained.

CAMS

Sewing-Machine, Machining. Some Fixtures Used in Machining Sewing-Machine Cams. F. Osgood Hickling. Am. Mach., vol. 61, nos. 20 and 21, Nov. 13 and 20, 1924, pp. 779-780 and 817-818, 8 figs. Nov. 13: Special care exercised in making castings; heavy cuts on small pieces; importance of accuracy of sizes. Nov. 20: Take-up lever cam; fixture for milling cam groove.

CANALS

[See also INLAND WATERWAYS.]

Backwater. See CONDUITS, Backwater and Drop-Down Curves.

Boat Lifts. A New Float Boat Lift (Ein neues Schwimmerschiffshebewerk), G. Ollert and H. Rottmayer. Zentralblatt der Bauverwaltung, vol. 44, no. 28, July 9, 1924, pp. 233-234, 3 figs. Details of design of vertical boat lift using tower and float arrangement in place of counterweight.

The Advantages of Dry Lifting in Lift Locks (Die Vorteile der Trockenförderung bei Schiffshebewerken), Karner. Schiffbau, vol. 25, no. 16, May 28, 1924, pp. 422-430, 12 figs. Points out disadvantages of system heretofore employed of raising ship in water-filled lock, and advantages of so-called dry-lift system, according to which ship is lifted "dry" in elevator framework.

The Problem of Lift Locks for High Lifts (Ueber die Frage von Schiffshebewerken für grosse Hubhöhen), H. Karner. Schiffbau, vol. 25, no. 9, Feb. 13, 1924, pp. 201-204, 4 figs. Describes design based on entirely new principles, showing possibility of constructing lift locks for any given lift.

Germany. Engineering Features of the Construction of the Hunte-Ems Canal from Oldenburg to Kampe (Germany) (Technisches über den Ausbau des Hunte-Ems-Kanals von Oldenburg bis Kampe), Popken. Bautechnik, vol. 2, no. 5, Feb. 1, 1924, pp. 33-36, 11 figs. Soil conditions; construction details and difficulties in marshy land; construction of nine locks.

Joining the Weser and the Main-Danube Territory by Means of the Werra-Main Canal (Ueber die Verbindung der Weser mit dem Main-Donau-Gebiet durch einen Werra-Main-Kanal), M. Contag. Bautechnik, vol. 2, no. 40, Sept. 16, 1924, pp. 446-461, 12 figs. partly on supp. plate. Details regarding new canal connecting Bremen and Regensburg; survey and gradients of line, locks, boat lifts, barrage work, etc.; expected development of Bremen.

The Soil Conditions of the Ems-Weser-Leine Canal (Die Bodenverhältnisse des Ems-Weser-Leine-Kanals), A. Mestwerdt. Zeit. für Bauwesen, vol. 73, no. 10-12, 1923, pp. 261-265, 6 figs. Investigation of soil conditions carried out by author and E. Harbort.

Hydraulic Notch. Calculation of Hydraulic Notch for Channel Control, H. B. Muckleston. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 232-233. Method employed in designing channel construction to maintain constant energy gradient at change of canal grade.

Irrigation. See IRRIGATION, Canals.

Locks. See LOCKS.

Mid-Scotland Project. Iron, Steel, and Kindred Industries, and the Mid-Scotland Ship Canal, J. Stewart. West of Scotland Iron & Steel Inst.—Jl., vol. 31, part 2, Nov., session 1923-24, pp. 13-20 and (discussion) 21-30, 1 fig. Reasons in support of canal; economic advantages; effect on iron industries.

N. Y. State Barge. See HYDROELECTRIC DEVELOPMENTS, N. Y. State Barge Canal.

Panama. See PANAMA CANAL.

Power. The Capacity of Power Canals (Om kraftkanalers kapacitet), A. Löfroth. Teknisk Tidskrift, vol. 54, no. 34, Aug. 23, 1924, pp. 87-89, 4 figs. (Väg- och vattenbyggnadskonst). Relation between volume of water and loss of pressure for different water levels and types of canals is analyzed, and simple method for its determination is given; results of test, diagrams, and tables.

Rhine-Danube. Rhine-Main-Danube Waterway. Times Trade & Eng. Supp., vol. 15, no. 332, Nov. 15, 1924, p. 201, 1 fig. Details of scheme for connection of North and Black Seas; describes works at Viereth on Main River, and Kachlet power station on Danube; effects on trade.

The Rhine-Main-Danube Waterway Scheme, L. C. Hughes-Hallett. World Power, vol. 2, no. 12, Dec. 1924, pp. 323-327, 2 figs. Object of scheme is to create inland shipping route from Rhine estuaries (North Sea) to Danube estuary (Black Sea), which is to convey usual type of large vessels engaged in inland traffic; power development; cost of construction; finance and organization.

Seepage-Loss Measurement. See IRRIGATION, Canals.

Welland. Welland Canal Construction Progress. Can. Engr., vol. 47, no. 26, Dec. 23, 1924, pp. 617-624, 11 figs. Historical review; progress on ship canal during past 12 months; principal features of remaining sections to be constructed.

CANNED FOODS

Tin Containers, Corrosion of. See CORROSION, Tin Food Containers.

CANNING

Technology. The Technology of Canning, Osman Jones. Chem. & Industry, vol. 43, no. 19, May 9, 1924, pp. 139T-142T. Layout of canning factory and departments required; operations; discoloration and metallic contamination.

CAPACITANCE

Calculation. See ELECTRIC CONDUCTORS, Capacitance, Calculation of.

CAR AXLES

Lubrication. Mechanical Lubrication of Car Axles (Die mechanische Schmierung der Eisenbahnachsen), W. Friedrich. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 877-879, 7 figs. Details of Schneider-Friedrich system of roller-chain lubrication now being used on all German railway cars, comparative test data of oil-pad and chain lubrication.

CAR COUPLERS

Automatic. Automatic Couplings for Railway Cars (Selbsttätige Kupplung für Eisenbahnfahrzeuge), Castner. Dinglers Polytechnisches Jl., vol. 339, no. 18, Sept. 1924, pp. 177-179, 3 figs. Discusses various designs of railway car couplings and points out superiority of Scharfenberg coupling.

Automatic Couplings in Japan. Ry. Gaz., vol. 40, no. 26, June 27, 1924, p. 926, 3 figs. Imperial Japanese Ry. Administration abandoned English system of coupling, with side buffers and screw couplings and installed mechanical arrangement with M.C.B. coupler of U. S. A. Ingenious arrangement enables ordinary couplings to be combined with automatic couplings under transition conditions.

The Question of Couplings (Das Kupplungsproblem), D. Paap. Verkehrstechnik, vol. 41, nos. 42, 43, and 44, Oct. 17, 24, and 31, 1924, pp. 517-521, 532-535, and 550-551, 19 figs. Discusses importance of the question; advocates auto-

matic central buffers with rigid guide-bar and explains and illustrates various types of couplings.

Types. New Designs of Electric Train Couplings (Neuere Bauformen für elektrische Zugkupplungen), Zeulmann. Glassers Annalen, vol. 95, no. 8, Oct. 15, 1924, pp. 193-201, 20 figs. Describes numerous modern types.

Von Scharfenberg Automatic Railroad Coupling (Die selbsttätige Eisenbahnkupplung von Scharfenberg, P. Paap. Praktische Maschinen-Konstrukteur, vol. 57, no. 10, Mar. 25, 1924, pp. 128-131, 7 figs. Describes coupling, and its great advantages over earlier designs, is always in proper position for automatic connection; air-brake hose is also automatically connected; ring springs act as draft gears.

CAR DUMPERS

Coal Cars. Car Dumper of Unusual Size and Capacity. Iron Age, vol. 114, no. 25, Dec. 18, 1924, pp. 1619-1620, 2 figs. Car dumper, erected for Reading Ry. Co. at Philadelphia, designed for cars carrying 120 net tons of coal; three men handle operation by electric and steam power.

Handling Coal with Gondola Car Dumper at St. Louis, E. H. Kidder. Gas Age-Rec., vol. 53, no. 4, Jan. 26, 1924, pp. 101-102, 3 figs. See also South. Engr., vol. 42, no. 2, Oct. 1924, pp. 56-57, 3 figs. Describes dumper installed at Cahokia plant of Union Elec. Light & Power Co., St. Louis, Mo., designed, manufactured, and erected by Link-Belt Co. of Chicago; made up of two separate structures, one that of two roller rings 24 ft. in diam., and other transfer table or platen upon which car stands.

Coal Handling with. See COAL HANDLING, Car Dumpers.

Design. The Influence of Car Dumpers on Freight Cars (Die Wirkung der Wagenkipper auf die Güterwagen), Schulz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 16, Apr. 19, 1924, pp. 394-396, 13 figs. Development of car dumpers, their shortcomings and recommendation for improvements.

Grain Unloading. See GRAIN HANDLING, Car Dumper for.

Rotary. Denver & Rio Grande Western Uses Car Dumper. Ry. Age, vol. 77, no. 25, Dec. 20, 1924, pp. 1115-1116, 3 figs. Details of rolling car dumper at Salida, Colo., to transfer coal, ore, and other bulk materials from narrow-gage to standard-gage cars.

Revolving Car Dumper Handles All Sizes of Open Top Cars. Ry. Rev., vol. 74, no. 5, Feb. 2, 1924, pp. 226-228, 4 figs. Details of W-S-M revolving car dumper developed to meet demand for low-capacity machine adaptable to plants where first cost of installation is governing factor, but where high efficiency, low operating cost, and minimum labor are required.

Rotary Car Dumper Used at Cahokia. Elec. World, vol. 83, no. 6, Feb. 9, 1924, p. 286, 1 fig. Gondola coal-car dumper, installed in plant of Union Elec. Light & Power Co., St. Louis, is capable of dumping 50-ton car in one minute and ten seconds with one unskilled attendant and 35-hp. operating motor.

CAR HEATING

Pennsylvania Railroad. The Heating, Ventilating and Lighting of Passenger Cars on the Pennsylvania Railroad, G. L. Fowler. Ry. & Locomotive Eng., vol. 27, no. 9, Sept. 1924, pp. 284-285. Gives outline of work of railroad in development of systems used.

Steam. Tests with Steam Heating of Passenger Cars (Versuche mit Dampfheizung in Personenzügen), M. Mertz. Glasers Annalen, vol. 94, no. 8, Apr. 15, 1924, pp. 93-109, 30 figs. Details of tests carried out by German Testing Bureau with high-pressure and low-pressure systems and various types of cars in special runs of trains, including a train consisting of 22 cars.

Thermostat Equipment. Getting Best Results with Heater Control Equipment, L. P. Hynes. Elec. Ry. Jl., vol. 63, no. 3, Jan. 19, 1924, pp. 97-100, 4 figs. How to install, inspect, test, and maintain mercury thermostat equipment in order to get best operating results and minimize maintenance expense; methods recommended as best by one manufacturer as result of experience on many properties.

CAR HOUSES

Design. Fort Wayne Builds Modern Carhouse. Elec. Ry. Jl., vol. 64, no. 6, Aug. 9, 1924, pp. 191-194, 7 figs. Details of design and construction of car house of Indiana Service Corpn., giving facilities for inspection, repairs, and storage.

Street-Railway. Carhouse for 100 Cars at Louisville, F. H. Miller. Elec. Ry. Jl., vol. 63, no. 11, Mar. 15, 1924, pp. 403-406, 10 figs. Describes new structure, which replaces carhouse burned last year, of reinforced concrete with full sprinkler equipment; through tracks facilitate car movement; novel type of double skeleton pits and facilities for car washing.

CAR LIGHTING

[See also LIGHTING, Train.]

Equipment. Report of Committee on Locomotive and Car Lighting, W. E. Dunham. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1558-1560, 3 figs. Discusses design of axle-generator belt drive and photometry of locomotive headlights. Report presented before Am. Ry. Assn.

Head-End System. Head-End Car Lighting System of the St. Paul, C. R. Gilman. Ry. Elec. Engr., vol. 15, no. 3, Mar. 1924, pp. 73-76, 11 figs. Description of head-end system, as used for electric lighting of passenger trains on Chicago, Milwaukee & St. Paul in contrast with individual car axle system. Running repairs and electric-fan repairs made.

Maintenance Methods. Light, Not Lamps, Determines Economy of Car Lighting, E. E. Dorting. Elec. Ry. Jl., vol. 64, no. 3, July 19, 1924, pp. 80-82, 2 figs. Analysis shows light to be thing purchased in car lighting; old lamps should be discarded; lamps and power for lighting cars cost Interborough Rapid Transit Co. $125,964 per year.

Pennsylvania R. R. See CAR HEATING, Pennsylvania R. R.

CAR SHOPS. See CARS, Shops.

CAR WHEELS

Cast-Iron. The Development of the Cast Iron Car Wheel, Geo. L. Fowler. Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, pp. 367-371, 8 figs. Outline of outstanding features in production of present-day wheel.

Chilled-Iron. The Chilled Iron Car Wheel as an Economic Factor in the Development of Railways in China, E. S. Way. Assn. Chinese & Am. Engrs.—Jl., vol. 5, no. 18, Oct. 1924, pp. 17-28, 3 figs. Analysis of individual items of economy of chilled iron-wheel.

The Chilled Iron Wheel in Railroad Service, E. Ruker. Assn. Chinese & Am. Engrs.—Jl., vol. 5, no. 3, Mar. 1924, pp. 11-16. Evolution, production, and use of this special kind of wheel, and its action in service.

Foundries. See FOUNDRIES, Car-Wheel.

Handling in Repair Shops. Handling Wheel and Axle Work on the Brooklyn-Manhattan Railways, F. H. Colvin. Am. Mach., vol. 61, no. 20,

Nov. 13, 1924, pp. 753-755, 4 figs. How cars are inspected and motor trucks handled when axles or tires require repairs; novel wheel-turning department with storage tracks and hoist for wheels and also for chips.

Rolled-Steel. The Manufacture of Solid Rolled Steel Car Wheels, G. A. Richardson. Ry. Club Pittsburgh—Official Proc., vol. 23, no. 5, Mar. 27, 1924, pp. 119-124 and (discussion) 124-126. Factors influencing delivery times and determining extra costs.

See also LOCOMOTIVES, Tires and Forgings, Manufacture.

Specifications. Report of Committee on Wheels. Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1211-1213, 3 figs. See also Ry. Age (daily edition), vol. 76, no. 36, June 19, pp. 1730-1735 and (discussion), pp. 1734-1737, 3 figs. Cooling of rolled-steel wheels; specifications for cast-iron steel wheels; development of cast-iron wheel design; wheel mounting gage; standard steel-wheel gage; tread-worn hollow wheels; grinding of cast-iron wheels. Report presented to Am. Ry. Assn.

Tires. Modern Production of Railway Wheel Tires (Die neuzeitliche Herstellung von Eisenbahnradreifen). Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 486-489, 14 figs. Methods of Kalker Machine Works in producing sets of wheels and axles, wheel centers, tires, and axles.

The Cause of Tire Fractures (Ueber die Ursache von Radreifenbrüchen), W. Marzahn. Glasers Annalen, vol. 94, no. 4, Feb. 15, 1924, pp. 37-41, 7 figs. Investigations of broken wheel tires showing causes due to faults in material and in workmanship; preventive measures to be observed in steel works and workshop.

The Manufacture of Railway Tires. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 602-603. Account of work done in Sheffield, England, 50 years ago.

Welding of Railway Wheel Tires (Aufschweissen von Radspurkränzen), Gollwitzer. Organ für die Fortschritte des Eisenbalmwesens, vol. 79, no. 11, Sept. 15, 1924, pp. 255-259, 16 figs. partly on supp. plate. Describes method whereby worn tires are being reconditioned by welding of fresh material on worn surface.

Wrought-Steel Gaging of. Gaging Wrought Steel Wheels for Car and Tender, A. Knapp. Ry. Mech. Engr., vol. 98, no. 3, Mar. 1924, pp. 164-167, 13 figs., and (discussion) no 4, Apr. 1924, pp. 224-227. Discussion on use of new A. R. A. steel wheel gage for determining defects, turning wheels and billing. Abstract of paper before Car Foremen's Assn. of Chicago.

CARBOMETER. See STEEL, Carbon-Content Determination.

CARBON

Activated. Activated Carbon (Ueber aktive Kohle), W. Mecklenburg. Zeit. für angewandte Chemie, vol. 37, no. 45, Nov. 6, 1924, pp. 873-877, 4 figs., and (translation) Chem. Age (N. Y.), vol. 32, no. 12, Dec. 1924, pp. 503-505. Discusses production of activated carbon, its use for decoloring, medicine, condensation, and as contact and gas-mask carbon, and its properties and substitutes.

Further Facts about Activated Carbon. Petroleum Times, vol. 12, no. 304, Nov. 1, 1924, p. 708. Action is considered to be both physical and chemical. Abstract of article by H. Kresse in Chemiker Zeitung.

Preparation of Active Carbon from Asphalt and Anthracite by the Action of Iodine (Bereiding van actieve kool nit asphalt en anthraciet door, inverking van jodium), F. J. Nellensteyn. Chemisch Week-blad, vol. 21, no. 46, Nov. 15, 1924, pp. 533-536, 1 fig. Describes method by which yield of active carbon is about 90 per cent of original material, as compared with about 20 per cent by activation with oxygen and steam; low yield by latter process is due to loss of carbon as oxides; theoretical considerations of activation process are discussed.

Animal Constituents. The Animal Constituents of Carbon (Die Tierwelt des Karbons), P. Kukuk. Glückauf, vol. 60, no. 16, Apr. 19, 1924, pp. 299-304, 9 figs. Describes animal remains in anthracite seams with regard to their position in paleozoölogical system.

Estimation in Substances. Determination of Carbon in Fuels, Organic Substances, Refractories and Alloys, E. Goutal. Colliery Guardian, vol. 128, no. 3332, Nov. 7, 1924, pp. 1189-1190, 2 figs. Method devised in compliance with desires expressed at Indus. Heating Congress held in Paris in 1923; based on combustion of test material in oxygen under pressure and estimation of CO_2 by titration, combustion chamber being modification of that employed by author and Mahler for determining carbon content of iron. Translated from Chaleur & Industrie.

Heat of Evaporation. The Heat of Vaporization of Carbon (Sur la chaleur de vaporisation du carbone), de. Forcrand. Académie des Sciences—Comptes Rendus, vol. 178, no. 23, June 2, 1924, pp. 1868-1871. Refers to high value of heat of vaporization of carbon which is obtained by substitution of known boiling-point temperature in formula of Trouton or Nernst modification.

Properties. Carbon and Coke (Kohlenstoff und Koks), D. Aufhäuser. Glückauf, vol. 60, no. 51, Dec. 20, 1924, pp. 1195-1201. Discusses atomic properties, forms and behavior of carbon, capacity for reaction, and combustion.

Resistance. The Variation in the Resistance of Carbon and Graphite with Temperature, B. Noyes, Jr. Physical Rev., vol. 24, no. 2, Aug. 1924, pp. 190-199, 7 figs. Determines resistance between —190 deg. and 2000 deg. Cent.; results do not fit any law; at 2200 deg. Cent. length of carbon rod increased.

Vapor Tension. Vapor Tension of Solid Carbon (Sur le tension de la vapeur du carbone), J. J. van Laar. Académie des Sciences—Comptes Rendus, vol. 178, no. 27, June 30, 1924, pp. 2250-2252. From study of coefficient of dilatation and molecular attraction of graphite, author obtains equation for sublimation temperature, making it clear that sublimation point is considerably above 4200 deg. abs., figure deduced from measurements by Lummer and by Kohn.

CARBON BLACK

Natural Gas, Production from. Carbon Black Produced from Natural Gas in 1923, G. B. Richardson. U. S. Geological Survey (Mineral Resources of U. S. no. 11:11), Sept. 29, 1924, pp. 89-90.

CARBON DIOXIDE

Absorption in Alkaline Solutions. Absorption of Carbon Dioxide and Ammonia from Gas Bubbles, P. G. Ledig. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1231-1233, 8 figs. Deals with continuance of previous work upon absorption.

Rate of Absorption and Equilibrium of Carbon Dioxide in Alkaline Solutions, R. V. Williamson and J. H. Mathews. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1157-1161, 8 figs. Investigation to study factors influencing rate of absorption of CO_2 in alkaline solutions, in order to determine possibility of increasing efficiency of commercial production.

Electrometric Determination. Investigations in Photosynthesis, H. A. Spoehr and J. M. McGee. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924,

pp. 128-130, 1 fig. Electrometric method of determining large quantities of carbon dioxide in air stream.

Meters. See FLUE-GAS ANALYSIS, CO_2 Meters.

Recorders. See FLUE-GAS ANALYSIS, CO_2 and CO Recorders.

CARBON MONOXIDE

Automobile Exhaust Gases. Carbon Monoxide in Motor Car Exhaust Gases. Engineer, vol. 137, no. 3559, Mar. 14, 1924, p. 282. Refers to investigations carried out in New York in garages and in Grand Central Station; foremost authorities on CO poisoning agree that standard recommended for Hudson River tunnel is uniform concentration of 4 parts of CO in 10,000 of air.

Detector and Alarm. Notes on a Carbon-Monoxide Detector and Alarm, J. A. Vaughan. S. African Instn. Engrs.—Jl., vol. 22, no. 7, Feb. 1924, pp. 98-103, 2 figs. Describes instrument intended for automatic detection of small traces of CO in atmosphere, so arranged that a bell is caused to ring when small traces, such as one part in two thousand, or even less, are present in atmosphere supplied to instrument.

Determination. Determination of Carbon Monoxide (Sur le dosage de l'oxyde de carbone), P. Lebeau and Ch. Bedel. Académie des Sciences—Comptes Rendus, vol. 179, no. 2, July 16, 1924, pp. 108-110. Addition of phenolic substances to suspension of cuprous oxide in sulphuric acid increases solubility of former, yielding solution which is good absorbent for CO; addition of water also causes no decomposition or loss of CO.

Determination of Carbon Monoxide in Industrial Gases (Sur le dosage de l'oxyde de carbone dans les gaz industriels), de la Condamine. Académie des Sciences—Comptes Rendus, vol. 179, no. 15, Oct. 16, 1924, pp. 691-692. Solution of 5 parts of cuprous oxide in 100 parts of sulphuric acid absorbs eight times its volume of CO without developing measurable dissociation pressure; this reagent is superior to either ammoniacal or hydrochloric-acid solutions of cuprous chloride.

Elimination from Town Gas. Elimination of Carbon Monoxide from Town Gas. Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 647-650. Practicability of schemes proposed and processes described for partial or complete elimination of carbon monoxide from town gas supply and its replacement by methane.

Hazards from House Heaters. Carbon Monoxide Fatalities From Natural Gas Heaters Investigated by the Bureau of Mines in the Pittsburgh District During the Past Year, G. W. Jones and W. P. Yant. U. S. Bur. Mines—Reports of Investigations, no. 2572, Feb. 1924, 4 pp. List of fatalities investigated, and conclusions of a study to determine what types of heaters liberate CO, why CO is liberated, and how by change of design or construction, liberation of this gas can be largely eliminated.

Carbon Monoxide Hazards From House Heaters Burning Natural Gas, C. W. Jones, L. P. Berger and W. F. Holbrook. U. S. Bur. Mines—Technical Paper no. 337, 1923, 31 pp., 8 figs., partly on supp. plate. Describes tests on six common types of heaters, and results obtained; suggestions for minimizing quantity of carbon monoxide emitted under certain conditions.

Meters and Indicators. See FLUE-GAS ANALYSIS, CO Indicator, and CO Meters.

Poisoning. Carbon Monoxide Poisoning in Homes and Industries, R. R. Sayers. Nat. Safety News, vol. 10, no. 3, Sept. 1924, p. 32. Discusses carbon monoxide poisoning and its prevention. Abstract of paper read before Pac. Safety Conference, San Francisco, Cal.

Carbon Monoxide Poisoning in Private Garages, W. P. Yant, W. A. Jacobs and L. B. Berger. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1047-1049, 1 fig. Determining CO in garage by calculation; tests made by running engines in garage; discussion of tests.

Tests of a Commercial Solution Used to Reduce the Hazard of CO Poisoning in Garages, A. C. Fieldner and W. P. Yant. U. S. Bur. Mines—Reports of Investigations, no. 2594, Apr. 1924, 4 pp. Results of analysis made of a compound sold under a trade name for which claims are reported to have been made regarding its efficacy in reducing CO poisoning in automobile garages, to determine its power to absorb, oxidize, or destroy CO.

The Use of Carbon Dioxide as a Remedy in Gas Poisoning, J. S. Haldane. Colliery Guardian, vol. 128, no. 3339, Dec. 24, 1924, pp. 1633-1634, 2 figs. See also Instn. Min. Engrs.—Trans., vol. 68, pt. 4, Jan. 1925, pp. 271-277, 2 figs., and Iron & Coal Trades Rev., vol. 109, no. 2065, Dec. 26, 1924, pp. 1042-1043, 2 figs. Describes experiments, points out how results may be applied practically in treatment of gas poisoning, and demonstrates main experiments and an apparatus for using carbon dioxide in treatment.

Poisoning, Treatment for. See MINE-RESCUE WORK, Transport of Injured.

CARBON TETRACHLORIDE

Fire Extinguisher. See FIRE EXTINGUISHERS, U. S. Specifications.

CARBONIZATION

Coal. See COAL, Carbonization.

CARBONS. See DIAMONDS, Drill.

CARBORUNDUM

[See also REFRACTORIES, Carborundum.]

Abrasive, Manufacture of. Manufacturing an Artificial Abrasive. Chem. & Met. Eng., vol. 31, no. 13, Sept. 29, 1924, pp. 501-503, 7 figs. Some observations on technology of carborundum manufacture. Design and operation of equipment.

CARBURETORS

Adjustment. Saving Gasoline and Increasing Mileage by Proper Carburetor Adjustment, G. W. Jones and A. A. Straub. U. S. Bur. Mines—Reports of Investigations, serial no. 2616, June 1924, 9 pp. 1 fig. Discusses heat losses due to improper carburetor adjustment.

Beach. Beach Carbureter Is Constant Vacuum Type. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, p. 671, 1 fig. Carburetor of variable venturi or constant-vacuum type with wood float located in float chamber concentric with mixing chamber; makes use of float valve consisting of ball of tobin bronze.

Characteristics of Ideal and Commercial. Comparison of Ideal and Commercial Carbureter-Characteristics, C. S. Kegerreis. Soc. Automotive Engrs.—Jl., vol. 14, nos. 3 and 6, Mar. and June, 1924, pp. 286-301, 21 figs., and (discussion) 609-612, 3 figs. Computed data illustrate car carburetion-requirements of various cars for level-road operation; results of car-test data procured from various sources show information regarding advisability of using straight-line mixtures; data on commercial carburetors; summary of 23 carburetors tested for general conclusions; results give information on effect of air temperatures on metering; 11 devices are compared with ideal carburetor at various car speeds.

Claudel-Hobson. See Zenith.

Heavy-Fuel. New Principle Embodied in Baechler Heavy Fuel Unit. Automotive Indus-

tries, vol. 50, no. 14, Apr. 3, 1924, pp. 757-758, 2 figs. Exceptionally energetic atomization is provided in heavy-fuel carburetor developed in Germany; water is added to mixture and fuel is emulsified with it; prevents detonation at compression pressures which are normally used.

The B. M. W. Heavy-Oil Carburetor (Der B. M. W.-Schweröl-Vergaser), B. Katz. Allgemeine Automobil-Zeitung, vol. 25, nos. 7-8 and 9, Feb. 16 and 26, 1924, pp. 28-29 and 31-32, 3 figs. Describes two types of BMW carburetors which have given excellent results when used in trucks, omnibuses and motor boats.

Schlee. The Fuel Stop of the Schlee Carburetor (Die Kraftstoffbremse des Schleevergasers), H. Wimplinger. Motorwagen, vol. 27, no. 1, Jan. 10, 1924, pp. 2-3, 4 figs. Describes use of fuel stop at light-load nozzle for purpose of automatically stopping supply of fuel from nozzle in manner desired by driver.

Types. Development of the Modern Carburetor (Die Entwicklung der neuzeitlichen Vergaser), M. Wimplinger. Dinglers Polytechnisches Jl., vol. 339, nos. 7, 9 and 12, Apr. 15, May 15, and June 30, 1924, pp. 57-60, 81-82, and 113-114, 16 figs. Principles of carburetion are explained and number of recent carburetor designs are described and illustrated.

Zenith. High-Speed Petrol and Paraffin Engines, J. Okill. Gas & Oil Power, vol. 19, no. 222, Mar. 6, 1924, pp. 107-108, 4 figs. Describes Zenith and Claudel-Hobson carburetors.

The Production of Zenith Carburetors (Die Herstellung des Zenithvergasers), G. Wimplinger. Werkstattstechnik, vol. 18, no. 24, Dec. 15, 1924, pp. 738-739, 13 figs. Methods of machining carburetors of vertical and horizontal type.

The Zenith Carburetor with Graded Atomization (Der Zenith-Vergaser mit stufiger Zerstäubung). Automobil-Rundschau, vol. 23, no. 1, Jan. 1924, pp. 7-8, 1 fig. Describes new Zenith carburetor and principle upon which design is based.

CARGO HANDLING

Ship Loading and Unloading. How There May be Obtained the Greatest Speed in the Mechanical Discharging and Loading of Ships and Barges Burdened With Miscellaneous Cargo, H. McL. Harding. Wld. Ports, vol. 12, no. 7, May 1924, pp. 78-97, 3 figs. Discusses terminal design, slip design, quays, cranes, sheds, etc.

CARNOTITE

Uranium Determination in. A Modified Method for the Determination of Uranium in Carnotite, P. H. M.-P. Brinton and R. B. Ellestad. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1191-1192. Describes method which accomplishes determination with very great saving of time and chemical steps.

CARS

Air Compressor. Mobile, Self-Contained Compressor Car for Railroad Service, C. S. Kulp. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, p. 955, 3 figs. Details of compressor car outfit consisting of two type POV-2 compressors directly connected to 50 hp. engine, single-cylinder horizontal type operating on 4-stroke cycle.

Bearings. See BEARINGS, Anti-Friction; BEARINGS, ROLLER, Railway Rolling Stock.

Brakes. See BRAKES.

Bumpers. See Buffers.

Buffers. A New Construction for Friction Buffers (Eine neue Bauart für Reibungspuffer), C. Wetzel. Schweizerische Bauzeitung, vol. 83, no. 11, Mar. 15, 1924, pp. 128-129, 3 figs. Describes new patented friction buffer offering a resistance of 28 to 34 tons to thrust and requiring a pressure of only about 2 tons to release friction device and return it to initial position.

Comparison of Electric and Hammer Welding for Repairing Buffers (Versuche zur Gegenüberstellung der elektrischen und der Feuerschweissung bei der Wiederherstellung von Puffern), Genzken. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 15, Nov. 15, 1924, pp. 345-346, 2 figs. In Cologne-Nippes Ry. repair shop electric welding proved superior as to quality but dearer due to high cost of current.

Production of Telescope Buffers (Die Herstellung von Hülsenpuffern). Werkstattstechnik, vol. 18, no. 19, Oct. 1, 1924, pp. 531-533, 3 figs. Discusses telescopic buffers as an improvement over plunger buffers and capable of taking greater loads. Details of design and parts.

Purposes and Actions of Railroad Bumpers, Especially Friction Bumpers (Friction Draft Gears) (Aufgaben und Wirkungon des Eisenbahnpuffers unter besonderer Berücksichtigung der Reibungspuffer), Metzkow. Glasers Annalen, vol. 95, no. 6, Sept. 15, 1924, pp. 79-89, 26 figs. Describes plain spring bumpers and the various forms of friction draft gears and bumpers. Superiority of Uerdingen friction bumper and ring spring over all other known designs of such devices were proved by extensive service tests.

Quantity Production of Car Buffers (Reihenfertigung von Eisenbahnpuffern), S. Gans. Werkstattstechnik, vol. 18, no. 19, Oct. 1, 1924, pp. 527-531, 19 figs. Details of design and of processes of manufacture from materials to finished product.

Reinforced Buffers for Railway Cars (Verstärkte Puffer für Eisenbahnfahrzeuge), H. Steber. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 137-155, 37 figs. Design and construction of new center buffers to be adopted by German Railways and to replace side buffers gradually.

Coal. See CARS, COAL.

Construction Methods. Railway Carriage and Wagon Buildings. Machy. (Lond.), vol. 24, no. 601, Apr. 3, 1924, pp. 1-4, 5 figs. Practice of Cammell Laird & Co.; making buffer forgings—upsetting forging machines; buffer forgings operations.

Couplers. See CAR COUPLERS.

Dumpers for. See CAR DUMPERS.

Dynamometer. Dynamometer Car Used on the Great Western Railway. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 466-472, 8 figs. Description of design, equipment and use of car for determining factors in working of locomotives and trains.

Dynamometer Cars of the Swiss Federal Railways (Le wagon-dynamomètre des Chemins de fer fédéraux suisses). Génie Civil, vol. 84, no. 24, June 14, 1924, pp. 571-573, 3 figs. Design and construction of cars; measuring devices and arrangement, including dynamometer, tachometer, anemometer, ergometer, apparatus for measuring drawbar pull, braking force, spreading of rails, etc.

New Dynamometer Car, New York Central R. R. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 687-691, 6 figs. Special car contains modern devices for recording locomotive performance.

New York Central Dynamometer Car. Ry. Age, vol. 77, no. 25, Dec. 20, 1924, pp. 1109-1112, 5 figs. Design and equipment of all-steel car in service on N. Y. C. for more than a year.

See also ELECTRIC LOCOMOTIVES, Dynamometer Cars.

Electric-Railway. See ELECTRIC RAILWAYS, Cars.

Elevated-Railway. See ELEVATED RAILWAYS, Cars.

Freight. See CARS, FREIGHT.

Inspection. New Inspection Cars for the Sudan Government Railways. Ry. Gaz., vol. 41, no. 10, Sept. 5, 1924, pp. 318-320, 3 figs. Cars, which are fitted with steel bodies and patent spring trucks are built to complete specification and specially designed to facilitate reërection abroad; length over buffers, 38 ft. 2½ in.; truck wheelbase, 5 ft.; width over side panels, 9 ft. ¼ in.

Interurban. Luxurious Cars for Interurban Service. Elec. Ry. Jl., vol. 64, no. 6, Aug. 9, 1924, pp. 199-201, 5 figs. Describes parlor car and coach built by Milwaukee Electric Ry. & Light Co.; semi-observation front and inclosed observation platform at rear.

Metal Roofs, Reclamation of. Central of Georgia Reclaims Metal Car Roofs, W. H. Harrison. Ry. Mech. Engr., vol. 98, no. 6, June 1924, pp. 329-332, 11 figs. 60 per cent of all sheets removed are restored to service at cost of $10 per car.

Mine. See MINE CARS.

Painting. See PAINTING, Cars.

Parts Interchangeability. Interchangeability of Parts in Railway Cars (Austauschbau bei Eisenbahnwagen), Klein. Zeit. des Vereines Deutscher Ingenieur, vol. 68, no. 37, Sept. 13, 1924, pp. 965-969, 14 figs. Necessity for interchangeability for economic production and repairs of freight and passenger cars, its introduction in Germany, and details of standards.

Passenger. See CARS, PASSENGER.

Refrigerator. See CARS, REFRIGERATOR.

Repairing; Welding and Cutting in. Welding and Cutting in Connection With Car Repairs, H. W. L. Porth. Acetylene Jl., vol. 25, no. 6, Dec. 1923, pp. 286, 288, and 290. Welding of car parts by oxy-acetylene process, and use of cutting torch in car repairing.

Repairs. See RAILWAY REPAIR SHOPS.

Roller Bearings. See BEARINGS, ROLLER, Railway Journal Boxes.

Shops. Improvements in the Johnstown Car Shops, Geo. A. Richardson. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 1040-1045, 10 figs. Improvements and additions made by Bethlehem Steel Co. to what were formerly known as Cambria car shops.

Springs. See SPRINGS, Railway-Car.

Steel Castings for, Reclamation of. Reclamation of Cast Steel Car Castings by Arc Welding, H. R. Pennington. Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 28-35, 6 figs. Examples of potential savings in reclamation of such parts as coupler bodies, knuckles, truck sides and bolsters for railways, and practice for reclamation of such parts.

Steel, Scrapping. Electric Arc Process for Scrapping Steel Cars, A. M. Candy. Ry. Elec. Engr., vol. 15, no. 4, Apr. 1924, pp. 112-114, 5 figs. Also Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 217-219, 4 figs. This method less expensive than others where large number of cars is to be handled. Operating data.

Steel, Straightening Frame. Steel Car Straightening Frame. Ry. Rev., vol. 75, no. 26, Dec. 27, 1924, pp. 1028-1030, 4 figs. Frame introduced for purpose of facilitating straightening of bent parts on steel cars; reduces cost of repair work.

Street-Railway. See STREET RAILWAYS, Cars.

Subway. See SUBWAYS, Cars.

Tank. See CARS, TANK.

Wheels. See CAR WHEELS.

Wooden, Construction. Use, Treatment and Working of Wood in Railway Car Construction (Die Verwendung, Behandlung und Bearbeitung des Holzes im Eisenbahnwagenbau), K. Bässler. Maschinenbau, vol. 3, no. 30, Dec. 24, 1924, pp. 1163-1165. Kinds of wood; use of wood in building construction; stacking, drying, working, assembling, and surface treatment in railway car construction.

CARS, COAL

Dumpers. See CAR DUMPERS.

Gondola. New 70-ton Capacity Gondola Car for the Wabash. Ry. Rev., vol. 75, no. 18, Nov. 1, 1924, pp. 657-659, 3 figs. Drop-end steel gondola car built for shipment of pipe and tubing permits loading to full capacity.

See also Hopper.

Hopper. Determining the Forces Active in an Automatic Unloader Car with Drop Door (Ermittlung der in einem Selbstentladewagen mit Klappenverschluss wirkenden Kräfte), M. Bieck. Glasers Annalen, vol. 95, no. 5, Sept. 1, 1924, pp. 67-71, 16 figs. Calculation of forces acting on walls and on drop bottom; force of automatic action, etc.

57 ½-Ton Hopper Bottom Gondola for C. & O. Ry. Mech. Engr., vol. 98, no. 3, Mar. 1924, pp. 161-164, 6 figs. Stronger and of greater capacity than previous cars of same weight; steel construction; length, 31 ft. 6 in.; width, 10 ft.; height from rail to top of body, 11 ft.

Standard-Gage Fifty-Ton Freight Cars for Transportation of Bulk Goods (Regelspurige 50-t. Eisenbahnwagen zur Beförderung von Massengütern), P. Krüger. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 171-186, 28 figs. Details of construction of freight cars embodying greatest economy and safety, including trucks, frames, automatic unloading arrangements, etc.

Rating. Commercial Coal Car Rating, W. M. Dake. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 179-180. Points out that present system of rating must be revised; proposed system.

20-Ton. The Great Western Railway's 20-Ton Coal Wagons. Colliery Eng., vol. 1, no. 8, Oct. 1924, pp. 364-368, 8 figs. See also Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 351-353, 5 figs. On each 500 tons of coal conveyed in these wagons there is nearly 400 ft. saving in length of trains; their use increases capacity of private owners' sidings by 30 per cent.

CARS, FREIGHT

Automatic - Unloading. Automatic Unloaders (Selbstentlade-Kübelwagen), Kayser, Verkehrstechnik, vol. 41, no. 48, Nov. 2 8,1924, pp. 623-624, 1 fig. New type of car embodying advantages of automatic unloaders and box cars.

Automobile. See Standard, Pennsylvania R. R.

Ballast. See Hart Convertible.

Boiler Transportation. See BOILERS, Transportation.

Box. Single Sheathed Box Cars for the D. T. & I. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 279-281, 4 figs. U. S. Railroad Administration design modified to provide 1 ft. added height and 1 ft. wider door opening.

60-Ton Capacity S. S. Box Car, Canadian National Rys. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 701-706, 7 figs. Outstanding features are improved end construction, selected lumber material, and its application to prevent leakage of grain.

See also Standard, Pennsylvania R. R.

Coal. See CARS, COAL.

Construction. Bangor & Arostook Car Building Contest. Ry. Age, vol. 76, no. 9, Mar. 1, 1924, pp. 511-513, 6 figs. Box cars, including trucks,

completed by two crews in total time of 94 man-hours each.

Economical Manufacture of Goods Trucks, Werner. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 189-190, 1 fig. Deals with interchangeability of parts and successful introduction of principle in German shops.

Production Methods in British Freight Car Building, D. R. Lamb. Ry. Rev., vol. 74, no. 16, Apr. 19, 1924, pp. 717-722, 10 figs. Consecutive operations in erection of 12-ton open freight cars at Derby shops of Lond. Midland & Scottish Ry.

Rapid Wagon Building in Railway Works. Ry. Gaz., vol. 40, no. 1, Jan. 4, 1924, pp. 11-19, 18 figs. Describes new system installed at Derby Works of Lond. Midland & Scottish Ry. for building clearing house standard 12-ton wagons.

Design. Report of the Committee on Car Construction. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1634-1638 (including discussion), 1 fig. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1186-1189, 1 fig. Reviews objects of fundamentals of design adopted by Association prior to development of present standard box-car designs; development of theoretical basis of car-framing design. Report presented to Am. Ry. Assn.

Foundation Brake Gear. Freight Car Foundation Brake Design, W. G. Stenason. Ry. Rev., vol. 74, no. 21, May 24, 1924, pp. 923-924, 5 figs. Describes form of foundation brake gear, with slack compensating attachment, that has given very satisfactory service. (Abstract.) Paper presented before Air Brake Assn.

Grain. New 40-Ton Bogie Wagons for South African Railways. Ry. Gaz., vol. 40, no. 6, Feb. 8, 1924, p. 167, 2 figs. Principal data of all-steel cars to be used for conveyance of grain in bulk from farming districts to S. African ports; for 3-ft. 6-in. gage; arranged for end or bottom discharge.

Hart Convertible. New Ballast Cars of the Michigan Central R.R. Ry. Rev., vol. 74, no. 10, Mar. 8, 1924, pp. 435-438, 4 figs. Describes Hart convertible car; can be used as a gondola or dump car in ordinary traffic; capacity of 50 tons.

Hot Boxes. Hot Boxes on Freight Cars, E. von Bergen. Car Foremen's Assn. of Chicago—Official Proc., vol. 18, no. 9, Sept. 1924, pp. 18, 21-22, 25-26 and 29, and (discussion) 29-30, 33-34, 37-38, 41-42, 45-46, and 49-52. Discusses problem of combating hot boxes, and methods employed.

Inspection and Maintenance. Inspection and Maintenance of Freight Cars, E. Erickson. Ry. Mech. Engr., vol. 98, no. 2, Feb. 1924, pp. 98-100, 2 figs. Inspection of cars on arrival at receiving yard; cars coming from connections; inspection and repair in classification yards; inspection at miscellaneous loading points; inspection and repair on repair or shop tracks.

Large-Capacity. Experimental 50-Ton Capacity German Freight Cars. Ry. Rev., vol. 74, no. 6, Feb. 9, 1924, pp. 257-259, 3 figs. New types of convertible coal cars developed as adaptations from American practice to meet economic conditions.

Introduction of Large-Capacity Freight Cars (Die Einführung der Grossgüterwagen), Flügel. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 38, Sept. 20, 1924, pp. 977-985, 19 figs. Discusses increase of carrying capacity from 15-20 tons to 50-60 tons, acceleration of circulation of cars, and cheapening of unloading by means of automatic devices; automatic couplings; bunker facilities in free ports; etc.

Logging. Interesting Design of Logging Car. Ry. Rev., vol. 75, no. 3, July 19, 1924, pp. 92-94, 2 figs. Chicago Milwaukee & St. Paul Ry. builds in its own shops skeleton flat cars for logging service.

Production Statistics, 1923. Freight Car Increase Breaks All Records. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 87-93, 1 fig. Railroads devoted 39 per cent of all 1923 capital expenditures to freight cars; gives table of orders in 1923 for service in United States.

Rebuilding. Box Cars Rebuilt in Record Time, D. & H. Co. Ry. Rev., vol. 74, no. 21, May 24, 1924, pp. 913-921, 12 figs. At freight-car rebuilding contest conducted at Oneonta, N. Y., entire superstructure of 60,000-lb. capacity, steel underframe, double-sheathed box car was rebuilt in record time of 52 man-hours.

Repairs. Analysis of the Cost of Freight Car Repairs, J. L. White. Ry. Age, vol. 77, no 1, July 5, 1924, pp. 21-24. Need is evidenced 196 per cent increase in these expenses from 191 to 1922. Difficulties confronting analyst in his study of cost of freight-train car repairs: Suggests a uniform method of reporting to Interstate Commerce Commission supplementary data necessary for an intelligent analysis of freight-car repair costs.

Efficiency in Heavy Freight Car Repairs, H. W. Williams. Ry. Age, vol. 77, no. 18, Nov. 1, 1924, pp. 810-812. Points out that economic problems and traffic demands are important factors in maintenance program; organization, system, and arrangement of facilities.

Unit System for Freight Car Repairs, J. McClennan. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 419-420. Gives proposed form for reporting freight-car repair output for comparison by piece-work-labor cost system; fixed applied piece-work labor costs per car used as basis of output.

Scrapping. Scrapping Steel Freight Cars. Welding Engr., vol. 9, no. 6, June 1924, pp. 21-23, 5 figs. Application of electric-arc cutting process to reclaiming and scrapping of rolling stock.

Standard, Pennsylvania R. R. Pennsylvania Exhibits Standard Cars. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1661-1663, 4 figs. Double-sheathed box and automobile cars among exhibits; single-sheathed frame finished for stock loading.

Standardized. Standardized Freight Rolling-Stock on Irish Railways. Ry. Engr., vol. 45, no. 531, Apr. 1924, pp. 142-147, 14 figs. Alternative designs are provided for metal and timber underframes.

Steel. The Railway Exhibition at Seddin, Berlin. Ry. Gaz., vol. 41, no. 21, Nov. 21, 1924, p. 668, 2 figs. Describes high-capacity all-steel freight car, and special type for bulk goods, both of self-discharging type, but built along different lines.

Steel, Reclaiming and Scrapping of. Electric Arc Process of Reclaiming and Scrapping Steel Freight Cars, A. M. Candy. Am. Welding Soc.—Jl., vol. 3, no. 11, Nov. 1924, pp. 24-31, 4 figs. Results of comparative tests made by one railway in cutting rivets using air guns, oxy-acetylene torches and arc process; typical installations, time required to cut up a car, size of pieces into which a car must be cut, etc.; factors to be considered in planning electrical installation for rivet-cutting or car-scrapping work.

Timber Preservation for. Treating Freight Car Timber Will Cut Repairs, H. S. Sackett. Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 337-339, 1 fig. States that preservation of lumber will add equivalent of 100,000 cars through reduced delays.

Transformer Transportation. New Transformer Cars for the New York New Haven & Hartford R. R. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 683-685, 2 figs. 70-ton capacity steel under-

frame transformer cars built by Standard Steel Car Co.; designed to carry load of 150,000 lb. uniformly distributed over length of 24 ft. at center of car.

Truck Frames. Washburn Side Frame for Arch Bar Trucks. Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 937-939, 4 figs. Describes frames of unique design used by Baltimore & Ohio on box and gondola cars.

Trucks. Improved Co-ordinating Six-Wheel Truck. Ry. Age, vol. 77, no. 12, Sept. 20, 1924, pp. 487-489, 5 figs. See also Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 602-604, 6 figs. Describes new truck designed by Boyden Steel Corpn., Baltimore, Md., known as type C-2-S, purpose of which is to reduce curve resistance and permit greater vertical flexibility.

Types Built in 1923. Freight Cars. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 19-44, 65 figs. Representative examples of double-sheathed box, single-sheathed box, single-sheathed automobile and furniture, refrigerator, gondola, hopper, flat, steel tank, and caboose, cars, and of miscellaneous freight car equipment, built in 1923, giving principal dimensions and data, builder, and railroad built for.

CARS, PASSENGER

Articulated. The Jakobs Articulated Passenger-Car System (Gelenkpersonenwagen Bauart "Jakobs"), M. Speer. Glasers Annalen, vol. 95, no. 1, July 1, 1924, pp. 1-9, 12 figs. Details of Jakobs design as patented in 1901 (no. 135,392), application in England, France, etc., and recent design adopted for Berlin suburban lines.

The Articulated Car, W. G. Gove. N. Y. Railroad Club—Proc., vol. 35, no. 1, Nov. 21, 1924, pp. 7441-7461, 17 figs. Description of its design, history, character and methods of construction and operation. Bibliography.

British Empire Exhibition. British Empire Exhibition Railway Material. Engineering, vol. 117, no. 3045, May 9, 1924, pp. 595-601, 13 figs. Exhibits of Birmingham Railway Carriage & Wagon Co., consisting of five passenger cars including two Pullman cars, and electric locomotives built by Metropolitan-Vickers Elec. Co.

Canadian Pacific Ry. Passenger Rolling Stock Additions, Canadian Pacific Railway. Can. Ry & Mar. Wld., no. 319, Sept. 1924, pp. 435-437, 5 figs. Notes on design and construction of buffet parlor cars, cafe parlor cars, first-class cars, and mail and express cars added.

Chilean State Railways. The New Iron Passenger Cars for the Chilean State Railways, M. Strecker. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 154-157, 7 figs. Describes technical details of passenger cars made by Breslau Works of Linke-Hoffman-Lauchhammer A. G. for Chilean State Railways.

Design. Improvements in Passenger Car Construction, C. E. Barba. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 479-481. Work of building and maintenance may be facilitated by adopting uniform equipment designs.

Dining. Dining Cars of the Rhine Railway Co. (Restaurationswagen der Rheinischen Bahngesellschaft), M. Schwab. Verkehrstechnik, no. 35a, Sept. 1924, pp. 409-411, 5 figs. Details of design and construction of cars for Düsseldorf-Krefeld line.

New Rolling-Stock for Day East Coast Trains, L.N.E.R. Ry. Gaz, vol. 41, no. 14, Oct. 3, 1924, pp. 439-445, 10 figs. Describes new vehicles, including all-electric "triplet" restaurant-car sets.

Equipment, Canadian Railways. Passenger Car Equipment, Canadian National Rys. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 757-761, 6 figs. Insulation and its application, roof construction, plain and effective interior finish are outstanding features in new steel equipment.

German. Standard Passenger Cars for German State Railways (Die Einheitspersonenwagen der Deutschen Reichsbahn), Speer. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 957-964, 19 figs. Details of new type replacing individual types of various states.

Heating. See CAR HEATING.

History and Development. History and Development of Passenger Car Building, Geo. A. Richardson. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1133-1141, 26 figs. Account of history and present facilities of Bethlehem Shipbldg. Corpn., Wilmington, Del., which was pioneer in manufacture of passenger cars.

Lighting. See CAR HEATING, Pa. Ry.; CAR LIGHTING.

Long Island Ry. Features of New Long Island Cars, Elec. Ry. Jl., vol. 63, no. 5, Feb. 2, 1924, pp. 167-170, 7 figs. Framing designed to resist collapse in collision and facilitate repairs when damaged; two motors per car arranged for tap field control; length, 64 ft. 5¾ in.; width, overall, 9 ft. 10 7/16 in.; seating capacity, 78.

Manufacture. The Manufacture of Railway Coaches in Germany, E. Cramer. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 183-189, 20 figs. Quantity production of steel passenger cars; modern truck manufacture; freight trucks for heavy loads; tipping and special trucks; refrigerator cars; central buffer couplings.

Oriental Limited. New Equipment for Oriental Limited Trains. Ry. Age, vol. 76, no. 26, May 31, 1924, pp. 1303-1305, 8 figs. Great Northern cars of improved design to be placed in service between Chicago, Seattle and Portland; equipment of each train will consist of dynamo baggage car, smoking car, first-class coach, Pullman tourist car, dining car, pullman sleepers and observation car.

Painting. Economy in Painting Steel Passenger Cars, G. H. Hammond. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 672-674, 2 figs. 12 years' experience on Soo Line demonstrates practicability and economy of four-coat system.

Parlor. Parlor Car Service. Elec. Traction, vol. 20, no. 7, July 1924, pp. 301-302, 4 figs. Cars were designed and constructed at Highland Park shops of Detroit United Ry.; old trailer cars formerly operating on Pontiac division were converted into parlor cars.

Production Statistics, 1923. Large Progress in Passenger Car Acquisitions. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 83-86, 1 fig. Orders less than in 1922 but otherwise largest since 1916; production largest since 1917; gives table of orders in 1923 for service in United States.

Queensland Government Rys., Australia. New Mail Trains for the Brisbane-Townsville Service, Queensland Government Railways. Ry. Gaz., vol. 40, no. 3, Jan. 18, 1924, pp. 78-81, 8 figs. Three complete trains built, each consisting of eight vehicles: 2 first-class Pullman sleepers, 2 second-class sleepers, 1 composite sleeper, 1 post-office car, 1 mail and luggage van, and 1 guard's van. Brief description of each car.

Side Girders, Shearing Stress in. Shearing Stress in Passenger Car Side Girders, W. J. Meyer. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 604-608, 12 figs. Analysis of procedure necessary in order to reduce weight without sacrificing strength.

Sleepers. New Canadian National Sleeping Cars. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 27-30, 5 figs. Also Ry. Age. vol. 76, no. 2, Jan. 12, 1924, pp. 189-190. 5 figs. Distinctive floor plan arrangement; frame and exterior of steel; interior finished with wood.

Sleeping Car Service Begun by Interstate Public Service Company. Elec. Ry. Jl., vol. 64, no. 19, Nov. 8, 1924, pp. 801-803, 6 figs. Describes all-steel 10-section sleeping cars placed in service between Indianapolis and Louisville; extra long berths, with windows alongside uppers; large washrooms and easy riding qualities; 62 ft. long and 8 ft. 8½ in. wide; operated on a slow schedule with a layover before entering terminal.

The Oriental Limited—Great Northern Railway. Ry. Jl., vol. 30, no. 7, July 1924, pp. 18-20, 4 figs. Describes new all-steel trains of most modern type built by Pullman Co., embodying latest designs and improvements in sleeping car improvement, in trans-continental service between Chicago and Pacific Northwest cities.

Steel. New Steel Passenger Cars for the Chilean State Railway (Die neuen eisernen Personenwagen für die chilenische Staatsbahn), Strecker. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 19, May 10, 1924, pp. 469-471, 7 figs. Details and construction features of cars built by Linke-Hofmann-Lauchhammer Works, Breslau.

The Passenger Car Up-To-Date, C. E. Barba. New Eng. Railroad Club—Proc., Apr. 8, 1924, pp. 70-81 and (discussion) 81-103. Construction of steel passenger cars; ideals to be considered in up-to-date equipment; tentative specification for painting.

Steel Paneling and Roofing. A New Carriage-Building Development at Swindon, Great Western Railway. Ry. Engr., vol. 45, no. 538, Nov. 1924, pp. 380-385, 11 figs. Modern coaching stock is being fitted as general practice with steel paneling and roofing, result being better and more durable finish. See also Ry. Gaz., vol. 41, no. 19, Nov. 7, 1924, pp. 605-609, 7 figs.

Steel, Suburban. All-Steel Carriages for Sydney Suburban Railways, Commonwealth Engr., vol. 11, no. 5, Dec. 1, 1923, pp. 175-178, 2 figs. Description of car bodies ordered from Leeds Forge Co., England, by New South Wales railway department; contract covers only complete shell of car body, including doors, windows and partitions, but exclusive of bogies, couplings and draft gear, seats, parcel racks and other furnishings, which will be manufactured locally.

Missouri Pacific Acquires Light Suburban Cars. Ry. Age, vol. 76, no. 15, Mar. 15, 1924, pp. 747-749, 4 figs. Design provides strength of through passenger coach; weighs 1000 lb. per seated passenger.

Steel Suburban Cars for Missouri Pacific. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 220-222, 7 figs. Unique seating arrangement provides for 117 passengers, car weight 1000 lb. per seated passenger.

Toronto, Hamilton & Buffalo Ry. New Passenger Equipment for the T. H. & B. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 422-424, 8 figs. Also Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 343-344, 2 figs. 26 all-steel cars to be used in passenger service between Toronto, Ont., and Buffalo, N. Y., were built by Can. Car & Foundry Co., Ltd., Montreal, Que., for Toronto, Hamilton & Buffalo Ry. Equipment consists of 10 first-class coaches, 10 smoking coaches and 6 baggage cars, steel construction and equipped with clasp brakes.

Trucks. The Görlitz Truck (Das Görlitzer Drehgestell). Glasers Annalen, vol. 95, no. 5, Sept. 1, 1924, pp. 71-73, 4 figs. Comparative data on American and Görlitz trucks, the latter having wheelbase of 11.8 ft. as in six-wheel trucks.

Types Built in 1923. Representative Examples of Passenger Train Cars Built in 1923. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 45-49, 17 figs. Illustrations of baggage, baggage-mail, passenger-baggage, passenger, and express refrigerator cars, with data giving principal dimensions, weight, builder, and railroad built for; illustrations of latest Pullman sleeping car equipment.

Ventilation. Ventilation and Heating of Railway Passenger Cars, K. F. Nystrom. Can. Ry. Club—Proc., vol. 23, no. 2, Feb. 1924, pp. 24-62 and (discussion) 62-75, 13 figs. Influence of occupants on temperature and humidity; CO_2 content in relation to ventilation; mechanical refinements required for ideal ventilation; factors essential to economical and efficient ventilation; ventilating systems now in use. Heat losses; heat requirements; radiation surface and fuel required for heating.

CARS, REFRIGERATOR

Canadian Pacific Ry. Canadian Pacific Ry's. Refrigerator Car Construction. Ry. Rev., vol. 75, no. 21, Nov. 22, 1924, pp. 826-828, 3 figs. Insulation and method of its application in cars for dressed-beef service, built in Angus shops.

Chicago Rock Island & Pacific Ry. New Ventilated Refrigerator Cars of the C. R. I. & P. Ry. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 551-557, 9 figs. Special attention given in new equipment to ventilation and insulation to obtain efficient refrigeration; capacity, 40 tons; length over running boards, 42 ft. 6½ in.; width over side sheathing, 9 ft. 2⅝ in.; height from top of rail to top of running boards, 12 ft. 10⅛ in.

Construction. See RAILWAY SHOPS, Car-Building.

French. Refrigerator Cars on the French System (Les wagons frigorifiques), M. A. Sigmann. Revue Générale des Chemins de Fer, vol. 43, no. 6, June 1924, pp. 399-417, 9 figs. Development of refrigerator cars; design and construction of isothermic cars of Orleans Railway; transportation of fruit, meat, milk, etc.

Icing Stations for. Engineering of Refrigeration and Development of Car Icing Stations, J. W. Ingraham. West. Soc. Engrs.—Jl., vol. 29, no. 1, Jan. 1924, pp. 28-32. Fundamental principles of design and operation of plants located at intervals along main lines of trans-continental railroads, for purpose of replenishing ice in refrigerator cars.

Improved Design. New Refrigerator Cars for the Rock Island. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 286-289, 7 figs. Also Ry. Age, vol. 76, no. 10, Mar. 8, 1924, pp. 547-549, 5 figs. Improved side construction has reduced maintenance costs and improved refrigerating efficiency; new method of insulation; Acme ventilation system used.

Insulation. Economical Thickness of Insulation in Refrigerator Cars, A. J. Wood and P. X. Rice. Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 357-362 and (discussion) 362-366, 10 figs. Explains a reasonably simple method for determining quickly and accurately most economical thickness of insulation, and discusses factors which enter into economical design of insulated walls.

Low Temperatures in. Low Temperatures in Refrigerator Cars, M. E. Pennington. Ry. Age, vol. 77, no. 21, Nov. 22, 1924, pp. 947-950. Explains why fruit, vegetables and eggs should move at less than 50 deg. fahr.; light salting of ice said to be important.

CARS, TANK

Canadian Pacific Ry. New Tank Cars for Canadian Service. Ry. Rev., vol. 74, no. 8, Feb. 23, 1924, pp. 324-327, 3 figs. Description of cars built by Can. Pacific Ry. to A. R. A. Class III specifications; tank capacity, 12,480 gal.

Development and Manufacture. Modern Tank Car is Industry's Bucket that Goes to the Well, A. S. Taylor. Compressed Air Mag., vol., 29,

no. 3, Mar. 1924, pp. 813-818, 15 figs. Notes on origin, development, and manufacture.

Specifications. Report of Committee on Tank Cars. Ry. Age (Daily Edition), vol. 76, no. 35, June 18, 1824, pp. 1675-1680 and (discussion) 1680-1684, 3 figs. Specifications for Class V and VI tank cars; report on dome covers, bottom-discharge outlets, etc. Report of committee before Am. Ry. Assn. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1175-1177, on committee specifications for Class VI tank cars for transportation of helium gas.

CASE-HARDENING

Case-Depth Measurement. What Is Case Depth? S. P. Rockwell and F. Downes. Am. Soc. Steel Treating, vol. 5, no. 3, Mar. 1924, pp. 285-295 and (discussion) 295-301, 4 figs. Shows variations which are normally obtained by various methods of measuring carburized case depths, using five standard steels under two different lengths of time, handled according to good hardening shop practice; shows necessity for more accurate specifications as regards case depth.

Charcoal for. The Influence of Barium Carbonate upon Wood Charcoal Used for Cementation, B. F. Shepherd. Am. Soc. Steel Treating-Trans., vol. 6, no. 5, Nov. 1924, pp. 606-614, 17 figs. Illustrates effect of barium carbonate in intensifying carburizing properties of wood charcoal; also shows that quantity of barium carbonate which produces best results is not mixture which has been standard since 1861; chrome-vanadium steel is shown to absorb carbon much more readily than simple carbon steel and to produce hypereutectoid zone of such depth and carbon concentration as to be extremely harmful.

Copper Coating in. Prevention of Case-Hardening by Copper Plating, J. C. McCullough and O. M. Reiff. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 611-613, 4 figs. Selective case-hardening by carbon-pack method may be secured by protecting desired parts with copper plating; method can always be relied upon when copper plating is perfect.

Role of Copper in Case Carburizing, O. A. Knight and E. A. Thomas. Forging—Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 17-19, 1 fig. Experimental investigation indicates that action of copper in preventing carburization at operating temperatures is physical rather than catalytic.

Fatigue Resistance and. Case-Hardening and Fatigue Resistance, John Miller. Iron Age, vol. 113, no. 18, May 1, 1924, pp. 1269-1271, 1 fig. Small parts on treatment found superior to alloy steels for automobiles; comparative tests on various steels confirmed by actual results.

Gases Evolved During. Gases Evolved During Carburization, V. E. Hillman. Iron Age, vol. 114, no. 11, Sept. 11, 1924, pp. 611-614, 8 figs. Chemical study of behavior of five solid commercial compounds. Theory of process.

Liquid Baths. A Few Notes on the Shimer Case Hardening Process, B. F. Shepherd. Am. Soc. Steel Treating-Trans., vol. 5, no. 5, May 1924, pp. 485-489 and (discussion) 489-490, 9 figs. Notes on liquid case carburizing of certain steels; curves and photomicrographs showing depths of penetration and structures obtained on S.A.E. 6120 and S.A.E. 1112 steels.

Locomotive Parts. The Case-Hardening of Locomotive Components. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 337-338, 1 fig. Deals with alternative steels and case-hardening factors.

Selective. See Copper Coating in.

Steel. Case Hardening Without Warping of Special Steels by Nitrating (Verziehungsfreie Oberflächenhärtung von Sonderstahl durch Nitrieren), Ad. Fry. Kruppsche Monatshefte, vol. 5, Dec. 1924, pp. 266-269, 12 figs. Discusses hardening with nitrogen in place of carbon, which can be done at lower temperature and without subsequent quenching, and is cheaper; numerous examples of application.

The Case-Hardening of Steel, R. N. Richardson. Eng. Production, vol. 7, no. 142, July 1924, pp. 214-215. Discusses heat treatment of case-hardened steel, methods for preventing carburizing of parts, case-hardening compounds, and causes of failure of case-hardened parts.

The Case-Hardening of Steel by Boron and Nitrogen, T. P. Campbell and H. Fay. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 719-723, 5 figs. Experiments on low-carbon steels show that boron penetrates like carbon, but boron steels are less hard; and that nitrogen is more readily absorbed by boron steel than by carbon steel.

CASKS

Washing, Machine for. Cask-Washing Machines. Engineering, vol. 117, no. 3038, Mar. 21, 1924, pp. 367-368, 9 figs. partly on p. 370 and supp. plate. Describes machine for washing casks and process, which is conducted with steam and hot water or liquor, which is introduced to cask through bung-hole.

CAST IRON

Annealing. Tying Gray or White Cast Iron in Knots, B. Stoughton. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 15-21, 16 figs. Radical transformation effected by new but simple heat treatment; machinability a feature of Schaap heat-treating process.

Carbon Control. States Carbon Control Theory, A. C. Porter. Foundry, vol. 52, no. 5, Mar. 1, 1924, pp. 194-195. Sulphur to manganese ratio said to exert regulating influence on amount of carbon in gray cast iron and on ratio of combined to graphitic carbon.

Castings. See IRON CASTINGS.

Chemical Composition, Influence of. Influence of Chemical Composition on Cast Iron. Metal Industry (Lond.), vol. 24, nos. 14, 15, 16, 17, 18, and 19, Apr. 4, 11, 18, 25, May 2 and 9, 1924, pp. 331-333, 355-356, 379-380, 403-405, 431-432, and 455-457, 3 figs. Influence of silicon, sulphur, phosphorus, and manganese; carbon forms and changes under the various conditions of chemical composition and temperature influences.

Chill, Effect on. The Effect of Chill on Cast Iron, E. J. Lowry. Metal Industry (Lond.), vol. 25, no. 19, Nov. 7, 1924, pp. 455-456, 1 fig. Migration effects on cooling resulting in variations of chemical composition through casting; general conclusions and practical significance. (Abstract.) Paper read before Am. Foundrymen's Assn.

Composition and Structure, A.S.T.M. Bar. Notes on Composition and Structure of A.S.T.M. Bar, J. W. Bolton. Foundry Trade Jl., vol. 30, no. 427, Oct. 23, 1924, pp. 349-354, 18 figs. Shows effects of variation in composition and structure on properties of standard bar.

Contraction and Piping. Relation between Contraction and Piping in Cast Iron and the Composition of the Charge, O. Bauer and K. Sipp. Metal Industry (Lond.), vol. 24, no. 4, Jan. 24, 1924, pp. 85-86, 7 figs. Experiments to ascertain relation between contraction and piping in cast iron, and composition of charge, carried out at request of technical committee of German Foundry Assn. Translated from Stahl u. Eisen.

Cooling Effects in. Some Cooling Effects in Cast Iron and Their Correction, R. T. Rolfe. Metal Industry (Lond.), vol. 24, nos. 21, 22 and 23, May 23, 30 and June 6, 1924, pp. 501-502, 525-526 and 551-552, 2 figs. General causes

giving rise to internal stresses in castings and methods of relieving them. Particulars of a series of tests carried out into annealing temperatures. Typical cases in which annealing is resorted to.

Corrosion by Sea Water. See CORROSION, Iron and Steel.

Decomposition by Acid. Acid Decomposes Cast Iron. Foundry, vol. 52, no. 5, Mar. 15, 1924 pp. 231-232, 3 figs. Chemical and physical peculiarities noted in casting which has been subjected to corrosive influence of dilute sulphuric solution covering long period.

Diagram. Cast-Iron Diagram (Ueber ein Gusseisendiagram), E. Maurer. Giesserei-Zeitung, vol. 21, no. 21, Nov. 1, 1924, pp. 457-463, 20 figs. Explains diagram by means of which a cast iron can be produced which is least dependent on cooling conditions, shows pearlitic base in microstructure and has excellent tensile strength.

On a Cast-Iron Diagram (Ueber ein Gusseisen diagram), E. Maurer. Kruppsche Monatshefte, vol. 5, July 1924, pp. 115-122, 20 figs. Discusses formulation of a diagram giving the various structural details of cost iron on lines of Guillet's diagram for special steels, and produces a cast iron largely independent of cooling conditions.

Dilatometric Analysis. Dilatometric Analysis of Alloys, with Special Reference to Cast Iron, P. Chevenard. Foundry Trade Jl., vol. 29, no. 411, July 3, 1924, pp. 3-10, 29 figs. Principles underlying physical analysis; advantages shown by dilatometric method, a method based upon observation of phenomenon of dilation; details of apparatus. Dilatometric properties of constituents of cast iron, directional changes and mutual reactions. Gives dilation diagrams.

Electric-Furnace Manufacture. Electric Furnace Iron Cheap, L. J. Barton. Foundry, vol. 52, no. 2, Jan. 15, 1924, pp. 71-72. Saving effected by use of an all-scrap charge renders electric melting costs lower than for cupola in localities where coke prices are extremely high.

See also Synthetic.

Filtration. The Filtration of Cast Iron, C. Brunelli. Foundry Trade Jl., vol. 30, no. 424, Oct. 2, 1924, pp. 283-286. Describes author's process and discusses principal defects in castings and their causes; impurities in raw materials; action of filter grates; large and small risers; influence of atmospheric air; distribution of useful heat; origin of blowholes. See also editorial, p. 279. Translated from Italian.

Formulas. Cast Iron Formulæ. Metal Industry (Lond.), vol. 25, no. 2, July 11, 1924, pp. 35-37, 3 figs. Use of formulas which purport to give relative proportions of the various constituents, particularly silicon-carbon relations. Criticizes specific formulas which have been proposed. Tenor of author's conclusions seems to be that all such formulas are more dangerous than useful.

Gas and Oxygen Determination in. Gas and Oxygen Determinations in Iron, Especially Cast Iron (Ueber Gas- und Sauerstoffbestimmungen im Eisen, insbesondere Gusseisen), P. Oberhoffer, E. Piwowarsky, A. Pfeifer-Schiessl and H. Stein. Stahl u. Eisen, vol. 44, no. 5, Jan. 31, 1924, pp. 113-116, 5 figs. Oxygen contents in low-carbon steel and cast iron; determination of oxygen from gas contents through hot extraction in vacuum; influence of oxygen contents on properties of cast iron.

Graphitic Softening. The Graphitic Softening of Cast Iron, J. W. Shipley and I. R. McHaffie. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 573-575, 6 figs. Graphitic softening is produced by retention within residual structure of cementite-phosphide eutectic and graphite of some of products of corrosion; wrought iron, steel, and some cast irons corrode out of face and hole, owing to absence of supporting non-corrodible framework.

Graphitization. Properties of Cast Iron, E. Touceda. See also Iron Trade Rev., vol. 74, no. 19, May 8, 1924, pp. 1244-1246, 1 fig. Foundry, vol. 52, no. 9, May 1, 1924, pp. 345-347, 1 fig. Manner and conditions under which graphitization takes place in cast iron has profound influence upon chemical and physical properties of metal; describes special metal made by Ross-Meehan Foundries, Chattanooga, Tenn., called mechanite metal.

The Formation of Graphite in Cast Iron, L. Northcott. Foundry Trade Jl., vol. 29, nos. 409 and 410, June 19 and 26, 1924, pp. 515-521 and (discussion) 548-550, 37 figs. Describes work undertaken in order to examine process of formation of graphite in commercial cast irons. Effect of annealing white cast iron at different temperatures and under such conditions as to produce tempercarbon or nodular graphite. Observations regarding precipitation of carbon. Experiments on a typical gray cast iron of good quality to determine mechanism of formation of flaky or primary graphite as commonly found in gray irons.

The Graphitisation of White Cast Iron, A. Yates, W. J. Diederichs and H. E. Flanders. Metal Industry (Lond.), vol. 25, no. 20, Nov. 14, 1924, pp. 479-480. Mechanism of graphitization; essentials for complete graphitization; shortened treatment adopted; production of intermediate products; commercial considerations of new treatment. (Abstract.) Paper read before Am. Foundrymen's Assn.

Gray, Growth of. Studies Growth of Gray Iron, T. E. Hull. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 253-254. Experimental work of Moissan with graphite reviewed and theory for growth of cast iron under repeated heating and cooling is evolved; graphite in iron absorbs gases.

Gray-Iron Alloys. The Analysis of Grey Iron Foundry Alloys. Serial article in Foundry Trade Jl., vol. 30, beginning July 31, and ending Oct. 2, 1924. Methods for analysis of pig-iron, cast iron (castings), ferrosilicon, spiegel, silico-spiegel, and ferro-manganese, which are, in author's opinion, most applicable to gray iron foundry practice.

Gray, Liquid Contraction in. The Problem of the Liquid Contraction in Grey Cast Iron, R. Buchanan. Foundry Trade Jl., vol. 29, no. 411, July 3, 1924, pp. 11-12. Review of subject.

Gray, Structure of. Study Structure of Gray Iron, J. W. Bolton. Foundry, vol. 52, no. 16, Aug. 15, 1924, pp. 628-634, 24 figs. Also Iron Trade Rev., vol. 75, no. 9, Aug. 28, 1924, pp. 544-550, 25 figs.; and Iron Age, vol. 114, no. 12, Sept. 18, 1924, pp. 685-689, 23 figs. Discusses macroscopic and low-power magnification methods which reveal general structure of gray iron and semi-steel; microphotography is considered.

Heat Treatment of. Heat Treatment of Gray Cast Iron, J. W. Bolton. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 820-822, 6 figs. Relieving stresses or softening by annealing, and effect of quenching and drawing.

Some Experiments on Cast Iron, J. W. Donaldson. West of Scotland Iron & Steel Inst.-Jl., vol. 31, part 4, Jan. 1924, pp. 54-57 and (discussion) 58-62, 1 fig. Experiments carried out with view to determining what effect low-temperature heat treatment had on good cylinder iron and on irons of similar composition containing small additions of various elements.

High-Temperature Growth. High-Temperature Growth of Special Cast Irons, J. H. Andrew and H. Hyman. Iron & Steel Inst.—Advance paper no. 2, for meeting May 1924, 10 pp., 11 figs. Investigation to ascertain whether presence of

silicon is necessary factor for growth; exactly what happens to graphite at end of 50 heats; and whether growth can be mitigated or retarded by presence of certain special elements, especially carbide-forming elements, such as chromium and vanadium in small quantities.

High-Tensile. High Tensile Cast Iron, A. Marks. Foundry Trade Jl., vol. 30, no. 436, Dec. 25, 1924, pp. 545-547, 2 figs. Methods of improving tensile strength of cast iron; influence of section; improving matrix; production of pearlitic cast iron.

Improvement by Nickel Introduction. Improving Cast Iron by Introduction of Nickel, P. D. Merica. Can. Foundryman, vol. 15, no. 8, Aug. 1924, pp. 14-15 and 21, 3 figs. Nickel improves machinability of castings, particularly of thin section; increases hardness, produces finer grain and increases resistance to oxidation and corrosion. Bibliography.

Iron-Carbon Eutectoid. Structural Evidence of an Iron-Carbon Eutectoid, A. Hayes and H. E. Flanders. Am. Soc. Steel Treating-Trans., vol. 6, no. 5, Nov. 1924, pp. 623-629, 10 figs. Results of experimental work indicating that carbon existing in solid solution when lower critical range is traversed very slowly is distributed in form of small rounded specks throughout the ferrite; this is considered structural evidence of eutectoid action; gives mechanism for formation of ferrite shell about primary carbon spots, in partially graphitized white iron.

Magnetic Analysis. See MAGNETIC ANALYSIS.

Manufacture. The History of the Manufacture of Cast Iron, T. Makemson. Foundry Trade Jl., vol. 29, no. 392, Feb. 21, 1924, pp. 153-157. Ancient iron workers; ironmaking in Middle Ages, discovery and early uses of cast iron; early use of coke; evolution of blast furnace and foundry; etc.

The Influence of Composition and Rate of Cooling upon the Microstructure and Physical Properties of Cast Iron, H. H. Beeny. Foundry Trade Jl., vol. 29, nos. 401 and 402, Apr. 24 and May 1, 1924, pp. 333-340 and (discussion) 365-366, 24 figs. Deals with constitution and physical properties of iron-carbon alloys as a whole, commencing with pure iron, passing through steels, and ending finally with white cast iron; microstructure of each broad type illustrated. Iron-carbide system and influence of silicon and other elements, and rates of cooling upon this system.

Manganese, Influence of. The Influence of Manganese on Cast Iron, J. E. Hurst. Foundry Trade Jl., vol. 30, no. 430, Nov. 13, 1924, pp. 417-419, 1 fig. Condition of manganese in iron-carbon alloys; influence of manganese in iron-carbon-silicon alloys; hardness and shrinkage; soundness and fluidity.

Manganese and Phosphorus in. Manganese and Phosphorus in Iron and Bronze. Can. Foundryman, vol. 15, no. 5, May 1924, pp. 18-19. Describes the substances and explains their characteristics and effects on other metals.

Melting and Casting. The Melting and Casting of High-duty Irons, F. Hudson. Foundry Trade Jl., vol. 30, no. 434, Dec. 11, 1924, pp. 495-501, 14 figs. By high-duty irons is meant that material used for manufacture of castings which have to withstand both pressure and friction, as in locomotive cylinders; melting in cupola; cupola reactions; carbonizing of metal during descent in cupola; superheating cast iron; conditions for carburization; methods in casting; pouring temperature.

See also ELECTRIC FURNACES, Iron Melting.

Nickel Additions. . Cast Iron Alloyed with Nickel, P. D. Merica. Foundry, vol. 52, no. 4, Feb. 15, 1924, pp. 131-133. See also Iron Trade Rev., vol. 74, no. 8, Feb. 21, 1924, pp. 555-556. Studies of results obtained by additions of nickel in varying percentages; hardness increased and grain structure made more dense.

Nickel Determination in. Analysis of Grey Iron Foundry Alloys. Foundry Trade Jl., vol. 30, no. 432, Nov. 27, 1924, p. 464. Determination of nickel in cast iron; solutions required; estimation.

Non-Magnetic. Non-Magnetic Cast Iron, S. E. Dawson. Foundry Trade Jl., vol. 29, no. 406, May 29, 1924, pp. 439-444, 10 figs. Effect and distribution of constituents; phosphide eutectic; position-of-eutectic experiments; disposition of silicide of iron.

Oxy-Acetylene Cutting. See OXY-ACETYLENE CUTTING, Cast Iron.

Pearlitic. Is the Lanz Method Essential to the Production of Pearlitic Cast Iron? Foundry Trade Jl., vol. 30, no. 417, Aug. 14, 1924, pp. 143-144. Discussion of an article by K. Emmel in Stahl u. Eisen, in which writer asks whether it is indispensable that this particular method should be used in order to get a pearlitic structure in cast iron.

Lauds Pearlitic Cast Iron, C. Irresberger. Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 941-943, 10 figs. Ascribes desirable properties to iron cast under close control as regards analysis and cooling rate; structural differences noted.

Notes on Pearlitic Cast Iron, J. E. Hurst. Foundry Trade Jl., vol. 30, no. 426, Oct. 16, 1924, pp. 327-332, 5 figs. and (discussion) vol. 30, no. 429, Nov. 6, 1924, pp. 400-403. Refers to Professor Bauer's definitions of pearlitic cast iron, and discusses ductility, chemical composition; formation of pearlite; border-line compositions; grain size, and rate of cooling.

Pearlitic Cast Iron. Metal Industry (Lond.), vol. 24, no. 20, May 16, 1924, pp. 477-478. Comments on recent work, including process of Diefenthaler and Sipp, iron-carbon conditions, mechanism of change on slow cooling, etc.

Pearlitic Cast Iron (Perlitguss), K. Emmel. Stahl u. Eisen, vol. 44, no. 13, Mar. 27, 1924, pp. 330-333, 11 figs. Also (abstract) Mech. Eng., vol. 46, no. 6, June 1924, pp. 352-353. Analysis of tests; structure of piston-ring castings; discussion based on article by O. Bauer in same journal (vol. 43, 1923, no. 17, p. 553).

Pearlitic Cast Iron and Its Applications (Perlitgusseisen und seine Anwendungsmöglichkeiten), K. Sipp. Giesserei-Zeitung, vol. 21, no. 17, Sept. 1, 1924, pp. 379-383 and (discussion) 383-385, 11 figs. Also (translation in abstract) Metal Industry (Lond.), vol. 25, no. 18, Oct. 24, 1924, p. 406. Nature and production; advantageous properties; uses.

The Manufacture of Pearlitic Cast Iron for High-Temperature Engines, A. Marks. Foundry Trade Jl., vol. 29, no. 404, May 15, 1924, pp. 406-408, 3 figs. Author's attempts to produce pearlitic cast iron in cupola with a view to obtaining strongest material possible for manufacture of castings for parts subjected to high temperature, such as internal-combustion-engine cylinders, covers and pistons.

Phosphorus, Influence of. The Influence of Phosphorus on Cast Iron, J. E. Hurst. Foundry Trade Jl., vol. 30, no. 431, Nov. 20, 1924, pp. 433-436, 10 figs. Deals with iron and phosphorus; iron, phosphorus and carbon; solidification of commercial phosphoric irons; influence of phosphorus on carbon, on melting point, and on strength properties; network structure; phosphide segregations.

Physical Changes. Physical Changes in Cast Iron due to (i) American Practice; (ii) Secondary Temperatures. Metal Industry (Lond.), vol. 24, no. 10, Mar. 7, 1924, pp. 227-228, 5 figs.

Discusses influence of casting into chill pig molds and water spraying, as in American blast-furnace practice, and influence of secondary or foundry temperatures, that is, remelting iron and subsequent casting.

Porosity. Porosity in Cast Iron, A. Marks. Foundry Trade Jl., vol. 30, no. 412, July 10, 1924, pp. 25-27, 8 figs. Also Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 61-62. Discusses graphite, shrinkage, gas, and dirt porosity, and concludes that there is no single cause or cure of porosity in castings. Each case has to be dealt with on first principles, and molding, feeding, chilling, and metal all attended to.

Segregation. Mixtures Closely Controlled. Foundry, vol. 52, no. 1, Jan. 1, 1924, pp. 26-28, 2 figs. Test block cast with two different thicknesses and afterward sawed through center longitudinally indicates segregation of iron under varying conditions.

Semi-Steel. See SEMI-STEEL.

Shrinkage. Shrinkage. Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 83-86, 3 figs. Discusses chief phenomena and causes of shrinkage in cast iron. Deals at some length with classic work of Keep.

The Influence of Various Elements on the Shrinkage of Cast Iron and Steel, I. Jaederstroem. Testing, vol. 1, no. 4, Apr. 1924, pp. 290-307, 16 figs. Shows influence on shrinkage exerted by carbon, silicon, manganese, phosphorus, sulphur, nickel and chromium, determined by varying percentage of one element at a time.

Solidification and Cooling, Chemical Equilibria During. Chemical Equilibria During Solidification and Cooling of White Cast Iron, H. A. Schwartz and Anna N. Hird. Am. Inst. Min. & Met. Engrs. —Trans., Advance paper no. 1356-S, July 1924, 4 pp. By analyzing cementite separated electrolytically from white cast iron of known composition and history, distribution of silicon between austenite and cementite during and after freezing has been followed. Results constitute a contribution to our knowledge of equilibria in ternary system iron-carbon-silicon. Information also obtained regarding distribution of manganese, silicon, and phosphorus, when only relatively small amounts of each are present.

Structure. Structure of High-Grade Cast Iron (Das Gefüge hochwertigen grauen Gusseisens), R. Kühnel and E. Nesemann. Stahl u. Eisen, vol. 44, no. 35, Aug. 28, 1924, pp. 1042-1044, 5 figs. Discusses microstructure consisting of pearlite, graphite, and phosphide eutectic; difficulty of distinguishing between this and pearlitic casting.

Sulphur, Elimination from. Sulphur in Cast Iron (Der Schwefel im Gusseisen). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 33, Aug. 17, 1924, pp. 241-242. Discusses drawbacks of presence of sulphur, recent increase in sulphur content and its causes, and means of reducing it.

Sulphur in Coke and Cast Iron and the Methods Proposed for its Elimination or Neutralisation, J. E. Fletcher. Foundry Trade Jl., vol. 30, no. 432, Nov. 27, 1924, pp. 462-463. Discusses ways and means of abstracting deleterious sulphur from coke and metal during its progress from charging stage to molds.

The Influence of Sulphur in Cast Iron, J. E. Hurst. Foundry Trade Jl., vol. 30, no. 428, Oct. 30, 1924, pp. 377-380, 3 figs. Sulphur in commercial cast irons in presence of sufficient manganese exists almost wholly as sulphide of manganese—MnS; in this form it is practically without influence on structure and properties of cast iron; in absence of sufficient manganese sulphur exists as iron sulphide which is soluble in liquid iron and which has tendency to prevent formation of graphite.

The Influence of Sulphur on Cast Iron (Der Einfluss des Schwefels auf das Gusseisen), C. Röber. Praktischer Maschinen-Konstrukteur, vol. 57, no. 1-2, Jan. 8, 1924, pp. 5-6. Means of reducing sulphur content in finished products; injurious effects of high sulphur content in finished castings; calorimetric determination of sulphur according to Eggertz method.

Synthetic, Electric-Furnace Manufacture of. Manufacture of Synthetic Foundry Iron in the Electric Iron in the Electric Furnace, C. E. Sims, C. W. Williams and B. M. Larsen. Foundry Trade Jl., vol. 30, no. 419, Aug. 28, 1924, pp. 183-185. Carburization difficulties; factors governing carburization; type of furnace and method of operation; costs; etc.

Tensile Strength. Strength of Cast Iron and Its Thickness, W. Rother. Iron Age, vol. 114, no. 6, Aug. 7, 1924, pp. 326-327, 5 figs. Investigation of relation between physical properties as affected by graphitic carbon; arbitration and experimental test bars.

Test Bars, Transverse. Transverse Test-Bars and Engineering Formulae, G. S. Bell and C. H. Adamson. Iron & Steel Inst.—Advance paper no. 4, for meeting. May 1924, 115 pp., 11 figs. Test results show that generally accepted engineering formulas for conversion of transverse test on one sized bar to that on another sized bar do not hold when applied to cast-iron test bars of different sizes; results of tensile and hardness tests.

Testing. Mechanical Tests of Cast Iron. Metal Industry (Lond.), vol. 25, nos. 13 and 14, Sept. 26 and Oct. 3, 1924, pp. 307-309 and 331-332. Consideration of the various classes of tests for determining "strength" properties of the metal.

Physical Tests for Cast Iron, J. Shaw. Foundry Trade Jl., vol. 29, nos. 396 and 397, Mar. 20 and 27, 1924, pp. 226-227 and 262-263, 2 figs. Discusses tests made; present-day specifications; new railway specifications; American conditions; comments on tensile testing; chemical analysis.

Titanium in. The Analysis of Grey Iron Foundry Alloys. Foundry Trade Jl., vol. 30, no. 434, Dec. 11, 1924, pp. 503-504, 1 fig. Titanium in cast iron; estimation of titanium.

Uranium Additions, Effects of. Notes Effects of Uranium on Cast Iron, H. S. Foote. Foundry, vol. 52, no. 3, Feb. 1, 1924, pp. 105-106. Results of tests made in foundries and laboratories of Carnegie Inst. Technology.

Welding. Describes Welding Process, A. H. Jansson. Foundry, vol. 52, no. 11, June 1, 1924, pp. 442-443, 5 figs. Methods used for welding gray or malleable iron castings at comparatively low temperatures said to eliminate excessive oxidation of metal; use of welding compound, discovered by M. A. Abele, Berlin, Germany, in form of dark gray powder, possessing oxidizing properties, but also having property of absorbing oxygen.

Expansion in Iron Castings, D. Richardson. Welding Engr., vol. 9, no. 2, Feb. 1924, pp. 19-20, 4 figs. How distribution of mass in casting determines correct procedure in preheating.

See also ELECTRIC WELDING, ARC, Cast Iron; OXY-ACETYLENE WELDING, Cast Iron, Bronze Welding of.

CASTING

Brass. Casting Brass Plates. Metal Industry (Lond.), vol. 24, no. 26, June 27, 1924, pp. 617-619, 4 figs. Outline of methods. Strictest attention to details, both in molding and melting, is essential for maximum output of commercial castings.

Centrifugal. Centrifugal Casting of Iron Piston Rings, J. A. Rathbone. West. Machy. Wld., vol. 15, no. 9, Sept. 1924, pp. 299-300, 3 figs. Uses of

cores; carbon precipitated as temper carbon on annealing; annealed metal proves excellent for pipe nipples; note on English practice.

Complex Centrifugal Castings, R. L. Binney and N. I. Terbille. Foundry, vol. 52, no. 9, May 1, 1924, pp. 340-343, 5 figs. Intricate hollow objects cast in permanent molds to afford basis of study; experiments were confined entirely to nonferrous field; multiple axes of rotation introduce new problems in making perfect castings.

Scientific Bases of Centrifugal Casting (Ueber die wissenschaftlichen Grundlagen des Schleudergusses), C. Pardun. Stahl u. Eisen, vol. 44, nos. 31, 35, and 40, July 31, Aug. 28, and Oct. 2, 1924, pp. 905-911, 1044-1048, and 1200-1208, 26 figs. Discusses nature and importance of centrifugal force and its application; development and types of centrifugal machines; suggests improvements in mechanical properties; results of tests of centrifugally cast pipes. See also (translation) in Foundry Trade Jl., vol. 30, nos. 424 and 433, Oct. 2 and Dec. 4, 1924, pp. 295-297 and 483-485, 5 figs.

Sheet Bars Cast Centrifugally, L. Cammen. Iron Age, vol. 113, no. 26, June 26, 1924, pp. 1857-1858, 5 figs. Structure of bars and steel rolled from them; physical properties of steel strip made from such bars; economic features.

The Present Status of Centrifugal Casting [Der gegenwärtige Stand des Schleuder- (Zentrifugal-) Gusses], C. Irresberger. Giesserei-Zeitung, vol. 21, no. 18, Sept. 15, 1924, pp. 397-402, 13 figs. Notes on origin; metallurgy; piston rings; horizontal and vertical axis; protection against hardening; annealing; Lavaud process; application for piston rings; production of pressure pipes.

See also PIPE, CAST-IRON, Centrifugally Cast.

Deoxidized Copper Billets. The Casting of Deoxidised Copper Billets, W. E. Ballard. Metal Industry (Lond.), vol. 24, no. 6, Feb. 8, 1924, pp. 121-122 and 124, 1 fig. Details best current practice; particular attention given to use of such billets for tubes, and particular precautions for such a purpose that must be taken in casting.

Lead Alloys. Casting Lead Alloys in Endless Strips. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 610-612, 2 figs. Method used by Hazelett Storage Battery Co., Cleveland, Ohio, in manufacture grids for storage batteries that is applicable in other fields of industry.

Melting and Molding Troubles. Casting Metals, W. J. Reardon. Metal Industry (N. Y.), vol. 22, nos. 1 and 2, Jan. and Feb. 1924, pp. 7-8 and 64, 10 figs. A series of questions and answers dealing with melting and molding troubles and their solutions.

Run-Outs. Run-Outs and Their Remedies, F. C. Edwards. Metal Industry (Lond.), vol. 25, no. 9, Aug. 29, 1924, pp. 203-204, 1 fig. Causes of run-outs, safeguards, and remedies.

CASTINGS

Aluminum. See ALUMINUM, Castings.

Automobile, Cleaning. Cleaning Automobile Castings, B. K. Price. Foundry, vol. 52, no. 9, May 1, 1924, pp. 355-357, 7 figs. Methods employed at Brunswick, N. J., plant of Int. Motors Co.; after tumbling and sand blasting, castings are sent to grinding department; plant makes aluminum crankcases.

Cleaning. Wire Brushes for Cleaning Castings. Mech Wld., vol. 76, no. 1970, Oct. 3, 1924, pp. 212-213. Describes new device which may be attached to any standard portable electric or pneumatic grinder.

Contraction Stress. Contraction Stress: Cause and Remedies, F. C. Edwards. Foundry Trade Jl., vol. 30, no. 435, Dec. 18, 1924, pp. 519-523, 11 figs. Contraction stress is said to be resultant of conflicting forces operating within castings and tending to cause fracture; these forces arise from shrinkage which takes place in castings while cooling; chief means of prevention lies in adopting sound principles of design.

Cooling, Importance of Uniform. The Importance of Uniform Cooling in Castings, F. C. Edwards. Metal Industry (Lond.), vol. 25, no. 22, Nov. 28, 1924, pp. 525-527, 5 figs. Gives two examples in which tensile stress was direct cause of fracture in one case, and shear stress in the other: in both cases stresses had been induced by uneven cooling.

Copper. See COPPER, Castings.

Defects, Causes of. Causes of Defects in Castings of Complex Design, Jas. McIntosh. Iron Age, vol. 114, no. 25, Dec. 18, 1924, pp. 1607-1608. Handling of mold at time of casting, looking to some control of heat treatment, regarded as help in solution of problem cites example of modern cylinder block in automobile engine.

Contraction and Shrinkage Defects in Castings, N. Deane. Metal Industry (Lond.), vol. 25, no. 6, Aug. 8, 1924, p. 134. Discusses main causes and cures of draws, cavities, and cracks in castings, due to cooling effects.

Efficient Design. Efficient Casting Design, F. C. Edwards. Engineering, vol. 117, no. 3040, Apr. 4, 1924, p. 423. Points out that to be really efficient, casting design should tend to reduce operation of molding to its simplest possible terms consistent with ultimate purpose of casting.

Iron. See IRON CASTINGS.

Light. Some Problems in Light Castings, J. C. Dorsie. Foundry Trade Jl., vol. 29, no. 399, Apr. 10, 1924, pp. 299-300, 4 figs. Designing covers for roadway manholes; warping of gutters; behavior of metal in molds.

Malleable. See MALLEABLE CASTINGS.

Pipe. Special Pipe Castings, A. J. Richman. Metal Industry (Lond.), vol. 24, no. 13, Mar. 28, 1924, pp. 307-308 and 310, 5 figs. Describes manufacture of a special pipe casting for a steam turbine and condenser plant. Feature is making of pattern rig and molding operations, illustrating general method of dealing with castings of this nature when only very few are required.

Production. Producing High Test Castings. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 681-683, 5 figs. Exacting methods employed in producing special lines of castings to comply with rigid specifications. Care exercised in mixtures used, and pouring temperatures.

Some Necessary Adjustments Between the Foundry and Drawing Office, E. Ronceray. Foundry Trade Jl., vol. 29, no. 393, Feb. 28, 1924, pp. 180-183 and (discussion) 183-184, 11 figs. Discusses points for common interest of both foundryman and engineer; requirements of engineer, internal strains in castings, real object of making castings without feeding heads, defects, strength of cast iron, etc.

Production Cost Finding. Finding Actual Cost of Castings, G. B. Cocker. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 421-422. See also Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 665-666. System devised by southern foundry for determining selling price. Two factors used, namely, actual time required to produce castings and amount of metal needed to pour them.

Production Increase. A Shop Laboratory that Improves the Product, C. O. Herb. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 1-3, 6 figs. How metallurgical laboratory at Niles Tool Works, Hamilton, Ohio, has helped to produce better castings.

Scabbing. Scabbing, F. C. Edwards. Metal Industry (Lond.), vol. 25, no. 19, Nov. 7, 1924,

pp. 453-455, 7 figs. Scabbing is said to be entirely due to fault of molder; main causes of scabbing and means of prevention.

Semi-Steel. See SEMI-STEEL, Castings.

Shrinkage. See MACHINE DESIGN, Casting Shrinkage, Effect on.

Steel. See STEEL CASTINGS.

Structural Weaknesses, Elimination of. The Elimination of Structural Weaknesses in Castings, O. Smalley. Foundry Trade Jl., vol. 29, no. 385, Jan. 3, 1924, pp. 5-11, 15 figs. Deals with structural weaknesses in relation to nature of crystallization of alloy on solidification and design of casting.

Structure of. Surface Structure Versus Inner Structure of Metals, V. N. Krivobok and O. E. Romig. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 66-76, 11 figs. Discusses structures which appear on surface of cast metals and their relation to inner crystalline organization of metal; variety of surface structures and danger of erroneous conclusions based on them solely.

X-Ray Examination. Hunting Ills with the X-ray, V. E. Hillman. Foundry, vol. 52, no. 6, Mar. 15, 1924, pp. 213-216, 13 figs. Also Iron Trade Rev., vol. 74, no. 17, Apr. 24, 1924, pp. 1103-1106, 13 figs. Diagnosis of castings defects made possible by new application of Roentgen rays; position and character of cavities indicate remedies to adopt in each case.

X-Rays in the Foundry, A. St. John. Foundry Trade Jl., vol. 30, no. 432, Nov. 27, 1924, pp. 460-461, 1 fig. Description of what X-rays are, how they are used for examining castings, and what they disclose, together with consideration of circumstances under which their use is justified. (Abstract.) Paper read before Am. Foundrymen Assn.

CATALYSIS

Copper. The Catalytic Action of Copper. Part IV—The Periodic Variation of the Activity with Temperature of Reduction, W. G. Palmer and F. H. Constable. Roy. Soc.—Proc., vol. 106, no. A-737, Sept. 1, 1924, pp. 250-268, 8 figs. Studies effect of temperature of reduction on activity of copper film catalyst produced by reduction from oxide, and on temperature coefficient of catalytic reaction occurring on its surface.

Heterogeneous. Heterogeneous Catalysis, A. S. Richardson, C. A. Knuth and C. H. Milligan. Indus. & Eng. Chem., vol. 16, no. 5, May 1924, pp. 519-522, 1 fig. Selective action of catalytic nickel in hydrogenation of certain vegetable oils.

Industrial Application of. Present Processes of Catalysis and Their Industrial Application (Les procédés actuels de catalyse et leurs applications industrielles), J. B. Senderens. Technique Moderne, vol. 16, no. 13, July 1, 1924, pp. 437-443. Discusses mechanism of catalysis and catalysis applied in hydrogenation, dehydrogenation, oxidation, hydration, and dehydration.

CATALYSTS

Ammonia-Forming. New Catalyst Developed by United States Chemists, C. E. Williams. Mfrs. Rec., vol. 85, no. 12, Mar. 20, 1924, pp. 69-70, 2 figs. Details of a catalytic substance that brings about fastest known reactions between hydrogen gas and nitrogen gas to form liquid ammonia, developed by Fixed Nitrogen Research Laboratory of U. S. Dept. Agriculture; invaluable in national defense and in manufacture of fertilizers.

Oil-Cracking. Ferrous Selenide as a Contact Catalyst for Cracking, Thos. Midgley, Jr., and C. A. Hochwalt. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 365-366. Preparation of ferrous selenide; method of conducting cracking tests; examination of various oils; results.

CAUSEWAYS

South Carolina. Four-Mile Causeway Carries State Road Over Swamp, J. Pinnell and J. L. Parker. Eng. News-Rec., vol. 93, no. 2, July 10, 1924, pp. 48-51, 5 figs. A causeway, alternately of embankment and concrete trestle, takes road in South Carolina 4½ miles over Santee River. Railway methods and equipment used in construction. Flood conditions add year to construction time.

CEILINGS

Concrete. Steel or Wood Small-Beam Ceiling with Reinforced-Concrete Hourdis Ceiling (Planchers à poutrelles en acier ou en bois avec hourdis en béton armé), F. Chaudy. Génie Civil, vol. 85, no. 4, July 26, 1924, pp. 89-91, 9 figs. Calculation of stresses, etc.

CELITE

Development and Uses. Research Gives Value to Hitherto Little Known Rock Product. Rock Products, vol. 27, no. 6, Mar. 22, 1924, pp. 23-27, 7 figs. Development of new product known as "celite," by Celite Products Co., Lompoc, Cal.; a diatomaceous earth composed almost entirely of silica, having an amorphous structure; its uses.

CELLULOID

Manufacture from Wood Cellulose Nitrate. Wood Cellulose Nitrate as the Material for Celluloid, K. Atsuki. Tokyo Imperial Univ.—Jl. of Faculty of Eng., vol. 15, no. 5, Nov. 1924, pp. 117-192. Reviews briefly most important researches published, and gives results of experiments carried out on use of wood cellulose for manufacture of celluloid.

Stability. The Stability of Celluloid, K. Atsuki. Tokyo Imperial Univ.—Jl. of Faculty of Eng., vol. 16, no. 3, Dec. 1924, pp. 19-46, 1 fig. Results of experiments on effect of heat upon ignition point of celluloid, and ignition time of celluloid; analysis of celluloid, and properties of celluloid used in this research; examples of celluloid fire, and course of spontaneous decomposition of celluloid.

CELLULOSE

Analysis. New Method for Determining α, β, γ Cellulose (Un nuovo metodo per la determinazione delle α, β, γ cellulose). Industria, vol. 38, no. 18, Sept. 30, 1924, pp. 508-509. Gravimetric and volumetric methods; method of determining α-cellulose, $\beta+\gamma$ cellulose, γ cellulose, and by difference, β-cellulose, and gives examples of analyses.

Chlorination. Chlorination of Cellulose (Chloruration de la cellulose), A. dePerdiguier and U. Pomilio. Chimie & Industrie, vol. 11, no. 6, June 1924, pp. 1086-1092, 5 figs. Discusses processes of chlorination, including those of Cataldi, Vains, Pomilio; answering Pomilio's article and reply by Pomilio.

Colloid Chemistry. Colloid Chemistry of Cellulose (Beiträge zur Kolloidchemie der Zellulose), H. Wislicenus and W. Gierisch. Kolloid-Zeit., vol. 34, no. 3, Mar. 1924, pp. 169-181, 4 figs. on supp. plate. Purified cellulose (filter paper) was disintegrated by long-continued milling in dry state in closed porcelain ball mill and in Dreefs steel plate mill; microscopical examination showed that meal obtained has lost all traces of fibrous structure and was in form of minute irregular particles which, especially when moistened, tended to collect into spherical aggregates.

Constitution. The Constitution of Cellulose, A. W. Schorger. Indus & Eng. Chem., vol. 16, no.

12, Dec. 1924, pp. 1274-1275. Discusses older formulas and presents new one.

Determination in Wood. See WOOD, Cellulose Determination.

Formation of Hydrocellulose. Formation of Hydrocellulose (Sur la formation de l'hydrocellulose), H. Gault and B. C. Mukerji. Académie des Sciences—Comptes Rendus, vol. 179, no. 7, Aug. 18, 1924, pp. 402-405, 2 figs. Study of formation of hydrocellulose by action of dilute sulphuric acid on cellulose, increase in copper number being proportional to degradation of cellulose; formation is directly proportional to strength of acid, time and temperature of immersion, and temperature of drying.

Manufacture. Heat Problems in Cellulose Manufacture (Wärmeprobleme in der Zellulose-Fabrikation). Archiv für Wärmewirtschaft, vol. 5, no. 6, June 1924, pp. 111-114, 2 figs. Discusses sulphite and sulphate processes, fuel consumption, steam production and consumption, and heat balances.

More About the De Vains Process, J. Strachan. Paper, vol. 33, no. 17, Feb. 14, 1924, pp. 12-13. Further data about process for manufacture of bleached cellulose.

Polymerization of Molecule. The Polymerization of the Cellulose Molecule (La polymérisation de la molécule cellulosique), P. Bary. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1159-1161. Deals with two different types of reaction undergone by cellulose, involving (1) no depolymerization, and product with colloidal properties similar to those of cellulose, or (2) depolymerization, with product which is less colloidal in its nature than cellulose.

Preparation. Notes on the Preparation of Standard Cellulose, A. B. Corey and H. Le B. Gray. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 853-854. Suggests method for consideration and criticism.

Wood and Cotton. Wood Cellulose. (Zur Kenntnis der Holzcellulose), E. Heuser and S. S. Aiyar. Zeit. für angewandte Chemie, vol. 37, no. 3, Jan. 17, 1924, pp. 27-28. Hypothesis of identity of cellulose obtained from different sources is supported by experiments with cotton cellulose and wood cellulose.

X-Ray Spectrum. X-Ray Spectrum of Cellulose (Röntgenspektrographische Beobachtungen an Cellulose), H. W. Gonell. Zeit. für Physik, vol. 25, no. 2, July 2, 1924, pp. 118-120, 3 figs. It is concluded from structure of individual points in X-ray diffraction patterns of various samples of cellulose that this substance must contain more than one crystalline constituent.

CEMENT

Acceptance Tests. Protection Against Acceptance of Inferior Cements (Selbstschutz gegen Belieferung mit minderwertigen Zementen), O. Colberg. Bautechnik, vol. 2, no. 25, June 13, 1924, pp. 252-255, 1 fig. Discusses sampling on delivery of cement, sand, gravel and broken stone used in concrete work; making of cake sample for quick test, setting test, etc.

Alumina. Aluminous Cement in Practice, T. J. Gueritte. Surveyor & Mun. & County Engr., vol. 65, no. 1685, May 2, 1924, pp. 425-426. See also Contract Rec., vol. 38, no. 49, Dec. 3, 1924, pp. 1197-1198. Deals with practical applications, including practical precautions, effect of temperature, shrinkage, and action of chemicals

Aluminous Cement (''Cement Fondu''), Pure or Mixed (Sand Cement), A. Paris. Concrete, vol. 25, no. 2, Aug. 1924, pp. 69-71. Deals with use in connection with two jobs, one on mountainous ground and other on marsh ground, namely; (1) repairs to Magnacun Tunnel, Rhaetic Railways system, Les Grisons, and (2) construction in reinforced concrete for floor and pile-work, at Villeneuve Gasometer, for Société du Gaz de la Plaine du Rhone, Vevey-Leysin. From paper presented at Int. Cement Congress, Lond., and reprinted from Structural Engr.

Ciment Fondu, G. F. F. Eagar and J. Watson. Colliery Engr., vol. 1, no. 6, Aug. 1924, pp. 259-261, 2 figs. Discusses new kind of cement, giving some account of its qualities and conduct under test.

Ciment Fondu and Mixtures of Ciment Fondu and Portland Cement, W. N. Thomas. Roy. Inst. British Architects—Jl., vol. 31, no. 20, Oct. 18, 1924, pp. 670-675, 11 figs. Results of experiments carried out at Engineering Laboratory, Oxford, England, on influence of water content and temperature upon tensile and compressive strength of alumina cement, and of temperature upon times of initial and final setting; and on setting times, tensile and compression strengths, and soundness of various mixtures of alumina cement and portland cement.

Effect of Quantity of Mixing Water on Heating of Aluminous Cement During Setting (L'Influence de la quantité d'eau de gachage sur l'échauffement, pendant la prise des ciments alumineux), J. Bertet. Génie Civil, vol. 84, no. 23, June 7, 1924, pp. 542-544, 6 figs. See also Concrete, vol. 25, no. 3, Sept. 1924, pp. 92-95, 4 figs. Studies of exothermic reactions accompanying setting of cement.

Fused Alumina Cement, E. C. Blanc. Rock Products, vol. 27, no. 17, Aug. 23, 1924, pp. 37-41, 2 figs. Review of European progress. Bibliography.

German Research on High Alumina Cements, C. R. Platzmann. Rock Products, vol. 27, no. 19, Sept. 20, 1924, pp. 23-25, 3 figs. Gives thoroughgoing study of range of lime-alumina combinations.

The Action of Frost on Ciment Fondu. Engineering, vol. 117, no. 3039, Mar. 28, 1924, p. 393. Results of tests show that elevation of temperature from normal, which is taken as 64 up to 86 deg. fahr., tends to retard actual setting time of ciment fondu.

Burning. Cement Burning, R. K. Meade. Concrete, vol. 25, no. 2, Aug. 1924, pp. 20-23 (Cement Mill Sec.), 1 fig. What takes place in a rotary kiln and what is sought to be accomplished in this. Discussion of the various factors which enter into burning of cement. See also discussion by C. O. Sandstrom in Concrete (Cement Mill Section), vol. 25, no. 5, Nov. 1924, pp. 85-87.

Calcium Sulphate. Calcium Sulphate Cement, C. L. Haddon. Chem. & Industry, vol. 43, no. 3, Jan. 18, 1924, pp. 11T-16T, 1 fig. Objects of research were: (1) To determine number of allotropic modifications of anhydrous calcium sulphate; (2) to explain differences in setting properties from different sources; (3) to examine acceleration of setting by other sulphates; and (4) to investigate nature of intercrystalline adhesion from evidence obtainable from calcium sulphate cement.

Ciment Fondu. See Alumina.

Electric. Properties of Electric Cement and Its Use in the Production of Metallurgical Cement (Ueber die Eigenschaften von Elektrozement und seine Verwendbarkeit zur Herstellung von Hüttenzementen), A. Guttmann. Stahl u. Eisen, vol. 44, nos. 27 and 28, July 3 and 10, 1924, pp. 786-792 and 815-819, 7 figs. Discusses production of portland cement from liquid blast-furnace slag by enriching with lime; economic production of electric cement; analytic, microscopic, and mechanic examination; production of iron portland cement and blast furnace cement from electric cement.

Furnace. Facts You Should Know About Asbestos Furnace Cement, W. P. Werner. Sheet Metal Worker, vol. 15, nos. 8 and 9, May 9 and 23, 1924, pp. 286-288 and 316-318, 9 figs. History of its development; its ingredients; how to abuse it and spoil an otherwise good furnace job; how to use it properly.

High-Grade. Cements of Higher Grade (Höherwertige Zemente), O. Graf. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 33, Aug. 16, 1924, pp. 853-856, 3 figs. Discusses properties of tensile strength in German and other cements, cements of high tensile strength after short period of setting, most important properties of cements, etc.

High-Temperature. See REFRACTORIES, Cements.

Hydraulic. French Specification for Hydraulic Limes and Cement. Eng. Wld., vol. 25, no. 6, Dec. 1924, pp. 376-379, 2 figs. Specification covering test methods, conditions of acceptance, classification of quality, classification according to nature of product, recommendation for requirements of quality, and conditions of delivery. Translated from French.

Hydraulic Cements by Additions of Certain Minerals to Lime, C. R. Platzmann. Rock Products, vol. 27, no. 10, May 17, 1924, pp. 37-38. German experiments and research during last few years.

Magnesium-Oxychloride. Magnesium Oxychloride Cement, J. H. Paterson. Chem. & Industry, vol. 43, no. 9, Feb. 29, 1924, pp. 215-218, 1 fig. Important features and applications; mechanism of setting and factors which control it.

Plastic Magnesia Cements, A. P. Sachs. Asbestos, vol. 5, no. 12, June 1924, pp. 5-12. Describes new cement known as Sorel's oxychloride cement, having very great strength and very high bending power. Chemical nature has not been established with certainty but is believed to be hydrated basic magnesium oxychlorid. 3 Mg O Mg Cl_2. 10 H_2 O.

What is Good Magnesium Oxychloride Cement? H. L. Olin and B. H. Peterson. Chem. & Met. Eng., vol. 31, no. 7, Aug. 18, 1924, pp. 266-267. Effects of adding free lime and calcium carbonate studied and causes of weakening of cement in case of former investigated.

Manufacture. See CEMENT MANUFACTURE.

Mills. See CEMENT MILLS.

Portland. See CEMENT, PORTLAND.

Rapid-Setting. A New Cement (Un nouveau ciment). Revue des Matériaux de Construction & de Travaux Publics, no. 172, Jan. 1924, pp. 1-4, 3 figs. Also (translation) Rock Products, vol. 27, no. 4, Feb. 23, 1924, pp. 40-41, 3 figs. Describes new rapid-hardening slag cement and compares its resistance with that of other slag cements commonly employed, showing economy of former.

Rapid-Setting Cements (Les ciments à durcissement rapide), P. Prevost. Revue Industrielle, vol. 54, no. 2183, Oct. 1924, pp. 305-311, 10 figs. Particulars of Louve cement, manufactured by Société Générale des Chaux et Ciments, and of fused cement of Société Pavin de Lafarge, including raw materials, composition, results of chemical and mechanical tests, and use.

Roman. Roman Cement (Romanzement), O. Schmidt. Tonindustrie-Zeitung, vol. 48, no. 86, Oct. 25, 1924, pp. 967-969. Particulars of cement invented by Parker, including production and composition, and comparison with portland cement.

Special. Special Cements and the Future of Reinforced Concrete (Les ciments spéciaux et l'avenir du béton armé), H. Lossier. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 123, no. 9, Nov. 1924, pp. 738-756, 4 figs. Discusses slow- and quick-setting cements; use of special cements in architectural work, naval construction, hangars for airships, etc.

Spraying. Restoration of Sarotti Factory Damaged by Fire by Cement Spraying Process (Die Wiederherstellung der brandbeschädigten Fabrik Sarotti durch das Betonspritzverfahren), E. G. Friedrich. Schweizerische Bauzeitung, vol. 83, no. 24, June 14, 1924, pp. 278-280, 6 figs. Reinforced-concrete chocolate factory very badly damaged by fire was entirely restored by additional reinforcing and cement spraying; results of tests.

See also CEMENT GUN; CONVEYORS, Building-Construction.

Statistics. Cement in 1922, E. F. Burchard and B. W. Bagley. U. S. Geol. Surv., no. II:26, Dec. 31, 1923, pp. 227-249, 1 fig. Statistics covering production, consumption, prices, manufacturing conditions, and foreign trade.

International Trade in Cement—Europe, R. M. Santmyers. Trade Information Bul. (Supp. to Commerce Reports), no. 213, Mar. 17, 1924, 38 pp. Statistics on production, exports, imports, etc., of different countries.

Storage Warehouses. Square and Triangular Cement Storage Warehouses. Eng. News-Rec., vol. 92, no. 5, Jan. 31, 1924, p. 185, 1 fig. Floor in one placed on cinder fill saves $45,000; in other, moisture condensation limited by minimum openings.

Tests. Experiments With High-Grade Cements (Versuche mit hochwertigen Zementen), K. Bonn. Beton u. Eisen, vol. 23, no. 21, Nov. 5, 1924, pp. 281-283, 3 figs. Particulars of bending tests with two slabs 3.62 m. by 12 cm. and 10 mm. thick, of 1:5 cement, hand mixed; theoretical load of 150 kg. per sq. m. increased to 225 kg. per sq. m.

Tabulation of Results of Cement Tests by the Vienna Municipal Building Board (Teilweise Zusammenstellung der Zementprüfungsergebnisse im Stadtbauamte Wien 1924), Hasch. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 45-46, Nov. 14, 1924, pp. 400-401, 1 fig. Chart giving compression strength in kg. per sq. cm. and days for setting, for portland, fusion, and special cements.

CEMENT GUN

Mines, Application in. Spraying With Cement Guns the Walls of Passages and Shafts in Dutch Mines (Het bespuiten met beton van mijngangwanden en betimmeringen in het Nederlandsche mijndistrict), W. H. D. De Iongh. Ingenieur, vol. 39, no. 12, Mar. 22, 1924, pp. 207-209, 4 figs. Describes cement gun, and its application to interior passages and chambers in mines. Cement covering makes mine timber fireproof.

CEMENT MANUFACTURE

Africa. The Mozambique Cement Making Industry. S. African Min. & Eng. Jl., vol. 35, no. 1700, Apr. 26, 1924, pp. 877-879, 3 figs. Details of new factory of Mozambique Portland Cement Co., Ltd., at Port Matolla, Africa, and modern methods of manufacture adopted.

British Colonies and Protectorates. Cement Manufacture and Its Possibilities in the Crown Colonies and Protectorates. Imperial Inst.—Bul., vol. 22, no. 2, 1924, pp. 173-193, 3 figs. Manufacture and properties of different cements; cement-making materials of West Africa.

Cinder Cement. Cinder Cement (Kohlenaschen-Zemente), H. Luftschitz. Tonindustrie-Zeitung, vol. 48, no. 45, June 4, 1924, pp. 485-488. Discusses use of lignite and anthracite cinders in production of portland and fused cements of low lime content.

Clinker Production. Heat Economy in the Cement Industry (Aus der Wärmewirtschaft in der Zementindustrie), L. A. Bruyn. Sparwirtschaft, no. 11-12, June 1924, pp. 50-51. Discusses production of clinker and heat required for it per kg. of clinker, types of furnaces, including rotary furnaces, their construction and efficiency.

Ford Plant, Mich. How Henry Ford Makes Cement, D. F. Jennings. Concrete, vol. 24, no. 5, May 1924, pp. 65-72 (Cement Mill Sec.), 11 figs. Description of Ford cement plant, which is a unit in River Rouge plant of Ford Motor Co., and of cement manufacturing operations. First consideration at cement plant is absolute protection for human life, then plant must be absolutely dustless.

Fuel Economy. Fuel Economy in Cement Manufacture, B. Gore. Black Hills Engr., vol. 12, no. 2, Mar. 1924, pp. 77-83, 1 fig. Outlines trend of developments in fuel economy and shows opportunity for continued engineering work in this particular field.

Fuel Requirements. See KILNS, Cement.

Grinding. New Laws Govern Fine Grinding, C. E. Blyth, G. Martin and H. Tongue. Concrete, vol. 25, no. 3, Sept. 1924, pp. 42-44 (Cement Mill Sec.), 1 fig. Some general underlying laws discovered by British Portland Cement Research Assn. as result of experiments carried out during last two years. Paper read at Int. Cement Congress, Lond., and reprinted from Structural Engr. See also Cement, Mill & Quarry, vol. 25, no. 7, Oct. 5, 1924, pp. 37-38.

See also GRINDING MILLS, Ball and Pebble Mills; GRINDING, Fine, Theory of.

Kilns. See KILNS, Cement.

Lime Rock and Coal Ashes. Cement from Lime Rock and Coal Ashes. Rock Products, vol. 27, no. 23, Nov. 15, 1924, pp. 35-39, 15 figs. Methods and equipment of Security Cement & Lime Co., Hagerstown, Md.

Portland Cement. See CEMENT, PORTLAND, Manufacture; Mills.

Power Consumed by Ball Mills. Calculation of Power Consumed by Ball Mills (Note sur les calculs de la force motrice absorbée par les proyeurs à boulets), E. C. Blanc. Revue des Matériaux de Construction & de Travaux Publics, no. 174, Mar. 1924, pp. 57-60, 2 figs. Method of calculation developed by author which is sufficiently accurate for practical purposes.

Silica Cement. How Silica Cement Is Made, P. H. Jung. Chem. & Met. Eng., vol. 31, no. 12, Sept. 22, 1924, pp. 465-467, 1 fig. Discussion of problems of technology and production of an important commodity that must meet difficult industrial specifications.

CEMENT MILLS

China. The Biggest Cement Works in China, M. H. Chou. Concrete, vol. 25, no. 3, Sept. 1924, pp. 38-41 (Cement Mill Sec.), 14 figs. Brief general description of plant of Chee Hsin Cement Co., Ltd., located at Tangshan, Province of Chihle, and chemical analysis of the cement.

Dust Collection in. See DUST, Collection.

Electric Drive. Synchronous Motors for Cement Mill Drive, G. E. Cassidy. Concrete, vol. 25, no. 1, July 1924, pp. 1-7 (Cement Mill Sec.), 13 figs. See also Cement, Mill & Quarry, vol. 24, no. 12, June 20, 1924, pp. 31-33. Salient characteristics of squirrel-cage induction, wound-rotor induction, and synchronous motors, the three types of motors that may be used in cement mill; advantages and application of synchronous motors; objections raised.

See also ELECTRIC MOTORS, A. C., Synchronous.

England. A New Cement Works on the Humber. Engineer, vol. 137, nos. 3561, 3562, and 3563, Mar. 28, Apr. 4 and 11, 1924, pp. 326-328 and 336, 358-360, and 392-394, 23 figs. Layout of works of Humber Portland Cement Co.; chalk quarry and slurry plant; slurry tank and measurer and wash mills; slurry-grinding tube mills; rotary kilns; flue dust-arresting chambers; coal-handling drying and grinding plant; clinker cooling and grinding; cement storage and dispatch.

Fuel Economy. Fuel Economy in the Portland Cement Industry, Rob. W. Lesley. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 293-295. American and foreign practice; points out that future problem of cement industry is proper utilization of fuels near plant itself, whether they are bituminous shale, lignite, low-grade coals or other such materials; and it depends upon proper distillation to recover oils, ammonia, gas, etc., leaving "spent" materials, containing ideal material for cement making, to be used in industry.

Manitowoc, Wis. Up-to-Date Design at New Manitowoc Plant. Cement & Eng. News, vol. 36, no. 9, Sept. 1924, pp. 11-17, 18 figs. Gives layout and describes Wisconsin cement mill built by company's own organization.

Materials Handling in. See MATERIALS HANDLING, Cement Mills.

Mexico. Utilization of Waste Heat in Mexican Cement Plant, A. B. Stewart. Concrete, vol. 24, no. 4, Apr. 1924, pp. 49-57 (Cement Mill Section), 9 figs. General description of plant of Cia. de Cemento Portland, "La Tolteca," in state of Hidalgo, with a maximum capacity of 1800 bbl. per day, and description in greater detail of waste heat generating equipment and operating experience.

Portland-Cement. See CEMENT, PORTLAND, Mills.

Pulverized Coal, Use of. Use of Pulverized Fuel in the Cement Industry, L. N. Duryea. Nat. Engr., vol. 28, no. 6, June 1924, pp. 277-279, 5 figs. Experiences in portland cement industry point to new economies in boiler-house management. Pumping coal through pipes; accident precautions necessary in plants operated with powdered fuel; power requirements in cement industry and latest methods in utilizing waste heat.

Signal Mt., Tenn. Construction Record at Signal Mountain Plant. Concrete, vol. 24, nos. 1 and 2, Jan. and Feb. 1924, pp. 1-3 and 17-19 (Cement Mill Section), 7 figs. Describes new wet process plant of Signal Mountain Portland Cement Co., and process used; daily capacity of 3000 bbl. cement with a force of 130 men.

Sweden. The Oeland Cement Company's Plant at Degerhamn, Sweden, F. Killig. Concrete, vol. 25, no. 4, Oct. 1924, pp. 71-76 (Cement Mill Sec.), 16 figs. Description of plant and notes on methods.

CEMENT, PORTLAND

Constitution and Burning of. On the Constitution and Burning of Artificial Portland Cements, J. E. Duchez. Rock Products, vol. 27, nos. 7, 22 and 25, Apr. 5, Nov. 1, and Dec. 13, 1924, pp. 37-40, 36-38, and 24-25, 4 figs. Apr. 5: Possible reactions between alumina and lime. Nov. 1 and Dec. 13: Study of hydraulic cementing materials other than artificial cements. Translated from Revue des Matériaux de Construction.

Fine Grinding of. Researches on Theory of Fine Grinding. Cement & Eng. News, vol. 36, no. 8, Aug. 1924, pp. 21-22 and 41, 3 figs. British Portland Cement Research Assn. reports on important investigation.

High Early-Strength. High Early-Strength Portland Cements in Germany, G. Haegermann. Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924,

pp. 910-911, 1 fig. Development of standard portlands that approximate early strengths of new alumina cements.

Ideal, Characteristics of. Some Requirements in the Study of Portland Cement, T. Merriman. Eng. News-Rec., vol. 93, no. 3, July 17, 1924, pp. 105-106. Outlines fundamental considerations that need to be given extended study in connection with development of tests which will more truly disclose quality of cement than do those now available. Characteristics of "ideal cement."

Manufacture. Glass Company to Make Cement From Waste Stone. Cement, Mill & Quarry, vol. 24, no. 9, May 5, 1924, pp. 17-21, 6 figs. See also Eng. Wld., vol. 24, no. 6, June 1924, pp. 377-380, 6 figs. Pittsburgh Plate Glass Co. to begin operations in its new cement plant at its quarry site at Fultonham, Ohio, near Zanesville, to use up a by-product or waste material from its present large crushing plant. Notes on equipment and methods to be employed.

Henry Ford's Cement Plant in Operation, G. M. Earnshaw. Rock Products, vol. 27, no. 16, Aug. 9, 1924, pp. 25-31, 22 figs. Describes 1000-bbl.-per-day plant at River Rouge, Detroit, Mich., making portland cement from blast furnace slag by wet process.

Hermitage Company Prepares to Enlarge. Cement & Eng. News, vol. 36, no. 8, Aug. 1924, pp. 11-17, 17 figs. Hermitage Portland Cement Co., Nashville, Tenn., proposes to add new unit and raise capacity of plant from 2000 to 3000 bbl. per day. Discusses quarrying operation, limestone crushing, raw grinding, preparation of coal, clinker handling, etc.

Some Facts about Portland Cement Manufacture, Chas. Wadsworth, 3d. Chem. & Met. Eng., vol. 31, no. 15, Oct. 13, 1924, pp. 570-573, 5 figs. Report of inspection of Petoskey Portland Cement Co.'s plant, with special reference to peculiarities of design and operation.

Mills. New Dry Process Plant, Phoenix Portland Cement Company. Concrete, vol. 25, no. 4, Oct. 1924, pp. 60-65 (Cement Mill Sec.), 13 figs. Description of plant located near Birmingham, Ala. Raw materials; cement burning.

Shanghai Portland Cement Works. Cement, Mill & Quarry, vol. 25, no. 1, July 5, 1924, pp. 28-30, 4 figs. Plant is located on Whangpu River, 3 mi. above Kiangnan dock; power plant consists of one 2000 hp. turbine coupled with one 1440 kw., 50-cycle, 525-volt Siemens generator.

The New Wet Process Plant of the Lehigh Portland Cement Company. Concrete, vol. 25, no. 4, Oct. 1924, pp. 52-59 (Cement Mill Sec.), 16 figs. Description of plant located near Birmingham, Ala., having a total capacity of about 5000 bbl. per day.

Wisconsin's First Portland Cement Plant, C. A. Breskin. Rock Products, vol. 27, no. 18, Sept. 6, 1924, pp. 53-61, 33 figs. Describes plant and equipment of Manitowoc Portland Cement Co.; pumping of clay.

Properties. New Studies in the Properties of Portland Cement, T. Merriman. Eng. News-Rec., vol. 93, no. 17, Oct. 23, 1924, pp. 669-672, 4 figs. Solubility of cement in sugar solutions; relation between solubility and tensile strength shown to be marked and useful; effect of CO_2 on cement.

Puzzolana. Effect of Puzzolana on Cements (L'influence des pouzzolanes sur les ciments), O. Raulin. Génie Civil, vol. 85, no. 2, July 12, 1924, pp. 37-39. Discusses special portland cements and their properties; puzzolanas, including volcanic slag, trass, blast furnace slag, etc., and their properties.

Rapid-Hardening. "Ferrocrete" — A Rapid-Hardening Cement. Engineer, vol. 138, no. 3598, Dec. 12, 1924, pp. 667-668. Results of tests of beams made with new rapid-hardening cement.

Setting. Hydration Processes in the Setting of Portland Cement and Clinker (Beiträge zur Kenntnis der Hydratationsvorgänge beim Abbinden des Portlandzements und des Klinkers), H. Pulfrich and G. Linck. Kolloid-Zeit., col. 34, no. 2, Feb. 1924, pp. 117-119. By substituting mixtures of glycerine and water for plain water, authors have been able to investigate setting of portland cement under microscope, without using great excess of water hitherto thought to be necessary; best composition of clinker appears to be lime 66.7, alumina 9.7, and silica 23.6 per cent.

Solubility in Weathering Agents. Solubility of Portland Cement in Weathering Agents, H. K. Benson, J. S. Herrick and T. Matsumoto. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1063-1066, 6 figs. Solubility of anhydrous portland cement in distilled water is shown to consist largely of calcium hydroxide; solubility of hydrated portland cement is of same order of magnitude as anhydrous.

Specifications. Cement Specifications, D. A. Abrams. Concrete, vol. 25, no. 5, Nov. 1924, pp. 196-197. Comparison of French and American specifications and tests for portland cement.

Storage. Effect of Storage of Cement, D. A. Abrams. Lewis Inst., Structural Matls. Research Lab.—Bul. no. 6, Apr. 1924, 33 pp., 12 figs. Also Eng. News-Rec., vol. 92, no. 22, May 29, 1924, p. 931, and contract Rec. & Eng. Rev., vol. 38, no. 21, May 21, 1924, pp. 493-497, 4 figs. Results of tests with three different lots of portland cement stored up to five years show that increase in strength of concrete is approximately proportional to logarithm of age; also that there is appreciable loss in strength due to storage in small lots. Deterioration is due to absorption of atmospheric moisture which causes partial hydration, etc.

Tests. High-Class German and Foreign Portland Cements (Hochwertige deutsche und ausländische Portlandzemente), K. Biehl. Tonindustrie-Zeitung, vol. 48, no. 75, Sept. 17, 1924, pp. 818-820. Comparison of German and Swiss cements as to setting, mesh, tensile strength and compression.

Tests on the Practical Utilization of High-Grade Portland Cement (Versuche über die Verwertung hochwertigen Portlandzementes in der Praxis), G. Rüth. Beton u. Eisen, vol. 23, nos. 6 and 8, Mar. 20 and Apr. 20, 1924, pp. 61-63 and 89-92, 15 figs. Results of tests made on cement manufactured by Dyckerhoff & Sons, demonstrating its high-grade properties.

Utilization. Tests on the Use of High-Grade Portland Cement in Practice (Versuche über die Verwertung hochwertigen Portlandzementes in der Praxis), G. Rüth. Bauingenieur, vol. 5, no. 7, Apr. 15, 1924, pp. 193-199, 5 figs. Testing scheme; production of specimens; results of practical load tests on plates, beams and experimental floor; results of loads and other tests to determine pressure, tension, elasticity, and contraction in connection with stress and deflection coefficients; conclusions regarding possibilties for utilization of high-grade portland cement.

CEMENTATION

Iron. Cementation of Small Pieces of Iron (Ueber die Zementierung kleiner Eisenstücke), D. Uno. Kyoto Imperial Univ., College of Sci.—Memoirs, vol. 7, no. 3, Mar. 1924, pp. 107-121, 9 figs. Results of experiments show dependence of degree of cementation on temperature and time, whence from size of piece, capacity for cementation may be calculated.

Study of. Introduction to the Study of Metallic Cementation (Introduction à l'étude de la

cémentation métallique), M. H. Weiss. Revue de Métallurgie, vol. 21, no. 1, Jan. 1924, pp. 18-41, 63 figs. Principal apparatus employed. Qualitative study of phenomenon: metal couples which are very slightly miscible in solid state; metal couples forming solid solutions in all proportions. Quantitative study: Influence of temperature; development of phenomena in function of time.

C. G. S. SYSTEM. See MEASUREMENTS, C. G. S. System.

CENTRAL STATIONS

Abandoned, Idle-Equipment Utilization. Utilization of Abandoned Steam Power Plants, H. A. Woodworth. Nat. Engr., vol. 28, no. 6, June 1924, pp. 262-264, 3 figs. Constructive suggestion for making use of idle equipment at present located in the many abandoned power plants throughout the country.

Ash Handling in. See ASH HANDLING.

Aurora, Ill. Aurora Plant Addition Built in Six Months. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 463-470, 8 figs. Addition to existing plant to take over block load consists of two 6000-kw. bleeder-type turbo-generators and three 1000-hp. Stirling boilers.

Auxiliaries, Electric-Drive Developments. Developments in Electric Drive for Central Station Auxiliaries, J. W. Dodge. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 404-414, 16 figs. Describes the various types of motors and control for this service, and their inherent characteristics, and outlines their applications.

Auxiliary Control. Factors in Central Station Auxiliary Control, H. L. Smith. Power House, vol. 17, no. 20, Oct. 20, 1924, pp. 71-76, 1 fig. Explains importance of continuous service in steam-power-station operation. Considers each auxiliary separately insofar as types of drive are concerned.

Boiler-Feedwater Circuits. Boiler Feed-Water Circuits in Power Stations, J. G. Weir. Ingenieur, vol. 39, no. 18, May 3, 1924, pp. 332-338 and (discussion) 338-339, 18 figs. Importance of use of regenerative principles is emphasized and a number of possible circuits are described, illustrated and analyzed. (In English.)

Bridgeport, Conn. Steel Point Station at Bridgeport, W. F. Thompson. Power, vol. 59, no. 7, Feb. 12, 1924, pp. 238-244, 5 figs. Simplicity and accessibility are outstanding features of new plant of United Illuminating Co.

Brooklyn Edison, Hudson Ave. Hudson Avenue Station. Elec. World, vol. 83, no. 18, May 3, 1924, pp. 867-876, 13 figs. Unusual features incorporated in design of new 400,000-kw. power house of Brooklyn Edison Co.; vertical-phase isolation used; details of coal-handling facilities, heat-balance arrangements, boilers and stokers, fans and feed pumps, turbines (which are largest in world), signaling system, etc. See also descriptions in Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 549-553, 12 figs.; and in Power, vol. 59, no. 20, May 13, 1924, pp. 750-758, 14 figs.

See also Heat Balance.

Calcutta, India. The Calcutta Electricity Supply Undertaking, W. Twinch. Elec. Rev., vol. 94, no. 2422, Apr. 25, 1924, pp. 659-663, 10 figs. Description of Cossipore electricity generating station; present output is 57,500 kw., and pressure of generation is 6000 volts.

Chicago, Ill. Calumet and Crawford Ave. Stations of the Commonwealth Edison Co., Chicago, Ill., W. F. Sims. Iron & Steel Engr., vol. 1, no. 7, July 1924, pp. 382-386, 5 figs. General layout, coal-handling equipment, boiler plant, feedwater system, switchhouse, connection with other stations.

Coal Handling in. See COAL HANDLING, Power Plants.

Combustion Control, Centralized. Centralized Combustion Control in Lowellville, Jos. F. Shadgen. Power, vol. 59, no. 18, Apr. 29, 1924, pp. 676-679, 2 figs. One of first complete remote-machine-regulated combustion systems in large power plants; fuel efficiency main object; pneumatic dispatch system of master controller and individual regulators; novel central-control house with unique instrument board.

Comines, France. Central Power Station at Comines, J. Gould Coutant. Combustion, vol. 11, no. 4, Oct. 1924, pp. 276-278, 4 figs. Initial installation consists of three 25,000-kw. turbo-generators, served by 10 boilers; details of pulverized-coal equipment; results of pulverized-coal firing have warranted placing of fourth repeat order for apparatus for extensions to station.

Construction Methods. Construction Procedure for a Steam Power Station. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, pp. 754-757, 7 figs. Connecticut Light & Power completes 75,000-kva. unit at Devon; concreting continued through winter; many parts fabricated in field shops.

Control. Automatic Control of Small Central Stations by Means of Mes Regulators (La regolazione automatica delle piccole centrali elettriche col regolatore rapido sistema "Mes"), G. Picker. Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 660-664, 13 figs. Details of design and operation of apparatus for d.c. and for a.c. control.

Distribution of Output of High-Tension Plants Working in Parallel (Die Leistungsverteilung beim Parallelbetrieb in Hochspannungsanlagen), J. Becker. Elektro-Journal, vol. 4, no. 10, Oct. 1924, pp. 278-280, 4 figs. Describes Zipp apparatus, by means of which all operating conditions in lines and power stations can be controlled effectively and with ease.

Crawfordsville, Ind. New Crawfordsville Unit Shows High Economy. Power Plant Eng., vol. 28, no. 22, Nov. 15, 1924, pp. 1128-1133, 11 figs. Municipally owned public service plant in Indiana installs new 3000-kw. turbo-generator which shows steam consumption of less than 15 lb. per kw.-hr.; coal consumption is considerably reduced; boiler tests and method of testing.

Design. Some Considerations in Power Station Design, F. W. Lawton. Jr. Instn. Engrs., vol. 35, part 1, Oct. 1924, pp. 1-17, 4 figs. Leading factors which contribute to economical design and operation of large central generating stations employing steam turbine as prime mover.

Design and Maintenance. Design and Maintenance of a 7500 Kw. Central Station Plant. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, Sept. 1924, 13 pp., 20 figs. Includes also manufacturers' statements.

Design and Operating Cost. Power Plant Design and Operating Cost. Power Plant Eng., vol. 28, nos. 7, 8, and 9, Apr. 1, 15, and May 1, 1924, pp. 372-374, 432-433, and 480-482, 10 figs. Apr. 1.: Comparison of costs which enter into design and maintenance when various types of prime movers are used. Apr. 15: Investment and operating costs of 1500-kw. central-station non-condensing plant with superheat. May 1: Investment and operating costs of 1500-kw. central station non-condensing plant with saturated steam.

Despatching Board. System Operating and Dispatching Board, A. P. Broadhead. Elec. World, vol. 83, no. 13, Mar. 29, 1924, pp. 627-628, 1 fig. Control board used by N. Y. State Gas & Elec. Corpn. to aid despatchers in checking operations on entire system, and also to give at all times indication of condition of equipment.

Detroit Edison Co. New Station for Detroit Edison Co., A. K. Bak and R. B. Purdy. Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 579-585, 10 figs. New Trenton Channel plant on Slocum's Island embodies new features such as pulverized coal, stage feedwater heating, outdoor switching station and d.c. generators for driving station auxiliaries, making source of auxiliary energy absolutely independent of main system; summary of mechanical equipment. See also description by P. W. Thompson in Elec. World, vol. 83, no. 22, May 31, 1924, pp. 1118-1128, 14 figs.; and description by C. H. Berry in Power, vol. 59, no. 22, May 27, 1924, pp. 848-857, 6 figs.

Developments. Development and Progress of Central Station Engineering, B. Sankey. S. African Inst. Elec. Engrs.—Trans., vol. 15, pt. 2, Feb. 1924, pp. 326-334 and (discussion) 334-338, 3 figs. Latest developments in steam-power generation, including high temperatures, high pressures, and air heating, binary fluid turbines, Mulungushi hydroelectric scheme, etc.

Résumé of the Year's Progress in Power Station Work. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 840-857, 3 figs. Report of A. I. E. E. Power Stations Committee reviewing power station progress. Deals with switches and circuit-breakers, development in water-wheel-type generators, flywheel effect of a.c. waterwheel generators, temperature standards, electric drive and control of auxiliaries, alternating versus direct current, power supply, motors and control, terminal rooms, bus structures, turbo-generator units, ventilation, lightning arresters, transformers, automatic equipment, etc.

Devon Station, Conn. Devon Station Marks Forward Step in Development of New England Superpower. Elec. World, vol. 83, no. 12, Mar. 22, 1924, pp. 562-570, 12 figs. New base-load, high-tension plant of Conn. Light & Power Co. designed for 200,000-kva. rating; mechanical and electrical features.

Devon Station of the Connecticut Light & Power Company. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 474-480, 10 figs. Located near mouth of Housatonic River, and has been laid out for a possible ultimate capacity of 200,000 kva. and 16 boilers. Present installation consists of three 25,000-kva. units and six 16,800-sq. ft. boilers.

See also Construction Methods; Heat Balance.

Diesel-Engined. Converting a Loser into Profit-Making Plant. Power, vol. 59, no. 20, May 13, 1924, pp. 772-775, 6 figs. Central station at Caruthersville, Mo., supplying both electricity and ice, cut its generating cost from over 6 to less than 1 per cent per kw-hr. by replacing an obsolete steam plant with Diesel engines; waste-heat recovery is employed in nearby house-heating service.

Diesel Engine Operating Experience, J. A. Boggs. Elec. World, vol. 84, no. 19, Nov. 8, 1924, pp. 995-998, 5 figs. How installation of two 550-hp. units of type named saved Neodesha, Kan., $18,624 in 10 months; analysis of operating results; details of installation.

Diesel Engines Eliminate Losses in Carthage Light Plant. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 684-686, 3 figs. By installation of Diesel engines production costs were reduced to below 1 per cent per kw-hr.

Diesel Engines for Standby Service in Steam and Hydro Plants, E. B. Pollister. Elec. Light & Power, vol. 2, no. 2, Feb. 1924, pp. 24-26 and 68, 9 figs. Ideal characteristics of a standby and auxiliary prime mover; data on recent installations.

Ice Control Methods at Shelburne Falls, J. H. Kennedy. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 895-896, 5 figs. Constant work is required to keep channels open and units running up to capacity on Deerfield River in Massachusetts at plants of New England Power Co. Abstract of article in Contact, May 1924.

Operating a Diesel Power Plant, R. G. Melrose. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 324-325. Outline of principal sources of operating difficulties experienced with oil engines, together with remedies.

Systematic Methods for Oil Engine Plants. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 893-894, 2 figs. Prime Movers Committee of Nat. Elec. Light Assn. stresses value of definite maintenance procedure and record systems.

The New Diesel-Electric Central of the French Concession in Shanghai (La nouvelle centrale électrique à moteurs Diesel de la Concession française de Shanghai). Génie Civil, vol. 85, no. 26, Dec. 27, 1924, pp. 599-603, 11 figs. Details of new power station of French Tramway & Electric Light Company, consisting of two 1200-kva. groups of Diesel-Sulzer engines and Oerlikon alternator and two 3300-kva. groups of Diesel-Sulzer engines and Schneider alternator, one of latter to be installed in 1925.

See also Iron River, Mich.; Rural, France; DIESEL ENGINES, Central-Station.

Diesel Power vs. Steam. Diesel Power vs. Steam for Large Central Stations. Oil Engine Power, vol. 2, no. 12, Dec. 1924, pp. 644-666, 3 figs. Claims that argument that mammoth units are necessary for central-station work is based solely on extreme wastefulness of smaller steam units and not on any essential requirement of central-station work; moreover, reduced water rate of large steam unit is largely counterbalanced by excessive complication of accessories required to make its low water rate a reality; how this affects question of using Diesel power is elucidated.

Electric Heating, Sale of Current for. Increasing Efficiency of Power Plants through Sale of Current for Electric Heating (Erhöhung der Leistungsfähigkeit der Kraftwerke durch Abgabe von Heizstrom), W. Windel. Elektrotechnische Zeit., special spring no., 1924, pp. 19-21, 2 figs. Shows how operating costs can be reduced by sale of current for electric heating; calculation of net costs of current generation for one kw-hr.; calculation of cost of generating heat.

Electric Trucks. "Electrics" in Central-Station Service. Elec. Wld., vol. 84, no. 8, Aug. 23, 1924, pp. 365-367, 2 figs. Definite field of activity indicated. Little serious study has been given by central stations to allocation of their own transportation vehicles, and survey shows electric trucks have been neglected.

Electrical Design. Progress Evident in Station Electrical Design, R. E. Argersinger. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1204-1207, 3 figs. Summary of developments in electrical design as shown by large stations now nearing completion.

Electrical Equipment. American Power Station Electrical Equipment, B. G. Lamme. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 108-110. Describes turbo-generators, a.c. water-wheel generators, synchronous condensers, frequency changer sets, transformers, reactors, switchboard practice for power houses, etc. Paper, abridged, contributed to World Power Conference.

Some Engineering Achievements of 1923, H. W. Cope and J. Liston. Southern Engr., vol. 40, no. 6, Feb. 1924, pp. 56-61, 9 figs. Description of a few of the larger power-plant apparatus, especially along electrical lines.

Employment Management in. See EMPLOYMENT MANAGEMENT, Central Station.

Esthonia. The Transcontinental Power Works at Ullila in Esthonia (Das Ueberlandwerk Ullila in Estland), A. Thomson. Elektrotechnische Zeit., vol. 45, no. 36, Sept. 4, 1924, pp. 956-959, 1 fig. Discusses utilization of peat deposits in Esthonia for power production; details of boiler plant, machinery, and switching plant.

Europe. Central Station Practice in Europe, B. G. Jamieson. West. Soc. Engrs.—Jl., vol. 29, no. 6, June 1924, pp. 247-256, 5 figs. Some noticeable differences in electrical engineering practice including use of mercury-arc rectifiers in place of converters, high voltage direct current and lack of interconnection of networks, extensive use of underground cable. Attention is given to appearance of central-station buildings and surroundings.

Fort Dodge, Ia. New Plant at Fort Dodge Shows High Economy. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 676-681, 10 figs. Plant of 5000-kw. cap. using steam at 550 deg. fahr., shows boiler-room economy of 85 per cent.; equipped with economizers, two-effect evaporator system with bleeding from main units, underfeed stokers, two induced-draft fans per boiler and motor drive for auxiliaries; simple coal-handling installation. Summary of equipment.

France. Electric Plants of the La Houve Mines (Les installations électriques des mines de La Houve), J. Reyval. Revue Générale de l'Electricité, vol. 16, no. 18, Nov. 1, 1924, pp. 703-713, 14 figs. Describes 650,000-volt central station and distributing system, linking up with main lines of eastern France and Switzerland.

Germany. Development of Public Electricity Industry on the Basis of Lignite Deposits in Central Germany (Der Aufbau der öffentlichen Elektrizitätswirtschaft auf der Braunkohle Mitteldeutschlands), M. Jahncke. Also Elektrotechnische Zeit., vol. 45, nos. 34 and 35, Aug. 21 and 28, 1924, pp. 909-913, and 928-934, 28 figs. Braunkohle, vol. 23, no. 18, Aug. 2, 1924, pp. 309-319, 11 figs. Statistical review of lignite power development, quantities and qualities of lignites available, linking up of works, advantages of large scale works, high tension lines, etc.

Electricity Supply of Schleswig-Holstein and West-Mecklenburg (Die Elektrizitätsversorgung Schleswig-Holsteins und West-Mecklenburgs), G. Scheehl. Elektrotechnische Zeit., vol. 45, no. 29, July 17, 1924, pp. 771-774, 1 fig. Details of power stations at Flensburg, Rendsburg, Kiel, Altona, Hamburg, Lübeck, their equipment, connections, etc.

Thüringen Works (Das Thüringenwerk), A. Schönberg. Elektrotechnische Zeit., vol. 45, no. 23, June 5, 1924, pp. 577-579, 2 figs. Details of combined electricity works supplying whole of state of Thüringen.

Heat Balance. Heat Balance at Hudson Avenue Station (Brooklyn), Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 706-709, 3 figs. Six sources of heat are involved in cycle; control is automatic; vertical isolation of phases is feature of electrical design.

Heat Balance in Devon Station. Power, vol. 59, no. 18, Apr. 29, 1924, pp. 674-675, 2 figs. Heat cycle designed for steam plant that operates in parallel with hydroelectric stations.

Heat Balance Study, F. H. Rosencrants. Combustion, vol. 11, no. 4, Oct. 1924, pp. 278-283, 2 figs. Analysis of relative merits of various means adopted for reducing loss of heat to condenser and to stack. (Abstract.) Report of Prime Movers Committee of Nat. Elec. Light Assn.

High Pressures and Temperatures in. High Pressures and High Temperatures in Central Stations, W. S. Monroe. Power, vol. 60, no. 3, July 15, 1924, pp. 87-91, 6 figs. Discusses reheating and regenerative cycles, describes arrangement employed at Crawford Ave. Station and shows why initial cost with 550 or 600 lb. need be but little more than with 300 lb. pressure. From paper read before World Power Conference.

Holland. Electrification of Holland (L'Électrification des Pays-Bas), H. Claus. Vie Technique & Industrielle, vol. 5, no. 46, July 1923, pp. 229-232. Summary of report by high voltage commission regarding linking up of power stations and its advantages.

Indiana. Rehabilitation of Two Indiana Plants Increases Efficiency. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 834-842, 12 figs. Central stations at Kokomo and Logansport have been made part of Northern Indiana Power Co. system, permitting them to exchange power back and forth with other plants in this system.

Industrial Power Plants vs. Central Station vs. Industrial Power Plants, W. J. Risley, Jr. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 896-897. Factors to be considered in making a change from one form of service to other.

Inspection. Periodic Power-Plant Inspection. Power, vol. 59, no. 11, Mar. 11, 1924, pp. 404-405. List of general instructions issued by Fed. Light & Traction Co., New York City, to managers of their subsidiary companies.

Interconnection. A New England Interconnection, R. J. Andrus. Elec. World, vol. 83, no. 3, Jan. 19, 1924, pp. 127-130, 7 figs. Principal features of stundy undertaken in connection with decision of Twin State Gas & Elec. Co. to interconnection St. Johnsbury (Vt.) division with Berlin (N. H.) division by a transmission line 52 miles long to provide additional capacity; saved building a steam-plant addition.

Interconnection of Electrical Systems. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 949-952, 2 figs. Discusses possible distances of transmissions in future, high-tension distribution networks, present-day transmission problems, and one-million-volt line. States that scheme of interconnection which will fully utilize hydraulic resources will undoubtedly show greatest economy.

Interconnection, Super-Power and Electrification, S. Q. Hayes. Elec. Jl., vol. 21, nos. 2, 3, 4, and 5, Feb., Mar., Apr., and May, 1924, pp. 72-77, 118-120, 166-176, and 247-254, 31 figs. General descriptive definitions of interconnection, superpower and electrification; benefits arising from their use; typical examples, both domesitc and foreign; and general conclusions as to advantages to be gained by properly combining these developments.

Super-Power Plants and Systems. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 1-8, 19 figs. Whereby economies in distribution of electrical energy may be obtained through interconnection of electrical systems.

The Steel Industry and the Electric Utilities, M. Skinner and F. D. Mahoney. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 532-536, 3 figs. Discusses advantages of interconnection between electric power systems of larger steel companies and those of neighboring electric utility companies, and difficulties to be overcome.

Iron River, Mich. Diesel-Engine Stand-by Plant at Iron River, Michigan. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 390-393, 3 figs. Describes a two-unit Diesel plant of 2150 kva. capacity installed to supplement water power in preference to addition to existing steam plant; cost $187.74 per kilowatt; economy 0.675 lb. oil per kilowatt-hour.

Kearny Plant, N. J. Work on Kearny Plant Progressing. Power Plant Eng., vol. 28, no. 5, Mar. 1, 1924, pp. 310-311, 2 figs. Additional details concerning plant on Hackensack River,

N. J., being built by Pub. Service Elec. Power Co., which will add new link to chain of superpower stations in East.

Large. The Economics of German Electricity Supply (Grundsätzliches zur deutschen Elektrizitätswirtschaft), G. Klingenberg. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 45, Nov. 8, 1924, pp. 1169-1170. Traces stages of centralization; points out that large central stations with comparatively low installation costs and technically and economically good operation are limited by high transmission costs; interconnection and extension of power plants through district federations; national coöperation only in the case of a few very large undertakings, especially hydroelectric and lignite works.

Leicester, England. The New Leicester Central Generating Station, T. R. Smith. Instn. Elec. Engrs.—Jl., vol. 63, no. 336, Dec. 1924, pp. 29-34, 3 figs. General description of work in hand or completed; particulars of general performance of that portion of plant which is in operation; discussion of lines on which future development of station may take place.

Lighting. See LIGHTING, Central Stations.

Lignite Firing. High Power Furnaces and Their Introduction into Power Works (Hochleistungsfeuerungen auf der ersten rheinischen Braunkohlenmesse und ihre Einführung in die Kraftwerke), Grunewald. Feuerungstechnik, vol. 12, no. 24, Sept. 15, 1924, pp. 197-203, 13 figs. Development of electric power plants burning lignite; high power grates for new boiler units; pulverized coal addition; stoking arrangements.

Load Dispatching. Load Dispatching—Directing the Operation of Large Central Station Systems, P. B. Juhnke. Elec. Light & Power, vol. 2, no. 2, Feb. 1924, pp. 13-17, 68-71 and 78, 3 figs. Relation of load dispatcher with generating stations; with transmission system, with substations and with distribution system; carrying capacity of cables; load dispatcher's diagram.

Station Readings Brought to Dispatcher, R. Bailey. Elec. Wld., vol. 84,. no. 5, Aug. 2, 1924, pp. 215-218, 4 figs. Records of loads at three generating stations are transferred over telephone lines to indicating and recording equipment in load dispatcher's office, Philadelphia, Pa., by simple accurate method.

London Electricity District. The North Metropolitan Electric Power Supply Company's Undertaking. Elec. Rev., vol. 94, nos. 2406 and 2407, Jan. 4 and 11, 1924, pp. 19-23 and 59-61, 19 figs. Describes additions and improvements which have been made to original installation at Brimsdown.

Management in. See INDUSTRIAL MANAGEMENT, Central Stations.

Manchester, England. The Barton Power-Station of the Manchester Corporation, and the Transmission-System in Connection therewith, H. N. Alliott and S. L. Pearce. Instn. Civ. Engrs.—Sessional Notices, no. 3, Feb. 1924, pp. 62-64. Site can accommodate 165,000 kw. of plant, whereof first section consists of 82,500 kw.; details of station equipment. (Abstract.)

Miami Fort, Ohio. High-Pressure Station on Ohio. Elec. World, vol. 84, no. 25, Dec. 20, 1924, pp. 1304-1306, 2 figs. See also Power, vol. 60, no. 27, Dec. 30, 1924, pp. 1067-1068. Miami Fort plant built for turbine water rate of 7.67 lb. per kw.-hr., using 600-lb. pressure and two 40,000-kw. tandem turbines tapped at four points; important features are use of pulverized fuel, air preheaters, and unique boiler-room equipment.

Mine-Mouth Plant. See Wabash River Plant, Indiana.

Mine-Operated. This Mine Power Plant Produces Power Cheaply, C. L. Moorman. Coal Age, vol. 25, no. 6, Feb. 7, 1924, pp. 210-212, 4 figs. Tests show cost to be 0.43 cents per kw-hr. under full-load conditions, 1.09 cents on idle days; stokers feed crushed refuse with washed slack; plant near Staunton, Ill., supplies power to three mines of Consolidated Coal Co. of St. Louis.

Motor-Truck Transportation. "Gas" Trucks in Central-Station Service. Elec. World, vol. 83, no. 15, Apr. 12, 1924, pp. 721-724, 5 figs. Survey of representative practices in all parts of United States; trend toward standaridzation; data on costs, performances, types and uses.

Muscatine, Iowa. Municipal Service for Muscatine. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 984-990, 9 figs. Describes municipally-owned electric light plant recently put into operation at Muscatine, Ia., which will furnish electricity for public service in competition with existing public service company and in addition will handle all street lighting and pumping requirements of this industrial city of 17,000 inhabitants.

Muskogee, Okla. New Byllesby Plant Near Muskogee. Power, vol. 60, no. 15, Oct. 7, 1924, pp. 562-568, 8 figs. Equipped to burn coal or oil and has a complete system for clarifying and softening muddy river water and is designed to safeguard operation from fluctuations of 40 ft. in river level.

North Tees Station, England. The North Tees Power Station. Engineering, vol. 117, no. 3050, and vol. 118, no. 3054, June 13 and July 11, 1924, pp. 753-755 and 57-59, 14 figs. partly on supp. plate. See also Engineer, vol. 137, no. 3572, June 13, 1924, pp. 664-665, 4 figs. General description of power station of North-Eastern Power Cos., with particulars of its layout and equipment; design from thermodynamic point of view.

The North Tees Power Station. Elec. Rev., vol. 95, no. 2432, July 4, 1924, pp. 18-22, 8 figs. Describes equipment of North Tees Station, unit of Northeastern Power Co.; boiler arrangement; 20,000 kw. turbo-generators, by Metropolitan-Vickers.

Oil-and-Coal-Fired. Station Fired with Oil and Coal, E. J. Burger. Elec. World, vol. 84, no. 20, Nov. 15, 1924, pp. 1039-1043, 9 figs. Features in design of 8000-kw. plant for Sedalia, Mo.; details of installation; operating methods.

Oil Burning in. See OIL FUEL, Burning.

Operating, Costs. How to Analyze the Operating Costs in a Municipal Electric System, G. F. Drewry. Elec. News, vol. 33, nos. 13 and 14, July 1 and 15, 1924, pp. 54-55 and 55-56. Advantages of cost analysis; cost of power can be definitely distributed; power factor must be taken into account.

See also Design.

Output and Distribution, N. America. Fourteen Systems with Output of More than a Billion Kilowatt-Hours in 1923. Elec. World, vol. 83, no. 15, Apr. 12, 1924, pp. 715-719. Tabular data on output and peak load of largest generating and distributing companies in United States and Canada; 1923 detailed output and distribution data for North American systems.

Parsons Line. Some Opinions on the "Parsons Line." Power Engr., vol. 19, no. 220, July 1924, pp. 251-253, 4 figs. Number of expressions by station engineers regarding value of this method of checking operating results.

Peoria, Ill. New Station Under Construction at Peoria, Illinois. Power, vol. 59, no. 17, Apr. 22, 1924, pp. 630-633, 3 figs. Initial section of 5-unit plant consisting of two 20,000-kw. turbo-generators, each served by two 13,920-sq. ft. boilers burning pulverized coal, designed for 400-lb. pressure and 250-deg. superheat; closed feed-

water system with automatic deaëration of water; other features.

Philadelphia. Operating Features at Delaware. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 537-542, 8 figs. Among interesting features of large central station in Philadelphia are test boilers, emergency valve control, and dual-drive circulating pumps.

Pineville, Ky. Pineville, Ky., New Steam Plant. South Engr., vol. 41, no. 8, Oct. 1924, pp. 35-41, 11 figs. Description of new $3,500,000 steam generating station of Ky. Utilities Co.; present capacity 15,000 kw.; bleeder turbine in one unit; ultimate capacity 30,000 kw.; Stirling water-tube boilers 10,012 sq. ft. heating surface.

Pittsburgh District, Power Production. Electric Power in Pittsburgh District, W. F. Rittman and S. B. Ely. Elec. World, vol. 83, no. 25, June 21, 1924, pp. 1271-1276, 13 figs. Analysis of central-station power production over period of years; detailed data on division of load, outputs, peak demands, and future trends; comparison with other power sources.

Plant Costs. See Saginaw River, Mich.; Unit Costs.

Power Factor, Improving. See POWER FACTOR, Improvement.

Power Supply. Power Supply for Central Station Auxiliaries, J. W. Dodge. Power House, vol. 17, no. 17, Sept. 5, 1924, pp. 21-25, 5 figs. Discusses radical changes in design and operation of large steam plants as direct result of high fuel costs; electric-drive economy; supply from main units, coupled to main unit, direct-current machine, etc.

Practice. General Review of Current Practice, P. Junkersfeld and G. A. Orrok. Combustion, vol. 11, no. 2, Aug. 1924, pp. 125-129, 3 figs. Current practice in power-plant field reviewed with particular reference to central stations. Compact chart indicating equipment in 22 of the most modern plants in United States.

Private Plant, vs. Central-Station Power Versus the Private Plant, H. C. Thuerk. Elec. World, vol. 83, no. 22, May 31, 1924, pp. 1140-1141. Disadvantages of isolated plant which are sometimes overlooked in comparing relative merits of two sources of power.

Problems. A Solution of Three Serious Central Station Problems, W. A. Layman. Rose Technic, vol. 33, no. 4, Jan. 1924, pp. 3-6 and 24-25, 3 figs. Discusses idle investment, excess system losses, and poor regulation.

Producer-Gas-Engined. The Salisbury Producer Gas Engine Electric Plant. S. African Power Engr., vol. 9, no. 79, Nov. 1924, pp. 3-7, 6 figs. Describes new municipal producer-gas engine plant erected at Salisbury, S. Africa. Saving of 75 per cent in fuel costs; big increase in overall thermal efficiency.

Pulverized-Coal-Burning. Pulverized Fuel at the Cleveland Electric Illuminating Company's Lake Shore Plant, W. H. Aldrich. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 519-520 and (discussion) 520-522 and 545. Data on pulverized-fuel equipment at this plant and experience gained in operation; description of coal-handling and burning apparatus.

Thiers Central Station Fired with Pulverized Coal (Station centrale de Thiers chauffée au charbon pulvérisé), M. L. Champy. Annales des Mines, vol. 5, no. 5, May 1924, pp. 291-317, 3 figs. Storing, drying, and conveying of pulverized coal; combustion chamber, boilers, turbo-alternators, switching facilities, and tests made; plant was particularly constructed to use a fuel which was otherwise useless because it was too fine.

Reheating in. Reheating in Central Stations, W. J. Wohlenberg. Mech. Eng., vol. 46, no. 5, May 1924, pp. 259-262, 11 figs. Influence of amounts of energy added in reheating, number of reheating stages and points in expansion at which reheating should begin; comparison of reheating, regenerative, and combination cycles combining both reheating and bleeding stages; shows that, because of influence on internal machine efficiency thereby, reheating properly applied may lead to higher efficiencies than bleeding; also that combination cycles give promise of realization in practice of appreciably higher efficiencies than would be the case for other cycles investigated. (Abridged.)

Remodeling. Modern Equipment Reduces Cost of Power. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 210-211, 2 figs. Steam equipment of Abeville, La., municipal light plant replaced by Diesels; cost of generating current reduced; water works served by motor-driven centrifugal pumps and air lift.

Revamping Municipal Electric Plant at Hannibal, Mo. Power, vol. 59, no. 11, Mar. 11, 1924, pp. 394-397, 4 figs. Revamping a Corliss-engine condensing plant and installing additional boiler, new turbo-generator to carry bulk of load, and coal and ash-handling equipment, resulted in reducing steam consumption per unit of output 40 per cent, amount of coal burned in nearly same proportion, and 24-per cent reduction in labor costs.

Remote Control, Supervisory Systems for. Supervisory Systems for Remote Control, J. C. Field. Elec. Communication, vol. 3, no. 2, Oct. 1924, pp. 134-144, 16 figs. Three types developed to meet three different operating conditions.

Rural, France. Using Heavy Oil-Engines for Rural Electrification (L'utilisation des moteurs à huile lourde pour l'électrification des campagnes), Y. LeGallou. Revue Générale de l'Électricité, vol. 16, no. 4, July 26, 1924, pp. 147-158, 7 figs. Recommends construction of small and medium centrals with heavy-oil engines for driving generating groups, as is done in Denmark.

Russia. Work of the Electric Stations of the Moscow Region in 1922, S. P. Stafrin. Electritchestvo, no. 1, Jan. 1924, pp. 31-41, 3 figs. Statistical article based on data collected by commission for investigation of trusts. (In Russian.)

Saginaw River, Mich. Saginaw River Steam Plant Costs Explained, H. F. Eddy. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 615-616. Author explains cause of exceptionally low cost—$71 per kw. of rated capacity. (Abstract.) Paper before Nat. Elec. Light Assn.

Saginaw River Steam Plant of Consumers Power Company. Power, vol. 60, no. 4, July 22, 1924, pp. 122-129, 7 figs. This new steam generating station has recently put in operation an initial 40,000-kw. installation of a 100,000-kw. plant, featured by preheating of feedwater and combustion air with steam bled from three stages of main turbines, conservation of radiated and blow-off heat, water sides in boiler furnaces, sluicing of ashes, and two motor-driven fans. Table giving data on principal equipment.

St. Louis, Mo. Cahokia—A Masterpiece, F. J. Crolius. Blast Furnace & Steel Plant, vol. 12, no. 4, Apr. 1924, pp. 7-11, 6 figs. Superpower plant at St. Louis constitutes study in material handling; summary of principal equipment.

Cahokia Station, Union Electric Light & Power Company, St. Louis, Mo. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 514-524, 15 figs. Uses pulverized fuel; preparation plant in same building as boilers and flue gases utilized to dry coal; each section of station containing 2 turbo-generators and 8 boilers is independent unit; steam pressure 300 lb., temperature 690 deg., natural draft, no economizers.

Pulverized-Fuel, Isolated-Phase Station. Elec. World, vol. 83, nos. 13 and 14, Mar. 29 and Apr. 5, 1924, pp. 610-620 and 659-666, 31 figs. See also description in Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 365-371 and 397-401, 10 figs. Features of Cahokia power plant, St. Louis, which involves underground coal-handling facilities, coal-preparation plant integral with station, unit layout of station and unusual condenser-floor and foundation plans.

St. Pancras, London. Extensions at St. Pancras. Elec. Times, vol. 66, no. 1725, Nov. 6, 1924, pp. 531-533, 5 figs. See also Elecn., vol. 93, no. 2425, Nov. 7, 1924, p. 527, 1 fig. Pulverized fuel, radiant heat superheaters, water-cooled furnace walls and other progressive features at St. Pancras (London) generating plant; describes installation of latest 7000-kw. Brush-Ljungström turbo-generator set.

St. Paul, Minn. Completing High Bridge Plant at St. Paul. Elec. World, vol. 84, no. 26, Dec. 27, 1924, pp. 1347-1349, 6 figs. Details of two-unit section of generating station of Northern States Power Co. which will serve at base-load plant to supplement nearby water powers.

High Bridge Steam Plant at St. Paul. Power, vol. 60, no. 26, Dec. 23, 1924, pp. 1006-1013, 8 figs. Initial 60,000-kw. installation of big base-load steam plant to supply St. Paul and surrounding territory and supplement water power of Northern States Power Co.; equipped with underfeed stokers, two-stage bleeding and evaporators used to purify water.

Saxton, Pa. Saxton Plant of the Penn Central Light & Power Company, A. Iddles. Power, vol. 59, no. 16, Apr. 15, 1924, pp. 592-599, 11 figs. Minemouth station designed for ultimate capacity of 100,000 kw.; first section, of 20,000 kw., installed; boilers equipped with economizers; house turbine and low-pressure evaporators; load on house turbine automatically controlled by temperature of boiler feedwater; data on principal equipment.

Service Improvement. Improving Central Station Service by the Application of Current-limiting Reactors to Distribution Feeders, D. K. Blake. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 361-368, 17 figs. Decided advantages that are obtainable by installation of current-limiting reactors in distribution feeders.

South Africa. Natal Electrification: Its History and Advantages. So. African Power Engr., vol. 9, no. 75, July 1924, pp. 26-28, 3 figs. Discusses why Maritzburg-Glencoe section was chosen; cost of scheme; estimated savings to be effected; other advantages anticipated; by-products and cheap power for local industries.

The Colenso Power Station. So. African Power Engr., vol. 9, no. 75, July 1924, pp. 29-34, 6 figs. Design and construction of power station to supply Maritzburg-Glencoe electrification section of S. A. R.

The Control Organisation of the Victoria Falls and Transvaal Power Co., Ltd., E. F. Rendell. S. African Inst. Elec. Engrs.—Trans., vol. 15, Pt. 9, Sept. 1924, pp. 446-471, 13 figs. Layout of system, general organisation, control office, arrangement of telephones, instruments, operation regulations, loading, operation of air distribution system, sectionalization and protection, communication system, and emergency operating.

The New Witbank Power Station. So. African Power Engr., vol. 9, no. 76, Aug. 1924, pp. 14-16, 1 fig. General layout and design of station with cooling ponds, coal staithes, outdoor switch house; five 20,000 kw. generators are to be installed; boiler house to contain 20 B. & W. boilers.

The Power Station Extensions at Kingwilliamstown. So. African Power Engr., vol. 9, no. 78, Oct. 1924, pp. 3-5, 2 figs. Describes new station to be erected, giving details of boiler house and engine-room plant and layout of power station.

The Randfontein Power Station. So. African Power Engr., vol. 9, no. 76, Aug. 1924, pp. 24-25, 1 fig. Description of largest single mine power station in So. Africa; 20,000 kw. capacity; general scheme and various features described.

The Rand's Largest Central Power Station. So. African Power Engr., vol. 9, no. 76, Aug. 1924, pp. 27-29. Describes Rosherville station; auxiliary machinery; electric generating and air compressing.

The Steam Plant of the Pretoria Power Station. S. African Power Engr., vol. 9, no. 77, Sept. 1924, pp. 24-26, 3 figs. Particulars of boiler plant, steam range and feed pumps, coal and ash-handling equipment, flue arrangements, draft system, turbines and condensing plant.

Southampton, England. Developments at Southampton, W. G. Turner. Electrician, vol. 93, no. 2411, Aug. 1, 1924, pp. 130-131, 1 fig. Details of extension of power station and area of supply, new 5000- and 6000-kw. turbo-generators.

State vs. Private Ownership. State versus Private Ownership of Electrical Utilities, A. T. Hadley. Nat. Elec. Light Assn.—Bul., vol. 11, no. 10, Oct. 1924, pp. 613-617. After dispassionate review of subject from standpoint of student of political economy, author is of opinion that as electrical industries constitute a field where there is exceptional room for progress in immediate future, both on operating and on commercial side, it seems most undesirable that electric power generation should become a government monopoly. From paper before World Power Conference, London.

Steam-Turbine, Developments in. Modern Tendencies in Steam-Turbine Power Plants, E. Berg and F. V. Smith. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 577-582, 10 figs. High pressure, superheat, reheating, and steam extraction as affecting power-plant economy, and advantages obtained in their adoption for marine propulsion. Calculated analysis of steam and fuel consumption of a 50,000-hp. turbine-electric-drive passenger vessel.

Storage-Battery Plant. See STORAGE BATTERIES, Central Stations.

Substations. See SUBSTATIONS.

Superpower. Five New Superpower Steam Stations. Elec. World, vol. 84, no. 84, no. 16, Oct. 18, 1924, pp. 834-838, 5 figs. Turbo-generators totaling 465,080 kw. in 13 units being installed at Toronto, Chicago, Long Beach, Kearny and Peoria; ultimate rating of plants to be 1,392,000 kw.

Switching Equipment. Modern Electric Switch Plants (Ueber moderne elektrische Schaltanlagen), W. O. Schumann. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 204-220, 44 figs. Discusses excess currents and voltages, resonances, switching, insulators, grounds, buses, etc.

Switching Equipment at the Hanover Central Station (Die Schaltanlagen des Grosskraftwerkes Hannover), H. Probst. Elektro-Jl., vol. 4, no. 8, Aug. 1924, pp. 213-215, 3 figs. Details of switching arrangements; 17,000-kva. generators; 6000 volts stepped up to 45,000-60,000 volt overhead transmission.

Switzerland. Data from Electricity Works in Switzerland for 1922 (Einige zusammenfassende Angaben aus der Statistik der Elektrizitätswerke der Schweiz für das Jahr 1922). Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 2, Feb. 1924, pp. 64-67. Preliminary results of statistics now being compiled on power plants of Switzerland; comparison with statistics for 1919.

Table Giving Power and Quantity of Current Available in 1922 in the Main Central Stations of Switzerland Situated to the North of the Alps and Data of Stations Which Might Render Auxiliary Service (Tableau résumant les puissances et les quantités d'énergie disponibles en 1922 dans les principales centrales d'électricité suisses, situées au Nord des Alpes et celles qui peuvent leur prêter secours), O. Ganguillet. Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 6, June 1924, pp. 265-269, 1 fig. Gives data as to hydro- or thermo-electric capacity in kw. power produced and supplied by 41 stations.

The New Power Station of the Wynau Electricity Supply Co., G. Fisler. Brown Boveri Rev., vol. 11, no. 9, Sept. 1924, pp. 205-208, 3 figs. Describes power plant of Wynau Electricity Supply Co., Langenthal, Switzerland, and gives layout.

Tennessee. Hales Bar Steam Plant on the Tennessee River, L. R. Lee. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1178-1182, 4 figs. Constructed adjacent to 45,000-kw. hydro-electric plant where it has been possible to take advantage of many existing facilities; coal is brought to plant by barges; economizer soot pits connected to boiler ash pits; steam can be extracted from three stages.

Torquay, England. Reorganisation at Torquay. Power Engr., vol. 19, no. 223, Oct. 1924, pp. 373-377 and 385, 10 figs. Describes Newton Abbot power station, with details of generating plant, boiler-house equipment, cooling water, switchgear, etc.

Total-Output Recorders. The Totalization of Power Readings, R. T. Pierce. Elec. Jl. vol. 21, no. 3, Mar. 1924, pp. 103-105, 7 figs. Describes instruments for measuring and recording total output of generating stations.

Tri-Cities, Iowa. 150,000-Kw. Plant for the Tri-Cities (Iowa). Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 726-728, 4 figs. Main turbine unit to be bled at four stages, three for stage feedwater heating and one for evaporator.

Unit Costs. Power Plant Unit Costs and Their Engineering Significance, L. Helander. Elec. Jl., vol. 21, no. 6, June 1924, pp. 285-290, 4 figs. Present unit costs intended to be a guide to engineer undertaking a preliminary survey of desirability of expanding capacity of an existing power station, of building a new station, or of entering into an agreement with an existing power plant for purchase of power, and particularly to assist engineers who are not continuously engaged in power plant erection but find it necessary to make occasional surveys of power generating costs.

Units in Parallel, Efficiency of. Maximum Operating Efficiency of Power Units in Parallel, A. P. Strom. Nat. Engr., vol. 28, no. 5, Mary 1924, pp. 210-212, 2 figs. Water rates of individual units plotted on a combined chart showing total water rate for any combination of units for various loads; most efficient combination of units can at once be determined by reference to chart. Serves equally well for distribution of load in hydroelectric plants.

Victoria, Australia. New Power Plant for Geelong, Vic., Electricity Supply. Commonwealth Engr., vol. 11, no. 4, Nov. 1, 1923, pp. 137-144, 5 figs. Describes condensing water, generating units, boilers, and distributing system; involves generation of 6000 to 6600 volts, 3-phase, 50 frequency.

Vienna, Austria. Post War Electricity Policy of Vienna Municipalities (Die Elektrizitätspolitik der Gemeinde Wien nach dem Kriege), E. Karel. Elektrotechnik u. Maschinenbau, vol. 42, no. 32, Aug. 10, 1924, pp. 232-239 (Elektrizitätswerk), 12 figs. Discusses developments of power houses and power production, steam and hydro-, transformers and substations, mercury vapor rectifiers.

Wabash River Plant, Indiana. Mine Mouth Plant in Indiana Just Put in Service. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 682-692, 10 figs. Wabash River plant of Indiana Elec. Corpn. transmits energy at 132,000 volts 75 mi. to Indianapolis for distribution; summary of mechanical equipment.

Wainwright Falls, Canada. Power Development at Wainwright Falls, J. S. Wilson. Can. Engr., vol. 47, no. 25, Dec. 16, 1924, pp. 595-599, 7 figs. Describes plant built on Wabigoon river for Dryden Paper Co., Ltd. Capacity, 1400 hp. at 29-ft. head; total area of drainage basin, 870 sq. mi.; details of Moody turbine and other equipment installed.

Water Power vs. Steam Power. Water Power Compared with Steam Power and Their Relation to Rural Service, G. C. Neff. Nat. Elec. Light Assn. Bul., vol. 11, no. 3, Mar. 1924, pp. 152-154. States that only comparatively few of the hydro-electric stations of United States can successfully compete in low cost of generation with large modern well-located steam plants of today. Excerpts of address before Agricultural College of Univ. of Wis.

Waukegan, Ill. New Waukegan Power Station. Power, vol. 59, no. 3, Jan. 15, 1924, pp. 80-86, 11 figs. First unit of 250,000-kw. base-load plant; boilers designed for 400 lb. and 700 deg.; a. c. stoker drive arranged for 40 speeds; coal-handling and feedwater systems; data on mechanical and electrical equipment. See also Power Plant Eng., vol. 28, no. 2, Jan. 15, 1924, pp. 119-126, 8 figs.

Waukegan 400-Lb. Plant Operating. Elec. World, vol. 83, no. 2, Jan. 12, 1924, pp. 78-86, 22 figs. High pressure a feature of new generating station on system of Public Service Co. of Northern Illinois; ultimate rating may be 250,000 kw. or more; mechanical and electrical features.

Weymouth, Mass. Some Engineering Features of the Weymouth Station of the Edison Electric Illuminating Company of Boston, I. E. Moultrop and J. Pope. Universal Engr., vol. 39, no. 2, Feb. 1924, pp. 14-23, 8 figs. Brief description of station and its equipment, with discussion of engineering features of more timely interest; initial main generating equipment to consist of two 32,000-kw. turbines each driving a main 30,000-kw. generator and a 2000-kw. auxiliary generator direct-connected to shaft of main generator.

Williamsport, Md. A 14,000-Kw. Station at Williamsport (Md.), Quickly Designed and Built. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 354-360, 10 figs. Ultimate capacity is 160,000 kw.; economizers and stage bleeders are used; 325 lb. steam pressure; design and erection completed one year after site was purchased, with 3,990,500 kw-hr. generated; other features of Potomac Edison Co.'s station; tabular list of mechanical equipment.

Some Operating Provisions at the Williamsport Station. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 762-764, 2 figs. Describes special ways in which instruments were chosen and arrangements made with view to maintaining both economy and service continuity; generators are to operate in multiple only through transformers.

CENTRIFUGAL CASTING. See PIPE, CAST-IRON, Centrifugally Cast; PIPE, CONCRETE, Centrifugally Cast.

CENTRIFUGAL MACHINES

British Empire Exhibition. Centrifugal Machines at the British Empire Exhibition. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 817-820, 12 figs. partly on supp. plate. Describes different machines exhibited.

CENTRIFUGES

Sharples. Clarification and Dehydration of Liquids. Chem. Age. (Lond.), vol. 11, no. 279, Oct. 18, 1924, pp. 396-397, 2 figs. Applications of Sharples super-centrifuge.

Systems, Selection of. Extraction Systems (Gesichtspunkte für die Auswahl des Extraktionssystems), W. Torwald. Chemiker-Zeitung, vol. 48, nos. 140 and 143, Nov. 20 and 27, 1924, pp. 853-855 and 974-876, 2 figs. Description and critical discussion of stationary and rotary extractors, with special consideration of their efficiency.

CERAMIC MATERIALS

Bibliography. Revised List of Publications on Ceramic Investigations. U. S. Bur. Mines—Reports of Investigations, no. 2645, Oct. 1924, 7 pp. Gives title and author of various publications of Ceramic Experiment Station of Bureau of Mines at Columbus, Ohio, together with other ceramic publications of Bureau published in technical journals and by coöperating agencies; also includes publications on ceramics.

Dielectric-Constant Determination. Determination of Dielectric Constant of Ceramic Material (Die Bestimmung der Dielektrizitätskonstante keramischer Massen), A. Burmester. Archiv für Elektrotchnik, vol. 13, no. 2, May 31, 1924, pp. 146-152, 6 figs. Discusses measuring of dielectric losses in high-tension lines and determination of dielectric constant from angle of dielectric losses and capacity of test piece.

Driers for. Ceramic Raw Materials, Driers and Drying, G. F. Metz. Am. Ceramic Soc.—Jl., vol. 7, no. 7, July 1924, pp. 504-508, 3 figs. Description of certain types of rotary driers used for drying of such ceramic materials as kaolin, chalk, china clay, whiting, fullers' earth, enamel frit, glass sand, feldspar, and various chemicals.

Fine Grinding. See GRINDING, Fine, Theory of.

Thermal-Dilation Measurement. Application of the Interferometer to Measurements of the Thermal Dilation of Ceramic Materials, G. E. Merritt. U. S. Bur. Standards—Scientific Papers, no. 485, Mar. 7, 1924, pp. 357-373, 14 figs. Describes an interference method and apparatus for measuring thermal expansion of ceramic materials.

CERAMIC PLANTS

Heat Economy in. The Problem of Heat Economy in the Ceramic Industry, W. M. Cohn. Am. Ceramic Soc.—Jl., vol. 7, nos. 5, 6 and 7, May, June, and July, 1924, pp. 359-376, 475-488, and 548-562, 34 figs. Determination of specific heat and heat changes for materials employed in ceramics at usual temperatures, including previous attempts at establishing these values. Results of experiments. Bibliography.

Waste-Heat Utilization. Utilization of the Combustion Gases in the Ceramic Industry (Abgasausnutzung in der keramischen Industrie), O. Brandt. Tonindustrie-Zeitung, vol. 48, no. 19, Mar. 5, 1924, pp. 190-192, 5 figs. Gases are used for preheating air and water for steam plants and for heating air for drying plants.

CERAMIC WARE

Firing. The Burning of Ceramics (Particularités des cuissons céramiques), M. D'Arleux. Chaleur et Industrie, vol. 5, no. 53, Sept. 1924, pp. 487-490. Discusses porosity and shrinkage and gives rules for firing in continuous furnaces.

The Oxidation of Ceramic Wares During Firing, G. A. Bole and F. G. Jackson. Am. Ceramic Soc.—Jl., vol. 7, nos. 3, 4, 5, 6, 7, 8, and 9, Mar., Apr., May, June, July, Aug., and Sept., 1924, pp. 163-164, 223-237, 382-396, 427-429, 532-538, 634-642, and 656-662, 26 figs. Mar.: Some reactions of a lower Kittanning fire clay on heating it at various rates to various temperatures in a current of pure oxygen. Apr. and May: Decomposition of various compounds of iron with sulphur under simulated kiln conditions. June: Behavior of calcium compounds in clays. July: Absorption of sulphur gases by ferric oxide in clay. Aug. and Sept.: Quantitative study of nature of sulphur evolution in kiln firing. Published with permission U. S. Bur. Mines.

CERIUM

Influence on Aluminum. See ALUMINUM, Cerium, Influence on.

CHAIN DRIVE

Efficiency. The Efficiency of Chains as a Power Transmitting Agent, H. Seymour. Elec. Rev., vol. 94, no. 2418, Mar. 28, 1924, pp. 484-486, 5 figs. Advantages of chain drive; suggestions for efficiency operation.

Lubrication. Lengthening the Life of the Chain Drive, A. F. Brewer. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 266-272, 12 figs. Lubricating requirements of driving-chain installation; lubrication must be suited to type of chain and to operating conditions.

Roller Centers, Path of. The Path of Roller Centers in Chains, G. M. Bartlett. Machy. (Lond.), vol. 23, no. 592, Jan. 31, 1924, pp. 575-577, 5 figs. Results of investigations of paths followed by centers of chain pins when approaching and departing from sprockets both at high and low speeds.

Silent. The Application of Silent Chain Drive to Machine Tools, Chas. R. Weiss. Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 873-876, 8 figs. Development and characteristics of bushed silent chain; advantages of silent-chain drive; application to machine tools; principles of automatic chain tightener.

Sprockets. An Improved Design of Chain Sprocket Teeth. Chas. R. Weiss, Am. Mach., vol. 61, no. 26, Dec. 25, 1924, pp. 993-996, 8 figs. New tooth forms results in considerably increased chain life; principles applicable to cut teeth as well as cast teeth; pitch line clearance and pressure angles.

Remedying Faults in Sprockets, John S. Watts. Machy. (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 350-351, 2 figs. Effect of changing pitch of driver and of follower; advantages gained by change in pitch; improved sprocket design.

CHAINS

Connecting Links, Pulling Tests of. Results of Pulling Tests of Chain Connecting Links (Mededeeling omtrent de resultaten van trekproeven met sluitings), I. R. Mulder. Ingenieur, vol. 39, no. 20, May 17, 1924, pp. 364-369, 8 figs. Photographs, diagrams and tables of test results for chain connecting links of various sizes, pin diameters varying from ¼ in. to 2 in.

Crane. Using Crane Chains with Safety, A. V. de Forest. Iron Trade Rev., vol. 75, no. 15, Oct. 9, 1924, pp. 942-943. Discusses overload. Annealing a protective factor, but no "cure-all" for overloading. Inspection and measurement will avert failure in operation. Abstract of paper read at Nat. Safety Congress.

Malleable-Iron. Malleable Iron Chain, J. W. Gardom. Foundry Trade Jl., vol. 29, no. 398, Apr. 3, 1924, pp. 269-272, 8 figs., and (discussion), no. 399, Apr. 10, 1924, pp. 301-304. Description of manufacturing methods, including molding and annealing, and metallurgical considerations.

Manufacture of Malleable Chain, H. R. Simonds. Abrasive Industry, vol. 5, no. 12, Dec. 1924, pp.

307-309, 7 figs. Chain links are molded carefully and finished by grinding on vitrified and rubber wheels; automatic machines are used for assembling.

Roller, High-Speed. High-speed Roller Chains, G. M. Bartlett. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 22-23, 2 figs. Discusses limits of permissible chain velocities.

Silent, Manufacture of. The Story of Morse Chain, C. G. Priebe. Am. Mach., vol. 60, nos. 20, 22, 24, and 26, and vol. 61, nos. 2 and 4. 69, 71, and 145-148, 50 figs., May 15, 29, June 12, 26, July 10 and 24, 1924, pp. 737-740, 811-814, 887-889, 959-962. May 15: Development of chain and its manufacture; growth of Morse Chain Co.; layout of units of plant. May 29: How sprocket wheels are made. June 12: Drawing operations; forming pin stock; carbonizing; press work on pints. June 26: How links are stamped out and hardened. July 10: How chain is assembled, riveted, inspected, and packed for shipment. July 24: Typical applications of silent chain for power transmission.

Strength Tests. Report on the Results of Tests on Strength of Chains (Mededeeling omtrent de resultaten van trekproeven met kettingen), I. R. Mulder. Ingenieur, vol. 39, no. 42, Oct. 18, 1924, pp. 815-819, 5 figs. Extensive tests of strength of chains, carried out by Dutch Bur. Standards; tables and diagrams; specifications of various associations.

CHARCOAL

Active. Active Charcoal (Ueber aktive Kohle), O. Ruff and E. Hohlfeld. Kolloid-Zeit, vol. 34, no. 3, Mar. 1924, pp. 135-139. Activity and content of foreign atoms; hypothesis previously put forward that activity was proportional to content of certain foreign atoms, has been tested by preparation and examination of 15 specimens of active charcoal; data obtained show that original hypothesis must be abandoned, since activities of charcoals examined cannot be correlated with their oxygen or nitrogen content.

Electric Conductivity. See COKE, Electric Conductivity.

Manufacture. Charcoal (Le charbon de bois). Nature, no. 2634, Sept. 27, 1924, pp. 193-195, 5 figs. Discusses different methods of production in France.

Phosphorus Content of Pine, Effect of. Phosphorus Content of Fir and Pine and Its Influence on Their Use for Charcoal Production (Fosforhalten i furu och gran med särskild hänsyn till framställning av träkol), H. von Eckermann. Jernkontorets Annaler, vol. 108, Tekniska Diskussionsmötet May 31, 1924, pp. 115-191, 51 figs. Extensive tests in Swedish forests have proved that content of phosphorus is larger in branches than in trunk of tree, is larger in surface lumber than in core lumber, differs with locality, is larger for younger trees, and changes with seasons.

CHARTS

Alignment. See ALIGNMENT CHARTS.

Application in Industry. Application of Charts in Industry, D. B. Porter. Mgmt. & Administration, vol. 7, nos. 1 and 3, Jan. and Mar. 1924, pp. 65-72, 12 figs.; and 329-336, 10 figs. Jan.: Management-data summary; presents historical charts drawn chiefly from fields of sales and financial data. Mar.: Application of charts which show frequency with which events occur under conditions of non-historical nature.

Construction and Functions. The Construction of the Principal Types of Charts Employed in Industry. Note sur la construction des principaux types d'abaques employés dans l'industries), P. Cayère. Arts & Métiers, vol. 77, no. 41, Feb. 1924, pp. 45-62, 24 figs. Discusses different types of charts and explains their various functions.

Conversion. Engineering Conversion Chart, P. W. Swain. Power, vol. 60, no. 11, Sept. 9, 1924, p. 413. Chart which can be conveniently used to change a quantity expressed in one engineering unit to a corresponding unit. Will save much time in problems of this sort where an accuracy of one per cent (practical limit in reading scales of this size) is sufficient, as is frequently the case.

Gantt. See INDUSTRIAL MANAGEMENT, Gantt Charts.

Instructional Purposes. The Diagram and Its Use for Instruction Purposes in Continuation Schools (Das Diagramm und seine Verwendung also Anschauungsmittel im Unterricht der Fortbildungsschule), L. Werner. Werkstattstechnik, vol. 18, nos. 7 and 8, Apr. 1 and 15, 1924, pp. 209-214 and 237-244, 27 figs. Most important kinds and forms of diagrams with special regard to enlightening public with regard to industrial facts and conditions; importance of diagram as subjective and objective medium of instruction.

Nomograms. Applications of a Type of Nomogram with Rectilinear Scales (Quelques applications d'un type de nomogramme à échelles rectilignes), J. Hak. Annales des Ponts & Chaussées, vol. 93, no. 6, Nov. -Dec. 1923, pp. 375-386, 5 figs. Describes methods of application.

Production Reports. Charts for Report Purposes, H. N. Stronck. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 705-709, 6 figs. Treatment of larger production charts; reproductions of charts; photostat reproduction of special material; lettering of charts; chart showing percentage fluctuations; arrangement of charts in report.

CHEMICAL ANALYSIS

Metals, Methods for. Critical Studies on Methods of Analysis, L. A. Congdon and others. Chem. News, vol. 128, nos. 3329, 3331, 3332, 3333, 3339, 3340, 3341, and 3342, Feb. 1, 15, 22, 29, Apr. 11, 17, 25, and May 2, 1924, pp. 67-71, 98-100, 116-120, 132-134, 233-236, 244-246, 266-268 and 274-276. Methods of analysis and results of experiments made with them. Feb. 1: Nickel, chromium, and manganese. Feb. 15: Aluminum. Feb. 22: Cadmium and molybdenum. Feb. 22: Cobalt. Apr. 11: Cerium. Apr. 17: Calcium. Apr. 25: Selenium. May 2: Barium.

CHEMICAL INDUSTRY

Machinery for, Design of. Relations between Chemical and Mechanical Industries (Beziehungen zwischen der chemischen und der mechanischen Industrie), A. Krauss. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 1 and 2, Jan. 5 and 12, 1924, pp. 1-5 and 22-24, 11 figs. Discusses most important aspects for construction of apparatus and machines in dry and nitrogen industry; importance of material research and behavior of most important structural materials; importance of heat economy, gas technology, and conveying plants; duties of the engineer.

Power and Heat Economy. Power and Heat Economies in the Chemical Industry (Kraft-und Wärmewirtschaft in der chemischen Industrie), E. Praetorius. Chemiker-Zeitung, vol. 48, no. 68, June 5, 1924, pp. 377-380, 1 fig. Discusses advantages of steam over Diesel; power and heat worked separately and in combination; back pressure engines and their efficiency.

Processes and Apparatus. Chemical Processes and Apparatus. Abridgments of Specifications (Lond.), Class 1 (i), 1924, Period 1916-20, 115 pp. Patents for inventions.

Pumps for. See PUMPS, Chemical Industry.

CHEMICAL PLANTS

Chimneys for. See CHIMNEYS, Chemical Plants.

Corrosion. In. See CORROSION, Chemical Plants.

Fire-Fighting Equipment. See FIRE FIGHTING, Chemical Plants; Equipment.

Fire Protection. See FIRE PROTECTION, Dyestuffs Plants.

Fuel Economy. Fuel Economy in Chemical Works, C. Elliot and H. W. Hollands. Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1920, Mar. 7, 1924, pp. 277-279, 3 figs. Evaporation problem in caustic-soda manufacture; preheated secondary air for caustic pots; results of large-scale tests; powdered fuel firing for caustic pots; powdered fuel for rotary dryers; cement kiln firing, etc.

Maintenance and Repair. Maintenance and Repair of Chemical Plants in Winter, H. Bücher. Chem. Age (N. Y.), vol. 32, no. 3, Mar. 1924, pp. 148-150. Suggestions.

Safety against Explosions. See BUILDING CONSTRUCTION, Chemical Plants.

Steam Economy. The Limitation of Steam Consumption in Chemical Works, C. F. Holmboe. Chem. & Industry, vol. 43, no. 37, Sept. 12, 1924, pp. 911-913, 3 figs. Author describes his method of economizing steam, which has proved satisfactory without complicating plant.

CHEMICALS

Manufacture, Corrosion Problems in. Corrosion—The Constant Menace of the Chemical Industry. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 61-69, 3 figs. Survey of corrosion problems in manufacture of following chemical products, with notes on means for reducing them: sulphuric acid, hydrochloric acid, nitric acid, electrolytic alkali and bleach, dyestuffs and intermediates, alum, salt solutions, ammonium nitrate, and acetic acid.

Storage. Efficient Bulk Storage of Chemicals in Powdered Form, G. F. Zimmer. Chem. Age (Lond.), vol. 11, no. 272, Aug. 30, 1924, pp. 210-211, 1 fig. Describes method of getting over difficulty of handling materials which tend to form cakes or lumps during storage.

CHEMISTRY

Atomic Weights. See ATOMS, Atomic Weights.

Colloid. See COLLOIDS, Chemistry of.

Industrial. The Third Congress of Industrial Chemistry (Le troisième Congrès de Chimie Industrielle), Ch. Berthelot. Revue de Métallurgie, vol. 21, no. 3, Mar. 1924, pp. 143-163, 5 figs. Review of contributions on analytical chemistry, fuels, ceramics, and products of synthetic ammonia.

CHIMNEYS

[See also STACKS.]

Calculation. The Calculation of Chimneys (Le Calcul des Cheminées), A. Grebel. Chaleur & Industrie, vol. 5, no. 45, Jan. 1924, pp. 13-22, 8 figs. Method developed by author, extracted from work entitled, Gas & Coke, by Grebel and Bouron.

Chemical Plants. What a Chimney Has to Do. Chem. & Met. Eng., vol. 31, no. 24, Dec. 15, 1924, pp. 930-933, 6 figs. Difficulties encountered in design of chimneys in chemical engineering industries.

Construction. How Should Chimneys Be Constructed? Contract Rec., vol. 38, nos. 36 and 37, Sept. 3 and 10, 1924, pp. 875-877 and 899-902, 12 figs. Discusses simple, practical and inexpensive measures to insure erection of safe chimneys, flues, and fireplaces.

Design. Design of Chimneys and Stacks for Power Plant Boilers, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 12, Dec. 1924, pp. 585-588, 3 figs. Notes on reinforced-concrete and steel chimneys; draft produced by chimneys; effect of stack height on capacity.

How and Why Are Chimneys? Sheet Metal Worker, vol. 15, nos. 2 and 3, Feb. 15 and 29, 1924, pp. 37-40, 74-75, and 98, 7 figs. Principles of design, construction and operation, with explanation of cause of draft, reasons for failures, etc.

The Design of Chimneys, W. S. Findlay. Power Engr., vol. 19, no. 219, June 1924, pp. 226-228, 5 figs. Factors in design of chimney shafts, with special reference to their stability.

Draft and Capacity. Draft and Capacity of Chimneys, J. G. Mingle. Combustion, vol. 10, nos. 3, 4, 5, 6, and 7, and vol. 11, nos. 2, 3, 4, 5, and 6, Mar. Apr., May, June, July, Aug., Sept., Oct., Nov., and Dec. 1924, pp. 186-193, 270-278, 354-360, 424-431, 67-74, 134-144, 219-225, 289-293, 364-369, and 444-452 and 457, 78 figs. Mar.: Draft and its importance. Apr.: Theory of natural draft. May and June: Available draft and losses due to velocity and friction. July: Draft performance of chimneys. Aug.: Required draft and general draft equation. Sept.: Height of chimney. Oct., Nov. and Dec.: Theory of capacity.

Theory of Draft (Théorie du tirage), N. Peters. Association des Ingénieurs Sortis des Ecoles Spéciales de Gand—Annales, vol. 14 (Series 5), 1924, pp. 129-140. Formulas for calculating dimensions of stacks, heat losses, etc.

Flues. Chimneys for Heating Boilers, A. G. King. Domestic Eng. (Chicago), vol. 106, no. 7, Feb. 16, 1924, pp. 20-23, 5 figs. Elements of a chimney flue and its proper position and construction.

Reinforced-Concrete. Concrete Chimney to Serve Two Breechings, C. W. Geiger. Power Plant Eng., vol. 28, no. 4, Feb. 15, 1924, pp. 240-242, 1 fig. Brick division wall at breeching openings carried on reinforced-concrete beam placed just below these openings.

Monnoyer System of Construction of Reinforced Concrete Stacks (Komíny a nádrze ze zelezového betonu systému Monnoyerova), J. Polivka. Zprávy Verejné Sluzby Technicke, vol. 6, no. 3, July 1, 1924, pp. 88-95, 10 figs. General discussion including complication of static forces acting on chimney.

Reinforced-Concrete in Stack Construction (Der Eisenbeton im Schornsteinbau), E. Lupescu. Beton u. Eisen, vol. 23, nos. 14 and 15, July 20 and Aug. 5, 1924, pp. 188-190 and 201-204 Discusses reinforced-concrete stack failures; criticizes faulty constructions and proposes specifications for design and construction.

Standardization of Reinforced-Concrete Stacks (Zur Normung des Eisenbetonschornsteins), J. Hingerle. Beton u. Eisen, vol. 23, no. 21, Nov. 5, 1924, pp. 283-285, 3 figs. Discusses a wall unit of stack small enough to be heated as straight beam unit, and calculates bending moment and tension at edge due to temperature in connection with reinforcing, and crack formation in stacks, and makes corresponding suggestions for standard construction proposed in article by Lupescu.

The Calculation of Tall Reinforced-Concrete Factory Chimneys (Il calcolo dei camini alti in cemento armato), N. Kelen. Ingeneria, vol. 3, no. 2, Feb. 1, 1924, pp. 61-63, 7 figs. Shows their superiority over those of brick, and discusses, with example, stresses by static load and by difference of temperature at inside and outside of wall.

Size Determination. How to Determine the Proper Size of Chimney, T. S. Clark. Power, vol. 60, no. 5, July 29, 1924, pp. 175-179, 1 fig. Ex-

plains in a practical manner necessary elements for determining proper size of chimney for a given installation. Includes typical examples.

Steel. Steel Chimneys, F. Johnstone-Taylor. Power Engr., vol. 19, no. 215, Feb. 1924, pp. 45-48, 9 figs. Survey of characteristics and advantages of steel chimneys.

Suction Draft for. On Artificial Draft in Steam Boiler Plants (Ueber den künstlichen Zug bei Dampfkesselanlagen), C. Rühl. Wärme- u. Kälte-Technik, vol. 26, no. 15, Aug. 1, 1924, pp. 123-126, 9 figs. Discusses types of drafts and describes evaporator-suction draft plant with Rhomboid regulator (German patent) and its advantages.

CHLORINE

Analysis. Critical Studies on Methods of Analysis, L. A. Congdon, W. B. Crabtree, H. W. Coles, L. L. Smith and M. L. Vehalgo. Chem. News, vol. 129, nos. 3370, 3371, and 3372, Nov. 14, 21, and 28, 1924, pp. 302-304, 317-320, and 334-337. Estimation and determination of chlorine. Bibliography.

Hydrochloric Acid from. Industrial Outlets for Chlorine, P. S. Brallier. Chem. & Met. Eng., vol. 30, no. 16, Apr. 21, 1924, pp. 624-626. Discusses hydrochloric acid and organic compounds as methods of consuming chlorine on commercial scale.

Industrial Products. A Survey of Products That Afford Industrial Outlets for Chlorine, P. S. Brallier. Chem. & Met. Eng., vol. 30, nos. 13 and 14, Mar. 31 and Apr. 7, 1924, pp. 508-510 and 542-545. Mar. 31: Technical and economic position of bleach, liquid chlorine and carbon tetrachloride and their significance to producers of chlorine. Bibliography. Apr. 7: Chloroform and metallic chlorides.

Production. Modern Practice in Electrolytic Chlorine-Caustic Production, H. J. Payne. Chem. & Met. Eng., vol. 31, no. 9, Sept. 1, 1924, pp. 334-338, 12 figs. Practice at plant of Eastern Electro-Chemical Co., Bangor, Me. Chemical engineering plays important rôle in applying theory to efficient practice.

The Canadian Salt Company's Processes for the Manufacture of Alkali-Chlorine Products, D. A. Pritchard and G. E. Gollop. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1056-1062, 8 figs. Deals with methods and processes at Sandwich Works of Can. Salt Co. in Ontario.

CHLORONOME. See CONDENSERS, STEAM, Tubes; WATER TREATMENT, Chlorination.

CHROMATES

Production from Ferro-Chromium Anodes. The Production of Chromates from Ferro-Chromium Anodes, M. DeK. Thompson. Am. Electrochem. Soc.—Advance paper no. 3, for meeting Oct. 2-4, 1924, pp. 37-50, 3 figs. Results of investigations carried out to study production of sodium chromate from ferro-chromium anodes under different conditions of current density, temperature, concentration of hydrate solution, and chromium content of anode. Results obtained on effect of various factors on current efficiency and energy efficiency of production of sodium chromate from ferro-chromium anodes.

CHROME-NICKEL STEEL

Carbides. The Carbides in Nickel Chromium Steels, J. H. Andrew and H. Hyman. West of Scotland Iron & Steel Inst.—Jl., vol. 31, parts 6 & 7, Mar.-Apr. 1923-1924, pp. 116-123, 10 figs. Discusses analysis of carbides in samples water-quenched from 770 deg. cent. and tempered at 650 deg. cent. for 3 hr., and water quenched from 1200 deg. cent. and tempered at 650 deg. cent. for 3 hrs.

Deoxidation, Influence of. The Influence of Deoxidation on Hot-Working Capacity and Properties of a Chrome-Nickel Structural Steel (Der Einfluss der Deoxydation auf die Warmverarbeitbarkeit und die Eigenschaften eines Chromnickel-Baustahles), W. Oertel and L. A. Richter. Stahl u. Eisen, vol. 44, no. 7, Feb. 14, 1924, pp. 169-175, 5 figs. Investigation of cracks; influence of casting temperature and speed, rolling temperature, and time required for heating rolling material; deoxidation and distillation; properties of steel produced under different conditions.

Non-Rusting. Non-Rusting Chromium-Nickel Steels, B. Strauss. Am. Soc. for Testing Mats. —Reprint of paper for meeting June 24-27, 1924, no. 19e, 10 pp., 5 figs. Valuable properties of chromium as an alloy with iron and steel, and experiments which led to development of two chromium-nickel steels in Physical Research Laboratory of Messrs. Krupp, Germany; results of corrosion tests, physical and metallographic properties, properties under elevated temperatures, and applications of these steels.

CHROME STEEL

Hardness. Secondary Hardness in Austenitized High Chromium Steels, Edgar C. Bain. Am. Soc. Steel Treating—Trans., vol. 5, no. 1, Jan. 1924, pp. 89-101 and (discussion) 101-105, 14 figs. Summary of hardness measurements made with Rockwell hardness tester on four grades of high-carbon, high-chrome steel with variety of quenches and series of draws; sample tools made from these steels in which secondary hardness had been developed after having been quenched austenitic gave results in cutting speed between that of carbon steel and high-speed steel.

Line of Solubility. The Verification of the Line of Solubility for Carbon in Chrome and Tungsten Steels (Nachprüfung der Löslichkeitslinie für Kohlenstoff in Chrom- und Wolframstählen), P. Oberhoffer, K. Daeves and F. Rapatz. Stahl u. Eisen, vol. 44, no. 16, Apr. 17, 1924, pp. 432-435, 7 figs. Previous works; use of constant slides; discussion of structure reproductions obtained; solubility and pearlite line.

Properties. Chromium—Its Uses and Its Alloys, W. M. Mitchell. Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 303-306, 13 figs. Chromium in steel lessens thermal conductivity; property is of importance when heat treating large forgings.

CHROMITE

World Trade. World Trade in Chromite, H. M. Hoar. Trade Information Bul. (Supp. to Commerce Reports), no. 252, Aug. 11, 1924, 33 pp., 2 figs. International factors; growth of British dominance in chromite industry; uses of chromite; world production; foreign and United States chromite resources and trade; importance of chromite to leather industry; chromium chemical derivatives.

CHROMIUM

Applications in Chemical Industry. The Importance of Chromium to the Chemical Engineer, Chem. & Met. Eng., vol. 30, no. 4, Jan. 28, 1924, pp. 149-151. Notes on nickel-chromium alloys; chrome irons; metallic chromium.

Estimation. Notes on the Estimation of Chromium, H. T. S. Britton. Analyst, vol. 49, no. 576, Mar. 1924, pp. 130-133. Discusses gravimetric and volumetric estimation, giving results of tests.

Plating Steel with. See ELECTROPLATING, Chromium Plating of Steel.

Production. Production of Pure Chromium by Direct Reduction of the Oxide by Means of Hydrogen (Die Darstellung reinen Chroms durch unmittelbare Reduktion des Oxydes mit Wasserstoff), W. Rohn. Zeit. für Metallkunde, vol. 16, no. 7,

July 1924, pp. 275-277, 1 fig. Discusses difficulties in preparation of pure metals not easily reducible, hydrogen as advantageous reduction agent, production of strongly circulating current of pure hydrogen, and its application in production of pure metallic chromium.

Structure of. The Structure of Chromium, H. Collins. Chem. News, vol. 129, no. 3372, Nov. 28, 1924, pp. 331-334. Presents proof of constitution and structure of atom of chromium, from which deductions are made.

Uses. Chromium—Its Uses and Its Alloys, W. M. Mitchell. Blast Furnace & Steel Plant, vol. 12, nos. 8, 10, and 11, Aug., Oct., and Nov. 1924, pp. 372-375, 452, 455, and 504-507, 13 figs. Use in steel industry for manufacture of alloy steels and heat- and corrosion-resisting alloys. See also Forging—Stamping—Heat Treating, vol. 10, nos. 3, 6, 9, and 10, May, June, Sept., and Oct. 1924, pp. 199-202, 235, 238, 357-359, and 373-374, 7 figs.

CHROMIUM STEEL

Stainless. See STEEL, Stainless.

CHRONOGRAPHS

Aberdeen. The Aberdeen Chronograph, D. A. Millar. Army Ordnance, vol. 4, no. 22, Jan.-Feb. 1924, pp. 219-222, 5 figs. Description of short-time measuring instrument developed for purpose of eliminating some of the errors attendant upon firing of small-caliber guns for velocity.

Ballistic. Modern Measuring Instruments for Ballistic and General Scientific and Technical Research Purposes (Neuzeitliche Messgeräte für ballistische und allgemein wissenschaftlich und technische Forschungszwecke), F. Duda. Zeit. für das gesamte Schiess- und Sprengstoffwesen, vol. 19, no. 7, July 1924, pp. 100-104, 11 figs. Design and construction of ballistograph and micro-time-measuring instrument, and their operation, separately and in combination.

CHRONOMETERS

Phonic. The Phonic Chronometer, A. B. Wood and J. M. Ford. Jl. Sci. Instruments, vol. 1, no. 6, Mar. 1924, pp. 161-173, 6 figs. Electrically controlled chronometer which is capable of directly indicating time intervals with accuracy of one-thousandth of second; it is driven by powerful phonic motor, which is controlled by tuning fork of adjustable frequency; used for measurement of time in physical investigations, sound ranging, depth sounding and in hydrographical survey, psychological measurements, automobile speed events, and electrical investigations.

CHRYSOLITE. See ASBESTOS, South Africa.

CHUCKING MACHINES

Automatic. New Chucking Machine Is Pneumatically Controlled and Operated. Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1230-1232, 4 figs. See also Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1574-1575, 3 figs. New Britain Machine Co. has developed completely automatic chucking machine, called New-Matic in 4- and 6-spindle types, which is adapted to many automotive-production operations and is so arranged that an operator can attend to two machines.

Multiple-Spindle. Gridley Chucking Machine. Iron Age, vol. 113, no. 23, June 5, 1924, pp. 1644-1645, 4 figs. Multiple-spindle unit for large and accurate output; air-operated chucks a feature.

CHUCKS

Machining Valves and Pipe Flanges. Machining Valves and Pipe Flanges, Chas. O. Herb. Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 171-174, 10 figs. Use of special chucks and tooling equipment designed with view to obtaining high production; equipment is used for finishing pipe flanges on Libby turret lathes built by Int. Machine Tool Co., Indianapolis.

CHURCHES

Heating. See HEATING, Churches; HEATING, ELECTRIC, Church and Schoolroom.

CIRCUIT BREAKERS

Aerothermic. Aerothermic Breaking Device for Lighting Stairs, Flags and Light Signals (Rupteurs aérothermiques pour minuterie d'escalier, enseignes et signaux lumineux), F. Cellerier. Revue Générale de l'Électricité, vol. 16, no. 9, Aug. 30, 1924, pp. 356-359, 5 figs. Describes device for automatic breaking of circuit, whose action is controlled by expansion of air, heated by electric current; it is used for intermittent lighting of various kinds.

Birka. The Birka Regulator and Its Importance in Connection with the Use of Electricity in Homes (Birkaregulatorn och dess betydelse för hemmens elektrifiering), A. Westerberg. Teknisk Tidskrift, vol. 54, no. 5, Feb. 2, 1924, pp. 24-28 (Elektroteknik), 5 figs. New type of automatic circuit breaker, based on discovery that tungsten contacts in a vacuum or neutral gas very effectively break electric currents. Its various uses in connection with electrical appliances.

High-Speed. Thomson-Houston Extra-Rapid Circuit Breakers (Le disjoncteur extra-rapide Thomson-Houston), L. Vernier and M. Wilfart. Revue Générale de l'Électricité, vol. 16, nos. 9 and 10, Aug. 30 and Sept. 6, 1924, pp. 339-351 and 387-397, 39 figs. Detailed description of Thomson-Houston circuit breakers as satisfying all conditions required of high-speed breakers.

High-Voltage. High-Voltage Circuit Breakers, A. W. Copley. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 17-18. Describes circuit breakers, manufactured for service Southern Cal. Edison Co., with high rupturing capacity and resigns following closely standard designs for more moderate voltages.

High-Voltage Circuit Breakers, J. S. Jenks. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 715-718. Discusses question from operator's point of view, gives experiences with West Penn system.

See also Oil Type.

Insulating Oils for. See OILS, Insulating.

Laboratory Thermostats. A New Design Circuit Breaker for Laboratory Theromstats, G. Fred. Smith and C. E. Hollister. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1162-1163, 4 figs. Describes apparatus designed to eliminate difficulties met in use of telegraphic instrument.

Oil Type. Analysis of Oil Circuit Breaker Requirements for Large Steel Plants, M. J. Wohlgemuth. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 411-413, 7 figs. Discusses conditions in typical plant which had badly mixed-up system; distribution system was entirely revamped and network installed which gives uninterrupted service at all substations.

Construction, Selection and Operation of Automatic Oil Circuit Breakers (Interruttori automatici in olio—Loro costruzione, scelta, impiego), O. L'Eplattenier. Elettrotecnica, vol. 11, no. 10, Apr. 5, 1924, pp. 222-229, 11 figs. Comprehensive treatment of entire subject with particular consideration of latest accomplishments. Discusses electrostatic and thermodynamic phenomena. Manufacturing influence upon phenomena of rupture explained by considering material, form and length of contacts, number of ruptures, their velocity and their measurements. Requirements an automatic oil circuit breaker must meet. Charts reporting practical and experimental data.

Directions for Selecting Circuit Breakers for High Tension A. C. Installations (Directives pour le choix des interrupteurs des installations à courant alternatif à haute tension), B. Bauer. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 5, May 1924, pp. 210-228, 6 figs. Gives definition of terms, necessary data for selection, calculation of disruptive circuit, protective resistances for circuit breakers.

High-Voltage Oil Circuit Breaker Tests, Alabama Power Company System, J. B. MacNeill. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 436-441, 16 figs. Series of 50 high-voltage oil-circuit breaker tests made during May and June of 1922.

Maintenance of Oil Circuit Breaker Operating Mechanisms, H. L. Biggin. Power, vol. 60, nos. 19 and 20, Nov. 4 and 18, 1924, pp. 721-723 and 797-800, 14 figs. Operation and care of oil circuit breakers of ratings up to 15,000 volts. Nov. 4: Care of operating mechanisms. Nov. 18: Care of switch contacts and oil.

Oil Circuit Breaker Investigation as Carried on with a 26,700-Kv-a. Generator, J. D. Hilliard. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 818-824, 16 figs. Discusses some of the characteristics of oil circuit breakers as determined from tests with this equipment, and indicates effect of some of the factors considered; oil viscosity and other oil characteristics; duty cycle tests.

135,000 V Outdoor Oil Circuit Breaker. Electrician, vol. 92, no. 2402, May 30, 1924, pp. 662-663, 4 figs. New Ferguson Pailin product. Three-phase automatic.

Quick-Acting. See CONVERTERS, Rotary.

Syntonic. Bruné Electro-Sytonic Circuit Breakers (Interruttore elettro-sintonico Bruné), P. Lana. Elettrotechnica, vol. 11, no. 19, July 5, 1924, pp. 452-454, 6 figs. Details of design and construction of circuit breaker based on principle of mechanical syntony, and applied to lighting system of town of Ferrara.

Tests. Circuit Breaker Tests at Bessemer, Ala., J. D. Hilliard. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 430-435, 13 figs. Tests on 300-ampere, 110,000-volt breakers, and on plain break and explosion-chamber 44,000-volt breakers.

CITIES

Congestion in. Study in Problems of Urban Growth, T. Adams and H. L. Seymour. Can. Engr., vol. 47, no. 22, Nov. 25, 1924, pp. 543-549, 3 figs. Forms and causes of congestion in modern cities; problems in Toronto; building and street congestion; sunlight and high buildings.

Finance and Improvement Policies. Municipal Finance and Improvement Policies, H. G. McGee. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 230-232. Study of expenditures and receipts of cities of 30,000 and upward, 1903 to 1921, with suggestions as to policy to govern capital outlays for improvements.

CITY PLANNING

[See also PORTS, Planning.]

Brantford, Kansas. Town Planning Progress at Brantford, A. E. K. Bunnell. Can. Engr., vol. 47, no. 12, Sept. 16, 1924, pp. 334-336. Part of report presented to Brantford City Council by Brantford Town Planning Commission; proposals made by engineer for layout of streets and general improvements to city.

Canada. A Review of Recent Town Planning Accomplishment in Canada, H. L. Seymour. Contract Rec., vol. 38, no. 53, Dec. 31, 1924, pp. 1297-1301, 1 fig. Public interest in movement is being fostered and importance of subject impressed upon municipal bodies. Kitchener, Waterloo and Point Grey are most advanced in town planning progress.

Review of Town Planning in Canada, T. Adams. Can. Engr., vol. 46, no. 26, June 24, 1924, pp. 651-653. Status in Canada before and during War and since that period. Author considers that much progress has been made.

Detroit Super-Highway Plan. Greater Detroit's Proposed Super-Highway Plan. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 59-61, 1 fig. See also Eng. & Contracting (Roads & Streets), vol. 62, no. 2, Aug. 6, 1924, pp. 283-287, 1 fig. Discusses congestion problem and more surface lines needed.

Garden-City Plans. Carrying out Mariemont Plan for a Self-Contained Town, Glenn Hall. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 580-582, 1 fig. Town planning and sound municipal engineering along lines of English Garden cities for new suburb of Cincinnati.

Garden Cities of French Northern Railway Co. (Les Cités-Jardins de la Compagnie du Chemin de Fer du Nord), P. Calfas. Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 197-203, 21 figs. Describes plans of new garden cities built in devastated area by Compagnie du Chemin de Fer du Nord, including layout, types of houses, etc.

Height of Buildings. Higher Building in Relation to Town Planning, R. Unwin. Roy. Inst. British Architects—Jl., vol. 31, no. 5, Jan. 12, 1924, pp. 125-140, and (discussion) 141-150, 19 figs. partly on supp. plates. Arguments against adoption of high buildings, including effect of high buildings on transport problem.

Highway Traffic, New York City. Regional Highway Traffic Problem of New York City, E. P. Goodrich and H. M. Lewis. Eng. News-Rec., vol. 92, no. 22, May 29, 1924, pp. 941-943, 4 figs. Physical survey discloses conditions forecasting traffic development calling for belt roads and city entrances. (Abstract.) Paper presented at conference on traffic, New York, under direction of Committee on Regional Plan of New York and Its Environs.

Highways and Traffic. Highways and Traffic, F. S. Besson. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, pp. 594-601, 18 figs. Dividing streets into three classes, rapid transit and local streets and traffic highways, author defines these terms and, using original plan of City of Washington and present street conditions there as basis of illustration, comments thereon and shows how important adequate city planning is in its bearing on traffic problem and what great foresight it requires.

Industrial Villages. See HOUSING, Industrial Villages.

Kitchener and Waterloo, Ont. Planning of Kitchener and Waterloo, Ont., H. L. Seymour. Can. Engr., vol. 47, no. 2, July 7, 1924, pp. 125-130, 3 figs. Developments leading up to preparation of comprehensive town planning scheme now nearing completion; proposals by experts; summary of conclusions and recommendations submitted by consulting engineers; elimination of level crossings.

Mining Town. See HOUSING, Miners' Dwellings.

Montreal Project. Considerations on a Project of Town Planning for the Island of Montreal, S. J. Fortin. Eng. Jl., vol. 7, no. 10, Oct. 1924, pp. 639-643. Outline of plan for establishment of town-planning commission to investigate and report on project.

National Planning as Aid to. National Planning as Aid to City Planning, R. W. Putnam. Ports & Waterways, vol. 1, no. 2, Aug. 1924, pp. 62-66 and 85-86, 4 figs. Discusses harbor facilities for bulk interchange at Chicago.

New York City, Replanning. City Replanning. Public Works, vol. 55, no. 8, Aug. 1924, pp. 258-260, 5 figs. See also Engrs. & Eng., vol. 41, no. 7, July 1924, pp. 173-182, 5 figs. Proposal for relieving street congestion by parking inside building lines and placing sidewalks level with second floor. Abstract of paper read before Am. Soc. Civil Engrs.

Pittsburgh. Solution of the Transportation, Parking and Flood Problems of Pittsburgh, E. K. Morse. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 5, June 1924, pp. 183-202, and (discussion) 203-216, 7 figs. Discusses character of traffic, congestion, relief, river walls, rapid transit, design of elevated tracks and stations, wharves, subways, navigation, floods, etc.

Principles. Regional and Metropolitan Planning Principles, G. B. Ford. Can. Engr., vol. 46, no. 2, Jan. 8, 1923, pp. 127-130. Methods of controlling and directing development of towns and cities; difference between regional and city planning; zoning ordinances; regulation of traffic; principles of regional planning; decentralizing industry; financing regional plan. From paper read at Nat. Conference on City Planning, Baltimore.

Street Planning. Changing the Horse-and-Buggy Road to Fit the Automobile, S. D. Waldon. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 521-531, 10 figs. Describes master plan to which Detroit is endeavoring to make its street improvements conform, and offers suggestion that additional rights-of-way should be acquired at once; outlines plan for superhighway that will meet modern requirements and make rapid operation safe.

Increasing the Capacity of Existing Streets, A. S. Tuttle. Am. Soc. Civ. Engrs.—Proc., vol. 50, nos. 5 and 10, May and Oct. 1924, pp. 593-605, and (discussion) 1311-1314, 6 figs. Consideration of following expedients for City of New York: Requiring new buildings to be set back to lines proposed as ultimate limits of widened streets; widening of roadways; more drastic traffic regulations; removal of roadway encroachments; by-passing of traffic; introduction of arcades.

Street Planning for Relief of Congestion at Bridges, Chas. W. Leavitt. Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 974-975. Widening of approaches; variable-speed traffic zones; separation of rapid-transit lines recommended. (Abstract.) Paper read before Nat. Conference on City Planning.

Traffic Congestion and. See TRAFFIC, Congestion Relief.

Traffic in Relation to. Street Traffic and City Planning. Pub. Works, vol. 55, no. 6, June 1924, pp. 201-206. Extent to which enormous development of city traffic made imperative street widening and other changes in structure and improvements in handling traffic; suggestions made.

Zoning. See HOUSING, Zoning and.

CLASSIFICATION

Dewey Decimal System. See INDEXES, Decimal Classification.

CLAY

Aluminum Chloride from. Preparation of Aluminum Chloride from Clays (Darstellung von Aluminiumchlorid aus Ton enthaltenden Verbindungen), P. P. Budnikoff. Zeit. für angewandte Chemie, vol. 37, no. 8, Feb. 21, 1924, pp. 100-101. From results of experiments in which kaolin, bauxite, aluminum oxide, and aluminum sulphate were separately heated with phosgene at temperatures ranging from 500 to 1000 deg., it would appear to be possible to apply action of phosgene or sulphur chloride on aluminum silicates to purposes of quantitative analysis.

Bentonite. Bentonite. J. Alexander. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1140-1142. Properties; occurrence and origin; composition and uses.

China. The English China Clay Industry, S. P. Bunn. Paper, vol. 33, no. 13, Jan. 17, 1924, pp. 11-13, 6 figs. Extent of development; Cornwall and Devon chief producing centers.

The Winning and Preparation of English China Clay, Geo. Brian. Ceramist, vol. 4, no. 5, Aug. 1924, pp. 270-282, 8 figs. Methods of winning china clay; sand pits; drags; micas; settling pits and tanks; drying kilns and process of drying.

Colloidal Plasticity. Kaolins, Clays, Etc. Colloidal Plasticity. Gel and Sol Phenomena (Kaolins, argiles, etc. Plasticité colloïdale. Phénomènes de gel et de sol), A. Bigot. Académie des Sciences—Comptes Rendus, vol. 178, no. 1, Jan. 2, 1924, pp. 88-90. Points out that some kaolins (those produced by weathering of granite) are not plastic, whereas others (alluvial kaolins) are very plastic; incompletely dehydrated clays give, with appropriate reagents, gels and sols, but this is no longer the case after complete dehydration.

Composition and Properties. The Composition and Properties of Clay, A. F. Joseph and J. S. Hancock. Chem. Soc.—Jl., vol. 125, Sept. 1924, pp. 1888-1895. Records composition of number of clays (principally soil clays), together with physical and chemical properties which appear correlated with composition.

Deposits. The Geology of Clay Deposits, M. W. Twitchell. Ceramist, vol. 4, no. 4, July 1924, pp. 211-228, 8 figs. Discusses formation of residual soils and clays, sedimentary clays; geology of New Jersey and its provinces.

Handling. See JETTIES, Clay-Cargo.

Kaolin. See KAOLIN.

Production, 1923. Clay in 1923. J. Middleton. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:9, Oct. 13, 1924, pp. 71-78. General conditions; production; production by uses; imports and exports.

Purification. Sedimentation as a Means of Purifying Clay, S. R. Hind. Ceramic Soc.—Trans., vol. 23, Pt. 3, 1923-24, pp. 234-252, 6 figs. Fundamental considerations, results of some laboratory tests, and methods of large-scale operation. Reprinted by permission of Brit. Refractories Research Assn., from Bull. no. 6, Apr. 1924.

Refractory. Refractory Clays and Shales of Indiana, W. N. Logan. Am. Ceramic Soc.—Jl., vol. 7, no. 3, Mar. 1924, pp. 201-206. Geographical distribution, physical and chemical properties, uses of refractory clays, and results of tests made, including cold crushing, slagging, transverse, and specific gravity tests and load tests under heat; physical properties and chemical composition of Chester shales.

See also REFRACTORIES, Clay.

Texture and Composition. The Relation of Texture and Composition of Clays, F. F. Grout. Am. Ceramic Soc.—Jl., vol. 7, no. 2, Feb. 1924, pp. 122-140. Determinations made with a view to finding distribution of common elements in portions obtained by mechanical separation of the several sizes of grains in a series of clays.

Washington. The Clays and Shales of Washington, Their Technology and Uses, H. Wilson. Univ. of Wash. Eng. Experiment Station,—Bul. no. 18, Oct. 1923, 224 pp., 105 figs. Geology of Washington clays; typical clays of state of Washington and comparison with several standard clays; results of tests on samples obtained during survey of the state, with statements of probable uses to which each clay can be put.

CLAY PRODUCTS

Casting. Practical Aspects in the Casting of Heavy Vitrified White Ware Products, C. C. Treiscel. Ceramist, vol. 4, no. 4, July 1924, pp. 204-211. Discusses raw materials, including ball clays, china clay and Kaolins, etc.; casting slips, pre-mixed and raw.

Drying. What You Should Know About Drying, W. E. Lemley. Brick & Clay Rec., vol. 64, no. 1, Jan. 8, 1924, pp. 26-29, 6 figs. Discussion of drying and drying methods, including description of dryers of Denny Renton Clay & Coal Co. From paper before Pacific Northwest Clay Workers' Assn.

Glass-House Pots. Some Notes on Pot-Clays and the Manufacture, Use and Treatment of Glass-house Pots, P. Marson. Soc. Glass Technology—Jl., vol. 8, no. 29, Mar. 1924, pp. 45-55 and (discussion) 55-57. Author's experiences with glass-house pots and pot-clay mixtures, presented with view of bringing glass manufacturers to realize some of the material factors and limitations which govern proper use of glass-house pots. Works tests for examining pot-clay mixtures and methods for obtaining greater efficiency in life of pots.

CLOCKS

Electric. A Superior Electric Pendulum; and Some Pendulum Equations, W. P. White. Optical Soc. of Am.—Jl., vol. 8, no. 6, June 1924, pp. 767-782, 5 figs. Attention called to great ease with which a very accurate clock pendulum of electric gravity type can be built. Simple equations given showing how design may be ordered to diminish recognized errors inherent in method of driving. These equations used to discuss value of this and other types of drive for pendulums of maximum accuracy, and indicate that electric gravity drive equals, and possibly excels, best of other types for such service.

Electric Clocks (Elektrische Uhren), H. Voigt. Praktische Maschinen-Konstrukteur, vol. 57, no. 38, Oct. 7, 1924, pp. 519-521, 9 figs. Principle and construction of electric clock centrals, and their operation.

Free Pendulum. The Free Pendulum, F. Hope-Jones. Roy. Soc. Arts—Jl., vol. 72, no. 3731, May 23, 1924, pp. 446-458 and, (discussion) 458-460, 9 figs. In explaining how it has been found possible to free pendulum altogether, author shows that it is neither desirable nor necessary to give frequent impulses, and that electrical time circuits of half-minute periodicity have contributed materially to breaking away from hide-bound custom.

CLOTH

Wear Testing. See FABRICS, Wear-Testing Machine.

CLUTCHES

Automatic Centrifugal. Automatic Centrifugal Clutches, H. Bentley. Am. Mach., vol. 61, no. 21, Nov. 20, 1924, p. 794. Designs and effects.

The Design and Operation of the Lancashire Automatic Centrifugal Clutch, H. Storar and W. P. Gladwell. Machy. (Lond.), vol. 25, no. 633, Nov. 13, 1924, pp. 193-200, 10 figs. Considerations in design; outputs; diameter of hub; thickness of driving arms; strength of rim; calculated outputs; lubrication.

Automobile. A New Flexible Coupling Device (Un nouveau dispositif d'accouplement flexible), E. Guilleaume. Industrie des Tramways, vol. 18, no. 205, Jan. 1924, pp. 11-14, 3 figs. Describes elastic device which is claimed to have many advantages over universal joint; gives results of tests and explains adaptation of this transmission to automobiles.

American Stock Clutch and Axle Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 446-450. Tabular data.

American Stock Clutch Specifications. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, p. 420. Specifications of different makes for busses, passanger cars, trucks, and tractors.

Conical. Conical Clutch Designs, A. Clegg, Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 867-869, 5 figs. Also Machy. (Lond.), vol. 24, no. 614, July 3, 1924, pp. 436-438, 5 figs. Advantages of conical clutches; construction of conical clutch for radial drilling machine; principles to be followed in design; conical clutch for lathe feed control and applied to planer drive.

Drums, Deformation of. Investigations of Deformation in Clutch Drums (Formänderungs-Untersuchungen an Kupplungstrommeln), G. Peneff. Maschinenbau, vol. 3, no. 15, May 8, 1924, pp. 517-520, 10 figs. Deformation tests on four different types of gear clutch drums of a benzol rail car; gives figures and diagrams which are of value in design and calculation of clutch drums.

Electrically Operated. Electrically-operated Clutches, M. H. Sabine. Machy. (Lond.), vol. 24, no. 602, Apr. 10, 1924, pp. 44-45, 7 figs. Improved design of solenoid clutch for use where control of power unit from distant position is required.

Föttinger. See MOTORSHIPS, Clutches.

Friction. Considerations in Clutch Design, A. Clegg. Machy. (Lond.), vol. 24, no. 612, June 19, 1924, pp. 363-367, 6 figs. Deals with friction clutches and expanding and contracting ring clutches.

Considerations in Friction Clutch Design, A. Clegg. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 669-670. Factors involved in design; allowable bearing pressures; calculating horsepower; types of friction clutches; single-plate, coil, and double-plate clutches.

Formulas and Data for Friction Clutches, Geo. W. Drake. Am. Mach., vol. 61, no. 25, Dec. 18, 1924, pp. 955-957, 4 figs. Formulas and data for cone, split-ring and disk friction clutches; practical examples of application of formulas.

Plate and Coil. Plate and Coil Clutches, A. Clegg. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 953-955, 6 figs. Also Machy. (Lond.), vol. 24, no. 619, Aug. 7, 1924, pp. 597-599, 6 figs. Notes on design. Describes different types.

Ring. Expanding and Contracting Ring Clutches, A. Clegg. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 793-796, 6 figs. Expanding ring clutch with unusual adjustment; design operated by toggle levers; Johnson expanding ring clutch; contracting ring clutch.

COAL

Analyses. Analyses of Samples of Delivered Coal Collected From July 1, 1915 to January 1, 1922, With a Chapter on the Tidewater Pool Classifications, N. H. Snyder. U. S. Bur. Mines, Bul. 230, 1923, 156 pp. Essential data on coals listed.

Methods of Analysis of Coal. Fuel, vol. 3, nos. 12, 13 and 3, Jan., Feb., and Mar. 1924, pp. 27-30, 53-56, and 93-97, 3 figs. Interim report of Fuel Research Board. Jan.: Proximate and ultimate analysis. Feb.: Phosphorus in ash; caking index of coal; calorific value. Mar.: Laboratory low-temperature assay of coal; Lessing coking test of coal.

Analysis, X-Ray. The X-Ray Analysis of Coal, C. N. Kemp. Colliery Guardian, vol. 127, no. 3296, Feb. 29, 1924, pp. 539-541. Experiments on its scientific technical applications. From

paper read before North of England Inst. Min. & Mech. Engrs.

The X-Ray Analysis of Coal, and a New X-Ray Examining Unit, C. N. Kemp. Chem. & Industry, vol. 43, no. 29, July 18, 1924, pp. 234T-236T. Discusses X-ray methods available, including bombardment by suitable rays and observing effect, radioscopic and radiodensimetric examination, examination of elementary crystalline constituents.

X-Ray Analysis of Coal, With Scientific and Technical Applications, C. N. Kemp. Instn. Min. Engrs.—Trans., vol. 67, Pt. 1, Mar. 1924, pp. 59-81 and (discussion) 81-83, 20 figs. Review of earlier researches. Details of investigation of radioscopic, radiographic, stereoradiographic, and radiodensimetric methods.

Anthracite. See CARBON, Animal Constituents.

Anthracite, Ash Content of. Ash in Anthracite, O. P. Hood. U. S. Bur. Mines—Reports of Investigations, no. 2571, Feb. 1924, 2 pp. Results of tests made by Bur. of Mines on 127 samples of 1000 lb. each, representing nearly 30,000 tons of anthracite in dealers' yards in 17 cities in Massachusetts.

Anthracite, Origin of. The Origin of Anthracite, J. Roberts. S. Wales Inst. Engrs.—Proc., vol. 40, no. 2, May 8, 1924, pp. 97-138, 12 figs. and (discussion), nos. 3 and 4, Sept. 4 and Oct. 9, 1924, pp. 213-228 and 291-297. Evidence in support of contention that anthracite is a natural product of low-temperature carbonization, parent substance having consisted of bright coal, probably both clarain and vitrain, which has subsequently attained a temperature of between 500 deg. cent. and 550 deg. cent. in earth's crust.

Argentine Republic. Coal in Argentina (Los carbones argentinos), J. Rassmuss. Ingenieria, vol. 28, no. 7, July 1924, pp. 289-293. Discusses principal deposits, Gondwana coal, Mesozoic coal, and tertiary lignites, and gives analyses.

Artificial. See OIL, Hydrogenation.

Ash, Effect on Value. The Effect of Ash on the Practical Value of Coal, C. F. Wade. Fuel, vol. 3, no. 7, July 1924, pp. 261-262. Reviews result upon boiler efficiency produced by any ash in differing quantities and discusses effects of ash of varying compositions.

Ash, Fusing Point of. A Furnace for the Determination of the Fusing Point of Coal Ash, B. B. Kaplan. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 847-848, 2 figs. Describes gas and air furnace which attains a maximum temperature of 2700 deg. fahr.; experimental results.

Ash-Softening Temperatures. Ash Softening Temperatures and Clinkering of Coals in a Boiler Furnace, J. F. Barkley. U. S. Bur. Mines—Reports of Investigations, no. 2630, Aug. 1924, 3 pp. Comparison of ash-softening temperature of each coal, with clinkering tendencies of coal when burned in furnace; tabulation of proximate analyses, ash-softening temperatures and plant reports as to clinkering.

Australia. The Coal and Coal Burning Needs of Australia, F. M. Whyte. Combustion, vol. 11, no. 1, July 1924, pp. 61-63. The various factors of resources and markets affecting fuel situation in Australia.

Breakers. See COAL BREAKERS.

Briquetting. American Briquet Company's Lykens Plant, M. W. Orr. Modern Min., vol. 1, no. 4, Nov. 1924, pp. 96-100, 9 figs. Describes manufacture of briquets from culm pile to finished product aboard railroad cars.

Development of Briquetting Industry in the Ruhr (Die Entwickelung der Brikettindustrie im Ruhrgebiet), Philipp. Bergbau, vol. 37, nos. 17, 18, 19, 21, and 27, Aug. 21, Sept. 4, 18, Oct. 9, and Nov. 20, 1924, pp. 462-466, 501-506, 524-527, 580-582, and 691-698, 9 figs. Ruhr coal conditions; binders for briquetting; drying machines; different types of presses used.

Fuel Briquets in 1923, W. F. McKenney. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:5, Sept. 26, 1924, pp. 41-48, 3 figs. Production; value; distribution; raw materials and binders; briquetting plants in United States; world's production.

Improvements in Couffinhal and Egg Shape Briquet Presses (Neuerungen an Couffinhal- und Eiformbrikettpressen), M. Benedict. Feuerungstechnik, vol. 12, no. 20, July 15, 1924, pp. 167-169, 4 figs. Discusses production of coal briquets in form of cubes of 0.5 to 10 kg. weight or egg shape of various sizes, and presses used for purpose.

Notes on Coal Briquetting. Colliery Engr., vol. 1, no. 5, July 1924, pp. 212-213. Discusses steam consumption for process heating and power, proportion of coal, pitch and moisture, etc.

Plant in Newark Makes Briquets by Trent Process, F. H. Kneeland. Coal Age, vol. 26, no. 21, Nov. 20, 1924, pp. 715-716, 1 fig. Uses screenings and sweepings from anthracite yards; after pulverization coal is "amalgamated" with oil-forming pellets reducing ash over 60 per cent; "amalgam" is then briquetted; advantages and uses of product.

Small Briquettes Plant. Eng. Process, vol. 5, no. 8, Aug. 1924, pp. 153-154, 3 figs. Describes plant designed by Gröppel-Rheinmetall Aktiengesellschaft für Kohlenaufbereitungsanlagen of Bochum for producing egg-shaped briquets.

Brown. See LIGNITE.

By-Products Industry. Coal By-products Industry (L'Industrie des sous-produits de la houille), E. Langrogne and W. Boulin. Technique Moderne, vol. 16, no. 24, Dec. 15, 1924, pp. 837-849, 14 figs. Recovery of by-products in a modern coking plant; condensation of gas, ammonia recovery, benzol recovery, and treatment of sulphate of ammonia, coal tar and coke-oven gas. Bibliography.

Canadian Resources. Report of Institute Fuel Committee. Eng. Jl., vol. 7, no. 12, Dec. 1924, pp. 721-724. Data on sources, production, transportation, and distribution of fuels; bituminous or sub-bituminous coals for domestic heating; bituminous coal for power purposes; coke.

Carbonization. A New Process of Low-Temperature Carbonization for Refining Coal (Ein neuartiges Schwelverfahren zur Veredelung von Kohle), C. Redzich. Wärme- u. Kälte-Technik, vol. 26, no. 23, Dec. 1, 1924, pp. 213-216. Design and construction of Meguin furnace, a vertical rotary furnace in which by careful treatment of coal a thin liquid primary tar and a semi-coke of greater density are obtained, due to use of centrifugal force.

A Study of Some Physical Laws Governing the Carbonization of Coal, A. W. Warner. Gas Jl., vol. 165, nos. 3165 and 3166, Jan. 9 and 16, 1924, pp. 90-91 and 147-148, 1 fig. Discusses five basic laws governing carbonization deduced from experiments with apparatus devised to show how a fourth fundamental process can be applied to carbonization of coking coal. From committee report submitted at 1923 convention of Am. Gas Assn.

Carbonization, W. B. Davidson. Gas Jl., vol. 167, nos. 3194, 3195, and 3196, July 30, Aug. 6, and 13, 1924, pp. 447-448, 515-516, and 580-581. Endeavors to set out briefly and clearly main accomplishments of research work on carbonization described in three Cantor lectures by E. V. Evans (Study of Destructive Distillation of Coal.)

Carbonizing Coal With Regenerated Heat, C. H. S. Tupholme. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 388-389, 1 fig. Description of new type of plant for complete gasification of coal, in which fuel is converted into gas in a single operation, leaving ash, liquor, and tar as residuals, in such a way that a large proportion of potential energy of coal is available as city gas.

Carbonizing in Continuous-Intermittent Retorts, F. Shewring. Gas Wld., vol. 81, no. 2108, Dec. 13, 1924, pp. 582-585 (includes discussion), 5 figs. See also Gas Jl., vol. 168, no. 3212, Dec. 3, 1924, pp. 653-656 (includes discussion), 5 figs. Description of plant which is continuous in gas manufacture and intermittent in coal feed and coke discharge. Coke production, gas production, working results, fuel consumption, etc.

Cast-Iron Retorts for Low-Temperature Carbonization, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 12, Mar. 24, 1924, pp. 471-473, 2 figs. Describes Tozer system designed to permit carbonization at moderate temperature and in short time.

Coal Carbonisation, J. Roberts. Colliery Eng., vol. 1, nos. 7, 8, and 10, Sept., Oct., and Dec. 1924, pp. 305-308, 357-359 and 470-472 and 475, 9 figs. Considers rationale of coking and non-coking coals, their classification and behavior during carbonization. Principles of carbonization. Low-temperature carbonization.

Extraction of Coal by Solvents, P. N. Lategan. S. African Jl. of Industries, vol. 7, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 41-46, 103-108, and 152-160. Low-temperature carbonization experiments with nine samples of South African coals. Jan.: Method; experimental apparatus; description of products. Feb.: Thermal decomposition of coal at 600 deg. cent.; semi-coke (smokeless fuel); low-temperature gas and its composition. Mar.: Tar oils; light spirit, alcohol, and benzol mixtures.

Extraction of Primary Tar and Crude Oils From Coal, Lignite, Etc., by Low-Temperature Carbonization (Extraction du goudron primaire et des huiles brutes, à partir des charbons gras, lignites, etc., par carbonisation à basse température), C. Berthélot. Génie Civil, vol. 85, nos. 10, 11, and 12, Sept. 6, 13, and 20, 1924, pp. 209-213, 230-233, and 251-254, 8 figs. Discusses technical difficulties; modern views; oil yields of lignites, coal, oil shales; field of application of low-temperature carbonization; processes for conversion of primary tars; etc.

Future Prospects of Low Temperature Carbonization, S. W. Parr. Gas Age-Rec., vol. 54, no. 21, Nov. 22, 1924, pp. 733-734 and 756. Review of present-day situation, and future aspects.

Graded Temperature Zones in Coal Carbonization, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 2, Jan. 14, 1924, pp. 54-55, 2 figs. Automatic temperature control is worth attention because of its use here and its possibilities for other applications.

Low Temperature Carbonization, A. McCulloch. Chem. & Industry, vol. 43, no. 11, Mar. 14, 1924, pp. 271-273. Need for smokeless fuel, suitable particularly for domestic purposes; difficulties encountered in producing such fuel from bituminous coal; progress made in this direction, and future of low-carbonization industry.

Low-Temperature Carbonization, A. McCulloch. Chem. Trade Jl., vol. 74, no. 1918, Feb. 22, 1924, pp. 220-221. Technical and economic problems still to be solved.

Low-Temperature Carbonization, C. H. Lander. Iron & Coal Trades Rev., vol. 109, no. 2940, July 4, 1924, pp. 9-10. See also Gas Jl., vol. 168, no. 3212, Dec. 3, 1924, pp. 659-661. There are two distinct lines whereby problem of low-temperature carbonization may be attacked, differentiation being according to method whereby heat is supplied to coal under treatment. Gives two methods of carbonizing coal. (Abstract).

Low Temperature Carbonization, D. Brownlie. Combustion, vol. 11, no. 5, Nov. 1924, pp. 354-359, 8 figs. Richards-Pringle process.

Low Temperature Carbonization. Combustion, vol. 10, no. 6, Dec. 1924, pp. 428-429 and 437. Opinions on its importance and future possibilities.

Low-Temperature Carbonisation and the Need for a National Scientific Policy, D. Brownlie. Chem. & Industry, vol. 43, no. 1, Jan. 4, 1924, pp. 2-4. Points out national importance of process.

Low Temperature Carbonisation, as Applied to Fuel Problems in Japan, Kwan-ichi Omori. Fuel, vol. 3, no. 10, Oct. 1924, pp. 360-366. Classification of processes; fuel problems in Japan; development of low-carbonization processes; present aspect.

Low-Temperature Carbonization of Coal, C. M. Garland. Power, vol. 60, no. 13, Sept. 23, 1924, pp. 490-493, 2 figs. Coal coked evenly and continuously by superheated steam at one pound pressure generated from volatile and residue of coking process. Including fixed charges on investment, cost of treating coal containing 5 per cent moisture is estimated at 80 cents per ton.

Modern Methods of Coal Carbonization, Rob. Gray. Gas World, vol. 80, no. 2069, Mar. 15, 1924, pp. 234-237; also in Gas Jl., vol. 165, no. 3175, Mar. 19, 1924, pp. 713-715. Construction of horizontal and vertical retorts; process of distillation in horizontals; decomposition of ammonia; comparison of tar from horizontal and vertical retorts; volatile products; Mond plant; calorific value and vertical retorts; water-gas plant. (Abstract.) Paper before West. District of Scottish Junior Gas Assn.

Notes on Carbonizing Temperatures, W. H. Warren. Gas Wld., vol. 81, no. 2106, Nov. 29, 1924, pp. 534-536 (includes discussion). See also Gas Jl., vol. 168, no. 3212, Dec. 3, 1924, pp. 649-651. Advantages an disadvantages of high combustion temperatures. Comparative working results obtained from retort houses using various combustion temperatures.

Practical Coal Carbonization, A. R. Powell. Mech. Eng., vol. 46, no. 7, July 1924, pp. 389-394, 6 figs. See also (abstract) Univ. Engr., vol. 40, no. 4, Oct. 1924, pp. 25-33, 6 figs. Enumeration of technical problems of low-temperature carbonization and classification and description of the various processes.

Practical Coal Carbonization, F. W. Sperr, Jr. Mech. Eng., vol. 46, no. 6, June 1924, pp. 329-333, 4 figs. Also Universal Engr., vol. 40, no. 2, Aug. 1924, pp. 31-37, 4 figs.; and Chem. Age (N. Y.), vol. 32, nos. 6 and 7, June and July 1924, pp. 277-279 and 297-299, 4 figs. Discusses high-temperature and low-temperature carbonization with special reference to American conditions; yields and values of by-products; coke as boiler fuel.

Recovery of Materials From Fuels in Power Plants (Die Gewinnung von Wertstoffen aus dem Brennstoff in Kraftbetriebe), Pradel. Braunkohle, vol. 23, nos. 35 and 36, Nov. 29 and Dec. 6, 1924, pp. 645-648 and 671-675, 22 figs. Reviews patents on low-temperature carbonization on grates, in retorts, and in shafts, giving details of design and operation.

Report of the Low Temperature Carbonization Section (Am. Gas Assn.), S. W. Parr. Am. Gas Jl. (daily edition), vol. 121, no. 19, Oct. 17, 1924, pp. 1079-1080. Gives latest developments in field.

Selection, Preparation and Carbonization of Coal and Preparation of Coke, A. W. Grant, Jr. Am. Gas Jl. (daily edition), vol. 121, no. 18, Oct. 16, 1924, pp. 1038-1040. Ash and sulphur contents and agglutinating values as reflected by transition of size of coal; pulverization; cementing materials in coal; coke degradation; advantages of high-temperature carbonization; coke quenching and handling.

Smokeless Fuel. Chem. & Industry, vol. 43, no. 35, Aug. 29, 1924, p. 874. Principles of pure coal briquet carbonization process.

Standard Carbonizing Plant Test Code, D. W. Wilson. Am. Gas Jl. (daily edition), vol. 121, no. 19, Oct. 17, 1924, p. 1077. Committee report, giving detailed forms.

Summary of British Low-Temperature Carbonizing Methods, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 26, June 30, 1924, p. 1019. Present trends and future prospects.

Test Results from Low Temperature Carbonization, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 10, Mar. 10, 1924, p. 397. Further experiences with Maclaurin plant at Dalmarnock, Scotland, show more fully what may be expected from this plant.

Tests of Run-of-Mine versus Three-quarters Inch Coal for Carbonization, F. D. Lohr and A. M. Beebe. Am. Gas Jl. (daily edition), vol. 121, no. 19, Oct. 17, 1924, pp. 1075-1077. Results of plant tests and conclusions.

The Carbonization of Coal (La carbonisation de la houille), E. Audibert. Technique Moderne, vol. 16, no. 3, Feb. 1, 1924, pp. 77-82. Discusses problems which have been subject of research and conclusions arrived at; notes on coking coal; carbonization of dry coal; blast-furnace coke, reactivity of coke and its influence on efficiency of blast furnace; valuation of by-products.

The Carbonisation of Coal in the Form of Fine Particles, H. E. Newall and F. S. Sinnatt. Fuel, vol. 3, no. 12, Dec. 1924, pp. 424-434, 11 figs. Production of cenospheres; describes phenomena observed when coal in form of fine particles is allowed to fall into inert atmosphere maintained at definite temperature.

The Low Temperature Carbonization of Coal. Petroleum Times, vol. 12, no. 304, Nov. 1, 1924, pp. 691-693, 1 fig. British government test on Parker plant installed at Barnsley.

The Maclaurin Process of Producing Smokeless Fuel, R. Sturrock. Gas World, vol. 80, no. 2061, Jan. 19, 1924, p. 52. Notes on Maclaurin process of low-temperature carbonization for production of a smokeless solid fuel, and results of tests made for Glasgow Corpn. Gas Dept. Extract from paper read before Scottish Jr. Gas Assn.

The Parker Low-Temperature Carbonisation Plant. Engineering, vol. 118, no. 3069, Oct. 24, 1924, pp. 588-589, 3 figs. Details of plant erected at Barugh works of Low-Temperature Carbonisation, Ltd., consisting of two settings, each of 32 retorts; results of test.

The Physics of the Coking Time. Gas Wld., vol. 81, no. 2107, Dec. 6, 1924, pp. 12-13 (Coking Sec.). Survey of factors influencing period of carbonization.

Thermal Reactions of Coal During Carbonization. J. D. Davis and P. B. Place. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 589-592, 4 figs. Discusses thermal behavior of coals during carbonization and compares methods applicable to determination of reaction heats; heat-rate method originally used by Hollings and Cobb for investigating reaction heats of English coals has been applied with slight modification to seven typical American coals and sample of pine sawdust, and attempt made to compare results with those found by direct determination in constant-volume calorimeter; results indicate that for high temperatures prevailing in coke-oven operations reaction heats are endothermic.

To Abolish the Burning of Raw Coal, D. Brownlie. Colliery Engr., vol. 1, no. 6, Aug. 1924, pp. 287-292, 1 fig. Review of present position of low-temperature carbonization and some constructive proposals; describes various processes.

Using a Modified Mond Producer for Low-Temperature Carbonization, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 7, Feb. 18, 1924, pp. 271-273, 2 figs. Process changed to produce richer gas and more tar, with increased overall thermal efficiency.

Using Internal Heating for Low-Temperature Carbonization, C. H. S. Tupholme. Chem. & Met. Eng., vol. 30, no. 22, June 2, 1924, pp. 861-863. Account of several important processes.

See FUELS, Research.

Carbonization By-Products as Power Sources. The Liquid By-Products of Coal Corbonization as Sources of Power, W. G. Adam. Gas Jl., vol. 167, no. 3191, July 9, 1924, pp. 254-255. See also Gas Wld., vol. 81, no. 2086, July 12, 1924, pp. 40-42, and Iron & Coal Trades Rev., vol. 119, no. 2940, July 4, 1924, pp. 10-11. Liquid organic or oil by-products; use of silica gel and charcoal; gum-forming compounds; problems for future. Extracts from World Power Conference paper.

Carbonizing Plant. New Coal Carbonizing Plant at Danbury, Conn. Gas Age-Rec., vol. 54, no. 15, Oct. 11, 1924, pp. 505-508, 5 figs. Plant is of horizontal gas-oven type.

Chemical Constitution. See FUELS, Solid, Chemical Constitution.

Classification. Classification of Coal That Will Enable Buyer to Know What Kind of Fuel He Is Getting, Geo. H. Ashley. Coal Age, vol. 25, no. 5, Jan. 31, 1924, pp. 167-171, 1 fig. See also Coal Mine Mgmt., vol. 3, no. 1, Jan. 1924, pp. 29-31 and 56-61. Suggests that coals be divided into ten classes by percentages of fixed carbon with ash equated to 7 per cent; seven new classes added to recognized divisions; graded also for quality.

Classification of Coal With Special Reference to Capacity for Coking (Beitrag zur Klassifikation der Steinkohle mit besonderer Berücksichtigung ihres Kokungsvermögens), S. Qvarfort. Gas- u. Wasserfach, vol. 67, no. 48, Nov. 29, 1924, 1924, pp. 728-730, 11 figs. Details of method for readily determining properties of coals, or for identifying coals, especially their coking properties.

Contribution to the Classification of Coal With Special Reference to Its Coking Qualities (Bidrag til klassifikationen av stenkol med särskild hänsyn taken till deras koksningsförmåga), S. Qvarfort. Teknisk Tidskrift, vol. 54, no. 15, Apr. 12, 1924, pp. 25-30 (Kemi), 15 figs. Method for testing coking qualities of a coal sample is described and, on basis of test, coal is classified as belonging to one of the nine different classes, defined by author. Advantageous use of such tests for gas works.

The Chemical Classification of Coal, C. A. Seyler. Fuel, vol. 3, nos. 1, 2, and 3, Jan., Feb. and Mar., 1924, pp. 15-26, 41-49 and 79-83, 4 figs. Author proposes nomenclature which was devised to disturb existing terminology as little as possible.

Cleaning. Cleaning Coal with Spiral Separators and Concentrator Tables. Gas Engr., vol. 40, no. 580, Aug. 1924, pp. 176-177, 2 figs. Spiral separator consists of central post with number of separating threads running spirally from top to

bottom and slightly inclined towards center, down which coal and stone slide under action of gravity; for dealing with coal below ⅜ in. in size H-H concentrator table is used; sole driving mechanism for this table consists of single unbalanced pulley carried on shaft which is clamped fast to heavy yoke at head end of shaking frame.

Concentrating Tables—Their Operation and What Results They Obtain in Cleaning Anthracite, J. Griffin. Coal Age, vol. 26, no. 7, Aug. 14, 1924, pp. 217-219, 4 figs. Used first eight years ago. Clean sizes up to pea. Clinkering eliminated; less ash after burning; reduced labor; increased boiler capacity; regulatable ash content.

Dry Cleaning of Coal, R. W. Arms. Am. Inst. Min. & Met. Engrs.—Trans., no. 1330-C, Mar. 1924, 9 pp. Classification of dry-cleaning devices, with theoretical discussion of principles involved; outline of methods of handling dust and screening difficulties at McComas plant, and other plants; describes American pneumatic separator and discusses sizing required, effect of moisture in raw coal, disposition of middlings, and other aspects of process; results of tests on various coals, and results of operation at Raton and McComas.

Dry Cleaning of Nut, Pea and Slack Coal, R. W. Arms. Coal Mine Mgmt., vol. 3, no. 1, Jan. 1924, pp. 53-54. Describes pneumatic separators.

Dry Cleaning Plant of the Greenhill Mine of the West Canadian Collieries, Limited, Blairmore, Alberta, G. A. Vissac. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 643-653, 2 figs. Deals particularly with economic side of coal washing; discusses why dry-cleaning process was selected and describes plant.

How to Clean and Size Coal So That a Favorable Market Can Be Maintained. Coal Age, vol. 25, no. 21, May 22, 1924, pp. 761-764, 10 figs. By air cleaning, ash is reduced between 33 to 50 per cent; coal gets to market unfrozen; what coal should be sized in tipple and what in rescreen. Discussion at meeting on coal preparation at Am. Min. Congress. See also article by G. F. Osler entitled, How Should Coal Be Screened and into How Many Sizes?, pp. 762-764.

Pneumatic Coal Separation, Wm. J. O'Toole. Coal Mine Mgmt., vol. 3, no. 12, Dec. 1924, pp. 36-41, 2 figs. Details of American pneumatic separator and installations of this device; sizing and dust collecting.

Swastika Dry Coal Cleaning Plant, F. Young. Ariz. Min. Jl., vol. 7, no. 19, Mar. 1, 1924, pp. 5-6 and 38, 1 fig. Description of dry process coal cleaning plant built and operated by St. Louis, Rocky Mt. & Pacific Co. (Swastika Fuel Co., distributors) at its mines at Brilliant, New Mexico, and special machinery used in this process.

The Dry Cleaning Process for Coal Min. Congress Jl., vol. 10, no. 7, July 1924, pp. 311-314, 2 figs. Recent developments in equipment; description of Paint Creek Coal Co.'s plant; primary vs. secondary preparation; cost of process; its advantages and disadvantages.

The Improvement of Coal by Mechanical or Thermal Methods of Treatment, J. B. B. Kershaw. Fuel, vol. 3, nos. 5, 6, and 7, May, June, and July 1924, pp. 165-170, 189-195, 249-253, 12 figs. Methods of removing impurities from small coal and from all kinds of washery waste and pit refuse, namely, (1) hydraulic or wet methods; (2) methods involving use of oil; (3) electrostatic and other dry methods; (4) methods involving use of heat.

The Wyco Dry Cleaning Plant, R. W. Arms. Coal Industry, vol. 7, no. 4, Apr. 1924, p. 163. See also Coal Age, vol. 25, no. 12, Mar. 20, 1924, pp. 421-422, 2 figs. Design and methods at plant built for Wyoming Coal Co. in W. Va., using American pneumatic separators.

What Anthracite Region Is Doing to Make Fine Sizes of Coal More Readily Salable, F. H. Kneeland. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 673-675, 5 figs. Jigging, tabling, and floating are cleaning processes in use; jigs now operate without suction and stratification occurs in quiescent liquid.

See also COAL WASHING.

Coking. Effect of Oxygen of Coal in Coking (Der Einfluss des Sauerstoffs der Kohle bei der Verkokung), A Thau and Trutnovsky. Glückauf, vol. 60, no. 41, Oct. 11, 1924, pp. 925-928. Discusses theory of Roberts, an American, that in coking we have to count with available oxygen, and that oxygen does not combine with hydrogen to water, leaving an excess of oxygen.

Combustion Power Determination. Determining the "Combustion Power" of Coal, M. Nicloux. Am. Gas Jl., vol. 120, no. 7, Feb. 16, 1924, pp. 137-139 and 151-152. What this means, and description of methods and apparatus. Translated from Chimie & Industrie.

Conservation, Railways. Coal Conservation, A. J. Law. Southern & Southwestern Ry. Club, vol. 17, no. 9, May 1924, pp. 23-24, 27-28, 31-32, 35-36, 39-40 and (discussion) 40, 43-44, 47-48 and 51-53. Points out measures which may be taken to save coal with only reasonable expenditure of money.

Constitution. The Constitution of Coal, Marie C. Stopes and R. V. Wheeler. Serial article in Fuel, beginning Jan. and ending Nov. 1924, 20 figs. Definition of coal; constitution; mode of accumulation of coal-forming materials; action of solvents; destructive distillation; initial decomposition; distillation at different temperatures; sulphur and nitrogen compounds; microscopical evidence bearing on constitution; opinions and observations of present research; ulmin compounds; action of reagents; artificial coal; theories. See also bibliography in no. 12, Dec. 1924, pp. 439-452.

Control Plan. Will This Solve America's Coal Problems? O. M. Fox. Ry. Jl., vol. 30, no. 1, Jan. 1924, pp. 29-33, 7 figs. Describes and analyzes Indiana plan of control; purports to eliminate over-production and over-manning, to stabilize prices and insure steady supply; would lighten burden of railways.

Crushing. The Primary Reduction of Coal. Gas & Oil Power, vol. 20, no. 231, Dec. 4, 1924, pp. 47-49, 4 figs. Crushing coal for use on automatic stokers or for further treatment in pulverizer mills; gyratory crushers; intermittent crushing; single toggle breaker; single roll crusher; swing hammer pulverizer.

Deposits. See COAL DEPOSITS.

Distillation. A Study of the Destructive Distillation of Coal, E. V. Evans. Roy. Soc. Arts—Jl., vol. 72, nos. 3749 and 3750, Sept. 26 and Oct. 3, 1924, pp. 767-782 and 785-801, 26 figs. See also Gas Jl., vol. 165, nos. 3172, 3173, and 3174, Feb. 29, Mar. 5 and 12, 1924, pp. 483-488, 15 figs.; 550-559, 11 figs.; and 629-634, 6 figs.; and Gas World, vol. 80, nos. 2067, 2068, and 2069, Mar. 1, 8 and 15, 1924, pp. 170-176, 13 figs.; 197-207, 11 figs.; and 228-234, 6 figs. New interpretation of therm; distribution of therms in high- and low-temperature process; prevention of therm wastage; therm yield and efficiency. Mar. 5: Volatile therms; rate of carbonization in relation to yields of gas and tar therms; constitution of primary tar; cracking of primary and secondary tars; economic considerations. Mar. 12: Physical behavior of coal under heat; increasing conductivity of coal; results of admixture of inert material; briquette carbonization; de-ashing of coal. Three Cantor lectures delivered before Roy. Soc. Arts.

A Successful Low Temperature Distillation Process, H. Holzwarth. Coal Industry, vol. 7, no. 3, Mar. 1924, pp. 112-115, 5 figs. Thyssen system, recently introduced in United States, has been in successful use for some years; expected to prove of value; illustrations of Thyssen kilns in Germany, and how they work.

Latest Progress in Coal Distillation and Derived Industries (Ultimos progresos obtenidos en la destilacion del carbon y en las industrias derivadas), L. Toron. Revista Minera Metalúrgica y de Ingenieria, vol. 75, nos. 2943 and 2944, Sept. 8 and 16, 1924, pp. 509-511 and 528-533, 2 figs. Discusses general improvement in distillation, crude combustibles, production of gas, coking furnaces, by-product recovery, tar, ammonia.

Low-Temperature Distillation, H. Nielsen. Gas Jl., vol. 168, no. 3209, Nov. 12, 1924, pp. 434-438, 4 figs. See also Chem. Trade Jl. and Chem. Engr., vol. 75, no. 1955, Nov. 7, 1924, pp. 549-551. Important points in regard to low-temperature carbonization; "L & N" process; briquetting; gas for furnaces. (Abstract.) Paper read at Manchester Smoke Abatement Conference.

Low-Temperature Distillation of Coal and the Question of Motor Fuel and Lubricating Oil (La distillation des carbons a basse température et la question du carburant et du lubrifiant nationaux), H. Havre. Société Industrielle de l'Est—Bul., no. 173, Apr.-May-June 1924, pp. 69-85, 7 figs. Discusses French situation, production of gas, tar and coke and its influence on carbonization methods, low-temperature distilling apparatus of various types.

Low-Temperature Distillation of Farmville, N. C., Coal, W. E. Giles and F. C. Vilbrandt. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 779-782, 2 figs. Low-temperature distillation study indicates that this excessively smoky and high-volatile coal can be converted into commercial gas and low-volatile residue suitable for domestic consumption.

Mondello Process for Distilling Fossil Fuel (Il processo Mondello per la distillazione dei combustibili fossili), G. Gastelli. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 2, Aug. 15, 1924, pp. 40-43. Details of new process by U. and P. A. Mondello based on principle of condensation with rapid lowering of temperature enabling recovery of primary tar, heavy oils, and medium-light oils.

Where Low Temperature Distillation Stands, C. H. S. Tupholme. Combustion, vol. 10, no. 1, Jan. 1924, pp. 57-59. Discussion of present status of low-temperature coal distillation, particularly in Great Britain. Author predicts that in near future we shall see low-temperature distillation standing not as a separate industry but in coöperation with those industries which employ power in any form.

See also Carbonization.

Distillation Products. Coal Distillation Products, Coke Oven Installations and Recovery Plants of the Société Normande de Métallurgie at Caen (Les produits de la distillation de la houille, installations des fours à coke et des usines de récupération de la Société normande de Métallurgie, à Caen), A. Grebel. Génie Civil, vol. 84, no. 25, June 21, 1924, pp. 585-593, 15 figs. Describes blast furnaces and steel plants, stock and preparation of coal, coke ovens, benzol treatment, tar distillation, etc.

Dry Cleaning. See Cleaning.

Drying. Notes on Coal Drying. Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 99-102, 2 figs. Brief descriptions of drying machines suited to both preliminary and final stages of preparation of pulverized coal and for other purposes.

Fusain, Analyses of. Analyses of Fusain, A. E. Beet. Fuel, vol. 3, no. 11, Nov. 1924, pp. 390-392. Data regarding properties.

Gasification. Complete Gasification of Coal, H. Strache. Gas Wld., vol. 81, no. 2091, Aug. 16, 1924, pp. 161-162, 2 figs. Also Colliery Guardian, vol. 123, no. 3321, Aug. 22, 1924, p. 483, 1 fig. Deals with double-gas (gas made by alternately blowing air and steam through heated coal in producer); use of coal in producer instead of coke distinguishes double-gas from water gas. Abstract of paper read at World Power Conference.

Further Experiences in Complete Gasification, F. H. Robinson. Gas Jl., vol. 167, no. 3202, Sept. 24, 1924, pp. 927-931, 6 figs. Description of system employed at Harrogate; heating balance; working costs; comparison of costs with horizontals.

The Regenerative Coal Gasification System at Aylesbury, A. G. Lane. Gas Jl., vol. 167, no. 3190, July 2, 1924, pp. 149-153, 3 figs. Also Gas Engr., vol. 40, no. 579, July 1924, pp. 151-152; and Gas Age-Rec., vol. 54, no. 6, Aug. 9, 1924, pp. 177-180, 2 figs. In this process of complete gasification coal is transformed into gas in single operation, leaving only ash, liquor, and tar as residuals, and in such manner as to render very large proportion of energy of coal available and salable as town's gas.

See also Carbonization.

Heat, Effect on. Quantity and Nature of Gas Evolved by Solid Fuels under the Action of Heat or of a Vacuum: Coals (Sur la quantité et la nature des gaz dégagés par les combustibles solides sous l'action de la chaleur et du vide: Houilles), P. Lebeau. Académie des Sciences—Comptes Rendus, vol. 178, no. 4, Jan. 21, 1924, pp. 391-393. Study of effect of heat on ten different kinds of coal; gaseous evolution in all cases becomes rapid at 400 deg. (1 to 5 cu.m. per metric ton); most coals give, per metric ton, 15 kg. of hydrogen, anthracite giving 25 kg.

Heating Value. A Graphic Method of Calculating the Lower Heating Value of Coal with Varying Water Content (Ein graphisches Verfahren zur Berechnung des unteren Heizwertes von Kohle bei verschiedenem Wassergehalt), H. Wegener. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 9, Sept. 1924, pp. 193-195, 2 figs. Graphic method with which it is possible to determine very quickly and with sufficient accuracy lower heating value of moisture-free coal.

Loss of Heating Value of Bituminous Coal on Exposure to Air, J. F. Byrne and J. D. Davis. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 775-778, 5 figs. Method and results of determination of loss in heating value of coal on exposure to air.

The Calorific Values of Coals, with Special Reference to the Coals of Nottinghamshire and Derbyshire, J. W. Whitaker. Instn. Min. Engrs.—Trans., vol. 67, pt. 2, May 1924, pp. 199-221, 7 figs. Also Colliery Guardian, vol. 127, no. 3299, Mar. 21, 1924, pp. 734-737, 6 figs; and Iron & Coal Trades Rev., vol. 108, no. 2924, Mar. 14, 1924, pp. 427-428, 1 fig. Results of analyses and calorific values of 38 samples of coal.

Hydrocarbons from. See HYDROCARBONS, Coal Conversion into.

Ignition. The Ignition of Coal, R. V. Wheeler. Fuel, vol. 3, no. 10, Oct. 1924, pp. 366-370, 5 figs. Tests to determine what relationship, if any, there is between chemical composition of coal and its ignition temperature; it is concluded that reaction responsible for "self-heating" of coal is mainly one of attachment of oxygen to molecules of high carbon content.

Low-Ash Coking. Producing Low-Ash Coking Coal, H. M. Chance. Iron Trade Rev., vol. 75.

no. 3, Jan. 17, 1924, p. 236. Differential separation affords possibility of obtaining desirable fuel from impure high-ash coal which is available in large quantity in many mining districts; first tried in anthracite field.

Low-Grade and Waste. The Utilisation of Low-Grade and Waste Coals in Power Production, W. S. Coates. Chem. & Industry, vol. 43, no. 21, May 23, 1924, pp. 157T-163T, 5 figs. Notes on furnace design; combustion of carbon in coke; boiler; pulverized fuel.

Low-Temperature Carbonization. See Carbonization.

Measurement by Volume. Coal Measurement by Volume versus Measurement by Weight, J. E. Lea. Eng. & Boiler House Rev., vol. 37, no. 6, Jan. 1924, pp. 194 and 196, 2 figs. Merits of measurement by volume.

Microscopic Examination. Microscopic Examination of Coal (Die mikroskipische Untersuchung der Kohle im auffallenden Licht), H. Winter. Braunkohle, vol. 23, no. 33, Nov. 15, 1924, pp. 605-613, 16 figs. Discusses examination of non-transparent minerals in light falling onto them, without or with slides, and reviews literature on subject.

Mines. See COAL MINES.

Mining. See COAL MINING.

Moisture in. Analytical Fuel Investigation. I. Practical Determination of Water Content in Coal (Brennstoffanalytische Untersuchungen. I. Die Bestimmung des Wassergehaltes der Steinkohle für praktische Zwecke), C. Blacher and G. Girgensohn. Chemiker-Zeitung, vol. 48, no. 65, May 29, 1924, pp. 357-359. Describes various methods and criticizes their results.

Apparatus for the Automatic Determination of Water in Coal, Tar and Oil (Ein automatischer Wasserbestimmungsapparat für die Untersuchung von Kohle, Teer und Oel), K. Schaefer. Chemiker Zeitung, vol. 48, no. 125, Oct. 16, 1924, p. 761, 1 fig. By use of different receivers in same apparatus determination can be made on materials containing varying amounts of water; apparatus consists of round-bottomed flask, containing material and zylene, fitted with ground-glass stopper through which passes distillation tube.

Moisture in Coal, W. S. Patterson. Power Engr., vol. 19, no. 222, Sept. 1924, pp. 329-330. Discusses boiler efficiency and wet coal, moisture and flue gas, moisture and economizer corrosion, moisture and spontaneous combustion, and appearance of wet coal.

Normal Water Content of Coal and Coke (Het normale Watergehalte van steenkool en cokes), N. Schoorl. Chemisch Weekblad, vol. 21, no. 1091, Aug. 23, 1924, pp. 393-395, 1 fig. Large number of samples, after exposure to atmospheres of varying degrees of humidity until weights were constant, were examined for water content, and results plotted on curves connecting water content and degree of humidity; forms and positions of curves show no relation to composition or calorific value of fuels.

Nitrogen Estimation. The Estimation of Nitrogen in Coal, A. Baranov and R. A. Mott. Fuel, vol. 3, nos. 12 and 13. Jan. and Feb. 1924, pp. 31-34 and 49-52, 1 fig. From this study of different methods of determining nitrogen in coal it appears that particular modification of Kjeldahl method chosen by Fuel Research Board is most accurate.

The Estimation of Nitrogen in Coal, W Donovan. Analyst, vol. 49, no. 575, Feb. 1924, pp. 57-61 and (discussion) 62. Nitrogen was estimated in five coals by Dumas method and in same coals by Kjeldahl-Gunning process; latter results, plus 0.2 per cent, would give correct percentage of nitrogen in coals examined.

The Estimation of Nitrogen in Coal and Coke, G. E. Foxwell. Gas World, vol. 80, no. 2059, Jan. 5, 1924, pp. 12-14. Methods generally used; Kjeldahl method not reliable; Dumas' method; modifications of Dumas test; making Kjeldahl test reliable.

Oil from. See OIL, Production from Coal.

Oxidation. Silver-sulphochromic Oxidation of Coal (Oxydation argentosulfochromique de la houille), L. J. Simon. Académie des Sciences—Comptes Rendus, vol. 178, no. 9, Feb. 25, 1924, pp. 775-777. When coal is heated with mixture of silver bichromate and concentrated sulphuric acid at 100 deg., 4 to 5 per cent of carbon present remains unoxidized; formation of gaseous oxidation products is more rapid at 50 than at 60 deg., at which temperature 28 per cent of coal remains unchanged; it is concluded that coal contains two constituents intimately mixed: one is oxidized at low temperatures; other, like coke, requires temperature of 100 per cent.

Sulphochromic Oxidation of Coal (Sur l'oxydation sulfochromique de la houille), L. J. Simon. Académie des Sciences—Comptes Rendus, vol. 178, no. 5, Jan. 28, 1924, pp. 495-498. Sulphochromic oxidation of finely ground coal containing 72.4-72.3 per cent of carbon gives 78 per cent of carbon present as CO_2, remainder being obtained partly as insoluble, partly as soluble, carbonaceous matter; prolonged oxidation by same method at 100 deg. causes evolution of oxygen (together with CO and CO_2).

Oxygen Estimation. The Estimation of Oxygen in Coal, G. E. Foxwell. Gas World, vol. 80, no. 2063, Feb. 2, 1924, pp. 11-12. Proposes methods.

Pennsylvania. Coal Reserves in Pennsylvania, J. D. Sisler. Pennsylvania Topographic & Geologic Surv. Bul. nos. 81 and 85, Nov. 1 and Mar. 20, 1924, 10 and 11 pp. respectively. Two bulletins giving tables of estimated quantity of coal in original deposit, quantity mined out and lost, and quantity recoverable in each township, workable area of each township, and summary of resources by beds, Bul. no. 81 dealing with Clarion County and Bul. no. 85 with Jefferson County.

Volatile Matter in Pennsylvania Coals, J. D. Sisler. Pennsylvania Topographic & Geologic Surv. Bul. no. 81, Nov. 1, 1923, 11 pp., 1 fig. Discusses problem of volatile matter, and shows relation of oil and gas pools to volatile matter in Pennsylvania coals, and use of coals from different districts; shows graphically relation of folding, faulting, and movement to chemical character of coals.

Phosphorus in. Phosphorus in Coal: Its Distribution and Removal, R. L. Cawley. Fuel, vol. 3, no. 6, June 1924, pp. 211-212. From results recorded, it is apparent that in seam of coal there is no one variety or macroscopic ingredient that contains bulk of phosphorus.

Plastic State. The Plastic State of Coal, G. E. Foxwell. Fuel, vol. 3, nos. 5, 6, 7, 8, 9 and 10, May, June, July, Aug., Sept. and Oct. 1924, pp. 174-179, 206-210, 227-235, 276-283, 315-319 and 371-375, 14 figs. May and June: Path of travel of gases in coke oven. July: Temperature of formation and path of travel of principal by-products. Aug.: General physical phenomena associated with plastic state. Sept.: Chemical changes occurring during plastic stage; influence of previous history of coal on plastic curve. Oct.: Relationship between plastic curve, coking index and composition of coal.

Preheating, Effect of. The Influence of Preheating Unoxidized and Partially Oxidized Coal upon its Rate of Absorption of Oxygen, G. Coles and J. I. Graham. Fuel, vol. 3, no. 11, Nov. 1924, pp. 384-390. Results of experiments made with sample of non-coking coal from South Staffordshire; deals with effect of heating coal prior

to oxidation, and with effect of heat upon partially oxidized coal.

Preparation. Coal Preparation on Modern Principles (Kohlenaufbereitung nach neuzeitlichen Grundsätzen), E. Dupierry. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 35, Aug. 30, 1924, pp. 905-907, 5 figs. Discusses difference in preparation of high- and low-grade coal, coal washing, fine screening, dust collection, etc.

Reinforced-Concrete Buildings for Coal Preparation in the Ruhr (Eisenbetonbauten für die Aufbereitung der Kohle im Ruhrkohlenbergbau), A. Konrad. Bauingenieur, vol. 5, no. 13, July 15, 1924, pp. 391-394, 8 figs. Describes recent plants for crushing, screening, washing of coal, gas scrubbing plants, etc.

Selection, Preparation and Carbonization of Coal and Preparation of Coke, A. W. Grant, Jr. Am. Gas Assn. Monthly, vol. 6, nos. 8 and 9, Aug. and Sept. 1924, pp. 501-510 and 571-575, 5 figs. Discusses ash and sulphur contents and agglutinating values as reflected by transition of size of coal; sulphur; pulverization; cementing material in coal; coke degradation; heating; indices of coke comparison; etc.

The Preparation of Coal for the Market, F. S. Sinnatt and H. E. Mitton. Instn. Min. Engrs.—Trans., vol. 67, part 6, Sept. 1924, pp. 481-516, 21 figs. partly on supp. plates. See also Colliery Guardian, vol. 127, nos. 3311, 3312 and 3313, June 13, 20 and 27, 1924, pp. 1508-1510, 1580-1581, and (discussion) 1647-1648, 6 figs. Notes on screening of coal; purification in dry condition; pneumatic coal cleaning; coal-washing processes and tests.

The Preparation of Coals, J. Loriet. Queensland Govt. Min. Jl., vol. 24, no. 283, Dec. 1923, pp. 465-468. Requirements of consumers and responsibilities of producers; arrangement of storage hoppers, etc.; advances in mechanical equipment. Abridged from report in Chaleur et Industrie.

See also Cleaning; Drying; COAL WASHING.

Production Cost and Price. What Is the Relation of Cost of Production to the Price of Coal?, D. L. Wing. Coal Age, vol. 25, no. 12, Mar. 20, 1924, pp. 428-430. Efficiency of management, physical conditions, lost time, variation in payments for royalties and in amounts for depletion, depreciation and officers' salaries among factors that cause wide range in output costs.

Production, United States. Coal in 1922, F. G. Tryon and S. A. Hale. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:33, Oct. 2, 1924, pp. 439-669, 18 figs. Review of coal industry in 1922; statistics of production and labor; production classified by mining methods; world's production; production, by States.

Prospecting for. Studying Sub-soils Without Borings (O conhecimento do sub-solo sem sondagens), P. O. de Castro. Revista Brasileira de Engenharia, vol. 8, no. 4, Oct. 1924, pp. 113-117, 7 figs. Theory and practice of Mintrop "seismos" method for studying sub-soils by observing and measuring vibrations passing through earth from points of distant artificial explosions to recording seismographs, successfully used in Holland.

Pulverized. See PULVERIZED COAL.

Purchasing and Inspection. An Effective Method for Keeping Fuel Costs within Bounds, G. Milton Levy. Factory, vol. 32, no. 1, Jan. 1924, pp. 40-42, 2 figs. It has been found that by compositing coal by shippers, it is possible to determine quality of coal shipped from various mines and when unsatisfactory, shipments from that mine can be cancelled; presents chart showing results of this inspection over period of year.

Reaction Between Gas and. The Speed of Reaction and Its Bearing on Technology (Technik und Reaktionsgeschwindigkeit), H. v. Jüptner. Feuerungstechnik, vol. 12, nos. 7, 8, and 9, Jan. 1, 15, and Feb. 1, 1924, pp. 49-52, 58-60, and 66-70, 1 fig. Deals with speed of reaction between coal and gas; influences of temperature on reaction speeds.

Recovery from Ashes. Fuel Recovery from Pan Ash. Gas Jl., vol. 165, no. 3167, Jan. 23, 1924, pp. 200-201, 3 figs. Description of dry-magnetic ash-separating process and equipment.

Recovering the Unburned Fuel from Ashes, S. H. Bunnell. Combustion, vol. 11, no. 4, Oct. 1924, pp. 287-288, 2 figs. Describes three German inventions in practical use for recovering usable coke from common ashes, namely, magnetic ash separator produced by Krupp Works, Weber system, and Schilde system.

Refining Methods. Modern Coal Refining Methods, M. W. Neufeld. Eng. Progress, vol. 5, no. 6, June 1924, pp. 109-112, 3 figs. Importance of by-products; vertical rotary distilling furnace of firm of Meguin A. G.; benzol production according to Raschig method.

Relative Power-Plant Values. Relative Plant Values of Coal, K. M. Holaday. Elec. Wld., vol. 84, no. 8, Aug. 23, 1924, pp. 363-365, 1 fig. Shows how heating values, moisture content, ash content, and fusing temperature as determined by laboratory test, in conjunction with a grading table, can assist in comparing fuels of different quality.

Separation, Differential. How Differential Separation Improves Quality, H. M. Chance. Coal Trade Jl., vol. 55, no. 11, Mar. 12, 1924, pp. 225, 239, and 242. Describes method of separation used in anthracite region which will enable bituminous mines to reduce ash content of high-ash coals with minimum loss in waste.

Siberia. The Tunguzka Coal Basin and the Kureika Graphite Deposit (Le bassin houiller des Toungouzka et le gisement de graphite de Kouréika), V. Logatchoff. Annales de la Société Géologique de Belgique, vol. 66, no. 4, Apr. 15, 1924, pp. B264-B285, 8 figs. Discusses geology of Northern Siberia, coal and lignite deposits at Tunguzka, Norlisk, graphite-anthracite deposits at Kureika.

Sizing. The Sizing of Small Coal, Thos. Fraser. Coal Industry, vol. 7, nos. 2 and 3, Feb. and Mar. 1924, pp. 89-91 and 121-124. New conditions in sizing small fuel which have arisen; special shaker screens for small coal and coke; vibrating screens.

See also Cleaning.

South Africa. Coal in South Africa, W. T. Heslop. Instn. Min. Engrs.—Trans., vol. 68, part 1, Oct. 1924, pp. 90-109, 8 figs. See also Iron & Coal Trades Rev., vol. 109, no. 2940, July 4, 1924, pp. 1-4. Production; discusses coal seams, character of coals, ash analysis, igneous intrusions and underground conditions in Natal, spontaneous combustion of coal, Vereeniging conditions, and Witbank efficiency.

Specific Gravity and Ash Content. The Specific Gravity and Ash Content of Coal, T. J. Drakeley and J. R. I. Hepburn. Chem. & Industry, vol. 43, no. 34, Aug. 22, 1924, pp. 277T-278T, 1 fig. Investigation to determine whether relation exists between specific gravity of sample of coal and its ash content; it is shown that no relation exists between true and apparent specific gravities and ash contents of samples of clean coal from same seam; relation exists between true and apparent specific gravities and ash contents of average samples and equation is given for calculating ash content of coal from specific gravity.

Spitzbergen. Boring in Frozen Strata, R. L. A. Dron. Min. Inst. of Scotland—Trans., vol. 45, part 1, 1924, pp. 22-27, 2 figs. Discusses difficulties met with in boring through frozen strata

in Spitzbergen to prove coal, and arrangements made to meet them.

Spontaneous Combustion. Fires Due to Spontaneous Ignition in Northwestern Bohemian Colliery District (Einiges über Gruben- und Depot-Brände infolge von Selbstentzündung im nordwestböhmischen Braunkohlenreviere), J. Carniol. Montanistische Rundschau, vol. 16, no. 20, Oct. 16, 1924, pp. 547-553. Oxidation process and conditions favoring auto-oxidation; effect of size of grain, temperature, earth pressure, etc.; chemical causes; precautionary measures; etc.

Pyrites as a Cause of Spontaneous Combustion in Coal-Mines, J. I. Graham. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 100-109 and (discussion) 109-113. Results of researches.

Suitable Coal Storage and Avoidance of Spontaneous Combustion (Zweckmässige Kohlenlagerung und Verhütung ihrer Selbstentzündung), R. Rogenhofer. Sparwirtschaft, nos. 7-8, 9-10, and 11-12, Apr., May, and June 1924, pp. 32-34, 37-39, and 45-46. Reviews literature on storage in air, water, losses and change in composition. June: Means for preventing changes and spontaneous combustion.

Spontaneous Combustion of Coal, J. Ivor Graham. Chem. & Industry, vol. 43, no. 14, Apr. 4, 1924, pp. 79T-87T. Influence of pyrites; influence of moisture on rate of oxidation and on spontaneous heating; adsorption of gases by carbon.

The Spontaneous Ignition of Coal in Ships' Bunkers, J. H. Anderson. Inst. Mar. Engrs.—Trans., vol. 35, Jan. and Feb. 1924, pp. 479-487 and (discussion) 509-525. Deals with coal fires aboard ship.

See also Moisture in; COAL MINES, Spontaneous Combustion; PYRITES, Spontaneous Combustion Caused by.

Spontaneous Heating. An Adiabatic Method for Studying Spontaneous Heating of Coal, J. D. Davis and J. F. Byrne. Am. Ceramic Soc.—Jl., vol. 7, no. 11, Nov. 1924, pp. 809-816, 2 figs. Describes apparatus developed in Bur. Mines laboratory for investigation of spontaneous heating of coal with adiabatic control, and shows briefly extent of heating which takes place when adiabatic condition is maintained. Pub. by permission U. S. Bur. Mines.

Storage. See COAL STORAGE.

Sulphur Compounds, Decomposition of. The Decomposition of Sulphur Compounds in Coal by Heat, J. Jolly and R. V. Wheeler. Gas Wld., vol. 80, no. 2076, May 3, 1924, pp. 11-12. Outline of research carried out in Dept. of Fuel Technology of Sheffield Univ. to determine manner in which sulphur is eliminated during coking process, factors that influence retention of sulphur in coke, distribution of sulphur in products of destructive distillation of different coals dependent on temperature of heating and rate at which that temperature was attained.

Sulphur Determination in. Rapid Determination of Sulphur, Particularly in Coal (Schnellbestimmung von Schwefel, besonders in Kohlen), H. Bahr and W. v. D. Heide. Zeit. für angewandte Chemie, vol. 37, no. 43, Oct. 23, 1924, pp. 848-851. Pulverized coal is mixed with barium peroxide and granulated aluminum, and mixture briquetted and ignited in porcelain or quartz crucible covered with lid with hole in it or with second inverted crucible; method appears to compare favorably, as regards accuracy, with that of Eschka, but is not, in its present form, applicable to coke.

Sulphur Forms in. Sulfur Forms in Coal—Distribution and Control, H. F. Yancey and S. W. Parr. Indus. & Eng. Chem., vol 16, no. 5, May 1924, pp. 501-508, 7 figs. Investigation of distribution of forms of sulphur in two coal beds made at two mines in Illinois and one in Alabama; various types of coals are classified on basis of sulphur occurrence and removal.

Tar. See COAL TAR.

Testing. A Float-and-Sink Method for Testing Coarse Size Coal, E. R. McMillan and B. M. Bird. Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 164-169, 2 figs. Methods and apparatus used in testing coals; developed at Northwest experiment station of Bur. of Mines in coöperative research work with Univ. of Washington.

Alberta Coals. Colliery Guardian, vol. 127, no. 3289, Jan. 11, 1924, pp. 92-93, 3 figs. Information regarding testing of coal from third annual report of Sci. & Indus. Research Council of Alberta, including sampling at mine, analysis of coals, air calorimeter, comparison of coals, etc.

Standardization of the Methods of Testing Coal, Metallurgical Coke, and Briquets (Propositions pour l'unification des méthodes d'essai du charbon, du coke métallurgique, et des briquettes), Ch. Berthelot. Chimie & Industrie, special no., May 1924, pp. 167-207, 38 figs. Describes most accurate methods for examination with view to their adoption as standard methods of analysis; methods of determination of coking power of coal, fusibility of ash, moisture, volatile matter, total carbon, nitrogen, and phosphorus.

The Testing of Coal, F. Dawson. Eng. & Boiler House Rev., vol. 37, no. 10, May 1924, pp. 355-356 and 358, 2 figs. Discusses determination of nature of coal, or its proximate analysis, and determination of its heat value; describes type of bomb calorimeter in general use.

Thermal Conductivity and Specific Heat. The Thermal Conductivity and Specific Heat of Coal, F. S. Sinnatt and H. Macpherson. Fuel, vol. 3, no. 12, Jan. 1924, pp. 12-14. Method of determining thermal conductivity and specific heat.

Thermal Reactions during Carbonization. Thermal Reactions of Coal During Carbonisation, J. D. Davis and P. B. Place. Fuel, vol. 3, no. 12, Dec. 1924, pp. 434-439, 4 figs. Results of tests on seven typical American coals by Hollings and Cobb method; reaction heats by calorimetric method; results show that reaction heats of coal are small compared with total heat effects involved in carbonization process.

Trade of Great Britain. The Coal Trade of 1923. Colliery Guardian, vol. 127, no. 3288, Jan. 4, 1924, pp. 21-32 and 39-40, 7 figs. See also Iron & Coal Trades Rev., vol. 108, no. 2914, Jan. 4, 1924, pp. 1-8. Review by districts, including production, shipments, prices, coal and coke contracts, labor and wages, developments, etc.

Treatment. Treatment of Coal with Naphthalene (Sur le traitement des houilles par la naphtaline), M. Oswald and R. Pinta. Chimie et Industrie, vol. 12, no. 3, Sept. 1924, pp. 415-422, 2 figs. Advantages of naphthalene as a solvent; extraction apparatus and experiments; production of new materials, including low-temperature tar very rich in oil and low phenol content.

United States, Empirical Relations for. Empirical Relations for Coals in the United States, F. C. Evans. Sibley Jl. of Eng., vol. 38, nos. 7, 8, and 9, Oct., Nov., and Dec., 1924, pp. 160-167, 188-195, and 217-227, 29 figs. Reviews briefly formation and deposition of coals in United States. Determination of heating value of combustible from proportion of volatile matter. Determination of per cent total carbon and of hydrogen.

Value for Steam Generation. The Value of Coal for Steam Generation, C. A. Joerger. Combustion, vol. 10, no. 1, Jan. 1924, pp. 59-60 and 65. Basis of determining value of a coal, and discussion of some of the items which cause confusion in terms, efficiency, economy, and capacity.

Volatile Constituents, Determination. Determination of Volatile Constituents in Solid Fuels

(Beschouwingen over de bepaling der vluchtige bestanddeelen in vaste Brandstoffen), S. de Waard. Chemisch Weekblad, vol. 21, no. 38, Sept. 20, 1924, pp. 433-435, 2 figs. Suggestions of Kreulen for use of standard burner and crucible are supported, but actual apparatus is criticized.

Determination of Volatile Matter in Solid Fuels (Beschouwingen over de bepaling der vluchtige bestanddeelen in vaste brandstoffen), D. J. W. Kreulen.. Chemisch Weekblad, vol. 21, no. 1091, Aug. 23, 1924, pp. 396-398, 2 figs. For comparative purposes determination of yield of coke is more valuable than that of volatile matter, and method of determining former, using standard alcohol lamp, standard crucible with loose cover, and definite time of heating, is suggested; if coal be pressed into pastilles, useful information may be obtained, coking then proceeding, as on large scale, by skin formation.

The Determination of Volatile Matter in Coal and Coke. Gas Wld., vol. 80, no. 2081, June 7, 1924, pp. 9-12. Methods used, and details of experiments.

Volatile Matter and Ash Content. The Volatile Matter and Ash Contents of Samples of Coal from the Same Seam, T. J. Drakeley and J. R. I. Hepburn. Chem. & Industry, vol. 43, no. 18, May 2, 1924, pp. 134T-137T. Gives equation for calculating, on average samples of dry coal containing no iron pyrites, volatile-matter content of coal on ash-free basis; percentage of volatile matter yielded by dry shale appears to vary considerably; variations may be due to different methods employed in initial drying of shale; modified equations for calculating volatile-matter content of coal on ash-free bases, for crude-coal samples containing iron pyrites, etc.

Volumetric Measurement. The Metering of Coal, W. S. Findlay. Indus. Mgmt. (Lond.), vol. 11, no. 18, Dec. 1924, pp. 517-518, 1 fig. Describes devices for volumetric measurement of coal; advantages accruing from volumetric measurement.

Washing. See COAL WASHING.

World's Resources. The Coal Resources of the World, R. Redmayne. Colliery Guardian, vol. 128, no. 3314, July 4, 1924, pp. 23-24, 4 figs. Also Coal Trade Jl., vol. 55, no. 31, July 30, 1924, pp. 665-667. Discusses world's coal reserves, lignite or brown coal, economies in use of coal and coal substitutes; available and future supplies including lignite, peat, waterpower and solar radiation as substitutes.

X-Ray Analysis. See Analysis, X-Ray.

COAL BREAKERS

Baker, Baker—The Latest Glen Alden Breaker. Coal Age, vol. 26, no. 3, July 17, 1924, pp. 76-81; 12 figs. Describes breaker of Glen Alden Coal Co. Reaching breaker from several sources, coal is crushed on ground level and product elevated to top of building; simplicity and neatness foster a good morale.

COAL DEPOSITS

Africa. Coal Resources of the Zambezi (Les richesses charbonnières du Zambèze), A. C. Gérard. Société des Ingénieurs Civils de France —Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 244-261, 13 figs. partly on supp. plate. General considerations on African coal; description of the various basins in south and central Africa, including those of the Zambezi.

Alaska. Matanuska Coal Field Mines only 7,000 Tons Monthly. Coal Age, vol. 26, no. 26, Dec. 25, 1924, p. 896. Coal in Alaskan field varies from lignite to anthracite; latter is in places 40 ft. thick but folded and penetrated by dikes and sills.

Alberta, Canada. Structure in the Crowsnest Coal Area, Alberta, B. Rose. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 609-619, 1 fig. on supp. plate. Outlines geology and discusses structural problems encountered in locating and mining coal seams.

Arley Seam, Britain. Physical and Chemical Survey of the National Coal Resources. Iron & Coal Trades Rev., vol. 109, no. 2956, Oct. 24, 1924, pp. 661-662. Abstract of report issued by Fuel Research Board. General description of Arley seam of Lancaschire coal field; analyses of specimens of Arley coal; inorganic constituents; low-temperature carbonization; steaming in vertical gas retorts; behavior when heated in oxygen; microscopical examination; inflammability.

Australia. Geology and Mineral Occurrences, Pascoe River District, Cape York Peninsula, C. C. Morton, Queensland Govt. Min. Jl., vol. 25, nos. 286 and 287, Mar. and Apr. 1924, pp. 78-83 and 129-134, 12 figs. References to geological reports on areas within the Peninsula. Geological description; economic geology; gold occurrences; workings.

Austria. Coal Geology of the Austrian States (Kohlengeologie der österreichischen Teilstaaten), W. Petrascheck. Berg- u. Hüttenmännisches Jahrbuch, vol. 72, nos. 1 and 2, 1924, pp. 5-48 and 1-24, 64 figs. Details of coal deposits in Austrian Alps, including regions of Mürz and Mur rivers, Carinthia, lower Austria, Hungry, Enns Valley and Tyrol.

New Coal Deposits in Western Austria (Neue Kohlenvorkommen im westlichen Oberösterreich), G. Götzinger. Zeit. des Internationalen Vereines der Bohringenieure u. Bohrtechniker, vol. 32, no. 24, Dec. 15, 1924, pp. 185-188. Describes new seams at Thomasroith, Siedelberg, Höring, and others.

China. Preliminary Report on Some Coals from Sze Chuan, China. Economic Geology, vol. 19, no. 7, 1924, pp. 641-650. Values, properties, and geologic relations.

Coal Balls in. Coal Balls—The "Finger Prints" That Identify Coal, F. L. Clark. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 656-657, 5 figs. In these limestone nodules fossil plants unerringly establish age and character of each seam of coal, according to results obtained through investigations by Dr. Adolph Noé, paleobotanist at Univ. of Chicago.

Correlation Problems. Some Coal-Seam Correlation Problems in Alberta, R. L. Rutherford. Can. Inst. Min. & Metallurgy—Bul., no. 152, Dec. 1924, pp. 942-951, 3 figs. Discusses difficulties involved in securing correlation information, and points out salient factors upon which correlation is dependent.

Dutch East Indies. Coalfields of Netherlands East Indies, P. C. Coote. Iron & Coal Trades Rev., vol. 108, no. 2929, Apr. 18, 1924, pp. 628-629, 5 figs. State and private enterprise in Sumatra and Borneo.

Fossil Zones. Fossil Zones in the Carboniferous Rocks, O. T. Jones. Instn. Min. Engrs.-Trans., vol. 68, part 3, Dec. 1924, pp. 220-233. Work which has been carried on within last few years by a number of different investigators on distribution of fossils in these strata. Bibliography.

Germany. A Third Lausitz Seam at Greater Depth (Ueber ein tieferes drittes Lausitzer Flöz), Baldus. Braunkohle, vol. 23, no. 37, Dec. 13, 1924, pp. 689-691. Details of new coal seam at Dahme 5 m. in thickness, new lignite seam at Cottbus of 4.3 m., etc.

Ruhr Coal and Osnabrück Coal (Ruhrkarbon und Osnabrücker Karbon), W. Gothan and W. Haack. Glückauf, vol. 60, no. 26, June 28, 1924, pp. 535-541, 3 figs. Discusses main deposits on

basis of modern investigation, gas content, thickness of deposits, general geology.

New Brunswick, Canada. The Minto Coal Basin of New Brunswick, W. S. Dyer. Can. Inst. Min. & Metallurgy—Bul., no. 145, May 1924, pp. 251-275, 8 figs. Outline of principal results obtained in study of geology and coal resources of this basin. History, and previous geological work.

New Mexico. Coal Resources of the Raton Coal Field, Colfax County, New Mexico, W. T. Lee. U. S. Geol. Surv., Bul. 752, 1924, 251 pp., 50 figs., partly on supp. plates. Geography and geological features, and description of coal deposits and coal.

Pennsylvania. Coal Beds in Fayette County, Pennsylvania, J. D. Sisler. Coal Trade Bul., vol. 51, no. 9, Oct. 1, 1924, pp. 391-395. Structure and stratigraphy; correlations of coals; coke.

Coal Beds in Westmoreland County, Pennsylvania, J. D. Sisler. Coal Trade Bul., vol. 50, no. 9, Apr. 1, 1924, pp. 393-398. General geology, topography and stratigraphy, and description of different districts.

Dividing the State of Pennsylvania Into Areas Having Coal of Equal Volatile Content. Coal Age, vol. 26, no. 12, Sept. 18, 1924, pp. 403-406, 2 figs. How these areas were mapped; their form and reasons for it; why irregularities exist and how oil and gas are found only in places where coal contains both. Article adapted from Bul. no. 81 of Topographic and Geologic Survey.

The Deposit of Double-Thick Upper Freeport Coal Situated in the Valley of the Allegheny River in Allegheny, Butler and Westmoreland Counties, Pennsylvania, J. M. Rayburn. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 1, Feb. 1924, pp. 27-38 and (discussion) 39-44, 6 figs., partly on supp. plate. Describes development of field, geology, topography, and stratigraphy.

Russia. The Coal Deposits of Tkvibuli, E. Petkevich and Dolgov. Russian Min. Jl., vol. 100, no. 1, Jan. 1924, pp. 45-46. (In Russian.)

The Coke and Coal of Kuznetsk in the Ural Mountains, I. Fedorovich. Russian Min. Jl., vol. 100, no. 3, Mar. 1924, pp. 273-275. (In Russian.)

South Africa. Coal in South Africa, W. T. Heslop. So. African Eng., vol. 35, nos. 6 and 7, June 30 and July 31, 1924, pp. 117-120 and 139-142, 5 figs. Production data; description of various seams; character of coals.

The Coal Resources of Southern Rhodesia, H. B. Maufe. So. African Min. & Eng. Jl., vol. 35, no. 1714, Aug. 2, 1924, p. 1314. Discusses physical characteristics. Abstract of paper read before First World Power Conference.

South Wales. The Correlation of the Coal Measures in the Western Portion of the South Wales Coal-Field, Emily Dix and A. E. Trueman. So. Wales Inst. Engrs.—Proc., vol. 40, no. 5, Nov. 13, 1924, pp. 353-383, 15 figs. Coal measures of North Gower.

Strata Movements. The Heat Due to Strata-Movements and Its Effect on Certain Coal-Seams, H. Briggs, A. L. S. Owen and J. Wilson. Instn. Min. Engrs.—Trans., vol. 67, part 4, July 1924, pp. 355-373, 6 figs. Discusses bedding-glides and joint-glides, heat produced by faulting, effects of faults on coal-seams occurrence of cinder coal, calcareous coal, natural gas, etc.

Tasmania. The Coal Resources of Tasmania. Tasmania Dept. Mines, Geol. Surv., Mineral Resources No. 7, 1922, 273 pp., 37 figs. on supp. plates. Geology of coal formations; geologic structure of coal fields; general character, composition, and calorific value of coals; commercial and industrial applications and market value; relationship of coal resources of Tasmania to important mineral deposits and hydroelectric power stations, and bearing of this relationship on industrial development of Tasmania.

Virginia. Can the Valley Coal Fields of Virginia Compete With Those of the Anthracite Region? Coal Age, vol. 25, no. 8, Feb. 21, 1924, pp. 269-271, 2 figs. Coal is semi-anthracite, slightly lower in rank than Lykens Valley product; ash content high, being from 14 to 28 per cent.

The Geology and Mineral Resources of Wise County and the Coal-Bearing Portion of Scott County, Virginia, J. B. Eby, M. R. Campbell and G. W. Stos. Va. Geol. Survey—Bul., no. 24, 1923, 617 pp., 129 figs. and maps, partly on supp. plates. Includes chapter on forests of Wise County.

Wales. On a Group of Red Measures or "Coloured" Strata in the East Glamorganshire and Monmouthshire Coalfield, A. Howell and A. H. Cox. S. Wales Inst. Engrs.—Proc., vol. 40, no. 2, May 8, 1924, pp. 139-174, 4 figs. on supp. plates. Results of investigation of strata with view to establishing their distribution, thickness, and relations to beds above and below.

South Wales Coal Region Is Principal Competitor of American Mining Districts, H. Williams, Coal Age, vol. 25, no. 20, May 15, 1924, pp. 726-727, 1 fig. Extent and location of coal fields; classification of different grades of coal and their uses; difficulties experienced in mining and marketing of anthracite.

COAL DUMPERS. See COAL HANDLING, Piers.

COAL DUST

Explosions. Coal Dust Explosions. Colliery Guardian, vol. 127, no. 3301, Apr. 4, 1924, pp. 861-862, 2 figs. Details of experiments carried out at Eskmeals during 1923.

Coal Dust Explosions, J. E. Jones. Coal Mine Mgmt., vol. 3, no. 5, May 1924, pp. 25-32 and 55-59, 1 fig. How they can be prevented. Simple remedy in practical operation. Reprinted from Am. Labor Legislation Rev., Mar. 1924.

Humidification of Mine Air for the Purpose of Reducing the Dust Hazard, T. Chester. Coal Mine Mgmt., vol. 3, no. 2, Feb. 1924, pp. 27-34, 4 figs. Causes of dust explosions; humidity data; why humidification helps; humidifying apparatus.

Powdered Coal Hazards, H. G. Jacobsen. Concrete, vol. 24, no. 1, Jan. 1924, pp. 5-7 (Cement Mill Section). Reviews investigations that were carried on during more than 100 years from almost first time mention was made of coal dust as an explosive in itself until time, only a few years ago, when this point was conclusively proved.

Spreading Stone Dust with Compressed Air to Prevent Coal-Dust Explosions, C. Moran. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 917-918, 5 figs. Discusses testing of coal dust for explosion properties and application of stone-dust distribution and stone-dust shelving to prevent or arrest coal-dust explosions.

Stone Dusting or Rock Dusting to Prevent Coal-Dust Explosions, as Practiced in Great Britain and France, G. S. Rice. U. S. Bur. Mines, Bul. 225, 1924, 54 pp. Notes on investigations made in Great Britain, France, and Germany; preventive methods in United States; stone dusting or rock dusting methods observed in British, French, German, and Belgian mines; application in American mines of European experience in stone dusting or schistification.

See also COAL MINES, Rock Dusting.

Firing with. Coal-Dust Firing in Iron and Steel Works, W. Schmitz, Iron & Coal Trades Rev., vol. 108, no. 2928, Apr. 11, 1924, p. 597, 2 figs. Author's experience with use of coal-dust firing over a period of over two years in seven forge and six rolling-mill furnaces at a German iron and

steel works; fuel used consisted chiefly of briquet dust and dried Rhenish crude lignite, although all kinds of available waste coal and coke breeze were used. From article in recent issue of Stahl u. Eisen.

Laying with Bituloid. Experiments with Colloidal Oil (Bituloid) as a Medium for Laying Coal-Dust, H. Briggs and N. H. Wales. S. Wales Inst. Engrs.—Proc., vol. 40, no. 3, Sept. 4, 1924, pp. 233-255, 5 figs. and (discussion), nos. 4 and 5, Oct. 9 and Nov. 13, 1924, pp. 262-290 and 325-330. See also Colliery Guardian, vol. 128, no. 3324, Sept. 12, 1924, pp. 673-674, 1 fig., and Iron & Coal Trades Rev., vol. 109, nos. 2950 and 2951, Sept. 12 and 19, 1924, pp. 431-433 and (discussion) p. 477. Nature of bituloid, manner of application, and costs; preliminary tests at Eskmeals and at certain coal mines; ignition tests at Straiton mine; further advantages and drawbacks.

COAL GAS

Benzene Extraction. Experiments on Extraction of Benzene from Coal Gas, A. C. Blackall. Gas Age-Rec., vol. 54, no. 23, Dec. 6, 1924, p. 794. Application of silica gel as an absorption agent shows considerable promise according to recent gas works experiments in England.

Benzol Content, Determination. Simplified Method for the Determination of Benzol Content in Gas by Means of Active Charcoal (Vereinfachte Arbeitsweise zur Bestimmung des Benzolgehaltes im Gase mit aktiver Kohle), A. Schmolke. Gas- u. Wasserfach, vol. 67, no. 7, Feb. 16, 1924, pp. 77-78. Describes method and apparatus developed by author, comprising adsorption vessel, vaporizer, superheater, air bath, cooler, and measuring burette, conveniently connected.

CO Elimination. See CARBON MONOXIDE, Elimination from Town Gas.

Condensation. The Condensation of Gas in Gas Works and Coke Plants (La condensation du gaz dans les usines à gaz et dans les cokeries), A. Grebel and H. Bouron. Génie Civil, vol. 84, no. 6, Feb. 9, 1924, pp. 130-133. Theory of condensation; cold condensation; productions of condensation; quantities of heat to be absorbed by pipes and condensers.

Corrosion Due to. The Corrosion Caused by Products of Combustion of Coal Gas, U. R. Evans. Chem. & Industry, vol. 43, no. 20, May 16, 1924, pp. 506-507. Investigation as to whether practice of employing coal gas in place of direct combustion of solid fuel tends to increase or reduce damage, with special reference to indoor corrosion.

Double Gas. See COAL, Gasification.

Hydrocarbons in. The Estimation of Condensable Hydrocarbons in Coal Gas by Solid Absorbents, W. Green and E. G. Maw. Gas Wld., vol. 81, no. 2085, July 5, 1924, pp. 11-13. Discusses adsorption tests, silica gel adsorption tests on coal gas, active carbon adsorption tests on coal gas, and comparative adsorption tests on coal gas.

Illuminating Power. Effect of Addition of Water Gas and Nitrogen to Coal Gas on Light Intensity of Gas Mantles (Einfluss von Wassergas- und Stickstoffzusatz zum Steinkohlengas auf die Lichtstärke des Gasglühlichts), P. Eitner. Gas- u. Wasserfach, vol. 67, no. 36, Sept. 6, 1924, pp. 539-541. Results of tests show that on addition of water gas calorific value and light intensity decreases, and temperature of combustion increases; on addition of nitrogen both calorific value and flame temperature decrease.

Low-Temperature-Carbonization. Composition of Low-Temperature-Carbonization Gas from a Rotary Oven at Different Temperatures (Ueber die Zusammensetzung des Schwelgases bei verschiedenen Temperaturintervallen des Drehofens), H. Arnold. Zeit. für angewandte Chemie, vol. 37, no. 7, Feb. 14, 1924, pp. 85-87. Analyses of gas obtained at various temperatures by carbonizing charge of 10 kg. of Rhenish gas coal (Lohberg) in rotary oven; determination of constituent gases; figures are given for composition of gas after passage through active charcoal.

Manufacture. See GAS MANUFACTURE.

Naphthalene Removal. Removal of Naphthalene from Gas by Oil Scrubbing, Rob. D. Pike and Geo. H. West. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 253-257, 5 figs. Gives two principal criteria for choice of scrubbing oils, namely, naphthalene vapor pressure characteristic of oil at constant temperature, and viscosity.

Prussian Blue from. Direct Preparation of Prussian Blue from Coal Gas, Achille Delcleve. Gas Jl., vol. 165, no. 3165, Jan. 9, 1924, pp. 92-93. Suggests process for treatment of coal gas which will result in direct preparation of refined commercial Prussian blue. Translated from Chimie et Industrie.

Sulphur Elimination. Elimination of Sulphur from Coal Gas. Gas Wld., vol. 81, no. 2094, Sept. 6, 1924, pp. 248-249, 7 figs. Discusses laboratory experiments carried out at Christiania municipal gas-works.

COAL HANDLING

Aerial Cableways for. See CABLEWAYS, Coal-Handling.

Boiler Plants. Coaling and Ash Removal in Boiler Houses (Kesselhausbekohlung und -entaschung), R. Baumann. Wärme, vol. 47, nos. 6 and 7, Feb. 8 and 15, 1924, pp. 51-53 and 63-65, 16 figs. Describes boiler-house coaling plant with tipping and gripping devices of great efficiency and requiring little attendance; and method for removal, cooling and loading into ash car of red-hot ashes; points out cleanliness and economy of method.

Car Dumpers. See CAR DUMPERS.

Conveyors. Belt Conveyors at Work, J. M. Cowan. Iron & Coal Trades Rev., vol. 108, no. 2914, Jan. 4, 1924, p. 26, 1 fig. Method of roof support for conveyor face; description of conveyors used; shifting of conveyor; gate-end loader.

Coal Bunkers, Coal and Ash Conveyors. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 100-104, 106, 108 and 110, 16 figs. Design of coal bins, method of suspension and how lined; operation and types of coal and ash-conveying apparatus.

Coal Face Conveyors, R. Burt. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 38-42, 4 figs. Practical notes relating to methods of application of these plants, as practiced in Fife coal field, Scotland.

Coal Handling for Boiler Houses by Means of Cable Conveyor Plants (Kesselhausbekohlung durch Seilconveyoranlagen), F. Riedig. Fördertechnik u. Frachtverkehr, vol. 17, no. 22, Nov. 18, 1924, pp. 312-314, 10 figs. Describes several types of single-group and multi-group cable conveyors for coaling boilers, built by Bleichert & Co.

Modern Developments in Coal Conveyors and Haulage Arrangements for Dealing with the Coal From the Working Face to the Pit Bottom, G. L. Leston. S. Wales Inst. Engrs.—Prac., vol. 40, no. 2, May 8, 1924, pp. 175-205, 10 figs.

Use of Conveyor Belts in Modern Coal Storage. Belting, vol. 25, no. 3, Sept. 1924, pp. 36 and 38, 3 figs. Describes methods of handling fuel by American Hominy Co.; coal mechanically handled from freight cars to firebox.

See also CONVEYORS, Sectional Portable.

Equipment for. How Mechanical Handling Cuts Power Costs, M. W. Potts. Indus. Mgmt. (N Y), vol. 68, no. 6, Dec. 1924, pp. 341-348, 14 figs.

Describes types of coal and ash-handling equipment.

See also CENTRAL STATIONS, Brooklyn Edison, Hudson Ave.; Chicago, Ill.; St. Louis, Mo.; MATERIALS HANDLING, Equipment.

Harbor Plants. Coal and Ore Handling Plant at Waalhaven, Rotterdam. Engineer, vol. 137, no. 3574, June 27, 1924, pp. 722-725, 8 figs. Details of installation of Coal Trading Assn. which, when completed, will comprise two quays 350 m. long, with accommodation for ocean-going vessels up to 10 m. draft, and between quays a dock 160 m. long available for river vessels with drafts up to 6 m.; description of transporter bridges, and transformer and load-equalizing station.

Loading Machines. Factors in Various Types of Machines, R. A. Walter. Coal Industry, vol. 7, no. 7, July 1924, pp. 264-266. Only one-half of loading machines operating successfully; suitable mining methods necessary to make others satisfactory.

How to Get Big Output From Loading Machines, W. M. Dake. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 689-694, 6 figs. Plans that enable loaders to keep working steadily but which do not involve radical reconstruction of mine workings or abandonment of room-and-pillar methods.

Interpretation of Progress in Mechanical Loading, A. F. Brosky. Coal Age, vol. 25, no. 3, Jan. 17, 1924, pp. 67-72, 9 figs. Types and principles of machines and appurtenances.

Machines Load More Than 100 Tons per Shift in Mines on Paint Creek, West Virginia, A. F. Brosky. Coal Age, vol. 26, no. 2, July 10, 1924, pp. 37-41, 7 figs. Operating details of loading machines in mines of Kingston Pocahontas Coal Co. and of Imperial Colliery Co.

Mechanical Coal Loading, R. A. Walter. Coal Mine Mgmt., vol. 3, no. 4, Apr. 1924, pp. 50-54. Factors influencing selection of equipment and system.

Mechanical Loading—Advantages and Disadvantages. Min. Congress Jl., vol. 10, no. 6, June 1924, pp. 267-271, 3 figs. Rapid development of machine loading; application of various types of loaders; room and pillar mining; mine cars; conveyor haulage; combined cutting and loading machines; etc. Discussion at Am. Min. Congress meeting.

One More Mechanical Loader Comes to Light. Coal Age, vol. 25, no. 9, Feb. 28, 1924, pp. 305-306, 2 figs. Wilson chain loader for low coal weights 4600 lb. and has maximum height of 32 in.; it has loaded 69 tons of coal a day and 120 tons of loose gob.

Performance, Type and Application of Mechanical Coal Loading Devices, R. A. Walter. Coal Mine Mgmt., vol. 3, no. 6, June 1924, pp. 38-42 and 51. Classification of loading machines. Deals with conveying devices, scraping loaders, shoveling machines, pressure loaders, digging loaders, gathering loaders, combined cutters and loaders, and heading drivers.

Locomotive Plants. Locomotive Coaling Plant Recently Installed by the Italian State Railway, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 5, Mar. 6, 1924, pp. 133-135, 2 figs. Describes installation of stationary type, built entirely of mild steel, erected in duplicate, one at Foggia and one at Rimini, embodying latest developments of its type.

Low-Cost System. Low Cost Handling of Coal and Ashes, F. Schultz. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 623-626, 8 figs. Describes system suited to industrial power plants.

Lowering Down Hillside. Lowering Coal Down Hillsides with Minimum Breakage, M. L. O'Neale. Coal Age, vol. 25, no. 20, May 15, 1924, pp. 715-721, 12 figs. Points out that type of conveyor to be chosen depends chiefly on such factors as length and inclination of hillside.

Piers. Electrically Operated Coal Pier, R. W. McNeill. South. Engr., vol. 42, no. 4, Dec. 1924, pp. 40-44, 7 figs. Describes new coal pier of West. Md. Ry. Co., at Port Covington, Baltimore; 30,000 tons of coal are handled per day of two 10-hour shifts with 50-ton coal cars; with 100-ton cars capacity is between 40,000 and 50,000 tons per day.

Modern Practice of Handling Coal in Bulk at Coal Piers, J. W. Speer. Elec. Jl., vol. 21, no. 6, June 1924, pp. 260-265, 11 figs. Turning-type dumper installation, direct loading stationary lifting-type dumper, direct loading stationary revolving-type dumper, mechanical coal trimmers, etc.

New Coal Pier at Hampton Roads, Virginian Ry. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 487-498, 25 figs. Description of Coal Pier No. 2, now under construction, at Sewalls Point, Va., and construction details.

Virginian Ry. Builds Double Car-Dumper Coaling Pier. Eng. News-Rec., vol. 93, no. 12, Sept. 18, 1924, pp. 452-455, 5 figs. Describes coaling pier at Sewalls Point, Va., and its equipment. Car dumpers handling 120-ton cars load 130-ton elevator buckets for charging motor transfer cars on deck of pier. Traveling towers on lower deck place coal in ship and trim cargo.

Power Plants. Coal and Ash Handling Plant. Eng. & Boiler House Rev., vol. 38, no. 4, Oct. 1924, pp. 135-140, 143-144, 147-148, and 150, 20 figs. Review of principal methods in present-day use for handling of coal and ash in boiler house.

Coal and Ash Handling Systems for Power Plants, J. W. Geiger. Nat. Engr., vol. 28, no. 2, Feb. 1924, pp. 53-56. Description, advantages and disadvantages of different types of apparatus; factors to be considered in selection.

Coal Handling in Small Boiler Plants. Power Engr., vol. 19, no. 218, May 1924, pp. 171-172, 4 figs. Notes concerning plant with but one or two boilers.

Coal Handling Plant at the East Greenwich Power Station. Engineer, vol. 137, no. 3574, June 27, 1924, pp. 715-716, 5 figs. partly on p. 718. Designed to deal with some 200 tons of coal per hour when working at full power; comprises two Temperley transporters, which operate on a jetty at river side, and a system of conveyors which receive coal unloaded from vessels by transporters and deliver it either into storage bunkers or into bunkers over boiler house.

Coal-Handling System, J. A. Beck. Combustion, vol. 11, no. 2, Aug. 1924, pp. 120-121, 3 figs. Description of apparatus installed at plant of Kansas Gas & Elec. Co. at Strauss, Kan., and of method of operation.

Industrial Coal-Handling Equipment, Geo. E. Titcomb. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 79-84, 10 figs. Types, capacities, and adaptability of various installations.

Pulverized Coal. See CONVEYORS, Pulverized-Material.

Pumping Station. How a Milwaukee Pumping Station Handles Coal, N. L. Davis. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1009-1012, 10 figs. Describes coal handling equipment at Riverside Pumping Station at Milwaukee, Wis

Ropeway System. Ropeway for Coaling a London Hotel, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 9, May 1, 1924, pp. 243-245 and 249, 6 figs. Description of ropeway which brings coal to store or stoke hole at Hotel Cecil; is of standard bi-cable type; total length from center feeding to center delivery terminal 230 ft.; two rail ropes ¾ in. in diam.; 3-hp. motor operates ¼-in.-

diam hauling rope at speed of 25 ft. per min. at feeding terminal.

Shipping Plant. Coal-Shipping Plant at the Clarence Works of Messrs. Dorman, Long & Company, Limited. Iron & Coal Trades Rev., vol. 109, no. 2951, Sept. 19, 1924, pp. 469-470, 3 figs. Details of new wharf and loading plant.

Tipples. See COAL TIPPLES.

Underground Transportation. Four-Mile Belt Line Carries 9,426 Tons of Coal in One Day at Frick Company Mine, Thos. W. Dawson. Coal Age, vol. 26, no. 26, Dec. 25, 1924, pp. 897-905, 5 figs. Methods employed by H. C. Frick Coke Co. in transporting coal; nineteen 48-in. belts and one 60-in. deliver to river dump all coal from three mines formerly entered by shaft; 35 cars discharged at one time by each of two revolving dumps.

COAL INDUSTRY

Brazil, Market of. Coal Market of Brazil, M. A. Cremer. Trade Information Bul. (Supp. to Commerce Reports), no. 275, Oct. 11, 1924, 22 pp. Market for American coal—extent and character of market; kinds of coal used; coal-handling facilities. Brazilian coal-mining industry—type of coal mines; manufacture and use of pulverized coal and briquets, manufacture of coke.

France. A Survey of the French Coal Industry, J. R. Cahill. Iron & Coal Trades Rev., vol. 109, no. 2950, Sept. 12, 1924, pp. 444-446. Review of operations of representative coal mines.

French Coal Industry in 1924. Black Diamond, vol. 73, no. 26, Dec. 27, 1924, pp. 735-736, 1 fig. Discussion of present status and problems to be met and solved. Production, consumption, importation and exportation, output of Lorraine, reparation fuels, prices, etc.

Literature, 1923. Literature of the Coal Industry for 1923, E. H. McClelland. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 39-42. Classified list of more important books, serials and trade publications which have appeared during year, with few of earlier date.

Nova Scotia. Cape Breton's Coal and Steel Industries. Iron & Steel of Can., vol. 7, no. 12, Dec. 1924, pp. 237-243, 5 figs. See also Can. Min. Jl., vol. 45, no. 50, Dec. 12, 1924, pp. 1215-1219, 4 figs. Influence of steel manufacture on coal production; part of coal and steel in the war; submarine coal mining; Cape Breton coal as anthracite equivalent; conditions of employments and wages; details of steel plant.

COAL MINES

Acid Water in. Spontaneous Combustion and Acid Water in a Borneo Mine, R. Allen. Iron & Coal Trades Rev., vol. 108, no. 2920, Feb. 15, 1924, pp. 262-263, 6 figs. Describes how troubles of spontaneous combustion and acid water were dealt with at colliery of Cowie Harbor Coal Co., Ltd., in British North Borneo.

Accidents. Statistical Analysis of Coal Mine Accidents in Pennsylvania, 1916-1922. Coal Trade Bul., vol. 50, no. 10, Apr. 16, 1924, pp. 440-442. Describes tables compiled by Coal Mine Section of Pennsylvania Compensation Rating and Inspection Bur., Harrisburg, Pa.

After-Damp. After-Damp. Sci. & Art of Min., vol. 34, no. 12, Jan. 5, 1924, p. 179. Physiological effects; effects on lights; nitrous fumes and tests therefor.

Alabama. Marvel Plant Largest of Any in Cahaba Field (Alabama). Coal Age, vol. 26, no. 23, Dec. 4, 1924, pp. 796-798, 4 figs. All coal drawn from steep slopes; pitch near surface 15 deg.; vibrating screens and tables used for cleaning coal; repair equipment.

Austria. Austrian Coal Fair (Oesterreichische Kohlenmesse), H. Schürff. Montanistische Rundschau, vol. 16, no. 17, Sept. 1, 1924, pp. II-LII, 15 figs. A series of articles covering future of Austrian coal mining, pulverized coal, tabular list of Austrian coal mines, activities of Oesterrichisch-Alpinen, Statzendorfer, Zillingdorf, Schrambacher, Grümbacher, and other mining companies.

Baths, Pit-Head. Pit-Head Baths at Ellington Colliery. Iron & Coal Trades Rev., vol. 108, no. 2924, Mar. 14, 1924, pp. 423-425, 7 figs. Particulars of baths of Ashington Coal Co., Ltd., England.

Belgium. Campine Region—A Coal Field with No Completed Shaft Less Than Two Thousand Feet Deep, D. Adam. Coal Age, vol. 26, no. 8, Aug. 21, 1924, pp. 247-251, 6 figs. Coal discovered in 1901; apparently portion of field extending from England to Germany; coal of excellent quality especially for metallurgical fuel; Longwall mining and rope haulage adopted.

Bituminous, Labor Required. Data About Labor Employed in Various Bituminous Coal Mines, H. N. Eavenson. Am. Inst. Min. & Met. Engrs.—Trans., no. 1285-C, Jan. 1924, 20 pp., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 28-29. Data collected to furnish idea of amount required in various operations of bituminous mining to produce a ton of coal, plants selected being well-managed ones; contains figures compiled from U. S. Coal Commission's report showing average amount of labor in various classes of mines.

British Empire Exhibition. The Colliery at the British Empire Exhibition. Engineering, vol. 117, nos. 3047, 3049, 3050, and 3051, and vol. 118, nos. 3054, 3057, 3058, 3059, 3060, 3062, 3064, and 3067, May 23, June 6, 13, 20, July 11, Aug. 1, 8, 15, 22, Sept. 5, 19 and Oct. 10, 1924, pp. 677-680, 726-729, 756-759, 793-795, 49-51, 158-160, 190-193, 224-227, 251-252, 338-342, 411-414 and 528-530, 174 figs., partly on supp. plates. Full-size representation of actual working colliery, with all essential features of modern high-class installation; details of engine room, brake engine and overwinder, overwinding prevention gear, head gear, safety hooks, and gears, safety gates, decking control, liquid controller, motors, high- and low-tension switchgear, transformer-room supply, air compressors, meters, coal cutters, conveyors, coal-washing apparatus, etc.

See also Wembley Exhibition, England.

Bumps and Shock Waves. Bumps and Shocks Disturb Johnson Colliery, D. C. Ashmead. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 641-643, 4 figs. Describes accidents occurring at coal mine near Dickson City, Pa.; bumps seem to occur during pillar operations; direction of bump force not always determinate; relief of rock tension appears to cause bumps.

Cage-Loading Platforms. Improved Cage-Loading Platforms (Neuere Bauarten der Förderkorb-Anschlussbühne von Eickelberg), H. Grahn. Glückauf, vol. 60, no. 44, Nov. 1, 1924, pp. 1014-1015, 2 figs. New constructions of Eickelberg connecting platform embody number of mechanical improvements, and cause less obstruction than original type; new platform operates automatically, oncoming tub pressing on lever which projects above rail level, and thus causing platforms on both sides of shaft to come down definitely, but smoothly, on cage bottom.

Canada. Industrial Conditions in the Crow's Nest Pass Coal-Field, R. Strachan. Can. Inst. Min. & Metallurgy, no. 148, Aug. 1924, pp. 519-530. Analysis of coal, production of coal and coke, freight rates, testing fuels, program of research.

Lethbridge Coal Field Developing Rapidly, J. H. Turner. Coal Age, vol. 26, no. 13, Mar 27,

1924, pp. 459-461; 1 fig. Production of mines of Lethbridge coal field, in Alberta, Can.; analysis of coal; advantages possessed by this field which reduce mining cost.

The Disabilities of the Coal-Mining Industry in South-Eastern British Columbia and Possible Remedies, R. M. Young. Can. Inst. Min. & Metallurgy, no. 148, Aug. 1924, pp. 511-518. Discusses high cost of production, including high wages, expensive upkeep and repairs, competition from oil, etc.

Cars. See MINE CARS.

Coal Handling. See COAL HANDLING.

Coal-Loading Machines. Making Coal-Loading Machines Work Successfully in Indiana, D. Ingle. Coal Age, vol. 25, no. 5, Jan. 31, 1924, pp. 163-166, 3 figs. Ayrshire Coal Co. cuts loading costs even on room-and-pillar system with machines averaging but 75 tons daily; with snubbing more lump is obtained than with hand loading.

Colliery, Model. See Wembley Exhibition.

Colorado. The Development of the Alamo Mine Property, J. H. Emrick and E. A. Baird. Coal Trade Bul., vol. 50, no. 11, May 1, 1924, pp. 479-481, 7 figs. Notes on development of and mining methods at property of Alamo Coal Co. located 17 miles from Walsenburg, Colo.

Compressed-Air Installation. The Rhymney Valley Compressed Air Installation, E. L. Hann. Colliery Guardian, vol. 127, no. 3313, June 27, 1924, pp. 1643-1644, 5 figs. Installation described serves group of 11 collieries, property of Powell Duffryn Steam Coal Co., Ltd., and Rhymney Iron Co., Ltd., situated in Rhymney Valley. Describes turbo-compressing plant; compressors built by Brown, Boveri & Co., Baden, and steam turbines driving them by Escher Wyss & Co., S. Africa.

Concrete Construction. "Build Everything of Concrete" Is O'Gara Policy, Ralph D. Brown. Coal Age, vol. 25, no. 16, Apr. 17, 1924, pp. 557-562, 8 figs. Tipple and rescreener cast monolithic and in one unit at O'Gara mine, Harrisburg, Ill.; concrete also used in shaft bottoms, roof arches, mule stables, etc., underground; concrete haulage-way roadbed under test.

Conveying, Skip. The Storage Principle in Coal Mining With Special Reference to Skip Conveying and Its Effect on Power Economics (Der Speicherungsgrundsatz im Steinkohlenbergbau unter besonderer Berücksichtigung der Gefässförderung und ihres Einflusses auf die Kraftwirtschaft), P. Lüth. Glückauf, vol. 60, nos. 41 and 42, Oct. 11 and 18, 1924, pp. 919-925 and 947-954, 27 figs. Advantages of storage for economic working; storage of materials and energy; plants with uniform and irregular loads; arrangement and advantages of skip conveying.

Conveyors. Conveyor That Facilities Concentrated Mining, N. D. Levin. Coal Age, vol. 26, no. 16, Oct. 16, 1924, pp. 541-544, 12 figs. Describes type of conveyor developed by Jeffrey Mfg. Co., Columbus, Ohio; so constructed that it can be lengthened or shortened quickly.

Decking Plants. Electro-Pneumatic Decking at Parkhill Colliery. Colliery Guardian, vol. 127, no. 3298, Mar. 14, 1924, pp. 673-674, 8 figs. Description of plant designed and erected by Westinghouse Brake & Saxby Signal Co., Ltd., Lond.

Modern Design in Colliery Plants and Shaft Fittings. Colliery Guardian, vol. 128, no. 3317, July 25, 1924, pp. 221-222, 5 figs. Describes pneumatic decking plant, with mechanical interlocking, now under construction for a Japanese colliery; arranged for simultaneous decking with two decks; also describes kep gear and cages.

Dewatering. Be Alert to Danger When Unwatering Coal Mines, L. D. Tracy. Coal Age, vol. 26, no. 21, Nov. 20, 1924, pp. 723-724. Points out that no one should go ahead of air with open light unless tests have been made for gas; air current should be promptly reëstablished.

The Water-Hoist for Shaft Un-Watering, J. J. Rutledge. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 26-28, 2 figs. Construction and operation of water box, used in conjunction with hoisting cage; probably best method for dewatering shaft.

Dust Control. See Ventilation.

Dust Laying. See COAL DUST, Laying with Bituloid.

Electric Winding. Electric Winding at Harworth Main Colliery. Iron & Coal Trades Rev., vol. 109, no. 2947, Aug. 22, 1924, pp. 305-307, 7 figs. See also Colliery Engr., vol. 1, no. 7, Sept. 1924, pp. 313-320, 11 figs. Detailed description of Harworth Main Colliery and its equipment.

Electrical Apparatus, Flameproof. Flameproof Electrical Apparatus for use in Coal Mines. Colliery Guardian, vol. 128, nos. 3326 and 3327, Sept. 26 and Oct. 3, 1924, pp. 809-811 and 874-875, 8 figs. Abstract of report of Brit. Mines Dept. dealing with flange protection, and giving results of experiments.

Electrical Equipment. Baker Electric Plant Guarded Against Breakdown, E. J. Gealy. Coal Age, vol. 26, no. 4, July 24, 1924, pp. 117-120, 10 figs. Two circuits of over 4000-volt current supply breaker; provisions to keep equipment from dust; impellers for 20-ft. lift at jigs designed so as to prevent slate in water from wearing pump parts.

Glen Alden Generates and Distributes More Power Than Any Utility Firm in Hard-Coal Region, E. J. Gealy. Coal Age, vol. 26, no. 3, July 17, 1924, pp. 82-90, 22 figs. Description of electrical equipment of Glen Alden Coal Co.'s Mines. Line pressures as high as 66,000 volts used. More power used above than below ground.

Lewis Mine Provides Against Electrical Shutdown and Uses Block System of Development, A. F. Brosky. Coal Age, vol. 25, no. 10, Mar. 6, 1924, pp. 343-346, 5 figs. Alternating current used for everything except haulage at mine of Hudson Coal Co., Wolf Summit, W. Va.; mainline haulage equipment pressed into service to gather cars.

Electrical Equipment, Hazards of. Hazards of Electric Sparks and Arcs in Coal Mines, L. C. Ilsley. U. S. Bur. Mines—Reports of Investigations, no. 2626, July 1924, 2 pp. Gives list of disasters from 1910 to 1924 attributed to electrical apparatus and circuits.

Electrical Machinery, Grounding of. The Grounding of Electrical Mining Machinery, C. M. Means. Coal Mine Mgmt., vol. 3, no. 9, Sept. 1924, pp. 40-42. Securing an adequate ground; grounds for pump motors; movable electrical machinery; relative dangers of a. c. and d. c.

Electrical Surveys. Electrical Surveys in Coal Mines, E. B. Stavely. Coal Industry, vol. 7, no. 2, Feb. 1924, pp. 68-72, 4 figs. Use of portable graphic instruments to determine voltage, current, power demand and power factor conditions; inefficient equipment often disclosed.

Electricity in. Electric and Mining Industries in the North of France (L'industrie électrique et l'industrie minière dans le Nord de la France), M. Blum-Picard. Revue de l'Industrie Minérale, no. 90, Sept. 15, 1924, pp. 445-465, 2 figs. partly on supp. plate. Development of use of electricity by mining companies; details of central stations; and power distribution, steam power data, etc.

Electrical Construction in Coal Mines, E. B. Stavely. Coal Industry, vol. 7, no. 3, Mar. 1924, pp. 104-108, 3 figs. Discusses mechanical design and installation of underground mine distribution

systems; factors to be considered in specifying line materials.

Electricity in Coal Mines, R. Nelson. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 243-244. Indicates obstacles to use of electricity in mines which have been overcome. Paper, abridged, read at Empire Min. & Met. Congress.

Some Researches on the Safe Use of Electricity in Coal Mines, W. M. Thornton. Instn. Elec. Engrs.—Jl., vol. 62, no. 330, June 1924, pp. 481-491 and (discussion) 491-514, 10 figs. Results of investigation; deals with electrical ignition of coal dust alone, coal dust with gas present, of methane and associated gases by disruptive sparks, steady or impulsive, transient arcs, direct or alternating, with varied voltage and frequency, in all percentages of mixture with air; gives examples of application of results to promote safety in mines.

The Present Trend of Electrical Safety in Coal Mines, L. C. Ilsley. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 341-344. Discusses hazards of electrical equipment, and interests of coal-mine operator, miner, state inspector, underwriters of compensation insurance, and manufacturer of electrical equipment in safety measures.

The Use and Abuse of Electricity in Coal Mines, J. A. B. Horsley. Iron & Coal Trades Rev., vol. 109, nos. 2961 and 2962, Nov. 28 and Dec. 5, 1924, pp. 861-862 and 924-926, 15 figs. See also Colliery Guardian, vol. 128, no. 3335, Nov. 28, 1924, pp. 1375-1378, 18 figs. and (discussion) no. 3336, Dec. 5, 1924, p. 1449. Improvement in equipment; testing; leakage indicators; earthing; joints in cable armoring; routine tests; sealing dielectric cables; overload protection.

Electrification. Electrification of Nunnery Colliery, C. S. Magee. Iron & Coal Trades Rev., vol. 108, no. 2920, Feb. 15, 1924, pp. 251-254, 4 figs. Description of electrical equipment of colliery situated on outskirts of Sheffield, Eng.

Elkville, Ill. "The Hartshorns" Open Big Illinois Strip Pit, E. W. Davidson. Coal Age, vol. 26, no. 10, Sept. 4, 1924, pp. 319-322, 5 figs. Describes new mine operated by Black Servant Coal Co., at Elkville, Ill. Careful prospecting and long stripping experience utilized in pit layout; except for one shovel and six locomotives, pit will be electrically operated throughout.

Engineers, Opportunities for. Opportunities for Engineers in the Coal Mines, R. Dawson Hall. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 491-492. Points out that there is equal opportunity in coal and metal mining. Abstract of A.I.M.E. paper.

England. Old Workings at New Kilburn Colliery, D. W. Flint. Iron & Coal Trades Rev., vol. 109, no. 2942, July 18, 1924, pp. 108-110, 6 figs. Discusses driving new adit toward full dip of seam, compares old and new methods of working. Abstract of paper read before Nat. Assn. Colliery Mgrs.

The Horden Colliery. Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 76-90, 23 figs. Description of equipment of colliery in county of Durham, England, winding over 4000 tons of coal per day.

The Physical and Chemical Survey of the National Coal Resources of Great Britain, C. H. Lander. Colliery Guardian, vol. 128, no. 3314, July 4, 1924, p. 21. See also Iron & Coal Trades Rev., vol. 109, no. 2940, July 4, 1924, pp. 7-8. Deals primarily with physical and chemical characteristics of different seams and how these vary; also purpose for which different classes of coal are best suited, and how they can be best utilized for these purposes, and distribution of coal, and its relation to other rocks and minerals.

The Pits of the Cannock Chase Colliery Co., Ltd. Colliery Guardian, vol. 128, no. 3337, Dec. 12, 1924, pp. 1495-1497, 14 figs. Excellent results that can be obtained from modernization and centralization of old collieries. Gives examples of interesting recording systems and ingenious operative devices.

The Sneyd Collieries Limited, Burslem. Colliery Engr., vol. 1, no. 5, July 1924, pp. 214-230, 23 figs. Illustrated description of typical No. Staffordshire Colliery, with special reference to some of re-equipment work being carried out.

Equipment. New Equipment Shown at Cincinnati Convention, F. H. Kneeland. Coal Age, vol. 25, no. 21, May 22, 1924, pp. 772-777, 16 figs. Describes exhibits of pumps, car greasers, track equipment, locomotives, cars and car dumps, shown at machinery exposition of coal mining convention.

Explosion Prevention. Coal-Mine Explosions and Their Prevention, H. F. Bain. Monthly Labor Rev., vol. 18, no. 6, June 1924, pp. 10-14. Experiments carried out by Bur. of Mines.

Is Mud Equal to Rock Dust For Mine Protection? Coal Age, vol. 26, no. 12, Sept. 18, 1924, pp. 391-394, 5 figs. W. J. Reid, superintendent of Lion Coal Co.'s mine at Wattis, Utah, with plenty of air-slacked shale at hand saves grinding costs by mixing dirt with water and spraying it through rooms and entries from home-made pumping machine.

See also Rock Dusting.

Explosions. Benwood Explosions Shows Need for Stricter and More Uniform Mining Laws, Rob. M. Lambie. Coal Age, vol. 25, no. 20, May 15, 1924, pp. 728-730, 2 figs. Fire that followed blast at mine of Wheeling Steel Corpn., W. Va., quickly extinguished by sealing off; all-service gas masks prove more advantageous than oxygen apparatus in rescue work; necessity for rock dusting emphasized.

Castlegate Blast Due to Contact of Gas with Open Light. Coal Age, vol. 25, no. 12, Mar. 20, 1924, pp. 431-432, 3 figs. According to preliminary report of disaster of Utah Fuel Co.'s mine, fireboss is believed to have attempted to remove firedamp from room.

Coal-Dust Explosions, W. T. Gotheridge. Can. Inst. Min. & Metallurgy,—Bul., no. 150, Oct. 1924, pp. 626-637. Suggestions for their prevention, and recovery of mines after explosions.

Coal Mine Explosions, W. Moorhead. Coal Mine Mgmt., vol. 3, no. 9, Sept. 1924, pp. 33, 42, 48, 51, 56, and 60. Safety measures employed at mines of Stag Canon Branch of Phelps-Dodge Corpn., Dawson, N. Mex.

Explosion Hazards Incidental to Unwatering Coal Mines. U. S. Bur. Mines—Reports of Investigations, no. 2649, Oct. 1924, 5 pp. Investigation of cases of gas explosion occurring during or very soon after mine was being unwatered; conclusions.

How to Investigate Explosion Hazards, J. W. Paul. Coal Mine Mgmt., vol. 3, no. 7, July 1924, pp. 38-43, 1 fig. Discusses effects of gas, dangerous dusts, dust sampling, sampling rib and timber dust, mine tests, results of sizing tests and explosibility index. Abstract of paper read before W. Virginia Coal Min. Inst.

Maltby Main Colliery Explosion. Colliery Guardian, vol. 127, no. 3296, Feb. 29, 1924, pp. 549-550, 2 figs. See also Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, pp. 337-340, 1 fig. Chief Inspector's report on causes of and circumstances attending explosion which occurred at Yorkshire, England, July 28, 1923.

Minimizing and Localizing Coal-Mine Explosions, W. C. Holman. Coal Age, vol. 25, no. 18, May 1, 1924, pp. 627-630, 4 figs. Adobe dust was spread several inches deep on main haulage roads throughout all mines of Dawson coal properties

of Phelps-Dodge Corpn., in order to lessen possibility of explosion; dust barriers placed at strategic points; air heated by radiators and humidified by steam and water; undercutter chains and loaded cars sprayed.

Recovery Work After the Castlegate Mine Disaster—What It Taught and Exemplified, A. L. Murray. Coal Age, vol. 26, no. 10, Sept. 4, 1924, pp. 323-326. Recovery of Castlegate No. 2 mine at Castlegate, Utah, following explosion of Mar. 8, 1924, forms excellent example of organization that must be perfected and procedure that is usually followed in recovery of any large mine after a major disaster. Treatment of bodies; establishment of ventilation; testing of apparatus before use; inspection of men on rescue teams.

The Critical Time of Day for Coal-Mine Explosions, L. D. Tracy and M. W. von Bernewitz. U. S. Bur. Mines—Reports of Investigations, no. 2638, Sept. 1924, 5 pp., 1 fig. Study of 256 coal-mine explosions, which occurred during period 1909-1924, and killed 4413 men and injured 570 others, reveals fact that there are two critical times of day when explosions are most likely to occur, and when corresponding care should be exercised to guard against disaster. Critical period in morning ranges between 6 and 9 o'clock, with a peak at 7:30 o'clock, and in afternoon or early evening between 3 and 7 o'clock, with a peak at 6 o'clock. Some discussion of explosions enumerated. (See (abstract) in Modern Min., vol. 1, no. 4, Nov. 1924, pp. 115-116.

Fans. See FANS, Coal-Mine.

Fire Detection. The Application of Gas Analysis to the Detection of Gob Fires, J. T. Storrow and J. I. Graham. Colliery Guardian, vol. 128, nos. 3327 and 3328, Oct. 3 and 10, 1924, pp. 873-874 and 934-935 and Iron & Coal Trades Rev., vol. 109, no. 2953, Oct. 3, 1924, pp. 543-547. Deals with part which careful chemical analysis of underground air samples may play in detection of heatings and following of course of these when they have occurred.

Fire Fighting. How to Make Preparations Against a Fire or an Explosion and What to Do When It Occurs, D. Harrington and M. W. von Bernewitz. Coal Age, vol. 26, no. 20, Nov. 13, 1924, pp. 689-691, 3 figs. Statistics based on 164 disasters of this kind as studied by engineers of Bur. of Mines; 500 lives saved by fan reversal; no lives lost by reversing fans.

Fire Prevention. Some Notes on the Problem of Gob Fires in Thick, Highly Inclined Seams, J. B. de Hart. Can. Inst. Min. & Metallurgy—Bul., no. 142, Feb. 1924, pp. 48-56. Causes and conditions which are inductive of spontaneous heating of coal; study of particular case of thick steeply inclined seams; possibility of ventilating gob; exclusion of air from gob as equally effective method of fire prevention; other possible methods.

Firedamp. See FIREDAMP.

Fires. An Account of a Fire in the Bickershaw Seven Feet Mine at Leigh, Lancashire, and Its Action Upon the Coal, M. Ashurst and F. N. Siddall. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 149-157, 3 figs.

Gob Fire at a North Wales Colliery, J. Valentine. Iron & Coal Trades Rev., vol. 119, no. 2958, Nov. 7, 1924, pp. 739-741, 3 figs. Account of fire at Vauxhall Colliery, Ruabon. (Abstract.) Paper before Nat. Assn. Colliery Mgrs.

Flooding. Redding Colliery Accident. Colliery Guardian, vol. 127, no. 3309, May 30, 1924, pp. 1381-1382, 2 figs. Report of chief inspector of mines, T. H. Mottram, on causes of and circumstances attending inrush of water, which occurred at Redding Colliery, Falkirk, Stirlingshire, Scotland, on Sept. 25, 1923.

France. Restoration Work at Pit No. 11 of the Lens Mines, France. Iron & Coal Trades Rev., vol. 109, no. 2963, Dec. 12, 1924, pp. 960-962, 13 figs. Describes work of reconstruction at pit which had been almost completely destroyed by Germans during world war. Translated from Revue Universelle des Mines.

Galleries. Building a Long Retarding-Conveyor Gallery at Brotherhood Mine, Coal River Collieries (W. Va.), W. J. Denman. Coal Age, vol. 25, no. 7, Feb. 14, 1924, pp. 235-236, 3 figs. Structure rises 800 ft., is in places 40 ft. above ground and 1400 ft. long, maximum grade being 35 deg.; how joints are stiffened and strengthened.

Gas Testing. Ancient and Modern Methods of Testing for Gas in Coal Mines, Geo. O'Brien. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 205-212. The first mine safety lamp; principle of safety lamp; lamps for testing gas; gas indicators.

Gas-Testing Apparatus. Sci. & Art of Min., vol. 34, no. 14, Feb. 2, 1924, pp. 214-215, 2 figs. Details of Clowes' gas chamber which is extensively used at mining schools for demonstrating effects of firedamp or inflammable gases on flame of lamp and for determining composition of residual atmosphere which will extinguish various kinds of flame; and Oldham apparatus also extensively used at coal mines and mining schools for demonstrating purposes.

Germany. Tectonics of Northeastern Border of Lower Siberia Coal Basin and Its Connection With CO_2 Gas Liberation in the Seams (Die Tektonik am Nordostrande des niederschlesischen Kohlenbeckens und ihr Zusammenhang mit den Kohlensäureausbrüchen in den Flözen), S. von Bubnoff. Zeit. für das Berg-, Hütten- u. Salinenwesen, vol. 72, no. 2, 1924, pp. 106-138, 13 figs. Results of geologic examination, especially of Seegen Gottes, Idaschacht, Sophie, Ruben, Rudolf and Wenzeslaus mines.

Tests and Improvements in Mining Operations in Prussia During 1923 (Versuche und Verbesserungen beim Bergwerksbetriebe in Preussen während des Jahres 1923). Zeit. für das Berg-, Hütten- u. Salinenwesen, vol. 72, no. 1, 1924, pp. 1-38, 36 figs. Details of blasting operations, mining methods, maintenance and extension of galleries, conveying, lighting, coke production, briquetting, etc.

Haulage. See COMPRESSED AIR, Coal Mines; MINE HAULAGE.

Haulage-Rope Breakage. The Nunnery Colliery Disaster. Iron & Coal Trades Rev., vol. 109, no. 2954, Oct. 10, 1924, pp. 583-584, 2 figs. Abstract of official report on causes of and circumstances attending underground haulage accident which occurred at mine near Sheffield in December, 1923; conclusions and recommendations.

Head Gears. Colliery Head Gears, J. W. Wardell. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 34-38, 11 figs. Discussion of the various types in ordinary use, with their relative advantages, and features governing their design.

Health Hazards. Is Coal Industry Blind to Health Hazards of Mine? D. Harrington. Coal Age, vol. 26, no. 22, Nov. 27, 1924, pp. 757-761, 2 figs. Author claims that coal mines contribute far more than their share of death and disease; rock dust, water and better ventilation needed.

Holland. The Dutch State Mines (Onze Staatsmijnen), H. A. Van Ysselsteyn. Ingenieur, vol. 39, no. 44, Nov. 1, 1924, pp. 857-864. Report on coal mines of Dutch Nation, covering history, yield, administration, invested capital, profits derived from their exploitation, and wages paid before and after world war.

Humidification. Wetting Down Colorado Mines Is a Real Problem. Coal Age, vol. 25, no. 11,

Mar. 13, 1924, pp. 386-387, 1 fig. Low humidity in high and dry region makes dust serious menace; C. F. & I. Co. humidifies with both live and exhaust steam and sprinkles lavishly.

Hungary. Coal Fields of Agram United Mining and Metallurgical Works (Das Zagorjanische Kohlengebiet der Vereinigten Berg- und Hüttenwerke A. G. in Zagreb), A. Hueber. Montanistische Rundschau, vol. 16, no. 18, Sept. 16, 1924, pp. 485-487. Discusses geologic formation, mining, and analyses of coals, lignites, and dry distillation products.

The Collieries of the First Danube Steam Navigation Company (D.D.S.G.), Near Pécs (Fünfkirchen), Hungary, J. Herczegh. Instn. Min. Engrs.—Trans., vol. 68, part 2, Nov. 1924, pp. 175-193 and (discussion) 193-196, 19 figs. Description of mining practice of Hungarian Liassic coalfields, including geological observations; central coal-washing, screening, and briquetting plant, and electric power station at Ueszög; coal transportation; conditions of working coal; shafts and winding gear; surface machinery; welfare and housing; etc.

Hydraulic Filling. Hydraulic Filling Plants in Erz Mountain Coal Mines at Zwickau (Die Spülversatzanlagen des erzgebirgischen Steinkohlen-Aktienvereins in Zwickau), F. Schwartz. Glückauf, vol. 60, nos. 44 and 45, Nov. 1 and 8, 1924, pp. 999-1003 and 1032-1037, 5 figs. Gives reasons for using hydraulic filling; production and conveying of filling sand; arrangement and operation of hydraulic plants; advantages of hydraulic mining.

India. Coal Mining in India. Colliery Engr., vol. 1, no. 5, July 1924, pp. 243-247, 9 figs. Illustrated account of conditions and methods of working in Indian coalfields.

Labor-Saving Equipment. Cost-Cutting Suggestions for the Mine Executive, E. Healy. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 678-680, 5 figs. Savings in past testify to possibilities of present; automatic equipment saves labor, eliminates accident, and is more dependable than station tender; super-power practice adaptable to mine conditions.

Lighting. Productive Lighting for Coal Mines, C. E. Egeler. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 4-7, 7 figs. Importance of better illumination underground; type of equipment needed for various sections of mine.

Management. "Balanced Mines" Should Have Rock-Bottom Costs, Chas. E. Anderson. Coal Age, vol. 25, no. 18, May 1, 1924, pp. 637-640, 2 figs. It is shown that everything about a mine can be balanced and each department must be coördinated with all others if lost motion is to be avoided; describes efficient mine-balance system.

Too Much Around a Coal Mine Is Left to Chance. Coal Age, vol. 25, no. 4, Jan. 24, 1924, pp. 137-138, 1 fig. Production losses at tipple; supervision underground; correlation of mining operations. From report on Underground Management in Bituminous Mines, made by S. E. Thompson and Associates to U. S. Coal Commission.

Mexico. A Modern Coal Mine in Mexico, J. B. Robinson. Coal Industry, vol. 7, no. 3, Mar. 1924, pp. 116-118, 4 figs. Mining and preparation practice at large Mexican mine of Sabinas Co.; coal coked in beehive ovens and sold locally.

Mine-Rescue Work. See MINE-RESCUE WORK.

Mudcapping. Danger in Using Permissible Explosives for Mudcapping in Dry and Dusty Coal Mines, W. J. German. Du Pont Explosives Service Bul., no. 9, Mar. 1924, 3 pp., 2 figs. A permissible is not a permissible when fired in the open.

Nova Scotia. Dominion No. 1 B. Colliery, Glace Bay, Cape Breton, J. Moffat. Can. Min. Jl., vol. 45, no. 40, Oct. 3, 1924, pp. 976-979, 4 figs. Mining method, coal-cutting machines, ventilation, pumping arrangements and underground haulage at coal mine in Nova Scotia.

Open-Lamp Hazards. The Danger of Open Lamps in Coal Mines, L. C. Ilsley and M. W. von Bernewitz. U. S. Bur. Mines—Reports of Investigations, no. 2567, Jan. 1924, 3 pp. Discusses hazards.

Pennsylvania. Bituminous Coal Losses and Mining Methods in Pensylvania, Jas. D. Sisler. Pennsylvania Geol. Surv., 4th series, 1924, 216 pp., 30 figs. Topography and geology of Pennsylvania bituminous coal field; method of studying coal losses; causes of coal losses; coal reserves; Pittsburgh steam coal, gas coal, coking coal districts; other districts.

Pit Temperatures. Pit Temperatures and their Possible Modification, F. Heise and K. Drekopf. Colliery Guardian, vol. 128, nos. 3323 and 3324, Sept. 5 and 12, 1924, pp. 612-613 and 678-679, 4 figs. Analysis of various factors exerting decisive influence on pit temperatures and examination of possibility of artificially modifying these conditions; chief factors are prevailing day temperature; heat due to compression; rock temperature; equalizing zone; absorption or deposition of water vapor; and formation of CO_2 through oxidation of coal or wood. Translated from Glückauf.

Power. Power Studies in Illinois Coal Mining, A. J. Hoskin and T. Fraser. Univ. of Ill.—Bul. no. 144, July 1924, 80 pp., 3 figs. Power problem in Illinois mines; uses of steam and electricity in Illinois coal mines; characteristics of typical mines selected for study; power consumption by various mining activities; power requirements at mixed-power mines; comparison of estimated with metered power consumption figures; public-utility power at Illinois mines; public-utility rates; and principal factors that affect power costs in mining.

Power Distribution. A Direct-Current Power-Distributing System that Keeps the Mine Equipment Working, R. Howey. Coal Age, vol. 26, no. 5, July 31, 1924, pp. 152-154, 3 figs. Need for higher operating efficiencies has created demand for automatic devices; troubles in power circuit are localized so that serious delays cannot occur.

Power Plants. A Modern Colliery Power Plant, S. Wales Inst. Engrs.—Proc., vol. 39, no. 7, and vol. 40, no. 2, Feb. 21, and May 8, 1924, pp. 772-794, and 77-92. Discussion of paper by E. L. Hann published in Proc., vol. 39, no. 5, p. 583.

Illinois Mine Generates Own Power Cheaply, A. Allen and H. F. Hebley. Coal Age, vol. 26, no. 1, July 3, 1924, pp. 3-7, 4 figs. Describes power plant of No. 4 mine of Donk Bros. Coal & Coke Co., in Madison County, Ill. All pickings and some slack burned; superheated steam used; exhaust from hoist and auxiliaries utilized in mixed-pressure turbine. Costs reduced to 1.6 cents per kw-hr. with plant at half capacity. Mine has a daily hoisting capacity of 6000 tons.

See also STEAM-ELECTRIC PLANTS, Coal-Mine.

Power Purchasing. Making Power Contracts That Will Save Your Purse, W. H. Russell. Coal Age, vol. 26, no. 13, Sept. 25, 1924, pp. 437-438. Discusses schedule under which power should be purchased. Power schedules should be selected with care; large savings often can be made by buying under two schedules; contract must be based on intimate knowledge of conditions at mine to be supplied.

Production and Labor, United States. Production and Labour in United States Coal Mines, E. T. Devine. Int. Labour Rev., vol. 10, nos. 5 and 6, Nov. and Dec. 1924, pp. 759-778 and 935-961. Report of U. S. Coal Commission of 1922-1923. Nov.: Account of Coal Commission and description of anthracite industry. Dec.: Bituminous coal industry, and recommendations.

Pumping. Present Day Pumping Practices in Anthracite Mines, E. J. Falloon. Modern Min., vol. 1, no. 2, Sept. 1924, pp. 32-40, 9 figs. Summary of some of the high points in preseat-day practices and tendencies. A properly applied system of pumping not only saves labor and power, but insures continuous mine operation.

Pumping Plants. See PUMPING PLANTS, Mines.

Quantity of Waste, Determination of. Determining by Volumetric Tests the Quantity of Unmarketable Material in a Coal Seam, H. Owens. Coal Age, vol. 25, no. 13, Mar. 27, 1924, pp. 465-466, 2 figs. Displacement tank used to obtain volume of the various sizes of coal shipped; volume of coal in solid calculated from mine maps and compared with volume shipped to market.

Refuse Disposal. The Mechanical Disposal of Colliery Spoil, G. F. Zimmer. Colliery Engr., vol. 1, no. 7, Sept. 1924, pp. 328-333, 9 figs. Survey of various methods of handling refuse by aerial ropeways, with special reference to jig-back type.

Rescue Apparatus. See MINE-RESCUE APPARATUS.

Research. Progress in Mining Technique, D. Adam. Colliery Engr., vol. 1, no. 5, July 1924, pp. 210-212. Discusses fields of research other than safety, especially transportation of coal from face to pithead and its ramifications.

Rhodesia. The Wankie Colliery, Southern Rhodesia. Iron & Coal Trades Rev., vol. 109, no. 2943, July 25, 1924, pp. 151-152 and 172-174, 12 figs. Discusses general layout and equipment, including ventilation, haulage, coal preparation, coke ovens, etc.

Rock Dusting. Dr. Wheeler Explains That Wet Coal Dust Is Still Coal Dust and Liable to Explode. Coal Age, vol. 25, no. 12, Mar. 20, 1924, pp. 423-427, 1 fig. Extracts from lectures given by R. V. Wheeler, dealing with factors which enter into gas and coal-dust explosions, placing greatest emphasis on prevention of latter by rock dusting.

How Old Ben Corporation with Rock Dust Extinguished Seven Mine Explosions, J. E. Jones. Coal Age, vol. 25, no. 25, June 19, 1924, pp. 907-911, 6 figs. See also Coal Industry, vol. 7, nos. 5 and 6, May and June 1924, pp. 191-197, 4 figs, and 243-246. Zone system vs. coating system; relative advantages of floor, rib and roof dust; frequencies of application; effectiveness of dust distributed by air current; sampling by vacuum cleaner.

Limestone's Advantages for Rock-Dusting, H. H. Brandon. Explosives Engr., vol. 2, no. 7, July 1924, pp. 235-237, 3 figs. Mines in various sections of country are adopting practice for rock dusting; many quarries can supply coal mines with pure pulverized limestone at attractive price.

M-S-A- Rock Dust Distributor, T. G. Fear. Coal Trade Bul., vol. 51, no. 9, Oct. 1, 1924, pp. 389-390, 6 figs. Description of car.

Machine in Royal Mine Makes Dust and Distributes It, S. Tescher. Coal Age, vol. 26, no. 22, Nov. 27, 1924, p. 756, 1 fig. Results of 6 months' experimenting with rock-dusting equipment at mine in Colorado; relies on ventilation to carry dust over 1000 ft. of space; dust barrier formed at each machine location.

Methods of Rock Dusting Bituminous Mines, E. Steidle. Coal Age, vol. 26, no. 24 and vol. 27, no. 1, Dec. 11, 1924, and Jan. 1, 1925, pp. 825-829 and 6-16, 8 figs. See also Modern Min., vol. 1, no. 5, Dec. 1924, pp. 126-134, 6 figs. Dec. 11: Rock Dusting as means of preventing and limiting mine explosions; practical application; testing. Jan. 1, 1925; Rock dust for mine protection, fire fighting, shot stemming and cushioning.

Pittsburgh Coal Co. Evolves Dust Distributor, A. F. Brosky. Coal Age, vol. 26, no. 25, Dec. 18, 1924, pp. 865-867, 5 figs. Nozzle of rock-dust distributor projects dust to all surfaces in proper proportion; mechanical mule draws train at suitable speed for complete distribution in one application.

Rock Dust No Cure-All, Say Western Engineers, E. W. Davidson and A. F. Brosky. Coal Age, Vol. 26, no. 23, Dec. 4, 1924, pp. 783-788, 7 figs. Development of rock dusting in the West; high-pressure dusting wins favor; mud-spraying experiments.

Rock Dust Stemming vs. Air Spacing, H. Petersen. Explosives Engr., vol. 2, no. 7, July 1924, pp. 219-223, 10 figs. Report of recent tests made at Black Hawk Mine of U. S. Fuel Co., Hiawatha, Utah.

Rock Dusting. Min. Congress Jl., vol. 10, no. 7, July 1924. Contains following papers read at Am. Min. Congress: Actual Experiences With and Tried Methods of Applying Rock Dust, J. E. Jones, pp. 291-293, 1 fig.; Occurrence, Characteristics and Behavior of Coal Dust, J. W. Paul, pp. 294 and 302, 1 fig.; Investigations Into Rock Dusting for Coal Dust Explosion Prevention, G. S. Rice, pp. 295-296, 1 fig.; Rock Dusting of Coal Mines: Efficacy, Methods and Costs, J. T. Ryan, pp. 297 and 302; Rock Dust Versus Water as a Preventive Measure for Mine Explosions, E. Steidle, pp. 298 and 302.

Rock Dusting of Bituminous Coal Mines, E. Steidle. Coal Mine Mgmt., vol. 3, no. 7, July 1924, pp. 23-33, 2 figs. Also Coal Industry, vol. 7, no. 7, July 1924, pp. 279-283, and Explosives Engr., vol. 2, nos. 7, 8, and 9, July, Aug., and Sept. 1924, pp. 240-242, 280-283, and 302-305, 8 figs. Discusses mine explosions, theory of coal-dust explosion, preventive measure, effect of watering coal dust, application, theory of rock dusting, examination of coal dust hazard, raw materials for rock dust, crushing and pulverizing, dust distributor, sampling rock dust areas, rock dust barriers and costs. Abstract of paper read before W. Virginia Coal Min. Inst.

Rock Dusting of Coal Mines, T. G. Fear. Coal Mine Mgmt., vol. 3, no. 7, July 1924, pp. 43-44 and 62-65. See also Coal Trade Bul., vol. 51, no. 9, Oct. 1, 1924, pp. 387-388. With use of permissible explosives, lamps and machinery, rock dust stemming and rock dusting of mines, coal-dust explosions can be controlled and practically eliminated. Abstract of paper read before Coal Mine Safety Conference, St. Louis.

Rock Dusting of Coal Mines: Efficacy Methods and Costs, J. T. Ryan. Coal Industry, vol. 7, no. 6, June 1924, pp. 241-242. Equipment necessary at mine to pulverize and spread dust; estimate for 400,000-ton mine installation.

Rock-Dusting Machine with Three Fixed Outlets Treats Roof and Ribs. Coal Age, vol. 26, no. 4, July 24, 1924, pp. 127-128, 2 figs. Particulars of Miller mine-dusting machine. Is mounted on a single truck and does not need services of a nozzleman. Dust does not pass through fan.

Rockies Are Full of Ingenious Dusting Machines. Coal Age, vol. 26, no. 13, Sept. 25, 1924, pp. 427-430, 8 figs. Describes home-made devices employed in Rocky Mountain coal mines for applying inert dust, employing various principles. Uniform feed difficult to assure.

Shale Dusting Now Spreading Rapidly in Illinois. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 683-688, 6 figs. Many companies follow lead of Old Ben Coal Corpn., where dusting system got its greatest impetus; methods employed.

Stone Dusting, J. A. S. Ritson. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 663-668, 8 figs. Legal requirement which helps Great Britain to

keep fatality rate one-third as large as ours; methods employed in dusting.

Stone Dusting to Prevent Mine Explosions. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 97-98. Discusses methods of distribution, fine or coarse, effect on health, situation in America; etc.

Tentative Specifications for Rock Dusting to Prevent Coal-Dust Explosions in Mines, G. S. Rice, J. W. Paul and R. R. Sayers. U. S. Bur. Mines—Reports of Investigations, no. 2606, May 1924, 6 pp. Also Coal Industry, vol. 7, no. 7, July 1924, pp. 273-275; and Coal Mine Mgmt., vol. 3, no. 7, July 1924, pp. 45-48 and 66. Discussing size of particles, character of rock dust, amount of dust required, redusting, allowable combustible matter, sampling, analysis of samples and extent of rock dusting necessary.

The Effects of Dust Inhalation in Mines, J. S. Haldane. S. Wales Inst. Engrs.—Proc., vol. 39, no. 6, Feb. 2, 1924, pp. 685-709 and (discussion) 709-722. Describes serious dangers which arise under certain conditions from inhalation of stone dust in mines, and explains evidence that in coal mines these dangers do not exist naturally, provided that suitable material is used for stone dusting and that stone dust is applied in such manner as not to expose men to excessive inhalation of dust.

Using Rock Dust in Shotholes to Lessen Violence and Increase Lump Coal, J. H. Horlick, Jr. Coal Age, vol. 25, no. 22, May 29, 1924, pp. 805-806. Explosive is laid loose in shothole and above it cartridges of rock dust are placed; dust is compressed, reducing violence of blast; flame of shot is extinguished by shower of dust.

What Kind of Rock Dust Should Be Used in Mines? Geo. S. Rice, J. W. Paul and R. R. Sayers. Coal Age, vol. 25, no. 24, June 12, 1924, pp. 876-878. Fifty per cent should pass through 200-mesh screen; smaller percentage may be this fine under certain conditions; some mines need 75 per cent of non-combustible; effect of methane.

See also COAL DUST, Explosions.

Rock Pulverizing Unit. Planning an Efficient Rock Pulverizing Unit, L. H. Sturtevant. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 647-649, 5 figs. Should have preliminary crusher, possibly dryer, and pulverizer of at least 1 ton per hr. capacity producing dust of 95-per cent 60-mesh and 60-per cent 200-mesh fineness.

Safety. "Make It Safe," A. W. Dickinson. Coal Industry, vol. 7, no. 3, Mar. 1924, pp. 108-111, 4 figs. Slogan in use at mines of Union Pacific Coal Co.; measures taken to promote safety of employees.

Mine Safety Due for a Boom in Illinois When New State Council Sets Pace for National Drive. Coal Age, vol. 26, no. 2, July 10, 1924, pp. 42-46, 3 figs. Discussion on mine safety which took place at meeting, engineered by Nat. Safety Council's mining section, of 100 coal-mining men, in St. Louis. Discussion ranged from rock dusting and ventilation down to exact way in which black damp kills a man.

Mine Safety Methods of the Ford Collieries Company, C. L. Colburn. Nat. Safety News, vol. 10, no. 1, July 1924, pp. 31-33, 4 figs. Company operates 3 mines employing about 1000 men. Management accomplishes marvelous results by watchword "Safety First."

Rocky Mountain Institute Lays Down Safety Code. Coal Age, vol. 26, no. 9, Aug. 28, 1924, pp. 289-292, 3 figs. Rules and regulations submitted in report of Rocky Mountain Coal Mining Inst. Coal-mining authorities of Colorado, New Mexico, Utah, and Wyoming believe in more observance rather than in more law. Declare for rock dusting and sprinkling. Want constant educational campaign.

Shaft Sinking. See SHAFT SINKING.

Shafts. Location of. Location and Size of Shafts. Sci. & Art of Min., vol. 34, nos. 22 and 23, May 24 and June 7, 1924, pp. 338-339 and 358. Preliminary operations; quality of coal found in various seams; existence of faults or other geological disturbances; nature of surface deposits; factors governing position of shafts.

Shale Dusting. See Rock Dusting.

Signaling. See MINE SIGNALING.

Silt Recovery from Breaker Slush. Recovering Silt from Breaker Slush, P. Sterling. Coal Industry, vol. 7, no. 2, Feb. 1924, pp. 85-86, 4 figs. Improved method for recovering solids from anthracite breaker slush; prevents stream pollution and provides fuel for use at future date; describes installation of Dorr thickener at Drifton, Hazleton Shaft and Sayre collieries.

Spontaneous Combustion in. Spontaneous Combustion in Coal Mines, J. I. Graham. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 27-31, 3 figs. Survey of underlying causes of this trouble, with indications of practical preventative methods.

See also Acid Water in.

Squeeze in Pitching Seams. The Cause of and Methods of Combating Squeeze in Pitching Seams, Wm. G. Heeley. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 707-710, 2 figs. Describes experience gained and explains deductions made from phenomenon of great squeeze which occurred at Brule mines, Alta.

Stone Dusting. See Rock Dusting.

Strikes. See STRIKES.

Substations for. See SUBSTATIONS, Coal-Mine.

Surface Plant. New Surface Plant at Barrow Colliery, Barnsley. Iron & Coal Trades Rev., vol. 109, no. 2948, Aug. 29, 1924, pp. 341-343 and 353-356, 17 figs. Gives description of rearranged surface plant at Barrow Colliery of Barrow Hematite Steel Co., Ltd. and general layout.

Underground Management. How Miner and Manager, Each with His Immediate Ends in View, Hamper Coal Production, S. E. Thompson. Coal Age, vol. 25, no. 11, Mar. 13, 1924, pp. 383-385, 5 figs. Discusses lack of coöperation between miner and management; points out that effect of two-shift work should be carefully studied in every mine from standpoint of economical management, equipment, development, and personnel.

Valuation. Estimating Coal Mine and Coal Land Valuations, H. B. Miller. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 21-25. Factors to be considered when making valuation; outline for report on coal mine in connection with valuation.

The Principles of Coal Property Valuation, A. W. Hesse. Coal Mine Mgmt., vol. 3, no. 1, Jan. 1924, pp. 44-48. Values on assured, probable and possible coals.

Valuation of Coal Mining Properties in the United States. Am. Inst. Min. & Met. Engrs.—Trans., no. 1290-C, Jan. 1924, 11 pp., 5 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 32-33. Report of Engrs.' Advisory Valuation Committee of U. S. Coal Commission.

Valuation of Coal Properties, G. M. S. Tait. Min. & Metallurgy, vol. 5, no. 205, Jan 1924, pp. 11-12. Basis of valuation. Geographical situation a deciding factor.

Ventilation. Coal Mine Ventilation, Jos. B. de Hart. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 620-625. Discusses two papers by Douglas Hay and Rob. Clive, forming reports of committee on ventilation of mines, appointed by Midland Inst. Min. Engrs.

Resistance of Mine Headings To the Flow of Air, J. W. Paul, G. E. McElroy and H. P. Greenwald. Coal Age, vol. 26, no. 13, Sept. 25, 1924, p. 441. Notes on tests made by U. S. Bur. Mines in connection with research on coal-mine ventilation factors. In smooth roadway coefficient only 0.000,000,003,6; rough floor will add 10 per cent; cutting out crosscuts reduced friction 6 per cent.

Tests on the Leakage of Mine Ventilating Doors, J. W. Paul, G. E. McElroy and H. P. Greenwald. U. S. Bur. Mines—Repts. of Investigations, no. 2602, May 1924, 3 pp. Particulars of tests made to determine leakage of two air locks which had been placed in experimental mine as part of equipment for tests on friction factors.

The Resistance of Coal-Mine Entries to the Flow of Air, J. W. Paul, C. E. McElroy, and H. P. Greenwald. U. S. Bur. Mines—Reports of Investigations, nos. 2621 and 2647, July and Aug., 1924, 6 pp. See also Coal Mine Mgmt., vol. 3, no. 9, Sept. 1924, pp. 49-51. No. 2621: Deals with resistance of unobstructed entries; test method and results; no. 2647: resistance caused by mine cars.

The Ventilation of Mines, D. Hay and R. Clive. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1058-1061, 6 figs. Discusses objects and principles of ventilation, splitting of air, regulation of splits, influence of leakage, size of airway, and natural ventilation effect. From paper read before Min. Sec. Empire Min. & Met. Congress.

Ventilation and Dust Control, D. D. Wilcox. Coal Mine Mgmt., vol. 3, no. 8, Aug. 1924, pp. 21-25, 1 fig. Discusses leaky stoppings, reducing resistance, improving circulation, and reducing amount of dust. Abstract of paper read before Coal Mine Safety Conference.

Ventilation in Cape Breton Collieries, J. Moffatt. Can. Min. Jl., vol. 44, no. 48, Nov. 30, 1923, pp. 943-944. Ascensional system now being organized in collieries of Dominion Coal Co.

Waste-Heat Ventilation (Abdampfbewetterung), H. Kegel. Braunkohle, vol. 22, no. 40, Jan. 5, 1924, pp. 613-616, 3 figs. Refers to work by F. Heise, published in same journal (no. 29, 1923), on possibility of utilizing heat from exhaust steam for production of air current in deep mines, and discusses possibility of applying waste-heat ventilation in lignite mines.

See also FANS, Mine.

Wales. The Llantrisant and Llanharan Sinkings. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 15-27, 15 figs. Particulars of modern equipment already erected by Powell Duffryn Steam Coal Co. Ltd., Wales, and of plans prepared for future development.

Wembley Exhibition, England. Wembley Exhibition Colliery, H. M. Crankshaw. Colliery Guardian, vol. 127, no. 3296, Feb. 29, 1924, pp. 533-538, 24 figs. See also Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, pp. 354-355, 1 fig.; and Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 43-49, 6 figs. Description of equipment of a full-sized coal mine equipped with plant representative of best British mining practice, most attractive feature at Wembley exhibition in England.

See also British Empire Exhibition.

Winding Engines. See WINDING ENGINES.

COAL MINING

Alabama. Alabama Coal Mining Practices, M. H. Fies. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1370-C, Sept. 1924, 49 pp., 26 figs. and (abstract) Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 487-490, 3 figs. See also Coal Age, vol. 26, nos. 14 and 15, Oct. 2 and 9, pp. 473-478 and 509-512, 12 figs. Production and other statistics; detailed description of mining methods; ventilation; pumping; haulage; mine cars and dumps; describes Ramsay mine-run sampler; safety.

A. C. vs. D. C. Operation. A. C. Versus D. C. in Mine Operation, R. Trautschold. Coal Industry, vol. 7, no. 2, Feb. 1924, pp. 83-84. Alternating current favored for all operations except haulage; 3-phase, 60-cycle current most widely used.

Alamo Mine, Col. Steeply Pitching Coal Beds, Undercut by Machine, Are Tapped by Slope in Shales Below Them, C. M. Schloss. Coal Age, vol. 25, no. 13, Mar. 27, 1924, pp. 451-454, 5 figs. Description of Alamo coal mine in Colorado and details of mining operations; seam gradient 58 per cent; slope will not cut seam till it has been driven 2600 ft. but a slant is provided to tap coal 1900 ft. from portal.

Arc-Walling Machine. Sullivan "Arkutter" at St. Helen's Colliery. Iron & Coal Trades Rev., vol. 109, no. 2951, Sept. 19, 1924, p. 481, 2 figs. Describes arc-walling machine consisting of Sullivan longwall electrically operated coal cutter mounted upon special fitting trolley so arranged that full width of heading is cut by jib being slewed through over 180 deg. while machine remains attached to trolley.

The Mavor and Coulson Arcwell Machine. Colliery Guardian, vol. 128, no. 3328, Oct. 10, 1924, pp. 937-938, 2 figs. Working results which give good idea of method in operation.

Australasia. Coal-Mining Practice in Australasia. Iron & Coal Trades Rev., vol. 108, no. 2939, June 27, 1924, pp. 1107-1110. See also Indus Australia & Min. Standard, vol. 72, no. 1865, Sept. 4, 1924, pp. 360-361. Coal resources and coal-mining methods in New South Wales, Victoria, South Australia, and New Zealand. Abstract of paper read at Min. & Met. Congress, Eng.

Beckley Bed, W. Va. Limitations and Eccentricities of the Beckley Coal Bed and How Best to Offset Them, C. R. Stahl. Coal Age, vol. 25, no. 14, Apr. 3, 1924, pp. 485-489, 4 figs. Difficulties of mining coal bed in Raleigh County, W. Va.; pumping, haulage and supervision problems.

Bituminous, Timber Used in. Timber Used in Bituminous-coal Mining, N. G. Alford. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1336-C, May 1924, 5 pp., 4 figs. Table showing timber used in bituminous coal mining in United States; estimated 1923 and future timber consumption in bituminous-coal mining; curves showing past and estimated future fuel consumption and production, including anthracite and bituminous coal, oil and gas.

Blasting. A Necessary Safety Condition for Blasting Inflammable Media (Sur une condition nécessaire de la sécurité du minage en milieu inflammable), E. Audibert. Académie des Sciences —Comptes Rendus, vol. 179, no. 17, Oct. 27, 1924, pp. 825-827. Discusses residual reactions which for safety should be completed before gases taking part make contact with exterior atmosphere.

Getting the Best Results With Permissible Explosives, J. Towal. Du Pont Explosives Service Bul., no. 6, Feb. 1924, 3 pp., 3 figs. See also Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 161-163, 3 figs. Some ways and means of producing lump coal.

How Dangerous Ground Currents Were Prevented and Confidence of Workmen Regained, Emory E. Jones. Coal Age, vol. 26, no. 17, Oct. 23, 1924, pp. 574-576, 5 figs. Stray currents were eliminated from shaft and equipment by interconnecting cables; leads on firing caps should be short-circuited until used; damaged blasting

cables must be replaced at once; results of tests made to determine exact cause of premature explosion in mine during shaft sinking.

Rock-Dust Stemming, J. H. Horlick, Jr. Explosives Engr., vol. 2, no. 6, June 1924, pp. 189-192, 4 figs. Produces more lump coal, requires less explosives, and increases safety.

Safety in Shot Firing in Inflammable Media (La sécurité du tir en milieu inflammable), E. Audibert. Annales des Mines, vol. 6, no. 8, Aug. 1924, pp. 63-128, 10 figs. Report presented to Research Commission on firedamp and explosives used in mines, discussing methods of testing, flames and heating produced by detonation, velocity of decomposition of solid explosives, etc.

Some Blasting Suggestions For Coal Miners, R. Z. Virgin Coal Trade Bul., vol. 50, no. 9, Apr. 1, 1924, pp. 390-391, 5 figs. Explosives used, cutting of fuse, caps or detonators, attaching detonator to fuse, piercing explosive to receive cap, igniting charge.

The Production of More Merchantable Coal J. W. Koster. Du Pont Explosives Service Bul., May 1924, 4 pp., 4 figs. Factors in blasting coal with permissible explosives which can be controlled by mine officials and which are vital in production of a merchantable product.

The Proper Use of Permissibles, G. Evans. Modern Min., vol. 1, no. 3, Oct. 1924, pp. 64-66, 5 figs. Helpful points on blasting practice in anthracite field.

The Rock-Dust Cartridge Method of Stemming Shots, H. M. Roscoe. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 638-642, 4 figs. Explains method and points out its advantages.

Why Cushioned Blasting Increases Lump Coal Production, J. Barab. Explosives Engr., vol. 2, no. 12, Dec. 1924, pp. 415-419 and 425, 3 figs. Discusses permissible explosives, results of tests on cushioned blasting, and theory of cushioning.

See also Shot Firing; BLASTING, Coal Mines; Electric.

Block System. Block System of Mining Coal Has Many Advantages, H. R. Bissell, Coal Age, vol. 26, no. 18, Oct. 30, 1924, pp. 613-614, 4 figs. Claims that it reduces danger, increases percentage of extraction and results in coarser, cleaner output; room-and-pillar mines can be converted to block method mainly by widening centers.

Boring. Boring in Frozen Strata, R. L. A. Dron. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 186-191, 2 figs. See also (abstract) in Iron & Coal Trades Rev., vol. 108, no. 2929, Apr. 18, 1924, p. 633; and Colliery Guardian, vol. 127, no. 3303, Apr. 17, 1924, p. 1005, 2 figs. Describes difficulties met with in boring at coal field in Spitsbergen.

Coal-Cutting Machines. Adapting Shortwall Machine to Center Cutting. Coal Age, vol. 26, no. 21, Nov. 20, 1924, p. 725, 3 figs. Undercutter can be mounted on truck so as to cut kerf from 1½ to 2½ ft. or from 3 to 4 ft. above track.

Chain Coal Cutters (Kettenschrämmaschinen), Wimmelmann. Bergbau, vol. 37, nos. 28 and 29, Nov. 27 and Dec. 4, 1924, pp. 705-707 and 725-727. Details of pick-quick machines, bar and chain cutters, including operation and efficiency; advantages and disadvantages of new chain cutter.

Coal-Cutters in India. Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, pp. 350-351 (includes discussion), 5 figs. Review of paper by Case read before Assn. Colliery Mgrs. in India. Merits of disk, bar, and chain types; "out-put" Shortwall cutter; care and maintenance of coal cutters.

Coal-Cutting at the United Westminster and Wrexham Collieries, Ltd. Iron & Coal Trades Rev., vol. 109, no. 2957, Oct. 31, 1924, p. 710, 4 figs. Maintenance costs of machines, both electric-motor and air-driven, working under entirely different conditions, at Wrexham and Gresford collieries.

Coal Stripper Uses Ice Harvesters' Method, D. M. Sutor. Coal Age, vol. 25, no. 12, Mar. 20, 1924, pp. 415-417, 4 figs. Turns longwall cutting machine on edge, "sawing" 28-in. seam into panels 12 ft. wide so that pop shots make less screenings; scheme reduces overall cost of coal.

Correct Forging and Tempering Methods Double the Life of Undercutting-Machine Bits, A. F. Brosky. Coal Age, vol. 25, no. 1, Jan. 3, 1924, pp. 3-5, 3 figs. At Lynch operation of United States Coal & Coke Co. 1800 cutter bits are given correct shape, sharp point, and correct temper every working day and only three men are employed in this service; how cost records are kept.

Cross-Cutter Operation with Hela Cross-Cutter Rods on the Sälzer-Neuack Mine (Essen, Germany) (Schrämmaschinenbetrieb mit Hela-Schrämstangen auf der Zeche ver. Sälzer-Neuack), M. Wemmer. Glückauf, vol. 60, no. 14, Apr. 5, 1924, pp. 255-260, 6 figs. Describes design and operation of cross-cutter and reasons for its adoption.

Effect of Mechanical Coal Mining on the Output of Cutters (Die Einwirkung der Maschinenmässigen Kohlengewinnung auf die Hauerleistung), J. Cloos. Glückauf, vol. 60, no. 49, Dec. 6, 1924, pp. 1144-1146. From statistics of Helene and Amalie mines shows that introduction of machines has not increased output per man, as expected.

Longwall Coal-Cutting Machines and Standardisation. Colliery Engr., vol. 1, no. 3, May 1924, pp. 146-147, 1 fig. Commentary upon diverse conditions in which they operate and consequent impossibility of attaining maximum efficiency with standardized designs.

New Coal-Cutting Machine Drives Gangways, A. Gerke. Coal Age, vol. 25, no. 7, Feb. 14, 1924, pp. 240-242, 4 figs. Describes Rotatia machine; same device cuts, breaks, and delivers product; entries may be driven on both sides of main gangway.

Radial Percussive Coal-cutters. Sci. & Art of Min., vol. 34, no. 17, Mar. 15, 1924, pp. 266-267, 4 figs. Describes Hardiax cutter, operated by compressed air; is of reciprocating type, and supported in position for cutting by a vertical column fixed between roof and floor of seam.

Re-sharpening of Coal-Cutter Picks. Colliery Engr., vol. 1, no. 4, June 1924, pp. 166-167. Few practical hints on heat treatment of steel to secure a maximum amount of service.

Tests of Coal Cutters by the Loire Mining Co. (Sur les essais de haveuses à la Compagnie des mines de la Loire), M. Saint-Andre. Revue de l'Industrie Minérale, no. 85, July 1, 1924, pp. 341-352, 7 figs. Discusses report on mechanical coal cutters, showing saving in cost and explosives, and increased output.

The Economic Aspect of Winning Coal Without the Aid of Explosives, E. H. Oliver. North of England Inst. Min. & Mech. Engrs.—Trans., vol. 74, part 2, Jan. 1924, pp. 34-38 and (discussion) 38-40, 2 figs. Describes "Murton" gearing which combines both horizontal and vertical movement of percussive coal-cutting machine. See also (discussion) in part 3, Mar. 1924, pp. 51-53.

See also Arc-Walling Machine.

Colorado, 1923. Coal Mining in Colorado During 1923, Chas. M. Schloss. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 50-52, 5 figs. Economic conditions and technical developments.

Conveyors. See COAL HANDLING, Conveyors.

Cutting, Vertical. Vertical Cutting, T. A. Stroup. Coal Mine Mgmt., vol. 3, no. 9, Sept. 1924, pp. 21-27, 5 figs. Particulars of tests made over a period of 90 days in summer of 1921 to investigate general economics, if any, that might result from introduction of vertical cutting as a standard practice into Clear Creek Mines, Utah.

Developments, 1923. Engineering Achievements Outstanding Features of Mining Progress in 1923, E. J. Gealy. Coal Age, vol. 25, no. 3, Jan. 17, 1924, pp. 77-78. Greater use of mechanical and electrical horsepower; increased application of automatic equipment; higher efficiencies in material handling.

Developments, Great Britain. Developments and Tendencies in British Coal Mining, Jas. Cooper. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 46-49. Thinner seams are being worked, and more mechanical equipment used, especially conveyors; investigations in dust explosions and mine lighting feature safety work.

Dump and Picking Methods. Dudley Mine's Unusual Dump and Picking Methods, W. R. Cole. Coal Age, vol. 26, no. 11, Sept. 1924, pp. 355-358, 5 figs. Revolving dump drops coal to a boom that feeds a steel-tube or storage bin. Each carload passes over boom alone and consequently every man's product gets individual inspection.

Economical. Reducing Costs in the Moscow Coal Basin by Change of Working Methods, A. Voskresensky. Russian Min. Jl., vol. 100, no. 3, Mar. 1924, pp. 291-295. (In Russian.)

Educational Requirements. Mining Education in the South Wales Coal Field. Colliery Guardian, vol. 128, nos. 3314 and 3315, July 4 and 11, 1924, pp. 27-28 and 91-92. Board of Education (Welsh Dept.) has issued report on provision of instruction for persons employed in coal mining industry in coal field of South Wales. Discusses aspects of mining education and existing provisions in coal field and suggests centralized organization.

European Practice. What American Coal Mining May Learn from Europe's Mines, John T. Ryan. Coal Age, vol. 25, no. 2, Jan. 10, 1924, pp. 41-45, 6 figs. More labor and capital is spent to save coal than in America because of limited coal resources; great care expended to protect life; wage provisions in Great Britain.

France and Belgium. Coal Mining in the North of France & Belgium, M. Hay and W. H. Wilcockson. Colliery Guardian, vol. 123, nos. 3321, 3323, 3325, and 3326, Aug. 22, Sept. 5, 19 and 26, 1924, pp. 481-482, 609-610, 741-743 and 803-804, 28 figs. Gives geology of region, geological structure, Campine coal field, character of coals, mining conditions in coal field, Pas-de-Calais, Nord coal field, Mons, Centre, Charleroi, Namur and Liege Basins, Campine, etc. Methods of working; haulage; screens and washeries; power production; social conditions, wages, housing, etc.

Germany. Coal and Pitchcoal Mining in Bavaria (Der Stein- und Pechkohlenbergnau in Bayern), Bergbau, vol. 37, nos. 23 and 24, Oct. 23 and 30, 1924, pp. 617-619 and 635-637. Geological formation, and deposits and their mining conditions.

Handling Coal. See COAL HANDLING.

Hungary. The Collieries of the First Danube Steam Navigation Company (D. D. S. G.), J. Herczegh. Iron & Coal Trades Rev., vol. 109, no. 2956, Oct. 24, 1924, pp. 666-668, 8 figs. See also Colliery Guardian, vol. 128, no. 3331, Oct. 31, 1924, pp. 1129-1131, 6 figs. Describes mining practice of Hungarian Liassic coal fields; coal washing and screening; power station; conditions of working coal; shafts and winding gear; surface machinery. (Abstract.) Paper read before Midland Inst. Min. Engrs.

Hydraulic Stowage. Hydraulic Stowage at a Lorraine Colliery. Colliery Guardian, vol. 128, no. 3325, Sept. 19, 1924, p. 748, 1 fig. Method of hydraulic stowage adopted by Merlebach Colliery, from which 4230 tons of coal are raised per day in two shafts. Abstracted from Revue de l'Industrie Minérale.

Hydraulic Stowage at the Dalzell and Broomside Colliery, Motherwell, R. W. Dron. Instn. Min. Engrs.—Trans. ,vol. 64, part 5, Feb. 1924, pp. 271-276 and (discussion) (276-283. Experience in application of the process where it has been in operation at a Scottish colliery since 1910.

Hydraulic Stowage at the Mines at Villebœuf (France) (Le remblayage hydraulique aux mines de Villebœuf), E. Jaboulay. Revue de l'Industrie Minérale, no. 81, May 1, 1924, pp. 219-236, 6 figs. Notes on material employed; nature of fill, its preparation and transport in dry state; arrangement of spaces to be filled and method of stowing.

Old Workings at Cassidy, B. C., Flushed with Fine Rock, Jas. B. Touhey. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 654-655, 2 figs. Hope to prevent spontaneous combustion; borehole sunk through quicksand and solid rock; stowing material carried underground by flume.

Some Uses for Hydraulic Stowing, R. Kirkby. Instn. Min. Engrs.—Trans., vol. 67, part 4, July 1924, pp. 336-345, 7 figs. Discusses reasons for using water stowing: (1) possibility of safely working coal seams subject to spontaneous combustion, (2) effectiveness of system in sealing off fires, and (3) practicability of preserving good main roads where coal is completely extracted.

Some Uses for Hydraulic Stowing, R. Kirkby. Min. Inst. Scotland—Trans., vol. 45, part 2, June 1924, pp. 36-45, 8 figs. partly on supp. plate. Application of system at Lochhead coal mine by Wemyss Coal Co.

Inclined-Seam Working. A Method of Working a Highly Inclined Thick Coal-Seam, J. A. H. Church. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 539-544. Author describes only method in his knowledge by which stowings at infinitesimal cost per ton can be introduced into mine.

Comparisons and Estimated Costs of Working a Thick Pitching Coal Seam by Advancing and Downward Method, and by the Proposed Retreating and Upward Method, R. H. Watson. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 545-562 and (discussion) 562-564, 2 figs. Study of cost of method of working thick inclined coal seams from dip upward, as described in paper by J. A. H. Church.

India. Some Problems of Indian Coal-Mining, D. Penman. Min. Inst. Scotland—Trans., vol. 45, part 2, June 1924, pp. 46-52. See also Instn. Min. Engrs.—Trans., vol. 67, part 4, July 1924, pp. 346-352. Notes on extraction of pillars; timbering; air blasts; spontaneous combustion; hydraulic stowing; coal-dust danger; coal cutting; and underground transport.

Industry, Economics of. Economics of the Coal-Mining Industry, E. Williams. Instn. Min. Engrs. —Trans., vol. 68, part 1, Oct. 1924, pp. 72-81 and (discussion) 81-89. Discusses price of coal, wages in coal-mining industry, costs of production other than wages, capital in coal industry and its remuneration, and output factor.

Japan. Coal Mining in Japan, D. C. Bliss, Jr. Coal Trade Bul., vol. 52, no. 2, Dec. 16, 1924, pp. 82-83. Total production for 1923 for all of Japan, exclusive of her dependencies was 28,948,820 metric tons, all bituminous. Notes

on the different mines, mining methods, and general machinery requirements.

Laying Out Workings. Machine Mining. Sci. & Art of Min., vol. 34, no. 12, Jan. 5, 1924, pp. 182-183, 3 figs. Laying out workings; semi-longwall method of working; wide headings; coal pillars; advantages of system.

Loading Machines. See COAL HANDLING, Loading Machines.

Longwall System. Glen Alden Operates Three Longwall Faces with Conveyors in a Thirty-Inch Coal Seam, F. H. Kneeland. Coal Age, vol. 26, no. 3, July 17, 1924, pp. 71-74, 6 figs. Description of seams in Glen Alden Coal Co.'s mines and of its mining methods.

H. S. Gay Long Ago Tried Out "Modified Longwall," A. F. Brosky. Coal Age, vol. 26, no. 20, Nov. 13, 1924, pp. 677-680, 5 figs. Efforts in 1905 at full retreating longwall failed because of uncontrollable roof, but rib-slapping in rooms 300 by 80 ft. was safer and raised output to 9.2 tons per day per inside employee.

Undersea Longwall Mining, J. Moffat. Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 140-142, 1 fig. At distance of 2½ mi. undersea and with cover of 1350 ft., Nova Scotia mine was changed from room and pillar to longwall with great success.

With Hand Shoveling 10 Tons per Man and 26 Tons per Loader Already Attained, A. F. Brosky. Ry. Mech. Engr., vol. 98, no. 2, Feb. 1924, pp. 197-203; 9 figs. Results of introducing modified longwall system of mining, loading coal mechanically and using conveyors to afford means of continuously transporting coal from working face to tipple; advantage of described system over room-and-pillar and over ordinary longwall mining.

Machine Loading. Machine Loads 377 Tons Into 2-Ton Cars in 8 Hours from Room Workings, A. F. Brosky. Coal Age, vol. 26, no. 25, Dec. 18, 1924, pp. 857-863, 9 figs. In mine at Braznell, W. Va., loading machines are applied successfully to room-and-pillar mining; average production per month is 289 tons; pillar coal is loaded mechanically.

They Are Solving Coal-Loader Problems at Hanna. Coal Age, vol. 26, no. 18, Oct. 30, 1924, pp. 618-620, 3 figs. Wyoming thick-seam conditions seem ideal for loading machines yet heavy time losses cannot be avoided; small units save money even at 104 tons a day; single track with switch proves best for rooms.

Machine Mining. Machine Mining. Sci. & Art of Min., vol. 34, nos. 15 and 16, Feb. 16 and Mar. 1, 1924, pp. 228-229 and 246-247, 4 figs. Feb. 16: Laying out workings for machine mining. Mar. 1: Laying out working faces; advantages and disadvantages of conveyors.

Notes on Machine Mining, L. C. Maitland. Iron & Coal Trades Rev., vol. 109, no. 2965, Dec. 26, 1924, pp. 1038-1040 and (discussion) 1040-1041. Conditions which suggest successful use of coal-cutting machines; position of cut, depth of cut, and type of machine; preparation of machine face; organization and supervision by colliery officials.

Problems of Mechanical Coal-Mining, Sam Mavor. Instn. Min. Engrs.—Trans., vol. 67, part 5, Aug. 1924, pp. 456-480. See also Colliery Guardian, vol. 127, nos. 3311 and 3312, June 13 and 20, 1924, pp. 1510-1512 and 1591-1592 and Iron & Coal Trades Rev., vol. 108, no. 2936, June 6, 1924, pp. 967-970. Notes on economics; intensive machine mining; standardization; mechanical coal cutting; underground conveying; lighting of machine faces; organization and supervision; transport; limitations and possibilities.

Suggestions for Concentrated Machine Mining, N. D. Levin. Coal Age, vol. 26, no. 4, July 24, 1924, pp. 109-112, 9 figs. Suggests certain principles that should be kept in mind in laying out a mine or a part of a mine for mechanical loading.

Machinery, Handling of. What Everyone in the Industry Should know About Handling of Mining Machinery, T. F. McCarthy. Coal Age, vol. 25, no. 9, Feb. 28, 1924, pp. 307-310, 3 figs. Points out that many equipment failures are due to lack of understanding of machines; devices should be designed to meet mining conditions.

Management in. See INDUSTRIAL MANAGEMENT, Coal Mines.

Methods and Equipment. Better Methods and Improved Equipment Increase Production at Beech Bottom Mine (W. Va.), A. F. Brosky. Coal Age, vol. 25, no. 15, Apr. 10, 1924, pp. 521-527, 8 figs. By locating power plant at mine, cost of power is greatly reduced; means adopted to reduce loss of coal in mining and to save unnecessary handling of slate.

Caving-in by Tiers and Diagonal Mining of Thick Seam With a Precipitate Dip (Etagenbruchbau und Diagonalbau in steilgelagerten, mächtigen Flözen), K. Sieben. Glückauf, vol. 60, no. 47, Nov. 22, 1924, pp. 1083-1086, 4 figs. Discusses two new methods of mining seams of great thickness at Miechowitz mine in Prussia.

Mining Methods at Ellsworth, A. M. Michell. Coal Industry, vol. 7, no. 5, May 1924, pp. 182-186, 6 figs. Cost-reducing methods at Bethlehem Mines Corpn., mines in Pennsylvania; describes mining system; haulage and ventilation practice.

With Slabbing System and One Machine Loader Gay Handles 250 Tons of Coal in 8 Hours, A. F. Brosky. Coal Age, vol. 26, no. 22, Nov. 27, 1924, pp. 745-750, 6 figs. Methods employed at mine of Gay Coal & Coke Co., Logan County, W. Va.; mechanical loader increases output per face employee 40 per cent; parting from 8 to 20 in. thick removed by arcwall machine.

See also Machine Mining; V-System.

Mine Tubs, Cleaning of. Mechanical Cleaning of Mine Tubs. Indus. Mgmt. (Lond.), vol. 11, no. 13 (new series), July 1924, pp. 361-362, 4 figs. Describes mechanical cleaning system for mining tubs successfully installed in Germany; cleaning devices consist of system of rotating brushes which enter tub while retained in horizontal position in one or other of rotary tub tipplers during cleaning process.

New Zealand. See Australasia.

Nova Scotia. Coal Mining in Nova Scotia in 1923, F. W. Gray. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 31-33. Production; output of various collieries; new collieries; outlook for 1924.

Pneumatic Tools. Miners' Hammers (Abbauhämmer), H. Grahn. Glückauf, vol. 60, no. 32, Aug. 9, 1924, pp. 683-689, 26 figs. Discusses development of pneumatic cutters and their field of application in Ruhr; various kinds of control, comparison as to efficiency and life.

Power Consumption, Reduction of. How to Save Power and Thus Reduce Maintenance and Operating Costs of Mine Machinery, W. H. Russell. Coal Age, vol. 26, no. 15, Oct. 9, 1924, pp. 499-500, 2 figs. It is shown that reduction in power required by machines will make savings by decreasing wear and strain on every part of machine, but saving of power is in itself well worth while.

Power Data. Power Data for Illinois Coal-Mining, A. J. Hoskin. Technograph, vol. 36, no. 11, Jan. 1924, pp. 74-75, 102 and 104, 2 figs. Explains why Illinois power companies can buy

coal, develop power from it, and sell power back to coal mining companies cheaper than they can develop it themselves.

Railway Transportation. The Railway's Part in Coal Mining, D. W. McDonald. Can. Inst. Min. & Metallurgy—Bul., no. 152, Dec. 1924, pp. 871-874. Outline of problem and general policy of taking care of normal traffic, and suggestion of ways in which, by means of coöperation, still greater efficiency could be obtained.

Regulations. U. S. Rules Make Mines in Public Lands Safer, H. I. Smith. Coal Age, vol. 26, no. 1, July 3, 1924, pp. 8-11, 7 figs. Deals with features of regulations for coal mining on leased public lands in United States which have to do with safety.

Rock Disposal, Aerial Tramway for. Aerial Tramway Solves Rock Disposal Problem, A. F. Brosky. Coal Age, vol. 26, no. 11, Sept. 11, 1924, pp. 363-366, 7 figs. Describes aerial tramway installed at Beech Bottom mine, near Wheeling, W. Va., for disposal of mine refuse. Tramway 3200 ft. long; dumping point 200 ft. higher than coal bed; little power required for operation; only 4 men needed to dispose of 400 tons of slate per shift.

Roof Supports. Support of Roof at the Coal Face. Sci. & Art of Min., vol. 34, no. 21, May 10, 1924, pp. 326-327, 4 figs. Choice of supports; timber props; undersetting props.

Room-and-Pillar Method. Modernize!—Some Revolutionary Suggestions with Practical Possibilities in Actual Practice, W. M. Dake. Coal Age, vol. 25, no. 4, Jan. 24, 1924, pp. 131-135, 5 figs. Describes system of mining by room-and-pillar method with conveyor belts from coal face to tipple, giving cost data; tracks only for delivery of supplies on storage-battery trucks or locomotives.

Room-Slabbing, Output Control in. How Output of Room-Slabbing Mines May Be Controlled, C. Gottschalk. Coal Age, vol. 26, no. 8, Aug. 21, 1924, pp. 251-252, 2 figs. While slabbing pillars, record tonnage is obtained. When driving rooms, output is low. Methods that keep output steady.

Shot Firing. Britain Drastically Revises Its Shotfiring Rules. Coal Age, vol. 26, no. 19, Nov. 6, 1924, p. 646. Shotfirers must be certified and must not be paid tonnage rate; coal dust must be treated before shooting.

Minimizing Stray Currents, W. Vogel. Explosives Engr., vol. 2, no. 11, Nov. 1924, pp. 383-386 and 395, 7 figs. European methods and precautions for eliminating dangers from this cause in electrical shot-firing. Translated from Elektrische Betrieb.

Safety in Shot Firing in Flammable Medium (La sécurité du tir en milieu inflammable), M. E. Audibert. Revue de l'Industrie Minérale, no. 87, Aug. 1, 1924, pp. 373-390, 6 figs. Discusses methods used at Montlucon for determining safety of explosives for firing in firedamp mines, velocity of decomposition of explosives, detonation of nitroglycerine, etc.

Small Haulage Engines. Working Coal to the Deep Without Horses, R. N. Lundie. S. Wales Inst. Engrs.—Proc., vol. 40, no. 1, Mar. 21, 1924, pp. 63-69, 1 fig. How coal can be won by economical use of small haulage engines, mostly of single-drum type, no horses at all being necessary. Only conditions required are that coal is worked to deep, inclination is not less than 3 in. per yd., or more than about 12 in. per yd., and that thickness of seam to be won is 3 ft. or over.

South Africa. Coal Mining in South Africa. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 13-14. Brief review of present position of industry.

Stripping. Coal-Strip Enterprises Grow in Western Kentucky, A. W. Williams. Coal Age, vol. 25, no. 4, Jan. 24, 1924, pp. 127-129, 3 figs. Sunlight Min. Co., of Madisonville, lead field with first plant opened about three years ago; 12 pits now running and three more about to open; operators face many problems.

Coal Stripping in Kansas, T. Marvin. Explosives Engr., vol. 2, no. 7, July 1924, pp. 224-227, 10 figs. Gives blasting methods employed in Pittsburg field to assist world's largest type of steam shovels.

Early Coal Stripping Full of Heartbreak, G. Holmes. Coal Age, vol. 25, nos. 22 and 23, May 29 and June 5, 1924, pp. 797-800 and 835-839, 10 figs. Story of coal stripping from its beginnings at Danville, Ill., in 1866.

Getting More Work from a Stripping Shovel, A. F. Brosky. Coal Age, vol. 26, no. 5, July 31, 1924, pp. 141-144, 5 figs. Long-reach stripping shovels are slow in operation; by providing separate machine to waste spoil, capacity of small shovel may be greatly increased.

Modern Anthracite Stripping, T. Marvin. Explosives Engr., vol. 2, no. 3, Mar. 1924, pp. 81-84, 10 figs. Drilling, blasting, loading, and hauling methods at Hazle Brook strippings, of Central Pennsylvania Stripping, Quarry & Construction Co., near Hazleton, Pa.

Strip Mines Full of Pitfalls for the Unwary, G. Holmes. Coal Age, vol. 26, no. 7, Aug. 14, 1924, pp. 211-216, 12 figs. Details of stripping practice, stripping by train and scraper, 300-ton electric shovel, etc.; circular, rectangular, etc., methods.

Stripping a Twice-Worked Anthracite Basin, F. H. Kneeland. Coal Age, vol. 26, no. 23, Dec. 4, 1924, pp. 789-792, 4 figs. Stripping practice at Cranberry Creek Coal Co.'s coal deposit near Hazleton, Pa.; modern machinery makes total recovery possible; giant electric shovel used; Ward-Leonard control employed; automatic dump cars for disposal of spoil.

Surface Plants. Colliery Surface Plants, J. W. Wardell. Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 66-70, 4 figs. Survey of requirements involved and methods adopted to insure their fulfilment.

Thin Seams. Best Method of Opening and Working a Thin Seam 22 Inches Thick to Produce 4,500 Tons per week, R. C. Morgan. Iron & Coal Trades Rev., vol. 108, no. 2914, Jan. 4, 1924, pp. 18-20, 8 figs. Development of face, machine-cut faces, dealing with a wet seam, economical working of developed seam, turning stalls off headings, and arrangement of shifts and general organization.

Top Cutting. Utah Company Uses Top Cutting Successfully, Thos. A. Stroup. Coal Age, vol. 25, no. 17, Apr. 24, 1924, pp. 599-602, 6 figs. See also Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 151-154, 4 figs. Cutter bar bent to avoid loss of height; top cutter saves its cost in timber, and coal lost in roof is compensated in coal saved in drawing pillars; suited only to thick coal.

Tunneling. Tunnel Problems Simplified. Sci. & Art of Min., vol. 34, no. 19, Mar. 29, 1924, pp. 274-275, 2 figs. **Examples illustrating** applica of simplest of ideas to solution of such problems as arise in connection with practice of tunneling in coal mines and showing that application of principles rather than an attempt to use formulas is essential to correct solution of such problems.

United States. Coal Mining in the United States, E. K. Scott. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 32-33 and 50, 1 fig. Some observations made by author on mining methods, equipment, personnel and costs, regulations, etc.

Vancouver Island. The Problems of the Vancouver Island Coal Industry, C. Graham. Can. Inst. Min. & Metallurgy—Bul., no. 147, July 1924, pp. 467-488, 8 figs. Discusses geological formation, operating conditions, state of mines, preparation and marketing.

V-Panel System. V-Panel Mining Progressing in Southern Colorado, E. W. Davidson. Coal Age, vol. 26, no. 21, Nov. 20, 1924, pp. 711-714, 7 figs. West Virginia system minus conveyors is transplanted to Boncarbo mine of Am. Smelting & Refining Co.; tracks are kept parallel to faces in each V; roof gives trouble but cost of coal is cut.

"V" System. Coal Mining by the V System, G. B. Southward. Am. Inst. Min. & Met. Engrs.—Trans., no. 1300-C, Feb. 1924, 9 pp., 6 figs. See also Explosives Engr., vol. 2, no. 10, Oct. 1924, pp. 357-361, 8 figs. Describes mining system used at Norton mine of W. Va. Coal & Coke Co., a highly concentrated system consisting of a series of short faces arranged to get complete recovery of coal with maximum protection for men and equipment.

Notes on Mining by the "V" System in West Virginia, J. C. Nicholson. Can. Inst. Min. & Metallurgy—Bul., no. 152, Dec. 1924, pp. 866-870, 1 fig. Advantages of system are enumerated.

Vertical Cutting. Vertical Shearing Saves Powder but Makes Slack, E. W. Davidson. Coal Age, vol. 26, no. 18, Oct. 30, 1924, pp. 607-609, 4 figs. After exhaustive tests, Utah Fuel Co. decides not to adopt vertical cutting in rooms and entries; center shear cut is tried with both top and bottom cuts in narrow work and rooms.

Wages in. See WAGES, Rate Setting in Coal Mining.

COAL STORAGE

Advisability of. Is Coal Storage Worth While? Power, vol. 59, no. 2, Jan. 8, 1924, pp. 42-44, 7 figs. Points out that regular systematic, large-scale storage of coal, by consumers during seasons of low consumption is public's largest opportunity and responsibility in solving coal problem.

Bins. Concrete Coal Bunkers, F. Dawson. Eng. & Boiler House Rev., vol. 39, no. 9, Apr. 1924, pp. 313-314, 2 figs. Leading features of reinforced-concrete construction. Notes on recent contract placed by Lond. County Council for new coal bunkers at Greenwich.

The Coal Bunker of the Höchst Color Works—Walls of Lupescu Hollow Brick, German Patent 326,196 (Kohlensilo Ch 36 der Höchster Farbwerke.—Wände aus Formsteinen System Lupescu D.R.P. 326,196), H. Baumann. Beton u. Eisen, vol. 23, no. 12, June 20, 1924, pp. 145-148, 13 figs. Details of design and construction of new plant for coal storage and distribution.

Bunkers. See Bins.

Economic Phases. Economic Phases of Coal Storage, F. G. Tryon and W. F. McKenney. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 73-76 and 108, 2 figs. Also Universal Engr., vol. 39, no. 4, Apr. 1924, pp. 19-25, 2 figs. Extent to which practice of storage has already been adopted; inducements to store offered by periodic fluctuations in price and supply of coal. (Abridged.)

Hollow-Tile Silo. Storing Coal in Hollow-Tile Silo. Iron Age, vol. 114, no. 26, Dec. 25, 1924, pp. 1675-1676, 2 figs. Handling equipment with self-weighing and recording features; live and reserve storage in one unit.

Losses in Storage Coal. The Storage of Bituminous Coal, W. Seymour. Eng. Jl., vol. 7, no. 4, Apr. 1924, pp. 183-185, 4 figs. Losses which may occur in storage coal and proposed remedies.

Precautionary Measures. What to Avoid When Storing Soft Coal, A. J. Hoskin. Coal Age, vol. 25, no. 23, June 5, 1924, pp. 840-842, 2 figs. Conclusions from results of investigation carried out at University of Illinois.

Scientific. Scientific Coal Storage. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 418-420, 1 fig. Summary of report of storage of coal committee of Am. Eng. Council.

Systems. Coal Storage (Zweckmässige Kohlenlagerung), Rogenhofer. Archiv für Wärmewirtschaft, vol. 5, no. 10, Oct. 1924, pp. 193-194. Reviews recent literature on subject.

Coal-Storage Systems, H. E. Birch and H. V. Coes. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 189-196 and (discussion) 196-198 and 233, 8 figs. Deals with advantages and limitations of various devices and systems in general way; particular attention is purposely given to limitations of devices, as practically all that is written on subject states only what a device was designed to do and how well it accomplishes its object.

Coal-Storage Systems for Large Plants. Power, vol. 59, no. 5, Jan. 29, 1924, pp. 172-173, 4 figs. Notes on bridge tram for coal handling; cableway system; use of scraper to reclaim coal and skip hoist in connection with scraper.

Some Methods of Storing Coal. Power, vol. 59, no. 3, Jan. 15, 1923, pp. 96-98, 6 figs. Discusses several low-priced systems of coal handling and storing.

COAL TAR

Low-Temperature. A Comparative Study of Some Coal Tars Produced by Low-Temperature Carbonisation, K. B. Edwards. Chem. & Industry, vol. 43, nos. 19 and 20, May 9 and 16, 1924, pp. 143T-148T and 149T-156T, 8 figs. Record of investigation commenced by author in 1920, and carried out on four typical low-temperature tars. Bibliography.

Products. Coal Tar Products. Chem. Age (Long.), vol. 11, no. 285, Nov. 29, 1924, pp. 544-547. Recent developments in their application.

COAL TIPPLES

Economical. Coal Prepared with Minimum Breakage, F. G. Koper. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 19-20, 3 figs. Coal screening and loading plant in smokeless-coal field designed to largely eliminate degradation; describes well-designed and economical tipple.

Variable-Speed. A New Distributing Tippler. Iron & Coal Trades Rev., vol. 108, no. 2925, Mar. 21, 1924, p. 471, 5 figs. Particulars of variable-speed tippler installed at Church Pit of Backworth Collieries, Ltd., Northumberland, Eng.; insures satisfactory distribution of coal without in any way restricting tippler output.

COAL WASHING

Alabama Practice. Coal Washing Practice in Alabama, H. S. Geismer. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1363-C, Sept. 1924, 17 pp., 6 figs. Also Coal Age, vol. 26, no. 15, Oct. 9, 1924, pp. 501-504, 3 figs. For producing coking coal, three-compartment jigs are favored; mines providing steam and commercial coal use single-compartment jigs exclusively. Chemists are as necessary to washing plants as recording gages are to power plants. Experiments in Alabama indicate that sludge released by coal washing plants can be deposited in streams and on agricultural lands without disastrous results.

Autolaveur System. The Autolaveur Coal-Washing System, D. Adam. Colliery Engr., vol.

1, no. 6, Aug. 1924, pp. 267-269, 7 figs. Brief account of new coal-washing development which has recently been used in Belgium.

European Methods. Europe Is Developing Some New Methods for Washing Coal, C. H. S. Tupholme. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 649-650, 2 figs. Most promising ones employ pulsating jig with double-rock discharge, an oil froth in vacuum or an air suction dryer.

Flotation Processes. Application of Sand-flotation Process to the Preparation of Bituminous Coal, T. M. Chance. Am. Inst. Min. & Met. Engrs.—Trans., no. 1352-C, June 1924, 10 pp., 4 figs. Types of plant installed; operating results; maintenance; bituminous coal washing; bituminous washery estimates.

Coal Washing by the Flotation Process (Le lavage des charbons par flottage), Ch. Berthelot. Génie Civil, vol. 84, no. 22, May 31, 1924, pp. 521-526, 9 figs. Treatment of coal dust and sludge containing high percentage of ash.

Elmore-Diel-Koppers Plant for Coal Flotation. Iron & Coal Trades Rev., vol. 109, no. 2952, Sept. 26, 1924, p. 519, 1 fig. Describes Koppers type of apparatus for dressing coal by flotation on Elmore-Diel system. Translated from Technische Blätter.

Much High-Grade Material in Inferior Coals Which Sand Flotation Can Release, H. M. Chance. Coal Age, vol. 25, no. 18, May 1, 1924, pp. 633-635, 1 fig.. Features in connection with application of sand-flotation process.

The Application of Froth Flotation to Coal Washing, L. Dessagne. Fuel, vol. 3, no. 9, Sept. 1924, pp. 320-327, 6 figs. Discusses theory and use of froth flotation washer, its economic value and conditions for its use; describes froth flotation washer.

The Chance Sand Flotation Process as Applied to the Washing of Coal, H. M. Chance. Fuel, vol. 3, no. 8, Aug. 1924, pp. 269-275, 2 figs. Gives working instructions based upon three years' commercial operation of process and upon tests with working models.

The Cleaning of Coal by the Conklin Flotation Process, F. A. Downes. Fuel, vol. 3, no. 11, Nov. 1924, pp. 400-403, 2 figs. Continuous separation of coal from its impurities is accomplished by flotation in bath of pulp having specific gravity between that of coal and rock.

The Flotation of Coal According to the Gröndal-Franz Process (Die Schwimmaufbereitung von Kohle nach dem Verfahren von Gröndal und Franz auf der Zeche Mont Cenis), R. Wüster. Glückauf, vol. 60, no. 2, Jan. 12, 1924, pp. 19-23, 7 figs. Describes first plants erected in Germany at Mont Cenis for flotation of washery coals and gives experimental and practical results so far achieved.

The Flotation of Coal by the Gröndal-Franz Process, F. Wüster. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 147-150, 7 figs. After short discourse upon Gröndal flotation process adapted by Dr. Franz to special requirements of flotation of coal, first coal-flotation plants in Germany, built by Erz- und Kohle Flotation G.m.b.H. in Bochum at Mont Cenis Colliery for treatment of coal sludge are described and experimental and practical results hitherto obtained reported upon.

The Gröndal-Franz (Ekof) Flotation Process (Das Schwimmverfahren von Gröndal-Franz der Ekof), Treptow. Metall u. Erz, vol. 21, no. 1, 1st Jan. issue, 1924, pp. 1-6, 2 figs. Describes application of process to midlings from Mittelberg copper pyrites ore.

The Sand Flotation Method of Chance Coal Co. Coal Trade Jl., vol. 55, no. 28, July 9, 1924, pp. 599-600. Describes flotation method for coal separation, invented by T. M. Chance, a simple and positive method that has proved a great success.

The Washing of Fine Coal by the Froth-Flotation and Concentrating-Table Processes at Oughterside Colliery, Cumberland. Instn. Min. Engrs.—Trans., vol. 67, part 4, July 1924, pp. 374-389, 8 figs. Discusses principle of froth flotation, gives flow sheets, cost of plant and running costs, etc.

See also Methods.

Float-and-Sink Test. The Float-and-Sink Test for Fine Coal, B. M. Bird and H. E. Messmore. U. S. Bur. Mines—Reports of Investigations, no. 2586, Mar. 1924, 4 pp. Describes test which is a laboratory means of making an accurate separation according to specific gravity, of coal, bone, and shale, and is applicable to any sample of which it is desired to know proportion of each of these materials. Can be applied satisfactorily in determining possibilities of removal of high-ash impurities from coal by washing, in determining efficiency of crushing as a means of liberating these impurities from coal, and as a check on efficiency of washing operations.

Methods. A Study of Coal Washing (Contribution à l'étude des lavoirs à charbon), C. Wolf. Revue de l'Industrie Minérale, no. 82, May 15, 1924, pp. 245-269, 15 figs. Discusses relative methods of tank washing and Rheolaveur process; how both systems operate; regulation of washing apparatus; mechanical power required, maintenance and control; causes of accidental interruptions. Appended note on calculation of stability of Rheolaveur flow washers.

Coal Washing at Oughterside, J. G. Scoular and B. Dunglinson. Gas Wld., vol. 80, no. 2076, May 3, 1924, pp. 13-17 (includes discussion). Impurities in coal; economic crushing size for cleaning purposes; principle of froth flotation; operation of flotation process; installation at Oughterside, concentrating table and vibratory screen drying, operating results, running costs, control of process, etc. Summary of paper read at joint meeting of Newcastle Sec. Soc. Chem. Industry and Northern Sec. Coke Oven Mgfs. Assn.

See also Autolaveur System; Flotation Processes; Rheolaveur Process.

Plants. Modern Coal Washing (Neuzeitliche Kohlenwäschen), Maercks and Otten. Archiv für Wärmewirtschaft, vol. 5, no. 10, Oct. 1924, pp. 195-199, 6 figs. Discusses operation of a modern plant, flotation of coal sludge, drying, increased value of fuel by washing, etc.

New Classifying and Washing Plant and Agglomerate Works of the Carabinier Coal Mines at Pont-de-Loup (Les nouvelles installations de triage-lavoir et fabrique d'agglomérés des Charbonnages du Carabinier, à Pont-de-Loup), G. Paques. Annales des Mines de Belgique, vol. 25, no. 2, 1924, pp. 329-346, 16 figs., partly on supp. plates. Details of location and layout, concrete construction work, Franki piles, sorting and washing equipment, etc

Wet Washing of Coal at Corbin, British Columbia, E. L. Warburton. Can. Inst. Min. & Metallurgy—Bul., no. 152, Dec. 1924, pp. 933-941, 4 figs. Considers phases and conditions surrounding problem of cleaning coal from Corbin mines; wet washing plant was designed for output of 200 tons of clean coal per shift of 8 hours; whole plant, working one shift, is capable of taking care of output from mines of 1000 tons per day.

Rheolaveur Process. How Washer at British Colliery Readily Treats Mixed Coals of Widely Varying Character, C. H. S. Tupholme. Coal Age, vol. 26, no. 13, Mar. 27, 1924, pp. 455-458, 7 figs. Describes coal washing method used at Butterley

Co.'s Ormonde Colliery; coal up to 3-in. cube is separated into four sizes and each size separately washed; adjustment to suit any kind of coal can be made readily.

Monograph by the Rheolaveur Coal Washing Department at Rochebelle (Monographie de l'atelier de lavage par rhéolaveurs de Rochebelle), M. Charvet. Revue de l'industrie Minérale, no. 83, June 1, 1924, pp. 289-301, 3 figs. Design, construction and operation of fireproof Rheolaveur coal washing plant of Rochebelle mines.

Rheolaveur Coal-Washing Plant in Germany, E. Dupierry. Iron & Coal Trades Rev., vol. 109, no. 2961, Nov. 28, 1924, pp. 866-867, 3 figs. Methods used in Germany, with special reference to Rheolaveur method. Translated from Zeit. des Vereines deutscher Ingenieure.

Tests and Results of Operation with Rheolaveur Coal-Washing Process at the Maria Main Mine (Die mit der Rheo-Kohlenwäsche auf der Grube Maria-Hauptschacht des Eschweiler Bergwerksvereins erzielten Versuchs- und Betriebsergebnisse), A. Wirth. Glückauf, vol. 60, no. 33, Aug. 16, 1924, pp. 711-717, 1 fig. Discusses viewpoints on construction of machines, their operation, power consumption, tabulation of results.

COBALT

Detection of. A New Method of Detecting Cobalt and Nickel Separately or in Presence of Each Other, C. C. Palit. Chem. News, vol. 128, no. 3343, May 9, 1924, pp. 293-294.

Separation from Nickeliferous Ores. Separation of Cobalt from Nickeliferous Ores by the Purpureo-Cobalt Chloride Process, G. T. Morgan and J. D. Main Smith. Chem. & Industry, vol. 43, no. 18, May 2, 1924, pp. 131T-133T. Describes improved process which can be worked at small fraction of cost of existing methods for preparation of purpureo-cobalt chloride, and this could be further lessened by recovery of ammonia, calcium chloride becoming sole waste product.

Smelting. Experiments in Cobalt-Silver-Nickel Smelting, A. C. Harris. Eng. & Min. Jl.—Press, vol. 118, no. 6, Aug. 9, 1924, pp. 214-216. Heat of oxidation of iron and arsenic may displace coke; small test converter proves practicability of process.

COBALT STEEL

Magnet. Cobalt Magnet Steels, E. A. Watson. Engineering, vol. 118, nos. 3060 and 3061, Aug. 22 and 29, 1924, pp. 274-276 and 302-304, 7 figs. Historical review; present production; future prospects; effect of cobalt content on properties of magnet steels; importance of BH max; effect on mechanical properties; heat treatment; effect of hardening conditions; heat treatment of high-carbon high-alloy steels; importance of cooling rate; economical aspect of employment of cobalt steels. Bibliography.

CODES

A. S. M. E. Boiler Code. See BOILERS, A. S. M. E. Codes.

A. S. M. E. Test Codes. See FUELS, Solid, Test Code for.

Lighting. See LIGHTING, Code.

Power Test. See POWER TEST CODES.

COFFEE

Machinery for Preparation. Coffee-Preparing Machinery. Engineering, vol. 118, no. 3068, Oct. 17, 1924, pp. 541-542, 8 figs. Describes exhibits at British Empire Exhibiting of series of machines built for coffee plantations, for pulping, washing, drying, polishing, and grading coffee berries.

COFFERDAMS

Bridge-Pier. See BRIDGE PIERS, Cofferdam Wreckage.

Stress Computation in Single-Wall. A Novel Method of Computing Stresses in a Single-Wall Cofferdam, H. A. Davies. Cornell Civ. Engr., vol. 33, no. 2, Nov. 1924, pp. 31-35, 2 figs. Method for designing structural elements of cofferdam, when sheeting is of uniform cross section, which can be applied to those calculations involved in determining stress distribution in a framed structure resisting lateral pressure, intensity of which increases directly as the depth.

COILS

Costing. The Costing of Winding and Insulating Coils, F. C. Lawrence. Elec. Rev., vol. 95, nos. 2438, 2439, 2440, 2441, 2442, and 2443, Aug. 15, 22, 29, Sept. 5, 12, and 19, 1924, pp. 242-244, 278-280, 318-319, 375-376, 409-410, and 445-446, 3 figs. Indicates some of the methods of costing in connection with manufacture of coils for electrical machinery, transformers and meters, already in operation in many factories, and points out reasons why they are not entirely successful. Describes methods which are deemed to give maximum accuracy obtainable without a vast amount of clerical labor.

Electromagnetic Behavior. Electromagnetic Behavior of Single-Layer Coils (Das elektromagnetische Verhalten der einlagigen Zylinderspule), W. Steidinger. Archiv für Elektrotechnik, vol. 13, no. 4, July 31, 1924, pp. 237-273, 21 figs. Discusses difficulties in calculation, formulates equations, coils of preponderating earth capacity, core functions, theory and experiment, etc.

Insulations. Repeated Thermal Expansions and Contractions, T. S. Taylor. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1047-1050, 6 figs. Their effect on long-armature coil insulations.

Natural Frequency. Natural Oscillations of Coils (Eigenschwingungen von Spulen), F. Reinhardt. Archiv für Elektrotechnik, vol. 13, no. 2, May 31, 1924, pp. 83-108, 16 figs. Investigates various types of coils as to natural frequency, if excited by damped waves, and formulates relations between natural frequency and damping.

Petersen. German System Readopts Petersen Coil. Elec. World, vol. 84, no. 15, Oct. 11, 1924, pp. 786-787, 2 figs. Undergrounded 1000-km., 110-kv. network in Central Germany finds protection necessary after removing coils two years ago.

Pleijel; for Telephone Cables. Development and Practical Applications of the Pleijel Coils (Aufbau und praktische Anwendungen der Pleijelspule), E. Schürer. Elektrotechnische Zeit., vol. 45, no. 11, Mar. 13, 1924, pp. 213-214. Describes chief characteristics of coil arrangement devised by Prof. Pleijel of Stockholm; satisfactory results of acceptance tests on two telephone cables 39 and 27 km. long equipped with Pleijel coils.

Pupin. The Development of Pupin Coils (Die Entwicklung der Pupinspulen), F. Hörning. Elektrotechnische Zeit., vol. 45, no. 10, Mar. 6, 1924, pp. 180-183, 6 figs. Also Siemens-Zeit., vol. 4, no. 8, Aug. 1924, pp. 274-278, 6 figs. Brief review of development and gradual improvement of core material to meet modern requirements; research work has developed pressed-iron-powder core of perfectly circular cross-section, with which faultless transmission of speed can be achieved under any circumstances.

See also CABLES, ELECTRIC, Telephone.

Reactance. The Calculation of Mechanical Stresses Occurring in Reactance Coils (Zur Berechnung der in Reaktanzspulen auftretenden mechanischen Beanspruchungen), J. Hak. Elek-

trotechnik u. Maschinenbau, vol. 42, nos. 2 and 18, Jan. 13 and May 4, 1924, pp. 17-19, 2 figs., and (discussion) 275-277, 1 fig. Formulas are derived for calculating these stresses, showing need of mechanical development of larger reactance coils.

Resistance, Non-Reactive. On a Design for a Bifilar Type of Non-reactive Resistance Coil, H. Nukiyama and Y. Shôji. Tôhoku Imperial Univ.—Technology Reports, vol. 4, no. 1, 1924, pp. 1-20, 13 figs. Describes experiment to determine frequency characteristics of a bifiliar type of non-reactive coil; theory of a bifilar coil as an electric cable; apparent dielectric constant; and method of reducing error in bifilar resistance due to frequency. Bibliography.

Self-Inductance of. On the Calculation of Self Inductance of Coils Wound on Square Forms, Y. Niwa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 425, Dec. 1923, pp. 958-976, 8 figs. Range of application of formula derived by author for calculation of self-inductance of coils with square cross section. A. Esau's criterion on author's formula. Results of experiments and calculations. Formula for self-inductance of solenoid with similar concentrated windings at equal intervals. (In English.)

Self Inductance of Ironless Throttling Coils (Die Induktivität eisenloser Drosselspulen), H. Hemmeter. Archiv für Elektrotechnik, vol. 13, no. 16, Sept. 30, 1924, pp. 460-477, 9 figs. Discusses modification of Stefan formula, by means of which inductance of ironless coils with rectangular winding space is calculated with a degree of accuracy of 0.1 per cent or better.

Telephone. Concerning Telephone Coils, P. K. Higgins. Telephone Engr., vol. 28, no. 4, Apr. 1924, pp. 17-19, 5 figs. Describes various types of telephone coils, including ringer, repeating, and phantom coils; how made, physical properties and applications; resistance, reactance, and impedance.

Variable-Inductance. Coils with Variable Inductance for Audio Frequencies (Ueber Spulen mit veränderlicher Selbstinduktion für Mittelfrequenz), H. Winter-Günther and J. Zenneck. Physikalische Zeit., vol. 25, no. 9, May 1, 1924, pp. 210-212, 5 figs. Describes simple arrangement of two coils, whose position along an iron core can be altered, which gives wide range of values for inductance, combined with low d. c. resistance; curves are given showing variations in inductance and effective resistance as functions of distance apart of coils.

Winding. See ARMATURES, Winding.

COKE

American Output. American Coke Output Analyzed. Iron Age, vol. 114, no. 26, Dec. 25, 1924, pp. 1689-1691, 3 figs. Furnace and non-furnace ovens; coke used in making pig iron; by-product and beehive compared. Abstracted from advance proof sheets of report by F. G. Tryon, U. S. Geol. Survey.

Blast-Furnace. Coke for Blast Furnaces, J. A. Thornton. Gas. Wld., vol. 80, no. 2072, Apr. 5, 1924, pp. 16-17, and (discussion) 17-20. Strength and porosity; ash and moisture; size of coke; beehive versus by-product; combustibility.

Effect of Coking Temperature on Properties of Blast Furnace Coke (Ueber den Einfluss der Verkokungstemperatur auf die Eigenschaften des Hochofenkokses), H. H. Berger. Gas- u. Wasserfach, vol. 67, no. 29, July 19, 1924, pp. 424-425. Discusses production of coke, specific gravity, porosity and compression strength, velocity of combustion; reduction of iron oxides.

Production of High-grade Blast-furnace Coke, H. M. Chance. Am. Inst. Min. & Met. Engrs.—Trans., no. 1351-C, June 1924, 8 pp., 2 figs. Outline of differential separation which makes available vast stores of low-ash coal locked up in coal beds from which it has been impossible to ship anything better than fair grades of steam coal; can be made by any liquid or solution having specific gravity greater than that of coal which is to be floated and less than that of coal that is to be separated by sinking in liquid.

Reactivity of Coke in Relation to Blast-Furnace Operation, G. St. J. Perrott and R. A. Sherman. Engrs.' Soc. West Pa.—Proc., vol. 39, no. 10, Jan. 1924, pp. 351-369 and (discussion) 370-375, 5 figs. Prevailing views as to function of coke in blast furnace and properties possessed by desirable coke; discusses problem in light of recent data secured by writers, both in laboratory and at blast-furnace plants.

By-Product, for Domestic Heating. Advantages for Byproduct Coke for Domestic Heating, A. R. Powell. Coal Age, vol. 25, no. 2, Jan. 10, 1924, pp. 39-40. Eliminates smoke, reduces need to clean furnace and flues, requires less attention than coal and gives even temperature.

Cell Structure. By-Product Coke Cell Structure, O. O. Malleis. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 901-904, 12 figs. Study of coke cell structure of unmixed coal or mixed coals that are very similar.

Combustibility of. The Combustibility of Coke, H. Bähr. Colliery, Guardian, vol. 128, no. 3320, Aug. 15, 1924, pp. 413-414, 2 figs. Details of design of Bähr's apparatus for determining reactive capacity of coke and combustion apparatus and operations. Translated from Stahl u. Eisen.

The Combustibility of Coke: A Critical Survey, Gas World, vol. 81, no. 2098, Oct. 4, 1924, pp. 10-14. Methods of producing coke of high combustibility; factors influencing combustibility; experimental determination of reactivity; important considerations.

Conveying. See Quenching; COKE HANDLING.

Desulphurization. The Desulphurization of Coke by Air, A. R. Powell. Gas. Engr., vol. 40, no. 577, May 1924, pp. 104-106. Details of investigation of desulphurizing effect of air on coke, and experiments to determine optimum temperature for oxidation of ferrous sulphide in coke.

Dry Cooling. Apparatus for Cooling Coke. Gas. Wld., vol. 80, no. 2072, Apr. 5, 1924, pp. 21-23, 4 figs. Describes method and apparatus for cooling coke from coke ovens; incandescent coke from coke ovens is cooled by action of gases in direct contact with coke, gases being first passed through coke to take up heat and afterwards through a steam generator, whereby gases are cooled, to be returned in a cycle to apparatus.

Dry Coke Cooling Plants. Gas. Wld., vol. 81, no. 2085, July 5, 1924, pp. 16-18, 4 figs. Design and construction of Sulzer plant in operation at Keilehaven gasworks, Rotterdam.

Dry-Cooling Coke with Inert Gas, C. H. S. Tupholme. Chem. & Met. Eng., vol. 31, no. 15, Oct. 13, 1924, pp. 574-575, 4 figs. Sulzer process, used in Europe, that overcomes many of objectionable features of other coke-quenching systems.

Dry Cooling of Coke (Ueber trockene Kokskühlung), F. Müller. Wärme- u. Kälte-Technik, vol. 26, no. 20, Oct. 15, 1924, pp. 185-186, 1 fig. Particulars of arrangement for Sulzer method of dry cooling by inert gases, and results of operation at Schlieren gas works, near Zurich.

Dry Cooling of Coke, M.. Johnstone-Taylor. Am. Gas Jl., vol. 121, no. 6, Aug. 9, 1924, p. 728, 2 figs. Some further notes on Sulzer system at Rotterdam.

Sulzer Dry Cooling of Coke in Coking Plants and Gas Works. Gas Engr., vol. 40, no. 578,

June 1924, pp. 123-124, 4 figs. Sulzer patent process for dry cooling consists in circulating inert gas through glowing coke which is enclosed in air-tight receiver; gives layout of plant being installed in French coke works; coke works is designed for output of 930 tons of coke in 24 hr.

The Dry Cooling of Coke. Engineer, vol. 137, no. 3567, May 9, 1924, pp. 514-517, 4 figs. Discusses principle of dry cooling and describes coal-distilling plant at Keilehaven works of Rotterdam Gas Co., consisting of battery of 10 chamber ovens, each of which is provided with 4 chambers having coal capacity of approximately 4½ tons each; experimental results.

Electric Conductivity of Charcoal and. The Electric Conductivity of Charcoal and Coke (Ueber die elektrische Leitfähigkeit von Holzkohle und Koks), R. Durrer. Stahl u. Eisen, vol. 44, no. 17, Apr. 24, 1924, pp. 465-468, 5 figs. Tests to determine relative conductivity of coke and charcoal; conductivity of coke in loose state averages about 1.8 times that of charcoal; in compact state it is only 1.3 times as great.

Foundry. The Examination of Foundry Coke, H. H. Shepherd. Metal Industry (Lond.), vol. 25, nos. 11 and 12, Sept. 12 and 19, 1924, pp. 255-256 and 283-284. Discusses importance of control of coke supplies in cupola melting, giving methods for determination of chief factors concerned, and pointing out particular significance and limits of each factor.

What Constitutes Good Foundry Coke, H. W. Anderson. Foundry, vol. 52, no. 18, Sept. 15, 1924, p. 717. Results of investigation, giving comparative analyses of different cokes, losses sustained by excessive moisture, etc.

Gas. See Sandwich Firing System.

Gas and Colliery, Tests. Report on Comparative Tests of Gas and Mine Coke (Versuche bei Verheizung von Gaskoks und Zechenkoks), Chr. Eberle. Gas- u. Wasserfach, vol. 67, no. 39, Sept. 27, 1924, pp. 585-587, 1 fig. Official report of evaporation tests with two equal low-pressure boilers at Municipal Hospital in Höchst; detailed test data.

Gas- vs. Blast-Furnace. Report on Comparative Tests with Gas- and Blast-Furnace Coke (Bericht über die in der Zeit vom 3. April bis 20. Juni 1924 im Auftrage des Betriebsamtes Fürth durchgeführten vergleichenden Versuche mit Gas- und Hüttenkoks). Gas- u. Wasserfach, vol. 67, no. 46, Nov. 15, 1924, pp. 694-698. Tests for determining relative behavior and efficiency of gas coke produced at Fürth gas works and blast-furnace coke, for use in central heating boilers.

Gasification. The Gasification of Coke in Steam, with Special Reference to Rates of Gasification and the Composition of the Gas, S. Pexton and J. W. Cobb. Gas. Jl., vol. 167, no. 3190, July 2, 1924, pp. 161-169, 7 figs. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 675-678. Investigates composition of gas and amount of undecomposed steam as varying with temperature, velocity of gas stream, and nature of coke used.

Handling. See COKE HANDLING.

Manufacture. See COKE MANUFACTURE.

Metallurgical. Reactivity of Coke (La réactivité du coke), J. P. Arend and J. Wagner. Revue de Métallurgie, vol. 21, no. 10, Oct. 1924, pp. 585-599, 12 figs. Discusses definition of reactivity based on law of equilibrium of reversible reaction of $CO_2 + C = 2CO$), a simple method for measuring it, and rôle of reactivity in blast-furnace operation.

Nitrogen Estimation. See COAL, Nitrogen Estimation.

Ovens. See COKE OVENS.

Peats as Source of. See PEAT, Oil and Coke Recovery.

Preparation. See COAL, Preparation.

Properties. Physical Examination of Coke (Beitrag zur physikalischen Untersuchung von Koks), P. Bardenheuer and G. Thanheiser. Mitteilungen aus dem Kaiser-Wilhelm-Institut für Eisenforschung zu Düsseldorf, vol. 5, 1924, pp. 13-20, 5 figs. Concludes that determination of permeability to gas is best suited for distinguishing cokes of different qualities, as permeability best discloses available coke surface for reaction gases in blast furnaces.

The Quality of Coke, Determination of Its Properties and the Development of Good Grades (Koksbeschaffenheit, Bestimmung der Eigenschaften und Erzielung guter Sorten), E. Diepschlag. Stahl u. Eisen, vol. 44, no. 18, May 1, 1924, pp. 496-498. Combustibility and strength of coke; coking process; author recommends coking under pressure.

Quenching. Conveying and Quenching of Coke in Gas Works, L. Rodde. Indus. Mgmt. (Lond.), vol. 11, nos. 15 and 16, Sept. and Oct. 1924, pp. 421-422 and 448-450, 9 figs. Discusses quenching, conveying, and storing; factors affecting quality of coke; hand labor vs. mechanical handling; comparison of plants; arrangement of plant; conveying coke breeze; hygienic considerations. Abstract of paper read before German. Soc. Gas & Water Engrs.

"Flood" Patent System of Coke Quenching and Conveying. Indus. Mgmt. (Lond.), vol. 11, no. 6, Mar. 20, 1924, pp. 159-160, 1 fig. Instead of allowing quenching water to drop on top layer of coke batch, it enters quenching tank through a stand pipe of suitable size, situated at convenient position, which is usually near end of coke battery.

Mechanical Coke-Quenching and Loading Devices for Mining and Metallurgical Coking Plants (Maschinelle Kokslösch- und Verladevorrichtungen für Zechen- und Hütten-Kokereien), W. Merkel. Bergbau, vol. 37, no. 17, Aug. 21, 1924, pp. 466-469, 1 fig. Construction and operation of Schöndeling coke-quenching and loading machine. Comparison with others.

Reactivity. The Reactivity of Coke. Gas Jl., vol. 167, no. 3195, Aug. 6, 1924, pp. 513-514, 1 fig. Discusses causes of variations in combustibility, effect of degree of gasification, change in specific gravity and hardness, etc.

The Reactivity (Combustibility) of Coke [Die Reaktionsfähigkeit (Verbrennlichkeit) von Koks], Hans Bahr. Starl u. Eisen, vol. 44, nos. 1 and 2, Jan. 3 and 10, 1924, pp. 1-9 and 39-42, and (discussion) 42-48, 12 figs. Account and results of autor's tests; new method for determination of reactivity; influence of carbon modifications and an artificial powdery-iron addition; conclusions.

See also Blast-Furnace.

Sandwich Firing System. Gas Coke, E. W. L. Nicol. Gas. Jl., vol. 168, no. 3209, Nov. 12, 1924, pp. 432-434, 1 fig. Its relation to industrial and domestic smoke prevention and fuel economy; Sandwich system of fuel blending. (Abstract.) Paper read at Manchester Smoke Abatement Conference.

Surfaces and Structures. Interpretation of Coke Surfaces and Structures, A. Thau. Chem. & Met. Eng., vol. 30, no. 8, Feb. 25, 1925, pp. 306-310, 13 figs. Interprets meaning of variations in coke appearance as affecting coke utility. See also article by same author, entitled How Structure and Surface Affect Combustibility of Coke, in same journal, no. 9, Mar. 3, 1924, pp. 347-350, 6 figs.

Utilization of. Fuel Efficiency with Special Reference to Coke, C. H. S. Tupholme. Combustion, vol. 10, no. 5, May 1924, pp. 349-352.

Low temperature distillation of coal as a solution of fuel problem of future, and discussion of utilization of coke.

Volatile in. See COAL, Volatile-Matter Determination.

COKE HANDLING

Conveying. See COKE, Quenching.

Gas Works. Coke-Handling Plant at Portsmouth Gasworks, S. E. Whitehead. Gas Wld., vol. 80, no. 2070, Mar. 22, 1924, pp. 264-271, 7 figs. Describes locomotive-drawn skips, De Brouwer conveyor "G. N." transporter, quenching bench, storage of coke in concrete hoppers, and telpher handling.

Hoists for. Automatic Coke Hoist, D. Cleave Cross. Gas Wld., vol. 80, no. 2071, Mar. 29, 1924, pp. 292-293, 2 figs. Novel coke hoist erected at Lea Bridge gas works for use with water-gas plant.

COKE MANUFACTURE

Alabama. Byproduct Coking in Alabama, F. W. Miller. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1367-C, Sept. 1924, 7 pp. Brief history of by-product coking in Alabama with short general description of plants and state's production of beehive and by-product coke.

By-Product Coke. Byproduct Coking in Alabama, F. W. Miller. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 475-477, 2 figs. See also Coal Age, vol. 26, no. 15, Oct. 9, 1924, pp. 506-508, 1 fig. Progress in oven development; labor supply and tonnages. Abstract of A. I. M. E. paper.

By-Product Coking Superior to Beehive Method. Coal Trade Jl., vol. 55, no. 26, June 25, 1924, pp. 553-554. Gives virtues of by-product coking and pronounces beehive method obsolete.

Comparative Survey of Coke-Oven Practice in Various Countries, G. A. Hebden. Iron & Steel of Can., vol. 7, no. 11, Nov. 1924, pp. 223-230, 3 figs. Deals with the matter from practical rather than technical standpoint, and considers only question of coke made in by-product ovens. Discusses separately practice followed in various countries, and compares various methods and conditions.

Making Coke to Combat Canada's Fuel Problem, H. P. Armson. Can. Machy., vol. 31, no. 23, June 5, 1924, pp. 27-30 and 47-48, 4 figs. Also Power House, vol. 17, no. 12, June 20, 1924, pp. 23-27, 4 figs., and Can. Foundryman, vol. 15, no. 6, June 1924, pp. 18-21 and 34, 4 figs. Description of processes by which Hamilton By-Products Coke Ovens Co. produce foundry and domestic coke, tar, ammonium sulphate, city gas, blue water gas, and naphthalene.

Making and Handling By-Product Coke, L. D. McClaren. Black Diamond, vol. 72, no. 26, June 28, 1924, p. 764. Describes three types of processes used in present day coke manufacture; history and meaning of by-product variety; instruction on domestic use.

Sodium Cyanide as a Byproduct of Coke Making, M. E. Mueller. Chem. & Met. Eng., vol. 30, no. 25, June 23, 1924, pp. 978-980, 1 fig. Process that permits recovery of this material or of any other cyanogen compound as by-product.

Coal Blending. Blending of Coal and Its Effect on Coke Made, A. W. Grant, Jr. Gas Age-Rec., vol. 54, no. 17, Oct. 25, 1924, pp. 583-587, 3 figs. Factors that should be considered in selecting a coal mixture. From paper read before Am. Gas Assn.

Coke Ovens. See COKE OVENS.

Formation of Coke Pieces. What Occurs in the Formation of Coke, A. Thau. Chem. & Met. Eng., vol. 30, no. 5, Feb. 4, 1924, pp. 222-227, 13 figs. How propagation of coking steam is affected by varying oven conditions and what this means in coke produced.

India. Coking and By-Products Recovery Practice in India, J. Parker. Gas Wld., vol. 80, no. 2072, Apr. 5, 1924, pp. 11-14, and (discussion) 14-16, 8 figs. See also Colliery Guardian, vol. 127, no. 3302, Apr. 11, 1924, pp. 931-932. Discusses coal handling, silica ovens, recruiting labor, labor troubles, a manager's qualifications in India, heat control, etc.

Non-Coking Coal. Making Coke from Non-Coking Coals by Froth Flotation. Coal Age, vol. 26, no. 25, Dec. 18, 1924, p. 867. Non-coking coals resist coating and flocculation, but sulphuric acid reduces resistance and good coke can then be made.

Problems. Coke Production and Uses (Kokserzeugung und Koksverwendung), K. Bunte. Gas. u. Wasserfach, vol. 67, nos. 48, 49, and 50, Nov. 29, Dec. 6 and 13, 1924, pp. 721-724, 739-744, and 758-760, 19 figs. Properties of gas coke, size, hardness, color, ash and water content, ignition and reaction, composition of coal, process of coking, mixed coal, formation of fissures and cracks, effect of coking velocity and temperature on formation of pores.

COKE-OVEN GAS

By-Product Recovery from. Developments in Recovering Byproducts from Coke-Oven Gases, E. V. Espenhahn. Chem. & Met. Eng., vol. 30, no. 16, Apr. 21, 1924, pp. 629-631. Trends in European practice serve to show American oven operator what future may hold for industry; notes on Burkheiser ammonium-sulphite process; recovering cyanides; production of alcohol; recovery of tar and naphthalene.

Production of Pitch and Tar Oils, Ammonia and Sulphuretted Hydrogen from Coke-Oven Gas by the Feld Process (Die Gewinnung von Pech und Teerölen sowie von Ammoniak und Schwefelwasserstoff aus Kokereigasen nach den Verfahren von Walther Feld), W. Funcke. Glückauf, vol. 60, nos. 38, 39, and 40, Sept. 20, 27, and Oct. 4, 1924, pp. 835-840, 868-876, and 897-905, 8 figs. This process follows reverse order of tar distillation; distillation is replaced by condensation. Polythionate process for recovering ammonia; Feld gas scrubber; experiments with tar separation and gas scrubbing; description and operation of Feld plant, and results obtained.

Utilization. Utilization of Coke-Oven Gas (L'utilisation des gaz de fours à coke), P. Baud. Nature, no. 2636, Oct. 11, 1924, pp. 236-240, 5 figs. Use for street lighting in Ruhr district; manufacture of nitric acid; extraction of hydrogen and ethylene.

COKE OVENS

Becker Type. See Coal Gas from.

By-Product. By-Product Coke Oven Plant, Hamilton. Can. Engr., vol. 46, no. 12, Mar. 18, 1924, pp. 359-365, 5 figs. Description of new plant established in Hamilton, Ont., to manufacture gas, coke, and by-products; coke to be used as substitute for anthracite; will help solve fuel problem.

Coke Plant at Troy to Have New Features. Iron Age, vol. 113, no. 15, Apr. 10, 1924, pp. 1075-1076, 1 fig. Elimination of upper horizontal flue and somewhat different layout of heating flues characterize American oven.

Lights 37 New By-Product Ovens, C. H. Hunt. Iron Trade Rev., vol. 74, nos. 15 and 16, Apr. 10 and 17, 1924, pp. 984-989 and 991, and 1053-1057, 9 figs. New type of narrow oven installed by Weirton Steel Co., W. Va.; high-volatile coals coked exclusively; temperature in heating walls

lowered without sacrificing coking period; plant has hourly capacity for 570,000 cu. ft. of gas and conversion of over 200 gal. of light oil into pure products; operating data.

The Becker By-Product Coke Oven. Iron & Coal Trades Rev., vol. 109, no. 2945, Aug. 8, 1924, pp. 233-234, 9 figs. Details of design and construction of Becker type of Koppers Co. ovens recently introduced into Great Britain.

Weirton's New By-Product Coke Plant, C. H. Hunt. Iron Age, vol. 113, nos. 8 and 9, Feb. 21 and 28, 1924, pp. 573-577 and 653-657, 8 figs. Also Blast Furnace & Steel Plant, vol. 12, nos. 3 and 4, Mar. and Apr. 1924, pp. 166-171 and 182-188, 11 figs. New plant has battery of 37 Koppers Co. Becker-type ovens of 14-in. width, and uses high-volatile coal; results of operation of coking plant and of blast furnace.

Coal Gas from. City Gas from Coke Ovens, R. S. McBride. Chem. & Met. Eng., vol. 31, no. 19, Nov. 10, 1924, pp. 734-736, 4 figs. Describes installation of small-size gas oven of Becker type, built by Koppers Co. in Battle Creek, Mich.

Consett Iron Co., Ltd. New Wilputte Coking Plant at the Fell Coke Works of the Consett Iron Company, Limited. Iron & Coal Trades Rev., vol. 108, no. 2935, May 30, 1924, pp. 909-910, 21 figs. partly on pp. 929-936. Describes coal-handling and coke-handling plants; Wilputte silica battery, comprising 60 ovens in one battery, built between reinforced-concrete end pinions, having a throughput of a little over 6000 tons dry coal per week; ovens machinery; gas main circuit and condensing plant; by-product plant; and benzol plant.

Design and Operation. Coke Ovens (Les fours à coke), A. Baille-Barrelle. Technique Moderne, vol. 16, nos. 10 and 11, May 15 and June 1, 1924, pp. 357-360 and 384-394, 34 figs. Dimensions and characteristics, with special reference to large American ovens; heating of ovens; satisfactory heating conditions; describes most recent types of coke ovens including Lecocq, Simplex, Solvay, Still, Coppee, Davicion, etc., and different ways of handling coke. Bibliography.

Coke Ovens (Les fours à coke), Ch. Berthelot. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 7-9, July-Sept. 1924, pp. 383-432, 11 figs. partly on supp. plate. Discusses modern construction and operation, coke-oven dimensions, choice of quality of gas for use in firing, choice of refractories used, and handling of metallurgical coke. Bibliography.

Recent Progress in the Construction and Operation of Coke Ovens (Les récents progrès de la construction et de l'exploitation des fours à coke), Ch. Berthelot Chimie & Industrie, special no., May 1924, pp. 234-252, 21 figs. Measures employed to increase coking capacity of ovens, such as decreasing size of oven, uniform distribution of heating gas; rational arrangement of heat regenerators, and use of proper refractories.

Koppers. The Salzburg Chamber Oven Plant (Die Salzburger Kammerofenanlage), A. Rosskothen. Gas- u. Wasserfach, vol. 67, no. 47, Nov. 22, 1924, pp. 705-709, 2 figs. Discusses conveying plant, heating, central generators, and comparison of heating with generator gas and mixed gas.

Meguin Vertical. The Vertical Oven (Der stehende Schwelofen). Stahl u. Eisen, vol. 44, no. 42, Oct. 16, 1924, pp. 1286-1290, 2 figs. Notes on low-temperature coking and distillation; stationary and revolving furnaces; design, operation, and advantages of Meguin distilling oven; recovery of by-products.

Narrow-Retort. Coke Ovens with Narrow Retorts (Schmalkammerige Koksöfen). Glückauf, vol. 60, no. 43, Oct. 25, 1924, pp. 978-980, 2 figs. Discusses American, English and German practice and advantages of narrow retorts which are expected to preponderate in future.

Oil Fuel as By-Product. Coke Plants and Oil Fuels (Kokerei und flüssige Brennstoffe), P. Fritzsche. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 23, June 7, 1924, pp. 593-599, 6 figs. Production of liquid fuels by coking of anthracite, by coal-gas production and by low-temperature process; production and preparation of coal tar and benzol hydrocarbons; principles underlying production of low-temperature tar; chemical conversion of coke-oven by-products into liquid fuels.

Piette. Piette Coke Ovens. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 510-512, 12 figs. partly on supp. plate. New coke ovens of Semet-Solvay and Piette Coke Oven Co. of Sheffield, England, with special reference to their battery of 24 coke ovens at Shelton Iron, Steel & Coal Co. of Stoke-on-Trent; each of these can produce 60 tons of coke per week.

Practice. Comparative Survey of Coke-Oven Practice in Various Countries, G. A. Hebden. Colliery Guardian, vol. 127, no. 3310, June 6, 1924, pp. 1459-1460. See also Can. Min. Jl., vol. 45, nos. 41 and 42, Oct. 10 and 17, 1924, pp. 1011-1014 and 1035-1036. Survey of Great Britain, Europe, the Dominions, and America. From paper read before Empire Min. & Metallurgical Congress.

Refractories for. See REFRACTORIES, Coke-Oven.

Waste-Heat and Gas Utilization. The Utilization of Waste-Heat and Surplus Gas from Coke-Ovens, I. C. F. Statham. Instn. Min. Engrs.—Trans., vol. 68, part 3, Dec. 1924, pp. 234-261 and (discussion) 261-270, 16 figs. See also Iron and Coal Trades Rev., vol. 109, nos. 2960 and 2961, Nov. 21 and 28, 1924, pp. 823-825 and (discussion), pp. 863-864, 5 figs.; and Colliery Guardian, vol. 128, no. 3334, Nov. 21, 1924, pp. 1311-1314, 10 figs. Composition of coke-oven gas. Discusses some of the methods employed for utilization of waste heat and surplus gas and summarizes results obtained in practice.

COLD

Production of. The Production of Cold, C. W. Kanolt. Optical Soc. Am.—Jl., vol. 9, no. 4, Oct. 1924, pp. 411-453, 7 figs. Freezing mixtures; cooling with solid CO_2 and by sprayed liquid; principles of mechanical cooling; thermodynamic charts; Carnot cycle; reversed Joule cycle; cycle with throttle expansion; heat interchange; Joule—Thomson effect and theory of Hampson liquefier; precooling and "cascade" system; Linde and Claude systems; construction and operation of Hampson liquefier; liquefaction of hydrogen and other gases; gas compressors, etc.

See also REFRIGERATION.

COLD STORAGE

Eggs. Studies of Eggs in Cold Storage in Relation to Top Layer, M. E. Pennington. Ice & Refrigeration, vol. 67, no. 3, Sept. 1924, pp. 143-148. Results of investigations showing changes in weights of eggs and of packages; conditions in storage warehouse more vital than minor modifications in packages; quality of eggs; type of package used; type of warehouse selected; conduct of experiments.

Furs and Fabrics. Cold Storage for Furs and Fabrics, H. J. Macintire. Heat. & Vent. Mag., vol. 21, no. 7, July 1924, pp. 47-49, 3 figs. Requirements to be met in overcoming ravages of moth miller and beetles, with notes on successful practice in design of cooling apparatus for cold-storage rooms.

Ozone in. Ozone and Cold Storage, F. E. Hartman. Refrig. Eng., vol. 11, no. 5, Nov. 1924, pp. 173-179, 4 figs. Uses of ozone in cold storage; mechanism of ozone formation; and design and operating factors bearing on production of ozone.

Plants. Frozen Meat in Germany. Cold Storage, vol. 27, no. 311, Feb. 21, 1924, pp. 43-44, 5 figs. Brief description of Bremerhaven plant.

Italy's Largest Cold Store. Cold Storage, vol. 27, no. 312, Mar. 20, 1924, pp. 89-90 and 93, 5 figs. Description of Parma installation, for food products preservation.

Large Terminal and Cold-Storage Warehouse at Duluth. Eng. News-Rec., vol. 92, no. 8, Feb. 21, 1924, pp. 324-327, 4 figs. Rail and water terminal; reinforced-concrete structure with some steel framing; traffic on two levels; perishable freight; cold-storage insulation; freight-handling equipment.

Refrigeration at French Ports. Cold Storage, vol. 27, no. 311, Feb. 21, 1924, pp. 47-48, 2 figs. Notes on layout and equipment of Bordeaux-Bassens dock stores.

The Railway Cold Stores at Lyon-Perrache. Ice & Cold Storage, vol. 27, no. 310, Jan. 1924, pp. 11-13, 3 figs. Describes equipment of a French agricultural cold store to encourage local production.

Washington's Storage Plant. Refrig. World, vol. 59, no. 1, Feb. 1924, pp. 13-18, 14 figs. Describes new warehouse and raw-water ice plant of Terminal Refrig. & Warehousing Co.

Warehouses. See Plants; WAREHOUSES.

COLLOIDS

Chemistry of. Colloid Chemistry, E. K. Rideal. Roy. Soc. Arts—Jl., vol. 72, nos. 3752, 3753, and 3754, Oct. 17, 24, and 31, 1924, pp. 830-836, 838-844, and 849-854, 5 figs. Oct. 17: Phenomena and properties. Oct. 24: Consideration of suspension colloids in which solid phase is finely dispersed in either liquid or gaseous dispersion medium forming sols and smokes respectively. Oct. 31: Emulsions; electrical properties of gels.

Colloid Mill. Design and Operation of a Colloid Mill, Wm. A. McLean. Chem. & Met. Eng., vol. 30, no. 17, Apr. 28, 1924, pp. 675-677, 2 figs. See also Indus. & Eng. Chem., vol. 16, no. 5, May 1924, pp. 494-497, 2 figs. Describes mill which is invention of F. J. E. China, of London; a hydraulic disintegrator in which several forces are developed as well as electric effect, and in combined resolution substances are reduced to colloidal state; chemical reactions; power consumptions; industrial uses.

The Colloid Mill. Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1931, May 23, 1924, pp. 619-621. The "beater-wheel" type in technical and patent literature; mode of operation; use of accelerators or dispersators; applications in foodstuff industries; clays and fertilizer products; preparation of cellulose derivatives; lubricants, rubber, inks, and glues; preparation of "liquid coal"; colloidal metal, and other powders.

Colloidal Protection. Colloidal Protection, J. Alexander. Chem. & Industry, vol. 43, no. 51, Dec. 19, 1924, pp. 1256-1258. Notes on double or plural protection; autoprotection; and cumulative protection.

Developments. Splendid Progress in Field of Colloids. Chem. & Met. Eng., vol. 30, no. 26, June 30, 1924, pp. 1020-1021. Brief review of outstanding papers. Colloid adsorption classified; grain size in photo emulsions; properties of clay; acid and alkali adsorption; emulsions without colloids.

Ferric-Oxide Sols. Constitution and Stability of Ferric-Oxide Sols (Konstitution und Stabilität von Eisenoxydsolen), W. Pauli and F. Rogan. Kolloid-Zeit., vol. 35, no. 3, Sept. 1924, pp. 131-138. Quantitative study of coagulation of colloidal solutions of ferric hydroxide by potassium chromate and sodium oxalate.

Gelatinization Process. Kinetics of Gelatinization and Its General Significance (Die Kinetik der Gelatinierung und ihre allgemeine Bedeutung), R. Reiger. Kolloidchemische Beihefte, vol. 19, no. 10-12, 1924, pp. 381-440, 27 figs. Gives evidence to show that gelatinization process is not simple, but consists of series of successive reactions occurring in distinct stages. Curves showed evidence of discontinuities, and could be divided into three distinct portions; discusses evidence for existence of similar discontinuities in other colloidal systems.

Gels. Deformations of Elastic Gel Bodies on Drying (Die Deformationen elastischer Gelkörper beim Trocknen), E. Hatschek. Kolloid-Zeit., vol. 35, no. 2, Aug. 1924, pp. 67-76, 13 figs. Discusses behavior of gels on drying, showing various distortions of shapes, and explains how to avoid them by choice of appropriate forms.

Osmotic Pressure and Flocculation. The Theory of Osmotic Pressure, Membrane Potential and the Flocculation of Colloids (Zur Theorie der osmotischen Drucke, der Membranpotentiale und der Ausflockung von Kolloiden), N. Bjerrum. Zeit. für physikalische Chemie, vol. 110, 1924, pp. 656-684, 1 fig. Investigations on colloidal chromic hydroxide; in flocculation with polyvalent ions; precipitation zone is found to be narrow, well-defined, and independent of time; amount of ferrocyanide ions necessary for complete flocculation corresponds closely to total charge of colloid.

Papermaking and. See PAPER MANUFACTURE, Colloids and.

Particle, Formation and Properties of. Some Recent Advances in the Field of Colloids. Chem. Revs., vol. 1, no. 3, Oct. 1924, pp. 249-275, 9 figs. Formation of particle; colloid particle as a molecular kinetic unit; and colloid particle as micell. Bibliography.

Science and Technology. Colloidal Science and Technology (Kolloidwissenschaft und Technik), W. Ostwald. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 481-484. Scientific study of colloids; different kinds of colloids; change in properties of a body under disintegration; physical and chemical behavior; influence of these changes on technical processes.

Silica Gels. Silica as an Industrial Adsorbent, E. C. Williams. Chem. & Industry, vol. 43, no. 16, Apr. 18, 1924, pp. 97T-112T, 12 figs. Deals with possibilities of its employment for recovery of benzene hydrocarbons from coal gas or coke-oven gas for use as automobile fuel. Report of work carried out on behalf of Joint Research Committee of Nat. Benzole Assn. & Univ. of Leeds.

Silicic-Acid Sols. Silicic Acid Sol and a New Method for Its Preparation (Ueber das Sol der Kieselsäure und eine neue Methode zu seiner Darstellung), Rob. Schwarz. Kolloid-Zeit., vol. 34, no. 1, Jan. 1924, pp. 23-29. Solubility of silicic acid, prepared from silicon tetrafluoride, was determined in ammonia solutions of various concentrations; sols of silicic acid can be prepared by allowing solution in ammonia to evaporate slowly over dilute sulphuric acid.

Sugar Manufacture. Colloids in Cane and Beet Sugar Manufacture, H. S. Paine, M. S. Badollet and J. C. Keane. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1252-1258, 1 fig. Data involving following criteria and testing methods were obtained: dialysis, ultrafiltration, cata-

phoresis, gold number, surface tension; information was gained regarding approximate composition of various colloid fractions separated from different factory products.

Viscosity. Viscosity and Elasticity of Colloidal Solutions (Über die Zähigkeit und Elastizität kolloider Lösungen), H. Freundlich and E. Schalek. Zeit. für Physikalische Chemie, vol. 108, no. 3-4, Feb. 15, 1924, pp. 153-173, 7 figs. By assuming constant elasticity of flow, connection between magnitude of resistance and head of velocity of elastic liquids can be calculated.

COLOR

Systems. Objects of Color Systems (Ueber einige Aufgaben der Farbenlehre), J. von Kries. Zeit. für Technische Physik, vol. 5, no. 8, 1924, pp. 327-349, 1 fig. Discusses physical nature of light, light sensations, physical definition of visible colors, color systems, including Ostwald, heterochromous photometry brightness and intensity of light, etc.

COLUMNS

Buckling of. Calculation of Columns Under Buckling Load (Berechnung gegliederter Säulen, die auf Knickung beansprucht werden), F. Röpke. Praktische Maschinen-Konstrukteur, vol. 57, nos. 18, 19-20, and 22, May 20, June 4, and 17, 1924, pp. 245-247, 266-270, and 310, 30 figs. Develops fundamental equation of Euler's formula and shows by diagrams effect of transverse forms occurring; also gives examples of Tetmayer and Krohn formulas and their application.

Notes on Moments in Pillars Due to Deflection of Beams Monolithic Therewith, O. Faber. Concrete & Constructional Eng., vol. 19, no. 6, June 1924, pp. 342-349, 5 figs. Explains bending of pillars due to deflection of beams monolithic with them.

Distilling. See DISTILLATION, Columns.

Eccentric Loads. Eccentric Loads on Columns, T. H. Fallows. Concrete & Constr. Eng., vol. 19, no. 9, Sept. 1924, pp. 583-585, 3 figs. Gives quick and reasonably accurate method of determining point of zero stress experimentally, for case where load acts on axis of symmetry of section.

Nomographic Charts for. Nomographic Column Charts, J. S. Newell. U. S. Air Service Information Circular, vol. 5, no. 446, Mar. 1, 1924, 10 pp., 10 figs. Charts made to facilitate design of wood, steel, or duralumin columns.

Reinforced-Concrete. A Case of Compound Flexure (Un caso particular de flexión compuesta), S. Bobrovsky. Ingenieria, vol. 28, no. 9, Sept. 1924, pp. 394-398, 3 figs. Calculation of flexure and compression in columns as used for workshops fitted with cranes or traveling bridges.

Calculation of Reinforced-Concrete Columns of Rectangular Construction (Cálculo de columnas de hormigón armado y sección rectangular), C. Loehle. Ingeniería y Construcción, vol. 2, no. 18, June 1924, pp. 245-248, 10 figs. Details of new methods of calculation, and examples.

The Effect Upon Cost and Size—Using More Cement in Reinforced-Concrete Columns, J. T. Thompson. Concrete, vol. 25, no. 5, Nov. 1924, pp. 180-181, 4 figs. Gives curves demonstrating that considerable savings in both money and floor space can be effected by making reinforced-concrete columns of a richer concrete than is customarily used in building practice.

Shoring and Removing. Methods Used in Shoring and Removing Heavily Loaded Columns, K. Johnson. Am. Architect & Architectural Rev., vol. 125, no. 2444, Apr. 23, 1924, pp. 411-415, 10 figs. How this work was done in connection with expansion of Exchange Nat. Bank of Tulsa building, Okla.

COMBUSTION

[See also CARBON DIOXIDE and CARBON MONOXIDE.]

Control. Automatic Combustion Control, J. Fred Weller. Combustion, vol. 11, no. 4, Oct. 1924, pp. 295-297. Deals with essential elements to be controlled, namely, fuel supply in proportion to steam demands, air supply, removal of gases, and maintaining negative furnace pressure.

Combustion Control, E. G. Bailey. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 483-487, 5 figs. Discusses problems of control.

Combustion Control Based on CO_2 in Gas, G. E. Gaster. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 768-769, 2 figs. Variations in CO_2 operate rheostat controlling speed of fan motor.

The Evils of Close Regulation in Automatic Combustion Control, T. A. Peebles. Power, vol. 60, no. 1, July 1, 1924, pp. 13-14. Points out that close regulation is desirable from viewpoint of production or utilization; on other hand, it tends to introduce wear, hunting or surging, and other undesirable conditions; this is particularly true of combustion-control apparatus.

Use of Combustion Control Devices Increases, R. J. S. Pigott. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1199-1203, 4 figs. Three principles for controlling ratio of air to fuel; classification of commercial systems; connection of regulator to control valves; connection to dampers or rheostats; opportunities for central control.

Fuels. See FUELS, Combustion.

Gaseous. See GASES, Combustion.

Molar Calculation. The Molar Calculation of Combustion Processes with Use of Nomograms (Die molare Berechnung von Verbrennungsvorgängen unter Verwendung von Nomogrammen), W. Otte. Wärme, vol. 47, no. 2, Jan. 11, 1924, pp. 11-14, 5 figs. Advantages of molar calculation; formulas; use of nomograms in connection with molar calculation of combustion processes; examples.

Problems. Some Combustion Problems in Glass Making, C. D. Smith. Am. Ceramic Soc.—Jl., vol. 7, no. 8, Aug. 1924, pp. 603-613, 4 figs. Advocates use of producer-gas equipment of recognized merit, gas mains of ample size with adequate facilities for cleaning or burning out, valves large enough to take care of requirements and with minimum resistance to exit gases, etc.

Spontaneous. Spontaneous Combustion; Diffusion of Gases, Wm. Galloway. So. Wales Inst. Engrs.—Proc., vol. 40, no. 4, Oct. 9, 1924, pp. 299-316, and (discussion), no. 5, Nov. 13, 1924, pp. 338-342. Gives explanation for generation of heat and ignition of gas which takes place when mixture of lighting gas and air comes into contact with platinum sponge; it is suggested that initial rise in temperature of coal which is absorbing oxygen is due, at least in early stage of heating, to compression of that gas in manner described, and not to any appreciable extent to process of combustion.

COMMUTATION

Brush Voltage and Current Density. Brush Voltage and Current Density under the Carbon during Commutation (Die Bürstenspannung und Stromdichte unter der Kohle bei der Kommutation), H. Lutz. Elektrotechnische Zeit., vol. 45, no. 10, Mar. 6, 1924, pp. 183-185, 5 figs. As resistance under carbon in constant state is inversely proportional to effective current density, resistance corresponds to commutation; momentary

deviation from effective current density produces, however, an additional tension, which can cause sparking; therefore straight-line commutation is desirable.

Mathematical Analysis of. A New Method of Investigation of the Commutation in Electrical Machines (En ny vei for kommuteringsteoriens utvikling), K. Faye-Hansen. Teknisk Tidskrift, vol. 54, no. 31, Aug. 2, 1924, pp. 143-146, 6 figs. (Elektroteknik). Mathematical analysis of commutation and particularly of changes of electric current in short-circuited coil; consideration is given to occurring higher harmonics.

Theory. Improvement of the Theory of Commutation (Ein neuer Weg zum Ausbau der Kommutierungstheorie), L. Dreyfus. Archiv für Elektrotechnik, vol. 13, no. 5, Aug. 22, 1924, pp. 358-365, 6 figs. Also (discussion) pp. 348-355, 5 figs. Application of new commutation theory in practice; conditions for favorable commutation calculated from reversing field; etc. Reference to preceding part given in Eng. Index, 1923, p. 170.

COMMUTATORS

Angle Gage for. See GAGES, Sine-Bar.

Heating of. The Measurement of the Heating of Dynamo Commutators (Sur la mesure de l'échauffement des collecteurs de génératrices électriques), H. Robert, P. Vernotte and A. Jeufroy. Académie des Sciences—Comptes Rendus, vol. 179, no. 11, Sept. 15, 1924, pp. 525-527, 1 fig. Compares method used in commercial testing, employing thermometers, with measurements made with thermocouple of very fine wires; curves are given showing relation between readings and time for two machines of different outputs, one of which was run at full and at reduced load; there is no simple relation between readings, and it is clear that commercial tests may in some cases be very misleading.

Motor-Driven, Double. A Motor Driven Double Commutator, A. P. Carman. Optical Soc. of America & Rev. Sci. Instruments—Jl., vol. 9, no. 2, Aug. 1924, pp. 175-178, 3 figs. Device for charging and discharging two electrical condensers in unison and with uniform frequency.

Small, Manufacture of. The Manufacture of Small Commutators. Machy. (Lond.), vol. 24, no. 614, July 3, 1924, pp. 429-431, 9 figs. Series of operations in systematic assembly of commutators for fractional horsepower electric motors.

COMPASSES

Aircraft. The Compass in Aircraft. Conclusions from Development of Sea Compass in Theory and Practice (Der Kompass im Luftfahrzeug. Folgerungen aus der Entwicklung des Seekompasswesens nach Theorie und Praxis), H. Meldau. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, nos. 13-14 and 15-16, July 26 and Aug. 26, 1924, pp. 147-150 and 167-170, 3 figs. Discusses theory of deviation and its fundamental equations by Poisson, compensation, determination of coefficients, arrangement of needle, kinetic problem, function of compass in aviation. Includes discussion.

Autographic. See Nautograph.

Earth Inductor. The Pioneer Earth Inductor Compass. Aviation, vol. 16, no. 23, June 9, 1924, pp. 616-617, 5 figs. Instrument used by American world fliers in spanning Pacific from Alaska to Japan.

Geological Work. New Type of Compass for Geological and Topographical Work (Nuovo tipo di bussola per geologi e topografi), G. Merciai. Rassegna Mineraria Metallurgica e Chimica, vol. 60, no. 6, June 15, 1924, pp. 118-123, 4 figs. Instrument uniting all advantages of various compasses for geology and applicable to rapid topographical work; details of construction and operation.

Nautograph. The Baule Nautograph (Le Nautographe Baule). Nature (Paris), no. 2620, June 21, 1924, pp. 389-393, 5 figs. Describes new apparatus by Lieut. Baule which automatically and continuously traces course of a ship on a map.

Radio. Radio Compasses on Tankers. Min. & Oil Bul., vol. 10, no. 8, Aug. 1924, pp. 802-803 and 871, 3 figs. Determining ship's position, even during dense fog, is possible with new radio compass, which is being adopted by number of California oil companies for use on tankers.

COMPENSATORS. See ELECTRIC MEASURING INSTRUMENTS, A. C. Compensators.

COMPRESSED AIR

Apparatus, After-Coolers for. After-Coolers as a Means of Removing Moisture from Compressed Air, L. H. Geyer. Nat. Engr., vol. 28, no. 11, Nov. 1924, pp. 535-537, 3 figs. Functions of after-coolers and their relation to efficiency of compressed-air plant. Construction details and cooling water required.

Applications. Utilization of Compressed Air (Utilisation de l'air comprimé), P. E. Leroux. Arts et Métiers, vol. 77, nos. 42, 43, and 44, Mar., Apr., and May 1924, pp. 105-119, 135-157, and 174-185, 90 figs. Design, construction and operation of compressed-air shovels, tipples, conveyors, mine locomotives, etc.

See also CONSTRUCTION WORK, Pneumatic Equipment, Application of.

Coal Mines. Compressed Air Haulage in the Coal Mines of Western Canada, S. A. Williams. Can. Min. Jl., vol. 45, no. 31, Aug. 1, 1924, pp. 749-751, 4 figs. Details of compressed-air locomotives first at Coleman, Alberta, and other places, air compressors and pipe lines.

The Rhymney Valley Compressed-Air Installation, E. L. Hann. Instn. Min. Engrs.—Trans., vol. 67, part 5, Aug. 1924, pp. 442-456, 8 figs. Describes installation which serves group of 11 coal mines.

Construction Work. Field of Application of Compressed Air in Construction Work (Anwendungsgebiete der Druckluft in Baubetrieb), M. Hübler. Bauingenieur, vol. 5, no. 10, May 31, 1924, pp. 295-299. Discusses use of compressed air (1) for producing workroom free from water, (2) for driving machine tools, (3) for conveying materials of all kinds.

Cotton Mills. Compressed Air Has Many Uses in the Cotton Mill, B. R. Burnham. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, pp. 943-946, 10 figs. Illustrates some of varied ways in which engineering cunning has cheapened and increased production.

Foundry Equipment. Pneumatic Apparatus Speed Up Performance in the Foundry, S. G. Roberts. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 933-936, 13 figs. Discusses pneumatic equipment of Malleable Iron Fittings Co., Branford, Conn., including air-operated riddles, knock-out vibrators, jet cleaners and sprayers, etc.

Improved Practice. Possibilities of Improvement in Compressed-Air Practice (Verbesserungsmöglichkeiten im Druckluftbetriebe), A. Hinz. Glückauf, vol. 60, nos. 15 and 16, Apr. 12 and 19, 1924, pp. 279-284 and 304-308, 2 figs. After brief discussion of costs of compressed-air operation, author investigates whether economy can be increased through improvements of compressor and motors; no advantages are obtained from higher air pressure, as work with lower pressures is more economical; great advantages result from utilization of air expansion which is only possible with minimum water content of compressed air, due to danger of freezing.

Improvements. Improvements in Compressed-Air Practice (Neuerungen im Pressluftbetrieb). Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 230-233, 8 figs. Improvements in compressors of small and medium output constructed by Frankfurt Maschine-Building Corpn.; improvements in compressed-air piping, and in pneumatic tools.

Machinery. Air Machinery, A. Hinz. Mech. Eng., vol. 46, no. 7, July 1924, p. 417. Possibilities of improvements in compressed-air plant operation. Translated and abstracted from Glückauf, nos. 15 and 16, Apr. 12 and 19, 1924.

Measurement. A New Compressed-Air Measuring Method (Ein neues Druckluft-Messverfahren), E. Stach. Glückauf, vol. 60, no. 14, Apr. 5, 1924, pp. 260-262, 3 figs. New method and equipment for determining compressed-air consumption in relation to suction volume in a pipe line or a machine; pressure fluctuations are without influence on measurement results.

Meters. Compressed-Air Meters (Pressluftmesser), A. Grossmann. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 249-250, 4 figs. Comparisons between compressed-air meters with and without shock-absorbing air chamber; points to incorrect results obtained with meters when compressed-air tool is directly attached, and favorable results obtained by attachment of shock-absorbing air chamber.

Mine Installation. See COAL MINES, Compressed-Air Installation.

Piping for. See PIPING, Compressed-Air, Calculation of.

Pneumatic Mail Tubes. Progress in Pneumatic-Mail-Tube Technology (Fortschritte der Rohrpost-Technik), H. Schwaighofer. Schweizerische Bauzeitung, vol. 83, no. 5, Feb. 2, 1924, pp. 55-58, 4 figs. Describes principal improvements in municipal pneumatic mail tube of Munich, Germany, as example of modern technical development.

COMPRESSORS

Air. See AIR COMPRESSORS.

Ammonia. See AMMONIA COMPRESSORS.

Carbon Dioxide. See REFRIGERATING MACHINES, CO_2 Compressors.

CONCRETE

Admixtures in. Calcium Chloride as an Admixture in Concrete, Duff A. Abrams. Lewis Inst., Structural Materials Research Laboratory—Bul., no. 13, Nov. 1924, 57 pp. 16 figs. See also abstract in Contract Rec. & Eng. Rev., vol. 38, no. 33, Aug. 13, 1924, pp. 814-815. Results of investigations to determine effects of calcium chloride and other compounds on compressive strength of concrete. Bibliography.

Aggregates. Analysis of Grading Curve for Concrete Aggregates, L. I. Hewes. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 222-262, 2 figs. Mathematical study of size gradation of sand and stone to coördinate various measures of grading such as fineness modulus, surface area, and density ratio.

Chert Unfit for Coarse Aggregate in Concrete, F. V. Reagel. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 332-334, 1 fig. Origin of flints and cherts, distribution, occurrence and characteristics. Experiments and tests in Missouri highway work show chert causes decomposition in surface after freezing.

Concrete and Concrete Aggregates, R. N. Van Winkle. Pit & Quarry, vol. 9, no. 5, Dec. 1, 1924, pp. 81-84. Results of compression tests of concrete made with trap rock and soft limestone, two extremes in aggregates, and of tests to compare strength of gravel and stone concrete. Mixing of concrete.

Field Control of Concrete Aggregates in Concrete Highway Construction, R. W. Crum. Good Roads, vol. 66, no. 2, Feb. 1924, pp. 41-43 and 58, 4 figs. Standard practice in Iowa.

Grading Aggregates by Fineness Modulus Method, C. D. Willett. Eng. News-Rec., vol. 92, no. 24, June 12, 1924, pp. 1010-1011, 3 figs. Abrams theory supplemented by charts for three sizes of aggregates; scientific method of proportioning made easy.

See also SLAG, Blast-Furnace.

Alkali Action. Protection of Concrete Against Alkali, E. C. E. Lord. Pub. Roads, vol. 5, no. 3, May 1924, pp 23-25. See also Concrete Products, vol. 26, no. 6, June 1924, pp. 39-41. Water-gas and coal tars and paraffin treatments investigated. Progress report of two series of tests by U. S. Bur. of Pub. Roads.

Volume Change a Measure of Alkali Action, G. Miller. Pub. Roads, vol. 5, no. 4, June 1924, pp. 12-13 and 17, 3 figs. Effect on concrete measured by changes in length.

Blocks. See CONCRETE BLOCKS.

Broken-Stone, Permeability Tests. Permeability Tests on Broken Stone Concrete, M. O. Withey and C. A. Wiepking. Univ. of Wis.—Bul., no. 1245, Eng. Series, vol. 9, no. 2, 1923, 55 pp., 15 figs. Description of tests made in 1914 and 1915 and results obtained.

Calcium Chloride in. Use of Calcium Chloride in Concrete as a Protection Against Cold (Klorkalciums användning vid cement- och betongarbeten såsom skyddsmedel mot köld), R. V. Frost. Teknisk Tidskrift, vol. 54, nos. 4 and 8, Jan. 26 and Feb. 23, 1924, pp. 3-6, and 15-18 (Väg- och Vattenbyggnadskonst), 1 fig. Freezing temperatures for concrete with different percentages of calcium chloride are given, as well as tests of strength of various samples.

Cement Addition. The Addition of Cement as a Means of Increasing Concrete Workability, Duff A. Abrams. Contract Rec. & Eng. Rev., vol. 38, no. 39, Sept. 24, 1924, pp. 946-947, 1 fig. Experiments at Lewis Inst. lead to conclusion that it is more economical to obtain desired workability by means of cement than by use of other admixtures.

Cement Content. Determining the Cement Content of Concrete, H. F. Kriege. Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 892-893. Chemical method of analyzing concrete based on silica content; check results given.

Cement Methods. Mortar and Concrete, W. Fisher. Cornell Civ. Engr., vol. 32, no. 8, May 1924, pp. 103-106, 110 and 121, 3 figs. Deals with proper cement methods.

Construction. See CONCRETE CONSTRUCTION; CONCRETE CONSTRUCTION, REINFORCED.

Contraction and Swelling. Volumetric Changes, Strength and Impermeability of Concrete with the Use of Portland Cement and High-Grade Clay Cement (Ueber Volumenveränderungen, die Festigkeit und die Wasserdichtigkeit von Beton bei Verwendung von Portland-Zement und dem hochwertigen Tonerde-Zement), A. Hummel. Bauingenieur, vol. 5, no. 5, Mar. 15, 1924, pp. 110-116, 13 figs. Results of investigations of contraction and swelling of cement, cement mortar, and concrete.

Curing. Tests Show How Damp-Sand Curing Improves Quality of Concrete, F. D. Crook and H. Faulkner. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1050-1051, 4 figs. Effect of oil on pavements shown by tests on small blocks. Impermeability depends largely on method of curing.

See also Portland-Cement.

Efflorescence. Efflorescence or "Bloom." Concrete, vol. 25, no. 3, Sept. 1924, pp. 86-87. Its causes, prevention, and removal.

Elasticity. Experimental Investigations on the Coefficient of Elasticity of Concrete (Recherches expérimentales sur le coefficient d'élasticité du béton), G. Magnel. Revue Universelle des Mines, vol. 67, no. 1, Jan. 1, 1924, pp. 38-40, 2 figs. Results show that with concrete aged between 3 months and 1 year resistance is slightly increased and during same time coefficient of elasticity remains practically constant; permanent deformation under same load is much less with 1 year than with 3 months of aging.

The Modulus of Elasticity in Compression of Concrete, W. D. Womersley. Concrete & Constr. Eng., vol. 19, no. 9, Sept. 1924, pp. 553-556, 2 figs. Experiments to determine elastic constants of concrete.

Friction Tests. Friction Tests of Concrete on Various Subbases, A. T. Goldbeck. Public Roads, vol. 5, no. 5, July 1924, pp. 19-20 and 23, 1 fig. Discusses determination of frictional resistances as a step toward rational design of concrete pavement; describes specimens and method of tests; frictional resistance lowered by wet subbase.

Gypsum. See BUILDING MATERIALS, Structolite.

Hydrated Lime in. The Use of Hydrated Lime With Portland Cement, J. W. Ramsey. Architectural Forum, vol. 40, no. 3, Mar. 1924, pp. 125-128. Results of tests made on addition of hydrated lime to mortars and concrete. Hydrated lime for waterproofing.

Impure Mixing Waters. Does Impure Water Affect Concrete? D. A. Abrams. Contract Rec. & Eng. Rev., vol. 38, no. 24, June 11, 1924, pp. 599-600. Strength tests, using mixing water of a wide range of types, indicate that there is not the variation that might be expected. Is not a question of presence of impurities so much as of their amount. From Am. Concrete Inst.—Proc., vol. 20, 1924.

Impure Waters for Mixing Concrete. Concrete & Constructional Eng., vol. 19, no. 8, Aug. 1924, pp. 527-529. Conclusions from exhaustive tests on effect of using impure water for mixing concrete, undertaken by Prof. Duff Abrams, Lewis Inst., Chicago.

Impure Waters for Mixing Concrete, D. A. Abrams. Can. Engr., vol. 46, no. 25, June 17, 1924, pp. 617-618. Also Concrete, vol. 24, no. 6, June 1924, pp. 241-243. Description and results of tests of portland-cement concrete using mixing water of wide range of types, many of which were thought to be unsuitable; principal conclusions from tests.

Tests of Impure Waters for Mixing Concrete, Duff A. Abrams. Lewis Inst., Structural Matls. Research Laboratory.—Bul., no. 12, Sept. 1924, 44 pp., 7 figs. Strength tests on portland cement were made at ages of 3 days to 2 1/3 years using mixing waters of wide range of types, many of which were thought to be unsuitable for use in concrete; 68 samples of water were tested, including sea and alkali waters, bog waters, mine and mineral waters, waters containing sewage and industrial wastes, and solutions of common salt; tests of fresh waters (including distilled) were made for purpose of comparison.

Mixers. See CONCRETE MIXERS.

Mixing. See Impure Mixing Waters; Proportioning.

Moist Sands. The Bulking of Moist Sands, A. A. Levison. Public Roads, vol. 5, no. 5, July 1924, pp. 21-23, 5 figs. Effect of phenomenon on strength and yield of concrete.

Novocrete. Laboratory Tests on Novocrete. Eng. & Contracting (Buildings), vol. 62, no. 4, Oct. 22, 1924, pp. 896-898. A product composed of portland cement and specially treated, known in United States and Canada by name of "Novocrete" or "mineralized" sawdust, and in Europe as "Durocrete." Characteristics, uses, and results of different tests made.

"Mineralized Sawdust" Aggregate for Concrete. Concrete, vol. 25, no. 3, Sept. 1924, pp. 106-107. Data on a new kind of concrete called Novocrete, having mineralized sawdust as an aggregate, and results of different tests made with it.

Pavements. See PAVEMENTS, CONCRETE.

Portland-Cement. Portland Cement Concrete, W. E. Hart. Armour Engr., vol. 15, no. 3, Mar. 1924, pp. 95-96 and 110-111, 4 figs. Notes on old and newer practice in manufacture of concrete, placing concrete, and curing of concrete after placing.

Production Developments. Some Developments in Making Concrete. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 448-451. Abstracts of papers and committee reports read before Am. Concrete Inst. as follows: Principles of Design of Concrete Plant; Suggestions for Producing Better Concrete; Field Tests of Concrete, J. G. Ahlers and S. Walker; Economic Value of Admixtures in Concrete, J. C. Pearson and F. A. Hitchcock; Weighing Concrete Aggregates on Highway Pavements, R. W. Crum.

Products Manufacture. The Economical Manufacture of Quality Concrete Products, E. W. Dienhart. Concrete, vol. 24, no. 5, May 1924, pp. 182-188, 10 figs. Discusses factors which influence strength of concrete, viz., quality of aggregate, grading of aggregate, quantity of cement, quantity of mixing water, time of mixing, and curing. From paper presented at Wis. Concrete Products Assn. convention.

Proportioning. Concrete Methods on the C. C. C. & St. L. Ry., J. B. Hunley. Eng. & Contracting (Bldgs.), vol. 61, nos. 3 and 4, Mar. 26 and Apr. 23, 1924, pp. 681-691 and 871-879, 5 figs. Old and new practices, with especial reference to proportioning. Notes on designing concrete mixtures.

How the Big Four Proportions Concrete. Ry. Eng. & Maintenance, vol. 20, no. 10, Oct. 1924, pp. 387-392, 6 figs. Improved methods adopted by Big Four and applied on all concrete construction; instructions for designing concrete mixtures; specimen design of concrete mixture.

Mixing Concrete for Power Plant Use. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1013-1014, 1 fig. Many uses arise around power plant where concrete, properly made, affords excellent construction. Fundamental principles of good construction.

Research. How One Industry Concentrates Its Research, D. A. Abrams. Chem. & Met. Eng., vol. 31, no. 14, Oct. 6, 1924, pp. 539-542, 4 figs. Structural Materials Research Laboratory of Chicago is working out important facts about portland cement and concrete; 45,000 tests are being made annually; describes some experiments and investigations made.

Rubberized. British Experiments With Rubberized Concrete, W. H. Gordon. Cement & Eng. News, vol. 36, no. 1, Jan. 1924, pp. 47 and 49. Some uses. Combination might yield added resilience for flooring and road material; also lining cast-iron and steel water pipe with concrete layer.

Sand, Selection of. Sand and Gravel in the Pittsburgh District. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 2, Mar. 1924, pp. 56-92 and (discussion) 93-102. Contains following papers: Selection of Sand and Gravel for Concrete in the

Pittsburgh District, by C. M. Reppert; Production of River Sand and Gravel, A. W. Dann; Tests to Determine Suitability of Fine and Coarse Aggregate, P. J. Freeman; Concrete and Concrete Materials, J. J. Paine; Control and Records of Concrete Construction, J. D. Stevenson; Municipal Practice in Testing Sand and Gravel Proposed for Use in Concrete, F. W. Lyon.

Sea-Water Action. Concrete in Sea Water, A. G. Tapley. Eng. Jl., vol. 7, no. 11, Nov. 1924, pp. 663-672, 5 figs. Results of tests of specimens of concrete placed in St. John harbor.

Destruction of Concrete by Sea Water (Die Zerstörung von Beton durch Meerwasser), O. Gassner. Tonindustrie-Zeitung, vol. 48, nos. 43, 49, 52, and 54, May 28, June 18, 28, and July 5, 1924, pp. 467-470, 528-531, 569-573, and 591-593, 2 figs. Discusses composition and action of sea water; Michaelis' theory of detruction, viewpoints for and against it and interpretation of other theories of destruction and contradictory views held. Theory of current bacillus and evidence in support of it.

The Action of Sea Water on Concrete. Concrete & Constructional Eng., vol. 19, no. 4, Apr. 1924, pp. 249-256. Discusses the subject under following headings: Impermeability and density; proportioning and mix; quantity of water; forms, spading and tamping; curing; proper location and percentage of steel; avoidance of seepage or drainage action; effect of alternate action of air and water during setting; exterior protection of concrete; cement.

Specifications. Standard Specifications for Concrete and Reinforced Concrete. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 8, Oct. 1924, pp. 1163-1284, 30 figs. See also Am. Ry. Eng. Assn.—Bul., vol. 26, no. 269, Sept. 1924, pp. 15-85, 17 figs. Submitted by joint committee on standard specifications. General instructions; definitions; quality of concrete; materials; proportioning and mixing; depositing concrete; forms; details of construction; waterproofing and protective treatment; surface finish; design; includes tables on grading of fine and coarse aggregate, size and areas of reinforcement bars, proportions for and workability of concrete, and moments to be used in design of flat slabs. Mandatory and advisory appendices.

Steel Concrete. Steel Concrete as a Building Material ("Stahlbeton" als Baumaterial), A. Kleinlogel. Gas- u. Wasserfach, vol. 67, no. 33, Aug. 16, 1924, pp. 487-490, 7 figs. Discusses new kind of concrete yielding homogeneous iron-like mass of great density approaching composition of cast iron, known as "steel-concrete," and gives examples of its application.

Strength. Making Quality Products Economically, E. W. Dienhart. Cement & Eng. News, vol. 36, no. 2, Feb. 1924, pp. 32-36 and 54, 10 figs. Discussion of factors which influence strength of concrete.

Tests. Compression and Tensile Strength Tests of Concrete by Means of a Micro-comparator (Druck- und Zugversuche an Beton mit Mikrokomparator), K. Eisenmann. Bauingenieur, vol. 5, no. 17, Sept. 15, 1924, pp. 540-545, 5 figs. Discusses measurement of compression and tensile stresses on concrete beams mixed 1:4; variation of coefficient of elasticity; etc.

Test Concrete on Five Eastern Jobs. Am. Contractor, vol. 45, no. 26, June 28, 1924, pp. 26-28, 4 figs. Details of tests made as part of general investigation to establish means of introducing into job practice some of improvements in concrete making, and to determine practicability of securing desired strengths in field. Planned and carried out by Structural Mtls. Research Lab., Chicago.

Trass Addition. Evaluation and Use of Trass (Zur Bewertung und Verwendung des Trasses), H. Bach. Tonindustrie-Zeitung, vol. 48, nos. 68, 72, 75, and 94, Aug. 23, Sept. 6, 17, and Nov. 22, 1924, pp. 739-740, 782-783, 820-821, and 1103-1104. Discusses increased use of trass in concrete and mortar, elimination of ineffective ingredients, shorter form of testing than that of trass standards. Hydrate water content of trass and its effect on properties of trass; tests of lime-trass; sand mixtures; effect of trass addition to mortars.

CONCRETE BLOCKS

Hollow. See HOUSES, Concrete-Brick.

Shrinkage. Shrinkage Effect in Concrete and Reinforced-Concrete Bodies (Ueber Schwindwirkungen in Beton- und Eisenbetonkörpern), M. Koenen. Beton u. Eisen, vol. 23, no. 1, Jan. 5, 1924, pp. 1-6, 12 figs. Discusses hygroscopicity and shrinkage, shrinkage in concrete, reinforced concrete under load and without load, and stresses due to shrinkages.

CONCRETE CONSTRUCTION

Bulkheads. Concrete Sheetpile Levee Wall at New Orleans, W. M. Peters. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 257-258, 4 figs. Bulkhead of tongued and grooved piles jetted down and grouted, built by Illinois Central R. R. for about a mile along river front adjacent to its Stuyvesant Docks at New Orleans, La., avoids raising river levee and wharf.

Reducing the Cost of Concrete Bulkheads, T. Aston. Concrete, vol. 25, no. 1, July 1924, pp. 28-30, 5 figs. Develops hollow stepped-down concrete wall for use as bulkhead for wharves, retaining walls, and the like. Shows step wall system, as applied to dam walls, gives cheaper construction than standard types of dam walls

Coal Bunkers. See COAL STORAGE, Bins.

Coal Mines. See COAL MINES, Concrete Construction.

Cold Weather. See BUILDING CONSTRUCTION, Concrete, Cold-Weather; CONCRETING, Cold-Weather.

Expansion Joints. See JOINTS, Concrete Expansion.

Marine Structures. Shingle Beaches and the Wear of Concrete, J. S. Owens. Engineer, vol. 138, no. 3580, Aug. 8, 1924, pp. 157-158, 3 figs. Describes method for concrete structures erected on foreshore and exposed to grinding action of shingle or boulders, which has been used successfully and aim of which has been to provide for concrete a surface that would (1) resist abrasive action of shingle as much as possible consistent with limitations as to cost and (2) permit of easy renewal when worn.

Muscle Shoals Power Development. The World's Largest Concrete Job. Contract Rec. & Eng. Rev., vol. 38, no. 33, Aug. 13, 1924, pp. 810-812. Muscle Shoals power development in Alabama involves placing of 1,291,385 cu. yd. of concrete; unusually excellent results are being obtained.

Pouring. See BRIDGES, CONCRETE, Pouring Method.

Precast Monolithic System. More About the Nel-Stone Precast Monolithic System. Concrete Products, vol. 24, no. 3, Mar. 1924, pp. 45-46 and 55, 10 figs. Chief object of this construction system is to eliminate form work in monolithic concrete structures of all kinds, thereby materially reducing construction time and cutting cost nearly in half.

Swiss Alps. Handling Concrete Materials in the Swiss Alps, S. A. Nutter. Eng. News-Rec., vol. 92, no. 3, Jan. 17, 1924, pp. 102-105, 6 figs.

Mountainous conditions make ordinary methods impracticable; long cableways, incline and narrow-gage railways used to reach site of dam construction; movable-tower cableway.

Temperature Changes. Temperature Changes in Concrete Bodies due to Setting Temperature, Surrounding Temperature and Solar Heat (Temperaturänderungen in Betonkörpern infolge der Abbindewärme und unter dem Einfluss der Umgebungstemperatur und der Sonnenbestrahlung), W. Lydtin. Bauingenieur, vol. 5, nos. 23 and 24, Dec. 10 and 25, 1924, pp. 760-765 and 795-801, 12 figs. Extent and distribution of temperature changes in concrete construction; connection between drop in temperature after setting and shrinkage of concrete.

CONCRETE CONSTRUCTION, REINFORCED

Boiler Houses. Reconstruction of Boiler Houses Using Reinforced-Concrete Construction (Der Umbau von Kesselhäusern unter Verwendung von Eisenbetonkonstruktionen), E. Vögler and A. Konrad. Beton u. Eisen, vol. 23, no. 16, Aug. 20, 1924, pp. 209-213, 13 figs. Details of methods adopted at Mathias Stimes mine, underpinning, development of elastic joints, bunkers, etc.

Buildings. See BUILDING CONSTRUCTION, Reinforced-Concrete; BUILDINGS, Concrete.

Buildings, Restoration of. See CEMENT, Spraying.

Calculations. The Use of Polar Coördinate Systems for Technical Calculations (Polära koordinatsystems användning för beräkning av formelvärden), H. Faxén. Teknisk Tidskrift, vol. 54, no. 43, Oct. 25, 1924, pp. 116-118 (Väg- och Vattenbyggnadskonst), 5 figs. Describes system of polar coördinates particularly adapted for calculations of reinforced-concrete structures. A device is used, the polar calculator, consisting of two movable disks, upper one being transparent, logarithmic curves being drawn on each disk.

Chimneys. See CHIMNEYS.

Cinder Concrete Unit Test. Cinder Concrete Units Fire and Water Test. Concrete, vol. 24, no. 1, Jan. 1924, pp. 25-27, 4 figs. Abstract of report by A. H. Beyer of 3-hr. fire and water test made upon two partitions built of precast reinforced cinder concrete units erected by Non-Burnable Building Products Co., Inc., Yonkers, N. Y.

Cost Estimating. Estimating the Cost of Reinforced Concrete, C. F. Dingham. Contract Rec. & Eng. Rev., vol. 38, no. 1, Jan. 2, 1924, pp. 1-4. Practical data that will enable contractor to figure on forming, placing, reinforcing and finishing concrete walls, slabs, and columns.

Cross-Sections, Dimensioning. The Dimensioning of Rectangular Reinforced-Concrete Cross-Sections for Bending with Axial Force (Dimensionierung rechteckiger Eisenbetonquerschnitte für Biegung mit Achsialkraft unter Berücksichtigung des Minimums für $f_e + f'_e$), R. Jahn. Bauingenieur, vol. 5, no. 6, Mar. 31, 1924, pp. 137-141. Extension of the Ehler tables for excentrically compressed or drawn rectangular cross-sections.

The Dimensioning of Reinforced-Concrete Cross Sections (Beitrag zur Bemessung von Eisenbetonquerschnitten), R. Saliger. Bauingenieur, vol. 5, no. 7, Apr. 15, 1924, pp. 162-166, 2 figs. Method of calculation and its advantages.

Deformation under Elongation. Deformation of Reinforced Concrete under Elongation (Les déformations du béton armé soumis à l'extension), H. Lossier. Génie Civil, vol. 84, no. 19, May 10, 1924, pp. 445-447, 7 figs. Results of investigations made in France and other countries during recent years on large top-boom trusses and on bowstring arches.

Fire Resistance of. Reinforced Concrete and Fire-Resistance, J. Singleton-Green. Concrete & Constructional Eng., vol. 19, no. 3, Mar. 1924, pp. 156-161. Conclusions derived from previous articles, and additional data.

Formwork Design. Design of Formwork for Reinforced Concrete Construction, A. E. Wynn. Concrete & Constr. Eng., vol. 19, nos. 9, 10, 11, and 12, Sept., Oct., Nov., and Dec. 1924, pp. 568-573, 639-644, 717-731, and 788-794, 11 figs. Sept.: Form building in general. Oct.: Materials, loads, pressures and stresses. Nov.: Theoretical design of forms. Dec.: Design tables.

Gas Works. Concrete Piles for Gas Works Foundations, J. F. Springer. Gas Age-Rec., vol. 54, no. 12, Sept. 20, 1924, pp. 385-388 and 390, 5 figs. General discussion of concrete as construction material for gas-works purposes.

Grandstands. Building the Nebraska University Concrete Stadium. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 498-500, 6 figs. Plant layout and form design and construction for reinforced-concrete grandstands with cantilever balconies, for War Memorial stadium for Univ. of Nebraska, at Lincoln, Neb.

New Grandstand of Race Course at Bois de Vincennes, Near Paris (Les nouvelles tribunes du champ de courses du Bois de Vincennes, près Paris), Ch. Dantin. Génie Civil, vol. 85, no. 25, Dec. 20, 1924, pp. 565-567, 4 figs. Details of design and reinforced-concrete work for stand seating about 1500.

Placing Concrete in Grandstands and Stadia. Concrete, vol. 24, no. 4, Apr. 1924, pp. 159-163, 2 figs. Items for specifications with cost data.

Loading Tests. A Study of Loading Tests on Reinforced Concrete Structures, E. S. Andrews. Concrete & Constructional Eng., vol. 19, nos. 6 and 7, June and July 1924, pp. 369-375 and 443-449, 6 figs. Considers some of more prominent tests made by experimental engineers and studies their principal results in light of ordinary methods of design, explaining how results may be interpreted. June: A two-way hollow-tile floor. July: British tests on one-way hollow tile floors

Marine Shelters. Ferro-Concrete Marine Shelter, J. C. Pardoe. Ferro-Concrete, vol. 16, no. 1, July 1924, pp. 2-7, 4 figs. At Barry Island, an English sea resort; covers area of 200 ft. by 75 ft. and is 24 ft. high; is of Mouchel-Hennebique ferro-concrete throughout.

Mines. Recent Reinforced Concrete Construction Work for Conveying and Working Coal (Neuere Ausführungen in Eisenbeton für Kohlenförderung und -verarbeitung), F. Baumstark. Bauingenieur, vol. 5, no. 17, Sept. 15, 1924, pp. 527-538, 14 figs. Discusses construction work underground, increased elasticity of reinforced-concrete construction, towers for coking coal, safety structures against subsidence in mining districts, etc.

Office-Building Substructures. Construction Methods and Plant for Substructure of Barclay-Vesey Building, New York, F. W. Skinner. Concrete, vol. 25, no. 1, July 1924, pp. 19-22, 4 figs. Barclay-Vesey St. office building being constructed for New York Telephone Co. will have height of 434 ft. above curb and will extend 4 stories or 63 ft. below curb to lowest of its 33 floors; all four sides of lot are completely enclosed by 22 long, narrow, pneumatic caissons of reinforced concrete, like row of bricks on edge, separately sunk end to end and afterward connected by watertight joints to make continuous foundation wall extending down into solid rock.

Precast. Pre-Cast Concrete Used in Engine Terminal. Ry Age, vol. 77, no. 23, Dec. 6, 1924, pp. 1025-1027, 6 figs. Western Pacific builds

two structures of this type of construction at Stockton, Cal.

Railway Structures. Crack and Rust Formations in Reinforced-Concrete Railway Structures (Riss- und Rostbildungen bei Eisenbetonbauten der Eisenbahn), W. Petry. Bauingenieur, vol. 5, nos. 7 and 8, Apr. 15 and 30, 1924, pp. 167-171 and 229-233, 5 figs. Investigations of their causes and means of preventing them. Decree of German State Traffic Minister, Oct. 10, 1922.

Reinforcement Embedment. Should Reinforcement Embedment Vary with Size of Bar? A. S. Woodle, Jr. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1092-1093, 1 fig. Examination into stresses set up by temperature changes in surface areas of reinforced concrete.

Reinforcing Bars. Comparative Tests of New Billet Steel and Rerolled Steel Reinforcing Bars, J. B. Kommers. Univ. of Wis., Eng. Experiment Station—Bul., vol. 9, no. 3, 1924, 32 pp., 6 figs. Details of tests and results obtained.

Slabs. Calculation of Reinforced-Concrete Slabs (Nota sobre el cálculo de forjados de hormigón armado), F. F. Alverez. Revista de Obras Públicas, vol. 72, no. 2418, Dec. 1, 1924, pp. 420-422, 2 figs. Details of simple method for calculating slabs fixed at both ends and under uniform load.

Deformations and Stresses of Continuous Plates (Die Formänderungen und die Spannungen von durchlaufenden Platten), A. Nádai. Bauingenieur, vol. 5, no. 5, Mar. 15, 1924, pp. 102-107, 5 figs. Calculation of deformation and stress in slabs which have individual loads at regularly arranged points.

Graphic Determination of the Neutral Axis of Reinforced-Concrete Slabs Under Simple Bending Load (Détermination graphique de l'axe neutre des dalles en béton armé sollicitées à la flexion simple), R. de Diesbach. Annales de l'Energie, vol. 4, nos. 3 and 4, May-June and July-Aug. 1924, pp. 81-85 and 127-130, 5 figs. Discusses slabs of rectangular cross section and describes simple method of calculation by E. Heirmann. Examples of application.

Reinforced-Concrete Slabs (Dalles en béton armé), A. Volet. Bulletin Technique de la Suisse Romande, vol. 50, no. 14, July 5, 1924, pp. 173-176, 3 figs. Explains use of charts giving cross sections of steel and concrete for simple determination, taking into consideration weight of slabs.

Reinforced-Concrete Slabs Under Simple Flexure (Etude de l'économie des pièces simplement fléchies en béton armé), F. Campus. Revue Universelle des Mines, vol. 4, nos. 5 and 6, Dec. 1 and 15, 1924, pp. 242-261 and 315-339, 9 figs. Discusses most economic dimensions that will also satisfy conditions of security; develops formulas and makes calculations, including simple flexure of rectangular slabs, girders, slab covering, most economic profiles, etc.; examples of application.

Simplified Calculation of Flexible Slabs (Die vereinfachte Berechnung biegsamer Platten), H. Markus. Bauingenieur, vol. 5, nos. 20 and 21, Oct. 25 and Nov. 10, 1924, pp. 660-666 and 702-711, 20 figs. Discusses calculation of ceilings, reinforcement, etc. Describes new method of approximation and gives examples to show its accuracy. Deals with slabs supported on 1, 2 or 3 sides and fixed on 3, 2 and 1, continuous slabs, etc.

Stairway Steps. Calculation of Reinforced-Concrete Stairway Steps (Berechnung eisenbewehrter Betonwerksteinstufen), H. Friesecke. Tonindustrie-Zeitung, vol. 48, no. 33, Apr. 23, 1924, pp. 344-346, 7 figs., partly on pp. 347 and 348. Occurring stresses are computed for different methods of support of steps and for different incline of stairs. Diagrams for solution of problems, involving use of such steps.

Stress Calculation. Shortcuts for Solving Problems in Concrete Design, R. P. V. Marquardsen. Eng. & Contracting (Buildings), vol. 61, no. 2, Feb. 27, 1924, pp. 440-446, 7 figs. Presents shortcut for investigating an existing structure of rectangular cross-section subject to combined axial and bending stress; i.e., a method by which, given cross-section of structure and magnitude and position of resultant of all outside forces acting on section, existing unit stresses in concrete and steel reinforcement may be found readily.

Tanks. See TANKS, Reinforced-Concrete.

Warehouse. Warehouse of a Shipping Firm in Düsseldorf, Germany (Lagerhaus der Speditionsfirma Hugo Daniels G.m.b.H. u. Co., Düsseldorf), F. Lange and J. Strub. Beton u. Eisen, vol. 23, no. 5, Mar. 5, 1924, pp. 50-51, 4 figs. Construction details of 4-story building whose supporting parts are built entirely of reinforced concrete, with flat-slab foundation construction.

Winter Construction. Reminiscences of Winter Construction in British Columbia, A. M. Bouillon. Eng. News-Rec., vol. 93, no. 26, Dec. 25, 1924, pp. 1030-1032, 6 figs. Many bridge piers and other concrete structures on Grand Truck Pac. Ry. constructed in sub-zero weather, often at reduced cost.

Wood-Alcohol Plant. Wood Alcohol Works in Reinforced Concrete of the Trickzellstoff Co. in Kehl (Der Neubau eines Spritwerks in Eisenbeton der Trickzellstoff G.m.b.H. in Kehl a. Rh.), R. Eisenlohr. Beton u. Eisen, vol. 23, no. 14, July 20, 1924, pp. 181-182, 5 figs. Wood alcohol is produced from cellulose waste lye by fermentation and subsequent distillation; design and construction of buildings.

CONCRETE MIXERS

Gravity. Gravity Material Supply Cuts Handling Costs. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 420-422, 4 figs. Describes concrete mixing plant employed for track elevation work on Pennsylvania R. R. at Cleveland, Ohio. Located, of necessity, in a restricted place, it required special layout. It is a one-yard mixing plant and delivers 400 cu. yd. in a 10-hr. day.

Standards for. Concrete Mixer Standards Are Revised. Concrete Rec. & Eng. Rev., vol. 38, no. 24, June 11, 1924, pp. 606-608. Regulations adopted at a joint meeting of representatives of concrete mixer manufacturers and Associated General Contractors of America.

CONCRETE, REINFORCED

Alignment Charts for. See ALIGNMENT CHARTS, Reinforced Concrete.

Beams. See BEAMS, Reinforced-Concrete.

Stresses in Circular Members. Determination of Bending and Shearing Stresses in Circular Reinforced Concrete Members, B. Wallach. Commonwealth Engr., vol. 12, no. 3, Oct. 1, 1924, pp. 89-93, 3 figs. Determination of stresses due to bending and shear in both hollow and solid circular sections when combined direct and bending stresses produce tension in section, exceeding allowable tensile stress in concrete.

CONCRETING

Cold-Weather. Building Concrete Structures in Winter. Can. Engr., vol. 46, no. 4, Jan. 22, 1924, pp. 169-172, 12 figs. Fundamentals of cold-weather concreting; describes methods employed, including heating materials, protection while hardening, protective coverings for concrete, etc. From Bul. of Portland Cement Assn.

Concreting in Freezing Weather, E. F. Rockwood. Architectural Forum, vol. 40, no. 1, Jan. 1924, pp. 41-42, 1 fig. Effects of cold weather

on concrete and suggestions for concreting in cold weather.

Practical Rules for Concreting in Cold Weather. Contract Rec., vol. 38, no. 47, Nov. 19, 1924, pp. 1141-1146, 12 figs. Principle is to supply enough heat and moisture to keep chemical action progressing. Practical rules for cold weather work. Use of tarpaulins.

Report on Placing Concrete in Winter. Ry. Rev., vol. 75, no. 17, Oct. 25, 1924, pp. 625-629. Feasibility, economy, and desirability of winter concrete work and approved methods of such construction. (Abstract.) Report of committee before Am. Ry. Bridge & Bldg. Assn.

The Economy of Winter Concrete Work. Contractors' & Engrs. Monthly, vol. 7, no. 6, Dec. 1923, pp. 53-55. Much time saved, but great caution must be taken in winter building with concrete. Proper procedure.

See also HYDROELECTRIC PLANTS, Winter Reconstruction.

Towers for. See CONVEYORS, Building-Construction.

CONDENSERS, AMMONIA. See AMMONIA CONDENSERS.

CONDENSERS, ELECTRIC

Capacities. Note on the Capacities of Small Air Condensers, L. Hartshorn. Jl. Sci. Instruments, vol. 1, no. 10, July 1924, pp. 305-309, 3 figs. Considers most general case of a condenser, i.e., any two conductors in a dielectric medium. Also considers case of a condenser carrying alternating current; points out desirability of making effective capacity depend on geometry of system and nature of dielectric only, and deduces conditions necessary; importance of these considerations in case of shielded air condensers.

Defects. The Imperfections of Condensers (Les imperfections des condensateurs), J. Granier. Revue Générale de l'Electricité, vol. 15, no. 4, Jan. 26, 1924, pp. 125-132, 3 figs. General study of poor insulating materials for direct and alternating current; discusses methods employed for determination of losses or of viscosity; attributes viscosity to electrolytic impurities, and gives physical interpretation of mathematical laws which are based on experience.

Grid-Leak Circuit. An Investigation of the Grid Leak Circuit, N. Wells. Elec. Rev., vol. 95, no. 2451, Nov. 14, 1924, pp. 751-752, 2 figs. Describes internal working of grid-leak circuit and shows fallacy of considering resistance simply as leak to condenser.

Insulating Materials and. Insulating Materials and Condensers (Isolants et condensateurs), J. Lahousse. Revue Générale de l'Electricité, vol. 15, nos. 15 and 16, Apr. 12 and 19, 1924, pp. 621-627 and 667-674, 4 figs. Review of results obtained by investigators of dielectrics, which are used to develop diagram of an insulating material; study of how to carry out calculation of condenser, with given power factor of insulating material in function of temperature.

Oscillations, Overdamped. Overdamped Condenser Oscillations, Chas. P. Steinmetz. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 424-428, 9 figs. Shows effect of condenser leakage on discharge wave.

Power Loss with Liquid Dielectrics. The Power Loss in Condensers with Liquid Dielectrics, L. S. McDowell. Physical Rev., vol. 23, no. 4, Apr. 1924, pp. 507-517, 5 figs. Power loss in condensers with liquid dielectrics; variation of equivalent series resistance and capacity with frequency, 600 to 3500 cycles.

Radiotelegraphic. Condensers in Radiotelegraphy (Les condensateurs en T. S. F.). Electricien, vol. 55, no. 1357, Oct. 1, 1924, pp. 439-442, 6 figs. Calculation; series and parallel grouping; testing by ballistic and by Kelvin methods.

Static. Recent Advances in the Design, Manufacturing and Testing of Static Condensers in Power Sizes, R. E. Marbury. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 114-118, 10 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1180-1186, 3 figs. Describes static condensers designed with insulation factors of safety such as have proved dependable in other apparatus for years.

Static Condensers in Series with the Stator Winding of Squirrel-Cage Induction Motors, T. F. Wall. World Power, vol. 1, no. 2, Feb. 1924, pp. 100-105, 10 figs. Study of effects of introducing static condensers in series with stator winding of squirrel-cage induction motor.

The Use of Static Condensers in Series with Stator Windings of Squirrel-Cage Induction Motors (L'emploi des condensateurs statiques en série avec les enroulements statoriques des moteurs d'induction à cage d'écureuil). Industrie Electrique, vol. 33, no. 765, May 10, 1924, pp. 169-173, 9 figs. Notes on improvement of power factor.

Static vs. Synchronous. Selection of Corrective Equipment, M. A. Hyde. Elec World, vol. 83, no. 10, Mar. 8, 1924, pp. 472-474, 4 figs. Choosing static or synchronous condensers on economic basis; comparisons as to cost, weight, volume, and operation; graphical solutions to corrective problem.

CONDENSERS, STEAM

Air Cooling, Effect on. How External Air Cooling Increases the Effectiveness of Condenser-Tube Surface, P. Bancel. Power, vol. 59, no. 20, May 13, 1924, pp. 769-771, 4 figs. Points out that two distinct processes ordinarily occur inside of surface condensers, namely, steam condensing, which goes on at high rate of heat transfer, and devaporizing air-steam mixture, which is carried out at very low rate of heat transfer; when air coolers are provided outside of condenser to handle latter process, condenser tubes may operate at much higher efficiency.

Air Pumps for. See AIR PUMPS, Water vs. Steam-Jet.

Auxiliaries. Some Condenser Auxiliaries. Power Engr., vol. 19, no. 224, Nov. 1924, pp. 424-426, 4 figs. Describes developments of apparatus for modern conditions.

Barometric, Testing. Testing Steam Turbine and Barometric Condenser, F. S. Youtsey. Power, vol. 59, no. 25, June 17, 1924, pp. 979-980, 2 figs. Method employed in testing condenser serving mixed-pressure steam turbo-generator.

Barometric, Vacuum-Pump Capacity. Calculating the Amount of Air Liberated in Barometric Condensers, C. M. Reed. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 370-372, 4 figs. Air enters with cooling water, steam and by leakage, which may be easily calculated from charts.

Condensate, Reuse of. Practical Experience in the Field of Returning the Water of Condensation (Praktische Erfahrungen auf dem Gebiete der Kondensatrückführung), R. Schulze. Wärme, vol. 47, no. 21, May 23, 1924, pp. 235-239, 7 figs. Discusses importance of feeding back condensate, faulty construction, advantage of collecting condensate under pressure, automatic condensate return.

Defects. Condenser Troubles. Mar. Engr. & Nav. Architect, vol. 47, no. 556, Jan. 1924, pp. 31-32, 4 figs. Consideration of defects common in condensers, and effect of application of metallic packing.

CONDENSERS, STEAM

Design. The Principles of Condenser Design, D. G. McNair. Power Engr., vol. 19, no. 221, Aug. 1924, pp. 304-307, 2 figs. General survey of three main types, showing how their leading dimensions may be roughly determined.

See also Surface.

Ejector-Air. Ejector-Air Condenser (L'Ejecteur-Air Condenseur), Génie Civil, vol. 84, no. 10, Mar. 8, 1924, pp. 234-235, 6 figs. Describes apparatus and principle upon which it is based; output depends solely upon speed of steam transmission in appartus, and is expressed in function of ratio of weight of steam to cross-section of ejector inlet.

Evaporative. The Evaporative Condenser, N. E. Webster. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 192-198, 3 figs. Description of conditions for which this type of condenser seems peculiarly suitable.

Isolated Plants. Condensing Equipment for Isolated Plants, C. L. Hubbard. Nat. Engr., vol. 28, no. 4, Apr. 1924, pp. 161-162. Applications of condensers in isolated plants; types of condensers suitable for this service and calculations involved in determining capacity and water requirements.

Jet. Jet Condenser Performance, Geo. E. Gaster. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1089-1092, 3 figs. Detailed discussion of various factors affecting operation.

Operation. Condensing Equipment. Nat. Elec. Light Assn., Serial Report of Prime Movers Committee, Sept. 1924, 60 pp., 76 figs. Operating results with jet condensers of different sizes, giving tests with various arrangements; analysis to show effect of varying amount of injection water; and suggested methods for determining economical quantities. Spray pond design and operation; surface condenser operation; air pumps; improvements in condensing performance effected by Laning; detection of condenser leakage; effect of heat transfer of various methods of cleaning condenser tubes; etc. Manufacturers' statements. Bibliography.

See also Surface.

Performance of, Checking. Condenser Performance, J. Bruce. Elec. Rev., vol. 94, no. 2410, Feb. 1, 1924, pp. 164-166, 6 figs. Describes simple and easily applicable methods for checking condenser performance of generating set in few moments, and also system whereby continuous tabulated and graphical record of such performance can be recorded from day to day, showing behavior of plant at glance.

Pumps, Cooling-Water. Economical Operation of Condenser Pumps, Chas. E. Colborn. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 643-645, 4 figs. Study of conditions governing use of one or two circulating pumps with changes in cooling-water temperatures.

Single- vs. Double-Pass. Single-Pass Condensers Require Less Pumping Power Than Double-Pass, P. Bancel. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 371-372, 2 figs. Neglecting external head, a single-pass condenser requires about one-eighth pumping power for same amount of cooling water as with a double-pass unit. Discusses resistance of external piping and rearrangement of condenser design, so as to utilize single flow to best advantage.

Steam-Turbine. See STEAM TURBINES, Design.

Surface. A New Type of Surface Condensers (Eine neue Bauart von Oberflächenkondensatoren), L. Heuser. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 43, Oct. 25, 1924, pp. 1121-1124, 5 figs. Discusses deleterious influence of condensate and air on cooling effect, and describes new design known as Ginabat condenser which avoids these difficulties; experimental results prove efficiency of new design.

A Very Large Condenser. Engineer, vol 137, no. 3552, Jan. 25, 1924, pp. 100-101, 6 figs. Condenser is one of two to be used in connection with two 30,000-kw. turbo-generator units being installed in large hydraulic-power station; is of contraflo type, 19 ft. 5 in. long between tube plates, and has internal diam. of 13 ft.

Efficient Operation of Surface Condensing Plant. Elec. Times, vol. 65, no. 1685, Jan. 31, 1924, pp. 117-119, 1 fig. Suggestions in regard to efficient operation; chart for determination of partial pressure of air under varying conditions of vapor temperature and absolute pressure.

Proportioning Water-Works Surface Condensers, W. R. Freeman. Power, vol. 60, no. 14, Sept. 30, 1924, pp. 529-531, 3 figs. Formulas and curves that may be used to advantage in proportioning of water-works condenser with typical examples to demonstrate their use.

Steam Used by Surface Condenser Auxiliaries, J .D. Morgan. Power Plant Eng., vol. 28, no. 22, Nov. 15, 1924, pp. 1135-1136, 3 figs. Higher vacuum is accompanied by greater power demand for driving auxiliaries; auxiliary steam consumption of surface-condensing plants.

Surface Condenser Operation, C. S. Tomlinson. Elec. Light & Power, vol. 2, no. 3, Mar. 1914, pp. 13-14, 60 and 62, 2 figs. Gives two formulas which can be used in studying condenser operation and shows how to apply them.

Surface Condensers (Note sur les condenseurs par surface). Bul. Technique du Bureau Veritas, vol. 6, no. 7, July 1924, pp. 131-133, 5 figs. Details of an improved surface condenser and tests carried out showing saving of steam of 4.5 per cent.

Surface Condensers and Auxiliaries, J. P. Likiak. So. Engr., vol. 41, no. 5, July 1924, pp. 51-55, 11 figs. Size limit, arrangement of passes, method of tube packing, and methods of cleaning tubes.

Surface Condensing Plant Operation. Power Engr., vol. 19, no. 225, Dec. 1924, p. 465. Method of analyzing operation of surface condensers.

Tendencies in Surface Condenser Practice. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 530-533, 4 figs. Points out that elimination of dead tube space, multiple air-suction openings, and variable water supply are important factors in condenser design and application.

Transmission of Heat in Surface Condensers According to Nusselt's Theory (La trasmissione del calore nei condensatori a superficie secondo la teoria del Nusselt), M. Medici. Industria, vol. 38, nos. 2, 4, and 6, Jan. 31, Feb. 29, and Mar. 31, 1924, pp. 40-43, 100-103, and 163-165, 4 figs. Extended mathematical treatment of subject.

Test Code. Test Code for Condensing Apparatus. Mech. Eng., vol. 46, no. 5, May 1924, pp. 291-296. Preliminary draft of additional code in series of nineteen being formulated by A. S. M. E. Committee on Power Test Codes.

Tubes. Chlorine Keeps Condenser Tubes Clean, C. H. S. Tupholme. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, p. 1055, 1 fig. Process and apparatus, known as Chloronome, for continuous and automatic treatment of cooling water with measured trace of chlorine gas to prevent fouling of condenser tubes and other cooling surfaces with deposits of living organisms.

Condenser Tubes Pulled in Record Time. Power, vol. 59, no. 26, June 24, 1924, pp. 1032-1033, 5 figs. Special devices facilitate removal of 6000

plugs and 9000 tubes from large surface condenser.

Corrosion of Condenser Tubes, Johnstone Taylor. Mar. Eng. & Shipg. Age, vol. 29, no. 2, Feb. 1924, pp. 108-109. Recent investigations prove entrapped air to be cause of raid corrosion.

Manufacture of Condenser Tubes, W. R. Webster. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 871-872. How non-ferrous castings of hollow cylinders are transformed into tubes. Composition and heat treatment. Abstract of paper read before Metropolitan Sec. of A. S. M. E.

The Metallography and Properties of Condenser Tubing, C. Blazey. Commonwealth Engr., vol. 11, no. 12, July 1, 1924, pp. 461-469, 20 figs. Discusses metallography, mechanical and other properties, and general considerations.

See also Surface.

Tubes, Packing for. Condenser-Tube Packing. Steamship, vol. 36, no. 423, Sept. 1924, pp. 88-91, 10 figs. Shows underlying causes and points out way to satisfactory and economical solution of problem; discusses condenser-tube disintegration, deformation, damage, life of condenser packing, and condenser ferrules.

Types. The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 3, Mar. 1924, pp. 312-316 and 366, 19 figs. Condensers and condenser equipment.

Unit Heat-Transfer Determination. Condenser Unit Heat Transfer Obtained from Chart, H. O. Michael. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 488-489, 1 fig. Gives chart with which operating engineer may very quickly learn condition of condenser, and explains its use. Based on general principle that all central stations and other well-regulated plants maintain a fairly constant steam pressure and temperature; because of this, B.t.u. rejected to condensers per lb. of steam is nearly constant, varying slightly with vacuum.

Vacuum. Methods Employed for Holding the Vacuum in Condensers in Marine Steam Engines (Note sui mezzi impiegati per mantenere il vuoto nei condensatori nelle macchine a vapore marine). Rivista Marittima, vol. 57, no. 10, Oct. 1924, pp. 35-53, 7 figs. Discusses theory of condensers and practical application of air ejectors, with recent examples.

Stoppages and Defects in Condensing Plants (Störungen und Mängel an Kondensationsanlagen). Hanomag-Nachrichten, vol. 11, no. 129-130, July-Aug. 1924, pp. 121-125, 2 figs. Discusses maintenance of vacuum, and causes leading to trouble; importance of condensing plant in steam-engine operation.

CONDUITS

Backwater and Drop-Down Curves. New Method of Computing Backwater and Drop-Down Curves, A. G. Husted. Eng. News-Rec., vol. 92, no. 17, Apr. 24, 1924, pp. 719-722, 4 figs. Modification of channel subdivision method with elimination of trial calculations; applicable to canals, sewers, etc., under uniform hydraulic conditions.

Concrete. Concrete Conduit Gaining Favor. Cement & Eng. News, vol. 36, no. 7, July 1924, pp. 33-34 and 40, 4 figs. Electrical engineers find "stone" product has many advantages over other materials in underground wiring systems.

Concrete Drain in Creek Bed. Richmond (Va.) Puts Shockoe Creek into a Concrete Conduit, A. J. Saville. Eng. News-Rec., vol. 93, no 23, Dec. 4, 1924, pp. 900-902, 4 figs. Methods and costs of constructing concrete drain in bed of creek carrying water and contracted by bridges.

Economic Design. A Method for the Economic Design of Penstocks, H. L. Doolittle. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 785-792, 13 figs. Presents original, simple graphic method for economic design; given certain flow of water, length of piping, and profile of penstock, curves can be rapidly drawn for pipes of varying diameter which indicate frictional loss and its value in dollars. Paper is accompanied by discussion, by R. L. Daugherty, in which algebraic solution of problem is presented.

Electrical, Concrete-Pipe. Concrete Pipe Electrical Conduits. Concrete, vol. 25, no. 1, July 1924, pp. 32-34, 4 figs. Method of installation, essential qualities of duct material, comparison of various materials, advantages of using concrete conduit, and extensive use of concrete conduit.

Hetch Hetchy Project, San Francisco. Building Moccasin Creek Penstock, Hetch Hetchy Project. Eng. News-Rec., vol. 93, no. 22, Nov. 27, 1924, pp. 858-860, 6 figs. Joints in welded pipe 15/16 in. thick "laid up" to clearances under 0.007 in. before riveting is done; derrick for placing pipe sections slides up on pipe already laid.

Installation. Underground Construction, T. C. Ruhling. Serial article in Elec. Light & Power, vol. 2, beginning Feb. and ending Dec. 1924, 80 figs. Practical treatise on methods and costs of typical underground conduit installations.

Medieval Construction. The "Chimney" or "Devil's" Conduit of the Grey Friars Monastery. Engineer, vol. 138, no. 3598, Dec. 12, 1924, pp. 658-660, 8 figs. Notes on old conduits in Bloomsbury and Pentonville and illustrations and descriptions of medieval conduits and reservoir, built in 13th century.

New York City Pipe Lines. Additional City Pipe Conduits of the Catskill Aqueduct, W. E. Spear. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, pp. 838-841, 6 figs. Large steel pipe lines on land in Brooklyn, Queens, and Richmond boroughs and cast-iron submarine pipe line beneath narrows of New York harbor; design, coating, and construction.

Penstocks. Penstock Manifolds Designed to Simplify Stresses, H. L. Doolittle and C. W. Larner. Eng. News-Rec., vol. 92, no. 24, June 12, 1924, pp. 1006-1008, 7 figs. Describes unusual penstock manifolds of radically different types installed at two of new power plants, one at Big Creek, no. 3 plant of S. Cal. Edison Co., and other in Vermont at Davis Bridge plant of N. E. Power Co.; both designed to eliminate as many indeterminate stresses as possible.

See also Economic Design; Pressure.

Pressure. Gallery of the Teigitsch Power Plant (Der Stollen des Teigitschkraftwerkes), J. Ornig. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 45-46, Nov. 14, 1924, pp. 385-391, 9 figs. Details of construction work on a pressure conduit 5357 m. in length. Geology, profile, triangulation, method of driving gallery, concreting and lining, and tests on sections and results.

Pressure-Conduit Tests of the Swiss Federal Railway (Kurzer Bericht über die Druckstollen-Versuche der S. B. B.), A. Schrafl. Schweizerische Bauzeitung, vol. 83, nos. 1 and 3, Jan. 5 and 19, 1924, pp. 7-10 and 27-30, 11 figs. Account of work of investigation to determine causes of failure of Ritom tunnel and expert testimony on other tunnels of Swiss Federal Ry.

Recent Examples of Reinforced-Concrete Pressure Conduits for Hydroelectric Plants (Neuere Ausführungen von Eisenbetondruckrohrleitungen für Wasserkraftanlagen), K. Bechtel. Bauingenieur, vol. 5, no. 7, Apr. 15, 1924, pp. 199-206, 18 figs. Describes installations made by German firm.

The Pipe Lines of the Moncenisio Hydro-electric Plant, S. L. R. Hollis. Engineer, vol. 137, no. 3573, June 20, 1924, pp. 692-694, 6 figs. Survey with regard to certain essential factors concerning pipe lines of Italian hydroelectric plant which operates under highest heat developed upon extensive scale in world; details of exacting and novel nature of official tests demanded by Italian Government in connection with plant.

CONNECTING RODS

Automobile Engine, Machining. See AUTOMOBILE ENGINES, Machining Parts.

Locomotive, Repair of. Repairing Locomotive Main and Side Rods, Chas. F. Henry. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 731-732, 10 figs. Detailed information concerning methods in use on Santa Fé system for reclaiming broken and worn connecting rods to fit them for further service.

Machining. Hollow Connecting Rods in the Making, F. H. Colvin. Am. Mach., vol. 60, nos. 9 and 10, Feb. 28 and Mar. 6, 1924, pp. 311-313 and 351-352, 16 figs. Feb. 28: Operations on connecting rods for Wright airplane engines; fixtures and methods for securing light weight, accuracy and ample strength. Mar. 6: Construction of inner rod and methods by which it is machined.

Milling Automobile Truck Connecting-rods, Chas. O. Herb. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 276-278, 6 figs. Complete tooling for milling operations on connecting rods for Mack trucks, designed and made by Cincinnati Milling Machine Co.

Roller Bearings for. See BEARINGS, ROLLER, Connecting Rods.

CONSTRUCTION WORK

Day-Labor Construction. Day Labor Construction Does Not Pay, A. S. Bent. Am. Contractor, vol. 45, no. 4, Jan. 26, 1924, pp. 25-27. See also Contract Rec. & Eng. Rev., vol. 38, no. 11, Mar. 12, 1924, pp. 264-267. Tells what is behind the day labor tendency, where method fails, and why it fails; lists a number of typical instances in which costs of construction by this means far exceed contractors' bids.

Economic Aspects of Day Labor Construction, A. S. Bent. Mun. & County Eng., vol. 66, no. 2, Feb. 1924, pp. 71-77. Gives examples of day labor construction.

Force-Account Construction. Force Account and Winter Work on Small City Jobs, I. E. Houk. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 292-293. Experience in building public works by force account at Dayton, Ohio, has shown that method is often, but not always, advisable.

Machinery for. What is New in Construction Equipment? Contract Rec. & Eng. Rev., vol. 38, nos. 1, 2, and 3, Jan. 2, 9, and 16, 1924, pp. 14-18, 35-39, and 57-63, 37 figs. Developments in 1923 in labor-saving machinery for contractor, including excavating machinery, ditching and trenching machinery, concrete mixing and placing equipment, material-handling equipment, haulage equipment, compressed-air equipment, crushing machinery, pile-driving machinery, lighting by acetylene flares and road-building machinery.

Pneumatic Equipment, Applications of. How Pneumatic Equipment Speeds Up Winter Construction Work, F. A. McLean. Contract Rec. & Eng. Rev., vol. 38, no. 5, Jan. 30, 1924, pp. 113-118, 11 figs. The application of pneumatic equipment for work such as trenching and excavation, bridge building, etc.

CONTINOSTAT. See STRUCTURES, Statically Indeterminate.

CONTRACT WORK

Estimating. Estimating Contract Work, D. S. Cole. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 373-376, 1 fig. Outlines method which simplifies estimating and makes easier executive's work of keeping his plant profitably busy.

CONTRACTING

Municipal. Drawing, Advertising and Letting Municipal Contracts, J. N. Ambler. Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924, pp. 906-909. Comparison of lump-sum and other types of bids; call for bids, letting of contracts, and reflections on good and bad engineering.

Time Charge. Time Charge Replaces Bonus and Penalty Clauses, H. H. Quimby. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 989-990. Operated successfully in over a hundred contracts; approved by city law department and liked by contractors.

CONTRACTORS' MACHINERY. See CONSTRUCTION WORK, Machinery for.

CONTROLOGRAPH. See AUTOMOBILES, Speed and Movement Recorder.

CONVERTERS

Cascade. A New Cascade Converter (Di un nuovo convertitore in cascata), S. Rotolo. Elettricista, vol. 3, no. 14 (series 4), July 15, 1924, pp. 105-106, 1 fig. Discusses new type in which half current is supplied by circuit outside of motor and other half by dynamo.

Operation. Operation of Converting Apparatus, V. E. Johnson. Power Plant Eng., vol. 28, nos. 16, 18, 20, 22, and 24, Aug. 15, Sept. 15, Oct. 15, Nov. 15, and Dec. 15, 1924, pp. 855-857, 952-954, 1059-1061, 1148-1151, and 1255-1257, 27 figs. Preliminary considerations; methods of converting alternating to direct current; motor-generators; rotary converters; methods of connecting; voltage regulation; operation of rotary converters; effects of power factor; parallel operation of rotaries; obtaining load division; protective features; maintenance of rotary converters; sparking and flashovers.

Rotary. Pressure Regulation of Rotary Converters by Means of Choke Coils, O. Thaning. Brown Boveri Rev., vol. 11, nos. 10 and 12, Oct. and Dec. 1924, pp. 220-229 and 282-290, 25 figs. All data required in connection with pressure regulation of rotary converters by means of choke coils are worked out and expressed as formulas which can be easily used in practice; indicates how results so obtained can be employed in designing choke coil; describes graphical method by which these results can be more rapidly determined; examples of application of formulas and of graphical method, and also of use of practical diagram for this purpose.

Rotary Converters, C. E. Bisdee. Elec. Engr., vol. 1, nos. 7 and 8, Oct. 15 and Nov. 15, 1924, pp. 241-248 and 293-298, 10 figs. Notes on voltage limitations and variation. Starting methods; telephonic disturbances; flashing.

The Generating Effect in Rotary Converters on Short Circuit, F. Hoeberli. Brown Boveri Rev., vol. 11, no. 1, Jan. 1924, pp. 3-12, 12 figs. Details of short-circuit tests carried out on series of rotary converters for direct-current traction service at 1600 volts, new type of quick-acting circuit breaker being employed.

See also Operation.

CONVEYORS

[See also MATERIALS HANDLING, Apparatus; Equipment; Stone and Clay Industries.]

Ash-Handling. See COAL HANDLING, Conveyors.

Automobile Factory. Conveying Sub-Assemblies in the Oakland Plant, H. Campbell. Am. Mach., vol. 60, no. 23, June 5, 1924, pp. 831-833, 8 figs. Conveyors forming part of material-handling equipment of Oakland Motor Car Co., Pontiac, Mich.; conveying motors and axles by overhead conveyor.

Power Conveyors in the Automobile Plant. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 541-543, 4 figs. Describes several examples of modern conveyor installations, link chains and sprockets for which were supplied by Link-Belt Co., Chicago.

The Modern Plant as a Production Machine, E. H. Nenning. Am. Mach., vol. 61, no. 7, Aug. 14, 1924, pp. 273-276, 12 figs. Use of conveyors in production of Oldsmobiles; relation of plant layout to production; construction of conveyors equipped with speed reducers and transmissions.

See also AUTOMOBILE MANUFACTURING PLANTS, Materials Handling in.

Belt. See COAL HANDLING, Conveyors.

Belting for. See BELTING, Lumber Industry.

Bridge. Conveying Bridges for Open Works in German Patents (Die in den deutschen Patenten zutage getretenen Bestrebungen in der Entwicklung der Abraum-Förderbrücken), Walther Fördertechnik u. Frachtverkehr, vol. 17, no. 23, Dec. 3, 1924, pp. 324-327, 11 figs. Design, construction, and operation of conveyor bridges as used in lignite-stripping operations.

Building-Construction. Quantity Conveying in Building Construction and Mining (Massenbeförderung bei Hoch- und Tiefbauten), G. Garbotz. Deutsche Bauzeitung, vol. 58, no. 70, Aug. 30, 1924, pp. 137-141, 12 figs. Types of apparatus for conveying building material, including cranes, gravity concrete towers, cement spraying, etc.

Cable. Handling Materials by Cable Conveyor, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 170-177, 11 figs. Describes installations which use cables as power and carrying medium. Examples of European practice.

Chewing-Gum Plant. Conveyors Handle Chewing Gum, W. B. Raney. Mgmt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 387-390, 10 figs. System in William Wrigley Jr. Co., Chicago plant.

Coal-Handling. See COAL HANDLING, Conveyors.

Coal-Mine. See COAL MINES, Conveyors.

Continuous. Modern Large-Scale Conveying by Means of Continuous Conveyors (Neuzeitlicher Massentransport mit Dauerförderern), M. Buhle. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 30, July 26, 1924, pp. 777-781, 15 figs. Describes lignite-conveying plants, at Klukwitz mine, briquet-conveyor plant at Voss mine, and coking-coal conveyor plant at Werme mine built by Bleichert & Co.

Continuous vs. Intermittent. Continuous Versus Intermittent Conveyors and Handling Methods, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 3, Feb. 7, 1924, pp. 77-80, 4 figs. General distinguishing features of the two systems; possibility of increasing capacity of an existing conveyor installation; comparison between working costs; continuous and intermittent industrial methods; etc.

Cotton-Mill. A Conveyor System that Revolutionized a Cotton Mill, Robt. T. Kent. Mgmt. & Adminstration, vol. 7, no. 4, Apr. 1924, pp. 411-416, 9 figs. Mechanical handling methods at Jackson Mills at Nashua, N. H.; system is designed to handle entire product from raw cotton to finished cloth with exception of movement between one or two operations, where hand labor is more economical.

Conveyors Require Good Management, Robt. T. Kent. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 539-543. Mechanical handling in cotton bill improved production, increased wages, lowered costs, and lessened labor troubles; methods employed at Jackson Mills at Nashua, N. H.

Factory. Conveyor Plants for Modern Manufacturing Processes, Hauck. Eng. Progress, vol. 5, no. 10, Oct. 1924, pp. 219-223, 16 figs. Describes various types employed by large manufacturing firm, including gravity conveyors, lifts, belt conveyors, etc.

Increasing Production by Power Conveyors, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 706-709, 5 figs. See also Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 558-561, 5 figs. Conveyor installations that have proved their economy in plant manufacturing small parts; japanning conveyors; conveyors for cleaning work before nickel-plating, and rinsing and drying afterward; assembly conveyors.

Flour-Mill. Conveying Apparatus in Flour Mills, Their Construction, Efficiency and Power Requirements (Die Fördervorrichtungen in Mühlen, deren Konstruktion, Leistungsfähigkeit und Kraftbedarf), F. Baumgarten. Fördertechnik u. Frachtverkehr, vol. 17, no. 11, June 3, 1924, pp. 153-155. Discusses development of conveying in connection with automatic grinding, conveying of flour in bulk and in sacks, ascending and descending conveyors, etc.

Forgings and Scrap Handling. Conveyors to Handle Forgings and Scrap. Iron Age, vol. 113, no. 24, June 12, 1924, pp. 1711-1712, 3 figs. Application of conveyor equipment for handling flashings and small automobile forgings from cold trimming presses at forge plant of Chevrolet Motor Co., Detroit.

Foundry. See FOUNDRIES, Materials-Handling Equipment.

Grain. Modern Technics of Conveying and Storing of Grain in Mill and Granary Construction (Neuzeitliche Förder- und Lagertechnik beim Kornumschlag im Mühlen- und Speicherbau), M. Buhle. Fördertechnik u. Frachtverkehr, vol. 17, nos. 13 and 14, July 8 and 25, 1924, pp. 175-179, and 191-195, 25 figs. Details of construction of various types of store houses, silos, etc., and conveyors from boats and to railway cars, grain and sack conveying. July 25: Examples of modern mill construction with conveying details.

Gravel-Plant. See GRAVEL PLANTS, Field Conveyors.

Mail and Parcel Transport. Mechanical Messengers, R. Heumann. Eng. Progress, vol. 4, no. 12, Dec. 1924, pp. 254-259, 10 figs. Arrangement of pneumatic-tube plant; rope-conveyor plants, employed in business houses and smaller works where correspondence has to be distributed from one central point to different points and recollected; conveyor belts.

Manual. Conditions for Producing Economic Manual Conveyors (Die allgemeinen Bedingungen zur Erzielung wirtschaftlicher Handfördermittel), H. R. Müller. Praktische Maschinen-Konstrukteur, vol. 57, nos. 32 and 33, Aug. 26 and Sept. 2, 1924, pp. 441-444 and 453-455, 20 figs. Design and construction of hand cars and trucks for tracks or trackless, and calculation of comparative costs. Manually-operated overhead conveyors running on rails, and their operation.

Overhead Monorail. Monorails and Their Application (Les monorails et leurs applications). Usine, vol. 33, no. 25, June 21, 1924, pp. 25-29, 8 figs. See also Génie Civil, vol. 85, no. 1, July 5, 1924, pp. 16-18, 3 figs. Describes various telepher systems executed by Establissements Tourtellier, Mulhouse.

See also FREIGHT HANDLING, Monorail Overhead Carrying System.

Pneumatic. Economics of Pneumatic Conveyors for Factories (Wirtschaftlichkeit von Hausrohrpostanlagen), J. Fritz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 26, June 28, 1924, pp. 681-683, 7 figs. Discusses principal types of conveyor systems for handling papers and small articles within building; operation of suction and pressure air plants.

Experimental Investigation of Pneumatic Conveying Process (Die experimentelle Untersuchung des pneumatischen Fördervorganges), M. Gasterstädt. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 617-624, 22 figs. Also Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 265, 1924, 76 pp., 10 figs. Describes experimental plant and measuring arrangements. Effect of quantity conveyed and velocity on pressure drop in conveying system; shows uniform connection between quantity conveyed and drop in pressure, and between velocity of air current and of material.

The Pneumatic Conveying of Materials, M. W. Potts. Indus. Mgmt (N Y), vol. 77, no. 1, Jan. 1924, pp. 9-15, 10 figs. Present state of development; principles involved; special problems encountered.

Pulverized Material. Fuller-Kinyon System of Conveying Pulverized Coal and Other Materials. Indus. Mgmt. (Lond.), vol. 11, no. 4, Feb. 21, 1924, pp. 103-106, 4 figs. Description of system whose outstanding characteristics are simplicity, safety, and cleanliness.

Rope. See Mail and Parcel Transport.

Sectional Portable. Rugged All-Steel Sectional Portable Conveyor Co-ordinates Mining and Haulage. Coal Age, vol. 25, no. 19, May 8, 1924, pp. 669-672, 8 figs. Constructed in short sections each of which can be carried by two men; pins are used instead of bolts as fastening; several motors used when long conveyor is to be driven.

Shaking. Conveying by Shaking Chute and the Acceleration Process by Marcus (Die Schüttelrutschenförderung und das Beschleunigungsverfahren von Marcus), O. Ohnesorge. Fördertechnik u. Frachtverkehr, vol. 17, no. 11, June 3, 1924, pp. 150-153, 5 figs. Discusses deviation of angle, intercallation of inclined planes, curved conveyor paths, etc.

Loosely Coupled Shaking Conveyors (Lose gekoppelte Förderrüttler), E. Asch. Zeit. für technische Physik, vol. 5, no. 10, 1924, pp. 436-441, 5 figs. Details of methods of calculation by means of alignment charts according to laws of oscillation.

Shaking Conveyors and the Marcus Acceleration Process (Die Schüttelrutschenförderung und das Beschleunigungsverfahren von Marcus), O. Ohnesorge. Fördertechnik u. Frachtverkehr, vol. 17, no. 6, Mar. 20, 1924, pp. 71-76, 8 figs. Mechanical basic conditions of oscillating troughs in general and the Marcus trough in particular; shaking-chute conveyance in inclined path purely as gravity conveyance; drive of shaking conveyors.

Shaking Conveyors as a Means of Transport in Mines (Pendelrännor som transportmedel vid gruvor), P. E. Gummeson. Teknisk Tidskrift, vol. 54, no. 6, Feb. 9, 1924, pp. 9-14 (Bergsvetenskap), 14 figs. Examples of simple construction of such channels are shown and economy of their use is pointed out.

Short-Distance. Short-Distance Conveyors (Nahfördermittel). Tonindustrie-Zeitung, vol. 48, no. 76, Sept. 20, 1924, pp. 837-838, 4 figs. Notes on roller platforms for conveying at any angle, used for coal, sand, and other bulk goods, singly or in combination.

Skip. Main Shaft Extraction by Means of Skips (Hauptschacht-Gefässförderungen), L. Schütt. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 26 and 28, June 28 and July 12, 1924, pp. 665-671 and 729-731, 21 figs. Discusses advantages of skip conveying with automatic emptying at upper end for main shaft operation, and describes plants at Caen (France), Diedenhofen, etc., with capacity of 250-300 tons per hr.

COOKING

Electric. See ELECTRIC COOKING.

Gas. See GAS APPLIANCES, Cookers.

COOLING TOWERS

Calculation. The Calculation of Cooling Towers (Berechnung von Kühltürmen), C. Geibel. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 7, Feb. 16, 1924, pp. 152-153, 1 fig. Setting up heat equations with aid of which cooling-plant values can be determined; points out that laws of current, speed of evaporation, and state of outgoing air are unknown conditions which must be determined.

Efficiency. Water-Cooling-System Efficiency, V. J. Azbe. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 799-805, 12 figs. Formulas and charts for use in predetermining performance of water-cooling systems at different seasons; cooling possibilities under different weather conditions and in different sections of country.

Operation. Analysis of Cooling Tower Operation, C. S. Robinson. Refrig. Eng., vol. 10, no. 6, Dec. 1923, pp. 201-204, 2 figs. Shows how an analysis of operation of cooling towers permits classification of tests, so that a comparison of the various types of towers is simple and accurate; discusses resent tests on cooling towers.

Reinforced-Concrete. The Dimensioning of Reinforced-Concrete Cylindrical Cooling Tower Walls (Bemessung von zylinderförmigen Kühlturmwänden aus Eisenbeton), E. Rausch. Deutsche Bauzeitung, vol. 57, no. 102-103, Dec. 22, 1923, pp. 117-120, 3 figs. Influence of wind forces and temperature; combined effect of wind and temperature stresses; practical example.

Steel. Cooling Towers for Steam Condensing Plant. World Power, vol. 1, no. 2, Feb. 1924, pp. 119-123, 6 figs. Recent designs of steel cooling towers manufactured by Worthington-Simpson, Ltd., for which many advantages are claimed.

Theory. A Theory of Cooling Towers Compared with Results in Practice, B. H. Coffey and Geo. A. Horne. Refrig. Eng., vol. 11, no. 6, Dec. 1924, pp. 187-192 and (discussion) 192-194 and 205, 5 figs. The Omega total-heat relation; cooling surface and heat transfer.

COOPERATION

Railway Shops. See INDUSTRIAL RELATIONS, Coöperative Program; Employees-Management Coöperation.

COOPERATIVE SOCIETIES

Coöperative Shingle Mills. Coöperation. Monthly Labor Rev., vol. 18, no. 1, Jan. 1924, pp. 170-178. Coöperative shingle mills in Western Washington.

Developments. Coöperation. Monthly Labor Rev., vol. 19, no. 6, Dec. 1924, pp. 150-170. Coöperative banking; coöperative housing; failing coöperative societies; relations with trade-union organizations; relations between different forms of coöperation; question of extension of coöperative production; place of women in movement; employees' coöperative buying.

Soviet Russia. Co-operation in Soviet Russia, M. Prokopowitch. Int. Labour Rev., vol. 10, no. 3, Sept. 1924, pp. 411-434. Early effects of

Bolshevist revolution; communist policy in regard to coöperation; new economic policy; present position.

COORONGITE. See OIL, Coorongite.

COPPER

[See also NON-FERROUS METALS.]

Alloys. See COPPER ALLOYS.

Casting. See CASTING, Deoxidized Copper Billets.

Castings. Cupola Castings, T. F. Jennings. Metal Industry (N. Y.), vol. 22, no. 11, Nov. 1924, pp. 444-445. See also Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 927-928. Making copper castings from cupola melted metal.

Making Copper Castings from Cupola Melted Metal, T. F. Jennings. Foundry Trade Jl., vol. 30, no. 427, Oct. 23, 1924, pp. 346-347, 1 fig. Common causes of defects in copper castings; need for deoxidizers; furnace factors; use of cupola in melting copper; cupola preparation; phosphor copper as deoxidizer; hardening copper; pouring heavy castings.

The Deoxidation of Copper and Production of Copper Castings (La désoxydation du cuivre rouge et le moulage d'objets en cuivre), L. Guillet. Revue de Métallurgie, vol. 21, no. 3, Mar. 1924, pp. 174-182, 7 figs. Results of tests made on samples of boron carbide from United States and other samples show that addition of boron carbide to copper produces no interesting effect; addition of small quantities of iron produces complete deoxidation of metal; results of tests on aluminum.

Cold Rolling and Hardness. Effect of Progressive Cold-Rolling on the Brinell Hardness of Copper, H. Moore. Metal Industry (Lond.), vol. 25, no. 14, Oct. 3, 1924, pp. 326-327, 1 fig. Results of experiments; effect of initial cold rolling; time factor; thickness of specimens and hardness results.

Note on the Effect of Progressive Cold-Rolling on the Brinell Hardness of Copper, H. Moore. Inst. of Metals—Advance Paper no. 9, for meeting Sept. 8-11, 1924, 3 pp., 1 fig. Details of experiments made to confirm conclusion that by severe cold-working a metal could be brought into a state in which its hardness would be little or no higher than that of annealed metal and that in this state metal could not be hardened by further cold-work.

Coloring. Coloring Copper and Bronze Work. Sheet Metal Worker, vol. 15, no. 8, May 9, 1924, p. 281. Preparing metal; chemical action explained; recipes for obtaining range of colors; directions on painting.

Corrosion. Seventh Report to the Corrosion Research Committee of the Institute of Metals, G. D. Bengough and R. May. Inst. of Metals—Advance Paper no. 3, for meeting Sept. 8-11, 1924, 176 pp., 35 figs., partly on supp. plates. Deals with corrosion of copper, zinc, 70:30 brass, and condenser tubes. Mainly concerned with mode of formation and behavior of "scales" which form on copper and brass in presence of sea-water.

The Corrosion of Copper and Copper Alloys, U. R. Evans. Chem. & Industry, vol. 43, no. 18, May 2, 1924, pp. 127T-131T, 4 figs. Points out that localized corrosion of copper and brass articles may occur by preferential removal of copper salts from certain points, thus producing concentration cell; by differential aeration (points shielded from oxygen become anodic and suffer attack); by contact with conducting bodies; and by local removal of protective skin.

Deoxidation. See Castings.

Deposits. See COPPER DEPOSITS.

Electrodeposition. Electrodeposition of Copper by the Union Miniere du Haut Katanga (Belgian Congo), H. Y. Eagle. Am. Electrochem. Soc.—Advance paper no. 21, for meeting Apr. 24-26, 1924, pp. 289-297, 6 figs. Describes new electrolytic tank house and its operation; electrolytic tanks are largest of kind ever built.

Electrolytic. Electrolytic Copper, J. G. A. Rhodin. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 560-561. Outline of exhaustive research carried out by late Jos. W. Swan up to autumn, 1893, dealing with stationary and moving cathodes, motion of electrolyte, static effects of detrimental nature; nature of solutions in relation to current density; bright copper deposits; electrolytic gold-leaf; copper wire by direct electrolysis; conductivity of pure electrolytic copper.

Estimation. Applied Methods of Estimating Copper in Ores, Slags, Alloys, etc. Metal Industry (Lond.), vol. 25, no. 9, Aug. 29, 1924, pp. 193-195. Comprehensive treatise of methods of copper estimation in practically all classes of ores, slags, alloys, etc.

Hardness. See Cold Rolling.

Iron in, Effect of. Investigation of the Effects of Impurities on Copper. The Effect of Iron on Copper, D. Hanson and G. W. Ford. Inst. of Metals—Advance Paper no. 7, for meeting Sept. 8-11, 1924, 27 pp., 23 figs., partly on supp. plates. Describes an investigation of effect of small quantities of iron on properties of copper, discussing constitution and microstructure, casting, hot- and cold-rolling, density, hardness, tensile tests, effect of heat treatment, electrical conductivity, fatigue range, notched-bar impact tests, softening after cold work, macrostructure, and machining properties.

Large Crystals, Producing. Forms Large Copper Crystals. Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 929-930, 2 figs. Gradual heating and cooling of pure copper in electric furnace is secret of success in producing large-size crystals giving peculiar physical properties; describes bars, which are really single crystals of pure copper, produced in research laboratory of Gen. Elec. Co., Schenectady.

Mattes, Constitution of. The Constitution of Copper Mattes, F. H. Edwards. Instn. Min. & Metallurgy—Bul., no. 236, May 1924, 19 pp., 59 figs., partly on supp. plates. Preparation of monosulphides of copper and iron, and review of their physical properties and binary system which they form with their respective metals; the matte system proper.

Metallurgy. See COPPER METALLURGY.

Mines. See COPPER MINES.

Prospecting. Flame Test for Copper an Aid in the Study of Croppings, C. H. White. Eng. & Min. Jl.-Press, vol. 117, no. 14, Apr. 5, 1924, pp. 568-569. Advantages of flame test; standardizing flame test; results of experiments.

Rod Rolling Mill. See ROLLING MILLS, Copper-Wire-Rod.

Rolled. Rolled Copper (Einiges über Walzkupfer), Kühnel. Zeit. für Metallkunde, vol. 16, nos. 3 and 4, Mar. and Apr. 1924, pp. 99-103 and 138-141, 15 figs. partly on supp. plate. Author distinguishes between changes of structure and properties due to smelting and congealing and those caused by further treatment; smelting and casting faults; heat treatment of copper; comparison of properties of solid and hollow copper.

Russia. Can Russia Export Copper to Germany? (Kann Russland nach Deutschland Kupfer ausführen?), L. von zur Mühlen. Metall u. Erz, vol. 21, no. 15, Aug. 1, 1924, pp. 359-365. Discusses occurrence of copper, mining, etc., holds that Russian copper mining can be very largely increased by better organization and transportation facilities.

Structure. The Structure of Copper, H. Collins. Chem. News, vol. 129, no. 3361, Sept. 12,

1924, pp. 157-159. As Cu sometimes acts like monad Na, and at other times like dyad Ca, constitution Naca, which was previously obtained for it, is particularly suitable; this constitution has now been proved to be correct.

Sulphide, Estimation from Oxidized Capping. Recent Progress With Leached Ore Capping, H. W. Morse and A. Locke. Economic Geology, vol. 19, no. 3, Apr.-May 1924, pp. 249-256 and (discussion) 256-258. Tries out, in three districts, estimations of sulphide copper from oxidized capping. Offers samples of such capping; makes certain wide assumptions, and joins these assumptions with evidences which samples, in their oxidized state, afford; restores these samples, by these assumptions, to an inferred sulphide condition; and checks this condition against known sulphide below, as a prediction of copper quantity.

United States Production. Copper in 1922, H. A. C. Jenison. U. S. Geol. Surv., no. I:19, 1924, pp. 257-304, 2 figs. Review of production by companies and states; smelter and refinery production; imports and exports, consumption, uses, and prices.

Welding. See ELECTRIC WELDING, Copper.

Wire. See WIRE, Copper.

COPPER ALLOYS

Copper-Aluminum. X-Ray Studies on the Copper-Aluminium Alloys, E. R. Jette, G. Phragmén and A. F. Westgren. Inst. Metals—Advance Paper no. 9, for meeting Mar. 12-13, 1924, 14 pp., 7 figs. X-ray analysis has confirmed previous knowledge that at ordinary temperature four different stable phases appear in this system.

Copper-Cadmium. The Constitution of the Alloys of Copper and Cadmium, C. H. M. Jenkins and D. Hanson. Inst. Metals—Advance Paper no. 8, for meeting Mar. 12-13, 1924, 16 pp., 33 figs. Deals with determination of constitution of alloys of cadmium with copper, especially in solid state; copper and cadmium in liquid state are mutually soluble in all proportions.

Copper-Tin. On the Equilibrium Diagram of the Copper-Tin System, T. Isihara. Inst. Metals—Advance Paper no. 7, for meeting Mar. 12-13, 1924, 31 figs. See also Tôhoku Imperial Univ.—Sci. Repts., vol. 13, no. 1, Oct, 1924, pp. 75-100, 44 figs. partly on supp. plates. Equilibrium diagram of copper-tin system is obtained by means of electric resistance measurement; alpha constituent shows progressive transformation beginning at 480 to 580 deg. cent. according to concentration of tin; maximum solubility of tin in alpha is determined to be 11 per cent at room temperature.

The Estimation of Copper and Tin in Copper-Tin Alloys, A. T. Etheridge. Analyst, vol. 49, no. 581, Aug. 1924, pp. 371-374. Discusses new method consisting of separating copper from sulphuric acid solution by electrolysis, tin being held in solution, and not precipitated by hydrolysis.

The Hardness of Copper-Tin Alloys (Die Härte der Kupfer-Zinnlegierungen), O. Bauer and O. Vollenbruck. Zeit. für Metallkunde, vol. 16, no. 11, Nov. 1924, pp. 426-429, 5 figs. Results of hardness determinations from heretofore published works; new plotting of complete hardness curve; hardness of bronze after quenching.

See also ALLOYS, Non-Ferrous; BRONZES.

Copper-Tin-Zinc. The Ternary System Copper-Tin-Zinc (Ueber das ternäre System Kupfer-Zinn-Zink), G Tammann and M. Hansen. Zeit. für anorganische u. allgemeine Chemie, vol. 139, no. 2, Aug. 19, 1924, pp. 137-161, 20 figs. Discusses formation of red-brass alloys and shows that their structure is dependent to an unusual degree on velocity of cooling after casting.

Copper-Zinc. On the Copper-Zinc Alloys Which Expand on Solidification, Kei Iokibe. Inst. Metals—Advance Paper no. 6, for meeting Mar. 12-13, 1924, 27 pp., 12 figs. Amount of expansion depends upon percentage of copper and rate of cooling; force of expansion is of considerable magnitude; hardness and elastic limit of expanded alloys are low, and they contain cracks and voids; inverse segregation and how its effect can be diminished; cause of inverse segregation.

See also BRASS.

Hardness. The Variation in Hardness of Copper Alloys with Temperature (La variation de la dureté des alliages de cuivre avec la température), L. Guillet. Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 295-302, 7 figs. Results of tests show that variations of hardness with temperature follow laws which vary considerably for alloys of same category; but in same range of thermal diagram, variations follow same laws to great extent; ternary alloys conserve their hardness better than binary alloys.

COPPER DEPOSITS

Austria. Copper Deposits of Savodenj (Ueber die Kupfererzlagerstätten von Savodenj), Götting. Montanistische Rundschau, vol. 16, no. 18, Sept. 16, 1924, pp. 493-496, 1 fig. Discusses geognostic conditions, character of ore and mining operations.

Canada. Copper Deposits of Arctic Canada, G. M. Douglas. Eng. & Min. Jl.-Press, vol. 118, no. 3, July 19, 1924, pp. 85-89, 5 figs. Discusses British Government explorations, great extent of mineralized area, copper in three forms, deposits at Bathurst inlet, possibilities of high-grade ore, and transportation problem.

Cananea, Mexico. Primary Chalcocite at Cananea, Mexico, G. J. Mitchell. Eng. & Min. Jl.-Press, vol. 117, no. 22, May 31, 1924, pp. 880-882, 10 figs. Discussion of genesis of an important copper mineral.

Cerro de Pasco. Mineral Deposits of Cerro de Pasco (Yacimiento mineral del Cerro de Pasco), F. G. Fuchs. Boletin Minero de la Sociedad Nacional de Mineria, vol. 36, no. 297, Jan. 1924, pp. 3-17, 7 figs. Discusses geology and mineral deposits, copper-silver, lead-zinc-silver and mixtures of these; activity of Cerro de Pasco Copper Co.

Idaho. A New Copper District Near Salmon, Idaho, C. P. Ross. Eng. & Min. Jl.-Press, vol. 118, no. 6, Aug. 9, 1924, pp. 205-208, 5 figs. Geological features show this area to be promising one for prospectors.

Montana. Rôle of Secondary Enrichment in Genesis of Butte Chalcocite, A Locke, D. A. Hall and M. N. Short. Am. Inst. Min. & Met. Engrs.—Trans., no. 1308-M, Mar. 1924, 30 pp., 17 figs. Field argument indicates that either deep chalcocite has replaced sulphide of extraordinarily easy replaceability or it is hypogene; microscopic argument indicates that this sulphide, if it existed, must have been hypogene bornite.

Tennessee. Ducktown, Tennessee, Copper District, W. A. Nelson. Am. Inst. Min. & Met. Engrs.—Trans., no. 1378-M, Oct. 1924, 5 pp. Location; production; general geology and structure; ore bodies.

Oxidation and Enrichment at Ducktown, Tenn., G. Gilbert. Am. Inst. Min. & Met. Engrs.—Trans., no. 1318-M, Mar. 1924, 23 pp., 12 figs. Study of specimens shows that key to both oxidation and enrichment at Ducktown is behavior of pyrrhotite, which is in part dissolved and in part replaced by marcasite; enrichment takes place chiefly at expense of marcasite.

COPPER INDUSTRY

Electricity in. Copper and Electricity, N. R. Stansel. Gen. Elec. Rev., vol. 27, no. 4, Apr. 1924, pp. 214-226, 13 figs. Account of copper

industry, touching on its many different phases; use of electricity in connection with its production.

COPPER METALLURGY

Concentration. See Ore Treatment.

Concentrators. New Cornelia Concentrating Mill at Ajo, Arizona, H. K. Burch. Eng. & Min. Jl.-Press, vol. 118, no. 21, Nov. 22, 1924, pp. 808-821, 13 figs. Details of construction of copper flotation plant; suspension-type bin a feature of storage system; how electric power is distributed; power to pumping plant at 44,000 volts; motor-driven rolls selected for final crushing.

The New Cornelia Copper Company Concentrator, W. L. Du Moulin. Ariz. Min. Jl., vol. 8, no. 10, Oct. 15, 1924, pp. 3-8, 7 figs. Description of 5000-ton concentrator at Ajo, Ariz., for treating of sulphide ores mined by steam shovel methods.

Electric Smelter. See Smelting.

Electrolytic Extraction. Electrolytic Separation of Copper, Antimony, Lead and Tin (Séparation électrolytique du cuivre, de l'antimoine, du plomb et de l'étain), A. Lassieur. Académie des Sciences—Comptes Rendus, vol. 179, no. 17, Oct. 27, 1924, pp. 827-829. With hydrochloric acid, lead and tin are precipitated together, with 20 cu. cm. hydrochloric acid and 5 cu. cm. hydrofluoric acid for a volume of 225 cu. cm. lead and tin are separated.

Electrolytic Separation of Copper, Antimony, and Bismuth from Lead (Séparation électrolytique du cuivre, de l'antimoine, du bismuth d'avec le plomb), A. Lassieur. Académie des Sciences—Comptes Rendus, vol. 179, no. 14, Oct. 6, 1924, pp. 632-634. Details of electrolytic separation by means of hydrochloric acid in presence of a reduction agent, including some improvements.

Greenawalt Electrolytic Copper Extraction Process, W. E. Greenawalt. Am. Inst. Min. & Met. Engrs.—Trans., no. 1284-M, Jan. 1924, 89 pp., 6 figs. Applicable to suitable oxide ores, sulphide ores and concentrates, and low-grade matte; is self-sustaining in acid on sulphide ores or concentrates, mixed ores, and high-grade oxidized ores, and on low-grade oxidized ores amount of acid to be purchased or manufactured is greatly reduced; ferric iron is under easy control, and copper may be effectively deposited from solutions of any acid or iron content likely to be used in copper leaching.

The Lockwood Process. Can. Min. Jl., vol. 45, no. 32, Aug. 8, 1924, pp. 765-768. Details of Lockwood patent process, consisting of crushing (and roasting) ore, making into pulp with water and sufficient H_2SO_4 to effect solution of copper, followed by electrolysis, using simple and inexpensive apparatus.

Use of Electric Current in Copper Production (Die Anwendung des elektrischen Stromes bei der Kupfergewinnung), G. Eger. Siemens-Zeit., vol. 4, no. 8, Aug. 1924, pp. 254-263, 19 figs. Discusses electrolytic process, using aqueous solutions; refining process, using soluble anodes; copper production from lyes by means of insoluble anodes, etc.; electrothermic production of copper from ores; remelting of copper and its alloys; etc.

Leaching. Ammonia Leaching of Calumet and Hecla Tailings, C. H. Benedict and H. C. Kenny. Am. Inst. Min. & Met. Engrs.—Trans., no. 1297-M, Feb. 1924, 16 pp., 5 figs. Description of 2000-ton plant of Calumet & Hecla Min. Co., at Lake Linden, Mich., which has been in almost continuous operation for seven years, together with changes made in original plant, reasons for these changes and results obtained in each case.

An Experimental Copper Leaching Plant at Burra Burra, South Australia, B. DuFaur. Chem. Eng. & Min. Rev., vol. 16, no. 190, July 5, 1924, pp. 381-384. Describes experimental plant capable of treating up to 7 tons of ore at one time; ore particles are dissolved almost solely by either sulphurous or sulphuric acids, made within leaching vat itself and sole function of ferric sulphate is to convert sulphites to sulphates and to produce sulphuric acid.

Progress in Leaching the Ohio Copper Mine, F. E. Wormser. Eng. & Min. Jl.-Press, vol. 118, no. 4, July 26, 1924, pp. 124-127, 8 figs. Production has been increased with larger pumping equipment and costs lowered.

The Electrolytic Tank House, Chile Exploration Company, Chuquicamata, Chile, C. W. Eichrodt. Am. Electrochem. Soc.—Advance Paper no. 23, for meeting Apr. 24-26, 1924, pp. 303-324, 3 figs. Details of tank house operation, including complete analyses of electrolyte, starting sheet manufacture, mechanical handling of copper, proper spacing of electrodes and electrical equipment.

Washing Residues from Copper Ore Leaching, G. D. Van Arsdale. Eng. & Min. Jl.-Press, vol. 118, no. 17, Oct. 25, 1924, pp. 653-655, 2 figs. Some of the principles that are involved and how calculations are made.

Ore Dressing. Concentrator Snapshots, E. H. Robie. Eng. & Min. Jl.-Press, vol. 117, no. 15, Apr. 12, 1924, pp. 596-601, 9 figs. **Impressions** gained on a trip through some of the copper and lead ore-dressing plants of Missouri, Arizona, and Tennessee.

Ore Flotation. See FLOTATION, Copper Ore.

Ore Treatment. The New Copper Queen Concentrator, E. Wittenau. Eng. & Min. Jl.-Press, vol. 117, no. 21, May 24, 1924, pp. 836-841, 10 figs. Results obtained during first year in treatment of a low-grade sulphide ore in Copper Queen concentrator of Phelps Dodge Corpn. at Warren, Ariz., and description of equipment. Three units doing work originally planned for four, making 92 per cent recovery on 2 per cent ore; no ball mills used.

See also COPPER MINING, Africa.

Precipitation. Copper Precipitation, Soulie-Cottineau. Chem. Eng. & Min. Rev., vol. 17, no. 193, Oct. 5, 1924, pp. 13-14. Notes on native copper process. Abstracted translation from Société des Ingénieurs Civils de France.

Smelters. See COPPER MINES, British Columbia.

Smelting. Smelting Copper Concentrates in a Converter, F. J. Longworth. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1366-M, Sept. 1924, 3 pp. Also Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 485-486. Study of converter practice made by Tenn. Copper Co., Copperhill, Tenn., to see if some method could not be evolved to smelt concentrates (their flotation plant delivering to smelter 40 to 50 tons per day) in a converter without preliminary treatment. Data covering performance from Feb. 1, 1923, to June 1, 1924, of 25-ft., 12-ft. diameter Pierce-Smith converter installed, equipped with a close fitting hood and draft just sufficient to keep converter from smoking at mouth.

Technical Developments in Copper Smelting, E. H. Robie. Eng. & Min. Jl.-Press, vol. 117, no. 21, May 24, 1924, pp. 845-849, 5 figs. A commentary on what is going on at some of the southwestern and Tennessee plants.

The Evergreen Electric Smelter, W. R. Lewis. Mountain States Mineral Age, vol. 9, no. 7, July 1924, pp. 11-13, 5 figs. Construction and operation of Evergreen electric smelting plant for treatment of copper concentrate at Apex; equipment is standard throughout except that electric heat is to take place of coke or other fuels.

The New Magma Copper Smelter, H. A. Ruth. Eng. & Min. Jl.-Press, vol. 118, no. 18, Nov. 1,

1924, pp. 685-693, 13 figs. Engineering details of model installation of Magma Copper Co., near Superior, Ariz., equipped with latest features of modern smelting practice. Designed for treating flotation and table concentrates, direct-smelting ores, custom ores, and concentrates.

The United Verde Smelter, G. J. Young. Eng. & Min. Jl.-Press, vol. 118, no. 3, July 19, 1924, pp. 97-101, 10 figs. Discusses recent practice and improvements of smelter; metallurgical practice; treatment of waste furnace gases; Cottrell plant recent addition.

Tailings Treatment. Six-cent Copper from Calumet & Hecla Tailings, C. H. Benedict. Eng. & Min. Jl.-Press, vol. 117, no. 7, Feb. 16, 1924, pp. 277-284, 13 figs. Over 50,000,000 tons of sand, accumulated during half a century, being treated by tabling, flotation, and leaching, by Calumet & Hecla Min. Co., Mich.

COPPER MINES

Africa. The Copper Ores of the Katanga. S. African Min. & Eng. Jl., vol. 35, no. 1702, May 10, 1924, pp. 934-935, 1 fig. Old workings; ore varieties; methods of working; smelting practice. From paper read before Chem., Min. & Met. Soc. by C. H. Luja.

Alaska. Geology and Mining Methods of Beatson Mine, S. Birch. Am. Inst. Min. & Met. Engrs.—Trans., no. 1288-M, Jan. 1924, 7 pp., 4 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 30-31. Latouche, or Beatson plant of Kennecott Copper Corpn., located in Prince William Sound district of Alaska; data on performance and distribution of labor, consumption of timber and explosives, and power requirements.

Geology and Mining Methods of Kennecott Mines, S. Birch. Am. Inst. Min. & Met. Engrs.—Trans., no. 1287-M, Jan. 1924, 12 pp., 2 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 29-30. Notes on geology; methods and equipment employed at principal mines of Kennecott group, viz., Jumbo, Bonanza, Erie, and Mother Lode mines; shrinkage stoping prevailing system; statements of labor efficiency and distribution, consumption of explosives, and power requirements.

Geology of the Beatson Copper Mines, Alaska, A. M. Bateman. Economic Geology, vol. 19, no. 4, June-July 1924, pp. 338-368, 3 figs. Details of formation of Beatson mine of Kennecott Copper Corpn. at Latouche Island, second largest copper mine in Alaska.

Arizona. A Great Mining Adventure, T. A. Rickard. Eng. & Min. Jl.-Press, vol. 117, no. 24, June 14, 1924, pp. 959-963, 2 figs. Story of United Verde extension, at Jerome, Ariz. A successful application of geology.

British Columbia. Britannia Beach Copper District of British Columbia, R. Dunn. Eng. & Min. Jl.-Press, vol. 117, no. 16, Apr. 19, 1924, pp. 640-644, 8 figs. Notes on history of mine, ore bodies, flotation concentration, shrinkage stoping, etc.

Granby Consolidated, R. Dunn. Can. Min. Jl., vol. 45, no. 9, Feb. 29, 1924, pp. 200-209, 11 figs. Description of mines and plants of Granby Consolidated Min. Smelting & Power Co. Ltd., at Anyox and elsewhere. Concentrator and smelter flow sheets. Since 1914 ores of Hidden Creek mine at Anyox have produced in gold 51,141 oz., in silver, 2,610,857 oz., and in copper, 223,481,462 lb. See also Story of Hidden Creek Mine, by J. Flewin, pp. 209-210, 1 fig.

California. Anaconda's Walker Mine and Mill, G. J. Young. Eng. & Min. Jl.-Press, vol. 117, no. 18, May 3, 1924, pp. 725-730, 11 figs. Copper property in California, using shrinkage stoping and flotation concentration.

Chile. Operations of the Chile Exploration Co., Chuquicamata, Chile, W. D. B. Motter. Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 13-16, 4 figs. Description of status of operations and of plant as it exists today; ore reserves and production; copper silicide anodes used.

Italy. See IRON MINES, Italy.

Montana. Something About the World's Biggest Mining Camp at Butte, G. H. Dacy. Compressed Air Mag., vol. 29, no. 3, Mar. 1924, pp. 809-811, 7 figs. Notes on geology, mining, etc., of region in Butte, Montana, producing large quantities of copper, zinc, silver, gold, and lead.

New Mexico. The Chino Enterprise, T. A. Rickard. Eng. & Min. Jl.-Press, vol. 116, nos. 23 and 26, Dec. 8 and 29, 1923, and vol. 117, no. 1, Jan. 5, 1924, pp. 981-985, 1113-1121, and 13-20, 24 figs. Geology of Santa Rita and origin of ore deposits; methods of prospecting and mining; metallurgical operations.

COPPER MINING

Africa. Copper Operations in the Congo, A. E. Wheeler. Min. & Metallurgy, vol. 5, no. 206, Feb. 1924, pp. 55-59, 10 figs. Describes operations of Union Miniere du Haut Katanga; sulphuric acid leaching adopted.

Arizona. Mining Methods of Verde Mining District, A. H. De Witt Smith. Am. Inst. Min. & Met. Engrs.—Trans., no. 1309-M, Mar. 1924, 43 pp., 12 figs. History and geology; ore deposits; exploration; conditions determining stoping methods; underground development plants; mine openings, shafts, or tunnels; drilling and blasting; mining methods; operations.

Utah. Breaking Ore at Utah Copper, G. J. Young. Eng. & Min. Jl.-Press, vol. 118, no. 17, Oct. 25, 1924, pp. 645-649, 17 figs. Procedure followed at Utah Copper mine, in Bingham Canyon, Utah, in drilling, blasting, and sampling, and shovel and car equipment used.

COPPER ORE

Crushing Plant. See CRUSHING, Ore-Crushing Plant.

COPPERSMITHING

Methods. Distillery Apparatus in a Coppersmithing Shop, H. P. Armson. Can. Machy., vol. 31, no. 10, Mar. 6, 1924, pp. 27-30, 3 figs. Description of methods employed in making large sectional drums, pipe connections, etc., at Booth-Coulter Copper & Brass Co.'s plant, Toronto, Can.

CORE BOXES

Valves. Making Globe Valve Corebox, W. C. Ewalt. Foundry, vol. 52, no. 12, June 15, 1924, pp. 483-485, 15 figs. Metal boxes are cast from carefully constructed wood master patterns where foundry output is large; in many cases pattern is built up from number of small segments.

CORE OVENS

Design and Operation. Calculation, Design, and Operation of Economical Core-Ovens (Berechnung, Konstruktion und Betrieb wirtschaftlich arbeitender Trockenkammern), Petin. Giesserei-Zeitung, vol. 21, nos. 7 and 10, Apr. 1 and May 15, 1924, pp. 125-130 and 200-203, 6 figs. Calculation; determination of size of grate, diameter and height of chimney, and cross section of exhaust port for core ovens with open flat-grate furnace and natural draft; determination of theoretical fuel requirement for drying period by means of heat balance.

CORES

Baking. See CORE OVENS.

Binders. Core Oils—Their Composition and Advantages, W. G. Smith. Can. Foundryman, vol.

15, no. 6, June 1924, pp. 13-16, 5 figs. Discusses binders, not only those in oil group, but those of all classes, putting special emphasis on advantages of properly mixed oils over pure linseed oil; linseed is good base but far from perfect; Chinese oils, corn oil, mineral oil, rosin, and fossil gums when properly blended make ideal core binder. Abstract of paper read before Detroit Foundrymen's Assn.

Making. See CORE BOXES.

Oil-Sand. The Technical Side of Oil-Sand Cores, C. W. H. Holmes. Foundry Trade Jl., vol. 29, no. 410, June 26, 1924, pp. 543-547. Selection of suitable sand and oil, preparation of core mixture, baking of oil-sand cores, and description of finished core.

Quantity Production. Producing Cores in Quantities, H. R. Simonds. Foundry, vol. 52, no. 20, Oct. 15, 1924, pp. 797-800, 6 figs. Practice at plant of New England Butt Co., Providence, R. I.; specially designed machine produces slender 3-in. cores for textile-machine castings at rate of from 8000 to 10,000 per week; output equals that of six coremakers.

Supports for. Core and Mould Supports, B. Shaw and J. Edgar. Mech. Wld., vol. 75, nos. 1942 and 1945, Mar. 21 and Apr. 11, 1924, pp. 178-179 and 229-230, 17 figs. Information regarding core and mold grids.

Testing. See FOUNDRY EQUIPMENT, Core and Sand Testing Equipment.

Upward Pressure of. Upward Pressure of ores and Copes, H. Cohen. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 819-820, 2 figs. Buoyancy of cores; pressure head of metal on cores; upward pressure on copes and weighting of flasks.

CORONA

Current-Voltage Relation in. The Current-Voltage Relation in the Corona, C. S. Fazel and S. R. Parsons. Physical Rev., vol. 23, no. 5, May 1924, pp. 598-607, 3 figs. Current-voltage relation for corona discharge between a cylinder and a coaxial wire.

Formation, Hysteresis Character of. The Hysteresis Character of Corona Formation, H. J. Ryan and H. H. Henline. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 825-830, 9 figs. Discusses two items encountered which clearly indicate hysteresis character of corona formation, viz.: (1) value of power lost through corona from a transmission line closely approximates that given by product of charging current and voltage in excess of critical voltage, and (2) dominating importance of crest voltage in relation to corresponding corona loss.

Lightning Arrester. See LIGHTNING ARRESTERS, Corona as.

Losses. Corona Loss Tests on the 202-Mile 60-Cycle 220-Kv. Pit-Vaca Transmission Line of the Pacific Gas and Electric Company, R. Wilkins. Am. Inst. Elec Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1109-1116, 20 figs. Physical and electrical characteristics of 220-kv. transmission likely to affect corona loss; measured corona losses were found to follow exponential laws in three distinct phases; at no point did losses follow quadratic law. (Abridgment.)

Corona Losses Between Wires at Extra High Voltages, C. F. Harding. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 932-940, 26 figs. Results of corona loss tests upon three sizes of cables at voltages varying from 100 to 620 kv. and spacings from 18 to 38 ft. are reported from Eng. Experiment Station of Purdue University; these results, reduced to standard 1000 ft. of trasmission line, are compared with corresponding values calculated from Peek's formula for similar conditions of operation; describes tower line and method of measurement of losses in high-voltage circuit; three methods of attacking problem of modified transmission-line design for elimination of excessive corona losses are outlined.

Theoretical Computation of Corona Losses (Teoretisk beräkning av coronaförluster), R. Holm. Teknisk Tidskrift, vol. 54, no. 1, Jan. 5, 1924, pp. 9-12 (Elektroteknik), 2 figs. Short description of a new method for computation of corona losses in high-tension transmission lines. States that corona losses are due to exchange of electrical charges in surrounding air, which require electrical energy in excess of that corresponding to capacity of wires, and object of investigation is to compute these charges.

CORROSION

Alloys. See METALS, Corrosion.

Aluminum. See ALUMINUM, Corrosion.

Boilers. See BOILERS, Corrosion.

Cast Iron. See CAST IRON, Decomposition by Acid.

Chemical Plants. Corrosion and Its Relation to Safety in Chemical Plant, J. H. Shapleigh. Chem. Age (N. Y.), vol. 32, no. 10, Oct. 1924, pp. 401-404. Definition of corrosion; corrosion in chemical plant; hazards caused by corrosion; selection of suitable materials; factors lessening corrosion.

See also CHEMICALS, Manufacture, Corrosion Problems in.

Chemistry of. See METALS, Corrosion.

Coal Gas as Cause. See COAL GAS, Corrosion Due to.

Coatings, Formation of. Coatings Formed on Corroded Metals and Alloys, Geo. M. Enos and Rob. J. Anderson. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 594-595. Experiments on coating formation. (Abstract.)

Condenser Tubes. See CONDENSERS, STEAM, Tubes.

Copper. See COPPER, Corrosion.

Electrolytic. Electrolytic Corrosion in a Water-Gas Holder, F. H. Rhodes and E. B. Johnson. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, p. 575. Describes special case of electrolytic corrosion and gives results of investigation.

The Electrolytic Theory of Corrosion, W. D. Bancroft. Jl. Physical Chem., vol. 28, no. 8, Aug. 1924, pp. 785-871. Reviews electrolytic theory and criticizes some conclusions based on it.

Engine Parts. See AUTOMOBILE ENGINES, Corrosion.

Gas Holders. See GAS HOLDERS, Corrosion.

Gas Mains. See GAS MAINS, Corrosion.

Gas Meters. See GAS METERS, Carbonic Acid Corrosion.

Gas-Works Equipment. See GAS MANUFACTURE, Corrosion Problems.

Iron. See IRON, Corrosion.

Iron Alloys. See IRON ALLOYS, Corrosion.

Iron and Steel. A Critical Résumé of Information on Corrosion of Iron and Steel, D. V. Onslow. World Power, vol. 2, no. 9, Sept. 1924, pp. 146-155, 4 figs. With special reference to cast iron to resist sea water.

Recent Progress in the Study of Corrosion, J. Newton Friend. West of Scotland Iron & Steel Inst.—Jl., vol. 31, part 5, Feb. 1924, pp. 74-83, and (discussion) 84-87, 11 figs., on supp. plates. Theories of corrosion; corrosion in moving liquids; colloid theory; influence of humidity, and of dis-

solved salts; action of alkalies on iron; influence of temperature; corrosion and overstrain.

Report of Committee on Corrosion of Ferrous Metals. Am. Foundrymen's Assn.—Preprint no. 445, for meeting Oct. 11-16, 1924, 9 pp., 11 figs. Accelerated spray tests on cast iron, cast steel and malleable; recommendations.

Rust and Its Causes, J. D. Frazer. Minn. Federation Architectural & Eng. Soc.—Bul., vol. 9, nos. 7 and 8, July and Aug. 1924, pp. 15-18 and 21-26, 2 figs. Discusses history of manufacture of iron and steel, purity of ancient iron, difference in products of open hearth and puddling furnace.

See also IRON AND STEEL, Corrosion.

Metallic. The Mechanism of Metallic Corrosion, G. D. Bengough and J. M. Stuart. World Power (formerly Beama), vol. 1, no. 1, Jan. 1924, pp. 25-34, 1 fig. Direct union with oxygen; hydrogen-displacement type of oxidation; formation of and changes in initial scale; corrosion of typical metals.

Metals. See METALS, Corrosion; Corrosive Agent, Behavior Under Action of; Protection.

Monel Metal. See MONEL METAL, Corrosion.

Muntz Metal. The Corrosion of Muntz Metal in Sea Water, W. Donavan and T. E. Perks. Chem. & Industry, vol. 43, no. 13, Mar. 28, 1924, pp. 72T-75T, 5 figs. Investigation into cause of occasional rapid corrosion of metal sheathing on Otaika Bridge, New Zealand; micrographical examination. See also succeeding article by T. E. Perks, entitled, The Corrosive Action of Brackish Waters on Metals, pp. 75T-77T, 2 figs.

Pipe. See PIPE, Corrosion.

Prevention. Corrosion Prevention. Machy. Market, no. 1239, Aug. 1, 1924, pp. 17-18, 4 figs. Special reference is made to "bitumastic" specialties which are now made in various shades; black solution is quick drying and has great durability forming impervious film over metal, effectively keeping out causes of corrosion, while cracking and peeling from movement of metal due to change of temperature is entirely prevented by elastic nature of solution.

Rust Removal. The Removal of Rust by Electrolytic Processes, J. P. McLare. Engineering, vol. 117, no. 3027, Jan. 4, 1924, pp. 25-29, 5 figs. Results of experiments with alkaline bath; efficiency of bath; describes plant and its development; cost of installation.

Ships. See SHIPS, Corrosion in.

Soil. Soil Corrosion Investigation, K. H. Logan. Am. Foundrymen's Assn.—Preprint no. 446, for meeting Oct. 11-16, 1924, 21 pp. Investigation by U. S. Bur. Standards of action of soils on buried pipes; tests of pipe materials, protective coatings, brass pipe fittings, and miscellaneous materials; determination of corrosion of specimens; discussion of progress report of soil-corrosion investigation.

Steam-Turbine Blades. See STEAM TURBINES, Blading.

Steel Plates. See STEEL, Plates, Corrosion-Resistance Tests.

Steel, Submerged. See STEEL, Submerged Corrosion.

Study of. A Paradox in Corrosion, U. R. Evans. Chem. & Met. Eng., vol. 30, no. 24, June 16, 1924, pp. 949-953, 3 figs. Mechanism by which currents are produced explains why corrosion depending on oxygen is sometimes greatest where oxygen is excluded.

Sugar Mills. Corrosion in Piping and Steam Turbines in Sugar Mills, I. McNiece. La. Planter & Sugar Mfr., vol. 73, no. 22, Nov. 29, 1924, pp. 428-429. Discusses corrosion caused by chemical action and corrosion traceable to usual attrition or abrasion of physical and material contact.

See also SUGAR MANUFACTURE, Corrosion Problems in.

Tarnishing and. The Relation Between Tarnishing and Corrosion, U. R. Evans. Am. Electrochem. Soc.—Advance Paper no. 6, for meeting Oct. 2-4, 1924, pp. 75-100, 7 figs. partly on supp. plate. Describes investigations into attack of gaseous sulphur dioxide on iron and zinc, and that of hydrogen sulphide on copper, with special reference to part played by water in each case, and also to essential difference between tarnishing and corrosion proper.

Tin Food Containers. The Corrosion of the Tin Container by Canned Foods, H. W. Powell and E. W. McHenry. Can. Chem. & Metallurgy, vol. 8, no. 8, Aug. 1924, pp. 185-186. Discusses subject of corrosion of food containers, pointing out certain of the factors involved and methods of controlling them. States that subject requires extensive research work before a practical solution can be reached.

Water Pipes. See WATER PIPES, Corrosion.

Zinc and Lead. The Relative Corrosion of Zinc and Lead in Solutions of Inorganic Salts, J. N. Firend and J. S. Tidmus. Inst. Metals.—Advance Paper no. 4, for meeting Mar. 12-13, 1924, 9 pp., 4 figs. Influence of alkali salts upon relative rates of corrosion of zinc and lead closely resembles that already observed in case of iron; satisfactory explanation can be offered to account for this.

COST ACCOUNTING

Balance-Sheet Analysis. A Method of Balance Sheet Analysis, A. Gilman. Mgmt. & Administration, vol. 8, no. 2, Aug. 1924, pp. 147-150. Deals with plan which compares a given balance sheet with earlier balance sheets of same company, describing new method called "index method." Comparison of "ratio method" and "index method." Advantages of "index method."

Balance Sheet Analysis, A. Wall. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 521-524. Purpose is to read figures of series of balance sheets so as to bring out more clearly, or emphasize, trends or strains in financing not easily recognizable in dollar figures.

Capital Requirements and Control. Capital Requirements and Control, J. H. Bliss. Mgmt. & Administration, vol. 7, nos. 4, 5, and 6, Apr., May, and June, 1924, pp. 405-410, 529-532, and 653-658. April: Control of fixed property investments. May: Surplus and its constructive application. June: Protection of working capital.

The Operating and Financial Ratios Characteristics of Industries, J. H. Bliss. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 155-160. Characteristic ratios of operating results; characteristics within industries; statistics on volume costs and margins; changed relationships in readjustment period; characteristic margins and expense ratios; contrast in turnovers.

The Story Told by the Financial and Operating Statements, J. H. Bliss. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 25-30. Author takes typical financial statement and analyzes it so as to show wide range of essential information that can be drawn from its figures.

Costs and Inventory Records. Combined Record System for Costs and Inventory, Wm. L. Myles. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 575-578, 6 figs. All records of labor and material kept in visible index; description of forms; how costs are determined; purchasing index and payroll statistics.

Crushed-Stone Industry. Cost Accounting in the Crushed Stone Industry, D. J. Hutchinson. Pit & Quarry, vol. 8, no. 12, and vol. 9, nos. 1, 2, 3, 4, and 5, Sept., Oct. 1, 15, Nov. 1, 15, and Dec. 1, 1924, pp. 89-92, 77-81, 67-72, 81-86, 105-110, and 105-108, 4 figs. Sept.: Cost accounting in its relation to selling prices, application of uniform accounting methods and material as an element of cost. Oct. 1: Expense analysis and distribution. Oct. 15: Principles and basis of expense distribution. Nov. 1: Application of these methods to actual cost figures. Nov. 15: General ledger control. Dec. 1: Methods of determining depletion.

Depreciation. A Statistical Theory of Depreciation, Based on Unit Cost, J. S. Taylor. Mass. Inst. Technology—Dept. of Mathematics Pub., Series 2, no. 71, Feb. 1924, pp. 1010-1023. Discusses methods of treating depreciation, dealing with "useful life" of machine, or number of years property will be used, and how depreciation charges are to be distributed over period of use. Reprinted from Am. Statistical Assn., Dec. 1923.

New Forms of Depreciation Schedules, G. W. Greenwood. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 689-692, 3 figs. Outlines method called sinking-fund method, which is believed to be new and to have advantages in many cases; comparison with straight-line method.

Executives. Costs for Executives, N. A. Hall. Indus. Mgmt. (N. Y.), vol. 67, no. 6, and vol. 68, nos. 1, 3, and 5, June, July, Sept., and Nov. 1924, pp. 325-328, 14-17, 135-138, and 283-286. June: Relationship between books and costs. July: Foundation of cost system. Sept.: Where burden comes from. Nov.: Equitable distribution of burden.

Industrial Cost Accounting for Executives, P. M. Atkins. Am. Mach., vol. 60, nos. 6, 7, 9, 10, 11, and 12, Feb. 7, 21, 28, Mar. 6, 13, and 20, 1924, pp. 201-204, 287-290, 329-333, 353-356, 403-406, and 433-434, 1 fig. Feb. 7: Standard practice instructions; installing system of cost accounts. Feb. 21: Design of forms to be used in facilitating keeping of cost records. Feb. 28: Coördination of cost records and general accounts. Mar. 6: Cost statistics and two methods of their visualized presentation; comparative reports. Mar. 13: Cost-accounting service to production control; auditing work of planning departments; comparative cost data for foreman. Mar. 20: Factory control by means of cost accounts; analyzing qualities of executive.

Factory. Connection Between Factory and Accountancy Bookkeeping (Zusammenhang zwischen Betriebs- und Kaufmännischer Buchhaltung), F. Schönberger. Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1139-1144, 7 figs. Explains connection between cost accounting and general bookkeeping by means of graphic diagrams; distribution of general expenses over individual cost; etc.

Finding and Making Use of Factory Costs, A. W. Rowley. Indus. Mgmt. (N. Y.), vol. 67, no. 4, Apr. 1924, pp. 195-200, 11 figs. Describes cost system successfully adopted by Harder Mfg. Corpn., manufacturers of silos and refrigerators.

Urgent Problems of Factory Organization and Their Natural Solution (Brennende Probleme der Betriebsorganisation und ihre natürliche Lösung), Geo. Schlesinger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 19, May 10, 1924, pp. 459-462, 4 figs. It is shown that the best scheme of factory organization is that in which cost accounting goes hand in hand with production: in other words, cost accounting should be a by-product of whole activity of plant.

Foundries. See FOUNDRIES, Cost Accounting.

Function of, Measuring. Evaluating the Cost Department. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 477-479. Varying views of cost accountants, engineers, and others on possibility of measuring cost-accounting function.

General-Expense Allocation. See FOUNDRIES, General Expenses, Allocation of.

Heat-Treating Department. The Complete Operation of a Practical Cost System, A. H. Gibson. Factory, vol. 32, no. 2, Feb. 1924, pp. 170-172, 234 and 236, 1 fig. Deals principally with problems of cost accounting in heat-treating department.

Highway. See HIGHWAYS, Cost Accounting.

Inventory Methods. A Simple Perpetual Inventory System, C. J. Morrison. Am. Mach., vol. 60, no. 5, Jan. 31, 1924, pp. 175-176, 3 figs. Simple and convenient perpetual inventory system for small shop; application to various classes of manufacturing; small amount of clerical work involved.

Keeping Perpetual Plant Inventory, W. C. Sponenburg. Telephony, vol. 86, no. 7, Feb. 16, 1924, pp. 21-23. Method, employed by Glen Telephone Co., Gloversville, N. Y., found most helpful in preparing reports for state tax and public-service commissions.

Quantity Control of Inventories, E. K. Wennerlund. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 677-682, 5 figs. Physical regulation contrasted with mere financial information; purpose of inventory control; classification of inventory; control of production materials; scheduling of purchase orders; follow-up of purchase orders; physical handling of materials.

Job Costing. A Simple System of Job Costing. Mar. Engr. & Nav. Architect, vol. 47, no. 557, Feb. 1924, pp. 66-67, 2 figs. Costing as a science; cost-recording essentials; labor rate and materials rate; prime cost cards.

Machine Shops. Costs and a Cost System, H. P. Dix. Am. Mach., vol. 60, no. 23, June 5, 1924, pp. 853-855. How to determine what list price should be; what records are necessary in cost system; information that can be used by any maker of machinery.

Machines for. See CALCULATING MACHINES, Cost-Accounting.

Manufacturing Costs. Notes on Manufacturing Costs, J. de Boisgrollier. Foundry Trade Jl., vol. 30, no. 436, Dec. 25, 1924, pp. 543-544. Points out danger of quoting average prices; basic conditions for fixing cost; method advocated for control of manufacturing costs. Translated from paper presented to Assn. Technique de Fonderie.

Mines. See MINES, Cost Accounting.

Point Method. Getting at Costs by the "Point Method," R. E. Roesler. Factory, vol. 32, no. 5, May 1924, pp. 662-663, 2 figs. Describes point cost method and its applications.

Production Costs. Calculation of Cost of Production and Bookkeeping (Selbstkostenberechnung und Buchhaltung), R. Doczekal. Sparwirtschaft, vol. 1, no. 21-24, Nov.-Dec. 1924, pp. 109-112 (AWB), 1 fig. Conditions to be fulfilled where cost keeping and bookkeeping are closely interconnected.

Pulp and Paper Mills. Accounting in Pulp and Paper Mills, Thos. J. Burke. Paper, vol. 35, no. 10, Dec. 25, 1924, pp. 405-407. Segregating fixed assets to get correct costs and proper estimation of receipts and expenses important to every accountant.

Rubber-Tire Manufacture. See TIRES, RUBBER, Manufacturing Costs.

Small Plants. Correct Costs at Little Expense, G. G. Thompson. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 517-520. System for small and medium-size plant.

System. See INDUSTRIAL MANAGEMENT, Planning.

Wastage in Relation to. The Wastage of Industrial Plant in Relation to Cost Accounting, A. Stewart. World Power, vol. 1, no. 6, June 1924, pp. 318-324, 4 figs. Nature of wastage; methods of measuring depreciation; plant register; cost of additions; repairs and renewals; inclusion of plant register.

Water-Works. See WATER WORKS, Cost System.

COSTS

Control of. See INDUSTRIAL MANAGEMENT, Cost Control.

Machine-Shop. How to Estimate Machine Shop Costs, A. A. Dowd. Am. Machinist, vol. 61, no. 6, Aug. 7, 1924, pp. 227-230, 3 figs. Estimates of machining time on spline-milling operations; practical examples of keyway and slot cutting; gear milling and hobbing estimates.

See also COST ACCOUNTING, Machine Shops.

Production, Calculation of. Calculating Cost of Production (Selbstkostenberechnung), R. Klanner. Sparwirtschaft, vol. 1, no. 15-16, Aug. 1924, pp. 76-78. Discusses calculation of cost of production in a medium-sized machine works with quantity production and order business.

Calculating Cost of Production (Selbstkostenberechnung), E. Schubert. Sparwirtschaft, nos. 9-10 and 11-12, May and June 1924, pp. 49-51 and 57-60. Series of articles based on reports of Cost of Production Committee and giving examples of calculation from new viewpoints.

Cost of Production and Its Determination (Die Selbstkosten und ihre Erfassung), F. Kresta. Sparwirtschaft, no. 19-20, Oct. 1924, pp. 97-105 (AWB), 15 figs. Analyzes direct, indirect, constant, and variable costs, and gives samples of record cards used.

Standard, System. Establishing Standard Cost, R. W. Darnell. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 51-56, 5 figs. Describes system of standard costs showing its operation and its advantages over other cost systems in common use.

COTTON

Breaking Load of. The Effect of Treatment with Sulphuric Acid on the Breaking Load of Cotton, P. D. Vincent. Textile Inst.—Jl., vol. 15, no. 5, May 1924, pp. T281-T290, 7 figs. Effect of treatment with sulphuric acid of various concentrations at room temperature on breaking load of cotton hairs and yarns has been actually measured; kier boiling increases breaking load of untreated yarn but still further weakens weaker acid-treated yarns.

Humidity and Elastic Properties. The Influence of Humidity on the Elastic Properties of Cotton, F. T. Peirce. Textile Inst.—Jl., vol. 15, no. 11, Nov. 1924, pp. T501-T518, 5 figs. Discusses rigidity of raw cotton hairs at 20 deg. cent., and the modulus of rigidity at the same temperature.

Moisture Relations. The Moisture Relations of Cotton, A. R. Urquhart and A. M. Williams. Textile Inst.—Jl., vol. 15, nos. 9 and 12, Sept. and Dec., 1924, pp. T433-T442 and T559-T572, 13 figs. Sept.: Absorption and desorption of water by soda-boiled cotton at 25 deg. cent. Dec.: Effect of temperature on absorption of water by soda-boiled cotton.

Research Work. Practical Application of Research Work, E. D. Walen. Textile World, vol. 65, no. 5, Feb. 2, 1924, pp. 161-162, 4 figs. Work of Cotton Research Co.; analyzes mill problems both in mill and laboratory with coöperation of practical mill men.

Stress-Strain Relationships. The Stress Strain Relationships of Cotton Hairs—The Time Factor, Geo. E. Collins. Textile Inst.—Jl., vol. 15, no. 11, Nov. 1924, pp. T519-T528, 4 figs. Deals with changes in dimensions of single cotton hairs under longitudinal stresses in their relation to time of application of loads.

COTTON INDUSTRY

Physical Research. Physical Research in the Cotton Industry, A. E. Oxley. Manchester Literary & Philosophical Soc.—Memoirs & Proc., vol. 68, no. 1, 1924, pp. 69-80, 16 figs., partly on supp. plates. Applications of physical methods to spinning, weaving, and finishing sections of trade; indicates how physical properties of finished fabric may be measured by aid of purely physical determinations.

COTTON MILLS

Compressed Air in. See COMPRESSED AIR, Cotton Mills.

Conveyors for. See CONVEYORS, Cotton-Mill.

Dust Removal. See DUST, Removal of.

Electric Motors for. Selecting Motors for Cotton Mills, Wm. S. Maddocks. Elec. World, vol. 83, no. 6, Feb. 9, 1924, pp. 272-277, 9 figs. Reasons why standard motors suitable for other plants have been found unsatisfactory; tendencies toward individual drive continue to manifest themselves in this industry.

Mechanical Engineering and Management. The Relation of Mechanical Engineering to Management in the Textile Industry, E. H. McKitterick. Mech. Eng., vol. 46, no. 6, June 1924, pp. 343-344 and 359. Reduction of cost of manufacture by means of improvements in power, lighting, and heating systems, and in handling of goods between processes.

Power Costs. Power Costs in Cotton Mills. Elec. World, vol. 83, no. 13, Mar. 29, 1924, pp. 621-623, 9 figs. Survey of conditions in twenty mills; relative values of all cost elements; purchased vs. made power and combinations; analysis of load conditions.

COUNTERBORES

Manufacture of. Manufacturing Interchangeable Counterbores. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924; pp. 943-947, 15 figs. Also Machy. (Lond.), vol. 24, no. 619, Aug. 7, 1924, pp. 592-596, 15 figs. Unusual operations and fixtures employed by Gairing Tool Co., Inc., Detroit, Mich., in making counterbores and holders.

COUPLINGS

[See also CLUTCHES.]

Compression. Making Couplings For Transmission of Power, H. P. Armson. Can. Machy., vol. 31, no. 13, Mar. 27, 1924, pp. 19-21, 3 figs. Shop methods and tools in plant of Bond Eng. Works, Toronto, Can., for machining double tapered sleeves and inner and outer shells for compression couplings.

Construction and Uses. Construction Details and Use of Clutches and Cutoff Couplings, F. E. Gooding. Indus. Engr., vol. 82, nos. 1 and 2, Jan. and Mar. 1924, pp. 5-9 and 127-130, 29 figs. Construction and operation of friction and magnetic clutches and cut-off couplings, and information necessary when ordering and installing them.

Hydraulic. See OIL ENGINES, Hydraulic Couplings.

Safety, for Machine Drives. Safety Couplings for Machine Drives, F. Osgood Hickling. Am. Mach., vol. 61, no. 24, Dec. 11, 1924, pp. 921-923, 7 figs. Devices to prevent damage to machines when drives or feeds are overloaded, and

which take place of "breaking pin" in light machines.

Shaft. Cast-iron Shrouded Shaft Couplings. Machy. (Lond.), vol. 24, no. 619, Aug. 7, 1924, pp. 582-583, 1 fig. Also (comment by W. R. Needham) no. 626, Sept. 25, 1924, pp. 816-817, 1 fig. Table giving modern proportions of shaft couplings and additional information that is required when designing a coupling.

CRANES

Balance-Weight Determination. Determination of Additional Weight—Ballast and Balance Weight—in Revolving Cranes (Bestimmung des Zusatzgewichtes—Ballast und Gegengewichte—bei Drehscheibenkranen), W. Hilge. Fördertechnik u. Frachtverkehr, vol. 17, no. 3, Feb. 3, 1924, pp. 29-31, 3 figs. Gives simple method for determining additional weight as the only possible minimum; by this means production and freight are rendered cheaper; current supply of slewing motor is reduced and control of crane is made easier.

Bearings. See BEARINGS, ROLLER, Shipbuilding.

Bridge. Columbia Digger Unloading Plant at Portland. Rock Products, vol. 27, no. 16, Aug. 9, 1924, pp. 35-37, 7 figs. West coast sand producer uses bridge crane of excellent design for unloading barges and putting sand and gravel into storage.

Building Material. See CONVEYORS, Building-Construction.

Cantilever. Cantilever Crane with Combined Counterbalance for Lifting Work and Weight of Load (Auslegerkran mit vereinigtem Hub-Arbeits- und Lasthöhenausgleich), V. Hirschhaut. Fördertechnik u. Frachtverkehr, vol. 17, no. 13, July 8, 1924, pp. 180-181, 1 fig. Details of design of new patent in which load jib is provided with rigid counterweight jib, with chain from drive to load and counterweight, etc.

Chains. See CHAINS, Crane.

Change-Gear. Hoists with Change-Wheel Drives (Hebezeuge mit Wechselgetrieben), W. Claes. Zeit. des Vereines deutscher Ingenieur, vol. 68, no. 48, Nov. 29, 1924, pp. 1247-1249, 9 figs. Describes new type of crane developed by firm of Arn. Georg, known as AGO crane; increased efficiency is demonstrated by comparison with other types; its practical importance for different special purposes.

Combination Pile Driver and. Combination Heavy Duty Crane and Pile Driver. Ry. Age, vol. 76, no. 15, Mar. 15, 1924, pp. 757-758, 2 figs. Machine built by Brown Hoisting Co. for Northern Pacific is capable of driving piles straight ahead or on either side of track; it may be revolved 360 deg. in either direction and piles may be driven at any point within circumference of 32-ft. circle.

Control, Electric. New Controls for Grab Cranes (Neue Steuerungen für Greiferkrane), F. Rothe. Siemens-Zeit., vol. 4, no. 9, Sept. 1924, pp. 318-325, 11 figs. Discusses different types of grab cranes for handling bulk goods, including two-chain cranes with two-motor control systems.

Crawler. Crawler Crane Built for First Time in Canada, H. P. Armson. Can. Machy., vol. 32, no. 3, July 17, 1924, pp. 19-21 and 42, 3 figs. Designed and built by J. T. Hepburn, Ltd., Toronto, for service in civic yards.

Derricks. See DERRICKS.

Double. Double Cranes in Port of Hamburg. Port & Terminal, vol. 4, no. 2, Mar. 1924, p. 20. Particulars of new crane, put out by Deutsche Maschinenfabrik A. G., Duisburg (Demag), for cargo handling; constructed along new lines, represents a combination in the building of two different types of cranes.

Electric. Electric Level-Luffing Cranes, W. A. Perry. Elec. Rev., vol. 94, no. 2412, Feb. 15, 1924, pp. 248-249, 2 figs. Describes 7-ton dock-side cranes supplied to Ardrossan Harbor Co., Scotland.

See also Traveling.

Electric Current for, Choice of. Choice of Current for Hoists with Special Regard to Harbor Cranes (Wahl der Stromart für Hebezeuge unter besonderer Berücksichtigung der Hafenkrane), H. Gettert. Elektrotechnische Zeit., vol. 45, no. 16, Apr. 17, 1924, pp. 353-359, 17 figs. Author seeks to ascertain which kind of current is most economical with regard to energy consumption.

Electric Equipment. Modern Single-Phase Crane Equipment of Brown, Boveri & Cie (Moderne Einphasen-Kran-Ausrüstungen der Brown, Boveri & Cie., A.-G.), H. Gettert. Fördertechnik u. Frachtverkehr, vol. 17, no. 5, Mar. 3, 1924, pp. 59-65, 28 figs. Advantages of Deri motors for drive of hoists; design and operation of motors; selection of control apparatus and arrangement of control for different types of cranes; control of Deri motors with controller and resistance.

Floating. A Self-propelled 350-Ton Floating Crane. Engineer, vol. 137, no. 3563, Apr. 11, 1924, p. 396, 8 figs., partly on supp. plate. Crane under erection in Japan designed to lift working load of 350 tons at 100-ft. radius; built by Cowans, Sheldon & Co., Carlisle.

See also DREDGES, Harbor.

Foundry. Calculation of a Foundry Crane (Berechnung eines Giessereidrehkranes), P. Meerholz. Praktische Maschinen-Konstrukteur, vol. 57, nos. 8 and 10, Mar. 1 and 25, 1924, pp. 88-90 and 122-124, 3 figs. Calculation and design of a slewing crane of 3000 kg. capacity, 6 m. radius, and 4 m. lift. Calculation of braking force required.

Gap. See RAILWAY REPAIR SHOPS, Locomotive.

Harbor. Improvements in the Construction of German Loading and Unloading Equipment (Neuerungen im Bau von deutschen Umchlaganlagen), Buhle. Bautechnik, vol. 2, no. 12, Mar. 18, 1924, pp. 125-142, 61 figs. Deals with mechanical equipment for ship loading and unloading, giving numerous examples of modern harbor cranes, and auxiliary equipment.

Modern Crane Plants for Waterways, River and Sea Ports and Docks (Neuzeitliche Krananlagen für Wasserstrassen, Binnen und Seehäfen sowie für Werften), K. Zapf. Schiffbau, vol. 25, nos. 19 and 20, July 9 and 23, 1924, pp. 521-525 and 547-550, 18 figs. Details of design and operation of various types of cranes built by the Ardeltwerke.

See also Electric Current for, Choice of.

Hydraulic, Air-Chamber Filling Device. Automatic Device to Fill the Air Chambers of Hydraulic Cranes With Compressed Air (Vorrichtung zum selbsttätigen Auffüllen der Windkessel von Wasserkranen mit Druckluft), G. Wagner. Verkehrstechnik, vol. 41, no. 15, Apr. 11, 1924, pp. 139-141, 2 figs. Improved design illustrated and described.

Industrial. Devices for Grappling Loads for Cranes (Die Lastaufnahmemittel der Krane), R. Hänchen. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 567-575, 31 figs. Discusses conveying apparatus for bulk goods; describes types of grabs, tipples, etc.

Jib. "Toplis" Luffing Cranes at Southampton Docks. Engineering, vol. 117, no. 3050, June 13, 1924, pp. 762-763, 4 figs., partly on p. 768. Patent horizontal-luffing type, consisting of traveling truck, in which is mounted a rotating steel

lattice structure, forming a mast and carrying jib and combined machinery house and operator's cabin.

Locomotive. Locomotive Cranes (Grue per sollevamento locomotive), F. Scheuermann. Ingegneria, vol. 3, no. 8, Aug. 1, 1924, pp. 283-285, 8 figs. Details of design and construction of cranes of capacities of up to 80 tons.

Putting Locomotive Cranes to Work, Geo. E. Titcomb. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 475-478, 10 figs. Discusses types which are of greatest use in manufacturing plants.

Standardization of Locomotive Cranes as Auxiliary Equipment for Use with Steam Shovels, J. C. Wheat. Min. Congress Jl., vol. 10, no. 4, Apr. 1924, pp. 171-173, 4 figs. Points out that two or three sizes should be developed to fulfill whatever special requirements are necessary for mining industry.

Overhead, Erection of. Erection of Overhead Crane Made Easy, Wm. L. Laing. Power, vol. 60, no. 22, Nov. 25, 1924, pp. 836-839, 8 figs. Methods of handling crane parts.

Overhead vs. Gantry. Comparative Cost of Electric Traveling and Gantry Cranes, Wm. L. Laing. Am. Mach., vol. 60, no. 9, Feb. 28, 1924, p. 318. Assumptions and figures which, when corrected to suit local conditions, can be used as guide.

Power-Plant. Types of Cranes for the Power Plant. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 846-848, 4 figs. Crane capacity may be determined by weight of equipment to be installed in future.

Quay. The Design of Quay Cranes, F. M. Du Plat Taylor. Engineer, vol. 137, no. 3570, May 30, 1924, p. 598, 2 figs. Suggests arrangement and design of cranes to meet requirements of modern large sea-going vessels.

Self-Propelling. A French Automobile Crane. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 604-605, 2 figs. Type of self-propelled crane extensively used in France for railway siding and port work, as well as for town and city transport and cleaning services.

Shop. Shop Cranes (Werkstätten-Innendienstkrane), R. Hänchen. Praktische Maschinen-Konstrukteur, vol. 57, nos. 37 and 38, Sept. 30 and Oct. 7, 1924, pp. 501-504 and 513-518, 24 figs. Construction and application of cranes used in workshops, including traveling, jib, slewing, and other types; cranes in shops consisting of a number of halls; floor cranes with and without tracks.

Slings. Use of Slings for Heavy Parts. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 955-957, 5 figs. Safety suggestions for crane followers in connection with use of slings and making hitches.

Traveling. A Special Running Shed Crane Equipment on the Pennsylvania Railway. Ry. Gaz., vol. 41, no. 2, July 11, 1924, p. 43, 3 figs. Particulars of ten-ton electric overhead traveling crane, operating on circular track and having all wheels of same diameter, at Columbus, Ohio, enginehouse of Penn. Ry.

Direct or Alternating Current for Overhead Traveling Cranes, Wm. L. Laing. Am. Mach., vol. 60, no. 4, Jan. 24, 1924, pp. 133-134. Advantages and disadvantages of each type; selecting crane motor with characteristics to fit work; speed, braking, overload capacity, service, and other characteristics.

5-Ton Underhung-Jib Crane. Engineer, vol. 136, no. 3550, Jan. 11, 1924, pp. 48-49, 3 figs. Describes overhead traveling crane with underhung jib, object of which is to reach into adjoining bays, or even beyond end of shop in which it is installed, and thus enable loads to be lifted and transferred from shop to shop without use of tramways or trucks.

Materials-Handling Equipment of the New Docks of Cambrai, France (Les appareils de manutention mécanique des nouveaux docks de Cambrai). Génie Civil, vol. 84, no. 22, May 31, 1924, pp. 513-516, 7 figs. Traveling cranes for transportation of sugar in sacks.

Monorail Traveling Crane. Min. & Oil Bul., vol. 10, no. 7, July 1924, pp. 717-719, 2 figs. Describes overhead crane and monorail system located at plant of Chanslor-Canfield Mirway Oil Co. Crane requires only half usual amount of trackage and makes transfer of large and heavy articles such as beams, pipes, lathes and engines, very simple.

1½-Ton Electric Overhead Traveling Crane with Underslung Bridge. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 164-166, 2 figs. Details of crane built by J. Adamson & Co., Hyde, Eng., with underslung bridge for transferring goods from barges on one side of workship into store sheds on other without traveling longitudinally.

Standard Traveling Cranes (Normale Dampfkrane), W. Benedict. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 576-577, 1 fig. Discusses construction of steam slewing cranes, especially control services; adaptability for many purposes.

Traveling Jib. The Minimum Necessary Total Weight and the Lowest Possible Wheel Load of Traveling Jib Cranes (Svängkranars minsta erforderliga totalvikt och lägsta möjliga hjultryck), J. Björklund. Teknisk Tidskrift, vol. 54, no. 38, Sept. 20, 1924, pp. 97-105 (Mekanik), 9 figs. Analytical methods are applied to principal designs of such cranes and comparatively simple formulas are evolved for minimum total weight and load on wheels of car track.

Unloading. Hoisting Apparatus. Electric Unloading Cranes (Note sur l'étude des appareils de levage. Grues de dechargement à moteurs électriques), G. Catella. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 220-227, 17 figs. Discusses choice of electric motor, calculation of power required, calculation of frame, and stability of crane.

Unloading Plant of the New United Sugar Company at Ham (Somme) [L'installation de déchargement de la Compagnie nouvelle de Sucreries réunies, à Ham (Somme)], C. Dantin. Génie Civil, vol. 85, no. 9, Aug. 30, 1924, pp. 185-189, 7 figs. Details of design and operation of portal gantry and cranes for handling sugar beet; electric drive.

Uses. Industrial Cranes and Their Varied Uses, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 67, no. 4, Apr. 1924, pp. 216-223, 12 figs. Discusses different ways in which cranes can be of service; classifications for cranes.

Wharf. See Electric; Quay.

CRANKCASES

Aluminum, Molding. Central European Practice, C. Irresberger. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 258-262, 15 figs. Aluminum crankcases molded with chills and lugs to neutralize shrinkage effects; molding practice; castings cleaned by sand blast and tested for porosity by brushing with gasoline.

Jigs and Fixtures for. Jigs and Fixtures for Small Crankcases, A. J. Aires. Am. Mach., vol. 60, no. 5, Jan. 31, 1924, pp. 167-170, 9 figs. Locating crankcase from four-bolt holes; centering case from center and end bearings; special sleeves for supporting crankcase walls while broaching and burnishing.

CRANKS

Multi-Throw, Welding. See WELDING, Multi-Throw Crank.

CRANKSHAFTS

Automobile. See DROP FORGING, Crankshafts.

Balancing. Practical Balancing of a V-Type Engine Crankshaft, D. E. Anderson. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 409-414, 10 figs. Practical methods devised to accomplish results desired; describes how selection of parts to obtain equal weights is made; combination static and dynamic balancing machine that can be set for either operation is used for balancing crankshaft; method of testing completed work.

Elastic Couplings, Influence of. Influence of Harmonics of Phase Retardation on Arrangement of Cranks in a Multiple-Cylinder Explosion Engine (Influence des harmoniques des retards de phase sur la répartition des manivelles dans un moteur à explosion à cylindres multiples), A. Blondel. Académie des Sciences—Comptes Rendue, vol. 178, no. 4, Jan. 21, 1924, pp. 354-359. Investigation of influence of elastic couplings and damping; it is shown that use of elastic couplings necessitates closer examination of conditions of resonance and damping of multiple crankshafts.

Explosion-Engine, Resonance of. Experimental Demonstration and Exact Measurement of Resonance of Crankshafts of Explosion Engines; Rôle of Flywheel; Favorable Effects of Elastic Coupling (Démonstration expérimentale et mesure précise des phénomènes de résonance propre des arbres-manivelles des moteurs à explosion; rôle du volant; influence favorable d'un accouplement élastique), A. Blondel and H. Harle. Académie des Sciences—Comptes Rendus des Séances, vol. 178, no. 18, Apr. 28, 1924, pp. 1442-1452, 4 figs. Gives results of experiments to measure resonance in crankshafts at various speeds; compares results with theory.

Failures. Crankshaft Failures on Gas and Oil Engines, E. Ingham. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 719-720. Testing for alignment; Wöhler's experiments on fatigue of metals; brittleness in crankshafts; points out that failure is rarely sudden, and shaft should be examined frequently for signs of fracture.

Stress Distribution in Crankshafts and Its Relation to Crankshaft Failures, D. J. McAdam, Jr. and G. F. Wohlgemuth. Am. Soc. Naval Engrs.—Jl., vol. 36, no. 2, May 1924, pp. 244-281, 29 figs. Causes of crankshaft failures; stress distribution in crankshafts as affected by restraint of journals; stress-strain relationship in typical naval crankshafts; measured and calculated angular deflections of Liberty crankshaft; typical crankshaft failures; desirable stress distribution in crankshafts.

Forging. The Forging of Automobile Crankshafts, J. H. Nelson. Forging—Stamping—Heat Treating, vol. 10, no. 9, Sept. 1924, pp. 312-317, 7 figs. Automobile manufacturers are demanding crankshaft forgings that require least amount of machining and which will give nearly perfect dynamic balance. Description of inspection methods necessary to secure best of material and produce desired results. Discusses forging and heat treatment.

Gas-Engine. The Crankshaft of Gas Engines (Die Kurbelwelle der Gasmotoren), H. and W. Haeder. Motor u. Auto, vol. 21, no. 2, Jan. 25, 1924, pp. 9-14, 56 figs. Aspects governing design; bearings; diameter condition with regard to cylinder bore; main dimensions; lubrication.

Machining. Machining Automobile Crankshafts, W. E. Groene. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 855-858, 4 figs. New manufacturing method involving use of automatic crankshaft lathe in conjunction with multi-cut lathe.

Motorcycle. Manufacturing a Motor Cycle Crankshaft. Eng. Production, vol. 7, no. 143, Aug. 1924, pp. 244-247, 22 figs. Detailed consideration of operation, layout and tooling equipment.

Repairing. See ELECTRIC WELDING, Precision.

CRATES. See PACKING, Crate Design.

CREAMERIES. See DAIRIES.

CREMATORIES

Furnaces. Heat Economics in Crematories (Wärmewirtschaft in Krematorien), Fichtl. Wärme, vol. 47, no. 34, Aug. 22, 1924, pp. 394-397, 5 figs. Types of furnaces; causes of high fuel consumption; improvements in heat economics; suggestions for better furnace construction.

CREOSOTE

Specification for. See RAILWAY TIES, Preservative Treatment.

CRUISERS. See WARSHIPS, Cruisers.

CRUSHERS

Gyratory. Vickers' Gyratory Crusher at the British Empire Exhibition. Engineering, vol. 117, no. 3045, May 9, 1924, p. 606, 2 figs. Designed to meet demands for strong and durable machine capable of crushing large quantities of rock, ore and stone used for road metal, railway ballast, and in concrete.

Types. Crushing and Grinding, S. G. Ure. Chem. & Industry, vol. 43, no. 47, Nov. 21, 1924, pp. 1145-1152, 10 figs. Jaw, disk and gyratory crushers.

Crushing Machinery, Kuhr. Eng. Progress, vol. 5, no. 3, Mar. 1924, pp. 47-49, 1 fig. Deals with crushers used for breaking up and pulverizing hard material, which work especially favorably.

CRUSHING

Ore-Crushing Plant. United Verde Completes Model Crushing Plant, G. J. Young. Eng. & Min. Jl.—Press, vol. 117, no. 10, Mar. 8, 1924, pp. 396-400, 12 figs. Describes new crushing plant of United Verde Copper Co. at Clarksdale, Ariz., designed to receive mine-run or both from underground operations and steam-shovel workings and to crush to various sizes, ranging from a maximum of 2½ to 3½ in. to pass a ¼-in. screen. Dust-collecting system a feature.

CRYOLITE. See FLUORSPAR.

CRYSTALS

Atomic Structure. The Atomic Structure of Deformed Crystals in Their Relation to Stiffening Process (Die atomistische Struktur deformierter Kristalle in ihrer Beziehung zu den Verfestigungsvorgängen), R. Gross. Zeit. für Metallkunde, vol. 16, no. 1, Jan. 1924, pp. 18-23, 14 figs. Results of tests with elastic and plastic deformation of mineral-salt and mica plates and their analogy to metallic crystals.

Carbon Atom in. The Carbon Atom in Crystalline Structure, Wm. H. Bragg. Franklin Inst.—Jl., vol. 198, no. 5, Nov. 1924, pp. 615-625. Observations of behavior of long-chain molecules seem to point to conclusion that carbon atom in chain, like carbon atom in diamond atom, is possessed of four points of attachment regularly disposed about

it, and that non-use of one does not alter disposition of others.

Deformation. The Strengthening of Crystals from the Standpoint of X-Ray Research (Die Verfestigungsfrage vom Standpunkt der Röntgenforschung), E. Schiebold. Zeit. für Metallkunde, vol. 16, nos. 11 and 12, Nov. and Dec. 1924, pp. 417-425 and 462-481, 34 figs. The mechanism of deformation of crystalline media and its identification in X-ray photograph. Bibliography.

Form and Lattice. On the Crystal Form and the Crystal Lattice, M. Yamada. Tôhoku Imperial University—Sci. Reports, vol. 13, no. 1, Oct. 1924, pp. 53-74, 21 figs. Calculates surface energy for few simple cases by assuming simple laws as to atomic action, and attempts to ascertain whether crystal forms and planes of cleavage theoretically found correspond to those which actually occur.

Gravitational Anisotropy in. Gravitational Anisotropy in Crystals, P. R. Heyl. U. S. Bur. Standards—Scientific Papers, no. 482, Feb. 16, 1924, pp. 307-324, 8 figs., partly on supp. plates. Details of experiments made to test whether, in a crystal of one of the nonisometric systems, gravitation will be found to align itself with inertia or will show some variability which will classify it with the great majority of physical phenomena.

Metallic, Etching of Hollow. Etching of Hollow Metallic Crystals (Ueber die beim Anätzen krummflächiger und hohler Metallkristalle auftretenden Körperformen), R. Gross, F. Koref and K. Moers. Zeit. für Physik, vol. 22, no. 5, Mar. 28, 1924, pp. 317-321. A study of faces developed on interior and exterior of hollow tungsten cylinder by etching with alkaline potassium ferricyanide solution.

Recrystallization. Observing the Recrystallization Process by Means of X-Rays (Beobachtungen des Rekristallisationsvorganges mittels Röntgenstrahlen), R. Glocker and E. Kaupp. Zeit. für Metallkunde, vol. 16, no. 10, Oct. 1924, pp. 377-379, 9 figs., partly on supp. plate. Discusses recrystallization tests with rolled silver sheets, showing presence of layers of crystallite at low temperatures which at high temperatures is distributed irregularly.

Strengthening and Recrystallization (Verfestigung und Rekristallisation), R. Gross. Zeit. für Metallkunde, vol. 16, no. 9, Sept. 1924, pp. 344-352, 22 figs. Author attempts to refer deformations of crystal to system based on slip planes formed in crystal, direction of slip, and axis, perpendicular to direction about which lattice can be bent; experiments on bending of rock-salt rods confirm author's previous assumption of strengthening through action of slip planes; effect of crystal surface on strength of rods is investigated and it was found that bending strength depends on inner constitution of crystal, not on surfaces.

Silicon-Steel. A Study of the Joule Magnetostrictive Effect in Silicon Steel Crystals, S. R. Williams. Testing, vol. 1, no. 3, Mar. 1924, pp. 190-193, 3 figs. Results of measurement of changes in length of individual silicon steel crystals when subjected to magnetic fields varying continuously from zero up to two thousand gauss.

Single-Metal. Some Properties of Single Metal Crystals, P. W. Bridgman. Nat. Acad. Sciences—Proc., vol. 10, no. 10, Oct. 1924, pp. 411-415. Results of measurements of number of physical properties of single crystals of more readily obtainable non-cubic metals, Zn, Cd, Bi, Sb, Te and Sn.

Structure. The Crystalline Structure of Organic Substances, W. H. Bragg. Engineering, vol. 117, nos. 3033, 3034, 3035, and 3036, Feb. 15, 22, 29, and Mar. 7, 1924, pp. 211-212, 244-245, 274-275, and 310-311, 22 figs. Feb. 15: Deals with first principles of X-ray analysis. Feb. 22: Reflection of X-rays from planes occupied by atoms in crystal; object of X-ray analysis. Feb. 29: Help of X-ray in finding out internal constitution of crystal. Mar. 7: Comments on long open chain organic molecules; the three types of chemical bonds.

Surface Energy. On the Surface Energy of Crystals and Crystal Forms, M. Yamada. Tôhoku Imperial University—Sci. Reports, vol. 13, no. 1, Oct. 1924, pp. 27-51, 15 figs. Method of extension of Born's and Stern's calculation of surface energy; by applying this method to crystals in general, polyhedral forms of crystals and law of rationality is explained by mutual action of atoms; gives reasonable explanation of cleavage.

Thermal-Expansion Coefficient. On the Thermal Expansion Coefficient of Crystalline Substances, Y. Endo. Tokyo Imperial Univ., Aeronautical Research Inst.—Report, vol. 1, no. 9, Nov. 1924, pp. 225-246, 4 figs. Elucidates mechanism of thermal expansion of crystalline substances and its variation on ground of M. Born and A. Landé's ionic lattice theory and quantum theory.

X-Ray Analysis. Application of X-Ray Crystal Analysis to Metallurgy, W. P. Davey. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 375-392, 6 figs. Outlines methods used in applying X-ray crystal analysis to metallurgy and gives outstanding results so far obtained; figures illustrating atom arrangements and diagram of method used in obtaining X-ray spectroscopic photographs.

Crystal Analysis by the Diffraction of X-Rays, R. A. Patterson. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 689-691, 6 figs. Describes Hull's method of applying X-ray diffraction to analysis of crystals, especially those of metals. Illustration of method applied to copper and copper-manganese alloy.

Study of Crystal Structure and Its Applications, W. P. Davey. Gen. Elec. Rev., vol. 27, nos. 11 and 12, Nov. and Dec. 1924, pp. 742-748 and 795-802, 10 figs. Nov.: Theory of diffraction of X-rays by a crystal. Dec.: Crystal lattices.

The Analysis of Crystal Structure by X-Rays, W. H. Bragg. Chem. & Industry, vol. 43, no. 39, Sept. 26, 1924, pp. 954-963, 9 figs. Consideration of new methods of analyzing structure of materials by means of X-rays, with special regard to stages by which they move toward their objective.

The Application of X-Ray Crystal Analysis to Metallurgy, E. C. Bain. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 692-698, 13 figs. Describes utilization of Hull or Debye and Sherrer method for atomic arrangement for study of metallurgic problems.

Zinc and Cadmium. Investigation of Metal Crystals (Untersuchungen an Metallkristallen), E. Grüneisen and E. Goens. Zeit. für Physik, vol. 26, no. 4-5, Aug. 14, 1924, pp. 235-249, 3 figs. Determination of elastic constants of zinc and cadmium and their specific heat and electric resistance.

CULVERTS

Corrugated-Iron. Corrugated Culverts on the Western Pacific, C. P. Gilmore. Eng. & Contracting (Railways), vol. 62, no. 4, Oct. 15, 1924, pp. 875-878, 3 figs. Twelve years' experience in replacement of wooden structures through high and low fills. Costs of installation.

How One Railroad Replaces Trestles with Corrugated Pipe, R. E. Caudle. Ry. Eng. & Maintenance, vol. 20, no. 1, Jan. 1924, pp. 19-20, 3 figs. Points out advantages of this type of culvert, and

gives comparative costs of concrete, cast-iron, and corrugated culverts.

Is the Corrugated Iron Culvert Adapted to Railroad Use?, W. S. Lacher. Ry. Eng. & Maintenance, vol. 20, no. 6, June 1924, pp. 224-230, 12 figs. Study of problem based on behavior of 10,000 installations in service up to 16 years.

Part Circle Corrugated Culverts in City Drainage. Eng. & Contracting (Roads & Streets), vol. 62, no. 3, Sept. 3, 1924, pp. 499-502, 8 figs. Details of installations in California cities showing application of system at street intersections and other points of small clearance.

Roads Use Corrugated Culverts Under Fills. Ry. Age, vol. 76, no. 27, June 7, 1924, pp. 1359-1363, 5 figs. Study of many installations in service up to 16 years indicates satisfactory service.

Solving the Small Bridge Problem with Large-Diameter Corrugated Iron Pipe, H. B. Kenny. Good Roads, vol. 67, no. 3, Sept. 1924, pp. 83-84, 2 figs. Discusses installation of large-diameter corrugated iron culverts, and methods employed.

Entrance Loss, Reduction of. Shape of Entrance Affects Flow Through Culvert Pipe. Ry. Eng. & Maintenance, vol. 20, no. 5, May 1924, pp. 196-198, 2 figs. Methods of reducing entrance loss; discharge a function of sq. ft. of head for full culvert; results of tests carried out by Univ. of Iowa and U. S. Bur. Pub. Roads.

Highway. See BRIDGES, HIGHWAY, Design.

Mexico. The Culvert System in the Town of Vera Cruz and Its Inconveniences (El sistema de atarjeas en la ciudad de Vera Cruz y sus inconvenientes), M. A. deQuevedo. Revista Mexicana de Ingenieria y Arquitectura, vol. 2, no. 8, Aug. 15, 1924, pp. 429-448, 1 fig., partly on supp. plate. Discusses bases of system constructed by S. Pearson & Son, its drawbacks and additional construction work necessary to put sanitary conditions in satisfactory state.

Replacing by Tunneling. Replacing a Culvert by Tunneling, F. H. Cramer. Ry. Eng. & Maintenance, vol. 20, no. 5, May 1924, pp. 183-186, 8 figs. Unique methods of driving and backfilling result in economical completion of difficult work.

CUPOLAS

Blast Controlling and Recording. Controlling and Recording the Cupola Blast. Can. Foundryman, vol. 15, no. 12, Dec. 1924, pp. 18-19 and 34, 4 figs. Points out that blast pressure is of little value without knowledge of volume; and describes pressure volume recorder which records pressure and volume.

Charge Calculation. Method and Example of Calculating Charges (Schema und Beispiel einer Gattierungsberechnung), B. Osann. Giesserei-Zeitung, vol. 21, no. 15, Aug. 1, 1924, pp. 317-319. Discusses chemical composition of castings, quantity of charge for 100 kg. finished castings, calculation of S content giving quantity of pig, calculates charge on basis of P content, followed by Mn and Si content, etc.

Charging. Mechanical Charging for a Foundry Cupola. Iron Age., vol. 114, no. 22, Nov. 27, 1924, pp. 1397-1398, 3 figs. More uniform mixing and better iron are secured; hydraulic core remover cuts costs of cleaning castings.

Control Records. Records Show Cupola Control, S. J. Pelton. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 255-257, 6 figs. Constant personal check must be kept on materials and methods, otherwise records are liable to have little value; scales and weighing methods require particular attention.

Design and Practice. General Cupola Design and Practice, A. Campion. Foundry Trade Jl., vol. 30, no. 432, Nov. 27, 1924, pp. 455-458. Requirements for efficient working; factors in design; cupola output; charging the cupola; heat development and melting.

Experimental Results. The Dimensions of Cupolas, Their Relation to Volume of Coke and Iron Charges and Their Influence on Melting Process and Coke Consumption (Die Abmessungen der Kuppelöfen, ihr Verhältnis zur Grösse der Koks- und Eisensätze und ihr Einfluss auf Schmelzgang und Koksverbrauch), A. Wagner. Stahl u. Eisen, vol. 44, no. 22, May 29, 1924, pp. 617-622, 1 fig. Results of experiments on two larger cupolas and one smaller one.

Fuel Economy. Economical Melting with Cupolas, H. Van. Aarst. Foundry Trade Jl., vol. 29, no. 409, June 19, 1924, pp. 522-524, 3 figs. See also Foundry, vol. 52, no. 13, July 1, 1924, pp. 514-515, 3 figs. How to be economical with fuel in cupola. Influence of iron on fuel economy, influence of mechanical properties of coke, air supply, and cupola linings.

Iron Melting in. Twin Cupolas Melt Wheel Iron, P. Dwyer. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 287-293 and 322, 10 figs. Describes new process introduced in Albany plant of Albany Car Wheel Co., consisting in melting iron in twin cupolas, allowing it to collect in central chamber and tapping it therefrom into mixing ladle; to insure continuous operation, two pairs of cupolas have been installed.

Operation. Calculations for Cupola Furnace Operation (Berechnungen für den Kupolofenbetrieb). Zeit. für die Gesamte Giessererpraxis, vol. 45, nos. 29, 30, 33, and 34, July 20, 27, Aug. 17 and 24, 1924, pp. 209-210, 217-219, 242-243, and 250-252. Discusses furnace dimensions, quantity of air of combustion and of gases, and makes calculations for increasing or decreasing charges, etc.

Practice. A Day at the Cupola, A. R. Bartlett. Foundry Trade Jl., vol. 29, no. 389, Jan. 31, 1924, pp. 89-92, and (discussion), Feb. 7, 1924, pp. 113-116, 1 fig. Describes operations of a day at cupola of foundry with which author is connected.

See also IRON FOUNDING, Practice.

Schuermann. Blast Preheated in New Cupola. Iron Trade Rev., vol. 74, no. 5, Jan. 31, 1924, pp. 353-355, 3 figs. Arrangement of refractory brick checkerwork conserves heat in cupola invented by E. Schürmann, Dresden, Germany; blast passes transversely across cupola melting zone; pressure and exhaust fans used; substantial saving in coke consumption claimed.

Comparative Melting Tests in a Standard Cupola and a Schürmann Furnace of the Same Overall Dimensions, E. Piwowarsky and N. Broglio. Foundry Trade Jl., vol. 30, no. 425, Oct. 9, 1924, pp. 305-310, 8 figs. Results show that Schürmann furnace has 30 per cent higher thermal efficiency, and mechanical properties of Schürmann-furnace iron are better.

Cupola Furnaces (Die Kupolöfen), L. Bolzani. Praktische Maschinen-Konstrukteur, vol. 57, no. 29, Aug. 5, 1924, pp. 411-412, 4 figs. Summary of development and functions of cupola furnaces; describes Schürmann furnace working with preheated air.

Slagging Operations. Slagging Operations in Cupola Practice, H. H. Shepherd. Metal Industry (Lond.), vol. 24, nos. 11 and 12, Mar. 14 and 21, 1924, pp. 259-261 and 283-284. Object of slagging; slagging reactions; amounts of flux to use; composition of good limestone for fluxing; sulphur absorption; cupola slags.

Thermal Principles. The Thermal Principles of the Cupola Furnace (Die wärmetechnische Grundlage des Kupolofens), E. Diepschlag. Zeit.

für die gesamte Giessereipraxis, vol. 45, no. 41, Oct. 12, 1924, pp. 321-323, 5 figs. Coke consumption should not exceed 6 per cent of charge, and care should be taken to have melting occur at proper temperature, too much coke and too high temperatures being injurious to cast iron.

Tilting Device. Tilting Device Has Advantages on Small Cupola. Can. Foundryman, vol. 15, no. 3, Mar. 1924, p. 16, 1 fig. Shell hung on trunnions for convenience in preparing instead of workman getting inside.

Waste Utilization. Operating Experience with the Gray-Iron and Coke-Recovery Machine (Betriebserfahrungen mit der Graueschen Eisen- und Koks-Rückgewinnungsmaschine), M. Kupper. Giesserei Zeitung, vol. 21, no. 11, June 1, 1924, pp. 223-225. Discusses possible applications of machine, results of operations, profit and loss. Describes tests with cupola-furnace, foundry and other wastes.

CURVES

Construction. The Plotting of Observations on Curves and Analysis of the Curves, G. B. Upton. Sibley Jl. of Eng., vol. 38, no. 7, Oct. 1924, pp. 168-172 and 185, 15 figs. Discusses superiority of graphic presentation, preference of curves to tabular matter, types of curves, expressing data in curves, plotting and fairing, etc.

Electrical Three-Dimensional. Electrical Diagrams in Three Dimensions (Darstellung elektrischer Beziehungen im Raumdiagramm), J. Wotschke. Elektrotechnische Zeit., vol. 45, no. 21, May 22, 1924, pp. 528-529, 3 figs. Describes uses to which diagrammatic curves in three dimensions, on principles of solid geometry, can be put for purpose of explaining graphically certain electrical phenomena, such as efficiency of synchronous generator, which is variable, depending both on power factor and output.

Fitting. The Development of a Frequency Function and Some Comments of Curve Fitting, E. B. Wilson. Nat. Acad. Sci.—Proc., vol. 10, no 2, Feb. 1924, pp. 79-84, 2 figs. Author describes method of determining his own fit which, he claims, has desirable characteristic that it suggests at once a working hypothesis.

Hyperbolic. Plotting Hyperbolic Transformation Curves (Note sur le tracé des courbes hyperboliques de transformation, dans le diagramme). Arts et Métiers, vol. 77, no. 44, May 1924, pp. 170-173, 3 figs. Discusses Brauer's curve showing volume and absolute pressure of gas varying in geometric progression; plotting of hyperbolic curves by means of logarithmic auxiliary curve.

CUTTING METALS

City Gas, Use of. Use of City Gas for Cutting Steel, J. H. Gumz. West. Machy. Wld., vol. 15, no. 3, Mar. 1924, pp. 85-87, 9 figs. Results of tests made to determine cost of city-gas cutting.

Electric-Arc Process. See CARS, Steel, Scrapping.

Hydrogen-Gas. Cutting Metal with Hydrogen Gas, W. H. L. Porth. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 15-18. Conditions important in connection with determining use of a fuel gas for cutting of metals. Equipment used for cutting with hydrogen as fuel gas, and details of operation.

Oxy-Acetylene Cutting. See OXY-ACETYLENE CUTTING.

Oxygas Machine. Oxygas Cutting-out Machine. Machy. (Lond.), vol. 25, no. 631, Oct. 30, 1924, pp. 153-154, 3 figs. Details of oxygen cutting machine using coal gas as combustible for providing initial and auxiliary heat.

Oxy-Hydrogen Cutting. Cutting Metals with Hydrogen Gas, H. W. L. Porth. Iron Age, vol. 113, no. 4, Jan. 24, 1924, p. 298. Equipment used and method of operating it; fields of usefulness enumerated. (Abstract.) Paper read before Gas Products Assn.

Problems. Report on the Present Status and Future Problems of the Art of Cutting and Forming Metals, C. A. Beckett. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 20-30 and 57, 5 figs. Report of new special research committee to foster research activity in this field. Notes on progress made to date in art of cutting metals; research problems; summary of research work on art of cutting metals.

Processes. Economics of Metal-Cutting Processes (Die Wirtschaftlichkeit der Trennverfahren), Kammerer and M. W. Gleich. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 863-865, 3 figs. Compares time and cost of cutting of various rolling-mill products by autogenous and Mars processes, showing advantages of latter, using a cutting disk.

Progress in. Foreign Progress in Cutting Metals, C. A. Beckett. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 618-624, 17 figs. Shows manner in which solutions of some of the problems presented have been attempted by foreign experimenters, referring more specifically to problems (1) development of a standard method for testing tool material and material to be cut, (2) development of a standard heat-treating method, and (3) development of methods for testing tool performance.

Tool-Steel Trials. See TOOL STEEL, Hardness and Cutting Trials.

CUTTING TOOLS

Cutting-Edge Formation. Proper Formation of Cutting Edge of Tools (Die richtige Ausbildung der Meiszelschneide und ihr wirtschaftlicher Einflusz auf die Arbeit in einem zeitgemäsz eingerichteten Hüttenwerke), H. J. Stoewer. Werkstattstechnik, vol. 18, nos. 18 and 19, Sept. 15 and Oct. 1, 1924, pp. 484-486 and 522-526, 11 figs. Discusses feeds and speeds; "Klopfstock" cutting edge of tools for axle-journal turning; lathes for wheel tires and disk wheels, shaft-turning lathes, and others.

Cutting Speeds. Cutting Speeds, Catlin. Eng. Production, vol. 7, no. 136, Jan. 1924, pp. 26-30, 15 figs. Consideration of speeds, type of machine, and tool to be used.

Lubrication. See LUBRICATION, Cutting Tools.

Overhang as Affecting Shop Costs. How the Overhang of Tools Affects Shop Costs, Chas. F. Henry. Am. Mach., vol. 60, no. 1, Jan. 3, 1924, pp. 17-19, 9 figs. Examples from modern railway shops that can apply elsewhere as well; preventing vibration lengthens life of tools.

Standardization. Standardization of Cutting Tools (Beitrag zur Normung der Schneidstähle), R. Nerrlich. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 463-466, 3 figs. Terminology of surfaces and angles of edge of cutting tools.

CYANIDES

Production by Nitrogen Fixation. Cyanides and Chemical Engineering, H. G. Chickering. Chem. & Met. Eng., vol. 31, no. 25, Dec. 22, 1924, pp. 967-970, 3 figs. Engineers of Du Pont Co. have worked out process for producing cyanides by nitrogen fixation.

CYLINDERS

Automobile-Engine. Building McLaughlin-Buick Six Cylinder Engines, A. Murphy and W. Eversley. Can. Machy., vol. 32, no. 20, Nov. 13, 1924, pp. 19-22, 9 figs. Describes use of precision tools in machining operations at Canadian

Products plant, Walkerville division of Gen. Motors of Canada.

Machining Cylinders for the Gray Motor, H. Campbell. Am. Mach., vol. 61, no. 17, Oct. 23, 1924, pp. 659-662, 10 figs. Departmental layout; routing of work with descriptions and illustrations of interesting operations; three-station cylinder fixture; multiple tapping machines; finish boring.

See also AUTOMOBILE ENGINES, Machining Parts; IRON CASTINGS, Automobile Cylinders.

Castings for. The Cylinder Problem, O. Smalley. Foundry Trade Jl., vol. 29, nos. 392, 393, and 394, Feb. 21, 28, and Mar. 6, 1924, pp. 147-151, 173-177, and 195-197, 26 figs. Cause and elimination of the commoner defects encountered in manufacture of cylinder castings.

Hollow, Stresses in. Stable Equilibrium Conditions of a Hollow Cylinder Under External Pressure (Conditions d'équilibre stable d'un cylindre creux soumis à une pression extérieure), P. Gentner. Revue Universelle des Mines, vol. 2 (series 7), no. 6, June 15, 1924, pp. 318-326, 3 figs. Mathematical discussion and calculation of stresses in tubes of infinite lengths (boiler tubes, etc.) and in thin wall tubes.

Locomotive, Machining. How the American Locomotive Company Machines Cylinders and Bushings, L. C. Morrow. Am. Mach., vol. 61, no. 18, Oct. 30, 1924, pp. 675-679, 15 figs. Laying out cylinders for boring and planing; machining operations; testing hydraulically; setting up and assembling cylinders; operations on cylinder and valve-chamber bushings.

See also LOCOMOTIVES, Cylinders, Machining.

Locomotive, Welding. Locomotive Cylinder Welding, J. S. Heaton. Welding Engr., vol. 9, no. 6, June 1924, pp. 24-25, 10 figs. Firepot made of front end netting greatly reduces cost of preheating cylinders; special preheating torch.

Lubricating Oils for. See LUBRICATING OILS, Cylinder.

Motorcycle. Making Motorcycle Cylinders. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 589-590, 5 figs. Work is cast in two-or three-part molds; pouring effected in many different ways; special device used for stripping fins into pattern of cylinder barrel.

Motor Cycle Cylinders (La frabrication des cylindres de motocyclettes), J. Léonard), Fonderie Moderne, vol. 18, Mar. 5, 1924, pp. 45-59, 19 figs. Also Foundry Trade Jl., vol. 29, no. 400, Apr. 17, 1924, pp. 311-315, 16 figs. Discussion of production, including tolerances, hardness, composition recommended, designing desiderata, metal-pattern making, molding, ramming, sponginess, etc.

Oval, for Airplane Engines. The Oval Cylinders. Aeroplane, vol. 27, no. 23, Dec. 3, 1924, pp. 524 and 526. Deals with claims made on behalf of oval cylinder and whether it really has advantages over circular cylinder which are likely to justify its use; supposed to be particularly advantageous in case of radial air-cooled type of engine.

Rotating, Air Force in. See AERODYNAMICS, Rotating Cylinders, Tests of.

Rotating, Deformation in. Deformation of Axial Symmetry in Rotating Bodies (Achsensymmetrische Deformation von Umdrehungskörpern), A. Timpe. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 5, Oct. 1924, pp. 361-376, 3 figs. Discusses solid and hollow cylinders, and solid and annular disks, and calculates axial torsion during rotation.

Seamless Steel. See OXYGEN, Cylinders for, Manufacture.

D

DAIRIES

Waste Treatment and Disposal. Aeration Studies on Creamery Waste Purification, M. Levine, L. Soppeland and G. W. Burke. Iowa State College of Agriculture & Mechanic Arts, vol. 22, no. 10, Aug. 8, 1923, 39 pp. Experiments undertaken to obtain information on principles of purification of dairy wastes; compares treatment of sewage and dairy waste; concludes that rapid elimination of acid constituents must come first in treatment of creamery waste.

The Treatment and Disposal of Dairy Wastes, Chas. L. Walker. Cornell Civ. Engr., vol. 32, no. 9, May 1924, pp. 112, 121, and VII. Summary of conclusions drawn from investigation in which sanitary engineer was of service to dairyman.

DAMS

Alcona, Mich. Alcona Dam on AuSable River, Wm. W. Tefft. Power, vol. 59, no. 6, Feb. 5, 1924, pp. 212-214, 4 figs. Two-unit 8000-kw. plant operating under head of 41 ft. max. ability at min. cost; features of interest are cubical design of plant with conduit spillway beneath power house, thin reinforced-concrete corewall, construction methods enforced by presence of quicksand, casting of steel-reinforced papier-mache conduit forms, etc.

Arch. Calculation of Cylindrical Envelopes Subjected to Thermic Stress. Application to the Calculation of Arched Dams (Calcul des enveloppes cylindriques soumises à des effets thermiques. Application au calcul des barrages-voûtes), A. Haegelen. Génie Civil, vol. 85, no. 3, July 19, 1924, pp. 62-65, 8 figs. Discusses general method for calculation, including general equations of elastic equilibrium, calculation of variations in temperature, application to dams.

High Arch Type Dam Built in Southern Spain, M. E. Wegenstein. Eng. News-Rec., vol. 93, no. 4, July 24, 1924, pp. 128-130, 5 figs. Describes concrete dam of Montejaque hydroelectric project, on Gaduares River in Andalusian Mountains; construction details; American methods and equipment used; crushed rock and sand quarried and prepared at site; two types of form used.

Recent Swedish Arch Dam Design, Bo Hellström. Engineering, vol. 118, no. 3054, July 11, 1924, p. 76. Notes on design of some recently-constructed Swedish concrete arch dams, and calculations involved. Paper, abridged, contributed to World Power Conference.

The Calculation of Dams with Relieving Arches (Zur Berechnung von Staumauern in Sparbauweise), F. Gebauer. Beton u. Eisen, vol. 23, no. 19, Oct. 5, 1924, pp. 258-260, 2 figs. Static calculation to demonstrate stress conditions in this type of arched dams.

See also Hartebeestpoort; Multiple-Arch.

Barrage. From the Gouffre d'Enfer Dam to the Camarasa Dam (Dalla diga di Gouffre d'Enfer a quella di Camarassa), F. Pagliaro. Ingegneria, vol. 3, no. 9, Sept. 1, 1924, pp. 298-305, 11 figs. Discusses hydroelectric plants of Barcelona Traction Light & Power Co. and St. Etienne; comparison of barrage dams and their design aid calculation.

Geologico-Constructive Study of Artificial Lake Barrage Dam and Pressure Conduit (Saggio di

investigazioni geognostico-costruttive applicate allo studio di un bacino imbrifero alpino e dei relativi: Sbarramento e canale di derivazione in pressione), C. Segré. Annali dei Lavori Pubblici, vol. 62, no. 6, July 1924, pp. 537-581. Discusses geological and hydrographical conditions, reservoir pressure conduit and barrage dam construction, etc.

The Sennar Dam on the Blue Nile (Le barrage de Sennar, sur le Nil Bleu). Génie Civil, vol. 85, no. 22, Nov. 29, 1924, pp. 500-503, 9 figs. Discusses irrigation of Gezira plain in Upper Egypt. Design and construction of Sennar dam.

See also Failures; HYDROELECTRIC PLANTS, France.

Building Materials, Investigation of. Investigations in Connection with the Construction of the Barberine Dam (Verschiedene Untersuchungen beim Bau der Staumauer Barberine), Eggenberger. Bauingenieur, vol. 5, no. 7, Apr. 15, 1924, pp. 189-193, 8 figs. Dam situated in valley of Trient River, Switzerland, has volume of 200,000 cu. m., is gravity type with triangular cross-section, and has height of 80 m. above foundation; investigation of building materials.

Concrete. Building Black Canyon Irrigation Dam in Western Idaho, W. Ward. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 818-823, 5 figs. Concrete dam of 184-ft. max. height built by Bur. of Reclamation to save private irrigation district; water level controlled by drum gates; concrete proportioned by Abrams method.

Concrete Dam at Sturgeon Falls Built During Temperatures as Low as 50 Below Zero, Geo. H. Kohl. Con. Rec. and Eng. Rev., vol. 38, no. 25, June 18, 1924, pp. 614-617, 5 figs. Interesting construction procedure on dam built by Spanish River Pulp & Paper Mills, Ltd. Describes plant and methods and gives outline of design.

Concrete Work at Wilson Dam, Muscle Shoals, R. P. Brown. Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 61-66, 6 figs. Construction features of largest concrete project in world.

Large Concrete Dam to Be Built at American Falls. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 741-742, 2 figs. Designs out for bids call for gravity overfall dam in gorge with non-automatic radial crest gates.

Laurel Road Dam, F. W. Skinner. Eng. Wld., vol. 24, no. 3, Mar. 1924, pp. 147-151, 9 figs. Construction details of $600,000 dam just completed for Stamford Water Co., across Mill River stream and valley, about 9 miles from Stamford, Conn., to impound about 2¼ billions gallons water in a 285-acre reservoir; is of gravity section.

Observations of Concrete and Reinforced-Concrete Works During a Trip of Investigation (Beobachtungen an Beton- und Eisenbetonbauten auf einer Studienreise), E. Probst. Bauingenieur, vol. 5, nos. 22, 23, and 24, Nov. 25, Dec. 10 and 25, 1924, pp. 721-728, 765-772, and 801-809, 23 figs. Discusses findings of Glenco inquiry; design and construction of Tirso barrage dam in Sardinia, and Belice barrage dam near Palermo; experience with cast concrete in barrage dam work; standards of bridges for Italian railways.

Progress in the Construction of Reinforced-Concrete Barrages (Fortschritte im Bau von Eisenbeton-Sperrmauern), O. Skall. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 45-46, Nov. 14, 1924, pp. 391-392. Development of Saliger dams, of arches between triangular piers and Ambursen types; proposals for reducing volume of dams and cost of construction; Vogt system of vertical circular cylinders.

Tensile Reinforcement in Concrete Dams, J. B. Macphail. Eng. Jl., vol. 7, no. 4, Apr. 1924, pp. 200-201, 3 figs. Proposed method for determining amount of reinforcement required.

The Construction of Loch Raven Dam, W. A. Megraw. Am. Water Wks. Assn.—Jl., vol. 11, no. 2, Mar. 1924, pp. 434-445, 6 figs. Description of concrete dam which is being constructed on Gunpowder river, in connection with improvements being made in Baltimore's water supply, to impound 23,000,000,000 gal. water; length, 640 ft. overall. Construction details.

The Lake Mentz Dam on Sundays River. Engineer, vol. 137, no. 3553, Feb. 1, 1924, pp. 116-117, 3 figs. partly on p. 122. Scheme carried out by Sundays River Irrigation Board 90 miles north of Port Elizabeth, South Africa; dam consists of massive reinforced-concrete structure, at one end of which are suspended five free-roller steel sluice gates, each 30 ft. wide by 25 ft. deep.

Wilson Dam at Muscle Shoals, World's Greatest Hydraulic Development, H. L. Cooper. Universal Engr., vol. 40, no. 2, Aug. 1924, pp. 21-26, 8 figs. See also Nat. Engr., vol. 28, no. 8, Aug. 1924, pp. 388-391, 3 figs. At Tennessee River for production of electric power and improvement of navigation; details of power house equipment, 30,000 hp. turbines, 25,000 kva. generators, 60 cycle, three-phase 12,000 volt 100 r.p.m., etc.

See also Hartebeestpoort; CONCRETE CONSTRUCTION, Swiss Alps.

Construction. Cableways Handle Excavation and Fill on Wisconsin Dam. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 301-302, 3 figs. Particulars of new dam for Wausau Paper Mills Co., on Wisconsin River at Brokaw, Wis.; designed to develop approximately 4000 hp. under a 17-ft. head. Cofferdam excavated and concrete gravel delivered by one slackline cableway; two used to construct earth dike.

Construction of Dams, A. P. Davis. Engineering, vol. 138, no. 3065, Sept. 26, 1924, pp. 466-468. Summary of current practice, especially its departure from, or development of, former practice. Paper, abridged, contributed to Sec. B of World Power Conference.

Earth. Classification and Definition of Earth Dam Types, J. A. Holmes. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, p. 1102, 7 figs. Descriptions based on methods of construction and materials employed.

Emden. Dike Construction West of the Emden Outer Harbor (Eindeichungsarbeiten westlich vom Emder Aussenhafen), M. Gährs and M. Hinz. Bautechnik, vol. 2, no. 37, Aug. 29, 1924, pp. 397-402, 10 figs. Details of work of walling-in of Larrelt and Wybelsum sandbanks to reclaim land; construction of weir, etc.

Failures. Collapse of the Gleno Dam (Einsturz der Gleno-Talsperre), N. Kelen. Beton u. Eisen, vol. 23, no. 11, June 5, 1924, pp. 133-138, 10 figs. Detailed explanation based on personal investigation of causes of failure.

Details of the Failure of an Italian Multiple-Arch Dam. Eng. News-Rec., vol. 92, no. 5, Jan. 31, 1924, pp. 182-184, 10 figs. Disastrous break of reinforced-concrete structure on masonry base of gravity section; plans not approved and workmanship doubtful; base laid in lime mortar; superstructure concrete poor.

Expert Report on Causes of Failure of Dam at Gleno (Relazione peritale sopra le cause che hanno determinato la rovina della diga del pian di Gleno in Val di Scalve, Crollata la Mattina del 1 Dicembre 1923), G. Ganassini and A. Danusso. Annali dei Lavori Pubblici, vol. 62, no. 5, May 1924, pp. 405-458, 40 figs. partly on supp. plate. Very detailed examination of Gleno collapse giving as fundamental reason inadequate statics of wall at center of dam. See also

(translation). Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 213-215, 3 figs.

Failure of Gleno Dam Charged to Buttress Shear. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 486-488, 5 figs. Study by Swiss engineer finds cause in weakness of defective buttress concrete under shear and tension.

The Destruction of Dams (Ueber Zerstörung von Staudämmen), Ziegler. Zeit. für Bauwesen, vol. 73, no. 10-12, 1923, pp. 293-305, 44 figs. Review of numerous dam failures, mainly in America, and their causes.

The Failure of Gleno Dam, Italy (Der Talsperrenbruch in Val Gleno), A. Stucky. Schweizerische Bauzeitung, vol. 83, nos. 6 and 7, Feb. 9 and 16, 1924, pp. 63-67 and 74-76, 19 figs. Buttress shear is charged with primary responsibility for disastrous failure of dam in Upper Italy; concrete of buttresses appears to have been of such poor quality as to be incapable of resisting stresses; failure of base is stated to be not primary cause of disaster; dam, which was 250 m. long, was completed in Oct. 1923 and failure occurred on Dec. 1. See also article by Rothmund in Bauingenieur (vol. 5, no. 3, Feb. 15, 1924, pp. 59-63, 3 figs.), giving opinion of an Italian engineer on causes of disaster.

Gleno, Italy. See Failures.

Grassridge, South Africa. Grassridge Dam, A. J. Wells-Jones. S. African Irrigation Mag., vol. 3, no. 2, June 1924, pp. 63-70, 7 figs. Description of dam, which is an earthen structure with a concrete core carried up to five feet below crest level. Catchment area 1500 sq. mi., capacity 60,000 acre feet.

Gravity. A Method for the Dimensioning of Gravity Dams (Ueber ein Verfahren zur Dimensionierung von Gewicht-Staumauern), W. Kienast-Curti. Schweizerische Bauzeitung, vol. 83, no. 20, May 17, 1924, pp. 229-230, 4 figs. Describes methods being applied by Buss Corpn. in Basel, Switzerland, according to Gutzwiller cell system, described in previous issue of same journal.

Arching Not Effective in Slightly Arched Gravity Dams, B. F. Jakobsen. Eng. News-Rec., vol. 92, no. 24, June 12, 1924, pp. 1020-1022, 2 figs. Relatively small curvature may be harmful because of reduced stability; arch action cannot be counted on under such conditions; construction costs increased by arching.

New French Instructions for the Building of High Dams as Gravity Dams (Neue französische Instruktion zum Bau hoher Talsperren als Gewichtsmauern), A. Zeerleder. Schweizerische Bauzeitung, vol. 83, no. 16, Apr. 19, 1924, pp. 181-183. Rules and regulations issued by French Minister of Buildings in 1923.

Very High Gravity Dams (Barrages de grande hauteur résistant par leur propre poids). Annales des Ponts & Chaussées, vol. 93, no. 6, Nov.-Dec. 1923, pp. 289-353, 7 figs. Instructions for planning of projects and execution of work presented by French Minister of Pub. Works to chief engineers of roads and bridges. See also discussion of regulations by E. Suter in Bul. Technique de la Suisse Romande, vol. 50, nos. 20 and 22, Sept. 27 and Oct. 25, 1924, pp. 249-252 and 273-277, 7 figs.

Hartebeestpoort, S. Africa. Hartebeestpoort Irrigation Dam in South Africa. Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 981-982, 3 figs. Concrete arch dam 195 ft. high; one end in hill and other at abutment.

The Hartebeestpoort Dam. Engineer, vol. 137, no. 3557, Feb. 29, 1924, pp. 230-231, 6 figs. partly on p. 228. Particulars of concrete dam; contents of reservoir when full is 568 million cu. ft., and calculated volume impounded is 9846 million cu. ft.; height of crest level of waste weir is 140 ft. above river bed, and top of solid parapet wall is 22 ft. 9 in. above top of waste weir.

The Hartebeestpoort Dam. Engineering, vol. 117, no. 3037, Mar. 14, 1924, pp. 323-325, 15 figs. partly on p. 338. Construction details of concrete dam recently completed near Pretoria, S. Africa; main features of design are arch dam, and long spillway at right angles to direction of dam with spillway channel outside it spanned at one point by bridge carrying Pretoria-Rustenburg road.

The Hartebeestpoort Dam, Pretoria, South Africa. Eng. & Contracting (Water Works), vol. 61, no. 2, Feb. 1924, pp. 340-342, 2 figs.

Hydraulic-Fill. Building the Highest Hydraulic Fill Dam, A. C. Eaton. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 235-238, 5 figs. Major unit of New England power system, Davis Bridge development on Deerfield River, Vt.; dam is 200 ft. high; construction operations on dam.

Irrigation. See Concrete; Hartbeestpoort; Sennar.

Italy. Large Italian Dams (Les grands barrages-réservoirs italiens). Génie Civil, vol. 84, no. 20, May 17, 1924, pp. 475-477, 6 figs. Details of more important dams recently completed or under construction, based on report by C. Bonomi in Annali delle Utilizzazioni delle Acque.

See also Failures.

Masonry. Lines of Pressure in Masonry Dams, A. Van der Meersch. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 349-350, 6 figs. Proposes solution which aims at greater simplicity in obtaining lines of pressure.

Movable. Hydraulic Movable Automatic Water Dam (Hydraulisch automatischwerkende "Dakstuw"), Huber en Lutz. Waterstaats Ingenieur, vol. 12, no. 1, Jan. 1924, pp. 3-9, 11 figs. Automatic arrangement which will dam up water so as to produce highest possible level for a hydraulic power plant under normal conditions, but will allow water to flow freely in case of a sudden flood. Numerous installations in Central Europe mentioned and design illustrated.

New Type Movable Dam Guards Soo Canal Locks, L. C. Sabin. Eng. News-Rec., vol. 93, no. 17, Oct. 23, 1924, pp. 656-660, 6 figs. Emergency structure insures service continuity to lock gates of St. Marys Falls canal, Mich.; bridges, wicket frames and needles handled by huge derricks.

Multiple-Arch. Multiple Arch Barrage Dams and Their Security (Les barrages à voutes multiples et la sécurité), E. Baticle. Génie Civil, vol. 85, no. 2, July 12, 1924, pp. 36-37. Criticises continued confidence in multiple-arch dams after Gleno failure and shows that dams do not give security theoretically that might be expected of them.

Reinforced Multi-Arch Dam Design Adopted by Swedish Engineers, Johnstone-Taylor. Concrete, vol. 24, no. 4, Apr. 1924, pp. 152-153, 6 figs. In connection with damming of Great Lule river in Lapland for water-power purposes, multiple-arch design constructed of reinforced concrete was decided upon as most economical. Particulars of structures, of which there are two, one having 23 arches and one 15 arches.

The Dam of the Vöhrenbach Power Plant (Germany) (Die Staumauer des Kraftwerkes Vöhrenbach), Fritz Maier. Beton u. Eisen, vol. 23, nos. 2 and 3, Jan. 20 and Feb. 5, 1924, pp. 13-18 and 25-28, 31 figs. Dam is of multiple-arch type, consisting of 12 arches with total span of 142-8 m. at crown; built of reinforced concrete; construction details and calculations.

The Tirso Dam, Sardinia. Engineering, vol. 118, no. 3071, Nov. 7, 1924, pp. 632-635, 15 figs.

partly on supp. plate. Project involves regulation of river and conservation of water for irrigation purposes, production of hydroelectric power, and drainage of large area to be served by irrigation; multiple-arch dam is said to be highest and most important example of its type to be built; it is 228 ft. from lowest foundation level to roadway level along top, and has series of 17 reinforced-concrete arches.

Muscle Shoals. See Concrete.

Porous-Foundation, Repairing. Repairing the Laguna Dam on the Colorado, R. M. Priest. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 1002-1003, 6 figs. Work to restore 15-yr.-old porous-foundation weir after shortened channel undermines toe of dam.

Rock-Filled. The World's Highest Rock-Filled Dam, T. Marvin. Explosives Engr., vol. 2, no. 9, Sept. 1924, pp. 311-318 and 323, 18 figs. Construction work on dam being erected by Ky. Hydro-Electric Co. on Dix River. Blasting and transportation of 1,600,000 cu. yd. of rock are main factors.

Sand-Bottom Estuaries. Tidal Power Barrages in Sand Bottom Estuaries. Engineer, vol. 137, no. 3559, Mar. 14, 1924, p. 276, 1 fig. Construction developed by author to meet local conditions of estuaries of south and north coasts of Devon and Cornwall, with object of ascertaining actual cost.

Sennar, Africa. The Sennar Dam and the Gezira Irrigation Scheme. Engineer, vol. 138, no. 3587, Sept. 26, 1924, pp. 348-350, 12 figs. partly on supp. plate and p. 352. Particulars regarding construction of Sennar Dam, which is being built on Blue Nile to provide water for irrigation of Gezira Plain, which lies south of Khartoum, on tongue of land formed by confluence of Blue and White Niles. Total length about 9925 ft., and height from lowest point in foundations to top of parapet about 130 ft.

Sluices. Sluices in the Krishnarajasagara Dam, G. Seshagiri Rao. Mysore Engrs.' Assn.—Bul., vol. 2, no. 1, Jan.-Mar. 1924, pp. 1-21, 3 figs. Experiences with sluices already built in dam and general features of proposals for those to be installed.

Spillways. The Hydraulic Design of the Shaft Spillway for the Davis Bridge Dam, and Hydraulic Tests on Working Models. Am. Soc. Civ. Engrs.—Proc., vol. 50, nos. 5, 6, 7, and 9, May, Aug., Sept., and Nov. 1924, pp. 671-678, 852, 860, 1118-1123, and 1426-1435, 3 figs. Discussion of paper by F. Kurtz.

Walls. Sliding Safety of Dams (Die Gleitsicherheit der Staumauern), E. Link. Zeit. für Bauwesen, vol. 74, no. 4-6, 1924, pp. 34-37, 10 figs. Discusses dam construction on base plate, of triangular, rectangular, and compound profiles, and formulates rules for cases where shearing strength of rock cannot be relied upon.

Wilson. See Concrete.

Zuider Zee, Netherlands. The Closure of the Zuider Zee according to the Plan of Ten Bokkel Huinink (De afsluitdijk der Zuiderzee. Plan Ten Bokkel Huinink), M. J. Stam. Ingenieur, vol. 39, no. 9, Mar. 1, 1924, pp. 145-150, 8 figs. Description of a proposed design for a new dam.

DENSIMETERS

DERRICKS

Derrick Boat. See BARGES, Derrick.

Failures. N. Y. Building Bureau Reports on Three Derrick Failures. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 266-267, 2 figs. Inspectors' findings concerning collapses of June 25, July 28 and 31 show one only due to faulty equipment.

DIAGRAPH. See INTEGRATORS, Diagraph.

DIAMONDS

Drill, Brazil. Drill Diamonds, Carbons or Carmonados, Their Occurrence in Brazil, F. L. Garrison. Eng. & Min. Jl.-Press, vol. 118, no. 13, Sept. 27, 1924, pp. 491-495, 7 figs. Physical properties of carbons; data as to Brazilian diamond production scanty; value of gravels a matter of speculation; productive area limited; continued reduction of output seems inevitable.

Grinding Wheel Truing. See ABRASIVE WHEELS, Diamonds for Truing.

Industrial. How Industrial Diamonds Are Set, F. B. Wade. Abrasive Industry, vol. 5, no. 4, Apr. 1924, pp. 93-94. Properties of diamonds for wheel truing, and setting methods.

Industrial Diamonds, R. Shaw. Eng. Production, vol. 7, no. 142, July 1924, pp. 188-191, 6 figs. Use of diamond for truing and dressing abrasive wheels; kinds of diamonds employed; diamond dies.

Mounting Diamonds by Casting, H. Miller. Abrasive Industry, vol. 5, no. 1, Jan. 1924, pp. 1-2, 2 figs. Description of a practical method.

Minerals, Treatment of. Diamond Dressing in British South Africa (Die Aufbereitung der Diamanten in Britisch-Südafrika), Treptow. Metall u. Erz., vol. 21, no. 17, Sept. 1, 1924, pp. 397-401. Discusses kimberlite and other diamond minerals; development of treating processes, apparatus used, mechanical comminuting, etc., as practised at Kimberley.

Mining. Diamond Mining (Diamantengewinnung), H. Harbottle. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 32, Aug. 9, 1924, pp. 827-829, 6 figs. Describes shaft sinking and stripping operations at Kimberley and treatment in washing machines and pulsating plants.

Transformation in Vacuum. Transformation of Diamond in a Vacuum at High Temperatures (Sur la transformation du diamant dans le vide à haute température), P. Lebeau and M. Picon. Académie des Sciences—Comptes Rendus, vol. 179, no. 20, Nov. 17, 1924, pp. 1059-1061. When heated in high vacuum at 1500 to 1900 deg., transformation of diamond into graphite is comparatively slow, being incomplete after one hour, in marked contrast to rapid transformation in presence of gases; above 2000 deg. change is much more rapid, but swelling up and disintegration which occurs in presence of gases are not always observed.

Transformation into Graphite. Transformation of the Diamond (Sur une transformation du diamant), G. Friedel and G. Ribaud. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1126-1129. On heating a diamond to 1500 deg. cent. the surface is blackened; heating in oxidizing flame removes this surface layer, which contains only small proportion of graphite; above 1800 deg. transformation into graphite occurs, becoming more rapid as temperature rises;

above 1885 deg. substance may suddenly disintegrate into small fragments.

Truing, Mounting for. See AUTOMOBILES, Rear Axles, Machining.

DIATOMACEOUS EARTH. See EARTH, Diatomaceous; MOLER.

DIE CASTING

Aluminum. Die-Casting Aluminium, S. Swan. Metal Industry (Lond.), vol. 24, no. 6, Feb. 8, 1924, p. 123. Chief practical precautions that must be taken for successful casting of aluminum in permanent molds.

Die Casting with Special Reference to Latest Results in Aluminum Casting (Die Spritzgussfertigung unter Berücksichtigung der neuesten Ergebnisse auf dem Gebiete des Aluminumspritzgusses), B. Wollmann. Werkstatttechnik, vol. 18, no. 21, Nov. 1, 1924, pp. 620-625, 26 figs. Methods of Arndt & Co., Doehler-Guss Co., Acme Die-Casting Co., and others, and apparatus used.

Aluminum Alloys. See ALUMINUM ALLOYS, Die Casting.

Machines, Alloys, and Dies. Die Casting, N. C. Barnard. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 661-669, 23 figs. Types of die-casting machines; representative alloys for use in die casting; die construction; casting problems; advantages gained by use of inserts.

Process. Die-Casting Processes (Die Spritzguss-Verfahren). Zeit. für die Gesamte Giessereipraxis, vol. 45, nos. 18, 19, 20, 21, 22, and 23, May 3, 10, 17, 24, 31 and June 8, 1924, pp. 114-115, 123-124, 134-135, 143-144, 154-156, and 162-165, 13 figs. Describes automatic machines used for casting parts of 1 to 50 g. weight. Alloys used are mainly white metal; soft alloys of lead, tin, antimony and copper; hard alloys, of zinc, tin and aluminum. Molds used, vertical and horizontal; apparatus made by Gebr. Eckert in Nuremberg.

DIELECTRICS

[See also INSULATION, ELECTRIC.]

Liquid, Disruptive Strength of. Electric Strength of Some Liquid Dielectrics (Ueber die elektrische Festigkeit einger flüssiger Dielektrika), J. Sorge. Archiv für Elektrotechnik, vol. 13, no. 3, July 7, 1924, pp. 189-212, 15 figs. Results of experiments for puncture test with pure liquid hydrocarbons, including some transformer oils; dependence of disruptive strength on gap and curvature of electrodes on temperature, on surface and material of electrodes, on frequency, etc.

Losses. Methods of Measuring Losses in Dielectrics with High-Tension Monophase Current (Méthodes de mesure des pertes dans les diélectriques en courant monophasé à très haute tension), P. Capdeville and R. Laroche. Revue Générale de l'Electricité, vol. 16, no. 17, Oct. 25, 1924, pp. 670-678, 18 figs. Discusses methods with and without use of resistances, especially methods based on use of a reflecting electro-dynamic wattmeter.

Review of Literature on the Dielectric Losses and the Cause of Breakdowns of Solid Dielectrics, Mary Z. Demerec. Sibley Jl. of Eng., vol. 38, no. 3, Mar. 1924, pp. 86-91 and 96, 7 figs. Brief and sketchy review of subject; indicates that present tendency seems to be away from theoretical formulas and toward more practical treatment.

Properties. The Properties of Dielectrics G. L. Addenbrooke. Nature (Lond.), vol. 113, no. 2840, Apr. 5, 1924, pp. 490-491, 2 figs. Conclusions derived from long study of dielectric actions.

Residual Charge and Conductivity. On the Variation of Residual Charge and the Ratio of Electrical Conductivity to Capacity Due to Temperature, Hikoo Saegusa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 432, July 1924, pp. 651-678, 83 figs. Results of investigation of crystalline and amorphous dielectrics. (In Japanese, with abstract in English.)

Solid, Breakdown of. See Losses.

Solid, Disruptive Strength of. Some Notes on the Disruptive Strength of Solid Dielectrics, A. A. Ahmed. World Power, vol. 1, no. 5, May 1924, pp. 281-287, 7 figs. Theoretical investigation of distribution of electric stress in case of plate electrodes, and comparison of results with those obtained by experiment performed on analogous electrolytic medium.

Theory. Dielectrics in the Light of the New Conception of the Atom (Das Dielektrikum im Lichte der neuen Atomvorstellung), G. Jacoby. Elektrotechnische Zeit., vol. 45, no. 37, Sept. 11, 1924, pp. 977-981, 13 figs. Explains behavior of dielectrics in electric field from standpoint of electronic and atomic theory; polarization and dielectric constants, electric puncture, etc.

DIES

Automobile-Fender. Interesting Tools for Drawing Fenders, S. E. Walke. Forging—Stamping—Heat Treating, vol. 10, no. 9, Sept. 1924, pp. 355-356, 8 figs. Describes method used in designing dies for forming crowned automobile fenders having a reversed curve at junction of running board and front fender.

Bending. A Roller Bending Die for Channels, E. Parsons. Forging—Stamping—Heat Treating, vol. 10, no. 12, Dec. 1924, pp. 455-456, 5 figs. Pieces are produced which are not marred in any way by bending die; material is plated and polished before bending operation, greatly reducing cost.

Blanking and Extruding, Steel for. Steel for Blanking and Extruding Dies, E. W. Barker. Forging—Stamping—Heat Treating, vol. 10, no. 3, May 1924, pp. 195-197, 6 figs. Selection of steel, design and heat treatment necessary for long life and rapid production; deep hardening and resistance to abrasion requisite qualities.

Die Casting. See DIE CASTING, Machines, Alloys and Dies.

Die Sinking. See MILLING MACHINES, Attachments.

Drawing. Designing Drawing Dies, E. Heller. Machy. (N. Y.), vol. 30, nos. 8 and 9, Apr. and May 1924, pp. 579-582, 10 figs., and 687-691, 7 figs. Factors to be taken into consideration in designing dies for drawing light-weight metal; operation of drawing die, etc.; determining size of blank for a shell of given dimensions and number of operations to complete work.

Designing Drawing Dies. Machy. (Lond.), vol. 24, nos. 611 and 614, June 12 and July 3, 1924, pp. 341-344 and 422-426, 14 figs. Radii over which metal can be drawn, type of equipment used, operation of drawing die, design of first-operation die, die for final drawing operation, design of blank holders, computing blank diameter of shells of unusual shapes, determining number of operations required, combination die for blanking and drawing, troubles encountered in drawing light-gage metal, etc.

The Redevelopment of the Drawing Die, S. S. Erpward. Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 292-294, 6 figs. Highest attainment in development of drawing dies may be traced to demands of automobile manufacturer for quantity production.

Drop-Forging. Drop Forging Dies—Layout and Design, W. Anslow. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 250-254, 18 figs. Parting line, contraction and balance are important considerations in laying

out dies. Life of dies is, to a large extent, dependent upon their design. Reprinted from Jl. of (British) Assn. Drop Forgers & Stampers.

Drop-Forging Dies: Materials, Allowances, Hardening, and Tempering. Mech. Wld., vol. 76, no. 1977, Nov. 21, 1924, pp. 325-326. Choice of material; allowance for shrinkage; draft allowance; amount of flash; use of lead proof.

Vital Factors in Design of Drop Forging Dies, W. Anslow. Can. Machy., vol. 32, no. 10, Sept. 4, 1924, pp. 27-29, 18 figs. Points out that parting line, contraction and balance are important considerations in layout; life of dies, to large extent, is dependent upon design.

Forging. Forging Dies (Das Schmieden im Gesenk), J. Staack. Werkstattstechnik, vol. 18, no. 20, Oct. 14, 1924, pp. 575-576, 7 figs. Advantages of die forging. Production of dies of various types.

Machine Forging Dies, C. C. Hermann. Machy. (N. Y.), vol. 30, nos. 9 and 10, and vol. 31, no. 1, May, June, and Sept., 1924, pp. 674-676, 754-757, and 34-36, 12 figs. See also Machy. (Lond.), vol. 24, nos. 307, 615, and 624, May 15, July 10, and Sept. 11, 1924, pp. 205-207, 453-455, and 740-742, 13 figs. Deals with design and use. Fundamental principles of design of forging dies, their heat treatment; examples of drop-forging work, procedure in designing dies.

Steels for Forging Machine Dies, E. R. Frost. Forging—Stamping—Heat Treating, vol. 10, no. 10, Oct. 1924, pp. 368-371, 3 figs. Factors entering into choice of best die steel; points out that no definite formula or rule can be given which will cover many conditions encountered.

Taking the Guesswork Out of Dies, C. C. Rhead. Forging—Stamping—Heat Treating, vol. 10, no. 3, May 1924, pp. 188-193, 3 figs. Records covering die performance essential to efficient production; discusses system for recording performance of dies used in production of pressed-metal parts.

Heat Treatment. See STEEL, HEAT TREATMENT OF, Dies.

Piercing. See Progressive.

Progressive. Progressive Dies for Piercing, Bending, and Blanking, W. Richards. Machy. (Lond.), vol. 24, no. 606, May 8, 1924, pp. 174-175, 5 figs. Comments on progressive die for production of bracket, described in same journal (vol. 23, p. 543), and shows that simpler tool and simpler method of producing piece, in one operation, are both available.

Progressive Dies for Piercing, Bending and Blanking, I. Bernard Black. Machy. (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 371-372, 5 figs. partly on p. 373. Describes "follow" and "progressive" die employed to produce locating bracket used in electrical device.

Punches and Standard Sets. See PUNCHES, Dies and.

Screw-Cutting. Screw Cutting, H. Appleyard. Mech. Wld., vol. 76, nos. 1960, 1964, and 1970, July 25, Aug. 22, and Oct. 3, 1924, pp. 50-51, 114-115, and 210-211, 20 figs. Discusses screw cutting by means of dies, including solid dies, round or button dies, spring dies and self-opening dies and best type for given purpose; form and angle of cutter, etc.

Self-Opening, Manufacture of. Development and Manufacture of the Self-Opening Die. Am. Mach., vol. 61, nos. 15 and 16, Oct. 9 and 16, 1924, pp. 563-566 and 621-624, 20 figs. Describes accurate tool work. Grinding operation on smaller parts; special jigs and fixtures; testing parts for accuracy; care of die.

Sewing-Machine Parts. Dies for Producing a Complicated Sewing-machine Part, C. E. Stevens. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 783-786, 6 figs. Piercing and blanking die; die for second and for final forming operation.

Shell, Blank Diameters. Method for Determining Blank Diameters, R. L. Wakelee. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 704-705, 3 figs. Method for determining blank diameters of drawn shells which is simple to apply and gives results that agree more closely with proven blank size than any commonly used methods tried out by author.

DIESEL ENGINES

Air Compressors of. See AIR COMPRESSORS, Diesel-Engine.

Air Supply. A Note on the Air Supply for Large Motor Ships, P. T. Brown. Inst. Mar. Engrs.—Trans., vol. 36, July 1924, pp. 101-140, 11 figs. Discusses air requirements of Diesel machinery for injecting and pulverizing fuel, and for maneuvering engines and other purposes; Lloyd's rules; air compressors and their size.

Asphalt Plants. Diesels in an Asphalt and Petroleum Plant. Oil Engine Power, vol. 2, no. 9, Sept. 1924, pp. 474-475, 2 figs. Power for operation of Warner plant of Warner-Quinlan Asphalt Co. is furnished by two 200-b.hp. McIntosh & Seymour Diesel engines of vertical four-cycle trunk-piston type; two years without repairs and three-month uninterrupted operating periods have characterized installation.

Beardmore-Tosi. Building Marine Diesel Engines. Machy. (Lond.), vols. 23 and 24, nos. 600 and 601, Mar. 27 and Apr. 3, 1924, pp. 825-828 and 17-21, 25 figs. Machining operations on Beardmore-Tosi engine.

Bethlehem. Largest Two-Stroke-Cycle Diesel Built in America. Power, vol. 59, no. 11, Mar. 11, 1924, pp. 406-408, 6 figs. Bethlehem 2900-hp. two-stroke-cycle engine has no cylinder head; scavenging pumps are at side of frame, scavenging valves in top of cylinder.

The Bethlehem Two Cycle Diesel Engine. Mar. News, vol. 10, no. 10, Mar. 1924, pp. 75-78 and 95, 11 figs. Particulars of new Bethlehem oil engine which is of vertical, two-stroke cycle, single-acting type, constructed in units of 4, 6 or 8 cylinders and running at a speed of from 116 r.p.m. for land power and twin-screw marine installations down to 90 r.p.m. for single-screw marine use. Notes on 6-cylinder two-cycle oil engine developing 2500 s.h.p. at 90 r.p.m., installed on motorship Cubore.

Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 3, Mar. 1924, pp. 152-156 and 161, 8 figs. Critique of design features of Bethlehem 2900-b.hp. 2-cycle unit, and complete details relating to design and method of operation of its axial scavenging valve.

Burgerhout-Nobel. The First Burgerhout-Nobel Diesel Engine. Mar. Engr. & Motorship Bldr., vol. 47, no. 567, Dec. 1924, pp. 449-453, 9 figs. Supplementary description of Nobel Diesel engine as manufactured by Burgerhout's Eng. & Shipbldg. Co., Ltd., Rotterdam.

Camellaird-Fullagar. British Yard Builds Largest Marine Diesel Engine. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 238-240 and 242, 3 figs. Particulars of 6-cylinder Camellaird-Fullagar opposed-piston engine developing 3000 b.hp. at 90 r.p.m., built by Palmers Shipbldg. & Iron Co.

Castings for. Castings for Diesel Engines. Foundry Trade Jl., vol. 30, no. 433, Dec. 4, 1924, pp. 475-480, 6 figs. Abstracts of papers read before joint conference of Instn. Brit. Foundrymen and Instn. Mech. Engrs., as follows: Temperature Stresses and Working Conditions in Diesel Engine Cylinders, A. L. Mellanby; Some Characteristics of Cast Iron for Oil Engine Castings, A. Campton; Oil Engine Design as Affected by Foundry Practice, Jas. Richardson; Oil En-

gine Design from a Foundryman's Point of View; and discussion of papers.

Central-Station. Diesel Engine for Stand-By Service, H. L. Conklin. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 851-852, 2 figs. Diesel engine shows lower fuel cost than steam equipment for peak-load service in water-power plant.

Diesel Engines Turn Tables on Central Station. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 366-370, 6 figs. Atlantic Wire Co., Branford, Conn., changed power source from steam plant to Diesel-engine drive; costs chargeable are considerably less per kw-hr. than purchased current cost; two six-cylinder Lombard Diesel engines rated to develop 180 b.hp. each and direct-connected to two Westinghouse 3-phase 200 kva. alternators and 10-kw. direct-connected exciters.

Municipality Replaces Water-Power with Oil Engines. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 379-380 and 385, 3 figs. When City of Marshall, Mich., began to grow so fast that all available water flow was used up in attempt to keep pace with increasing power demands, electric current was purchased outside at moderate rates. Subsequent steep rises in cost of purchased power made city turn to oil-engine power, and Diesels since installed have netted big operating gains.

Central-Station Service. See CENTRAL STATIONS, Diesel-Engined.

Combustion Phenomena in. Combustion Phenomena in Diesel Engines (Verbrennungsvorgänge im Dieselmotor), H. v. Wartenberg. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 7, Feb. 16, 1924, pp. 153-154. Explains cause for poorer ignition and tendency to soot formation with burning of tar oils in Diesel engines, and points out that combustion can be accelerated by much finer breaking up of drops, probably through admixture of large quantities of water emulged in oil, and through employment of higher temperatures in compression space.

Compressorless. Compressorless Diesel Engines. Eng. Progress, vol. 5, no. 12, Dec. 1924, pp. 249-253, 11 figs. Antechamber Diesel engines; engines with jet atomization.

Injection and Combustion Phenomena in Compressorless Diesel Engines (Einspritz-und Verbrennungsvorgänge in kompressorlosen Dieselmotoren), V. Heidelberg. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 40, Oct. 4, 1924, pp. 1047-1052, 24 figs. Operating characteristics of compressorless engines with direct injection; influence of various factors; heat-theoretical comparison with compressor Diesel engines.

Control Apparatus. Control Apparatus (Note sur les appareils à gouverner). Bul. Technique du Bureau Veritas, vol. 6, nos. 7 and 8, July and Aug. 1924, pp. 123-127 and 143-146, 13 figs. Reviews steam, hydraulic, and electric apapratus and auxiliaries.

Costs. Bids Show Range in Diesel Costs. Mar. Rev., vol. 54, no. 9, Sept. 1924, pp. 347-348, 2 figs. Analysis of bids and of reasons for difference; compares different types of Diesel engines, two- and four-cycle, single- and double-acting, air- and solid-injection.

Crankshafts, Torsional Vibrations in. Influence of Torsional Vibrations on Diesel Engine Crankshafts. Motorship, vol. 9, no. 12, Dec. 1924, pp. 898-900 and 905, 4 figs. How mysterious fractures occurred, reason discovered and cause eliminated.

Design. Calculation of Principal Dimensions of Stationary Diesel Engines (Berechnung der Hauptabmessungen von ortsfesten Dieselmaschinen), A. Balogh. Praktische Maschinen-Konstrukteur, vol. 57, no. 9, Mar. 15, 1924, pp. 101-104, 4 figs. Calculations for 60-hp. stationary Diesel; working of Diesel engines; table of principal dimensions.

Developments. The Diesel Engine, A. Nägel. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 110-112, 4 figs. Discusses recent improvements in Diesel engine construction, including (1) freeing main type engine of handicaps due to too close adherence to original model, (2) use of two-stroke cycle for large engines, (3) injection and atomizing of fuel without aid of compressed air, (4) use of fuel of low ignitability. Abstract of paper read before World Power Conference.

Double-Acting. A New Type of Double-Acting Diesel Engine for Marine Purposes, G. J. Lugt and H. Hunter. Engineering, vol. 118, no. 3053, July 4, 1924, pp. 26-30, 8 figs. Also Engineer, vol. 138, no. 3575, July 4, 1924, pp. 23-24, 6 figs.; and Shipbldg. & Shipping Rec., vol. 24, no. 1, July 3, 1924, pp. 7-11, 5 figs. Details of design and construction of new type of four-cycle double-acting engines, developing about 80 per cent more power than single-acting engines of same size, using Arschaouloff's system of solid injection. Piston diam., 31½ in.; stroke, 55 in.; hp. in single cyl. at 95 r.p.m., 600.

American-Developed Double-Acting Diesel Engine. Motorship, vol. 9, no. 9, Sept. 1924, pp. 668 and 673-674, 4 figs. Particulars of new two-cycle, air-injection engine capable of being flanged directly to existing propeller shafts in Shipping Board vessels with minimum hull alterations.

Double-Acting Diesel of Unique Design. Motorship, vol. 9, no. 4, Apr. 1924, pp. 261-263, 5 figs. How North British 200 s.h.p. unit differs from all other 2-cycle double-acting marine oil engines.

Double Acting Diesels, Johnstone-Taylor. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 605-606, 3 figs. Describes designs by two British firms, namely, North Eastern marine and North British design.

Double-Acting Marine Diesel Engines. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 707-708, 7 figs. on supp. plates. See also Engineer, vol. 137, nos. 3570 and 3571, May 30 and June 6, 1924, pp. 604 and 626-627, 5 figs. partly on p. 630. Details of 1000-i.hp. experimental 4-cycle North-Eastern Werkspoor engine.

More on the Double-Acting Diesel Engine. Motorship, vol. 9, no. 9, Sept. 1924, pp. 659-660, 4 figs. Uniflow port scavenging system developed by Maschinenfabrik Augsburg-Nürnberg has given successful test results.

Tests of New Double-Acting Development Cylinder. Motorship, vol. 9, no. 8, Aug. 1924, pp. 578-579, 5 figs. As result of shop tests of first single-cylinder double-acting type of four-cycle Diesel engine built at Wallsend-on-Tyne, Eng., by North Eastern Marine Eng. Co., in collaboration with Werkspoor of Amsterdam, Alfred Holt & Co., Liverpool, has ordered a 4000 s.hp. engine for single-screw motorship.

The Development of High-Power Diesels, Johnstone-Taylor. Gas & Oil Power, vol. 20, no. 230, Nov. 6, 1924, pp. 23-25, 2 figs. Possibilities of double-acting type for land work.

See also Worthington.

Exhaust-Chamber Casting. Making a Diesel Engine Water-Cooled Exhaust Chamber, A. J. Richman. Metal Industry (Lond.), vol. 25, no. 20, Nov. 14, 1924, pp. 477-479, 6 figs. Casting measures 6 ft. long by 2 ft. 10 in. outside diam., and is cored for water jacket giving ½-in. thickness of metal on one side and ⅝-in. on other; details of molding and casting.

Exhaust Temperature. The Significance of Exhaust Temperature, P. H. Smith. Engineering, vol. 118, no. 3068, Oct. 17, 1924, pp. 544-547. Gives results of experiments carried out on Carels-type Diesel engine.

Experimental Work. Further Experimental Work on Diesel Engines, R. Beeman. Shipbldg. & Shipg. Rec., vol. 23, no. 16, Apr. 17, 1924, pp. 459-461. See also Mar. Engr. & Motorships Bldr., vol. 47, no. 561, June 1924, pp. 227-231, 2 figs. Experimental work, dealing with Diesels for warships, dimensions and weight, aluminum alloy pistons, development of high mean pressure, determination of suitable profile for fuel cam-actuating sprayer, shoping of combustion chamber, rate of heat flow and its attendant stresses, lubricating oil consumption, and alternative fuels. Abstract of paper read before Instn. Nav. Architects.

Fairfield-Sulzer. Fairfield-Sulzer Engines for the Union Steam Ship Company of New Zealand, Ltd. Shipbldg. & Shipg. Rec., vol. 23, no. 12, Mar. 20, 1924, p. 333. Particulars of engines to be installed in a new motor passenger liner, the Aorangi; four sets of Fairfield-Sulzer Diesel engines each having six cylinders 27½ in. diameter by 39-in. stroke, working on 2-stroke cycle; 16,000 i.hp. on four shafts.

Four-Cycle, Supercharging of. Will Supercharging Revolutionize Four-Cycle Diesel Operation? Oil Engine Power, vol. 2, no. 3, Mar. 1924, pp. 148-152, 8 figs. Supercharging development work in Germany and America in connection with four-cycle Diesel engines.

French Installations. Reconstructing France by Aid of Diesel Power. Oil Engine Power, vol. 2, no. 1, Jan. 1924, pp. 6-11, 9 figs. Notes on several of large Diesel plants installed during and since war; one engine is larger than any yet built in U. S. A.

Fuel Injection. Investigation of the Fuel-Injection Process in Diesel Engines (Untersuchungen über den Einspritzvorgang bei Dieselmaschinen), W. Riehm. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 25, June 21, 1924, pp. 641-645, 10 figs. Discusses fundamentals of injection process; describes experimental plant, tests with water and oil, absorption of heat up to ignition.

Fuel-Measuring Pump. Some Effects of Fuel Measuring Pump Design on Diesel Engine Performance, J. E. Canoose. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 4, Nov. 1924, pp. 573-623, 15 figs. Results of study on R-21 to 27 class submarine engines in service; it is shown that natural result of failure of fuel-measuring pump to function properly, unless it be adjustment unbalance, is lowered volumetric efficiency.

Fuel Valves. Diesel Engine Fuel Valves, H. F. Birnie and R. C. Baumann. Power Plant Eng., vol. 28, nos. 6, 7, 8 and 11, Mar. 15, Apr. 1, May 1 and June 1, 1924, pp. 336-338, 381-383, 488-491 and 598-599, 24 figs. Mar. 15: Atomization an important function of fuel valve; plate atomizer valves. Apr. 1: Improved combustion resulting from study of valve details. May 1: Construction and action of commercial types of fuel valves. June 1: Valves used on horizontal engines; special valves for heavy oils.

Generator Drive. Oil-Engine Driven Shop Generators in the German Navy, W. Laudahn. Schiffbau, vol. 25, nos. 6 and 8, Jan. 9 and 23, 1924, pp. 157-161 and 179-187, 2 figs. The engines of the German Gen. Elec. Co. (AEG) with 12-kw. power. Results of workshop tests. For reference to previous articles in this series see Eng. Index 1922 and 1923.

Great Britain. Diesel Engine Progress in Great Britain. Pac. Mar. Rev., vol. 21, no. 8, Aug. 1924, pp. 411-414, and 417, 11 figs. Discusses increased application of Diesel engines for all types of ships, types of Diesel, pros and cons.

Heat Losses. Investigations of Diesel Engines (Untersuchungen an der Dieselmaschine), K. Neumann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 4, Jan. 26, 1924, pp. 77-80, 5 figs. Thermodynamic circle process and working losses; heat diagrams of engine for complete and incomplete expansion; calculation of heat-transmission coefficient for combustion and expansion independent of piston diagram.

Heavy-Oil-Burning. Burning Boiler Oil in Diesel Engines, C. L. Ruegg. Power, vol. 60, no. 13, Sept. 23, 1924, pp. 488-489, 3 figs. Discusses use in Diesel engines of heavy oil now being burned under boilers. Since price is below that of refined oils, owners of Diesel engines should make necessary rearrangement of fuel system to permit them to take advantage of the situation. Deals with changes necessary.

Burning Heavy Fuel Oil in Diesel Engines, R. Hildebrand. Power House, vol. 17, no. 14, July 20, 1924, pp. 26 and 39, 1 fig. Satisfactory results were obtained with small three-cylinder, single-acting, four-stroke vertical engine developing 200 h.hp. at 257 r.p.m.

High-Power. High-Power Diesel Engines (Hochleistungs-Dieselmaschinen), F. E. Bielefeld. Wirtschaftsmotor, vol. 6, no. 7-8, Aug. 25, 1924, pp. 7-8, 4 figs. Discusses compressor and compressorless types; improvements in atomizing and injecting fuel oil; comparisons with Scott-Still engine.

Inland-Waterway Vessels. Diesel Engines for Inland-Waterway Navigation (Dieselmaschinen auf Binnenwasserstrassen), P. Kühnle. Schiffbau, vol. 25, no. 11, Mar. 12, 1924, pp. 276-277, 2 figs. Discusses factors influencing employment of Diesel in place of steam engines.

The Diesel Engine for Inland Navigation (Der Dieselmotor in der Binnenschiffahrt), P. v. Schuh. Schiffbau, vol. 25, nos. 24, 26, and 27, Sept. 24, Oct. 22, and Nov. 5, 1924, pp. 651-654, 729-735, and 754-760, 7 figs. Use of Diesel engines for navigation of Volga, Rhine, and other rivers, and lakes; comparative costs, showing advantage of Diesel engines; comparative data for steam and Diesel operation of cargo vessels between Ruhrort and Mannheim; comparative equipment for steam and Diesel operation of cargo boats.

Knudsen. Knudsen Diesel. Pac. Mar. Rev., vol. 21, no. 2, Feb. 1924, p. 115, 3 figs. Two-cycle engine of opposed-piston type, but with cylinders set on acute angle with common combustion chamber at their upper end.

Locomotives with. See LOCOMOTIVES, Diesel-Compressed Air; Diesel-Electric; Diesel-Engined.

Low-Powered. Low-Powered Diesel Engines (La question du Diesel de faible puissance), P. Simondet. Arts & Métiers, vol. 77, no. 42, Mar. 1924, pp. 81-105, 22 figs. Deals with technical, financial, and manufacturing problems of low-power engines working on Diesel cycle, with special reference to difficulties which may account for comparatively restricted extent to which they have hitherto been employed; among types of engines described are Hindl and Hvid engines.

Lubrication. Lubricating Diesel Engines and Auxiliary Machinery. Mar. Eng., vol. 29, no. 5, May 1924, pp. 298-300. General rules for selecting lubricants and methods of applying them to promote economy.

The Lubrication of Diesel Engines (Ueber Dieselmaschinen-Schmierfragen), W. Ernst. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 18, May 3, 1924, pp. 451-454, 14 figs. Points out that in view of the different parts to be lubricated use of different oils for various applications is desirable, but it is sometimes necessary to use a unit lubricating oil which has to be adapted to the various applications including that of cooling pistons; gives examples of difficulties encountered in lubrication of Diesel engines with a unit oil.

See also LUBRICATION, Prime Movers.

M.A.N. How the World's Largest Diesel Was Built, Fred. Englert. Motorship, vol. 8, no. 12, Dec. 1923, pp. 848-849 and vol. 9, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 40-41, 119, and 185-187, 12 figs. Relates most serious problems which faced engineers of M.A.N.'s plant, Nürnberg, in bringing to practical state highest powered Diesel engine ever constructed, developing over 17,000 s.hp.

The High-Power Diesel Engine of Nürnberg, W. Laudahn. Power, vol. 59, nos. 16 and 17, Apr. 15 and 22, 1924, pp. 603-606 and 642-644, 8 figs. Discussion of difficulties met with in designing 12,000-hp. Diesel engine; account of explosion that wrecked engine. Translated from Zeit. des Vereines Deutscher Ingenieure, Dec. 8, 1923.

Two-Cycle Double-Acting M. A. N. Diesel Engine (Moteur Diesel à deux temps et à double action de la M. A. N.). Bul. Technique du Bureau Veritas, vol. 6, no. 10, Oct. 1924, pp. 185-187. Engine is said to develop 1.9 times as much power as single-acting engine of same dimensions; deals principally with first engine built from parts of 12,000-hp. engine, previously built by way of experiment in Nuremburg works; nine-cylinder engine to deliver 11,000 hp. is being developed in works. Translated from Werft Reederei Hafen.

See also Double-Acting, Smit-M.A.N.

Maintenance and Care. The Maintenance and Care of Diesel Engines, O. Olson. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 169-170. Practical notes on operation of Diesel engines, compressors, and motorship auxiliaries.

Manufacture. Building Diesel Oil Engines for Ford, L. S. Love. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 977-982, 12 figs. Methods employed in Blake & Knowles plant of Worthington Pump & Machy. Corpn.; crankshaft bearings planed instead of bored; special fixture made for jointing bedplates; crankshafts turned direct from forged block without preliminary removal of stock.

One of America's Prominent Diesel Plants. Motorship, vol. 9, no. 6, June 1924, pp. 434-436 and 441, 6 figs. Describes Cleveland, Ohio, plant of Winton Engine Works. Quantity production, handling and routing highly developed.

Marine. Latest Developments in Diesel-Engine Ship Propulsion (Neuste Bestrebungen beim Schiffsantrieb durch Dieselmotoren), E. Goos. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 18, May 3, 1924, pp. 435-441, 18 figs. Discusses present tendencies in development of marine Diesel engines; examples and practical results; measures for increasing efficiency and improving operating safety and economy; drive of auxiliary machinery; heating and motor oils.

New Model of Well-known Marine Diesel Engine. Motorship, vol. 9, no. 5, May 1924, pp. 341-345, 8 figs. 2-cycle design of Swan, Hunter & Wigham Richardson is rated at 2000 b.hp. and weighs 242 tons; combustion space heat stresses minimized.

Plan New Diesel for Big Output. Mar. Rev., vol. 54, no. 3, Mar. 1924, pp. 114-116, 5 figs. Description of 6-cylinder 4-cycle crosshead type Diesel engine developing 2000 i.hp. at a maximum of 100 r.p.m. with a 30-in. bore and 48-in. stroke, installed on Suphenco.

Recent Marine Diesel Engines (Neuere Schiffs-Dieselmaschinen), O. P. Kühnle. Schiffbau, vol. 25, no. 19, July 9, 1924, pp. 517-520, 5 figs. Discusses advantages of hot-bulb two-stroke and four-stroke engines, and describes engine built by Motorenwerke, Mannheim, of 1600 hp. and 120 r.p.m., using only 174 g. fuel per hp-hr.

The Maintenance of Marine Internal-Combustion Engines. Mar. Engr. & Nav. Architect, vol. 47, no. 557, Feb. 1924, pp. 53-54. Working and operation of marine Diesel engines considered practically.

See also Beardmore-Tosi; Bethlehem; Camel-laird-Fullagar; Double-Acting; McIntosh & Seymour.

Maybach Automotive and Rail-Car. Maybach High-Speed Automotive and Rail-Car Diesel. Oil Engine Power, vol. 2, no. 11, Nov. 1924, pp. 595-596, 2 figs. Heavy-oil air-injection engine weighing only 19 lb. per b.hp. develops 150 b.hp. at 1300 r.p.m.; points way to solution of problem of using unmodified Diesel principle in engines of strictly automotive character.

McIntosh & Seymour. An American 2,600 i.h.p. Four-Cycle Marine Engine. Motorship, vol. 9, no. 10, Oct. 1924, pp. 751-755, 9 figs. Motorship, vol. 9, no. 10, Oct. 1924, pp. 751-755, 9 figs. Describes vertical, single-acting, 4-cycle, crosshead type, directly-reversible engine recently completed by McIntosh & Seymour Corpn. Does not differ radically from their previous design, but incorporates modern improvements.

Mexican Fuel Oil. Burning Heavy Fuel Oil in Diesel Engines, R. Hildebrand. Eng. Wld., vol. 25, no. 3, Sept. 1924, pp. 167-168, 1 fig. Describes method employed by Fulton Iron Works Co. in solving problem of using heavy fuel oil in Diesel engines.

Michel. The Michel Engine (Der Michel-Motor). Motor u. Auto, vol. 21, no. 5, May 10, 1924, pp. 40-41, 4 figs. Two-stroke-cycle Diesel engine with new arrangement for transmission of piston force; small engines requiring little space; good balancing of masses.

Motorcycle. A New Heavy-Oil Engine for Motorcycles (Ein neuer Fahrzeug-Schwerölmotor), E. Frey and C. Fischer. Motorwagen, vol. 27, no. 2-3, Jan. 20-31, 1924, pp. 28-29, 2 figs. Describes compressorless Diesel engine which can be operated with all kinds of oil fuel, including crude, paraffin, lignite-tar and shale oil, as well as with light fuel oils, such as gasoline, benzol, alcohol and petroleum, without making any changes in engine.

Non-Reversible. Reversible and Non-Reversible Marine Diesel Engines (Umsteuerbare und nicht umsteuerbare Schiffsdieselmaschinen), M. W. Gerhards. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 579-580. Critical discussion of advantages of non-reversible engines with reversible intermediate gears over directly reversible engines.

Nordberg. Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 11, no. 4, Apr. 1924, pp. 203-209, 12 figs. Describes Nordberg model having a cylinder output of 550 b.hp. at 120 r.p.m.; many 4-cylinder units of 2200 hp. are in service. Data on operating and installation costs.

Operation. Modern Diesel Engine Installation, F. Veitenheimer. Military Engr., vol. 16, no. 88, July-Aug. 1924, pp. 311-315, 5 figs. Discusses operation and operating cost of Diesel engine. Describes a stationary Diesel engine plant installed by U. S. Engr. Dept. in Hawaiian Islands; main equipment consists of three 135-hp. 4-cycle single-acting vertical type 6-cylinder Diesel engines, each directly connected to a 90-kw. 125-volt. d.c. generator.

Practical Diesel Engineering, L. R. Ford. Mar. Eng., vol. 29, nos. 7, 8, 9, 10, 11, and 12, July, Aug., Sept., Oct., Nov., and Dec., 1924, pp. 389-393, 473-476, 543-546, 607-610, 669-673, and 741-744, 26 figs. Practical information regarding construction, operation, and upkeep of Diesel engines. July: Action of gases in cylinder; definitions; pressure-volume curves; cycles and cyclic

processes; Otto and Diesel cycles. Aug.: Use of heat cycles; how horsepower of a reciprocating engine is measured; indicator. Sept.: Mechanical cycles; construction of two- and four-cycle engines; opposed-piston and double-acting engines. Oct.: Normal practice; engine-room arrangements; preparations for starting engines. Nov.: Maneuvering ship; routine under way; engine-room stores; purchasing fuel and lubricating oils; precautions in handling fuel oil. Dec.: Derangements likely to occur in operation and adjustments required for their correction.

Opposed-Piston. Palmers' 3,000 s.h.p. Opposed-Piston Diesel Engine. Motorship, vol. 9, no. 2, Feb. 1924, pp. 118-119, 1 fig. Single-screw unit for 10,000-ton single-screw tanker, constructed on Fullagar principle with air injection.

Pipe-Line, Lubrication of. Pipe Line Diesels and Their Lubrication, F. Thilenius. Oil Engine Power, vol. 2, no. 2, Feb. 1924, pp. 67-76, 13 figs. Developments carried out on Prairie Pipe Lines. Describes new system which utilizes all available exhaust heat in conjunction with reclaimers, purifiers, and special filters, combined into standard units and eliminates all lubricating troubles.

Power Plants, Use in. Diesel Engines as Economical Power Producers, J. Ander. Power House, vol. 17, no. 6, Mar. 20, 1924, pp. 30-31, 1 fig. Data on Diesel engine plants and operating cost of same under Canadian conditions. Serious competitor of hydroelectric power.

Use of Diesel Engines in Power Plants, L. R. Ford. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1003-1004. See also South. Engr., vol. 42, no. 4, Dec. 1924, pp. 55-58. Considerations affecting adaptability of Diesel engine.

Preheating Fuel Oil. Preheating Fuel Oil for Diesel Engines, Rob. A. Melrose. Power, vol. 60, no. 23, Dec. 2, 1924, p. 904. Discusses methods.

Problems of Development. Some Problems in Oil Engine Development, O. P. Robinson. Tech. Eng. News, vol. 5, no. 5, Dec. 1924, pp. 178-179 and 188, 2 figs. Discusses difficulties encountered in development of Diesel engines.

Pumping Plants. See PUMPING STATIONS, Diesel-Engine-Driven.

Repairing. Overhauling a Diesel Engine, M. S. Howard. Power Plant Eng., vol. 28, no. 2, Jan. 15, 1924, pp. 139-141, 7 figs. Where to look for wear and how to handle repair work.

Scavenging Blowers for. Centrifugal Scavenging Blowers for Two-Cycle Marine Diesel Engines, E. Klingelfuss. Brown Boveri Rev., vol. 11, no. 4, Apr. 1924, pp. 67-80, 28 figs. Details of design and construction of centrifugal scavenging blowers, their advantages, and prime-movers for them; arrangement on board ship; operation in conjunction with Diesel engines.

Semi. See SEMI-DIESEL ENGINES.

Smit-M.A.N. A New Dutch Diesel Engine. Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 265-266, 5 figs. J. & K. Smit of Kinderdijk, Holland, have commenced manufacture of M. A. N. Diesel engines. Particulars of unit recently completed, 3-cylinder 60-b.hp. M. A. N. 4-stroke Diesel engine.

Street-Car Power. Two 3,600 b.h.p. and Two 1,500 b.h.p. Diesels for Street-Car Power. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 371-373, 2 figs. Consistent and economical service of two 1,500-b.hp. Diesel engines over lengthy period, caused Shanghai Street-Car Co. to order two additional engines of 3,600 b.hp. each to meet their greater power needs.

Sulzer. A Large Diesel Engine for China. Engineer, vol. 137, no. 3572, June 13, 1924, p. 656, 1 fig. Notes on trials of 3600-b.hp. two-cycle stationary Diesel engine built by Sulzer Bros., Switzerland.

A New Sulzer Engine with Independent Scavenging. Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 267-268 and 270, 2 figs. Particulars of first Diesel engine constructed by Wallsend Slipway & Eng. Co.; Sulzer 4-cylinder unit of 2000 b.hp.

See also Fairfield-Sulzer.

Sun-Doxford. Sun-Doxford Engines of the Henry Ford II. Mar. Eng., vol. 29, no. 6, June 1924, pp. 334-337, 5 figs. First application of large Diesel engines on a Great Lakes bulk freighter. Details of engines; opposed-piston type, having four cylinders 23½ in. in diameter, each piston having stroke of 45½ in.; approximate s.hp. 3000 at 85 r.p.m.

Supercharging. See Four-Cycle.

Swan. See Marine.

Tosi. The Tosi Diesel Engine, G. C. Ziliotto. Mar. Eng., vol. 29, no. 6, June 1924, pp. 357-360, 6 figs. Discusses features of Tosi engines, principally, combined inlet and exhaust valves, injection valve, and method of cooling cylinder.

Troubles. Some Experiences of a Diesel-Engine Trouble Man, D. L. Fagnan. So. Engr., vol. 41, no. 6, Aug. 1924, pp. 44-48, 6 figs. Diesel-engine troubles and what was done to remedy them after operating engineer had failed to make good.

Two-Stroke-Cycle. Present-Day Diesel Engines —Application of the Two-Stroke-Cycle Principle, Nagel. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 526-527, 3 figs. Extract of paper read before Verein Deutscher Ingenieure, June 20, 1923, at Berlin.

Two-Stroke Diesel Engine, Johnstone-Taylor. South. Engr., vol. 41, no. 8, Oct. 1924, pp. 42-44, 3 figs. Notes regarding progress of opposed-piston engine in British stationary work.

See also Bethlehem.

Types. High Power Diesels. Power Engr., vol. 19, no. 221, Aug. 1924, pp. 289-291, 7 figs. Discusses types of Diesel engines suited to electrical generation.

Use as Prime Mover. The Diesel Engine as a Prime Mover, L. H. Morrison. South. Engr., vol. 42, no. 3, Nov. 1924, pp. 50-54, 11 figs. Compares important points in favor of Diesel engine with other prime movers.

Valve Setting. Setting the Valves of a Diesel Engine, H. F. Birnie and R. C. Baumann. Power Plant Eng., vol. 28, no. 3 and 4, Feb. 1, and 15, 1924, pp. 180-182, 7 figs., and 230-232, 6 figs. Describes general process of valve setting, including fuel cams.

Valves. Valves of Diesel Engines, F. Johnstone-Taylor. Gas & Oil Power, vol. 19, no. 222, Mar. 6, 1924, pp. 97-98, 3 figs. Practical advice on their care and maintenance.

Warship. Further Experimental Work on Diesel Engines, R. Beeman. Engineering, vol. 117, nos. 3043, 3044, and 3045, Apr. 24, May 2, and 9, 1924, pp. 559, 589-591, and 624-625, 22 figs. See also Engineer, vol. 137, nos. 3566, 3567, 3568, and 3569, May 2, 9, 16, and 23, 1924, pp. 487-488, 517-518, 547-548, and 578-579, 22 figs. Discusses possibilities of application of Diesel engines for propelling machinery of surface war vessels. (Abstract.) Paper read before Instn. Nav. Architects.

Water Works. Oil Engines that Have Seen Long Water Works Service, J. H. Bender. Fire & Water Eng., vol. 75, no. 11, Mar. 12, 1924, pp. 495-496 and 513, 3 figs. Record of three units installed in Clayton, N. M., in 1911, 1912, and 1917 respectively, which have given good satisfac-

tion, demonstrating reliability of this type of motive power.

Werkspoor. North-Eastern Werkspoor Diesel Engine. Steamship, vol. 36, no. 421, July 1924, pp. 18-21, 4 figs. Describes direct-coupled, double-acting, heavy-oil engine for marine purposes built by North-Eastern Marine Eng. Co.'s works at Wallsend-on-Tyne; four-cycle single cylinder unit of 1000 i.hp.

See also Double-Acting.

Worthington. An American Double Acting Diesel. Mar. Eng. & Shipg. Age, vol. 29, no. 9, Sept. 1924, pp. 528-530, 2 figs. See also Pac. Mar. Rev., vol. 21, no. 9, Sept. 1924, pp. 454-455, 2 figs., and Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 585-587. Details of design and construction of four-cylinder, double-acting, two-cycle Worthington Diesel engine designed to develop 2400 s.hp.

Diesel Engine with Power at Every Stroke. Iron Age, vol. 114, no. 10, Sept. 4, 1924, pp. 559-560, 2 figs. Particulars of Worthington development of two-cycle double-acting prime mover which promises notable widening of oil-engine field in applicability and economy.

The Worthington 2-Cycle Double-Acting Diesel Engine. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 482-486, 10 figs. Describes types constructed by Worthington Pump & Machy. Corpn. of Buffalo, N. Y.

Worthington Builds Double-Acting Two-Stroke-Cycle Diesel Engine. Power, vol. 60, no. 12, Sept. 16, 1924, pp. 457-459, 9 figs. Engine combines a fuel economy comparable with that of best existing types of Diesel engine, with dimensions, weight, and construction cost per horsepower approaching those of reciprocating steam machinery. First unit, a single-cylinder engine, is rated at 600 to 800 hp. at speeds of 90 to 120 r.p.m., cylinders being 27 in. in diameter by 40 in. stroke.

See also Double-Acting.

DILATOMETERS

[See also TOOL STEEL, Time and Temperature, Effect on.]

Double-Mirror. Double Mirror Dilatometer for Low-Temperature Work (Ausdehnungsmessungen bei tiefen Temperaturen mit Doppelspiegeldilatometer), G. Borelius and C. H. Johansson. Annalen der Physik, vol. 75, no. 1, Aug. 1924, pp. 23-36, 5 figs. Brass plate resting on two supports has pair of parallel mirrors fixed one at either end; specimen under test is fastened rigidly at its upper end whereas its lower end is attached to center of plate; as specimen expands or contracts, this plate is bent and amount of bending is determined in usual way, using beam of light reflected from mirrors in turn; results are given for specially pure copper rods and also for crystals and zinc and cadmium.

DIRECTION FINDING

Errors of Bearings. The Effect of the Shape of the Transmitting Aerial upon Observed Bearings on a Radio Direction-Finder, R. L. Smith-Rose. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 957-963, 3 figs. Experiments to determine to what extent emission of abnormally polarized waves by aerials of different shapes from ground transmitting station was responsible for frequent occurrence of variable "night" errors at ground direction-finding station.

Navigation. A Directive Type of Radio Beacon and Its Application to Navigation, F. H. Engel and F. W. Dunmore. U. S. Bur. Standards—Scientific Papers, no. 480, Jan. 5, 1924, pp. 281-295, 10 figs. Deals with a method of guiding a ship or airplane by means of radio signals sent from a particular type of directive radio beacon; describes principle of operation of this beacon; results of tests both on shipboard and on an airplane.

Development of the Bellini-Tosi System of Direction-Finding in the British Mercantile Marine, J. A. See. Instn. Elec Engrs.—Jl., vol. 62, no. 330, June 1924, pp. 543- 550 and (discussion) 550-557, 4 figs. Account of various sources of error encountered during development of system as aid to navigation in British mercantile marine; these errors can be isolated and their causes removed one by one; deals with application of instrument to purposes of navigation; table showing high degree of accuracy which has been attained.

Modern Aids to Navigation, J. O. G. Cann. Can. Ry. Club—Official Proc., vol. 23, no. 6, Sept. 1924, pp. 22-31 and (discussion) 31-36. Discusses location of ship's position by radio.

Radio Acoustic Method of Position Finding in Hydrographic Surveys, N. H. Heck, E. A. Eckhardt and M. Keiser. U. S. Coast & Geodetic Survey—Spec. Pub. no. 107, Serial no. 277, 1924, 23 pp., 16 figs. Discusses hydrographic problem and installation details. Describes apparatus and method of operation.

Some Radio Direction-Finding Observations on Ship and Shore Transmitting Stations, R. L. Smith-Rose. Instn. Elec. Engrs.—Jl., vol. 62, no. 332, Aug. 1924, pp. 701-711, 2 figs. Account of experiments conducted with two direction-finding receiving stations taking observations on ship transmitters located at various positions in North Sea between England and Europe.

The Problem of Beacon Stations, J. A. Slee. Wireless Wld., vol. 15, no. 11, Dec. 10, 1924, pp. 330-334, 4 figs. Deals with stations for marine navigation. Describes purposes of system, and discusses its advantages and limitations.

Wireless Navigation, J. Robinson. Roy. Soc. Arts—Jl., vol. 72, no. 3735, June 20, 1924, pp. 516-526 and (discussion) 526-531, 10 figs. Describes Bellini-Tosi and Robinson systems and installation on aircraft.

Radiogoniometer for. A New Unilateral Radiogoniometer (Un nouveau radiogoniomètre avec levée du dute), E. Bellini. l'Onde Electrique, vol. 3, no. 29, May 1924, pp. 233-253, 19 figs. Describes a new device for direction finding.

DIRIGIBLES. See AIRSHIPS, Dirigibles.

DISKS

Electrification of. The Electrification of Two Parallel Circular Discs, J. W. Nicholson. Roy. Soc. Lond.—Philosophical Trans., vol. 224, no. A623, 1924, pp. 303-369. Mathematical solution of two parallel electrified disks on same axis by harmonic analysis which treats disks as special cases of oblate spheroids, harmonic analysis leading to an integral equation of a new type which is ultimately solved.

Rotating, Calculation of. Calculation of Rotating Disks (Le Calcul des disques tournants), P. Caufourier. Génie Civil, vol. 84, no. 1, Jan. 5, 1924, pp. 15-17, 4 figs. Discusses Prudon, Pigeaud, and Stodola-Arrowsmith methods and describes rational method of employing Arrowsmith calculation.

Rotating, Deformation in. See CYLINDERS, Rotating, Deformation in.

Rotating, Theory of. The Rotating Disk, E. L. Thearle. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 670-674, 9 figs. In Foppl's classical theory of eccentric rotating disk, center of gravity is assumed to lie always in plane of deflected shaft,

and angular acceleration is neglected entirely; solution leads to critical speed, at which shaft deflection becomes infinite; since mechanism such as a De Laval turbine would become inoperative under such conditions, idea of "violent vibration" at critical speed is introduced; author attempts to develop more rational theory by writing down equations of motion of particles of disk in more general form and introducing idea of possible angular acceleration; maximum shaft deflection at critical speed is found to have finite value.

Turbine Bucket Wheels. See STEAM TURBINES, Disks, Protection from Axial Vibration.

DISTILLATION

Columns. Distilling Column Design and Performance. E. H. Leslie. Oil News, vol. 12, no. 1, Jan. 1924, pp. 16-17. Deals with different phases of problems of oil distillation, and design and performance of distillation column.

Distilling Columns (Kolonnenabtreiber-Betrieb), A. Thau. Gas- u. Wasserfach, vol. 67, nos. 3 and 5, Jan. 26 and Feb. 2, 1924, pp. 37-39 and 51-52, 5 figs. Based on experiences with different types of columns, author discusses practical difficulties encountered, peculiarities, causes of trouble and their elimination.

The Efficiency of Fractionating Columns, G. Calingaert and F. E. Huggins, Jr. Indus. & Eng. Chem., vol 16, no. 6, June 1924, pp. 584-586, 2 figs. It is shown that efficiency of packed distilling tower can readily be tested under widely varying operating conditions, by using it as stripping column for dilute ammonia solutions.

Engler. The Effect of Thermometric Lag in Engler Distillation, W. R. Ormandy. Instn. Petroleum Technologists—Jl., vol. 10, no. 43, June 1924, pp. 342-355, 4 figs. Shows by experiments that Engler distillation is greatly at mercy of rather arbitrary source of error and recommends electric measurement of temperature.

Fractional. A New Distillation Method for Simultaneous and Direct Recovery of all Fractions as Chemically Pure Products (Eine neue Destillationsmethode zur gleichzeitigen und unmittelbaren Gewinnung aller Fraktionen als chemisch reine Produkte), V. Freund. Chemiker-Zeitung, vol. 48, no. 104, Aug. 28, 1924, pp. 603-604, 3 figs. Details of apparatus based on leading vapor mixture through dephlegmator in which is cooling liquid whose boiling point is identical with boiling point of vapor ingredient boiling at highest temperature, etc.

Stills. An Experimental Still for the Detailed Study of Crude Petroleum, N. B. Cooke. U. S. Bur. Mines—Reports of Investigations, no. 2632, Aug. 1924, 21 pp., 5 figs. on supp. plates. Design and method of constructing 10-gal. still, by means of which crudes of various types can be distilled under standard conditions and by various methods.

Cylindrical Stills and Pipe Stills Compared, F. N. Williams. Petroleum World, vol. 21, no. 280, Jan. 1924, pp. 31-33. Continuous and batch distillation; uses of pipe still.

Design of Column Stills With Continuous Decanters, G. H. Mains. Chem. & Met. Eng., vol. 31, no. 8, Aug. 25, 1924, pp. 307-311, 5 figs. Lewis equations extended to cover partly miscible liquids and specific application illustrated by calculating design of continuous furfural still.

Distillation and Rectification (Distillation et rectification), L. Gay. Chimie & Industrie, vol. 10, nos. 5 and 6, Nov. and Dec. 1923, pp. 811-828 and 1026-1042, 10 figs. Application of author's heat theory to mixture of gasolene, toluene and metaxylene; general study of ideal solutions; determination of problem of distillation and rectification. Minimum of heat consumption compatible with functioning of apparatus: distilling and rectification problems.

DITCHES

Drainage. See DRAINAGE, Ditches.

DITCHING

Machinery for. See CONSTRUCTION WORK, Machinery for.

DIVING APPARATUS. See BREATHING APPARATUS, Diving.

DIVINING RODS

Problem. The Divining Rod Problem (Zur Frage der Wünschelrute), Ziet. des Internationalen Vereines der Bohringenieure u. Bohrtechniker, vol. 32, no. 20, Oct. 15, 1924, pp. 153-155. Experience with prospecting in North Africa. Attributes divining rod action to physical emanations. Details of apparatus taking place of divining rod and functioning subject to contact with hand, and its successful application.

DOCKS

Calcutta, India. See PORTS, Calcutta, India.

Drydocks. See DRYDOCKS.

Liverpool, England. Mersey Shipping Facilities. Shipbldg. & Shipg. Rec., vol. 24, no. 6, Aug. 7, 1924, pp. 163-168, 10 figs. Progress of new works by Mersey Docks & Harbor Board; Gladstone dock extension; duplication of deep-water entrances to Birkenhead docks; new facilities for oil storage.

The New Gladstone Dock System at Liverpool. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 47-49, 14 figs., partly on supp. plates and p. 54. Docks under construction will complete Gladstone dock system which includes a new river entrance, Gladstone dock itself, and two Gladstone dock branches; system also incorporates Gladstone graving dock, which was completed and put into service in 1913. Main features of whole scheme. Progress of main wet dock works.

Southampton, England. Dock Extensions at Southampton. Engineer, vol. 138, no. 3591, Oct. 24, 1924, pp. 458-460, 2 figs. Discusses proposal for dock-extension scheme which may ultimately involve expenditure of £13,000,000; brief description of existing dock system.

Wharves. See WHARVES.

DOLOMITE

Crystal Structure. The Crystal Structure of Dolmite, R. W. G. Wyckoff and H. E. Merwin. Am. Jl. Sci., vol. 8, no. 48, Dec. 1924, pp. 447-461, 7 figs. Laue photographs show that crystals of dolomite have symmetry of atomic arrangement which is lower than that of calcite; from this it is clear that dolomite is chemical substance distinct from calcite and magnesite.

Production, 1923. See MAGNESIUM, U. S. A.

Refractories, Utilization for. The Utilization of Dolomite for Refractories, G. A. Dole. U. S. Bur. Mines—Reports of Investigations, no. 2627, July 1924, 11 pp. See also Cement, Mill & Quarry, vol. 25, no. 6, Sept. 20, 1924, pp. 31-34. Review of literature and epitome of work done and articles published by Schurecht, Robson and Andrews, in investigation of feasibility of making basic refractories from dolomite, carried on at experiment station of Bur. Mines, at Columbus, Ohio.

DOMES

Masonry. Analytical Solution of Masonry Domes, D. C. Coyle. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 4, Apr. 1924, pp. 401-416, 7 figs.

Investigation to develop analytical formulas for pyramidal and conoidal masonry domes, analogous to equations which have been established for spherical and conical shapes; it is shown that conclusions derived from formulas are those which might be expected; deals with stresses in dome of any profile that is symmetrical about vertical axis.

DOPES

Aircraft. See AIRCRAFT CONSTRUCTION MATERIALS, Dopes.

DRAFT

Boilers. See BOILER OPERATION, Draft Regulation.

DRAFT TUBES. See HYDRAULIC TURBINES, Draft Tubes.

DRAFTING ROOMS

Management of. See MACHINE SHOPS, Drafting-Room Management.

DRAINAGE

[See also RECLAMATION.]

California Stadium Field. Drainage of California Stadium Playing Field, W. W. Weir. Eng. News-Rec., vol. 92, no. 17, Apr. 24, 1924, pp. 714-716, 3 figs. Extensive system of tile drains designed for 24-hr. precipitation exceeding annual rainfall; soil studies precede choice of material overlaying impervious hydraulic fill.

City Areas, Storm-Water Discharge. Storm Water Discharge in City Areas, J. Sarvaas. Indus. Australian & Min. Standard, vol. 71, no. 1851, May 29, 1924, pp. 806-808, 2 figs. Gives formulas and makes calculations. Abstract of paper read before Victorian Inst. Engrs.

Culverts. See CULVERTS.

Ditches. Drainage Construction on Newlands Reclamation Project, A. W. Walker. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 382-386, 8 figs. Conditions under which work of construction of extensive drainage system on Newlands reclamation project in Nevada was done, and methods adopted in order to obtain greatest economy and speed. Serious water-logging of farm lands by irrigation seepage water necessitated rapid construction. Data on effect of drainage system in lowering ground water and in removing salt from alkali soil.

Method of Reconstrucing Old Open Drainage Ditches, J. L. Parsons. Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 77-79, 1 fig. Work of this kind being carried out in Iowa. From Nat. Reclamation Mag.

Open Ditches Replaced by Tile. Nat. Reclamation Mag., vol. 3, no. 3, Mar. 1924, pp. 44-45 and 55, 7 figs. Discussion at Congress in St. Louis shows value of tile replacement for ditches.

Rapid Low-Cost Excavation of Drain Ditches, A. W. Walker. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 426-428, 7 figs. Organization of work by which 150 miles of ditch were built in two years to relieve waterlogging of lands on Newlands reclamation project in Nevada.

South Dakota Drainage Ditches With Flood Gates, P. S. Egbert. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 334-335, 2 figs. Country with slight fall but subject to floods complicates drainage problem. Diked channel through big slough.

Legislation. See IRRIGATION, Legislation, U. S.

Louisiana. Drainage and Flood Control in Louisiana, A. T. Dusenbury. Nat. Reclamation Mag., vol. 3, nos. 6-7, June-July 1924, pp. 122-123 and 129, 5 figs. Considers all classes of reclamation in conservation and development of land.

Pumps, Dutch. See PUMPS, Drainage.

Rainfall and. Drainage and Rainfall, E. V. Willard. Nat. Reclamation Mag., vol. 3, no. 2, Feb. 1924, pp. 24-25 and 34-35. Records show that wet cycles alternate with dry cycles and drainage has no effect on rainfall.

Drainage Development in Its Relation to Wild Animal and Plant Life and Rainfall, E. V. Willard. Min. Federation Architectural & Eng. Societies—Bul., vol. 9, no. 3, Mar. 1924, pp. 14-25, 1 fig. Discusses briefly factors and circumstances which prompted land settlement policies of the nation, and what were the measures of land values used with which land settlement was promoted. Discussion of whether drainage reduces rainfall. Tables giving precipitation records for Minnesota.

Roadbed. Roadbed Drainage and Crossing of Chicago Sewer; I. C. R. R. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, pp. 410-412, 3 figs. Siphon outlet for tile drains; double layer of slabs carries tracks and loads sewer having internal pressure.

Run-Off. Run-off For Open Ditch Land Drainage, C. E. Ramser. Agricultural Eng., vol. 5, no. 10, Oct. 1924, pp. 222-226. Results of run-off investigations made in Lee and Bolivar counties, Mississippi, western Tennessee, and western Iowa.

Silt Handling. Handling Silt in Settling Basins, R. M. Towl. Nat. Reclamation Mag., vol. 3, nos. 6-7, June-July 1924, pp. 116-119, 6 figs. Also Eng. & Contracting (Water Works), vol. 62, no. 2, Aug. 13, 1924, pp. 341-344, 3 figs. How silting problems are being met and results in Hill Creek settling basin.

Storm-Water Drains. The Distribution of Intense Rainfall and Some Other Factors in the Design of Storm-Water Drains, F. A. Marston. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 1, Jan. 1924, pp. 19-46, 12 figs. and (discussion) in nos. 4 and 5, Apr. and May 1924, pp. 543-558 and 660-670, 3 figs. Data showing area covered by excessive rainfall of short duration based on measurements made in Boston Metropolitan Dist., New Orleans, La., and Cambridge, Ohio.

Swamps. Drainage of the Swamp of Piombino (La bonifica del padule di Piombino), S. Minnucci. Annali dei Lavori Pubblici, vol. 62, no. 6, July 1924, pp. 599-613, 8 figs. Discusses hydrographic conditions of River Cornia, silting up of river, drainage work done and to be done.

DRAWINGS

Blueprint System. Drawing Office Blue-print System, R. D. Salmon. Machy. (Lond.), vol. 25, no. 634, Nov. 20, 1924, pp. 237-238, 2 figs. Describes system which has proved thoroughly reliable and easy to maintain.

Drafting-Room Methods. Better Methods in the Drafting Room, J. Flodin. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 293-296. Problems of chief draftsman; taking care of file or reference prints; issuing and keeping proper account of prints; method of recording patterns and dies; etc.

Preparation and Use. Working Drawings, B. Moore. Elec. Jl., vol. 21, no. 10, Oct. 1924, pp. 483-486, 2 figs. Functions, classes, preparation, machining limits, and use of drawings.

Tool-Drafting Records. Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 591-593, 4 figs. Records necessary in tool-drafting room; time and progress records; supervision of drafting room.

DREDGES

British Types. Some Recent British Dredgers. Engineer, vol. 138, no. 3599, Dec. 19, 1924, pp. 694-696, 6 figs. Describes examples of dredgers shown in model form at Wembley Exhibition, built by three Scottish firms, including suction type, dipper dredger, and rock cutter.

Bucket. New Bucket Dredge for Emden (Ein neuer Eimerbagger für Emden), Paulmann. Zeit. für Bauwesen, vol. 74, no. 4-6, 1924, pp. 31-33, 10 figs. partly on supp. plate. Design and construction of a dredge embodying all improvements derived from experience; capacity 500 cu. meters sand per hour of 1.8 sp. gr.; efficiency during 3-hour test was 650 cu. meters of 2.05 sp. gr.

Cable. Earth and River Operations by Cable Dredges (Erd- und Flussbauten durch Kabelbagger), F. Riedig. Bautechnik, vol. 2, no. 50, Nov. 21, 1924, pp. 568-569, 4 figs. Details of systems of cable dredges with parallel moving towers, and with fixed winch tower and radially movable smaller tower, and their operation.

Diesel-Electric. Diesel-Electric Dredge A. Mackenzie Completes Trials. Mar. Eng. and Shipg. Age, vol. 29, no. 7, July 1924, pp. 409-411, 14 figs. Particulars of first of four new diesel-electric sea-going dredges for U. S. Army.

Diesel-Electric Hopper Dredge for U. S. Army. Motorship, vol. 9, no. 7, July 1924, pp. 497-502, 15 figs. Particulars of "A Mackenzie," sea-going dredge of suction type. Electric transmission from three 1000-b.hp. Diesel engines furnishes propelling power and operates dredging pumps. Flexibility, economy, and modern equipment characterize this vessel.

Diesel-Electric Operation of Gold Dredges in Alaska, H. J. Gallagher. Oil Engine Power, vol. 2, no. 6, June 1924, pp. 312-314, 6 figs. 1575-b.hp. power plant furnishing current to dredges was placed in service in 1923 and duplicate order followed in 1924; Diesel power enables practically all-year-round work to be carried on.

Large Diesel-Electric Dredge for West Coast. Motorship, vol. 9, no. 6, June 1924, pp. 442-444, 2 figs. Particulars of Port of Portland Commission's steel-hull 30-in. suction dredge, developing a total of 3400 b.hp. and removing 50,000 cu. yd. per day.

See also Sea-Going.

Gold. See Diesel-Electric.

Harbor. Harbour Plant. Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 546-549, 23 figs. partly on supp. plates. Examples of floating cranes, dredges, and rock breakers exhibited at Brit. Empire Exhibition.

Hopper. See Diesel-Electric Sea-Going.

Hydraulic. High-Lift Hydraulic Dredge Has Toothed Gutter Head, V. J. Milkowski. Eng. News-Rec., vol. 92, no. 24, June 12, 1924, pp. 1016-1017, 4 figs. Designed for deep digging and long discharge in Welland River canalization of Chippawa power canal.

Oil-Engined. Design Oil Type Harbor Dredge. Mar. Rev., vol. 54, no. 7, July 1924, pp. 289-292, 12 figs. Particulars of dipper dredge "Hell Gate" of U. S. Engineer Corps.

Oil-Engine Dredge of Tennessee-Arkansas Gravel Co. Rock Products, vol. 27. no. 17, Aug. 23, 1924, pp. 25-26, 5 figs. Details of construction of tug "Virginia" equipped with 165 hp. three-cylinder Anderson oil engine; describes pumping plant of Tenessee-Arkansas Gravel Co.

Sea-Going. All-Electric Sea-Going Hopper Dredges, H. C. Coleman. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 438-442, 8 figs. Describes hydraulic-type hopper dredge which is self-propelled vessel with molded hull similar to that of ordinary ocean cargo ship; first of this type ever built, A. Mackenzie, is in active service in New York harbor.

Army Engineers Build Four Seagoing Electric Dredges. Eng. News-Rec., vol. 93, no. 2, July 10, 1924, pp. 57-59, 5 figs. All-electric operation even to smallest service. Every dredge movement controlled from pilot house. Three 1000-hp. Diesel engine generating units operate 800-hp. propeller and pump motors.

First Diesel-Electric Army Dredge Completed. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 230-233, 7 figs. Particulars of the A. Mackenzie, seagoing hopper dredge of radically new type for harbor service; electricity used for propulsion and operation; length, overall, 268 ft. 5 in.; breadth, molded, 46 ft.; depth, molded, 22 ft. 6 in.; deadweight, 2000 tons on draft of 19 ft. 6 in.

Hydraulic Seagoing Hopper Dredges, W. D. Styer. Soc. Nav. Architects & Mar. Engrs.—Advance paper no. 2, for meeting Nov. 13-14, 1924, 18 pp., 23 figs. on supp. plates. Historical development; method of operation; advantages of type for bar dredging; different types; performance; description of most recent designs. See (abstract) in Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 728-729.

New Electric Federal Suction Dredge, W. D. Styer. Dredging Eng., vol. 1, no. 1, Dec. 1923, pp. 5-7, 4 figs. Describes the A. Mackenzie, new type sea-going hopper dredge built for U. S. Eng. Dept., first of four; power unit consists of three 1000-b.hp. Diesel engines each direct connected to a 700-kw. 500-volt d.c. generator, and two auxiliary 225-b.hp. Diesel engines direct connected to a 150-kw. 250-volt d.c. generator.

See also Diesel-Electric.

Suction. A Twin-Screw Light-Draught Rotary Suction Dredger for Bombay. Shipbldg. & Shipg. Rec., vol. 24, no. 8, Aug. 21, 1924, pp. 227-228, 1 fig. Tendering particulars of twin-screw self-propelling suction cutter dredgers for service in Lloyd barrage construction; proposed dimensions are, length, 220 ft.; breadth, 45 ft.; depth, molded, 7 ft. 6 in.; speed, 9 m.p.h.

Types. Dredging Apparatus Used in the Brisbane River, W. T. Evans. Commonwealth Engr., vol. 11, no. 10, May 1, 1924, pp. 392-395. Describes various types of dredging apparatus used and details of machinery.

DREDGING

Gold. Gold Dredging in Central Otago, New Zealand. Chem. Eng. & Min. Rev. vol. 16, no. 192, Sept. 5, 1924, pp. 473-475, 1 fig. History of dredging in district.

Gold-Dredging in New Zealand. Times Trade & Eng. Supp., vol. 14, no. 298, Mar. 22, 1924, p. 46. Plan for damming of Lake Wakatipu outlet.

Levee Work. See LEVEES.

Reclamation and. See RECLAMATION, Dredging and.

DRIERS.

[See also EVAPORATORS, Types.]

Calculation. Graphic Determination of Required Heating Surface of Pipe and Plate Dryers (Die graphische Ermittlung der erforderlichen Heizflächen von Röhren- und Tellertrocknern, sowie der Leistungsverhältnisse der einzelnen Apparate), Kegel. Braunkohle, vol. 23, nos. 30 and 31, Oct. 25 and Nov. 1, 1924, pp. 553-556 and 574-579, 6 figs. Develops formulas for a simple graphic method of calculation assuring a constant temperature of evaporation, and gives practical examples.

Ceramic Materials. See CERAMIC MATERIALS, Driers for.

DRILLING

Automobile Parts. Drilling Operations on Automobile Parts, H. L. Tigges. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 109-111, 7 figs. Gives a number of examples of work performed in automobile plants on heavy-duty drilling machines built by Baker Bros., Inc., Toledo, Ohio, speeds and feeds used for each job and production obtained being mentioned in each case.

Deep-Hole. Deep-Hole Drilling in Large Lathe. Iron Age, vol. 113, no. 6, Feb. 7, 1924, pp. 419-421, 7 figs. Success in drilling printing-machine rolls attributed to boring bar; describes machining of rolls; special milling attachments developed.

See also MACHINING METHODS, Blueprints, Elimination of.

Diamond. Diamond Drilling Under Difficulties, R. P. McGrath. Eng. & Contracting (Water Works), vol. 61, no. 1, Jan. 9, 1924, pp. 95-99, 5 figs. Selection of locations for dams, bridges, and other engineering structures by means of preliminary test borings made with diamond core drills. Describes ingenious methods on three western jobs. From Mine & Quarry, Nov. 1923.

Diamonds for. See DIAMONDS, Drill.

Heavy-Duty. Examples of Heavy-Duty Drilling and Boring, H. L. Tigges. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 46-48, 7 figs. Operations on automobile cylinder blocks, pistons, crankshafts, and spring seats.

Jack-Hammer. Improvements in Drilling Efficiency With Jack-Hammers, P. M. Newhall and L. Pryce. S. African Instn. Engrs.—Jl., vol. 22, no. 8, Mar. 1924, pp. 114-133 and (discussion) 133-136, 11 figs. Details of investigation, primary object of which was to find out whether it might be possible to take some measures toward standardization of rock drills and their equipment, thus reducing number of types and patterns on each mine, and simplifying question of variety and quantity of spare parts required. Comparison between footage drilled per shift in 1923 with 50-lb. wet jack-hammer with that obtained with dry jack-hammer and hollow steel in 1920, giving fair measure of total improvement brought about during period that these investigations have been in progress.

Oil Wells. See OIL WELLS, Drilling.

Resistance of Metals to. See METALS, Machining Qualities.

Rotary. Rotary Drills in Mining Exploration (La sonda giratoria en las exploraciones mineras), J. E. Harding. Ingenieria Internacional, vol. 12, no. 5, Nov. 1924, pp. 224-227, 5 figs. Discusses methods and records for collecting and classifying data obtained from analysis of core samples.

DRILLING MACHINES

Angle-Plate Fixture. Universal Angle-plate Drilling Fixture. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, pp. 315-316, 3 figs. Use and general application of universal drilling fixture for handling casings for turbines.

Angular Settings for. Angular Settings for Drilling and Boring. Mech. Wld., vol. 75, nos. 1943, 1945, and 1948, Mar. 28, Apr. 11 and May 2, 1924, pp. 190-191, 222, and 270-271. 16 figs. Describes various methods of angular setting.

Boiler-Shop. Economic Drilling Work in Boiler Shops (Wirtschaftliches Bohren in der Kesselschmiede), P. Naumann. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 894-896, 5 figs. Discusses principles for construction of drilling machines and describes a two-spindle machine designed accordingly.

Continuous. Langelier Continuous Drilling Machine. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, p. 317, 1 fig. Ten-spindle rotary machine designed primarily for drilling tapped hole in nuts used on hub of automobile disk wheels, but which can easily be arranged to drill other parts of similar form.

Design. A Study of Drilling Machines, Jos. G. Horner. Machy. (Lon.), vol. 25, no. 636, Dec. 4, 1924, pp. 297-298. Details of design and developments, with reference to geared speeds and feeds, high-speed steel, spindles, tables, etc.

Development. Fifty Years Development in Drilling Machines. Machy, (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 352-354, 2 figs. Comparison between early and present-day designs of upright and radial drilling machines.

Fifty Years of Drilling Machine Specialization. Am. Mach., vol. 60, no. 1, Jan. 3, 1924, pp. 21-23. See also Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 61-65. Drilling-machine history of past half century of Cincinnati Bickford Tool Co.; contrast between machines and performances of former years and today.

Drilling and Milling. Drilling and Milling Work in Large-Scale Machine Construction (Bohr- und Fräswerke im Grossmaschinenbau), A. Schlegelmilch. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 865-871, 18 figs. Details of new combined drilling and milling plant of Schiess Machine Works at Düsseldorf and comparative advantages.

Electric. Electric Hand Drilling Machines in Steel-Construction Workshops, Especially in Shipyards (Die elektrische Handbohrmaschine in Eisenkonstruktionswerkstätten, insbesondere auf Werften), H. Gütschow. Praktischer Maschinen-Konstrukteur (Deutsche Werkzeugmaschinenbau), vol. 57, no. 1-2, Jan. 8, 1924, pp. 7-10, 8 figs. Describes preliminary work for introduction of such machines in shipyard in Danzig, including comparative tests on pneumatic and electric drilling machines, showing superiority of latter.

Electric and Compressed-Air, Comparison of. Comparative Tests of Electric and Compressed Air Hand Drilling Machines (Vergleichsversuche zur Ermittlung der Wirtschaftlichkeit von elektrischen und Pressluft-Handbohrmaschinen), E. Pallas. Maschinenbau, vol. 3, no. 22, Aug. 28, 1924, pp. 814-817, 9 figs. Advantages and drawbacks, economic comparison, results of experiments, formula for determining coefficient of efficiency and economy.

Economics of Compressed-Air Drilling Machines (Einiges über die Wirtschaftlichkeit von Pressluftbohrmaschinen), G. Salinger. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 896-897, 3 figs. Comparison with electric drilling machine; increasing efficiency of pneumatic machine; substituting gliding by rolling friction; shows superiority of roller bearings.

Heavy-Duty, Possibilities of. Possibilities of Heavy-duty Drilling, H. L. Tigges. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 950-952, 5 figs. See also Machy. (Lond.), vol. 24, no. 624, Sept. 11, 1924, pp. 737-739, 5 figs. Points out possibilities of vertical heavy-duty drilling machine by presenting examples of work done in automobile plants. By term "heavy-duty drilling machine" is meant a machine with a box column.

Multiple-Spindle. Multiple-spindle Drilling Machines. Machy. (Lond.), vol. 23, no. 593, Feb. 7, 1924, pp. 609-612, 6 figs. New tools operating on time cycle, more particularly for operation on railway-car details.

Radial. A New Portable Universal Radial Drilling Machine. Eng. Production, vol. 7, no. 140, May 1924, pp. 144-145, 4 figs. Describes drilling and tapping machine of Wm. Asquith, Ltd., Halifax.

Locomotive-Frame Drilling Machines (Lokomotivrahmen-Bohrmaschinen), E. Stephan. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 897-899, 6 figs. Advantages of drilling over cutting

and punching; operation of frame-drilling machines; simultaneous drilling of several frames; etc.

New 6-ft. Radial Drilling Machine. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, pp. 305-306, 1 fig. High-speed radial drilling, boring, facing tapping, and studding machine, constructed by Geo. Swift & Sons, Halifax.

Radial, Manufacture of. Manufacturing the Right Line Radial Drill, J. Haydock. Am. Mach., vol. 61, nos. 13 and 14, Sept. 25 and Oct. 2, 1924, pp. 495-498 and 543-545, 15 figs. Sept. 25: Deals with planing, milling, and drilling operations on the heavier parts. Oct. 2: Gear cutting, scraping, and assembling.

Rotating Tables. Drilling Motor Parts on the Rotating Table, W. F. Sandmann. Am. Mach., vol. 60, no. 6, Feb. 7, 1924, pp. 197-199, 6 figs. Examples of rotating fixtures used on large variety of automotive work; construction of fixtures and principles involved in design.

Slot. A New Duplex Slot Drilling Machine. Machy. (Lond.), vol. 24, no. 620, Aug. 14, 1924, pp. 627-628, 3 figs. Describes latest duplex slot drilling and keyseating machine built by Smith & Coventry, Ltd., Salford, Eng.; convenience of operation and compactness of design, combined with accessibility of all adjustments, are prominent features. Has single belt drive.

Types. Plate and Bar-working Tools. Machy. (Lond.), vol. 23, nos. 596 and 598, Feb. 28 and Mar. 13, 1924, pp. 713-718 and 777-784, 34 figs. Drilling machines and practice.

Vertical. See Heavy-Duty.

DRILLS

Grinding. See ABRASIVE WHEELS, Selection and Uses.

Portable, Electric. Summary of Conditions for Judging Portable Electric Drills (Zusammenfassung aller Bedingungen für die Bewertung ortsbeweglicher Elektro-Bohrmaschinen, sogenannter Handbohrmaschinen und deren Verwendungsgebiete), H. Sundhaussen. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 157-167, 17 figs. and 2 tables on supp. pages. Details of various types of drills, their design, construction, and operation.

Rock. See ROCK DRILLS.

Steel for, Defects in. Physical Defects in Hollow Drill Steel, F. B. Foley, Chas. Y. Clayton and M. L. Frey. Am. Inst. Min. & Met. Engrs.—Trans., no. 1317-S, Mar. 1924, 13 pp., 6 figs. Mine drill steels were examined to detect cause of prevalence of failures at bit end of short steels of large gage at particular mine; transverse cracks along water hole were found; new steels are found to contain very few actual cracks but surface of water hole is uneven, and in used steels cracks seem to originate at base of such undulations or serrations; these irregularities are thought to be predisposing cause of cracks.

DROP FORGING

Costs, Relation to Operation. Relation of Drop Forge Costs to Percentages of Operation, R. T. Herdegen. Forging—Stamping—Heat Treating, vol. 10, no. 11, Nov. 1924, pp. 405-409, 1 fig. Data compiled from various forge shops.

Crankshafts. Precautions Needed in Production of Automotive Drop Forgings. Automotive Industries, vol. 50, no. 26, June 26, 1924, pp. 1388-1391, 6 figs. Wyman-Gordon employ special machine to prove running balance of crankshafts, and etch section to show direction of flow in finished product, in addition to standard tests.

Dies. See DIES, Drop-Forging.

Drop Stamps. Drop Stamps with Multiple Impression Dies. Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 705-706, 2 figs. Describes battery of drop stamps introduced by Brett's Patent Lifter Co., to be used for production of parts of railway appliances; novelty of installation consists in arrangements made for use of multiple-impression dies.

Hammers. See HAMMERS.

Piece-Rate Prices. Maintaining Proper Piece Rate Prices, L. J. Stoddard. Forging—Stamping—Heat Treating, vol. 10, no. 12, Dec. 1924, pp. 446-447. Points out that ability to correctly estimate given weight of pieces to be forged, and production per hour, and to properly apportion cost is essential to success.

Practice. Drop Forging, B. Brett. Eng. Production, vol. 7, no. 146, Nov. 1924, pp. 337-340, 6 figs. Description of work produced; features in design and application of drop-forging equipment; multiple die stamping, and design of hammer specially brought out for application of this system of drop forging, furnaces for drop forging.

Research, Importance of. The Drop Forge Industry as the Buyer Sees It, C. E. Bement. Forging—Stamping—Heat Treating, vol. 10, no. 12, Dec. 1924, pp. 452-454. Points out that lack of research and investigation on important phases of drop-forging practice is contributing factor in retarding normal development.

Trimming Flash. Drop Forge Practice—Trimming the Flash, L. Aitchison. Forging—Stamping—Heat Treating, vol. 10, nos. 3 and 4, Mar. and Apr. 1924, pp. 102-105 and 148-152 and 172, 21 figs. Discusses factors that must be taken into consideration in trimming flash from drop forgings; proper design of trimming tools essential.

DRYDOCKS

East Boston, Mass. The Simpson Dry Dock Plant. Shipbldg. & Shipg. Rec., vol. 24, no. 11, Sept. 11, 1924, p. 311, 1 fig. Gives general layout and improvements carried out at Simpson Dry Dock Plant, East Boston, Mass.

Esquimalt, B. C. The Canadian Government Dry Dock at Esquimalt, B. C. Engineering, vol. 138, no. 3065, Sept. 26, 1924, pp. 449-450, 33 figs. partly on supp. plate and p. 454. Description of new dock being constructed, which will accommodate largest class of ships, a depth over sill at high tide of 40 ft. being provided, while maximum usable length will be 1150 ft.

Floating. An Interesting Floating Dry Dock. Pac. Mar. Rev., vol. 21, no. 9, Sept. 1924, p. 463, 3 figs. Describes new 15,000-ton floating drydock being built for Wallace Shipbldg. & Drydock Co., Ltd., Vancouver, B. C.; dock will consist of 11 timber pontoons, four in small section and seven in large.

Floating Drydock at Vancouver. Can. Engr., vol. 47, no. 16, Oct. 14, 1924, pp. 422-423, 1 fig.

New Floating Dry Dock for Southampton. Engineer, vol. 137, no. 3556, Feb. 22, 1924, pp. 198-199, 9 figs., partly on supp. plate. Shows progress of work and launching of individual sections.

Reinforced Concrete Dolphins for 60,000-Ton Floating Dock at Southampton. Concrete & Constructional Eng., vol. 19, no. 7, July 1924, pp. 450-454, 1 fig. To provide docking facilities for ships of Majestic type and larger (56,557 tons).

The Southampton 60,000-Ton Floating Dock. Engineering, vol. 117, no. 3051, June 20, 1924, pp. 789-791, 23 figs. partly on supp. plates. Detailed description of dock provided by Southern Ry. to enable even largest vessels in world, viz., the Majestic and the Leviathan, using port to be repaired and overhauled. Total weight of structure and equipment is 18,800 tons. Dock is of double-sided, self-docking type constructed in seven

sections, any one of which can be lifted by others for painting or repairs.

Havre, France. The New Dry Dock at Havre. Engineer, vol. 137, no. 3572, June 13, 1924, pp. 662-663, 6 figs. Dock has length of 312 m., and free width at entrance of 38 m.; it is composed of steel and concrete and was erected on land, floated, towed to site it was to occupy, and then gradually sunk on to previously dredged foundation by building masonry inside it, so as to form walls and floor of dock.

See also QUAYS, Tidal Basin, Havre, France.

Italy. The Drydock "Principe di Piemonte" of the Royal Arsenal at Venice (Bacino da carenaggio "Principe di Piemonte" del R. Arsenale di Venezia), F. Ferreri. Annali dei Lavori Pubblici, vol. 62, no. 8, Aug. 1924, pp. 709-730, 20 figs. on supp. plates. Details of construction and equipment.

Liverpool. See DOCKS, Liverpool.

Oil Engines for. Stationary Oil Engines for Dry Docks. Oil Engine Power, vol. 2, no. 12, Dec. 1924, pp. 641-643, 3 figs. Sets forth advantages of employing oil engines to furnish power for operation of drydocks; details of construction, launching, and delivery of 8000-ton floating drydock ordered by company in Batavia, Java, from Burgerhout's Eng. & Shipbldg. Works, Rotterdam.

Swansea, England. The New Palmer's Graving Dock at Swansea. Engineering, vol. 117, nos. 3045 and 3046, May 9 and 16, 1924, pp. 602-604 and 610, and 637-640, 26 figs. See also Engineer, vol. 137, nos. 3568 and 3569, May 16 and 23, 1924, pp. 544-546 and 576-577, 6 figs. Account of new dock and its equipment and detailed consideration of constructional work; built entirely of concrete except quoin and sill stones, which are of granite.

DRYING

Air Heaters for. See AIR HEATERS.

Driers. See DRIERS; REFRACTORIES, Drying.

Intensive, Influence of. The Influence of Intensive Drying on Internal Change (Ueber den Einfluss intensiver Trocknung auf innere Umsetzungen), A. Smits. Zeit. für Physikalische Chemie, vol. 111, no. 3-4, Aug. 5, 1924, pp. 161-170. Explanation of properties of intensively dried substances based on theory of allotropy, substance being assumed to contain at least two different molecular forms in internal equilibrium, at least one of these forms being inactive.

Principles and Methods. Drying Methods in Modern Industrial Processes, Chas. L. Hubbard. Nat. Engr., vol. 28, no. 7, July 1924, pp. 309-314, 7 figs. Fundamentals of drying processes and basic factors affecting their operation.

Principles and Methods of Drying in Modern Industrial Processes, C. L. Hubbard. Nat. Engr., vol. 28, no. 11, Nov. 1924, pp. 543-547, 9 figs. Discussion of the different methods used in drying processes and their relative advantages and applications.

Textile Mills. See TEXTILES, Drying Apparatus.

Vacuum. Drying in Vacuum (Torkning i vakuum), A. Estelle. Teknisk Tidskrift, vol. 54, no. 41, Oct. 11, 1924, pp. 77-78 (Kemi), 3 figs. Describes system of drying of wood in vacuum invented by P. H. Mueller.

Drying in Vacuum (Torkning i vakuum), E. Oeman. Teknisk Tidskrift, vol. 54, no. 37, Sept. 13, 1924, pp. 65-69 (Kemi), 3 figs. Analyzes process and principles of drying in vacuum.

Vacuum Wood-Drying Process of Swedish Origin. Swedish Export, vol. 8, no. 1, Jan. 1924, pp. 7-8, 2 figs. Special reference to installation of some plants on Forselles' high-vacuum system.

Waste-Heat. See WASTE HEAT, Drying with.

Wood. See WOOD, Drying.

DRYING PLANTS

Wood. Wood-Drying Plants for Shipyards (Holztrocknungs-Anlagen für Schiffswerften), F. Kleiber. Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 247-249, 3 figs. Describes Daqua artificial wood-drying system and plant.

DURALUMIN

[See also AIRCRAFT CONSTRUCTION MATERIALS, Light Metals; ALUMINUM ALLOYS, Steel vs.]

Improvement Process. The Researches on the Duraluminum Problem, W. Fraenkel and E. Scheuer. Testing, vol. 1, no. 1, Jan. 1924, pp. 33-39. Explains peculiarity of process of improvement, and gives hypothesis reached by authors, namely, that cause of improvement is explained as chemical reaction in quenched alloy taking place in forming solid solution.

Production and Uses. Duralumin, Its Composition and Treatment, S. H. Phillips. Am. Mach., vol. 61, no. 10, Sept. 4, 1924, pp. 371-374, 5 figs. Data concerning production and uses.

Properties and Uses. Duralumin (Duralumin), R. Beck. Zeit. für Metallkunde, vol. 16, no. 4, Apr. 1924, pp. 122-127, 2 figs. Its properties and uses; refining process.

Treatment. Duralumin, How It Is Treated, Handled and Protected Against Corrosion, H. C. Knerr. Automotive Industries, vol. 51, no. 15, Oct. 9, 1924, pp. 648-650. Instructions for working cover forming, bending, tube bending, spinning, forging, riveting, welding, and soldering; condensed data given on composition, mechanical properties, and heat treatment.

Welding. See ELECTRIC WELDING, Resistance, Spot.

DUST.

Atmospheric. Dust in the Atmosphere. Nature (Lond.), vol. 114, no. 2872, Nov. 15, 1924, pp. 720-722, 3 figs. Methods of estimating atmospheric impurity; effects of impure air. (Abstract.) Report of Advisory Committee on Atmospheric Pollution.

Investigation of the Dust Content of the Atmosphere, H. H. Kimball, I. F. Hand, N. Shaw, and E. R. Miller. Monthly Weather Rev., vol. 52, no. 3, Mar. 1924, pp. 133-141, 17 figs. Series of papers on experiments with Owen's dust counter, organic bodies found in air of Washington and London; dust fall of Mar. 29, 1924.

See also AIR, Dustiness Measurement.

Coal. See COAL DUST.

Collection. A Dust Collecting System, B. E. Whitesell. Am. Ceramic Soc.—Jl., vol. 7, no. 3, Mar. 1924, pp. 77-82, 8 figs. Describes principle on which a dust collecting system installed at Salina Plant of Kier Fire Brick Co., Pittsburgh, Pa., operates; factors considered in designing, and description of installation and operation.

A Flue Dust Collector. Power Engr., vol. 19, no. 221, Aug. 1924, pp. 291-292, 2 figs. Describes method of trapping flue dust at base of steel chimneys, instead of allowing it to escape from chimney top.

Collecting Flint Dust, A. E. Harris. Ceramic Soc.—Trans., vol. 23, Pt. 1, 1924, pp. 26-32 and (discussion) 32-38, 5 figs. Methods and equipment.

Dust Collecting Plants for Briquetting Works (Entstaubungsanlagen für Brikettfabriken), M. Kessner. Feuerungstechnik, vol. 12, no. 18, June

15, 1924, pp. 150-152, 3 figs. Describes plant collecting coal dust which is used for firing as pulverized coal, constructed by Demag, Duisburg.

Electric Dust Collection in the Cement Industry (Die elektrische Gasreinigung im Dienste der Zementindustrie), H. Nitzsche. Tonindustrie-Zeitung, vol. 48, no. 48, June 14, 1924, pp. 517-520, 8 figs. Discusses Cottrell-Möller process and apparatus for it made by Lurgi-Apparatebau G.m.b.H. in Frankfurt, their advantages and application in cement works.

Industrial Dust Collecting and Ventilating (Die Bedeutung zeitgemässer Entstaubung und Entlüftung in der Industrie), E. Schumann. Rauch u. Staub, vol. 14, Sept. 22, 1924, pp. 96-99, 8 figs. Discusses dust removal and ventilation in various kinds of factories from sanitary standpoint and gives examples.

Counter. See Atmospheric.

Explosion Prevention. Safety in Grinding Sulphur and Hard Rubber, H. W. Frevert. Chem. & Met. Eng., vol. 31, no. 23, Dec. 8, 1924, pp. 894-896, 4 figs. Operating in atmosphere containing less than 8.5 per cent ozygen with sulphur and less than 13 per cent oxygen with hard rubber will bring about danger of dust explosions.

Explosions. A Peculiar Dust Explosion, W. A. Noel. Chem. & Met. Eng., vol. 31, no. 6, Aug. 11, 1924, pp. 223-225, 6 figs. Investigation of causes and possible origin of dust explosion in spray drier used on milk.

Dust Explosions (Die Staubexplosionen), G. Jaeckel. Zeit. für Technische Physik, vol. 5, no. 3, 1924, pp. 67-78, 3 figs. Discusses causes; thermal explosions and electric explosions; gives theory of propagation of dust explosions which enables calculation of upper and lower explosion limits of dust from its thermal constants, etc.

Electric Plants in Dustladen Spaces (Elektrische Anlagen in stauberfüllten Räumen). Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 13, July 15, 1924, pp. 113-114. Details of explosion of aluminum dust at bronze factory favored by slight defects in electric lines.

The Lower Limits of Concentration for Explosion of Dusts in Air, L. J. Trostel and H. W. Frevert. Chem. & Met. Eng., vol. 30, no. 4, Jan. 28, 1924, pp. 141-146, 5 figs. Recounts tests made at Bur. of Chemistry, Dept. of Agriculture, and interprets results in light of industrial needs.

See also COAL DUST, Explosions; EXPLOSIONS, Lignone Dust; Starch Dust; Sugar Dust.

Flour, Explosions of. See GRAIN ELEVATORS, Explosions.

Inhalation, Effect of. The Inhalation of Dust, H. M. Carleton. Colliery Guardian, vol. 128, no. 3331, Oct. 31, 1924, pp. 1127-1128. Abstract of report to Medical Research Council. Author combats commonly held view that harmfulness of dust can be measured by degree of angularity and sharpness of particles; experiments confirm opinion that inhalation of coal dust may have beneficial results and that dangers arising from inhalation of shale dust are very small.

Precipitation, Electrical. Dust Precipitation by Means of High-Tension Current (Niederschlagung von Staub durch Elektrizität von hoher Spannung), H. Kalpers. Elektro-Jl., vol. 4, no. 8, Aug. 1924, pp. 219-220. Industrial dust precipitation with current up to 100,000 volts; glass and other protective coverings for active electrodes and their efficiency.

The Electrostatic Precipitation of Suspended Particles from Gases, H. C. Urquhart and K. I. Marshall. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 223-239, 4 figs. Discusses history of electric precipitation, theory of electrostatic precipitation process, by passing dust between two suitably shaped electrodes charged with high potential unidirectional electricity; plate and pipe types of precipitators, application and results.

See also Removal; PRECIPITATION, Electrical.

Protection Against. Protection Against Dust and Fumes, R. C. Williams. Forging—Stamping—Heat Treating, vol. 10, no. 4, Apr. 1924, pp. 164-167, 1 fig. Examples of practical results in accident and sickness prevention demonstrates what it is possible to accomplish if careful methods are utilized.

Removal. Dust Extraction in the Cotton Industry, J. H. Crabtree. Power Engr., vol. 19, no. 218, May 1924, pp. 169-171, 7 figs. Describes several systems actually at work in mills.

Dust Removal and Gas Purification by Means of Electricity (Entstaubung und Gasreinigung durch Elektrizität), E. Zopf. Montanistische Rundschau, vol. 16, no. 6, Mar. 16, 1924, pp. 135-138, 3 figs. Description of Cottrell-Möller electric process, according to which gases are conducted through a high-tension electric field, carrying pulsative direct current of about 50,000 volts. Metal dust, vapor, and smoke-containing gases are completely purified by this process. Hundreds of successful installations in Germany.

See also GASES, Dust Removal.

Separators. See AIR FILTERS, Dust Separators.

DYE INDUSTRY

Great Britain. British Dyestuffs Industry, F. E. Breithut. Trade Information Bul. (Supp. to Commerce Repts.), no. 231, May 19, 1924, 30 pp. Particulars of factories making dyestuffs, dyestuffs, dyestuffs (import regulation) act of 1920, reparation dyes, status of industry, quality of dyestuffs, prices, and proposed Anglo-German dye agreement.

Review and Criticism of British Dyestuff Industry, H. Levinstein. Chem. Age (Lond.), vol. 11, no. 278, Oct. 11, 1924, pp. 364-367. Author's views on situation and a frank criticism of position of British Dyestuffs Corpn.

Status of the Dye Industry in Great Britain, F. E. Breithut. Chem. & Met. Eng., vol. 30, no. 22, June 2, 1924, pp. 869-970. Economic factors responsible for its development and present tendencies.

The British Dyestuff Industry as Seen by a Neutral, H. A. Prager. Chem. Age (Lond.), vol. 11, no. 287, Dec. 13, 1924, pp. 594-596. Present position and ways of reconstruction.

Italy. The Dye Industry in Italy and the New Processes Developed for Manufacturing Some of the Most Important Intermediate Products (L'industria delle materie coloranti in Italia ed i nuovi processi per la fabbricazione di taluni dei grandi prodotti intermediari), G. Poma. Giornale di Chimica Industriale ed Applicata, vol. 6, no. 3, Mar. 1924, pp. 111-120, 12 figs. Description of radically new and successful processes developed.

Post-War Development. The Dyestuff Industry (L'Industrie des matières colorantes), A. Wahl. Technique Moderne, vol. 16, no. 10, May 15, 1924, pp. 341-349, 9 figs. Review of developments since the war in France, Germany, Switzerland, England, and United States.

Switzerland. The Swiss Dyestuffs Industry, F. E. Breithut. Trade Information Bul. (Supp. to Commerce Repts.), no. 175, Jan. 14, 1924, 16 pp. Production, export, and import statistics.

United States. American Progress in Dye Manufacture, Chas. H. Herty. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1021-1023, 1 fig. Account of progress; list of new dyestuffs announced since Tariff Act of 1922.

Dye Symposium. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924. Contains following articles: Early Attempts to Establish the Analine Industry in United States, V. G. Bloede, pp. 409-411; Record of the Coal-Tar Color Industry at Albany, E. Hendrick, pp. 411-413; American Dyestuffs, Geo. A. Prochazka, pp. 413-417; Washington's Relation to the Dye Industry Prior to 1914, Chas. E. Munroe and A. M. Doyle, pp. 417-419.

DYEING

Jig Dyeing Machines. Jig Dyeing Machines, R. Sansone. Textile Wld., vol. 66, no. 17, Oct. 25, 1924, pp. 107, 109 and 111, 6 figs. An Italian viewpoint on possible future developments. Detached dye vat. Electrical applications.

Mineral Pigment, Use of. Use of Mineral Pigment in Dyeing, J. M. Matthews. Color Trade Jl., vol. 14, no. 2, Feb. 1924, pp. 37-41. Necessity of obtaining mineral compounds in some soluble form for use as dyes; features to be guarded against in use of mineral dyes; application of mineral dyes; etc.

Turkey Red. Comparison of Methods for Dyeing Turkey Red (Contribution à l'étude du rouge Alizarine teint), Chas. Sunder. Société Industrielle de Mulhouse—Bul., vol. 90, no. 1, Jan. 1924, pp. 72-79. Review of methods in which fabric is mordanted, before dyeing, with oil and alumina or with alumina and then oil, or is mordanted after dyeing (padding) with Alizarin.

Wool. Classification of the Methods of Dyeing Wool, J. M. Matthews. Color Trade Jl., vol. 14, nos. 3 and 5 and vol. 15, no. 1, Mar., May, and July, 1924, pp. 77-81, 141-145, and 7-9. Nature of wool fiber; dyeing directly with basic and substantive dyes; diluents used with dyestuffs and their effect on dyeing; requirements of dyes for household dyeing; dyeing in a weekly acid bath; dyeing with sulfone dyes by addition of chrome and bluestone; archil an important wool dye; etc. Processes involving use of an alkaline bath.

DYES

Action of Light on. The Action of Light on Dyes Applied to Cotton Fabrics, P. W. Cunliffe. Textile Inst.—Jl., vol. 15, no. 4, Apr. 1924, pp. T173-T194. Summary of literature on fading. Bibliography.

Adsorption by Mordants. Effect of Hydrogen-Ion Concentration on Compound Formation and Adsorption of Dyes by Mordants, R. E. Marker and N. E. Gordon. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1186-1188, 5 figs. Investigation to show quantitative effect of hydrogen-ion concentration on adsorption of acid and basic dyes by mordants.

Retention by Silicic Acid. Retention of Organic Dyestuffs by Silicic Acid (Ueber das Verhalten von organischen Farbstoffen zu Kieselsäure), E. Berl and W. Pfannmüller. Kolloid-Zeit., vol. 35, no. 3, Sept. 1924, pp. 166-169. Finely divided quartz absorbs basic dyestuffs; reaction is reversible and color can be removed by washing; with ignited quartz powder and with commercial specimens of precipitated silica, adsorption was irreversible.

DYNAMICS

Theory. Contribution to the Knowledge of the Theory of Motion (Beiträge zur Kenntnis der Bewegungslehre), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, nos. 41, 44, and 49, Oct. 28, Nov. 18, and Dec. 23, 1924, pp. 549-551, 589-592, and 662-664, 37 figs. Discusses motion of eccentric disks and cams and their calculation.

DYNAMITE. See EXPLOSIVES, Dynamite.

DYNAMOMETER CARS. See CARS, Dynamometer.

DYNAMOMETERS.

Belt. Some Power Studies Through Use of the Ohio Recording Belt Dynamometer, G. W. McCuen. Agricultural Eng., vol. 5, no. 3, Mar. 1924, pp. 51-55, 13 figs. Describes dynamometer that will record power requirements and performance of belt-driven machines; prime mover, in a cradle, swings to make possible recording of a torque due to resistance in a belt. Studies in threshing and baling straw. Tests on effect of sharpness of knives.

Direct-Reading Power Indicator. A Direct-Reading Power Indicator (Indicateur de puissance à lecture directe), H. Guillou. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 135, no. 10, Dec. 1923, pp. 1163-1170, 7 figs. Apparatus developed by author which, in contrast to simple dynamometer, registers actual power transmission at any moment; can be applied in all cases where power is transmitted by means of rotating shaft.

Hub. Dynamometer Hub for 200-M-Kg. Torsional Moment and 1200-Kg. Tension (Die Messnabe für 200 m-kg. Drehmoment und 1200 kg. Zug, Bauart Stieber), W. Stieber. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 69-73, 18 figs. Describes development of dynamometer hub, of Stieber design, suitable for Liberty-12 engine; results of tests.

Railway. See CARS, Dynamometer.

Torsion. Experience With Vieweg Torsion Dynamometer (Erfahrungen mit Torsionsdynamometern nach Vieweg), H. Herttrich and E. Krabbe. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1028-1032, 7 figs. Describes mechanical and optical parts. Experience especially as to accuracy of measurement, calibrating, and interruptions. Field of application.

The Amsler Torsion Dynamometer with Stroboscopic Reading Device (Dynamomètre de torsion, système Amsler, avec dispositif de lecture stroboscopique). Génie Civil, vol. 84, no. 11, Mar. 15, 1924, pp. 260-261, 2 figs. Apparatus for measuring power absorbed by high-speed machines forced to overcome an almost constant resistance.

Torsion Dynamometer (Torsionsdynamometer), L. Klein. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 32, Aug. 9, 1924, pp. 830-831, 4 figs. Transmission dynamometer suitable for measuring power of textile or other industrial machinery under working conditions; in use, key of driving pulley on machine is removed and instrument is attached to driving shaft by coupling; ordinates of resulting diagram are turning moment and displacement, and its area records work done; results of tests and typical portion of record are given; instrument works satisfactorily at speeds up to 1200 r.p.m.

Types. Some New Dynamometers, J. S. G. Primrose. Mech. World, vol. 75, nos. 1936, 1937, and 1938, Feb. 8, 15, and 22, pp. 87-88, 100-102, and 115-116, 7 figs. Review of some of the more modern means of measuring force, contrasting them with some of the older forms which are better known.

DYNAMOS. See ELECTRIC GENERATORS, D. C.

E

EARS

Acoustics of. See ACOUSTICS, Ear.

EARTH

Diatomaceous. The Origin and Uses of Diatomaceous Earth, V. L. Eardley-Wilmot. Can. Min. Jl., vol. 45, no. 38, Sept. 19, 1924, pp. 918-920. Discusses composition, story of diatom, diatom theory for origin of oil, formation of diatomaceous earth, uses, etc.

Elements in. The Radial Distribution of Certain Elements in the Earth, H. S. Washington. Wash. Acad. Sci.—Jl., vol. 14, no. 19, Nov. 19, 1924, pp. 435-441. It appears that earth is mainly composed, to extent of over 98 per cent, of only seven elements which, in their order of abundance, are: iron, oxygen, silicon, magnesium, nickel, calcium, and aluminum.

Heat of, Determination. The Heat of the Earth, O. Wilson. Sci. Am., vol. 130, no. 2, Feb. 1924, pp. 98 and 143-144, 5 figs. Apparatus with which deep temperatures are determined.

Interior of. Seismophysics and the Interior of the Earth (Sur les bases nouvelles de la sismophysique et sur la constitution interne du globe terrestre), R. Yamamoto. Annales de Physique, vol. 1, May-June 1924, pp. 293-345, 5 figs. Comprehensive exposition, mostly mathematical, of theory applying to propagation of seismic waves; gives general theory of waves as well as methods used for calculating positions of epicenter and hypocenter and velocity of waves; theory of Wiechert that center of earth is of metallic iron appears to lack confirmation, as variation of velocity with depth appears to be continuous.

Magnetic Field. A Method for Determining the Total Intensity of the Earth's Magnetic Field from a Moving Support. Terrestrial Magnetism & Atmospheric Electricity, vol. 29, no. 1, Mar. 1924, pp. 41-46, 2 figs. Describes method which is an attempt to eliminate "settings" and "readings" which involve calculations when using such instrument at sea.

Pressure. Determination of Sliding Surfaces in Taking Earth Pressures (Bestimmung der Gleitflächen bei Erddruckermittlungen), M. Buchwald. Bautechnik, vol.. 2, no. 48, Nov. 7, 1924, pp. 546-549, 20 figs. Describes a simplified method of calculation and gives examples of applications.

Investigation of the Coulomb Earth-Pressure Theory (Untersuchung der Erddrucktheorie von Coulomb), A. Freund. Bautechnik, vol. 2, no. 12, Mar. 18, 1924, pp. 101-109, 30 figs. Origin, nature, and evaluation of the Coulomb principle; rectification and development of theory with aid of laws of elasticity.

See also FOUNDATIONS, Bearing Soils.

Temperatures Within, Calculation of. Temperature at Moderate Depths Within the Earth, L. H. Adams. Wash. Acad. Sci.—Jl., vol. 14, no. 20, Dec. 4, 1924, pp. 459-472, 2 figs. Factors which determine cooling of primitive Earth; initial temperatures near surface; calculates probable temperatures in upper 300 kilometers.

EARTHQUAKES

Causes. Inside the Earth, and Out, Oliver Lodge. Sci. Am., vol. 130, no. 6, June 1924, pp. 374-375, 3 figs. Conditions in rock crust that lead to earthquakes.

Characteristics of. Earthquakes and Their Characteristics (Los terremotos y sus caracteristicas), R. E. J. Summers. Ingeniería Internacional, vol. 11, no. 5, May 1924, pp. 231-233, 3 figs. Deals with resistance of buildings to seismic shocks and gives formulas for use in designing earthquake-proof structures.

Damage to Electrical Installations. A Brief Description of the Damage Done to Electrical Installations by the Earthquake and Emergency Measures, M. Shibusawa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 425, Dec. 1923, pp. 925-941, 17 figs. on supp. plates. Describes damage done to electrical installations of Japan by earthquake and measures taken to restore stricken district from these chaotic conditions. (In Japanese.)

Japan. On the Recent Earthquake, A. Imamura. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 426, Jan. 1924, pp. 7-18. (In Japanese.)

Six Lessons from the Japan Earthquake, R. F. Moss. Mich. Architect & Engr., vol. 6, no. 2, Feb. 1924, pp. 18-22, 1 fig. Gives six important lessons and recommendations for future construction.

See also TELEGRAPH LINES, Earthquake Damages, Japan.

Japan, Structures Subjected to. See BUILDING CONSTRUCTION, Earthquake Protection; Reinforced-Concrete.

Resistance of Buildings to. See BUILDINGS, Japan, Resistance to Earthquake.

ECCENTRICS

Turning. See MACHINING METHODS, Eccentrics, Turning of.

ECONOMIZERS

Cast-Iron. Cast-Iron Flue-Gas Economizer for Low and High Pressures (Gusseiserne Rauchgas-Vorwärmer für niedrigen und hohen Druck). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 23, June 7, 1924, pp. 609-610, 9 figs. Repeated pressure tests followed by cold-water pressure on two test pieces of pearlitic iron casting show that internal pressure can be increased up to 140 atmos.

Construction and Operation. Economizers and Their Place in Boiler Work. Boiler Maker, vol. 23, no. 12, Dec. 1924, pp. 351-353, 8 figs. How economizers are built; theory of operation; methods used in their repair.

Efficiency. Examination and Opinion on Economizers (Beitrag zur Untersuchung und Begutachtung von Rauchgasheizkörpern), G. Polcich. Feuerungstechnik, vol. 13, no. 5, Dec. 1, 1924, pp. 45-47. Report of experiment station of Technical Institute in Vienna on efficiency of economizers applied to house heating, showing that no advantage is derived from their application if stoves are properly constructed.

High-Pressure. Advances in Economiser Practice. Power Engr., vol. 19, no. 215, Feb. 1924, pp. 63-64, 3 figs. Describes Ringstay economizer for high-pressure work.

Operation and Types. The Efficient Operation of the Economiser. Eng. & Boiler House Rev., vol. 37, no. 11, June 1924, pp. 425-427, 3 figs. Methods whereby maximum efficiency may be obtained, both as regards reduction in coal bill and satisfactory operation of installation, especially from point of view of length of service.

See also BOILERS, Operation and Types.

EDUCATION, ENGINEERING

Calculus, Value in. Value of Calculus to the Engineer, R. Fleming. Can. Engr., vol. 46, no. 23,

June 3, 1924, pp. 587-588. Divergent views as to value of calculus. Personality of instructor of more importance than text book; better to learn calculus at college than after.

Cambridge University. Engineering Education at Cambridge University. Engineer, vol. 138, no. 3591, Oct. 24, 1924, pp. 462-464, 10 figs. partly on supp. plate. Connected account of use and development of engineering teaching in University; describes accommodation and equipment of laboratories; results which have been striven for and, to large extent, gained.

College Personnel System. Personnel System for a College of Engineering, A. A. Potter. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 330-331. Details and experience of Purdue University with system developed with funds provided by manufacturers.

Coöperative. Co-operative Railway Engineering Courses. Ry. Age, vol. 77, no. 21, Nov. 22, 1924, pp. 921-924, 7 figs. Program worked out by Central of Ga. Ry. and Ga. School of Technology.

Courses. Engineering Courses for the Functional Rather Than the Industrial Divisions of Engineering, E. Bennett. Eng. Education, vol. 14, no. 10, June 1924, pp. 582-599. Functional divisions of engineering are considered to be functional divisions found within any of the large industrial organizations.

Electrical Engineering. Electrical Educational Institutions Get Closer to Industry. Elec. Wld., vol. 84, no. 7, Aug. 16, 1924, pp. 311-313, 4 figs. Discusses growth in number of students, trend of education in its relation to industry, poor salaries paid to teachers.

Germany. Exposition of German Committee for Technical Schools in Hannover (Die Ausstellung des Deutschen Ausschusses für Technisches Schulwesen in Hannover). Maschinenbau, vol. 3, nos. 25 and 27, Oct. 9 and Nov. 13, 1924, pp. 973-974 and 1070, 2 figs. Details of engineering exhibit, drawings and models for training of apprentices.

New Media for Instruction at Technical Schools (Neue Lehrmittel für technische Schulen), R. Harm. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 929-930, 2 figs. Details of colored instruction charts explaining processes and apparatus used in various branches of engineering by means of progressive illustrations; for use in schools and colleges.

Technical Traveling Exhibit of the V. D. I. (Die betriebstechnische Wanderausstellung des Vereines Deutscher Ingenieure), Ph. Wisotzky. Sparwirtschaft, vol. 1, no. 15-16, Aug. 1924, pp. 73-74. Particulars regarding traveling exhibit representing various engineering lines, including State Railways, prepared by V. D. I. and circulating among principal industrial towns in Germany and Austria.

Highway Engineers. See ENGINEERS, Highway, Training of.

Leaders and Routine Practitioners. Educating Leaders and Routine Practitioners, C. C. Williams. Eng. Education, vol. 14, no. 9, May 1924, pp. 528-535. Considers question of whether colleges can effectively train both leaders and routine practitioners simultaneously.

Metallurgy. On Metallurgical Education, S. L. Hoyt. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 195-202. Recommends emphasizing and giving fundamentals in training to students, and handling practical side largely outside of curriculum, illustrating his idea by brief course in metallography.

Symposium on Metallurgical Education Held at the Fifth Annual Convention of the Society, Pittsburgh, October, 1923. Am. Soc. Steel Treating, vol. 5, nos. 2 and 3, Feb. and Mar. 1924, pp. 169-182 and 302-316, 3 figs. Feb.: Contributions by C. Upthegrove and A. E. Crockett and discussion. Mar.: Contribution by F. Crabtree; discussion of metallurgical education, by O. E. Harder; and discussion.

Symposium on Metallurgical Education Held at Sixth Annual Convention of the Society at Boston. Am. Soc. Steel Treating—Trans., vol. 6, no. 6, Dec. 1924, pp. 692-715, 2 figs. Contains following papers: What Constitutes the Best Metallurgical Education, B. Stoughton; Metallurgical Education, D. J. Demorest; The Education of the Research Men, K. Honda; and discussion.

Mining. Mining Engineering Education Since 1910, G. M. Butler. Jl. Eng. Education, vol. 15, no. 4, Dec. 1924, pp. 261-270 and (discussion) 270-284. Discusses three outstanding things that have exerted pronounced influence upon mining engineering education since 1910: (1) the world war; (2) Mann report on study of engineering education; (3) conference on commercial training for engineers fostered by U. S. Bur. of Education, held in Washington in June, 1919.

Power-Plant Engineering. Training Engineers for Alberta's Power Plants, R. M. Dingwall. Power House, vol. 17, no. 14, July 20, 1924, pp. 19-20 and 40-41, 3 figs. Provincial Inst. of Technology & Art, Calgary, Alberta, gives complete course in mechanical engineering consisting of two terms of 8 mo. each; students devote 50 per cent of their time to practical work.

Professional Training and. College Education and Professional Training, W. E. Wickenden. Jl. Eng. Education, vol. 15, no. 3, Nov. 1924, pp. 180-183. Characteristics of collegiate education and professional training.

Professional Training beyond Undergraduate Course. The Four-Years Course and After, J. B. Whitehead. Jl. Eng. Education, vol. 15, no. 3, Nov. 1924, pp. 184-189. Points out that industry must do more to emphasize importance of continuance of formal professional training beyond undergraduate years, and that for correction of present unfortunate conditions, some kind of united action on part of industry is necessary, in offering encouragement to certain number of promising young men each year to go forward into advanced work.

Selective Sectioning in Thermodynamics. Selective Sectioning in Thermodynamics. A Progress Report on a Continuing Pedagogical Experiment, Geo. W. Munro. Jl. Eng. Education, vol. 15, no. 3, Nov. 1924, pp. 202-213. In June 1924, Purdue Univ. completed third semester of experiment in selective sectioning of students in thermodynamics; author, who is professor of thermodynamics at University, sets forth object sought, methods employed, difficulties encountered, and results secured.

Tabulated Recapitulations, Use of. Tabulated Recapitulations as a Means of Education, P. A. Cushman. Eng. Education, vol. 14, no. 8, Apr. 1924, pp. 450-458, 4 figs. Points out in what ways engineering students would gain by use of tabular recapitulations during their study of fundamental courses.

Teaching, Methods of. At What Are We Aiming and With What?, F. W. Springer. Eng. Education, vol. 14, no. 10, June 1924, pp. 565-581. Proposes a key or outline of educational theory and makes more apparent desirability and possibility of finding cues for application of theory to engineering education.

EDUCATION, INDUSTRIAL

[See also EMPLOYEES, TRAINING OF.]

Character and Extent. Education and Training for the Industries. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 482-483. Investigation into character and extent of such training. Making

industry attractive to high-school and college students. Labor as a means of social salvation.

Coal Mining. See COAL MINING, Educational Requirements.

Foundry School. French Establish Foundry School, V. Delport. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 250-252, 4 figs. See also Iron Trade Rev., vol. 74, no. 15, Apr. 10, 1924, pp. 992-994, 3 figs. Comprehensive plan launched to provide thorough preparation for foundry engineers and managers; degree of engineer in foundry practice granted; school is linked with apprenticeship system; located in Paris.

Machinists. Can a School Turn Out First-class Machinists?, C. O. Herb. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 622-625, 4 figs. Methods followed in machine shop of Worcester Boys Trade School, Worcester, Mass., run on a commercial basis; describes shop work courses.

Training for Industries. Education and Training for the Industries. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 145-147. Report of conference on subject, held at A. S. M. E. annual meeting; includes address by R. L. Sackett on industrial education in Great Britain.

EDUCATION, VOCATIONAL. See VOCATIONAL TRAINING.

EGGS

Preservation. Industrial Preservation of Fresh Eggs "A La Coque" (For Boiling), F. Lescarde. Ice & Cold Storage, vol. 27, no. 312, Mar. 1924, pp. 53-56, 5 figs. Description of Lescardé process and results of experiments made with it; commercial advantages of the process.

EJECTORS

Steam-Jet Vacuum. The Steam Jet Vacuum Ejector. Mech. World, vol. 76, nos. 1973 and 1974, Oct. 24 and 31, 1924, pp. 264-265 and 277-278, 5 figs. Discusses principles underlying action of ejector and gives equations and methods whereby, with suitable coefficients, vacuum ejector may be designed.

ELASTICITY

Calculation. On the Application of Variational Equations to Statical Problems of Elasticity, A. Ono. Kyushu Imperial Univ. College of Eng.—Memoirs, vol. 3, no. 2, 1924, pp. 87-116, 7 figs. Considers the various conditions in which strain-variational and stress-variational equations are applied, and compares results of calculation with actual experiments.

Limit of. The Problem of Elasticity (Zur Frage der Elastizität), J. Czochralski. Zeit. für Metallkunde, vol. 16, no. 12, Dec. 1924, pp. 457-461. Limit of elasticity as basis for calculations of constructor.

Modulus of. The Variation of Young's Modulus at High Temperatures, C. H. Lees, J. P. Andrews and L. S. Shave. Physical Soc. Lond.—Proc., vol. 36, Pt. 5, Aug. 15, 1924, pp. 405-416, 3 figs. Shows by experiments that for fused quartz modulus changes only slightly between 0 deg. and 800 deg. cent.; for platinum, nickel, and aluminum wire decreases with rise of temperature, at low temperatures slowly, at high, more rapidly.

Photo. See PHOTOELASTICITY.

Plasticity and. Plasticity and Elasticity, E. C. Bingham. Franklin Inst.—Jl., vol. 197, no. 1, Jan. 1924, pp. 99-115, 9 figs. Notes on varieties of flow; stress-time curves; stress-strain diagram; rigidity; resilience and restitution; elastic after-effect.

ELECTRIC ARC

Carbon Arcs. Researches on the Carbon Arc; Vapor Pressure Determinations of the Carbon (Untersuchungen am Kohlelichtbogen; Dampfdruckbestimmungen des Kohlenstoffs), H. Kohn and M. Guckel. Zeit. für Physik, vol. 27, no. 5-6, 1924, pp. 305-357, 10 figs. Discusses measurement of intrinsic brilliancy of positive crater, and of temperatures, for determining vapor pressure curve of carbon, from which heat of vaporization of carbon is calculated.

The Relation Between Current, Voltage, and the Length of Carbon Arcs, A. E. R. Westman and R. B. Walker. Am. Electrochem. Soc.—Advance paper no. 24, for meeting Oct. 2-4, 1924, pp. 345-359, 8 figs. Results of investigation of relation between current, voltage and arc length for carbon arcs carrying alternating currents of from 100 to 700 amp. Gives also current and voltage wave forms and discusses their significance.

Characteristics. Minimal Length Arc Characteristics, H. E. Ives. Franklin Inst.—Jl., vol. 198, no. 4, Oct. 1924, pp. 437-473, 28 figs. Investigation to see whether experimental test reveals phenomena in accord with conception of minimal or zero length arc; consequences to be investigated are specifically those to be drawn as to nature of discharge at separating contacts, or break arcs; evidence is presented that discharge occurring between separating electrodes is, for large currents, an arc; for small currents, an atmospheric spark; method of isolating arc discharge for study.

Cold. Existence of a Light Arc With Cathode Not Glowing (Ueber die Existenz des Lichtbogens bei nicht glühender Kathode), H. Stolt. Zeit. für Physik, vol. 26, no. 2, Aug. 8, 1924, pp. 95-101. Shows that between fixed anode and brass or copper cathode strongly cooled by rotation an arc can be produced, and that probably arc is possible without cathode at white heat.

High-Intensity. Studies in the Projection of Light. The High-Intensity Arc and the Parabolic Mirror, F. Benford. Gen. Elec. Rev., vol. 27, nos. 3, and 4, Mar. and Apr. 1924, pp. 199-207 and 252-260, 34 figs. Describes 150-amp. arc; its essential feature is a deep and well-formed crater that is constantly filled with a highly luminous gas whose temperature is about 5500 deg. A. Computations and curves on high-intensity arc, in which specific case of a 60-in. high-intensity searchlight is largely used.

Positive Crater, Temperature of. Temperature of the Positive Crater of an Electric Arc (Sulla temperatura del cratere positivo dell'arco elettrico), M. Pierucci. Nuovo Cimento, vol. 1, no. 3, July-Sept. 1924, pp. 227-241. Developments as to forced arcs; results of experiments on temperature of positive d.c. craters show that, generally speaking, temperature at crater is not constant; temperatures of forced arcs rise very high.

Resistance Distribution in. Sound Measurements in Arc Lights with High-Frequency Currents (Sondenmessungen am Lichtbogen mit Hochfrequenzströmen), A. Hagenbach and M. Werli. Zeit. für Physik, vol. 26, no. 1, Aug. 5, 1924, pp. 23-39, 4 figs. In previous work authors described method of determining high-frequency a.c. resistance in arc light; by this means it is possible to calculate its counter-electromotive force; in present paper distribution of resistance in arc is investigated, and counter-electromotive force at anode and at cathode is determined; gives diagram of experimental arrangements, and tabulated results obtained with different kinds of carbon electrodes.

Spectra. The Appearance of "Raies Ultimes" in the Spectra of Electric Arcs (Sur l'apparition des raies ultimes dans les spectres de l'arc électrique), St. Procopiu. Académie des Sciences—Comptes Rendus, vol. 178, no. 16, Apr. 14, 1924, pp. 1368-1369. Experiments made with arcs of Zn contain-

ing impurities such as Pb, Cd, Al, show that sensitive spectral lines of impurities appear strongly when arcs are operated in air but are faint or absent with arcs in vacuo; it is assumed that ionization is mainly of electrical origin in vacuum arc, but thermal with arcs at atmospheric pressure, and that emission of "raies ultimes" is therefore to be attributed to thermal mechanism.

ELECTRIC CABLES. See CABLES, ELECTRIC.

ELECTRIC CAPACITY

Measurement. See ELECTRICAL MEASUREMENTS, Capacity.

ELECTRIC CIRCUITS

Circuit Breakers. See CIRCUIT BREAKERS.

ELECTRIC CIRCUITS, A.C.

Calculation. New Theory of General Circuits (Neue Theorie des allgemeinen Stromkreises), S. Fryze. Elektrotechnische Zeit., vol. 45, no. 26, June 26, 1924, pp. 677-681, 5 figs. Discusses principal equations, their coefficients, critical impedance, and gives examples of new method.

Condenser, in. Condenser in the Alternating-Current Circuit with Valve (Kondensator im Wechselstromkreis mit Ventil), W. Jaeger and H. von Steinwehr. Archiv für Elektrotechnik, vol. 13, no. 4, July 31, 1924, pp. 330-348, 20 figs. Discusses connection to use both halves of alternating-current waves and investigates what capacity condenser must have to secure most favorable result and not to subject continuous current to too great variations.

Coupled, Transient Phenomena in. A Problem in Transient Phenomena in Coupled Circuits, E. E. Witmer. Franklin Inst.—Jl., vol. 198, no. 2, Aug. 1924, pp. 217-229, 2 figs. Methods of integration and evaluation of one-parameter integral; approximations and interpretation of results; time lags; effect of obliquity and eccentricity of trajectory on curve of electromotive force.

Coupling. Coupling Between Two Oscillatory Circuits, with Some Applications, L. S. Palmer and H. W. Forshaw. Instn. Elec. Engrs.—Jl., vol. 62, no. 334, Oct. 1924, pp. 895-900, 6 figs. Different methods of coupling two oscillatory circuits are classified as follows: (1) indirect coupling through field of force common to both oscillatory circuits, (2) direct coupling through impedance common to both circuits, (3) direct coupling through impedance not included in either oscillatory circuit; describes easy method of obtaining values of two resonant frequencies for each system.

Energy Measurement. See ELECTRICAL MEASUREMENTS, Energy in A. C. Circuits.

Four-Pole. Four-pole Theory (Vierpoltheorie), J. Wallot. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 488-492, 3 figs. Discusses behavior of connections consisting of a source of energy, a consumer, and connecting four-pole combinations.

Graphical Treatment. The Graphical Treatment of Circuits Containing Iron Core Reactances and Capacity, L. Fleischmann. Gen. Elec. Rev., vol. 27, no. 4, Apr. 1924, pp. 260-262, 11 figs. Graphic method for analytic treatment of circuits possessing variable self-induction and capacity.

Induction and Capacity. On the Caluculation of the Inductances and Capacities for a Multi-Range or Other Consecutive Series of Tuned Transmitting or Receiving Circuits, the Total Range and Accuracy Required Being Given, J. Erskine-Murray. Inst. Radio Engrs.—Proc., vol. 12, no. 4, Aug. 1924, pp. 485-496, 1 fig. Describes method of determining constants of each circuit when total wave length range and accuracy of setting required in each intermediate range are given.

Induotive. Inductive Alternating Current Circuits, E. K. McDowell. Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 387-388, 3 figs. Explanation of impedance diagram, together with rules for its construction.

Oscillating Valve. The Application of Oscillating Valve Circuits to the Precise Measurement of Certain Physical Quantities, J. E. P. Wagstaff. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 277, Jan. 1924, pp. 66-84, 8 figs. Describes application of oscillating valve circuits to several diverse problems.

Oscillatory. Experimental Investigations of Oscillatory Circuits with Iron Core Coils (Experimentelle Untersuchungen über Schwinungskreise mit Eisenkernspulen), L. Casper, K. Hubmann and J. Zenneck. Zeit. für Hochfrequenztechnik, vol. 23, no. 4-5, 1924, pp. 63-77, 31 figs. Discusses conditions in pure alternating current magnetization and in superimposed direct current magnetization, in condenser circuit to which alternating current generator of 500 periods per sec. was connected and whose self-induction was formed by coil with closed iron core.

Protection, Apparatus for. The Design of Apparatus for the Protection of Alternating-Current Circuits, A. S. Fitzgerald. Instn. Elec. Engrs.—Jl., vol. 62, no. 331, July 1924, pp. 561-598 and (discussion) 599-627, 58 figs. Description of differential protective systems, particularly those suitable for use where there is a neutral earthing resistance. Discusses operating conditions, and their influence on methods of design and construction, and describes improved means of practically applying the various protective circuits.

Reciprocities in. Reciprocities in A. C. Circuits (Ueber Reziprozitäten bei Wechselstromkreisen), K. Matthies and F. Strecker. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 1-15, 15 figs. Discusses resistance reciprocities and frequency reciprocities, combination of which leads to uniform treatment of four a. c. circuits forming a cyclic group.

Resonant. Electrical Resonance, E. Ambrose and P. B. Frost. Elecn., vol. 93, no. 2425, Nov. 7, 1924, pp. 524-525, 1 fig. Results of an investigation which throw some light on breakdowns and a. c. systems attributed to surges.

Study of Resonant Circuits, L. Fleischmann. Elec. World, vol. 83, no. 9, Mar. 1, 1924, pp. 430-431, 1 fig. Analytical treatment of a. c. circuit containing iron-ore reactance and condenser in parallel.

Theory. A Generalization of Reciprocal Theorem, J. R. Carson. Bell System Technical Jl., vol. 3, no. 3, July 1924, pp. 393-399. Generalization of Raleigh's theorem as to periodic electromotive force in circuit A giving rise to same current in B as would be excited in A if electromotive force operated in B.

Three-Phase. Modern Mathematics of the Three-Phase Circuit (La moderna matematica dei circuiti trifasi), E. Bottani. Elettrotecnica, vol. 11, nos. 30, 31, and 33, Oct. 25, Nov. 5 and 15, 1924, pp. 738-745, 768-774, and 928-937, 40 figs. Discusses three vector systems and makes calculations of a three-phase system of vectors.

Time Constants. Time Constants for Engineering Purposes in Simple Exponential Transient Phenomena, A. E. Kennelly. Nat. Acad. Sci.—Proc., vol. 10, no. 11, Nov. 1924, pp. 467-473, 4 figs. Definition of a simple exponential transient; typical case of a simple electric circuit; discusses exponential time constant, binary time constant, and decimal time constant; exponential transient current-time curves; rectification of exponential transients on arith-log paper.

Two-Mesh. Theorems Regarding the Driving-Point Impedance of Two-Mesh Circuits, R. M.

Foster. Bell System Technical Jl., vol. 3, no. 4, Oct. 1924, pp. 651-685, 7 figs. Determination of necessary and sufficient conditions that a driving-point impedance be realizable by means of a two-mesh circuit consisting of resistances, capacities, and inductances, and determination of networks realizing any specified driving-point impedance satisfying these conditions.

ELECTRIC CIRCUITS, D. C.

Graphic Calculation. Graphic Calculation of D. C. Electric Circuits (Graphique pour les calculs electriques en courant continu), J. Mesnier. Revue Générale de l'Electricité, vol. 15, no. 7, Feb. 16, 1924, pp. 263-266, 7 figs. Presents chart developed by author for rapid determination of characteristics, intensity, tension, resistance (or power) of d.c. circuit when the two other circuits are known; its principal application is to determine starting resistance, but other applications are exemplified.

ELECTRIC CONDUCTIVITY

Flames. Electric Conductivity of Flames Carrying Metal Vapors (Untersuchungen über die elektrische Leitfähigkeit metalldampfhaltiger Flammen mit Einführung einwandfreier Feldmessungen), E. Zachmann. Annalen der Physik, vol. 74, no. 14, July 1924, pp. 461-517, 16 figs. Finds that number of electrons is directly proportional to number of metal atoms, etc.; conductivity of alkali metal flames is proportional to square root of metal concentration, etc.

Fused Chlorides. The Electrolytic Conductivity of Fused Chlorides (Ueber das elektrolytische Leitvermögen geschmolzener Chloride), A. Voigt and Wm. Blitz. Zeit. für anorganische u. allgemeine Chemie, vol. 133, no. 4, Mar. 10, 1924, pp. 277-305, 6 figs. Describes behavior of chlorides of various minerals based on experimental results.

Metals. Electric Conductivity in Metal Aggregates (Die Elektrizitätsleitung in metallischen Aggregaten), M. Pirani and J. Runge. Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 183-185, 3 figs. Conductivity of binary aggregate can be calculated if one constituent is lodged in the other in regularly arranged cylinders or spheres, etc.

Electric Conductivity of Metals (Die elektrische Leitfähigkeit von Metallen). Elektrotechnik u. Maschinenbau, vol. 42, no. 26, June 29, 1924, pp. 413-415. Abstract from A. Schulze's articles dealing with copper, stone, gold; platinum group; nickel, cobalt, aluminum, lead, tin, bismuth, tungsten.

Electric Conductivity of Metals (Die elektrische Leitfähigkeit von Metallen), A. Schulze. Zeit. für Metallkunde, vol. 16, no. 2, Feb. 1924, pp. 48-54, 2 figs. Deals with changes in conductivity with modification conversions, and with melting of metals; dependence of conductivity on pressure; conductivity in magnetic field; conductivity with direct and with alternating current; change in conductivity through exposure and radiation; conductivity of powders and thin layers.

The Electrical Conductivity and certain other Properties of Metals and Alloys on the Basis of Bohr's Theory, K. Höjendahl. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 284, Aug. 1924, pp. 349-360, 1 fig. An attempt to account for properties of metals and alloys on basis of rotation of elliptic orbit of valency electron.

See also METALS, Electric Conductivity.

Temperature Coefficients. The Temperature Coefficients of Electric Conductivity (Notiz über den Temperaturkoeffizienten des elektrischen Leitvermögens), W. Blitz. Zeit. für anorganische u. allgemeine Chemie, vol. 133, no. 4, Mar. 10, 1924, pp. 306-311, 1 fig. Investigation of effect of temperature variations on transport of electricity.

ELECTRIC CONDUCTORS

Aluminum. Computing the Carrying Capacity of Aluminum Conductors, D. P. Slack. Power, vol. 60, no. 18, Oct. 28, 1924, p. 689. Method of calculation.

Use of Aluminum for High-Tension Overhead Lines (Die Verwendung des Aluminiums für Hochspannungsfreileitungen), M. Neustätter. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 6-8, 2 figs. Discusses conductivity and other properties compared with copper, advantages and drawbacks for high tension transmission, steel-aluminum conductors, etc.

See also Heating of; Steel-Aluminum; ALUMINUM, Uses.

Armature. See ARMATURES, Eddy-Current Losses in.

Capacitance, Calculation of. The Direct Method of Calculation of Capacitance of Conductors, H. B. Dwight. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1034-1039, 4 figs. Describes direct method of calculation for multi-conductor cables with round conductors, which uses exact shape of round conductors and which gives accurate expressions for irregular distribution of electricity on conductors, and for value of capacitance.

Connections. The Resistance of Electrical Connections, G. E. Luke. Elec. Jl., vol. 21, no. 2, Feb. 1924, pp. 66-69, 7 figs. Discusses clamped, and soldered or welded connections; soldered sleeve connectors.

Crossing Railways. Electric Conductors Crossing the State Railways (Attraversamenti delle Ferrovie dello Stato con condutture elettriche). Telegrafi e Telefoni, vol. 5, no. 3, May-June 1924, pp. 145-150. Additional Italian regulations for construction and insulation of lines, crossing railroads overhead, above or below ground.

Current-Carrying Capacity. The Current-Carrying Capacity of Solid Bare Copper and Aluminium Conductors, S. W. Melsom and H. C. Booth. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 909-915, 7 figs. Describes cooling-curve method which was used in determining coefficient of heat emissivity for series of small sample lengths of round and flat copper and aluminum conductors of various sizes and surface conditions; this was checked by direct electrical heating of longer lengths, which showed two methods to be in close agreement; gives tables for current carrying capacity of copper and aluminum busbars.

Equilibrium and Deformation. Equilibrium and Deformation of Conductor Systems Traversed by Magnetic Currents and Bodies without Hysteresis (Equilibre et déformation de systèmes de conducteurs traversés par des courants et de corps magnétiques sans hystérésis), A. Liénard. Annales de Physique, vol. 20, Nov.-Dec. 1923, pp. 249-350. Study based on two notes published in Comptes Rendus de l'Académie des Sciences (vol. 172, 1921, pp. 207 and 323) on electromagnetic energy and thermocynamical potential of system of currents in presence of magnetic substances without hysteresis; method employed permits calculation of all possible cases and complete solution of problem of magnetostriction.

Free Electron Concentration Within. The Variation of Thermionic Emission With Temperature and the Concentration of Free Electrons Within Conductors, A. T. Waterman. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 366-376. Discusses equilibrium electron theory of thermionic emission.

Derivation of expression for thermionic saturation current density; evaluation of constants and application to experimental data; comparison with other formulas; discussion of lack of agreement for most oxides; calculation of free electron concentrations within conductors.

Hall Effect. Hall Effect in a Conductor Due to Its Own Magnetic Field, W. and B. Roberts. Physical Rev., vol. 24, no. 5, Nov. 1924, pp. 532-543, 13 figs. From results of investigation it is concluded that Hall effect is always present in wires carrying currents and should cause a slight increase of resistance at high current densities.

Heating of. Heating of Large Steel-Cored Aluminum Conductors, R. J. C. Wood. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1021-1024, 10 figs. Tests made to determine temperature rise, both in still air and in wind, of three sizes of cable.

Inductance, Redúcing. Reducing Inductance on Adjacent Transmission Circuits, H. B. Dwight. Elec. World, vol. 83, no. 2, Jan. 12, 1924, pp. 89-90, 2 figs. Explanation of arrangement of conductors on steel towers by which inductance is materially decreased.

Installation of Identified. Installation of Identified Conductors, C. W. Mitchell. Jl. of Elec., vol. 52, no. 1, Jan. 1, 1924, pp. 15-16, 17 figs. Answers many questions asked by contractor-dealers and construction men relative to certain provisions of new edition of Nat. Elec. Code.

Iron. Alternating Current in Iron Conductors (Wechselströme in massiven Eisenleitern). K. Zickler. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 650-651, 1 fig. Shows that Rosenberg formula for watt loss is less accurate than those by author.

Properties and Uses of Magnetic Conductors, with Special Reference to the Use of Iron (Propriétés et usages des conducteurs magnétiques et particulièrement emploi du fer), P. Bunet. Industrie Electrique, vol. 33, nos. 757, 758, 759, 760, 761, 762, and 763, Jan. 10, 25, Feb. 10, 25, Mar. 10, 25, and Apr. 10, 1924, pp. 5-8, 28-32, 48-54, 72-78, 91-96, 112-118, and 125-127, 15 figs. Discusses use of iron for conductors and some practical developments. Jan. 25: Causes of increase of resistance in variable current; Kelvin effect; permeability of iron; practical calculations. Feb. 10: Modification of resistance of iron conductors by variation of their surface or their permeability; derivation of formulas. Feb. 25: Effective section of plates for alternating flux. Mar. 10: Practical conclusion for round wire. Mar. 25: Resistance of magnetic conductors of variable direct current. Apr. 10: Non-magnetic conductors covered with magnetic envelope.

Joints. The Contact Resistance of Large Conductors, A. R. Enger. Elec Jl., vol. 21, no. 7, July 1924, pp. 316-318, 6 figs. Shows from experiments that voltage across contact will vary inversely with pressure, and that resistance between contacts depends only on total pressure with which they are forced together.

Kelvin's Law. Kelvin and the Economics of the Generation and Distribution of Electrical Energy, G. Semenza. Instn. Elec. Engrs.—Jl., vol. 62, no. 334, Oct. 1924, pp. 882-894, 7 figs. Author seeks to give clear picture of applications which Kelvin's law has received in all fields of electrotechnics and to demonstrate utility of various developments of law.

Modulus of Elasticity. The Modulus of Elasticity of Conductors With Particular Reference to Power Transmission Lines (Elasticitetsmodulen för linor med speciell hänsyn till kraftledningslinor), S. Velander. Teknisk Tidskrift, vol. 54, no. 9, Mar. 1, 1924, pp. 43-46 (Elektroteknik), 2 figs. Importance of separating permanent and elastic elongation of wires is emphasized. Diagrams giving results of tests.

Networks. Some Properties of Simple Electric Conducting Networks, A. E. Kennelly. Am. Philosophical Soc.—Proc., vol. 63, no. 2, 1924, pp. 171-189, 15 figs. Mathematical discussion of T and Pi line circuits, variation of hyperbolic angle, surge impedance, inequality ratio, etc. Bibliography.

Networks, Three-Terminal. Some Properties of Three-Terminal Electrical Conducting Networks, A. E. Kennelly. Am. Acad. Arts & Sci.—Proc., vol. 59, no. 13, July 1924, pp. 297-311, 17 figs. Mathematical discussion of T, Pi, and Delta line circuits; surge impedance; inequality ratio; etc. Bibliography.

Pull Exerted by. Chart for Determining the Effort Produced by Electric Conductors on Their Supports (Abaque pour la determination des efforts produits par les conducteurs electriques sur leurs supports), P. Burdin. Revue Générale de l'Electricité, vol. 16, no. 11, Sept. 13, 1924, pp. 425-428, 5 figs. Discusses graphic process for determining by same alignment chart mechanical effort produced by conductors, being component of wind pressure on conductors and their drag.

Self-Induction and Resistance Measurement. An A. C. Bridge for Measuring Self-Induction and Resistances in Short Conductors (Eine Wechselstrombrücke zur Messung der Selbstinduktion und des Wirkwiderstandes an kurzen Leitungsstücken), U. Meyer. Elektrische Nachrichten-Technik, vol. 1, no. 1, July 1924, pp. 29-36, 3 figs. Details of experiments made at German Telegraph Technical Bureau with Krarup wires in which this kind of bridge was largely used.

Steel-Aluminum. Calculation of Steel-Aluminum Conductors (Ueber die Berechnung von Stahlaluminiumleitungen), O. Strand. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 654-657, 6 figs. Develops formulas and diagrams for determining distribution of tension in Fe-Al cables at varying temperatures.

Tension Computation, Graph for. Straight-Line Graph for Computing Tensions in Line Conductors, E. S. Thayer. Elec. World, vol. 83, no. 3, Jan. 19, 1924, pp. 135-136, 2 figs. Rearrangement of older formula to obtain a straight-line diagram which will readily give proper tension to use, considering temperature and loading.

Theory. Electric Conductors and Insulators (Conduttori e isolanti in elettricita), G. Peri. Industria, vol. 38, no. 12, June 30, 1924, pp. 327-331, 8 figs. Discusses passage of current in conductors, formation of electrostatic field, capacity current, insulators, etc.

Wave Propagation Along. The Guided and Radiated Energy in Wire Transmission, J. R. Carson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 908-913. Brief preliminary account, without mathematical details, of results of mathematical investigation of wave propagation along wires.

ELECTRIC COOKING

Equipment. An Electric Cooker—Some Experience, Figures and Facts, E. G. Ross. Elec. Rev., vol. 95, no. 2432, July 4, 1924, pp. 5-7. Superiority of electric over gas cooking, consumption of electric current.

Heavy-Duty. Development of Heavy Duty Electric Cooking, A. M. Lloyd. Elec. Light & Power, vol. 2, no. 2, Feb. 1924, pp. 20-23, and 50, 7 figs. Gives experiences relative to development of heavy-duty cooking load.

ELECTRIC CURRENTS

Acceleration. Method for Accelerating Rise of Current on Connecting Inductive Resistances to

a Source of Current of Contact Voltage (Ueber eine Methode zur Beschleunigung des Stromansteigens beim Einschalten induktiver Widerstände an eine Stromquelle konstanter Spannung), C. Schenfer. Elektrotechnik u. Maschinenbau, vol. 42, no. 32, Aug. 10, 1924, pp. 489-492, 7 figs.

Accidents from. See ACCIDENTS, Electric Currents.

Alternating. See ELECTRIC CURRENTS, ALTERNATING.

Boosting Voltage. Electric Boosting Voltage (Die Elektrische Ueberspannung), A. Smits. Zeit. für Elektrochemie, vol. 30, no. 5, May 1924, pp. 215-223, 3 figs. Discusses theory of electromotive equilibria to explain anode and cathode polarization, boosting voltage and passivity.

Dangers of. The Dangers of Electric Current and Means of Overcoming Them (Les dangers du courant électrique et les moyens de les éviter), V. Kammerer. Société Industrielle de Mulhouse —Bul., vol. 90, no. 2, Feb. 1924, pp. 103-156, 4 figs. Author seeks to show that electric current presents many dangers which are not always estimated at their true value; and deals in detail with precautionary measures to be taken in selection of materials, their judicious application, and control of installations, particularly in regard to insulation and grounding.

Effect on Friction of Sliding Contacts. See FRICTION, Sliding Contacts.

Measurement. See ELECTRIC MEASURING INSTRUMENTS; ELECTRICAL MEASUREMENTS, Alternating Currents.

Physiological Effects. Physiological Effects of Electric Current (Effets physiologiques du courant électrique). Electricien, vol. 55, no. 1359, Nov. 1, 1924, pp. 488-489. Deductions drawn from experiments on animals as to its effect on human beings. Resuscitation of victims.

Short-Circuits. Short-Circuits Calculations, R. Rader. Elec. Wld., vol. 84, no. 6, Aug. 9, 1924, pp. 261-262, 12 figs. Simple method for determining currents where calculation board is not available; practical application of formulas.

Short-Circuit Current in Case of Double Ground (Kurzschlussstrom bei Doppelerdschluss), T. Panzerbieter. Elektrotechnische Zeit., vol. 45, no. 27, July 3, 1924, pp. 719-720, 1 fig. Explains simple calculation of permanent short circuit current appearing in double grounds in rotary current systems and gives examples.

The Application of Decrement Factors in Short-Circuit Studies, W. R. Woodward. Elec. Jl., vol. 21, no. 5, May 1924, pp. 213-216, 4 figs. Consideration of nature of transients in short-circuit currents.

Theory. Electric Current Considered as Circulatin of Equal Charges and Opposite Signs (Le courant électrique considéré comme circulation de charges égales et de signes contraires), F. Guéry. Académie des Sciences—Comptes Rendus, vol. 179, no. 20, Nov. 17, 1924, pp. 1036-1039. Concludes that Weber's theory is only one at present in agreement with that of Maxwell and with hypothesis of charges in motion in conductors.

Wave, Measurement of. Wave Current Magnetization and Wave Current Measuring by Means of Measuring Instruments Containing Iron (Wellenstrommagnetisierung und Wellenstrommessungen mit eisenhaltigen Messgeräten), M. Stöckl. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 75-105, 28 figs. Discusses magnetization of d.c., a.c., and wave currents; wave current hysteresis loops; influence of unequal magnetic load of iron parts of measuring instruments on results of measurements.

ELECTRIC CURRENTS, ALTERNATING

Curves. Determination of Curve Contour of Alternating Currents with Aid of the Braun Tube (Zur Bestimmung der Kurvenform von Wechselströmen mit Hilfe der Braunschen Röhre), L. Casper, K. Hubmann and J. Zenneck. Zeit. für Hochfrequenztechnik, vol. 23, no. 2, Feb. 1924, pp. 32-34, 12 figs. Method used by authors in investigation of simple and coupled oscillating circuits with iron-core coils and also in frequency multiplication with aid of such coils.

Definition. Definition of Apparent and Reactive Factor as Well as Power Factor in Multiple-Phase Current (Die Definition der Schein- und Blindleistung sowie des Leistungsfaktors bei Mehrphasenstrom), H. Schering. Elektrotechnische Zeit., vol. 45, no. 27, July 3, 1924, pp. 710-712. Discusses definitions and terminology.

Distribution. Economic Distribution of Active and Reactive Currents Over Several Machines or Power Plants in Parallel (Die wirtschaftlichste Verteilung der Wirk- und Blindströme auf mehrere parallel arbeitende Maschinen oder Kraftwerke), C. v. Dobbeler. Elektrotechnische Zeit., vol. 45, no. 48, Nov. 27, 1924, pp. 1297-1301, 8 figs. Develops diagram for determining cost of production and transmission of any phase-displaced current, taking into account cost of current varying with extent of load on machines.

Frequency Analyzers. An Electrical Frequency Analyzer, R. L. Wegel and C. R. Moore. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 798-802, 9 figs. Theory and construction of apparatus by means of which it is possible to obtain a permanent record of frequency and magnitude of each component of a complex alternating current; its use in various fields.

Magnetizing Curves. Determination of Magnetizing Curves From the Effective Values of Magnetizing Alternating Current (Bestämning av magnetiseringskurvor ur magnetiseringsströmmens effectivvärde vid växelström), I. Herlitz. Teknisk Tidskrift, vol. 54, no. 36, Sept. 6, 1924, pp. 154-155 (Elektroteknik), 2 figs. Method given is purely theoretical, but is claimed to give fairly accurate results.

Measurement of. Nature and Measurement of the Alternating Currents Passing Through a Siemens Ozone Tube (Ueber die Natur und Messung der durch Siemenssche Ozonröhren fliessenden Wechselströme), E. Warburg. Zeit. für Technische Physik, vol. 4, no. 12, 1923, pp. 450-460, 4 figs. Various methods of measuring said current (of a frequency of 50 per second) give widely differing results. Instruments used and tabulated results obtained from a great number of tests with oxygen and air.

Parallel Connection. Behavior of A. C. Circuits for Parallel Connection of Iron Choking Coils and Condensers (Das Verhalten von Wechselstromkreisen bei Parallelschaltung von Eisendrosselspule und Kondensator), L. Fleischmann. Elektrotechnische Zeit., vol. 45, no. 48, Nov. 27, 1924, p. 1307, 2 figs. Shows that in parallel connection of saturated iron choking coil and capacity effective total current can never be zero, but that a relative maximum and minimum of current appears, depending on voltage for constant period and vice versa.

Reactive. Compensation of Reactive Current (Ueber Blindstromkompensation), E. Schulz. Elektrotechnischer Anzeiger, vol. 41, nos. 137 and 138-139, Aug. 26 and 28, 1924, pp. 737-738 and 745-746, 2 figs. Discusses reactive current and compensator to increase power factor $\cos \phi$, and shows field of application of compensator.

Measuring Reactive Current and Its Consumption (Ueber Blindleistungs- und Blindverbrauchsmessungen), R. Scheld. Wissenschaftliche Ab-

handlungen der Physikalisch-Technischen Reichsanstalt, vol. 7, no. 2, 1924, pp. 215-224, 5 figs. Calculation of active and reactive current in a three-phase circuit with and without neutral, and method of measuring reactive current.

Varieties of Reactive Current Calculation and Their Justification (Arten der Blindstromberechnung und ihre Berechtigung), Mannel. Elektrische Betrieb, vol. 22, no. 18, Sept. 24, 1924, pp. 182-184. Discusses definitions and calculation, power factor variation, producers' demand for compensation when $\cos\phi$ falls below 0.07 or 0.8.

Rectification. See RECTIFIERS.

Theory. Elementary Theory of Alternating Currents, K. C. Graham. Ry. Elec. Engr., vol. 15, nos. 4, 5, 7, 8, 9, 11, and 12, Apr., May, July, Aug., Sept., Nov., and Dec. 1924, pp. 115-117, 151-153, 219-221, 261-264, 285-288, 395-398, and 421-423, 65 figs. Apr.: How alternating current is generated. May: Generation of single and polyphase currents. July and Aug.: Consideration of inductance and capacity. Sept.: Inductance and capacity of parallel circuits. Nov.: Generators. Dec.: Transformers.

Vector Diagrams and Algebraic Signs. Vector Diagrams and Algebraic Signs in Alternating-Current Theory (Ein Beitrag zur Richtungsbezeichnung in Vektordiagrammen), H. Kalka. Elektrotechnik u. Maschinenbau, vol. 42, no. 21, May 25, 1924, pp. 329-333, 7 figs. Considers general case of network to which are connected generators and consuming devices; after considering expressions for power and wattless components of currents and power and wattless components of volt-amperes, he advances reasons for adoption of rules which are least likely to occasion confusion.

ELECTRIC DISCHARGE

Force on Cathode in Tube. Mechanical Force and Field Strength at the Cathode in a Discharge Tube (Kraft und Feld an der Kathode einer elektrischen Glimmentladung), W. Braunbek. Zeit. für Physik, vol. 21, no. 3, Feb. 8, 1924, pp. 204-218, 11 figs. It is shown that force exerted on cathode in electrical discharge tube is due to electric force, depending on field intensity at cathode, and an aerodynamic force which is due to pressure differences set up in gas and gas currents arising therefrom; describes method which aims at elimination of force due to gas currents and measures only electric force.

High-Frequency. Electric Discharge of Very High Frequency (Sur la décharge électrique à fréquence très élevée), C. Gutton. Académie des Sciences—Comptes Rendus, vol. 178, no. 5, Jan. 28, 1924, pp. 467-470. High-frequency discharge in glass tubes containing dry air at low pressure; curves were obtained representing as function of pressure, difference of potential for which tubes become luminous.

Mercury Vapor. The Thermal Effect of Cathodic Plate Current in the Mercury-Vapor Discharge (Ueber die Wärmewirkung kathodischer Gehäuseströme in Quecksilberentladungen), W. Schottky and J. von Issendorff. Zeit. für Physik, vol. 26, no. 2, Aug. 8, 1924, pp. 85-94, 4 figs. Examination of current which passes between mercury discharge column and surrounding cylindrical metal electrode maintained at definite potentials; to ascertain nature of discharge, determination is made of heat imparted to surrounding electrode by discharge when different potentials are applied.

ELECTRIC DISTRIBUTION

Circular Circuit. Current Distribution in Circular Circuit Fed Through Radii (Stromverteilung in einem Rade), J. Würschmidt and F. Stäblein. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 15-22, 3 figs. Given a wheel with a number of spokes, an electric current passing through it and leaving it at the periphery, calculates resistance of wheel, and strength of current in individual spokes.

Economics. Economics of Distribution, J. G. H. Douglas. Elec. Wld., vol. 84, no. 22, Nov. 29, 1924, pp. 1145-1148, 6 figs. Extension of Kelvin's law to secondary mains, underground cables and transformers; specific applications of principles to circuits; economic versus temperature ratings.

ELECTRIC DISTRIBUTION SYSTEMS

Alternating-Current. General Properties of Transmission Systems Traversed by Alternating Current in Constant Operation (Sur quelques propriétés générales des réseaux parcourus par des courants alternatifs en régime permanent), C. Ravut. Revue Générale de l'Electricité, vol. 15, no. 10, Mar. 8, 1924, pp. 405-413, 1 fig. Author shows how to determine experimentally different coefficients of characteristic function of intensities and points to existence of characteristic function of potentials which he calls adjunct characteristic function; examination of these two functions leads to determination of pulsations of resonance of network.

A. C. Underground. Alternating Current Underground Distribution in New Orleans, W. R. Bullard. La. Eng. Soc.—Proc., vol. 10, no. 4, Aug. 1924, pp. 179-199 and (discussion) 199-202, 10 figs. partly on supp. plates. Description of present and proposed systems; a.c. low-voltage distribution network; use of 13,200-volt distribution transformers; 3-phase, 4-wire, 115/200-volt distribution; advantages of new system.

Calculation. Calculating Distribution Lines, A. Burt. Elec. World, vol. 83, no. 5, Feb. 2, 1924, pp. 232-233. Rough-and-ready rule applied to ordinary distribution problems; illustrative examples for distribution circuits.

Charts for Calculation of Electric Distribution Systems (Abaquues pour le calcul des réseaux de distribution d'énergie électrique; Simplification par anamorphose entraînant l'universalité), E. Lajour and M. Pelou. Revue Générale de l'Electricité, vol. 16, no. 15, Oct. 11, 1924, pp. 579-586, 4 figs. Discusses a simplified method using logarithmic paper.

Canada. Electric Power Transmission and Distribution in Canada, J. C. Smith and C. V. Christie. Eng. Jl., vol. 7, no. 7, July 1924, pp. 421-446, 17 figs. Current practice in design and operation of electrical transmission and distribution systems in Canada.

Chicago, Ill. General Light and Power Supply of Chicago, G. M. Armburst and J. B. Jackson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 608-609. Development of a distribution system is largely determined by load density and its rate of change. Discussion of these factors and their influence on Chicago distribution system.

Conduits. See CONDUITS, Electrical.

Control and Protection. Control and Protection of High-Voltage Electric Distribution Systems (Controle et manœuvres dans les réseaux électriques à haute tension), M. Hunter. Société Française des Electriciens—Bul., vol. 4, no. 31, Jan. 1924, pp. 67-92, 9 figs. Shows necessity of localizing faults in distribution system, in spite of complications involved; deals with origin of electric disturbances and principles applied for localizing them; special protection of bus-bars.

Control and Switching of High-Pressure. The Control and Switching of High Pressure Distribution Systems, P. V. Hunter. Elec. Rev., vol. 94, nos. 2407 and 2408, Jan. 11 and 18, 1924, pp.

72-74 and 113-114, 7 figs. Discusses methods and arrangements necessary to secure uninterrupted supply of electricity, so far as this can be done by selectively switching feeders and apparatus in and out of circuit. (Abstract.) Paper read before Société Française des Electriciens.

Cost Estimates. Appraisals Based on Number of Meters Connected, R. B. Sleight. Elec. World, vol. 83, no. 26, June 28, 1924, pp. 1322-1323. Analysis of cost estimates on small-town distribution systems; limitations and practical application of method.

D. C., Calculation. The Calculation of D. C. Systems by Successive Approximations (Le calcul des réseaux à courant continu par approximations successives), J. Kuntziger. Assn. des Ingenieurs Electriciens Sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, series 7, Jan. 1924, pp. 15-23, 3 figs. Describes simple method of calculation which permits satisfactory solution of problem for all practical purposes.

Double-Voltage, for Rural Districts. Double-Voltage Distribution Systems (Les systèmes de distribution à deux tensions), L. Olivié. Revue Générale de l'Electricité, vol. 15, no. 13, Mar. 29, 1924, pp. 550-557. Their application to rural districts with scattered population; author points out advantages of system which he proposes, and points out that system based on same principle has already been successfully adopted in Canton of Fribourg, Switzerland, where rural population is greatly scattered.

Fault-Resistance Determination. The Measurement of the Fault Resistance of a 2-Wire Direct-Current System, G. W. Stubbings. Elec. Rev., vol. 95, no. 2452, Nov. 21, 1924, pp. 769-770, 2 figs. Describes test which is particularly applicable to 2-wire networks working with negative permanently earthed through low resistance.

France. Circular Defining the Technical Conditions Which Distribution of Electric Energy Must Satisfy (Circulaire déterminant les conditions techniques auxquelles doivent satisfaire les distributions d'énergie électrique). Revue Générale de l'Electricité, vol. 16, nos. 3 and 4, July 19, and 26, 1924, pp. 125-136 and 171-184, 2 figs. Issued by Minister of Public Works, Ports and Merchant Marine to police captains in France.

Grounding of Neutral. Inductive Grounding of the Neutral of Cable Networks (Die Erdung der Neutralen in Kabelnetzen), E. Neumann. Elektrotechnische Zeit., vol. 45, nos. 13 and 14, Mar. 27 and Apr. 3, 1924, pp. 261-266 and 294-297, 42 figs. In municipal underground cable of Berlin, Germany, operating with 30 kv., extensive practical tests were made before final inductive grounding protection was installed; results of preliminary investigations with direct and ohmic resistance grounding of neutral point; oscillographic tests preceding standardization of system; different behavior of grounding coils with varying degrees of undercompensation; mechanical method which permits unskilled operators to adjust inductance of grounding coils always in accordance with number of cable trunks connected to system.

Insulating and Grounding in. Insulating and Grounding in Electric Plants (Isolierung und Erdung in elektrischen Betrieben), W. Vogel. Wärme, vol. 47, no. 38, Sept. 19, 1924, pp. 439-442. Necessity for careful insulating and earthing to avoid dangers, proper methods and tests to apply.

Leakage-Protection Device. Couse-Rosebourne Leakage Protection. Power Engr., vol. 19, no. 225, Dec 1924, pp. 449-451, 5 figs. System of leakage protection for d.c. feeders.

Load Dispatching, Centralized. Load Dispatching System of P. G. & L. Co., C. W. Geiger. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 543-545, 3 figs. Control is centralized in one office; carrier-current system in continuous use.

Load Distribution in Generators. A New Apparatus for the Determination of Best Effective and Blind Load Distribution in Multiple-Feed High-Tension Systems (Ein neuer Apparat zur Ermittelung der günstigsten Wirk- und Blindlastverteilung in mehrfach gespeisten Hochspannungsnetzen), M. Schleicher. Elektrischer Betrieb, vol. 22, no. 3, Feb. 10, 1924, pp. 17-19. Describes apparatus for determining best load distribution in generators, which eliminates all calculation even with most complicated network; constructed by Siemens & Halske.

Network Theorem. A New Network Theorem, A. Rosen. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 916-918, 5 figs. Gives generalized theorem of which well-known three-ray star-mesh transformation is particular case; formula is of simple nature and great saving of labor results from its use; gives three examples of application.

Networks, Analytical Solution of. Analytical Solution of Networks, R. D. Evans. Elec. Jl., vol. 21, nos. 4 and 5, Apr. and May 1924, pp. 149-154 and 207-213, 23 figs. Explanation of how calculations may be made of short-circuit currents for different locations on power system, for proper application of circuit breakers, and to secure best operation of relay systems.

Networks, Interconnecting System for. New Type of High-Tension Network, P. H. Thomas. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 610-618, 1 fig. Presents a new type of interconnection for high-tension networks for economic supply of electric power over large areas having an already well developed load. Central idea is superposition of a high-tension network of single-circuit lines over whole district for purpose of supplying a medium in which current may flow in any general direction as changing conditions may dictate. See (discussion) in vol. 44, no. 1, Jan. 1925, pp. 58-65, 1 fig.

Networks, Protection of. The Protection of Supply Networks, W. Wilson. Electrician, vol. 92, no. 2401, May 23, 1924, pp. 624-627, 7 figs. Some critical notes on McColl system.

Operation. The Continuity and Regularity of Operation of Large Electric Systems, G. Semenza. Engineering, vol. 118, no. 3055, July 18, 1924, p. 112. Shows that improvement of service is an advantage both for consumer and producer, but perhaps more for producer. Causes of bad service.

Protection. Protection of Electric Systems Against Short Circuits and Insulating Defects (Protection des réseaux électriques contre les courts-circuits et les défauts d'isolement), V. Genkin. Revue Générale de l'Electricité, vol. 16, nos. 10, 11, and 12, Sept. 6, 13, and 20, 1924, pp. 379-387, 429-440, and 475-483, 70 figs. Discusses disconnecting as quickly as possible section suffering from defects without disturbing operation as a whole, and reviews various solutions proposed. Various protective systems. Bibliography.

Protective Gear for Electric Power Systems, H. Trencham. World Power, vol. 2, no. 12, Dec. 1924, pp. 328-333. Its justification and application; protective gear for generators and transformers; radial or dead-end feeders; alternative and parallel feeders; ring feeders.

Rural. Construction and Use of Charts for Rapid Calculation of Rural Distribution Systems [Note sur la construction et l'usage d'abaques permettant le calcul rapide des réseaux ruraux de distribution d'énergie (réseaux à courant triphasé à la fréquence de 50 p:s)], Olivié. Revue

Générale de l'Electricité, vol. 16, no. 16, Oct. 18, 1924, pp. 630-638, 9 figs. Deals with three-phase 50-period lines. Methods and charts for ready calculation.

Swedish Rural Electrification. Elecn., vol. 93, no. 2419, Sept. 26, 1924, pp. 347-349, 10 figs. Details of equipment used and distribution arrangements.

Rural Communities. Delivering Municipal Electric Power to Rural Communities, A. G. Lang. Am. City Mag., vol. 30, no. 2, Feb. 1924, pp. 161-163, 5 figs. Description of rural distributing system of Hydroelectric Power Commission of Ontario.

Short-Circuits, Effect and Prevention. Effect and Prevention of Short Circuits, B. G. Jamieson. Elec. World, vol. 83, no. 17, Apr. 26, 1924, pp. 815-817, 3 figs. By extending isolation of phases beyond generating stations to primary distribution points saving of investment and greater reliability will be gained even on small interconnected systems.

Survey. Conducting a Distribution Survey, E. G. Nichols and J. R. Eyre. Elec. World, vol. 84, nos. 15 and 16, Oct. 11 and 18, 1924, pp. 781-784 and 839-840, 7 figs. Objects that made it worth while; improvements in operation and economy made possible by it; how work was organized and carried on. Oct. 18: Transfer of field notes to permanent maps and records; value of survey to company; results obtained and perpetual inventory system.

Trouble-Handling System. Handling Trouble on the Detroit System, H. G. Granger. Elec. World, vol. 83, no. 3, Jan. 19, 1924, pp. 137-139, 7 figs. Describes organization of trouble department of Detroit Edison Co.; functions during 24 hr. every day in year; extensive telephone board to distinguish between customer complaint calls and calls from outside repair men.

Underground. A Study of Underground Distribution Systems for the City of New Orleans, W. R. Bullard. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1058-1062, 2 figs. Describes system, which as result of investigation, was selected to form basis for serving future growth of load in underground district of New Orleans and for eventually displacing present distribution system; economic comparison of several types of systems.

Underground Alternating-Current Network Distribution for Central Station Systems, A. H. Kehoe. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 545-554, 27 figs. Experimental arrangements for underground a.c. system; experience with combined light and power network on one set of mains; effect of voltage variation on incandescent-lamp illumination; tests on cables which indicate that for underground distribution conditions, low-voltage cables will eliminate arcing faults which high-voltage cable will not do; description of experimental system.

Voltage Increase. Increases in Distribution Voltage, H. P. Seelye. Elec. Light & Power, vol. 2, no. 5, May 1924, pp. 131-133, 5 figs. Discusses some of the factors which bear upon problem, in the adoption of a higher distribution voltage, of what that voltage shall be.

ELECTRIC DRIVE

Air Compressors. See AIR COMPRESSORS, Electric Motors for.

Boiler Rooms. See BOILER ROOMS, Electric Drive.

Calico-Printing Machines. See ELECTRIC MOTORS, A. C., Variable-Speed.

Cement Mills. See CEMENT MILLS, Electric Drive; ELECTRIC MOTORS, A. C., Synchronous.

Central-Station Auxiliaries. See CENTRAL STATIONS, Auxiliaries, Electric-Drive Developments.

Cost Comparison of Steam, Diesel, and. Maximum Prices for Current Supply (Höchstpreise für Stromlieferung), W. Windel. Elektrotechnische Zeit., vol. 45, nos. 38 and 39, Sept. 18 and 25, 1924, pp. 995-1000 and 1027-1032, 9 figs. Theoretical and practical comparison of cost of electric, steam, and Diesel drive, for threshing machines and machine tools. Discusses question of whether to buy current or produce it; cost of producing a kw-hr.

Gas Works. See GAS WORKS, Electric Drive.

Group vs. Individual. Group versus Individual Drives, C. H. S. Tupholme. Mech. World, vol. 76, no. 1973, Oct. 24, pp. 261-262. Author's impressions of field of application of both group and individual drives, and experiences of engineers in various engineering shops where author has made study of power-transmitting conditions.

When to Use Group and Individual Drives, R. W. Drake. Indus. Engr., vol. 82, nos. 2, 3, and 4, Feb., Mar., and Apr. 1924, pp. 56-60 and 106-107, 118-122, and 174-177, 15 figs. Comparative advantages and disadvantages of group and individual drives in industrial plants; points on layout, installation, and operation; fan drives; lineshaft losses.

Ice Plants. See ICE PLANTS, Electric Drive.

Irrigation Pumping. Electrical Applications to Irrigation Pumping, R. H. Cates. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1042-1046, 4 figs. Application of electric drive to pumping equipment in California.

Machine Tools. A New Reversing-Gear Arrangement for Individual Electric Drives (Eine neue Umsteuergetriebeanordnung für elektrischen Einzelantrieb), E. Lauer-Schmaltz. Maschinenbau, vol. 24, no. 8, Jan. 24, 1924, pp. 203-206, 7 figs. Describes two different designs of new type of motor, the flywheel ring motor, which together with a new system of mechanical reversing arrangement, offers advantages for transmission of larger amounts of power.

See also MACHINE TOOLS, Electrically Driven.

Machinery. See ELECTRIC MOTORS, Wood and Metal-Working Machinery.

Milling Machines. See MILLING MACHINES, Electric Drive.

Paper Mills. See PAPER MILLS, Electric Drive.

Purchased Power for Wire Plant. Improving Flexibility and Cost of Power. Iron Age, vol. 113, no. 6, Apr. 17, 1924, pp. 1141-1143, 6 figs. Tying up of own power stations with current from public-service company gives wire plant at Trenton, N. J., exceptional ease of control and freedom from interruption; details of new substation and power lines.

Rolling Mills. See ROLLING MILLS, Electric Drive.

Shipyards. Electrical Power Transmission for Shipyards, T. Schwarz. Eng. Progress, vol. 5, no. 5, May 1924, pp. 85-88, 7 figs. Show how all kinds of power transmission, especially hydraulic transmission, have been replaced by the electric drive, which has recently even mastered largest machines for handling plates.

Steel Mills. See ELECTRIC MOTORS, A. C., Synchronous; STEEL WORKS, Electric Drive.

Stokers. See STOKER, Electric Drive for.

Textile Mills. See TEXTILE MILLS, Electric Drive.

Transition from Steam to. The Transition from Steam to Electric Drive, E. E. Thomas. Power

House, vol. 17, no. 18, Sept. 20, 1924, pp. 21 and 42. Shows that continuity of operation of auxiliaries is often facilitated by house turbines, augmented by electrical ties to main bus, relay protection being included to assure service.

Woodworking Machines. See WOODWORKING MACHINES, Electric Drive.

ELECTRIC FURNACES

Acid. Make Electric Steel in South. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 312-315, 8 figs. Also Iron Trade Rev., vol. 74, no. 14, Apr. 3, 1924, pp. 913-916, 8 figs. New Orleans company specializing in sugar-mill machinery installs acid electric furnace to make railroad castings; metallurgical control insures uniform quality of metal poured.

The Manufacture of Acid Electric Steel for Commercial Castings, L. J. Barton. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 369-398, 8 figs. Discusses manufacture of acid as made in electric furnace, for use in production of commercial castings; selection, segregation and use of scrap metal; details of charging melting furnace; melting-down conditions involved, and various types of slags obtained in both good and bad practices; production of special steels and various alloy steels.

Advantages. Electric Industrial Heating, H. M. Drake. Engineer, vol. 137, no. 3553, Feb. 1, 1924, pp. 114-116, 4 figs. Discusses practice and experiences in America; advantages of electric heating; author advocates more extensive use of electric heating in Great Britain.

Annealing. Electric Furnaces for Annealing of Oxide-Free Products (Elektrische Blankglühöfen), W. Rohn. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 42, Oct. 18, 1924, pp. 1101-1105, 8 figs. Requirements of annealing furnaces for metalworking practice; thermal efficiency of fuel-heated furnaces; technical and economic disadvantages of pickling; efficiency and profitability of electric annealing furnaces; advantages of annealed metal which is entirely free of oxide formation; principles of design and construction of electric annealing furnaces.

Medium Temperature Furnace Installations, C. F. Cone. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 494-503, 18 figs. See also Forging—Stamping—Heat Treating, vol. 10, no. 10, Oct. 1924, pp. 375-379, 8 figs. Describes regenerative car-type furnace for annealing of wire, installed in Buffalo plant of Fowler & Union Horse Nail Co.

Arc. Viewpoints in the Construction of Electric Arc Furnaces (Gesichtspunkte beim Bau von Lichtbogen-Elektroofenanlagen), K. Kerpely. Giesserei Zeitung, vol. 21, nos. 12, 13, and 15, June 15, July 1, and Aug. 1, 1924, pp. 242-247, 277-282, and 320-325, 20 figs. June: Discusses arc furnace in foundry; electric and mechanic equipment; comparison of efficiency of Heroult and Fiat furnaces. July: Electric arrangement of furnaces for high tension and low tension. Aug.: Furnaces and accessories.

Brass. Present Tendencies in Electric Brass-Furnace Practice, H. W. Gillett and E. L. Mack. U. S. Bur. Mines—Reports of Investigations, no. 2597, Apr. 1924, 10 pp. Also Brass Wld., vol. 20, no. 5, May 1924, pp. 163-166. Trend of developments in practice in last two years. Bibliography.

The Case of Electric Brass Melting, R. June. Iron Age, vol. 114, no. 7, Aug. 14, 1924, pp. 371-372, 1 fig. Production experience at Detroit plant of Federal-Mogul Corpn.

Brass, Refractories for. See REFRACTORIES, Electric-Brass-Furnace.

Bronze Foundry. Electric Furnace Practice in the Bronze Foundry, F. C. Heath. Am. Electrochem. Soc.—Advance paper for meeting Oct. 2-4, 1924, pp. 451-454. Foundry installed in Detroit, Mich., has installed 5 Detroit electric furnaces of indirect arc, rocking type.

Control Gear. An Electric Furnace Regulating Gear, H. J. Seymour. Power Engr., vol. 19, no. 218, May 1924, pp. 174-175, 2 figs. Describes one type of automatic apparatus for regulation of 2-phase electric furnaces.

Developments. Electric Furnace Developments, F. Hodson. Foundry Trade Jl., vol. 29, no. 398, Apr. 3, 1924, pp. 273-274. See also Iron & Coal Trades Rev., vol. 108, no. 2928, Apr. 11, 1924, p. 596, and Blast Furnace and Steel Plant, vol. 12, no. 7, July 1924, pp. 314-318, 8 figs. Growth of electric melting-furnace industry. Söderberg electrode.

See also ELECTROMETALLURGY, Developments.

Electrode-Regulating Motors. Electrode Regulating Motors of Electric Steel Furnaces (Die Elektrodenreguliermotoren der Elektrostahlöfen), K. Kerpely. Giesserei-Zeitung, vol. 21, no. 8, Apr. 15, 1924, pp. 153-157. Principle and design of d.c. regulating motors; calculation of speeds; method of three-phase regulation; induction motor; speed regulation and braking.

Electrodes. The Use of Söderberg Continuous Electrodes in Electric Steel Furnaces (Die Verwendung der Söderbergschen Dauerelketrode an Elektrostahlöfen), W. Eilender and L. Lyche. Stahl u. Eisen, vol. 44, no. 14, Apr. 3, 1924, pp. 364-368. Experimental equipment with continuous electrode on one phase of 6-ton Heroult furnace; main equipment on 3-phase operation of same furnace; working results; reducing cost of electric-steel practice; thermal efficiency of 6-ton Heroult furnace.

See also ELECTRODES.

Enameling. Vitreous Enameling with the Electric Furnace, E. F. Collins. Fuels & Furnaces, vol. 2, no. 12, Dec. 1924, pp. 1273-1274. Advantages of electric furnace for producing vitreous enamel ware.

See also ENAMELING, Electric Furnaces for; FURNACES, ENAMELING, Electric.

Fiat. See Arc.

Heat-Treating. Economics of Electrically-Heated Annealing and Hardening Furnaces (Die Wirtschaftlichkeit des elektrisch beheizten Glüh- und Härteofens). Elektrotechnischer Anzeiger, vol. 41, nos. 148 and 149, Sept. 13 and 16, 1924, pp. 802 and 804, and 812-813. Details of various types of furnaces and their operation; advantages of electric furnaces.

Electric Furnace for Continuous Hardening and Tempering Wire, R. H. MacGillivray. Am. Electrochem. Soc.—Advance paper no. 10, for meeting Oct. 2-4, 1924, pp. 149-151, 3 figs. on supp. plates. Description of furnace, consisting essentially of two units, one an electric-heated air-hardening furnace, approximately 5.48 m. in length, and other an electric-heated, lead drawing pan, quenching being done in oil.

Electric Furnace for Heat Treating Steel Wire, R. H. MacGillivray. Elec. Wld., vol. 84, no. 23, Dec. 6, 1924, pp. 1210-1211, 2 figs. Consists of two units, one an electrically heated air-hardening furnace, the other a hardening furnace having nickel-chromium retort with nickel-chromium resistance elements on top and bottom.

Electric Furnace Installation, R. S. Sawdey. Iron & Steel Engr., vol. 1, no. 9, Sept. 1294, pp. 487-489, 4 figs. Describes electric furnaces installed at Van Dorn Iron Works Co., Cleveland,

Ohio, installation consists of four double-end box-type furnaces.

Electric Furnace Proves Best, J. Watson. Elec. Wld., vol. 83, no. 8, Feb. 23, 1924, p. 376, 1 fig. Special application for hardening clipper plates proves very economical; costs and operating results.

Electric Furnaces for the Heat Treatment of Razor Blades. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 713-714, 4 figs. Wild-Barfield electric hardening and tempering furnaces, installed at works of Wilkinson Sword Co. for heat treatment of hollow-ground blades for safety razors.

Electric Heat-Treating Costs. Elec. Wld., vol. 84, no. 20, Nov. 15, 1924, pp. 1060-1061, 1 fig. Figures on heat-treating costs obtained from Standard Equipment Co. of Cleveland.

Treating High-Speed Tools. Iron Age, vol. 113, no. 4, Jan. 24, 1924, p. 388, 1 fig. New furnace installed at Gleason Works, Rochester, N. Y., with special equipment for high temperatures.

Using Electric Heating Furnaces, A. E. White. Iron Trade Rev., vol. 75, no. 19, Nov. 6, 1924, pp. 1229-1231. Exhaustive survey of electric heat-treating installations provides data for recommended design of furnaces; use of electric heat for forging units and for cyaniding still is in experimental stage.

See also FURNACES; HEAT-TREATING, Electric.

Heating in Vacuum. Apparatus for Heating Electrically in a Vacuum to a High Temperature (Sur un dispositif permettant de chauffer électriquement dans le vide à haute température), P. Lebeau and M. Picon. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1151-1153. Apparatus consists essentially of tube of carbon, molybdenum, or tungsten, which forms resistance and which is placed in flask of Pyrex glass or quartz; authors describe use and calibration of optical pyrometer of double-scale, disappearing-filament type which was used in connection with apparatus.

Heroult. See Arc; Electrodes.

High-Frequency Inductive Heating. High-Frequency Inductive Heating, D. Wilcox. Iron Age, vol. 114, no. 25, Dec. 18, 1924, p. 1617, 1 fig. Application where sections of bars or rods must be heated to high temperatures in electric furnace.

High-Temperature. Economical Design of Electric Furnaces for High Temperatures (Ett försök till en rationell konstruktion av elektriska högtemperaturugnar), O. Stålhane. Teknisk Tidskrift, vol. 54, no. 40, Oct. 4, 1924, pp. 171-174 (Elektroteknik), 3 figs. Furnace combines use of a resistance, which has form of a coil, with an electric arc connected in series with said coil and made to rotate under influence of said magnetic field. Temperatures of over 1755 deg. cent. have been obtained by use of only 1000 watts.

Induction. A Six-Ton Induction Furnace Installation, M. Unger. Gen. Elec. Rev., vol. 27, no. 8, Aug. 1924, pp. 498-503, 12 figs. Details of new General Electric Co. three-ton furnace and its auxiliaries, yielding high-grade melt of extreme uniformity.

Horizontal Ring Induction Furnaces, J. A. Seede. Iron Age, vol. 114, no. 20, Nov. 13, 1924, pp. 1281-1282, 3 figs. Comparison with electric arc furnaces for metals; attractive features of induction melting; results from 6-ton unit.

Iron-Melting. Nine Tons in a 3-Ton Furnace, L. J. Burton. Foundry, vol. 52, no. 10, May 15, 1924, pp. 401-403, 9 figs. Capacity of electric furnace increased to melt sufficient iron to pour large gear wheel; operating door banked up about 10 in. with cement made of white sand and sodium silicate; operation at plant of Dibert, Bancroft & Ross Co., New Orleans.

See also IRON METALLURGY, Electric Smelting.

Iron-Ore Reduction. Electric Reduction Furnace Iron, R. C. Gosrow. Iron Trade Rev., vol. 74, no. 15, Apr. 10, 1924, pp. 982-983 and 991. States that pig iron made in electric reduction is of high quality and adapted to foundry and steel-making use.

Low-Grade Iron and Scrap. Using the Electric Furnace, J. T. MacKenzie. Foundry, vol. 52, no. 21, Nov. 1, 1924, pp. 859-860. Company making cast-iron pipe installs electric melting unit to handle low grades of iron and scrap; direct metal tried out; segregation of manganese sulphide causes trouble. (Abstract.) Paper read before Am. Foundrymen's Assn.

Medium- and Low-Temperature. Medium and Low Temperature Applications, E. A. Hurme. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 503-513, 24 figs. Application of small medium-temperature heat-treating furnaces; hearth-type tool-treating furnaces; tool-steel tempering furnace; large-size medium-temperature furnaces; furnaces for annealing castings; application of electric heat to annealing and hardening wire; applications of low-temperature heating; baking of motor armature; enameling; electric steam boilers; sheet-mill roll heaters.

Melting. Electric Melting Furnaces, J. A. Seede. Iron & Steel Eng., vol. 1, no. 9, Sept. 1924, pp. 490-494, 8 figs. Review of development; refinements in furnace design, accessories, and operation; increasing productive capacity of furnace.

Melts Iron in Twin Electric Furnaces, A. W. Bryant. Foundry, vol. 52, no. 14, July 15, 1924, pp. 556-559, 4 figs. Iron Trade Rev., vol. 75, no. 4, July 24, 1924, pp. 226-228, 4 figs. At plant of Kelly & Jones Co., Greensburg, Pa., who manufacture a line of plumbing and valve fittings in gray iron, steel and malleable iron, two acid-lined units, 1½ tons capacity each, mounted on turntable 180 deg. apart and having single set of electrodes, provide small batches of hot metal at short even intervals.

Multiple System of Electric Melting, E. A. Hanff. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 999-1003, 6 figs. "Twin-furnace" plan as applied to steel foundry; greater speed in melting and less equipment claimed.

Mercury Poisoning. Mercury Poisoning from Electric Furnaces, L. Jordan and W. P. Barrows. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 898-901. Investigation of four cases of subacute or chronic mercurial poisoning among men operating high-frequency induction furnaces; describes resulting improvements made to furnaces.

Metal-Refining. Refining Metals Electrically, L. J. Barton. Serial article in Foundry, vol. 52, beginning June 1, and ending 15, 1924, 29 figs. June: Compares electric melting with other and earlier methods of producing steel for castings. June 15: Primary consideration which should govern selection of electric furnace. July 1: Compares basic and acid-lined furnaces. July 15, Aug. 1, 15 and Sept. 1: Discussion of furnace installation, maintenance and operation, from practical standpoint. Sept. 15: Points which should be watched in buying scrap. Oct. 1: Two-slag and one-slag methods of making basic plain carbon steel. Oct. 15: Chemical reactions. Nov. 1: Advantages and methods of using fluorspar and other slags. Nov. 15: Determining final pouring temperature; mixing ladle additions. Dec. 1: Slag basic process; making acid steel; melt-

ing down charge. Dec. 15: Analysis controlled by slag manipulation; causes of oxidation.

Metallurgical. Small Electric Furnace for White Metal and Aluminum (Elektrischer Kleinschmelzofen für Weissmetall und Aluminium), W. Rohn. Zeit. für Metallkunde, vol. 16, no. 10, Oct. 1924, pp. 396-398, 2 figs. Design and operation of a small furnace for casting temperatures of up to 800 deg. cent.; consumption of power, efficiency and output of furnace, and results of running.

The Economies of Electric Heat in Metallurgical Processes, D. D. Miller. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 129-135. Enumerates advantages of use of electric heat.

Pig-Iron. New Norwegian Electric Pig Iron Furnace, F. Hodson and M. Sem. Iron Age, vol. 113, no. 22, May 29, 1924, p. 1585, 1 fig. Open-top furnace successfully operating with charcoal or coke; new ore-reduction process.

The New Norwegian Electric Pig Iron Furnace, F. Hodson and M. Sem. Jl. of Electricity, vol. 53, no. 3, Aug. 1, 1924, pp. 92-93, 4 figs. Results of tests made on new type of electric furnace; furnace was in operation continuously for period of year and a half during test.

Principles and Design. Electric Furnaces (Les fours électriques). Electricien, vol. 55, nos. 1347 and 1348, May 1 and 15, 1924, pp. 193-197 and 221-225, 15 figs. General considerations; electrothermal problem; resistance furnaces; arc and induction furnaces.

Refractories, Effect of Deoxidizing Slag on. Fluorine in the Deoxidizing Slag, and Its Influence on Refractories in Basic Electric Furnace Practice, F. T. Sisco. Am. Electrochem. Soc.—Advance paper no. 19, for meeting Oct. 2-4, 1924, pp. 257-272. Deoxidizing slag as first formed; analyses of electric-furnace deoxidizing slags; advantages and disadvantages of fluorine in deoxidizing slag; temperature and fluidity of slag and their effect on roof and walls; etc.

Resistance. An Electric Graphite Resistance Furnace, H. Bruan, A. L. Mehring and W. H. Ross. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 821-822, 2 figs. Describes furnace which combines features of both Arsem and Tucker furnaces with some new features, and which was designed for such special reactions as those involved in pyrolytic treatment of phosphate rock under non-oxidizing conditions.

Resistor. Granular Carbon Resistor Furnaces, M. M. Austin. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 156-157, 2 figs. Describes two types in which some of disadvantages of such furnaces have been overcome and their construction simplified.

The Granular Resistor Furnace, O. P. Watts. Optical Soc. Am.—Jl., vol. 9, no. 6, Dec. 1924, pp. 705-707. Useful for heating tubes and crucibles to temperatures attainable only by electric furnace, and where greater uniformity of heat is required than can be obtained by arc; it is most convenient method of melting metals and alloys in amounts of 100 to 1000 grams; voltage and power requirements; operation.

The Metallic Resistor in Industrial Heating Furnaces, E. F. Collins. Chem. & Met. Eng., vol. 30, nos. 24 and 25, June 16 and 23, 1924, pp. 936-941 and 981-985, 18 figs. Application and design of electrical heating equipment; comparison of types of resistors; advantages of furnace. Chemical, physical, and economic laws governing use of equipment.

Steel. Operating Data for an Electric Steel-Melting Furnace, F. L. Landon. Jl. Electricity, vol. 53, no. 12, Dec. 15, 1924, pp. 434-436, 8 figs. Operating results from a 6-ton 3-phase Heroult furnace in Sacramento shops of Southern Pac. Co.

Progress in the Production of Electric Steel (Die Fortschritte der Elektrostahlerzeugung), F. Sommer. Stahl u. Eisen, vol. 44, nos. 18, 19, and 20, May 1, 8, and 15, 1924, pp. 490-496, 526-530, and 553-558 and (discussion) 558-560. Statistical data; arc and induction furnace; economical and metallurgical features.

Some Applications of Electric Heat to the Heheating of Steel, E. F. Collins. Fuels & Furnaces, vol. 2, nos. 6, 7, 8, 9, and 10, June, July, Aug., Sept., and Oct., 1924, pp. 575-578, 655-660, 791-794, 939-942, and 1065-1067, 9 figs. Brief review of past and present day conceptions of heat and laws governing it. Metallic resistors in unmuffled furnaces. Various types of resistor furnaces. Automatic temperature control of electric furnaces. Chemical, mechanical, physical, and economic laws involved in selection of heat source.

The Care of the Electric Steel Furnace, D. D. MacGuffie. Metal Industry (Lond.), vol. 25, no. 18, Oct. 31, 1924, pp. 429-430. Discusses chief points requiring attention in case of electric steel furnaces; deals chiefly with Heroult basic furnace, giving particulars as to procedure for lining out furnace, making it ready for melting, charging, and points of concern in melting and finishing off metal.

The Practical Economics of the Electric Steel Furnace, D. D. MacGuffie. Metal Industry (Lond.), vol. 25, no. 21, Nov. 21, 1924, pp. 501-502. Taking 3-ton Heroult furnace as practical example, author discusses chief points in equipment, operation, and maintenance of electric furnaces, from point of view of obtaining most economical results.

Thermostats for. See THERMOSTATS.

ELECTRIC FUSES

Cartridge. Cheap and Entirely Safe Cartridges for Cut-Outs (Die alte Forderung nach billigen und doch völlig betriebssicheren Sicherungspatronen), O. Ely. Elektro-Jl., vol. 4, no. 6, June 1924, pp. 154-156, 10 figs. Details of construction of N-Diazed cartridges complying with all requirements of German Electric Assn.

Potential-Transformer, Tests on. Potential Transformer Fuse Tests, P. M. Hess. Elec. Wld., vol. 83, no. 10, Mar. 8, 1924, pp. 467-471, 6 figs. Extensive investigation conducted into safety and reliability of 13,200-volt cartridge and expulsion fuses; conclusions and test data show how to secure improvements.

Safety. Electric Starting Devices and Fuses with Reference to Safety, G. F. MacWilliams. Coal Mine Mgmt., vol. 3, no. 10, Oct. 1924, pp. 47-52 and 54. Notes on automatic circuit breakers; safety switches; keeping switches clean; starters; line fuses; grounding; line protectors; switch handles.

Selection and Maintenance. Care in Choosing and Maintaining Fuse and Switches May Prevent Many Accidents, J. F. MacWilliams. Coal Age, vol. 26, no. 14, Oct. 2, 1924, pp. 468-471, 5 figs. Fuses should be kept in fireproof cabinets; automatic circuit breakers of 2000-amp. capacity or over should be remotely controlled; each phase in a three-phase circuit should be provided with separate fuses. From paper read before Nat. Safety Council.

Tests. Low-Tension Tests on High-Tension Fuses and Resistors, P. M. Hess. Elec. Wld., vol. 84, no. 3, July 19, 1924, pp. 107-109, 4 figs. Results of laboratory investigations made by Pennsylvania Water & Power Co. at Holtwood to determine performance of fuses with and without resistors.

Time-Element Purposes. The Use of the Fuses for Obtaining an Exact Time Element, W. Wilson. World Power, vol. 1, no. 2, Feb. 1924, pp. 91-99, 5 figs. Discusses use and performance of fuses for time-element purposes, and deduces methods whereby their characteristic curves may be drawn as result of minimum of experimental data.

ELECTRIC GENERATORS

[See also ELECTRICAL MACHINERY.]

Alternating-Current. See ELECTRIC GENERATORS, A. C.

Armatures. See ARMATURES.

Auxiliary, Parallel Operation. Parallel Operation of Auxiliary Generators, H. B. Seeley. Power Plant Eng., vol. 28, no. 24, Dec. 15, 1924, pp. 1257-1260, 6 figs. New arrangement consisting of small auxiliary generator direct connected to main unit presents new operating problems.

Brushes. See BRUSHES.

Commutation. See COMMUTATION.

Commutators, Heating of. See COMMUTATORS, Heating of.

Design. See ELECTRICAL MACHINERY, Design.

Direct-Current. See ELECTRIC GENERATORS, D. C.

Fires in, Extinction of. Extinction of Fires in Generators by Means of Carbon Dioxide, C. L. Jones. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 650-657, 4 figs. Details of a series of experiments made with carbon dioxide at Mellon Inst. Indus. Research. Tests were conducted on pieces of generator coil. Discusses effects of windage, gas composition, air temperature, copper temperature, and insulating materials.

Heating. See ELECTRIC MOTORS, Heating.

Installation. See ELECTRIC MOTORS, Installation.

Operating Costs. Some Factors Affecting the Working Costs of Small Electric Generating Sets, E. G. Kennard. Instn. Elec. Engrs.—Jl., vol. 62, no. 332, Aug. 1924, pp. 713-719, 5 figs. Comparisons of costs for generating current, using various types of small internal-combustion engines under various working conditions. How working costs per unit of electricity are influenced by various factors, viz., type of engine, nature and magnitude of load, price and calorific value of fuels.

Turbo. See TURBO-GENERATORS.

Ventilation. Ventilation of Electrical Generators, M. D. Engle. Elec. Light & Power, vol. 2, no. 4, Apr. 1924, pp. 13-17 and 60, 9 figs. Methods of obtaining cooling air for large generators; specification for a generator air cooler.

Wind-Driven. Electricity and Wind Power (Elektrizität aus Windkraft), L. Riefstahl. Gewerbefleiss, vol. 103, no. 10, Oct. 1924, pp. 165-172, 7 figs. Particulars of A. E. G. wind-electric plant as installed on Dummerstorf Estate at Rostock, with a 60-cell storage battery capacity of 580 ampere hours.

ELECTRIC GENERATORS, A. C.

Additional Losses. Additional Losses in Synchronous Machines and Their Measurement (Zusätzliche Verluste in Synchronmaschinen und ihre Messung), R. Rüdenberg. Elektrotechnische Zeit., vol. 45, nos. 3 and 4, Jan. 17 and 24, 1924, pp. 37-41 and 59-63, 28 figs. Investigation of parasite stray fields which develop in synchronous machines and which are located mainly in air gap and in winding heads; they are shown to be principal cause for additional losses which, therefore, can be predetermined by calculation; it is also shown that additional losses can be determined with great accuracy by means of short-circuit test on finished machine.

Air Gap in Salient-Pole, Shape of. The Shape of Pole-Shoe Required to Produce a Sinusoidal Distribution of Air-Gap Flux Density, B. Hague. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 921-929, 10 figs. Gives theory of commonly used method in which reluctance of gap from point to point is adjusted to value proper to sinusoidal flux by shaping pole face to give gap of varying length, longer at tip than at center of pole; deals with flat and circular armatures with any number of poles; numerical example illustrating theory given in text.

Assembling. Assembling 22,000-Kva. Waterwheel Generator, R. Brown. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 278-281, 7 figs. Involved special method of handling field poles and adjusting air gap to relieve load on bearings. Drying out windings and placing machine in service.

Assembling Generator Rotors, Ralph Brown. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 566-567, 3 figs. Describes how generator rotors were assembled at Caribou plant of Great West. Power Co.

Drive. House Service Generators; Their Types and Field of Application, W. R. Herod. Gen. Elec. Rev., vol. 27, no. 8, Aug. 1924, pp. 549-554, 2 figs. Details of house service generators driven by main turbine shaft, by separate steam turbine, by turbine and motor.

Excessive Voltage in. Excessive Voltage in Generators, W. V. Lyon. Elec. World, vol. 84, no. 15, Oct. 11, 1924, pp. 784-785, 5 figs. Account of unusual test data brought to writer's attention; possible explanation of result obtained involves point in theory of a.c. generators about which little has been written.

Exciters. Armature Copper Losses of a Rotary Current Exciter (Die Ankerkupferverluste der vom Netz erregten Drehstromerregermaschine), W. Weiler. Elektrotechnische Zeit., vol. 45, no. 41, Oct. 9, 1924, pp. 1080-1083, 13 figs. Develops formulas for calculating copper losses similar to those in use for rotary converters.

Gas-Driven. Coupling Three-Phase Alternators Driven by Gas Engines (Couplage d'alternateurs triphasés commandés par moteurs à gaz), A. Discry. Revue Générale de l'Electricité, vol. 16, no. 19, Nov. 8, 1924, pp. 731-739, 2 figs. Discusses effect of power factor on stability of coupling in a system comprising central stations of metallurgical works, each feeding a medium voltage system, and interconnected with high-tension lines.

High Frequency Alternators, C. M. Laffoon. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 416-420, 13 figs. General résumé of high frequency alternators; inductor-type alternator; cylindrical-type high-frequency generators; characteristic curves.

Induced Voltages in Excitation Systems. See VOLTAGES, Induced, Hazards of.

Induction. Recent Progress in the Field of Induction Generators and Induction Reactive Machines (Neuere Fortschritte auf dem Gebiete der Asynchron-Generatoren und Asynchron-Blindleistungsmaschinen), M. Schenkel. Elektrotechnische Zeit., Special no., Aug. 28, 1924, pp. 15-17, 5 figs. See also Elektrotechnische Zeit., vol. 45, no. 47, Nov. 20, 1924, pp. 1265-1270, 9 figs. Discusses separately excited commutators and their connection with such three-phase induction generators, leading to new reactive machine of a synchronous character, very suitable for improving power factor.

Operation. Operation of A. C. Generating Equipment, V. E. Johnson. Power Plant Eng.,

vol. 28, nos. 2, 3, 6, 8, 11, and 14, Jan. 15, Feb. 1, Mar. 15, Apr. 15, June 1, and July 15, 1924, pp. 142-144, 183-186, 339-342, 438-440, 600-603, and 758-759, 53 figs. Fundamental considerations which serve as foundation for practical study. Jan. 15: Representing alternating currents by vectors. Feb. 1: Effect of capacity in a.c. circuits; power factor; wattless component. Mar. 15: 3-phase alternator, principles of construction and operation. Apr. 15: Study of characteristics of generators under various conditions. June 1: Conditions necessary for parallel operations, synchronizing, division of load, power-factor correction. July: Summary of principles as applied to generators; hints regarding care of machines.

Parallel Operation. Parallel Operation of Direct-Connected Auxiliary Generators, H. B. Seeley. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 387-390, 6 figs. Discusses operating shaft-driven auxiliary generators in parallel with other sources of auxiliary power, with parallel operation with main bus through transformers, parallel operation with turbine-driven house unit, parallel operation of two-shaft generators.

Phenomena. A Method for Presenting Analytically Infinite Form Periodic Functions, Polygonal or Irregular (Un metodo per la rapprensentazione analitica sotto forma finita delle funzioni periodiche poligonali o communque irregolari), L. Laboccetta. Elettrotecnica, vol. 11, nos. 19, 20, and 21, July 5, 15, and 25, 1924, pp. 442-452, 471-480, and 496-502, 53 figs. Discusses sinusoidal diagrams of variable elements of currents expressed as function of time or angle, on basis of which other periodic electromagnetic phenomena in generators and electric motors are studied.

Polyphase. General Diagram of Polyphase Machines with Cylindrical Stator and Rotor (Diagramme général des machines polyphasées à stator et rotor cylindriques), J. Bethenod. Revue Générale de l'Electricité, vol. 16, no. 1, July 5, 1924, pp. 5-7, 1 fig. Applies new kind of diagram which takes into account magnetic saturation.

Polyphase High-Frequency. Note on Polyphase High-Frequency Alternators, S. Chiba. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 947-954, 18 figs. Calculations lead to conclusion that utilization of armature or stator periphery is inherently far better in polyphase than in single-phase machines.

Power Loads from, Totalizing of. Totalizing Alternating-Current Power Loads, V. H. Todd. Power, vol. 60, no. 2, July 8, 1924, pp. 47-49, 7 figs. Methods that may be used to obtain a combined reading of a number of power loads supplied from a.c. generators.

Repulsion. See ELECTRIC MOTORS, A. C., Repulsion, Atkinson Type.

Self-Excitation. Charging of the Transmission Line and Self-Excitation of Alternators, Masakazu Takahashi. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 432, July 1924, pp. 683-715, 29 figs. Describes precise nature of line-charging characteristic and saturation curve and gives graphical method of obtaining saturation curve from no-load saturation curve and short-circuit characteristic; results of actual tests coincide fairly well with this method. (In Japanese with abstract in English.)

Self-Exciting Alternators, F. Contell. Elec. Rev., vol. 94, no. 2411, Feb. 8, 1924, pp. 204-205, 1 fig. Describes machine for which it is claimed that it is possible to excite a.c. generator with current from generator itself; essential part of invention consists in special way in which alternator is excited and in use of auxiliary alternator when main generator is being started up.

Shearing Stresses. Average Shearing Stress in D. C. Machines (Die mittlere Schubspannung bei Gleichstrommaschinen), K. Metzler. Elektrotechnik u. Maschinenbau, vol. 42, nos. 45 and 46, Nov. 9 and 16, 1924, pp. 649-658 and 669-675, 24 figs. Reviews equations available from which to design new types of machines.

Short-Circuit Currents. Alternator Short-Circuit Currents, A. Fraenckel. Electrician, vol. 92, no. 2388, Feb. 22, 1924, pp. 224-225, 4 figs. Calculation of sudden rushes based on physical phenomena. Abstract from Elektrotechnische Zeit.

Short-Circuits. Short Circuits of Alternating-Current Generators, C. M. Laffoon. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 736-743, 17 figs., and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1187-1190, 1 fig. Presents physical conception and simple non-mathematical analysis of short-circuit phenomena of alternating-current generators. Formulas are developed for maximum instantaneous values of armature and field short-circuit current delivered by both single and polyphase generators.

65,000-Kva. The 65,000-Kv.-a. Generator of the Niagara Falls Power Company, W. J. Foster and A. E. Glass. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 365-372, 11 figs. Details of novel features, including stator, stator core, stator winding, rotor spider, poles and field coils, upper bearing bracket, guide and thrust bearing, oiling system, excitation generators, etc.

The 65,000-kv.-a. Vertical Waterwheel Generators for the Niagara Falls Power Company, M. C. Olson and E. B. Plenge. Gen. Elec. Rev., vol. 27, no. 2, Feb. 1924, pp. 90-97, 17 figs. Details of design of electric generator placed in operation Dec. 1923, measuring 31 ft. outside diameter and weighing 750 tons; its operation, combined with that of two similar machines now being built, will furnish an additional 100,000 hp. without diverting more water from Falls.

Synchronous, Stray Reactance in. Determination of Stray Reactance in Synchronous Alternators (Sur la détermination de la réactance de dispersion des alternateurs synchrones), J. Fallou. Revue Générale de l'Electricité, vol. 16, no. 13, Sept. 27, 1924, pp. 491-493, 2 figs. Describes simple method applicable to any three-phase alternator.

Turbo-Alternators. See TURBO-ALTERNATORS.

Vector Diagrams. Determination of the Coefficients for the Potier Vector Diagram for Alternators (A propos de la détermination des coefficients du diagramme de Potier appliqué aux essais des alternateurs), J. Le Monnier. Revue Générale de l'Electricité, vol. 15, no. 13, Mar. 29, 1924, pp. 531-532, 1 fig. Points out that method commonly used for separating out effects of armature reaction and armature reactance are difficult to apply exactly, and outlines method whereby satisfactory results can be obtained.

Winding, Losses in. See ELECTRICAL MACHINERY, A. C. Windings, Losses in.

ELECTRIC GENERATORS, D. C.

Armatures. See ARMATURES.

Bipolar. The Belt Driven Edison Bipolar Dynamos, W. S. Andrews. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 163-168, 7 figs. Sketch of some of Edison's historic dynamos, giving details of design in tabular form.

Commutation. Armature Reaction and Commutation, G. Windred. Electricity, vol. 38, nos. 1739 and 1740, Mar. 7 and 14, 1924, pp. 122-123 and 141-142, 5 figs. Description of primary concepts of modern practice in commutation of d.c. generators; elimination of sparking.

Constant Voltage at Variable Speed. The Latour System of D.C. Generator at Constant Voltage and Variable Speed (Dynamo à courant con-

tinu à tension constante et à vitesse variable, systeme Marius Latour). Revue Générale de l'Electricité, vol. 15, no. 3, Jan. 19, 1924, pp. 97-99, 6 figs. If small series motor is fastened to shaft of compound-wound generator and is connected in series with shunt winding of generator, latter will give constant voltage at variable speed; such system has been patented by Marius Latour, who simplified arrangement by combining motor with generator by placing two auxiliary brushes upon commutator of generator and providing auxiliary magnetic field on stator.

Low Voltage. Stability of Direct-Current Generators, C. Lynn. Elec. Jl., vol. 21, no. 7, July 1924, pp. 304-308, 6 figs. Discusses d.c. generators separately excited and self-excited; gives no-load and full-load saturation curves; d.c. generators used as exciters for a.c. generators.

Moment of Inertia, Determination. Method of Experimentally Determining the Moment of Inertia of a Generator for a Special Case (Méthode de détermination expérimentale d'un moment d'inertie d'une dynamo, dans un cas particulier), J. Foerster. Revue Générale de l'Electriticté, vol. 15, no. 5, Feb. 2, 1924, pp. 163-164, 1 fig. Method of determining moment of inertia of d.c. shunt-wound dynamo, based on knowledge of intensity of current in function of time; method is said to be more convenient in certain cases than habitual method.

Self-Excitation. The Self-Excitation of the Dynamo, H. J. S. Heather. World Power, vol. 2, no. 10, Oct. 1924, pp. 232, 6 figs. Deals with self-excitation in cast of series- and shunt-wound machines.

Welding Dynamo. See ELECTRIC WELDING, Dynamo for.

ELECTRIC LAMPS

Arc. See ELECTRIC LAMPS, ARC.

Burning Hours, Calculation of. The Calculation of Lamp Burning Hours, W. Atkins. Post Office Elec. Engrs. Jl., vol. 17, Pt. 1, Apr. 1924, pp. 24-25, 1 fig. Chart designed to enable calculations to be made quickly and easily with reasonable accuracy.

Fittings. Internal Illumination by Various Types of Electric Lamp Fittings (Alcuni rilievi sperimentali sulla illuminazione di interni), G. Peri. Elettrotecnica, vol. 11, no. 23-24, Aug. 15-25, 1924, pp. 558-563, 11 figs. Results of illumination measurements made on working plane in room 10.5 by 6.15 m. and of average height of 4.5 m., using six different types of fittings.

Incandescent. See ELECTRIC LAMPS, INCANDESCENT.

Mercury-Vapor. A Capillary Mercury Lamp, J. H. Vincent and G. D. Biggs. Jl. of Sci. Instruments, vol. 1, no. 8, May 1924, pp. 242-246, 6 figs. Details of construction and behavior of lamp, which consists of an open U-tube. Can be constructed to operate on any direct voltage from 100 upward, takes very little current, and has no limit to its working life.

The Mercury-Arc Lamp as Spark Gap and Interrupter (Die Quecksilberlampe als Funkenstrecke und Unterbrecher), W. Burstyn. Jahrbuch der drahtlosen Telegraphie u. Telephonie, vol. 23, no. 1, Jan. 1924, pp. 8-12, 15 figs. With aid of Hewitt "starting band," which is small condenser formed between mercury, glass wall, and narrow metal band around lamp tube, mercury lamp may be artificially ignited so as to start with voltage below critical potential; lamp so started may be used as controlled-impulse spark gap for rigid coupling, using direct current of few hundred volts as operating voltage; combination of artificial starting and stopping permits lamp to be used as interrupter for spark coils, giving up to 1000 interruptions per sec.

Testing Laboratory. See LABORATORIES, Germany.

ELECTRIC LAMPS, ARC

High-Brilliancy. New Experiments on the Source of Light of Very High Intrinsic Brilliancy (Neue Untersuchungen über eine Lichtquelle von sehr hoher Flächenhelligkeit), H. Gerdien and A. Lotz. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 515-518, 1 fig. Shows that intrinsic brilliancy can be increased to four times that of positive crater of pure carbon arc.

Tungsten. Tungsten Arc Lights with Increased Intrinsic Brilliancy (Wolframbogenlampen mit erhöhter Flächenhelle), C. Müller. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 250-253, 3 figs. Describes tungsten arc lights in which intrinsic brilliancy is considerably increased by means of suitable articulation of surfaces and increased efficiency; results of experiments in which electrodes made of sintered tungsten particles were used.

ELECTRIC LAMPS, INCANDESCENT

Candlepower Measurement. The Measurement of Candle-power by Means of the Photo-electric Cell, F. K. Moss. Gen. Elec. Rev., vol. 27, no. 9, Sept. 1924, pp. 592-601, 8 figs. Describes investigation made to determine serviceability of photoelectric cell to measure mean spherical candlepower of incandescent lamps. Photometric technique is outlined, limitations of application observed, and results are shown to be distinctly encouraging.

Efficiency. Variations of Voltage in Distributing Lines and Their Effect on Incandescent Lighting (Le variazioni della tensione nelle reti di distribuzione e la loro influenza sulla economia della luce prodotta con lampade a incandescenza), A. Asta. Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 650-660, 13 figs. Characteristics of lamps, life of lamps, calculation of current, choice of lamps for a given current, etc.

Efficiency and Life Tests. Lamp Efficiency and Life Tests, J. F. Skogland and J. Franklin Meyer. Elec. World, vol. 84, no. 25, Dec. 20, 1924, pp. 1302-1304. Consistent results from tests at different efficiencies; average life efficiency bears constant ratio to initial efficiency. Published by permission of U. S. Bur. Standards.

Glow. See Neon.

Machinery for. Incandescent Lamp Machinery. Machy. (Lond.), vol. 23, no. 599, Mar. 20, 1924, pp. 807-808, 2 figs. Machines made by Chas. Eisler, Newark, N. J., employed respectively for forming tube in end of lead wires, and for welding filament and lead wires together.

Neon. Notes on Some Electrical Properties of the Neon Lamp, U. S. Oschwald and A. G. Tarrant. Physical Soc. of Lond.—Proc., vol. 36, part 4, June 15, 1924, pp. 262-268 and (discussion) 278-280, 4 figs. Discusses wave form of oscillating neon lamp, maximum frequency and persistence of ionization in neon lamp.

On Certain Properties of the "Osglim" Neon-Filled Lamp, J. H. Shaxby and J. C. Evans. Physical Soc. of Lond.—Proc., vol. 36, part 4, June 15, 1924, pp. 253-261, and (discussion) 27-280, 5 figs. Discusses characteristic voltage and current curve, illustrations of use of lamp as indicator in commutator method of measuring frequency of alternating currents.

Some Electrical and Optical Properties of Neon Glow Lamps, E. Karrer and A. Poritsky. Optical Soc. Am.—Jl., vol. 9, no. 3, Sept. 1924, pp. 323-335, 12 figs. Data on relative intervals of light and darkness, distribution of luminosity over potential cycle when glow lamp is excited with alternating potential, efficiency of lamp as a func-

tion of input wattage, and spectrum. Bibliography.

The Application of the Neon Lamp to the Comparison of Capacities and High Resistances, J. Taylor and W. Clarkson. Jl. Sci. Instruments, vol. 1, no. 6, May 1924, pp. 173-182, 9 figs. Deals with application of "flashing" of neon discharge tube to measurement of capacities and high resistances; extension of method utilizes beats between two neon lamp circuits "flashing" at high frequencies, for measurement of small capacities.

See also RAILWAY SIGNALING, Neon Lamps for.

Quartz-Windowed. An Incandescent Lamp with a Quartz Window, D. C. Stockbarger. Optical Soc. Am.—Jl., vol. 9, no. 3, Sept. 1924, pp. 337-339, 2 figs. Describes a lamp giving a continuous ultraviolet light, similar to Gehlhoff lamp except in construction of side tube. Side tube, 5/8 in. inside diameter by about 6 in. long, is graded lime glass-to-quartz joint on end of which is sealed a ground and polished plane fused quartz window.

Railway. SSW Electric Incandescent Lamps in Railway Operation (Die Verwendung von elektrischen Glühlichtleuchten der SSW im Eisenbahnbetrieb), F. Hein. Siemens Zeit., vol. 4, no. 11-12, Nov.-Dec. 1924, pp. 451-457, 7 figs. Discusses types of lamps used for lighting tracks of shunting stations, platforms, station walls, locomotive sheds, workshops, offices, etc.

Russian. The Qualities of the Russian Electric Lamps, I. M. Russak. Elektritchestvo, no. 5, May 1924, pp. 256-265, 11 figs. Data of tests. It is claimed that Russian lamps are not inferior to Osram lamps. (In Russian.)

Specifications. Problems in Illumination (Problemi di illuminazione), C. Clerici. Elettrotecnica, vol. 11, no. 23-24, Aug. 15-25, 1924, pp. 553-558. Discusses choice of lamps, calibration, specifications for tungsten-filament lamps, testing, etc.

Statistics on Use. Statistics on Use of Incandescent Lamps. Elec. News, vol. 33, no. 12, June 15, 1924, pp. 53-54, 2 figs. Gives demand by sizes, lamp-price changes, and recent developments.

Tungsten-Filament. The Development of the Electric Incandescent Lamp, B. P. Dudding and C. J. Smithells. World Power, vol. 1, no. 2, Feb. 1924, pp. 106-110, 9 figs. The tungsten filament.

The Testing of Tungsten Incandescent Lamps under Given Conditions (Ueber die Prüfung von Wolfram-Glühlampen unter definierten Bedingungen), F. K. v. Göler. Licht u. Lampe, no. 2, Jan. 17, 1922, pp. 28-30, 3 figs. Behavior of tungsten lamps when burning with different specific charges; evaluation of duration test results and practical utilization of tests.

Variation of Temperature and Brightness of a Tungsten Filament Rendered Incandescent by Alternating Current (Variazioni di temperature e di splendore di un filamento di tungsteno reso incandescente da corrente alternata), A. Mendici. Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 677-678, 2 figs. Results of tests by means of photometric measurement deducing temperature variation from variation in brightness.

Variations in Temperature and Electron Emission of a Tungsten Filament Rendered Incandescent by Alternating Current (Variazioni di temperatura e di emissione elettronica di un filamento di tungsteno reso incandescente da corrente alternata), M. Paris. Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 673-677, 10 figs. Experiments to establish amplitudes and limits of temperature variations of a tungsten filament raised to high temperature by an electric current in vacuum.

See also Specifications.

ELECTRIC LOCOMOTIVES

Austria. Electric Passenger- and Express-Train Locomotives, Type 1CI, Series 1029, of the Austrian Federated Railways (Elektrische Personen- und Schnellzugslokomotiven Bauart 1CI, Reihe 1029 der österr. Bundesbahnen), R. Meixner. Elektrotechnik u. Maschinenbau, vol. 42, no. 36, Sept. 7, 1924, pp. 541-549, 5 figs. Details of design, electric and mechanical equipment.

Baldwin-Westinghouse. Baldwin-Westinghouse Electric Locomotives in South America and Japan, H. R. Barnes. Baldwin Locomotives, vol. 2, no. 3, Jan. 1924, pp. 3-18, 26 figs. Describes types employed in Chile, Argentina, and Japan.

Current-Generating System. Railway Electrification (Considerations sur l'électrification des chemins de fer), E. Stassano. Génie Civil, vol. 84, no. 20, May 17, 1924, pp. 472-475. Notes on Stassano system of generation of current on locomotive. Supplementary note is appended on observations on Stassano system of traction, setting forth its shortcomings.

Design. Design of Electric Locomotives (Gestaltung elektrischer Lokomotiven), W. Reichel. Siemens Zeit., vol. 4, no. 11-12, Nov.-Dec. 1924, pp. 381-401, 31 figs. Design and development of principal type of locomotives for German and other railways, including 1C+C1, 1CC1, 1BB1, 1C2, 2BB2, A3+A3, $2A_12$.

Developments. Development of the Electric Locomotive, F. H. Shepard. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1568-1579, 17 figs. History of development, with tabulation of practically every electric locomotive in world, built or under construction, showing wheel and cab arrangement of each type in diagram; advantages and disadvantages of each type of drive.

Recent Developments in Electric Locomotives, N. W. Storer. Mech. Eng., vol. 46, nos. 9 and 11, Sept. and Nov. 1924, pp. 523-528, and (discussion) 686-688, 9 figs. Describes some of the recent designs of electric locomotives and discusses some of the tendencies in design, especially of mechanical parts.

The Development of the Electric Locomotive, A. H. Armstrong. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 608-617, 18 figs. General comparison of steam and electric locomotives; forms of motor drive; electric-locomotive rating; otheograph tests of locomotive impact on rails, etc.

The Development of the Electric Locomotive, F. H. Shepard. Ry. Elec. Engr., vol. 15, no. 7, July 1924, pp. 225-236, 1 fig.

Diesel-Electric. See LOCOMOTIVES, Diesel-Electric.

Dimensioning and Efficiency. Connection between Dimensioning of Motors, Gear Arrangement and Maximum Efficiency in Single-Phase Locomotives (Untersuchung der Zusammenhänge über Motordimensionierung, Getriebeanordnung und Grenzleistung bei Einphasenvollbahnlokomotiven), E. Wist. Elektrotechnik u. Maschinenbau, vol. 42, no. 30, July 27, 1924, pp. 465-468, 1 fig. Abstract of dissertation.

Direct-Current. Electric Locomotives for the Detroit & Ironton, F. Allison, H. L. Maher and L. J. Hibbard. Ry. Age, vol. 77, no. 16, Oct. 18, 1924, pp. 685-686, 1 fig. See also Ry. Rev., vol. 75, no. 16, Oct. 18, 1924, pp. 578-580, 1 fig. D. c. driving motors will receive power from 22,000-volt a.c. trolley.

Electrical Engineering Exhibits—The British Empire Exhibition. Engineer, vol. 138, no. 3588, Oct. 3, 1924, pp. 370-374, 17 figs. partly on p. 382. Describes d.c. locomotives exhibited by Metropolitan-Vickers Elec. Co., and controlling equipment for 1500-hp. 3300-volt. a.c. winder exhibited by Allen West & Co.; other exhibits.

New High-Speed Electric Locomotives, Type 1-3-1, for 650-Volt Direct Current (Nuove locomotive elettriche 1-3-1 a grande velocità a corrente continua 650 Volta), A. Giaquinto. Rivista Tecnica delle Ferrovie Italiane, vol. 26, no. 3, Sept. 15, 1924, pp. 53-61, 13 figs. partly on supp. plates. Design, construction, and equipment of five locomotives built by Officine Mecaniche di Milano for Milano-Varese line; two 800-hp. motors; total weight, 67 tons.

Dynamometer Cars. Measurement Car for the Investigation of Electric Locomotives (Der Messwagen zur Untersuchung elektrischer Lokomotiven), Kleinow. Glasers Annalen, vol. 94, no. 5, Mar. 1, 1924, pp. 53-57, 10 figs. Describes car of the German State Railway fully equipped for investigation of electric locomotives; details of design, measuring instruments, and results.

Tests of Electric Locomotive, Norfolk & Western Ry., T. C. Wurts. Ry. Rev., vol. 75, no. 16, Oct. 18, 1924, pp. 581-583, 1 fig. Dynamometer car used to produce data on actual road performance of new type LC-2 motive power.

1800-Hp. 4-6-6-4-Type. Electric Locomotive for the Imperial Japanese Railways. Engineering, vol. 117, no. 3030, Jan. 25, 1924, pp. 97-100, 11 figs. partly on supp. plate and p. 112. Describes locomotives supplied by English Elec. Co. of 4-6-6-4 type having motor equipments of 1800 hp.

English. "English Electric" Locomotives for Montreal. Tramway & Ry. World, vol. 56, no. 30, Dec. 18, 1924, pp. 322-323, 4 figs. Particulars of electric locomotive built by English Elec. Co. for Montreal Harbor Commissioners; designed with special view to increased traffic movements; box cab double-bogie articulated type, equipped with four 430-hp. motors, each driving through twin spur gearing on to axle; line voltage 2400 d.c.; 0-4-4-0 type.

Equipment, Sweden. Electric Train Operation in Sweden (Elektrische Zugförderung und die Wasserkräfte Schwedens), M. Winkler. Dinglers Polytechnisches Jl., vol. 339, no. 5, Mar. 1924, pp. 37-39, 5 figs. Illustrates and describes equipment of locomotives for electrically operated road across Sweden and Norway over Gellivare.

Freight. Pennsylvania Builds Three Electric Locomotives, T. C. Wurts. Ry. Age, vol. 76, no. 4. Jan. 26, 1924, pp. 295-296, 4 figs. See also Elec. Ry. Jl., vol. 63, no. 4, Jan. 26, 1924, pp. 133-134, 6 figs., and Ry. Rev., vol. 74, no. 4, Jan. 26, 1924, pp. 170-172, 6 figs. Data on three 200-ton locomotives being built at Altoona shops of Pennsylvania; all of same type, but one to be used for freight service under single-phase a.c. trolley, and other two for passenger service on d.c. current.

See also German; Mexican Ry.; 0-4-4-0.

German. Electric Locomotives with Special Reference to the Locomotives of the German State Railways (Die elektrischen Lokomotiven unter besonderer Berücksichtigung der Lokomotiven der Deutschen Reichsbahn), M. Kleinow. Elektrotechnische Zeit. vol. 45, nos. 22 and 23, May 29, and June 5, 1924, pp. 547-553 and 583-588, 16 figs. Discusses a.c. locomotives of 15,000 volts and 16 2/3 periods used for long-distance traffic, their development and construction and equipment.

Heavy Freight Locomotives, Type C-C, of the German State Railways (Die schweren Güterzuglokomotiven Bauart C-C der Deutschen Reichsbahn), O. Michel. Elektro-Journal, vol. 4, no. 9, Sept. 1924, pp. 257-265, 21 figs. Design and construction of new type locomotive for average train loads of 1200 tons; acceleration, 25 km. in 3½ min. on gradients of 10 per cent; maximum velocity, 55 km.; tractive effort, 27,000 kg. for 10 seconds static pull.

The New Electric Locomotives of the German State Railways (Die neuen elektrischen Lokomotiven der Deutschen Reichsbahn), O. Michel. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 177-187, 15 figs. Describes the seven different types adopted by German State Rys.

Industrial. Electric Industrial Locomotives, F. E. Fisher. Iron & Steel Engr., vol. 1, no. 12, Dec. 1924, pp. 628-633, 4 figs. Problems which must be considered in selecting type or design of locomotive.

Japanese. Electric Locomotives for the Imperial Government Railways of Japan. English Elec. Jl., vol. 2, no. 6, Apr. 1924, pp. 294-301, 9 figs. Particulars of the three types ordered, namely, local passenger, freight, and express passenger locomotives. All fitted with same motor, 306 hp., 750 volts.

Maintenance. Economy of Electric Railway Operation as Influenced by the Maintenance of the Locomotives and by the Provision of Suitable Repair Shops (Die Wirtschaftlichkeit der elektrischen Zugförderung in Abhängigkeit von der Unterhaltung der Lokomotiven und vom Bau und Betrieb grösserer Ausbesserungswerke für elektrische Lokomotiven), Sorger. Glasers Annalen, vol. 95, nos. 6 and 7, Sept. 15 and Oct. 1, 1924, pp. 90-98 and 159-170, 10 figs. Compilation of data from operation of electric railways in various countries; comparison of maintenance and operation expenses of steam and electric locomotives; plans and diagrams of construction and operation of electric-locomotive repair shops.

Mexican Railway. Passenger and Freight Locomotives for Mexican Railway Company, Ltd., G. H. Walker. Gen. Elec. Rev., vol. 27, no. 4, Apr. 1924, pp. 272-277, 9 figs. Mechanical and electrical details of 150-ton 3000-volt d.c. locomotive; tractive effort, 54,000 lb. speed at 1 hr. rating, 19 m.p.h.; how locomotives have been arranged to meet service requirements of this particular electrification.

Midi Railway, France. High-Speed Electric Traction (La traction électrique à grande vitesse), F. Broussouse. Technique Moderne, vol. 16, no. 9, May 1, 1924, pp. 324-328, 5 figs. New locomotives with vertical motors of the Midi Railway.

High-Speed Locomotives, Type 2-C-2, of the Midi Railway (Les locomotives à grande vitesse type 2 C 2 de la Compagnie des Chemins de fer du Midi), B. Leboucher. Société Française des Electriciens—Bul., vol. 4, no. 36, June 1924, pp. 437-462, 17 figs. Discusses stability, classification, design, characteristics, and mechanical and electric equipment of 2-C-2 Midi locomotives and of 2-D-2 type recently ordered.

Motor-Generator. Motor-Generator Locomotives for the New Haven. Ry. Age, vol. 77, no. 16, Oct. 18, 1924, pp 697-698, 2 figs. Alternating current from trolley converted to direct current for motors on locomotive.

Mountain Express. A Mountain Express Engine, B. Vannes. Electrician, vol. 93, no. 2421, Oct. 10, 1924, pp. 407 and 412, 1 fig. Design employed on Austrian State railways; first electric mountain express locomotive. Translated from Elektrotechnik u. Maschinenbau.

0-4-4-0 Type. Electric Goods Locomotive, Victorian Government Railways. Ry. Gaz., vol. 40, no. 17, Apr. 25, 1924, pp. 596-597, 3 figs. Particulars of two locomotives to be used for service in Melbourne metropolitan railway yards and for hauling freight trains within Melbourne suburban electrified railway area; wheel arrangement 0-4-4-0; voltage and system 1500 d.c., individual single-geared drive, maximum tractive effort 26,000 lb.

Norfolk & West. Ry. New Electric Locomotives of the N. & W. Ry., T. C. Wurts. Ry. Rev., vol.

74, no. 23, June 7, 1924, pp. 1018-1022, 9 figs. Equipment just put in service illustrates advances of 30 years' experience in electric motive power.

Oil-Engine-Driven. Oil-Engine-Driven Electric Shunting Locomotive. Engineering, vol. 118, no. 3075, Dec. 5, 1924, p. 781, 3 figs. Built jointly by Gen. Elec. Co. and Ingersoll-Rand Co. for switching service; it is equipped with 300-hp. oil engine directly connected to 200-kw. generator.

See also LOCOMOTIVES, Diesel-Electric.

Parallel-Crank Drive. Vibrations of Electric Locomotives with Crank Drive (Die Schüttelschwingungen elektrischer Lokomotiven mit Stangenantrieb), A. Winkler. Elektrotechnik u. Maschinenbau, vol. 42, nos. 16 and 17, Apr. 20 and 27, 1924, pp. 241-248 and 261-265, 7 figs. Problem of parallel-crank drive and its history; ideal parallel-crank drive; forced oscillations of practical parallel-crank drive; elasticity of shafts; play of bearings; quasi- and pseudo-harmonic oscillations; gear springs; damping of systems with rigid speed characteristics; subsequent calculation of actual locomotives with special consideration of gear springs and damping.

Paris-Orleans Ry., France. High Speed Passenger Locomotive for Paris-Orleans Railway, W. D. Bearce. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 146-150, 3 figs. Detailed description of gearless 120-ton locomotive; nominal voltage of system 1500 volts d.c.

Passenger. Electric Passenger Train Locomotive for the Railway Line Görlitz—Königsberg, Paul Müller. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 173-174, 4 figs. Approved 2Dl locomotive with rod drive, for heavy gradients. Supplied by Bergmann Elec. Works, Berlin.

Pit and Quarry Haulage. Locomotives for Haulage at Pits and Quarries, H. H. Johnston. Pit and Quarry, vol. 8, no. 7, Apr. 1924, pp. 97-100, 4 figs. Notes on different types of electric locomotives, and electric equipment for haulage systems.

Quencher, for Coke Plants. Electric Quencher Locomotives for By-Product Coke Plants, H. H. Johnston. Elec. Jl., vol. 21, no. 11, Nov. 1924, pp. 517-520, 4 figs. Operation and maintenance of electric locomotives in quenching service; types; pneumatically operated automatic control.

Regenerative. New Locomotives for the Norte Railways of Spain, W. R. Taliaferro. Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, pp. 364-365, 1 fig. 3000-volt d.c. regenerative locomotives built by Westinghouse Elec. Mfg. Co. and Baldwin Locomotive Works.

Side Rods. Oblique Articulated Side Rods for Electric Locomotives, G. Darrieus. Brown Boveri Rev., vol. 11, no. 3, Mar. 1924, pp. 43-51, 9 figs. Describes statically determinate transmission system and its characteristics; successful experiments with oblique articulated rods up to highest speeds.

Siemens-Schuckert. The Siemens-Schuckert Locomotives on the Swedish Riksgränsbahn (Die Siemens-Schuckert-Lokomotiven auf der schwedischen Riksgränsbahn), F. Kuntze. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 4, Jan. 26, 1924, pp. 72-76, 21 figs. Brief outline of first 1C + C1 locomotives of Swedish railway and results obtained therewith; description of new 1C + C1 locomotives and their ability to meet stringent requirements made on them.

See also Swedish Railways.

Single-Phase. New Type Electric Locomotives for New York, New Haven & Hartford R. R. Ry. Rev., vol. 75, no. 17, Oct. 25, 1924, pp. 623-624. Details of single-phase locomotives which do not have a.c. traction motors; each locomotive contains traveling substation and will be equipped with synchronous motor-generator set for converting 11,000-volt, 25 cycle single-phase supply to direct current.

1-C-1 Electric Locomotives of the Swiss Federal Railway (Les locomotives électriques type 1-C-1 des Chemins de fer fédéraux), E. Savary. Bul. Technique de la Suisse Romande, vol. 5, no. 3, Feb. 1924, pp. 25-29, 9 figs. partly on supp. plate. Principal features and advantages of single-phase locomotives with individual axle drive, built by Sécheron Works, Geneva. Translation in Int. Ry. Congress Assn.—Bul., vol. 6, no. 6, June 1924, pp. 457-461, 4 figs.

Single-phase Electric Locomotives. Engineer, vol. 137, no. 3560, Mar. 21, 1924, pp. 305-308, 23 figs. partly on p. 310 and supp. plate. Describes 1 B-B 1 and 1-C-1 locomotives built by Sécheron Co., Geneva, for Swiss railways.

2-C-1 Single-Phase Electric Locomotive with Individual Drive. Engineer, vol. 137, no. 3562, Apr. 4, 1924, p. 369-371, 6 figs. partly on p. 362. New locomotives built by Brown, Boveri & Co., in which each driving axle has an independent motor; gearing is fitted on one side of engine and driving wheels on opposite side are free.

See also 2-8-2.

South African Railways. Electric Locomotives for South African Government Railways. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924, pp. 285-290, 10 figs. Describes locomotives on main-line railway of Glencoe and Pietermaritzburg section of So. African Rys. which deal chiefly with hauling of heavy mineral traffic down to coast; A.A. + A.A. type; gage, 3 ft. 6 in.; equipped with four 300-hp. motors; weight, 66 tons 12 cwt.; overall length, 48 ft. 8½ in.; tractive effort, maximum, 40,000 lb.

Electric Locomotives for South African Railway. Ry. Age, vol. 77, no. 2, July 12, 1924, pp. 53-56, 6 figs. Description of combined passenger and freight locomotives for Glencoe to Pietermaritzburg section.

3,000-Volt Locomotives for South African Railway. Elec. Ry. Jl., vol. 64, no. 11, Sept. 13, 1924, pp. 390-391, 3 figs. Describes locomotives designed for use on narrow-gage line, three 75-ton units being coupled together to haul a 1430-ton freight train.

Storage-Battery. Storage-Battery Locomotives and Their Use for Railways (Die Akkumulatorlokomotive und ihre Verwendung für Eisenbahnen), R. Winckler. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 14, Oct. 30, 1924, pp. 325-328, 4 figs. Types of locomotives, advantages of storage-battery drive, application in shunting yards, auxiliaries in freight traffic, freight trains for narrow-gage lines, and light passenger traffic on main lines.

See also Switching.

Swedish Railways. The Siemens-Schuckert-Locomotives of the Swedish State Railways (Riksgränsbahn), F. Kuntze. Eng. Progress, vol. 5, no. 1, Jan. 1924, pp. 1-4, 6 figs. Details of ore-train twin locomotives of 1C + C1 type.

Swiss. Electric Locomotives of the Swiss Federal Railways (Die elektrischen Lokomotiven der S.B.B.), M. Weiss. Schweizerische Bauzeitung, vol. 84, no. 2, July 12, 1924, pp. 21-24. Discusses results of locomotive operation, advantages of electric traction so far shown; interruptions and damages to locomotives; cost of maintenance.

See also Single-Phase.

Switching. Electric Switchers for Paulista Railway, W. D. Bearce. Elec. Traction, vol. 20, no. 5, May 1924, pp. 214-215, 2 figs. Steeple cab-type electric switching locomotives used on railway in Brazil; running gear consists of two swivel trucks each equipped with two GE-255-1500/3000 volt motors.

High-Power Battery Locomotives for Shunting Purposes, M. Hiertzeler. Brown Boveri Rev., vol. 11, no. 10, Oct. 1924, pp. 215-219, 6 figs. Battery locomotive, class E 421, supplied to Italian State Railways; battery locomotives for Swiss Federal Railways.

See also Oil-Engine-Driven.

Tests. Epoch Making Tests on New Passenger and Freight Locomotives, W. D. Bearce. Gen. Elec. Rev., vol. 27, no. 2, Feb. 1924, pp. 98-103, 9 figs. Describes tests carried out at Erie Works of Gen. Elec. Co. on two electric locomotives, viz., Paris-Orleans passenger, and freight locomotive for Mexican Ry. Co.; principal features of locomotives.

Three-Phase. New Three-Phase Electric Locomotives of the Italian State Railways (I nuovi locomotori elettrici trifasi a 5 sale accoppiate delle FF.SS.), Amedeo Savoia. Rivista tecnica delle Ferrovie Italiane, vol. 25, no. 4, April 15, 1924, pp. 128-134, 1 fig. Details of new three-phase locomotive with five coupled axles (type Gr. E 551).

Turbo-Electric. See LOCOMOTIVES, Turbo-Electric.

2-8-2. The Pennsylvania 2-8-2 Type Electric Locomotive, W. H. Enunson. Railroad Herald, vol. 28, no. 8, July 1924, pp. 34a-34c, 3 figs. Also Ry. & Loco. Eng., vol. 37, no. 6, June 1924, pp. 173-175, 3 figs. New single-phase electric locomotives for use in either freight or passenger service on 11,000-volt 25-cycle alternating current, built and designed by Penn. Ry.

Vibrations. The Vibrations on Electric Locomotives with Crank Drive (Die Schüttelerscheinungen elektrischer Lokomotiven mit Kurbelantrieb), Iwan Döry. Elektrotechnik u. Maschinenbau, vol. 42, no. 4, Jan. 27, 1924, pp. 45-47, 3 figs. Discusses causes of periodic vibration and indicates that play in bearings is largely responsible for it; fact that vibrations occur under no load as well as at full load tends to support author's conclusions; use of properly placed springs in gear mechanism is means for avoiding vibrating and resonating phenomena.

Westinghouse-Baldwin-Naval. Electric Locomotives for the Spanish Northern. Ry. Age, vol. 77, no. 23, Dec. 6, 1924, pp. 1037-1038, 1 fig. Westinghouse-Baldwin-Naval locomotives are of 6-axle type with 6-wheel swivel trucks. See also description by W. R. Taliaferro in Ry. Rev., vol. 75, no. 23, Dec. 6, 1924, pp. 912-915, 7 figs.

ELECTRIC MEASURING INSTRUMENTS

A. C. Compensators. A New A. C. Compensator (Ein neuer Wechselstromkompensator), W. Geyger. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 80-82, 2 figs. Describes simple compensator which permits direct reading of amplitude and phase of alternating current as well as its actual and apparent components.

Alternating-Current Measurement. New Devices for Measuring Alternating Current in Long-Distance Lines (Neuere Geräte für Wechselstrommessungen an Fernsprechleitungen), P. Kaspareck. Zeit. für Fernmeldetechnik, Werk- u. Gerätebau, vol. 5, nos. 8 and 9, Aug. 16 and Sept. 16, 1924, pp. 62-71 and 85-87, 48 figs. Discusses measuring apparatus meeting increased requirements of telephone cables, including instruments for measuring a.c. sources, controlling manufacture, measurement during laying of cables, and testing quality of telephones or for acceptance tests, made by Siemens & Halske A. G.

Ammeters. See AMMETERS.

Commercial and Indicating. Electrical Measuring Instruments. World Power, vol. 2, no. 11, Nov. 1924, pp. 292-295. Commercial and indicating instruments. Review of book by C. V. Drysdale.

Electromagnetic Direction Moment. Electric Measuring Instruments for Alternating Current with Electromagnetic Directing Moment (Ueber elektrische Messinstrumente für Wechselstrom mit elektromagnetischem Richtmoment), H. Kafka. Elektrotechnik u. Maschinenbau, vol. 42, no. 1, Jan. 6, 1924, pp. 1-5, 6 figs. Study of workings of such instruments; details of double-coil instruments now being used on recommendation of author by Siemens & Halske as indicating instruments for a.c. bridges.

Electrometers. See ELECTROMETERS.

Galvanometers. See GALVANOMETERS.

Hot-Wire. Heat Compensation for Hot-Wire Instruments (Hitzdraht-Messgeräte mit neuartiger Präzisions-Temperaturkompensation), A. Steinert. Elektrotechnische Zeit., vol. 45, no. 16, Apr. 17, 1924, pp. 365-366, 7 figs. To provide precision heat compensation for hot-wire voltmeters and ammeters, one end of platinum-silver hot wire is fastened directly to brass base of instrument, while its other end is held on free end of strip of bi-metallic metal, by proper choice of this thermostatic strip and careful adjustment between it and initial tension in hot wire, very accurate heat compensation may be obtained within plus or minus 10 deg. cent. variations of room temperature; instrument is patented by Velmag Co., Leipzig, Germany.

Magnetometer. A Portable Magnetometer, J. H. Shaxby. Jl. of Sci. Instruments, vol. 1, no. 8, May 1924, pp. 234-237, 2 figs. Describes magnetometer of commutated inductor type, designed primarily for field work, especially in mountainous or otherwise difficult country.

Moving-Coil. Moving-Coil Measuring Instruments (Les appareils destinés à mesurer le rapport de deux couples électrodynamiques), S. Held. Revue Générale de l'Electricité, vol. 15, no. 14, Apr. 5, 1924, pp. 591-598, 9 figs. Novel series of instruments are theoretically explained and shown in sketches; they are based on principle of having either one moving coil within tripolar magnetic field or two angularly displaced moving coils in bipolar field; in this way it is possible to design ohmmeters, phase meters, and frequency meters that are very sensitive and accurate; examples as built by French concern.

Permeameters. Permeameter for Alternating Current Measurements at Small Magnetizing Forces, G. A. Kelsall. Jl. Optical Soc. Am. & Rev. of Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 329-338, 7 figs. Describes apparatus and methods for measuring permeability of a magnetic material to small alternating magnetizing forces.

Repairing. Repair of Electrical Indicating Instruments, V. H. Todd. Ry. Elec. Engr., vol. 15, no. 2, Feb. 1924, pp. 40-42, 1 fig. Causes which may make them indicate incorrectly and remedies which may be applied.

Standard Cells. See BATTERIES, Weston Standard Cells.

Synchronoscope. New Measuring Apparatus for Measuring Quotients (Neues Messwerk für Quotientenmesser), E. Kühnel. Elektrotechnische Zeit., vol. 45, no. 38, Sept. 18, 1924, pp. 1002-1003, 8 figs. New apparatus based on action of fixed coils on an armature consisting of two z-shaped iron vanes; measures also phase and frequency.

Totalizing and Remote Power Indication. The Totalizing and Remote Indication of Electric Power and Its Reactive Component, H. K. Nock and H. S. Edgerly. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 758-761, 10 figs. Describes instrument designed to indicate either

power or reactive component, depending upon its connections; it can be arranged to record graphically in either case output of several generators.

Voltage Surges. The Klydonograph, J. F. Peters. Elec. Wld., vol. 83, no. 16, Apr. 19, 1924, pp. 769-773, 26 figs. Instrument for accurately measuring and recording voltage surges; tests on which calibration is based; photographic plate figures give detailed information of surge characteristics.

Voltmeters. See VOLTMETERS.

Watt-Hour Meters. See WATT-HOUR METERS.

Zero Instruments. Regulator of Sensitiveness of a Zero Instrument (Ein Empfindlichkeitsregler für Nullinstrumente), H. Schering and G. Reichardt. Wissenschaftliche Abhandlungen der Physikalisch-Technischen Reichsanstalt, vol. 7, no. 2, 1924, pp. 241-245, 2 figs. Discusses measurement of a.c. bridges in which it is desirable at first to reduce sensitiveness of zero instrument (vibration galvanometer) and then to increase it gradually to a maximum.

ELECTRIC METERS

Ampere-Hour. Sangamo Types NCR and NCI Amperehour Meters. Ry. Elec. Engr., vol. 15, no. 11, Nov. 1924, pp. 401-402, 3 figs. Describes indicating and regulating meters of improved type.

Argentine Republic. Rules for Certification and Operation of Electric Meters (Prescripciones para la aprobacion y funcionamiento de contadores eléctricos). Boletin de la Asociación Argentina de Electrotécnicos, vol. 10, no. 3-4, Mar.-Apr., 1924, pp. 44-52. Rules by Meter Sub-Committee of Argentine Electrotechnic Assn., covering conditions of certification, testing, coefficient of correction.

Electrolytic. Electrolytic Meter (Elektrolytzähler für Gleichstrom, hergestellt von den Siemens-Schuckertwerken, Nürnberg). Elektrotechnische Zeit., vol. 45, no. 1, Jan. 3, 1924, p. 10, 3 figs. Electrochemical meter which measures amount of consumed energy by amount of hydrogen gas developed on rare-metal cathode by shunted fraction of metered direct current; made by Siemens-Schuckert Works for capacities of 2½ to 10 amperes and circuits of 110 or 220 volts.

Frictional Couples. A Study of Electric Meters (Contribution à l'étude des compteurs d'électricité), R. M. Fichter. Revue Générale de l'Electricité, vol. 8, nos. 23, 24, and 25, June 7, 14, and 21, 1924, pp. 1035-1043, 1083-1095, and 1131-1141, 11 figs. Complete study, based on results of numerous experiments, of nature of frictional couples occurring in all types of electric meters, means of reducing these couples and producing meters of great practical reliability while utilizing only small driving couple; methods of determining frictional couples and also driving couple of meter; study of effects of air friction and influence of shape of brake magnet thereon, action of gearing driving indicating dials, and frictional couples due to brushes in d.c. watt-hour meters; results of tests on commercial meters of various types; author concludes that meters with high driving torque are not always most sensitive.

Induction. Angular Error in Induction Meters (Der Winkelfehler bei Induktionszählern), H. Schering and R. Schmidt. Wissenschaftliche Abhandlungen der Physikalisch-Technischen Reichsanstalt, vol. 7, no. 2, 1924, pp. 225-240, 25 figs. Also Archiv für Elektrotechnik, no. 12, no. 6-12, Feb. 29, 1924, pp. 511-526, 25 figs. Methods for determining deviation of phase displacement in flow of current and voltage; shows that angle of flow of voltage changes considerably with strength of current in coil, angle of current flow changing little.

Electric Meters with Reduced Energy Loss (Les compteurs d'électricité à consommation réduite), M.-R. Fichter, Revue Générale d'Electricité, vol. 15, no. 2, Jan. 12, 1924, pp. 62-65, 6 figs. Describes induction meter of caliber of 10 amperes, 110 volts, 50 periods per sec., and advantages which it offers; meter, which is known as F. B. F., has been approved by French Ministry of Pub. Works.

Kilovolt-Ampere. A New Electricity Meter. Engineer, vol. 137, no. 3567, May 9, 1924, pp. 519-520, 7 figs. A.c. meter which gives direct reading of power factor, total kilowatt-hours, kilovolt-ampere hours, and kilowatt and kilovolt-ampere demand for any predetermined period, and also power factor for over any period; introduced by Westinghouse Elec. & Mfg. Co.

A Universal Meter for Electric Power, B. H. Smith. Elec. Jl., vol. 21, no. 3, Mar. 1924, pp. 112-114, 15 figs. Also Sibley Jl. of Eng., vol. 38, no. 5, May 1924, pp. 120-123, 14 figs. Describes ball type of kv.-a. meter; gives direct reading of indicated power factor, total kw-hr., total kv.-a. hours, and kw. and kv.-a. demand for any time interval; makes use of vector addition of watt-hr. and reactive volt-ampere-hours.

Ball Type of Kva. Meter, B. H. Smith. Elec. Wld., vol. 83, no. 7, Feb. 16, 1924, pp. 333-334, 6 figs. New mechanical arrangement for getting root-mean-square of watt and wattless components to obtain kva. demand.

Recent Developments in Kilovolt-Ampere Metering, B. H. Smith and A. R. Rutter. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 441-445, 18 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1176-1178. Two late developments in kva. demand meters; one is of indicating type and indicates total kw-hr., kw. demand, and kva. demand; other is of recording type and gives record of kw. demand, kva. demand, kw-hr. and kva. hr.

Long-Distance Methods. Automatic Transmission of Power Readings, B. H. Smith and B. T. Pierce. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 101-105, 17 figs. Automatic methods which may be employed for remote metering, including frequency, inverse current, potentiometer, position, voltage, current, and impulse.

Mechanical Constants Measurement. On the Generation of an Extra-Low-Frequency E. M. F., and the Measurements of Mechanical Constants of Electrical Meters, Y. Watanabe. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 424, Nov. 1923, pp. 876-892, 22 figs. Application of extra-low-frequency e.m.f. to determination of mechanical constants of electrical measuring instruments; results given for instruments of moving coil type, moving iron type, electrodynamometer type, and hot-wire type; hysteresis phenomena are observed for instruments of permanent magnet type, and jumping phenomena for those with very small bluntness. (In Japanese).

Power Metering. Remote Metering by the Impulse and Condenser Method, B. H. Smith. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 355-357, 8 figs. Discusses impulse method of transmitting power readings based on converting impulse rates into readable values; advantages.

Reactive Current. Measuring Reactive Current in Three-Phase Systems (Blindverbrauchsmessung in Drehstromnetzen), A. Sengel. Elektrotechnische Zeit., vol. 45, no. 37, Sept. 11, 1924, pp. 973-975, 15 figs. Details of new connections for measuring reactive current by means of wattmeter or kw-hr. counters in three-phase lines under any load.

Recording (Graphic) Frequency. A New Graphic Recording Frequency Meter. World Power, vol. 2, no. 9, Sept. 1924, pp. 182-183, 3 figs. Details of new Nalder-Lipman meter.

Service Fundamentals. Fundamentals of Meter Service, R. C. Fryer and J. Gregory. Elec. Wld., vol. 83, no. 20, May 17, 1924, pp. 1003-1006, 6 figs. Requirements for meter-service boxes; proposes circuit breakers instead of fuses, with meter included in same box.

Service Fuses vs. Circuit Breakers. Service Fuses Versus Circuit Breakers, G. E. Palmer. Elec. Wld., vol. 83, no. 24, June 14, 1924, pp. 1225-1227, 3 figs. Universal service entrance and meter requirements met by properly designed combination fuse and switch boxes; disadvantage of circuit breakers.

Three-Phase. Behavior of Wrongly Connected Three Phase Supply Meters in High Tension Plants (Das Verhalten falschgeschalteter Drehstromzähler in Hochspannungsanlagen), H. Ziemendorff. Elektrotechnische Zeit., vol. 45, no. 36, Sept. 4, 1924, pp. 952-955, 3 figs. Gives tabulation of mistakes and shows consequences on meter of wrong connection, and how to avoid mistakes.

Meter Connections for Three-Phase Lines (Ueber den Anschluss von Drehstromzählern für beliebig belastete Phasen mit Messwandlern), R. Dehrmann. Elektrischer Betrieb, vol. 22, no. 1, Jan. 10, 1924, pp. 1-4, 20 figs. Explains correct ways of wiring meters and methods for checking up meters already wired, and points out that use of 1000-ampere current transformer for meter in circuit which does not carry more than 400 amperes will give very inaccurate readings; tabulation of 18 characteristic misconnections shows what meters read instead of correct value.

Transmission of Readings. The Transmission of Meter Readings by the Impulse Method, B. H. Smith. Elec. Jl., vol. 21, no. 5, May 1924, pp. 219-221, 5 figs. System recently developed for making use of d.c. impulses controlled by watt-hour meter sender and special receiver.

Types. Control of Current Consumption in Transmission Lines (Le contrôle de la consommation d'énergie électrique dans les réseaux de distribution), W. Janvier. Revue Générale de l'Electricité, vol. 16, nos. 5 and 6, Aug. 2 and 9, 1924, pp. 195-203 and 237-248, 30 figs. Discusses difficulties of meters met with in practice, checking meters; direct current and polyphase meters, meters for three-phase current; measuring transformers by direct and indirect methods, potentiometers, etc.

Watt-Hour, Testing. Testing for Rotation of Watt-hour Meters, F. C. De Weese. Power Plant Eng., vol. 28, no. 8, Apr. 15, 1924, pp. 440-441, 5 figs. Describes methods used in making polyphase meter installations and presents diagrams illustrating various steps in testing meters.

ELECTRIC MOTORS

[See also ELECTRICAL MACHINERY.]

Ampere-Turns for Saturated Teeth. Ampere-Turns for Saturated Teeth, V. Karapetoff. Elec. Wld., vol. 83, no. 24, June 14, 1924, p. 1231, 1 fig. Approximate method of computation which will be found sufficiently accurate for purposes of design.

Armatures. See ARMATURES.

Automatic Control. Electric Motors with Automatic Working Control (Die Anwendung des Arbeitsregler-Antriebes), O. Pollok. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 1 and 2, Jan. 5 and 12, 1924, pp. 6-8 and 29-31, 17 figs. Describes drive for machines with heavily fluctuating power capacity by means of automatically regulated electric motor; applications and advantages of device developed by author and marketed by German Gen. Elec. Co. (AEG).

Auxiliary-Drive, Control of. Control of Auxiliary-Drive Motors, A. L. Harvey. Power, vol. 59, no. 20, May 13, 1924, pp. 761-762, 2 figs. Automatic regulation of motor speed; control of stoker drives; use of two motors for driving forced- and induced-draft fans; automatic change over from one source of power to another.

Ball Bearings for. See BEARINGS, BALL, Motor.

Bearings. See BEARINGS, Motor, Selection of; BEARINGS, ROLLER, Motors.

British Empire Exhibition. The British Empire Exhibition. Machy. (Lond.), vol. 24, no. 609, May 29, 1924, pp. 279-282, 7 figs. Electric motors and control gear.

Brushes. See BRUSHES.

Chemical Plants. Electric Motors for Drive of Small Chemical Plants (Der Elektromotor als Antriebsvorrichtung für den chemisch-technischen Kleinbetrieb), W. Meysahn. Chemiker-Zeitung, vol. 48, no. 113, Sept. 18, 1924, pp. 665-666. Discusses advantages of electric drive generally and especially of individual drive.

Commutation. See COMMUTATION.

Controllers. Brown Boveri Drum Controllers, J. F. Lochhead. Brown Boveri Rev., vol. 11, no. 5, May 1924, pp. 87-97, 21 figs. Design and operation of drum controllers used for low and medium power motors starting up at most 200 times per hr.

Electric Motor Control Systems and Motor and Like Controllers. Abridgments of Specifications (Lond.), Class 38 (ii), 1924, Period 1916-20, 178 pp. Patents for inventions.

Limitations of Manual Controllers for Electric Motors, H. D. James. Power, vol. 59, no. 18, Apr. 29, 1924, pp. 671-672, 2 figs. Advantages and limitations of manual controller compared with magnetic.

Motor Controlling Devices. South. Engr., vol. 41, no. 4, June 1924, pp. 55-59, 17 figs. Notes on use and connections of various forms.

Operation and Care of Cam-Type Manual Controllers for Electric Motors, H. D. James. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 480-481, 4 figs.

Operation and Care of Drum-Type Manual Controllers for Motors, H. D. James. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 368-369, 4 figs. Function of controller parts; adjustment of contact-finger pressure; movement and lift of fingers; inspecting and cleaning; a.c. controllers.

Cotton-Mill. See COTTON MILLS, Electric Motors for.

Design. See ELECTRICAL MACHINERY, Design.

Direct-Coupled Geared. The Moderate-Powered Direct-Coupled Back-Geared Motor, E. G. Ross. Elec. Rev., vol. 95, no. 2450, Nov. 7, 1924, pp. 684-685. Machine consists of a standard-type electric motor running at speed between 800 and 1200 r.p.m., and fitted with simple spur reduction gear to bring down speed to required value on second-motion shaft; this type is said to have many advantages for driving of low-speed shafting.

Direct-Current. See ELECTRIC MOTORS, D. C.

Fans. See FANS, Electrically Driven.

Fractional-Horsepower. Fractional Horse-power Motors. Machy. (Lond.), vol. 25, no. 635, Nov. 27, 1924, pp. 278-279, 6 figs. Describes Wilson-Wolf motors, characteristic feature of which is highly developed degree of standardization, not

only in component parts, but also in methods of framing and equipping motors.

Heating. The Heating of Electric Machines (Die Erwärmung elektrischer Maschinen), F. Ratkovszky. Elektrotechnische Zeit., vol. 45, no. 21, May 22, 1924, pp. 527-528, 1 fig. Method is derived for determination of maximum superheat of electric machines with sufficient accuracy.

Helical Gearing System. The Uggla System of Helical Gearing for Electrical Motors. Commonwealth Engr., vol. 11, no. 5, Dec. 1, 1923, pp. 178-170, 3 figs. Description of system and its advantages.

Installation. How to Handle Electric Motors and Generators. Elec. News, vol. 32, nos. 23 and 24, Dec. 1 and 15, 1923, and vol. 33, nos. 1 and 2, Jan. 1 and 15, 1924, pp. 40-41, 41-42, 40-41 and 42-44, 2 figs. Complete instruction on installation and maintenance.

How to Install Motors and Generators. Coal Industry, vol. 7, no. 6, June 1924, pp. 251-255. Handling, locating, erecting, connections, drives, starting, operation, synchronizing, care, and inspection.

Railway. Back Gear for Street Car Motors (Zur Frage der Zahnradvorgelege von Strassenbahnmotoren), Willenberg. Verkehrstechnik, vol. 41, no. 45, Nov. 7, 1924, pp. 559-563, 9 figs. Discusses drawbacks for present types and suggests improvements. Advantages of Albrecht-Krupp drive.

Effect of Rotation on Stress Distribution in Electric Railway Motor Pinions, A. L. Kimball, Jr. Gen. Elec. Rev., vol. 27, no. 2, Feb. 1924, pp. 130-131, 5 figs. Further results of a study which is being made of stresses in railway motor pinions by Coker photoelastic method.

Methods in a Rapid Transit Shop, F. H. Colvin. Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 889-890, 7 figs. Special devices for handling and cleaning armatures, for pulling pinions, utilizing pneumatic drills as drilling machines, and for putting couplings in air-brake hose.

Shock-Reducing Suspension of Traction Motors Only Partly Mounted on Springs (Stossvermindernde Aufhängung des nur teilweise abgefederten Bahnmotors), A. Laternser. Schweizerische Bauzeitung, vol. 84, no. 11, Sept. 13, 1924, pp. 125-127, 3 figs. Discusses Bentley-Knight suspension and deals with motor suspension from point of view of dynamics.

Stress Distribution in Rotating Gear Pinions as Determined by the Photoelastic Method, P. Heymans and A. L. Kimball, Jr. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 129-130 and (discussion) 130-132 and 171, 6 figs. Further results of scientific study undertaken by Gen. Elec. Co. for development of superior electric-railway motor pinions; continuation of work started and reported upon before A. S. M. E. in preceding year; results from preliminary observations.

Winding Standards for a Railroad Electrical Shop, A. C. Turtle. Ry. Elec. Engr., vol. 15, no. 5, May 1924, pp. 141-143, 4 figs. A course of procedure for repairing and testing coils of various kinds of motor equipment.

Railway, Bearing Lubrication. See BEARINGS, Railway-Motor.

Railway, Lubrication of. See LUBRICATION, Railway Motors.

Repair. See Railway.

Rolling-Mill. See ROLLING MILLS, Electric Motors.

Small, Manufacture of. Routing and Handling Material in Making a Quarter-Horsepower Motor, L. C. Morrow. Am. Mach., vol. 61, no. 8, 9, and 10, Aug. 21, 28, and Sept. 4, 1924, pp. 291-294, 333-336, and 389-392, 18 figs. Straight-line method of manufacture. Economical use of floor space and man-power. Judicious use of conveyors.

Starting Rheostats. See RHEOSTATS, Starting.

Starting Torque. The Determination of Starting Torque for Motor Drives, P. B. Jackson. Power, vol. 60, no. 14, Sept. 30, 1924, pp. 527-528, 3 figs. Discusses a method for determining starting torque of a load. Contains table giving approximate starting characteristics of a.c. and d.c. motors.

Totally Enclosed. "Emcol" Totally Enclosed Motors. Machy. (Lond.), vol. 24, no. 601, Apr. 3, 1924, pp. 4-5, 2 figs. Production of motors on interchangeable basis; improved method of cooling in Emcol system; duplex system of air ducts.

Variable-Speed Transmissions. Practical Pointers on How Variable Speeds Can Be Obtained, Indus. Engr., vol. 82, no. 11, Nov. 1924, pp. 519-524 and 555, 19 figs. Describes types of equipment used for adjusting speeds to needs of a process or to work performed by machines singly or in a group.

Wood and Metalworking Machinery. Wood and Metal-Working Machinery Motor Requirements, H. C. Jorstad. Elec. World, vol. 83, no. 11, Mar. 15, 1924, pp. 519-521, 4 figs. Applications of former require high-speed drive; variable and adjustable speed requirements must be met on lathe applications; trend in development.

ELECTRIC MOTORS, A. C.

Air-Compressor Drive. See AIR COMPRESSORS, Electric Motors for.

Circle Diagrams. See Induction.

Commutator. Brush Shifting Polyphase Commutator Motor, G. Fox. So. Engr., vol. 41, no. 5, July 1924, pp. 55-59, 8 figs. Describes design of motor used to some extent in power plant, especially for fan and dump devices.

Commutation Characteristics of Single-Phase Commutator Motors (Die Kommutierungscharakteristiken des Einphasenkollektormotors), K. Krauss. Elektrotechnische Zeit., vol. 45, no. 33, Aug. 14, 1924, pp. 876-878, 2 figs. Deals with polar curves for reversing field and reversing pole vectors for variable operation and their use.

Commutator Motor for Demonstration Purposes (Kollektormotor für Demonstrationszwecke), J. Hassdenteufel. Elektrotechnik u. Maschinenbau, vol. 42, no. 39, Sept. 28, 1924, pp. 581-582, 8 figs. Design and construction of a motor used for educational purposes, characteristics of operation corresponding to different types of machines according to connections made.

New Polyphase Commutator Motor with Commutating Field and Phase Compensation (Moteur polyphasé à collecteur à champ tournant avec champ de commutation), A. Heyland. Revue Générale de l'Electricité, vol. 16, no. 16, Oct. 18, 1924, pp. 619-630, 17 figs. Main feature of this motor to which it owes its remarkable characteristics is arrangement of stator winding, rotor winding being of standard type; use of hexaxial and triaxial types of winding; owing to excellent commutation, size of commutator in new type of motor does not exceed that which would be used in standard d.c. motor.

Variable Speed A. C. Commutator Motors, H. Dreghorn. Electricity, vol. 38, nos. 1753, 1754, 1755, and 1756, June 13, 20, 27, and July 4, 1924, pp. 303-304; 318; 333-334; and 345-346. Series commutator motor; Eichberg 3-phase shunt commutator motor; Schrage variable-speed motor; etc.

Compensating. The Use of a Synchronous Compensator for Modification of Power Factor of a Plant Purchasing Electric Power (Considérations sur l'emploi d'un compensateur synchrome pour modifier le facteur de puissance d'une usine consommatrice d'énergie électrique), A. E. Bellan. Revue Générale de l'Electricité, vol. 15, no. 15, Apr. 12, 1924, pp. 645-655, 7 figs. Author seeks to show that considerable economy can be realized by an industrial consumer, with aid of a synchronous compensator with or without automatic control, supplying all or part of reactive energy consumed.

Concatenation, Parallel. Parallel Concatenation of Induction Motors. T. Isono. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 431, June 1924, pp. 517-544, 16 figs. Explains characteristics of parallel concatenation which can be obtained by changing some connections of series concatenation and easily started with one of the two induction motors with smaller number of poles. (In Japanese.)

Control Gear, Air-Break. Air-Break Control Gear for Small A. C. Motors. Electricity, vol. 38, nos. 1744, 1745, and 1746, Apr. 11, 18, and 25, 1924, pp. 185-186, 198-199, and 209-210, 3 figs. Breaker versus fuse; air-break versus oil-break; switching "direct on"; describes typical totally-enclosed air-break "Mill" circuit breaker; limiting starting current; control of slip-ring induction motors.

Controllers. See ELECTRIC MOTORS Controllers.

Crawling. Crawling of Three-Phase Squirrel-Cage Induction Motors, T. F. Wall. World Power, vol. 1, no. 4, Apr. 1924, pp. 224-233, 7 figs. Discusses phenomenon of crawling, i.e., running up of motor to some speed which is only fraction of normal synchronous speed and remaining running at that low speed; cause and remedies.

Excitation. The Excitation of Synchronous Machines, R. G. Jakeman. Elec. Rev., vol. 94, no. 2410, Feb. 1, 1924, pp. 167-168, 7 figs. Use of distributed exciting windings and uniformly slotted exciting members.

Fynn-Weichsel. Induction and Synchronous Features in New Motor. Coal Age, vol. 25, no. 4, Jan. 24, 1924, pp. 141-142, 2 figs. Describes Fynn-Weichsel motor, developed by Wagner Elec. Corpn. of St. Louis, Mo., embodying best characteristics of both types; combines high efficiency, high torque, constant speed, and high power factor.

Grounds, Locating. Locating Grounds on Motor Circuits, A. Haist. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 655-656, 1 fig. In writer's experience one of best methods for locating grounds on any of various motors on 3-phase system is by means of radial switch having contact point for each phase and voltmeter.

High-Speed. High-Speed Direct Connected Motors Demanded by Wood-workers, W. A. Furst. Elec. News, vol. 34, no. 18, Sept. 15, 1924, pp. 64-66, 4 figs. Discusses high speeds available, effect on quality of output, factor of slip in motors, calculating motor speeds, changing cycle of current, output of generators; individual motors on cutter heads are recent development resulting in call for 60-cycle current.

Induction. A New Self-Excited Synchronous Induction Motor, V. A. Fynn. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 744-748, 7 figs. Comparison of synchronous and asynchronous motors, combination of advantages of both in Danielson synchronous induction motor, self-excited synchronous induction motor; details of new type of synchronous induction motor giving satisfactory solution of difficulties.

A Special Application of Synchronized Induction Motors (Une application particulière des moteurs asynchrones synchronisés), M. Barrère. Revue Générale de l'Electricité, vol. 16, no. 3, July 19, 1924, pp. 115-119, 6 figs. Discusses principal methods of starting synchronous compensators, effect of starting on line voltage; starting with auto-transformer and with synchronized asynchronous motor.

Change-Speed Induction Motors, C. W. Kincaid. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 357-363, 20 figs. Discusses modifications to obtain speed changes, separate stator windings for each speed desired; three-phase, series-star low speed, parallel-star high-speed combinations.

Circle Diagram of the Osnos Motor (Das Kreisdiagramm des Osnos-Motors), T. Schmitz. Elektrotechnik u. Maschinenbau, vol. 42, no. 41, Oct. 12, 1924, pp. 601-605, 7 figs. Develops circle diagram of Osnos motor, a compensated induction motor, and compares this motor with a Sachsenwerk motor.

Circle Diagram of Polyphase Induction Motor. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 424, Nov. 1923, pp. 870-875, 8 figs. Shows that exact circle diagram can be derived in a simple and easy manner, without using inversion and other troublesome processes, by applying principle of superposition of currents. (In Japanese).

Effect of Phase Compensator on Slip and Overload Capacity of an Induction Motor (Der Einfluss des Phasenkompensators auf die Schlüpfung und Ueberlastungsfähigkeit des Induktionsmotors), S. A. Press. Archiv für Elektrotechnik, vol. 13, no. 5, Aug. 22, 1924, pp. 403-408, 1 fig. Develops equations and makes calculations; shows that motor may carry a triple overload.

Effect of Teeth on Torque-Speed Curve of Squirrel-Cage Induction Motors (Ueber den Einfluss der Zähne auf die Drehmomentkurve des Asynchronmotors), B. Aparoff. Elektrotechnik u. Maschinenbau, vol. 42, no. 39, Sept. 28, 1924, pp. 577-580, 8 figs. Theoretical investigation showing that torques arising from space harmonics of flux due to presence of teeth greatly exceed those due to arrangement of stator winding; oscillograms obtained of currents in rotor bars and end rings confirm theoretical deductions.

Efficiency of an Induction Motor (Rendement d'un moteur asynchrome), J. Vuillermoz. Électricien, vol. 40, no. 3153, Aug. 1, 1924, pp. 341-342, 1 fig. If Pu is mechanical power (from brake test) and Pa electric power absorbed by stator, then efficiency is η per cent $Pu/Pa = 100$.

Handy Tables for Use When Changing A. C. Windings for Different Frequencies, A. C. Roe. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 187-193 and 211. How induction motors may be changed for operation at different frequencies, and effect of such changes on speed and horsepower.

Induction Motor with Unity Power Factor (Un motore asincrono con fattore di potenza uno), U. R. Andrei. Elettricista, vol. 3, no. 9, May 1, 1924, pp. 66-67, 2 figs. Describes compensated induction motor recently brought out by a Dresden, Germany, concern.

Polyphase Induction Type A. C. Motors. World Power, vol. 1, no. 3, Mar. 1924, pp. 186-188, 4 figs. Details of Peebles motors, manufactured by Bruce Peebles & Co., Edinburgh.

Rotary Shear of Single-Phase Induction Motors (Der Drehschub der allgemeinen Reaktionsmaschine), R. Brüderlin. Elektrotechnik u. Maschinenbau, vol. 42, no. 37, Sept. 14, 1924, pp. 553-558, 6 figs. Discusses field in air gap and shear in motors; develops formulas for calculating efficiency of single-phase induction motor.

ELECTRIC MOTORS, A. C.

Self-Compensating Induction Motors (Motore asincrono autocompensato), G. Sartori. Elettrotecnica, vol. 11, no. 22, Aug. 5, 1922, pp. 521-528, 15 figs. Discusses theory and principle of motor and its operation, speed characteristics, power factor, results of tests.

The Employment of A. C. Motors (Note sur l'emploi des moteurs à courants alternatifs), J. Mathivet. Revue Générale de l'Electricité, vol. 15, no. 12, Mar. 22, 1924, pp. 516-518. In author's opinion, installation of induction motors exceeding 100 hp. should be prohibited, or consumers should be made to pay for additional losses in addition to regular tariff; he shows that these losses would be very great for motors of 100 to 500 hp.

The New Compensated Induction Motors (Les nouveaux moteurs asynchromes compensés), C. Toulet. Vie Technique et Industrielle, vol. 5, no. 59, Aug. 1924, pp. 312-314, 4 figs. Discusses reactive current and its elimination, constructional and technical characteristics of compensated asynchronous motors and their advantages.

The Performance of Three-phase Induction Motors, T. F. Wall. World Power, vol. 2, no. 9, Sept. 1924, pp. 164-169, 10 figs. Discusses performance as influenced by change in supply pressure.

The Theory of the Circle Diagram (Zur Theorie der Kreisdiagramme), H. Pflieger-Haertel. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 486-493, 1 fig. Results of calculation are applied to circle diagram of 3-phase induction motor.

Theory and Working of Compensated Induction Motors (Die Theorie und Wirkungsweise der kompensierten Asynchronmotoren), Kade. Elektrotechnische Zeit., vol. 45, no. 19, May 8, 1924, pp. 456-461, 12 figs. Describes physical working of induction motors, design of which are based on Heyland's ideas; connection of 3-phase shunt commutator motor which can be used for speed regulation as well as for phase displacement, according to position of commutator brush.

Use of Polyphase Frequency Converters for Compensating Three-Phase Asynchronous Motors (Die Anwendung des mehrphasigen Frequenzumformers zur Kompensierung von Drehstromasynchronmotoren), L. Dreyfus. Archiv für Elektrotechnik, vol. 13, no. 16, Sept. 30, 1924, pp. 507-520, 7 figs. Theory and calculation of an arrangement for medium- and large-sized machines for compensating an induction motor by means of special frequency converters rotating synchronously with main motor.

Winding and Connecting Small Single-Phase Motors, C. A. M. Weber. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 377-382, 29 figs. Discusses single-phase a.c. with split-phase primaries and squirrel-cage rotors, and with single-phase primaries and wound rotors; methods of winding primaries, slot insulation, etc.

See also Fynn-Weichsel; Kapp Vibrator; Railway; Speed Regulation; Squirrel-Cage; Starting; Synchronous; CONDENSERS, Static.

Iron Losses. Surface Iron Losses with Reference to Laminated Materials, T. Spooner and I. F. Kinnard. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 723-729, 7 figs; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1175-1176. Details of tests with experimental salient-pole machine and experimental three-phase induction motor, showing that surface losses of air-gap induction vary approximately as 1.5 power of tooth frequency, from second to first power of 2 with increase of 2, and as first power of slot pitch.

Kapp Vibrator. Influence of the Kapp Vibrator on Induction Motors (Influence du vibrateur de Kapp sur les moteurs asynchrones), J. Kucera. Revue Générale de l'Electricité, vol. 15, nos. 19 and 20, May 10 and 17, 1924, pp. 819-827 and 875-878, 9 figs. Study of Kapp vibrator; theory upon which it is based; and its advantages.

Model Air Propellers. Electric Motors for the Drive of Small Model Air Propellers (Motoren zum Antrieb von kleinen Modell-Luftschrauben), J. Ackeret. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, pp. 101-103, 9 figs. Describes use of small 3-phase motor for wind-tunnel tests.

Operation and Maintenance. Alternating-Current Motors, Operation and Maintenance. South. Engr., vol. 41, no. 4, June 1924, pp. 42-49, 15 figs. Application of various types of a.c. motors and some of their characteristics.

Operation of Alternating-Current Motors, W. R. Bowker. South. Engr., vol. 42, nos. 3 and 4, Nov. and Dec. 1924, pp. 59-61 and 46-50, 11 figs. Nov.: Theory of polyphase induction motors; true and apparent power-starting and speed control of induction motors. Dec.: Starting motor, operating single-phase motors from three-phase service, and variable-speed three-phase motors.

Phase Changing. Practical Data for Use When Changing Single-Phase Motors to 2-or 3-Phase, A. C. Roe. Indus. Engr., vol. 82, no. 5, May 1924, pp. 232-234 and 258. Step-by-step details for these changes and handy tables for use on a variety of jobs.

Phasing Out. Phasing Out Synchronous Motors, J. A. Caparo. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1101-1102, 11 figs. Example of application of vectors in solving practical problem.

Induction Motors on Unbalanced Circuits, A. M. Dudley. Elec. Jl., vol. 21, no. 7, July 1924, pp. 339-343, 3 figs. Discusses vector methods of analysis of unsymmetrical systems.

Induction Motors with Low-Power Synchronizing (Les moteurs asynchrones synchronisés de faible puissance), J. Le Monnier. Revue Générale de l'Electricité, vol. 15, no. 7, Feb. 16, 1924, pp. 257-262, 8 figs. Review of efforts recently made for development of such motors; describes three types of different design but based on same principle, and points out their advantages.

Method for Experimental Determination of Primary and Secondary Reactance in Induction Motors (En metode til eksperimentel bestemmelse av stator- og rotorreaktans i asynkrone induktionsmaskiner), J. B. Barth. Elektroteknisk Tidsskrift, vol. 37, nos. 1 and 2, Jan. 8 and 15, 1924, pp. 1-8 and 11-13, 17 figs. Machine is driven at double synchronous speed, and electrical measurements are made from which reactance of primary and secondary windings may be calculated.

Polyphase Induction Motors, G. Windred. Electrician, vol. 92, no. 2387, Feb. 15, 1924, pp. 190-191, 3 figs. Notes on the various methods of starting and speed control.

Polyphase. See Commutator; Induction.

Polyphase Synchronous. See Starting.

Protection. Protection of Motors (La protection des moteurs), L. Lagron. Electricien, vol. 55, no. 1359, Nov. 1, 1924, pp. 481-483, 8 figs. Reviews different methods of protecting motors when current gives out, and describes a device especially applicable to 3-phase motors, affording protection in all cases of voltage drop or absence of current.

Railway. Summary on Induction Traction Motors (Riassunto di studi su locomotori con motori asincroni), G. Bianchi. Elettrotecnica, vol. 11, nos. 15 and 16, May 25, and June 5, 1924, pp. 334-340 and 361-364, 24 figs. Summarizes ques-

tions of construction of induction motors used in three-phase and monopolyphase traction; speed regulation, three-phase systems with commutation of poles; polyphase and irregular systems with commutation of poles, speed changes, rheostats, etc.

Repulsion. The Atkinson-Type Repulsion Machine as a Motor and Generator, F. J. Teago. Instn. Elec. Engrs.—Jl., vol. 62, no. 332, Aug. 1924, pp. 720-726, 12 figs. Results of experiments made by research students, under direction of author, on a 25-period single-phase Atkinson-type repulsion motor in Laboratories of Applied Electricity, Liverpool Univ.

See also Squirrel-Cage.

Rotary. Saturation of Rotary Current Motors With Reference to Form Factor of Tension (Die Sättigung von Drehstrommotoren in Beziehung zum Formfaktor der Spannung), H. Schübbe. Elektrotechnischer Anzeiger, vol. 41, nos. 168 and 169, Oct. 18 and 21, 1924, pp. 929-930 and 941-942 and 944, 5 figs. Discusses form of tension curve, form factor and amplitude factor, flux of motor, number of windings, etc.

Rotor Slot Wedges and Shaft Keys. Calculation of Wedges and Dovetails (Kräftespiel und Festigkeit von Tragkeilen), F. László. Elektrotechnische Zeit., vol. 45, no. 20, May 15, 1924, pp. 493-495, 8 figs. Pole pieces on most generators and synchronous motors are secured to revolving shaft by means of dovetail construction, and windings in armature slots are frequently retained by wedges. Mathematical paper showing that no exact and fully reliable method is known for calculating forces in these machine parts. Describes testing machine which when used with delicate optical measuring devices, gives location and exact magnitude of these forces.

Series. Single-Phase Series Motors, G. Fox. Southern Engr., vol. 40, no. 6, and vol. 41, no. 1, Feb. and Mar. 1924, pp. 53-55 and 41-45, 14 figs. Feb.: Self-excited shunt induction motors. Starting motors, power factor and characteristics. Mar.: Repulsion, unity power factor motors and their operating characteristics.

Single-Phase. A New Type of Single-phase Motor, S. R. Bergman. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 599-603, 11 figs. Development of a constant-speed a.c. motor for application to single-phase current. Describes derivation of this new type of motor from plain repulsion motor. Has characteristics of a shunt motor over running range, and series type characteristics during starting and acceleration. Possesses high power factor.

Single-phase Variable-Speed Motors, N. P. Perez. Elec. Rev., vol. 94, no. 2415, Mar. 7, 1924, pp. 364-365, 3 figs. Discusses shunt method of speed control.

See also Induction; Series.

Speed Regulation. Speed Regulation of Induction Motors in Sub-Synchronous and Hyper-Synchronous Range According to the Brown Boveri-Scherbius System (Die Regelung der Drehzahl von Induktionsmotoren im unter- und übersynchronen Gebiet nach System Brown Boveri-Scherbius), Seiz. Elektrotechnik u. Maschinenbau, vol. 42, nos. 8 and 9, Feb. 24 and Mar. 2, 1924, pp. 109-112 and 128-136, 12 figs. Principle of speed regulation of induction motors; regulation according to Brown Boveri-Scherbius system; working of Scherbius machine; generative work of main motor, excitation of Scherbius machine; phase compensation and compounding of main motor; working characteristics and useful possibilities of system.

The Speed Regulation of Induction Motors by Three-Phase Commutator Motors Connected in Cascade, W. Seiz. Brown Boveri Rev., vol. 11, no. 7, July 1924, pp. 139-142, 3 figs. Details of Brown Boveri-Scherbius and rotating-field cascade systems for speed regulation of induction motors.

See also Induction.

Squirrel-Cage. Improvements in Rotors, J. F. Fries. Iron & Steel Engr., vol. 1, no. 1, Jan. 1924, pp. 61-63, 10 figs. Particulars of author's invention relating to method of forming and securing winding on rotors of squirrel-cage induction motors, and to producing a rotor of improved construction in which screws and other mechanical joints are dispensed with in securing winding in place.

Induction Squirrel-Cage Motor Starting at High Resistance (Moteur asynchrome à cage d'écureuil à démarrage à couple élevé et faible appel de courant), J. Larde. Arts et Métiers, vol. 77, no. 48, Sept. 1924, pp. 349-351, 5 figs. Describes a new type of squirrel-cage motor giving advantages of a motor with wound rotor and retaining low cost of construction and upkeep.

The Torsional Moment in Rotating-Field Induction Motors with Squirrel-Cage Rotor (Ueber den Verlauf des Drehmomentes bei asynchronen Drehfeldmotoren mit Käfiganker), P. Andronescu. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 453-485, 18 figs. It is shown how squirrel-cage rotor can be replaced by rotor having coils: behavior of field around rotor when there is only one coil on rotor; by introduction of induction coefficients the process of flow and torsional moment can be determined.

Theory and Calculation of the Squirrel Cage Repulsion Motor, H. R. West. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 783-790, 11 figs. Results of analytical study of operation of motor. Derivation of method of calculation is outlined and some of the more interesting results are given.

See also Crawling; Starting.

Starting. A Novel Method of Starting Polyphase Synchronous Motors, E. V. Clark. Instn. Elec. Engrs.—Jl., vol. 62, no. 334, Oct. 1924, pp. 878-881. States that difficulty experienced in starting up polyphase synchronous motor simultaneously with alternator supplying circuit is greatly reduced if alternator is of asynchronous type, and that with small laboratory plant this method of starting is extremely simple; outlines scheme for operating small synchronous motors with this method of starting and cites three fields where method may be of use, namely, testing shops of manufacturers, laboratories, and emergency use.

Automatic Starting of Synchronous Motors. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 282-283, 4 figs. Describes new type of controller for automatically starting synchronous motors in which reduced starting voltage is obtained through reactance coils.

Clutch Pulley for Squirrel-Cage Motors (La poulie D. E. M. et le démarrage des moteurs asynchrones en court-circuit), G. Leboupin. Revue Générale de l'Electricité, vol. 8, no. 23, June 7, 1924, pp. 1066-1070, 8 figs. Describes D. E. M. centrifugal clutch pulley to enable squirrel-cage motors to start light and thus to reduce duration of short-circuit current; pulley consists of series of wedges, driven by shaft and free to move outwards; at full speed, wedges fly outwards and drive pulley by friction; as speed increases oil is flung outwards into annular ring, so that coefficient of friction is increased and clutch engages smoothly; performance curves; tests have shown that it is suitable for motors up to 6 hp. and probably much higher.

New Method for Starting Induction Motors Without a Rheostat, K. I. Shinfer. Electritchestvo, no. 2, Feb. 1924, pp. 69-77, 10 figs.

ELECTRIC MOTORS, A. C.

Description of a modification of Görges method in which part of rotor winding is used as a rheostat winding. Method was tested in 60- and 10-hp. motors, and oscillograms of stator current are given. (In Russian.)

Starting Conditions in Alternating-Current Motors with Short-Circuited Rotor and Their Measurement (Die Anlaufverhältnisse beim Drehstrommotor mit Kurzschlussläufer und ihre Messung), R. Elsässer. Siemens-Zeit., vol. 4, nos. 6 and 7, June and July 1924, pp. 149-154 and 207-212, 12 figs. Discusses starting phenomena and measurements for explaining them, and considers most important means of eliminating damaging effects of starting.

The Görges Method of Starting Induction Motors (Ueber die Anlaufschaltung nach Görges für asynchrone Motoren), C. Schenfer. Elektrotechnik u. Maschinenbau, vol. 42, no. 10, Mar. 9, 1924, pp. 141-145, 7 figs. Describes method which employs either of two connections: (1) in one arrangement two unequal windings lie in same slots, and efficient mean factors induced in these windings by rotating magnetic field are subtracted algebraically, so that motor starts with reduced current; (2) in other arrangement the two windings have equal numbers of turns, but lie in different slots and belong to different phases, so that efficient mean factors induced in them are subtracted vectorially.

The Self-Starting of Squirrel-Cage Motors through Current Displacement (Ueber das Selbstanlassen von Kurzschlussmotoren durch Stromverdrängung, R. Mayer. Elektrotechnische Zeit., vol. 45, no. 8, Feb. 21, 1924, pp. 137-139, 8 figs. It is shown that current displacement has no effect on reduction of starting current, which is only brought about by increased leakage which is required for every current-displacing arrangement; displacement itself influences degree of starting current as a rule only in an undesirable way.

Three-Phase Motors with Self-Starting (Drehstrommotoren mit Selbstanlauf), A. Weddige. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 8, Feb. 23, 1924, pp. 173-176, 27 figs. Review of development; different arrangements developed during recent years; the Weissburg-Simplex self-starting motor.

See also Induction.

Synchronous. A Synchronized Induction Motor (Ein Asynchronmotor ohne Blindverbrauch), W. Weiler. Elektrotechnische Zeit., special spring no., 1924, pp. 8-10, 7 figs. Detailed theoretical and practical data on recently introduced type of 3-phase motor, which operates practically without phase displacement and which is being recommended between approximate limits of 4 and 75 hp.; for equal output it is claimed that new motor has slightly higher efficiency and smaller bulk and weight.

Benefit of Synchronous Motors, B. L. J. Moore. Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 733-734. Study shows that this equipment, installed in large sizes, effects saving without preferential rate. In case analyzed, annual saving yielded return of 15 per cent on increased investment.

Bonusing Use of Synchronous Motors, H. B. Dwight. Elec. World, vol. 83, no. 6, Feb. 9, 1924, pp. 285-286. With or without power-factor rate clause it should be possible to secure increased use of corrective equipment by giving rebate on power bills based on kva. installed.

Frequency Starting of Synchronous Machines (Zum Frequenzanlauf synchroner Maschinen), R. Brüderlin. Elektrotechnische Zeit., vol. 45, no. 46, Nov. 13, 1924, pp. 1239-1240, 3 figs. Discusses proper adjustment of excitation and deduces a simple rule for it.

Graphic Method for Determining the Reversing Moment of a Synchronous Machine (Ein graphisches Verfahren zur Bestimmung des Kippmoments der Synchronmaschine), G. Lammeraner. Elektrotechnik u. Maschinenbau, vol. 42, no. 42, Oct. 19, 1924, pp. 614-617, 3 figs. Discusses a method which by direct connection of vector diagram and no-load characteristic enables predetermination of behavior of synchronous machines with single-pole at constant excitation and constant terminal voltage.

Locating Faults in Synchronous Motors, A. A. Fredericks. Power, vol. 60, no. 12, Sept. 16, 1924, pp. 451-453, 3 figs. Difficulties that may be experienced in operation of synchronous motors and causes of heating in bearings and windings.

On the Synchronization of an Induction-Type Synchronous Motor, Yasusl Watanabe. Denki Gakkwai Zasshi (Inst. Elec. Engrs. of Japan—Jl.), no. 428, Mar. 1924, pp. 207-226, 34 figs. Motion of rotor of induction motor during synchronizing period with d.c. excitation may be expressed by differential equation of second order; discusses graphical solutions of this equation, etc. (In Japanese.)

Oscillations and Resonance in Systems of Parallel Connected Synchronous Machines, H. V. Putman. Franklin Inst.—Jl., vol. 197, nos. 5 and 6, May and June 1924, pp. 603-621 and 787-820, 6 figs. Develops method for calculating resonance frequency of two synchronous machines electrically in parallel; theory for calculating actual power pulsations which occur in systems of two and three synchronous machines connected to reciprocating apparatus; with some approximation theory is extended to four machines and general method for n machines is suggested; simple methods of calculating correct sizes of flywheels necessary for successful parallel operation of engine-driven generators.

Synchronous Motor Operation, H. Cotton. Electrician, vol. 92, no. 2388, Feb. 22, 1924, pp. 220-221 and 229, 4 figs. Analysis of phenomenon of pulling into step.

Synchronous Motors for Cement Mill Drive, G. E. Cassidy. Cement & Eng. News, vol. 36, no. 7, July 1924, pp. 15-21 and 23, 10 figs. Discusses various types of motors now in common use in industry. Abstract of paper read before Portland Cement Assn.

The Control of Synchronous Motors, H. D. James and J. H. Graybill. Elec. Jl., vol. 21, no. 7, July 1924, pp. 335-339, 4 figs. Discusses field frequency method and time element method of control and both combined.

The Synchronous Induction Motor, H. Cotton. World Power, vol. 2, nos. 6, and 7, June and July 1924, pp. 329-337 and 45-50, 14 figs. General theory and operation of synchronous induction motors, conditions of slip, equation of slip motion and its solution for special cases.

The Synchronous Motor in Steel-Mill Service, D. W. Dean. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 428-433, 10 figs. Characteristics of synchronous motors; comparison to induction motors; customary applications; advantages and disadvantages.

Three-Phase Motors with Power Factor cos $\phi = 1$ (Drehstrommotoren mit Leistungsfaktor cos $\phi = 1$), H. Ott. Elektro-Jl., vol. 4, no. 6, June 1924, pp. 156-161, 19 fig. Details of the Levy's "synasynmotor" (synchronized asynchronous motor), principle of connections, operating curve, etc.

See also Starting.

Three-Phase. Three Phase Motors with Variable Speed, Johnstone-Taylor. Power House, vol. 17, no. 14, July 20, 1924, pp. 23 and 39-40, 2 figs. Electrical designers evolve new type with widely

varying speed range, capable of maintaining constant speed under varying load.

Variable Speed 3-Phase Motors. Engineering, vol. 117, no. 3047, May 23, 1924, pp. 658-660, 11 figs. Motors constructed by Brit. Thomson-Houston Co. and exhibited at Brit. Empire Exhibition.

See also Induction; Starting; Synchronous; Variable Reactance.

Variable Reactance. Three-Phase Machines with Variable Reactance (Drehfeldmaschinen mit veränderlicher Reaktanz), R. Brüderlin. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 12-29, 13 figs. Analytical investigation; application to special cases.

Variable-Speed. Variable-Speed Drives for Calico Printing Machines. Elec. Rev., vol. 94, no. 2411, Feb. 8, 1924, pp. 221-223, 2 figs. Describes variable-speed a.c. motor developed by Brit. Thomson-Houston Co. and its application of 5-color printing machine.

See also Commutator; Single-Phase; Three-Phase.

Voltage Changes. Making Voltage Changes on A. C. Motors, A. C. Roe. Indus. Engr., vol. 82, no. 3, Mar. 1924, pp. 131-137 and 158, 2 figs. Directions and data in tabular form for changing voltage of a.c. motors by reconnecting existing winding, by changing coil pitch and chord factor, or by rewinding coils.

Wave Windings. Methods of Laying Out Wave Windings for A. C. Motors, A. C. Roe. Indus. Engr., vol. 82, nos. 9, 10, 11, and 12, Sept., Oct., Nov., and Dec. 1924, pp. 428-435 and 458; 483-489 and 507; 532-537 and 554-555; and 580-583, 43 figs. Sept.: How to lay out and construct two-layer wave windings for two- and single-phase stators of induction motors. Oct.: Construction and rules as applied to three-phase windings of this type; winding more than two coils per cell, and methods of paralleling coils. Nov.: Short-cut methods and tabulations of data for use in laying out this type of winding. Dec.: Windings having 120-deg. spacing between line leads when number of slots is and is not a multiple of number of poles.

Windings, Losses in. See ELECTRIC MACHINERY, A.C. Windings, Losses in.

ELECTRIC MOTORS, D.C.

Armature Connections. Internal Connecting of D.C. Armatures (Conexiones internas de las armaduras de corriente continua), A. C. Roe. Ingenieria Internacional, vol. 12, no. 5, Nov. 1924, pp. 230-232, 6 figs. Discusses mistakes generally made and which may influence direction of rotation of motors and functioning of generators.

Armatures. See ARMATURES.

Braking. Rheostat Braking of a Direct-Current Series Motor (Le freinage rhéostatique du moteur série à courant continu), E. Herman. Revue Générale de l'Electricité, vol. 16, no. 15, Oct. 11, 1924, pp. 586-599, 18 figs. Theory of braking; characteristics of d.c. series motors; various arrangements for rheostat braking.

Commutation. The Commutation in D.C. Machines with Very Small Peripheral Speeds (Die Kommutierung in Gleichstrommaschinen bei sehr kleinen Umfangsgeschwindigkeiten), C. Schenfer. Elektrotechnik u. Maschinenbau, vol. 42, no. 18, May 4, 1924, pp. 273-275, 6 figs. When an ammeter is connected to armature coil of a d.c. armature and armature is very slowly turned, the dependence of short-circuit current of armature coil can be experimentally determined as function of torsion angle of armature.

Economic Criteria. The Economics of Power Consumption, D. J. Bolton. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 901-908, 2 figs. With special reference to small d.c. motors; possibility of determining frame of motor on economic instead of physical grounds; lays down basis for economic comparisons; examines efficiency of shunt motor when suitably under-run.

Electric Trucks. The Dimensioning of Electric Motors for Electric Trucks (Ueber die Dimensionierung der Elektromotoren für elektrische Nutzwagen), Rob. Schwenke. Motorwagen, vol. 27, no. 11, Apr. 20, 1924, pp. 183-185. Gives dimensions and characteristics of various makes of electric trucks, and discusses factors influencing them.

Iron Losses. Iron Losses in D. C. Machines, E. Hughes. Instn. Elec. Engrs.—Jl., vol. 63, no. 336, Dec. 1924, pp. 35-50, 19 figs. Analysis of iron loss in 6 d.c. machines with undistorted flux to determine: (1) effect of high flux density upon hysteresis loss; (2) hysteresis and eddy-current exponents over wide range of flux density; (3) ranges of frequency and of flux density over which total iron loss can be represented by given expression; etc. Increase of iron loss with load is examined; method of calculating iron loss for any degree of distortion of main flux.

Operation and Maintenance. Direct-Current Motors, Operation and Maintenance. South. Engr., vol. 41, no. 4, June 1924, pp. 35-41, 16 figs. Application of various types of d.c. motors.

Oscillations in. Hunting of Machines With Leonard Connection, Using Compound-Wound Generators as Starting Machine (Ueber das Pendeln von Maschinen in Leonardschaltung bei Verwendung eines Verbundgenerators als Anlassmaschine), W. Greve. Archiv für Elektrotechnik, vol. 13, no. 16, Sept. 30, 1924, pp. 409-440, 17 figs. Discusses oscillation phenomena in d.c. machines with Leonard connection when in armature circuit a compound-wound generator is used for compensating voltage drop, and the two characteristic forms these oscillations take.

Railway. Ventilated D.C. Traction Motors (Les moteurs de traction ventilés à courant continu), E. Heldé. Revue Générale de l'Electricité, vol. 15, no. 2, Jan. 12, 1924, pp. 55-61, 9 figs. Describes various systems employed for ventilation of traction motors, and refers to tests carried out in Europe and United States which show influence of ventilation on different functions of motor. Tables and curves showing comparisons between closed and ventilated traction motors.

Reconnecting. Changing a Series Motor to Shunt or a Shunt to a Series, A. C. Roe. Power, vol. 59, no. 19, May 6, 1924, pp. 721-722, 2 figs. Describes method of conversion.

Reconnecting Direct-Current Machines—Change in Speed, A. C. Roe. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 212-215, 5 figs. Three problems worked out showing how to figure winding for change in speed of shunt, compound, and series motors.

Reconnecting Direct-Current Machines—Changing Speed and Voltage, A. C. Roe. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 363-365, 4 figs. Problems are worked out showing how to figure a new winding for a shunt compound and series motor to operate with a change in speed and voltage.

Series. See also Braking.

Speed Regulation. See ELECTRON TUBES, D.C. Motor Speed Regulation.

Speed Regulator. Speed Regulator for Single Motor Drive, J. H. Ashbaugh. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 390-393, 7 figs. Details of speed regulator insuring accuracy and ease of operation which can be used on installations where armature voltage control is impossible and speed regulation must be obtained solely by motor field control.

Starting Boxes. Three- and Four-Point Starting Boxes for Direct Current Motors, H. J. Wolf. So. Engr., vol. 41, no. 6, Aug. 1924, pp. 57-58, 5 figs. Discusses wiring connections for series, shunt, and compound wound motors.

Starting Moment. A Method of Measuring Starting Moments (Eine Methode zur Messung von Anlaufmomenten), R. Brüderlin. Elektrotechnik u. Maschinenbau, vol. 42, no. 5, Feb. 3, 1924, p. 57, 3 figs. Method is said to have advantage that speed, independent of turning moment, rigidly retains its value, so that readings can be effected without disturbance.

Switching Surges in High-Voltage. Switching Surges in High-Voltage Motors (Les phénomènes de surtension à la mise en marche des moteurs électriques à haute tension), M. Margand. Revue de l'Industrie Minérale, no. 80, Apr. 15, 1924, pp. 193-204, 5 figs. Discusses cause and prevention of electrical breakdowns in certain high-speed 5700-volt motors used underground to drive mine pumps; methods employed in investigation and conclusions.

Testing. Tests To Make on Direct-Current Motors When Putting Them Into Service, C. A. Armstrong. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 398-400, 9 figs. Methods for determining if connections are correct on series, shunt, and compound motors before putting them into service, and how to test polarity of series- and shunt-field coils in compound motors.

Type Determination. Tests for Determining Type of Direct-Current Machines, B. A. Briggs. Power, vol. 60, no. 15, Oct. 7, 1924, pp. 573-576, 15 figs. Shows how to distinguish between different types of d.c. motors, also between d.c. machines and a.c. computation-type motors.

ELECTRIC PLANTS

[See also CENTRAL STATIONS; HYDRO-ELECTRIC PLANTS.]

Argentine. Regulations for Electric Installations (Reglamentacion para instalaciones eléctricas). Boletin de la Asociación Argentina de Electrotécnicos, vol. 10, no. 5-6, May-June 1924, pp. 81-108. Text of regulations by Argentine Electrotechnic Assn., covering general protective measure, machines, transformers, storage batteries, switchboards, lighting accessories, conductors, layout of plants, etc.

Central Stations. See CENTRAL STATIONS.

Interconnection. See SUPERPOWER.

Layout. Notes on Electric Plants (Notas sobre instalaciones eléctricas). Ingeniería y Construcción, vol. 2, no. 22, Oct. 1924, pp. 440-447. Discusses lighting and motive power, calculation of conductors and maximum loads, overhead lines, general layout of plants, dynamos and motors, storage batteries, and transformers.

Mines. Small Power Centrals for Mines (Las pequeñas centrales térmicas mineras), M. Grech. Anales de la Asociacion de Ingenieros del Instituto Católico de Artes e Industrias, vol. 3, no. 4, 1924, pp. 342-349, 9 figs. Discusses conditions such electric power plants must satisfy and describes layout and working of Aldea-Moret (Cáceres) plant for supplying power to tricalcic phosphate mine of Unión Española de Explosivos.

Protection. Protection of Electric Plants against Wrong Operations (Protection des installations électriques contre les fausses manoeuvres), A. Parisis. Revue de l'Industrie Minérale, no. 96, Dec. 15, 1924, pp. 557-567, 12 figs. Describes individual and central locking devices which are applied to make wrong operations impossible; examples of application at high-tension plant of Compagnie Houillère de Bessèges.

Steam-Electric. See STEAM-ELECTRIC PLANTS.

Substations. See SUBSTATIONS.

Troubles. The Secret Maladies of Electric Installations (Les maladies secrètes des installations électriques), G. Capart. Revue Universelle des Mines, vol. 3, no. 4, Series 7, Aug. 15, 1924, pp. 182-192, 6 figs. Discusses high-power motors, strains to which they are subjected and fatigue affecting their life, and advises adoption of higher safety factors and of elastic joint between system and motor or low-capacity condenser.

Windmill-Driven. See WINDMILLS.

ELECTRIC POWER

Calculation. Calculating Electric Energy, Taking into Account the Reactive Current (Die Verrechnung elektrischer Energie unter Berücksichtigung der Blindströme), W. v. Krukowski. Siemens-Zeit., vol. 4, nos. 6 and 7, June and July 1924, pp. 160-164 and 217-222, 7 figs. Summarizes present position as to reactive current and gives suggestions for choice of suitable methods of calculation, cost of electric energy, apparatus for calculation, etc.

Development. New Fields of Research for Power Development, E. W. Rice, Jr. Gen. Elec. Rev., vol. 27, no. 9, Sept. 1924, pp. 572-579. Survey of what past and present research has accomplished and what trends of investigation appear to be most worthwhile in future. Abstract of paper read at Lond. Power Conference.

Power Development in 1923, H. P. Liversidge. Elec. Wld., vol. 83, no. 1, Jan. 5, 1924, pp. 11-15, 8 figs. Advances made in generation, transmission and distribution; importance of cable development; higher distribution voltages used; future needs and trends.

France. Importation into France of Foreign Power, and the Water Power Situation in Switzerland (Importation en France d'énergie étrangère et situation de la houille blanche en Suisse), E. Garnier. Revue Générale de l'Electricité, vol. 16, no. 1, July 5, 1924, pp. 26-32, 1 fig. Discusses increasing power production in Switzerland and proposes import duty on power going into France.

Future Growth. Looking Ahead Ten Years, Rob. M. Davis. Elec. Wld., vol. 83, no. 1, Jan. 5, 1924, pp. 17-24, 4 figs. Survey indicates startling growth in next years; energy generated will triple; estimated present length and future growth of central-station transmission systems.

Generation from Coal Fields. Advantages of Generating and Distributing Electrical Energy Direct from Coal-Fields, J. B. Hamilton. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 667-674. Shows advantages of central power plant.

Government Ownership of Plants. Comments on the Proposed California Water and Power Act, A. E. Boynton. Jl. Electricity, vol. 53, no. 7, Oct. 1, 1924, pp. 238-241. Analyzes claims of proponents of government ownership and operation of power plants that power rates are lower under state and municipal ownership, and tells story of such projects as are still operating under this plan.

Great Lakes District's Consumption in 1950. Middle West Power in 1950. Elec. Wld., vol. 84, no. 2, July 12, 1924, pp. 64-65, 3 figs. Survey for part of Great Lakes district which has just been completed shows that per capita consumption will amount to 1760 kw-hr. per annum in 1950. Main reliance will be steam plants connected by transmission systems.

Hotel Supply. Use of Purchased Power in Hotels, W. H. Whitton. Elec. Wld., vol. 84, no. 6, Aug. 9, 1924, pp. 267-270, 3 figs. To eliminate all possible wastage central-station engineers should see that proper electrical and steam equipment is installed and later check up on

efficiency of operation; correction of wasteful practices.

Mining Industry, Witwatersrand, S. Africa. Power Supply to the Witwatersrand, T. G. Otley. S. African Instn. Engrs.—Jl., vol. 23, no. 1, Aug. 1924, pp. 210-226, 7 figs. Outline of general layout and design of Witbank generating station; present and prospective power consumption of mining industry.

Production. Electricity: Its Generation, Distribution and Utilisation at Refuse Disposal Works, G. W. Sainsbury. Surveyor & Mun. & County Engr., vol. 65, no. 1693, June 27, 1924, pp. 615-616. Discusses steam raising, generating plant and cost of generation, distributing and various uses.

Service. Contracting for Electric Power Service, S. Withington. Ry. Elec. Engr., vol. 15, no. 8, Aug. 1924, pp. 265-267, 1 fig. Suggested form of contract which provides for power at cost with increasingly better service.

Superpower. See SUPERPOWER.

Transmission. Power Transmission, F. C. Hanker. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 33-34. Brief review of development, pointing out power limitation of long-distance, high-capacity systems.

ELECTRIC RAILWAYS

[See also STREET RAILWAYS.]

Articulated Trains and Self-Propelled Cars. Articulated Trains and Self-Propelled Cars. Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 641-643, 1 fig. Review of report by Committee on Heavy Electric Traction of Am. Elec. Ry Assn., including study of light-weight equipment.

Australia. The Romance of Electric Railways in Australia, Stephen Q. Hayes. Elec. Traction, vol. 20, no. 6, June 1924, pp. 258-260, 1 fig. Power and railway developments on Australian mainland and adjacent islands.

Berlin, Germany. Electric Track Equipment of the Berlin North Suburban Lines (Elektrische Streckenausrüstung für die Berliner nördlichen Vorortbahnen), J. Rink. Siemens Zeit., vol. 4, no. 11-12, Nov.-Dec. 1924, pp. 437-441, 9 figs. Details regarding Stettiner Bahnhof-Bernau line, operated on 800 volts, d.c.; return rail arrangements, zinc covering of rail joints, welding-on of copper rail bonds, etc.

The Berlin North-South Line (Die Berliner Nordsüdbahn), M. Zangemeister. Verkehrstechnik, vol. 37, no. 25, June 20, 1924, pp. 251-260, 19 figs. Details of layout, connections with other lines, stations, rolling stock, machine shops, electric equipment and transformers.

Car Maintenance. Equipment Maintenance, F. M. Brinckerhoff. Elec. Ry. Jl., vol. 64, no. 13, Sept. 27, 1924, pp. 509-514, 8 figs. Discusses important considerations for expediting inspection and overhaul work; deals with such practical features of shop design as proper areas of floor space, use of lye tanks, provision for paint spraying and spray washing, adequate materials handling, and dipping and baking equipment.

Cars. Committee on Electric Rolling Stock, L. K. Sillcox. Ry. Age, (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1560-1568, 3 figs. Proposed outline for future work; recommended instructions for maintenance of electrical equipment of rolling stock; operating problems encountered in handling of long freight trains under electric operation on heavy grades; discussion. Report presented before Am. Ry. Assn.

New Direct-Current Motor Coaches, F. Eckinger. Brown Boveri Rev., vol. 11, nos. 11 and 12, Nov. and Dec. 1924, pp. 243-249 and 268-273, 15 figs. Describes types used on Swiss light and local railways.

See also CARS, Interurban.

Cars, Berlin North-South Line. New Cars for the North-South Line in Berlin (Neue Wagen der Berliner Nordsüdbahn), M. Kemmann. Verkehrstechnik, no. 13, Mar. 28, 1924, pp. 115-118, 5 figs. Discusses design of cars to facilitate traffic movement, self-ventilating motors, multiple-unit trains.

Cars, Mersey Ry. New Equipments on the Mersey Railway, C. Corbridge. Elec. Ry. & Tramway Jl., vol. 50, no. 1228, Mar. 14, 1924, pp. 122-127, 6 figs. Principal particulars of an electric line in England. Data on rolling stock and equipment, and description of new motor cars.

Cars, Safety. New Safety Cars for Ontario Hydro Electric Railways. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 184-185, 2 figs. Details of 400-class cars, which will be equipped for multiple-unit operation.

Chemistry in Service of. Chemistry in the Service of the Electric Railway, F. A. Bent. Elec. Traction, vol. 20, no. 7, July 1924, pp. 311-314, 2 figs. Describes chemical laboratory of Pacific Elec. Ry. of Cal.; chemical specifications; checking manufacturers; lubrication tests; paint tests; idiosyncrasies of painters; plating, etc.

Contact System. Contact System for Virginian Electrification, C. L. Hancock. Ry. Elec. Engr., vol. 15, no. 12, Dec. 1924, pp. 419-420, 3 figs. Entire construction including contact wire, messenger and fittings to be nonferrous material.

Contact Wires. Basis for Determination of the Standard Contact Wire Section for Electric Train Operation of the German State Railways (Grundlagen und Berechnungen zur Einheitsfahrleitung für die elektrischen Zugförderungsanlagen der Deutschen Reichsbahn), Naderer. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 197-205, 19 figs. partly on supp. plates. Reasons for selection of a certain section of contact wire for electric train operation. Calculates influences of temperature variations and wind action, latter being most important.

Coördination with Motor-Bus Transportation. Coördination of Other Forms of Transportation with the Electric Railway, P. Shoup. Elec. Ry. Jl., vol. 64, no. 15, Oct. 11, 1924, pp. 625-628. Points out that eventually buses will have to carry same obligations as traction companies; duplication of service impairs efficiency and results in higher fares. (Abstract.)

Fault Localizing. New System for the Automatic Isolation of Faults on Traction Lines (Nouveau système pour l'isolement automatique des défauts sur les lignes de traction), P. Quoirez. Technique Moderne, vol. 16, no. 22, Nov. 15, 1924, pp. 786-789, 7 figs. Particulars of Sprecher & Schuh system used on Sihlbrugg-Zurich line for isolating faulty sections, in which any short-circuited section is at once taken out of circuit.

Germany. Electrotechnics at the 1924 Technical Railway Exposition (Die Elektrotechnik auf der eisenbahntechnischen Ausstellung 1924), Wechmann. Elektro-Journal, vol. 4, no. 9, Sept. 1924, pp. 241-256, 31 figs. Design and construction of electric locomotives for passenger and freight trains, at Seddin stations, for V.D.I. Railway session, also motor cars, shunting engines, crane cars, etc.

Handling Long Freight Trains. Operating Problems Under Electric Motive Power. Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1192-1197, 3 figs. Methods in handling of long freight trains under electric operation on heavy grades. Report of sub-committee appended to report of committee on electric rolling stock, presented before Am. Ry. Assn.

Hendon-Edgware Extension, Eng. Hendon-Edgware Extension, London Electric Railway. Ry.

Gaz., vol. 41, no. 8, Aug. 22, 1924, pp. 244-249 and 255-256, 13 figs. Discusses Burroughs tunnels, bridges, etc., permanent way and signaling, stations, platforms and booking halls, details of equipment, method of operation, etc. Completes new "underground" lines serving north of London and provides growing residential area with convenient transport facilities.

The Hendon-Edgware Extension of the London Electric Railways. Engineer, vol. 138, no. 3582, Aug. 22, 1924, pp. 216-218, 8 figs. Notes on extension being made, particularly new automatic substation put in operation at Burnt Oak for supplying current to line.

Inspection Shops. Interborough Inspection Shop Methods. Elec. Ry. Jl., vol. 64, no. 7, Aug. 16, 1924, pp. 238-242, 5 figs. Inspection of elevated and subway cars on Interborough Rapid Transit Ry. is on basis of 1000 mi. for motor cars and 1200 mi. for trail cars; work is thoroughly planned; bonus is paid to finders of trouble of vital importance.

Japan. 1500-Volt Direct-Current Electric Railway Installation of the Kobe-Himeji Railway Co., Kobe, Japan, M. Takagi. Gen. Elec. Rev., vol. 27, no. 8, Aug. 1924, pp. 536-538, 4 figs. Details of rolling stock, multiple-unit passenger and freight cars, substation, etc.

Motors. See ELECTRIC MOTORS, Railway; ELECTRIC MOTORS, A.C., Railway; ELECTRIC MOTORS, D.C., Railway.

Operation. Cia Paulista de Estradas de Ferro, G. Bellows. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 312-317, 6 figs. Comparison of operating costs on Paulista Railway, first steam railway in Brazil to adopt electric traction, showing superiority of electric over steam operation.

Development of Electric Railway Operation in Central Germany (Die Entwicklung des elektrischen Vollbahnbetriebs in Mitteldeutschland), Heinemann. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 188-193, 4 figs. Indicates electrified lines, and describes power plants, substations, power transmission lines, locomotives, repair shops, and plans for future development.

Present Status of Electric Railway Operation (Gegenwärtiger Stand der elektrischen Bahnbetriebe), W. Usbeck. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 943-949, 20 fig. Reviews present electric railways in Germany, power houses, characteristics of modern distributing plants and their advantages.

Overhead Construction, Germany. Overhead Construction for German Railway. Elec. Traction, vol. 20, no. 9, Sept. 1924, pp. 415-416, 1 fig. Details of unusual refinement in overhead construction on Mittenwaldbahn; overhead is sectionalized or separated into sections which can be disconnected in case of disturbance; for return circuit running rails of track are used; special lighting protection.

Overhead Distribution and Contact Systems. Overhead Distribution and Contact Systems, R. E. Wade. Ry. Elec. Engr., vol. 15, no. 10, Oct. 1924, pp. 358-365, 18 figs. Factors in heavy electric-traction installations which make for economy and efficiency.

Overhead Lines Insulation. New Proposals for Insulation of Overhead Lines of Standard Gage Lines (Neuere Vorschläge für die Isolierung von Vollbahn-Oberleitungen), E. Altmann. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, pp. 1022-1024, 16 figs. Discusses insulators for 15-kv. single-phase a.c. adopted for German Rys. and new forms of suspended insulators of a disruptive strength of up to 9000 kg., so-called "motor" insulators, and tests carried out with them by Brown-Boveri.

Paris Congress. Electric Traction at the 19th International Congress (La traction électrique au XIX^{e} Congrès international de Tramways, de Chemins de fer d'intérêt local et de Transports publics automobiles), L. A. Sekutowicz. Revue Générale de l'Electricité, vol. 16, no. 14, Oct. 4, 1924, pp. 545-557, 15 figs. A summary report discussing improvements in construction of motors and electric equipment, light car construction, etc.

Public Relations. How to Secure Better Public Relations, E. C. Hathaway. Elec. Ry. Jl., vol. 63, no. 4, Jan. 26, 1924, pp. 139-140. Bad treatment of utility corporations results from personal grievances of customers; public relations committee should make company better understood; its manager should take active part in civic affairs; correct attitude of employees important; securities should have wide distribution locally.

Rehabilitation. How the Indianapolis & Cincinnati Line was Rehabilitated. Elec. Ry. Jl., vol. 64, nos. 4, 5, and 6, July 26, Aug. 2, and 9, 1924, pp. 113-117, 163-166, and 203-206, 17 figs. Describes methods used for power supply with purchased energy; original high-tension lines were used with certain modifications; it is estimated savings from installation will pay its cost in ten years.

Return-Current Recovery. Recovering Current in Electric Railways With Intense Traffic and Frequent Stops (Application de la récupération aux chemins de fer électriques à trafic intense et arrêts fréquents), Bethenod. Société Française des Electriciens—Bul., vol. 4, no. 37, July 1924, pp. 643-652, 2 figs. Tests carried out show a saving of 20 per cent on expense of energy; drawbacks of step-up and step-down transformers and remedy; Ward-Leonard transformer; etc.

Safety Devices. Automatic Safety Devices for A.C. Trains with Special Reference to the Hamburg Elevated (Selbsttätige Zugsicherungsanlagen mit Wechselstrom unter besonderer Berücksichtigung der Analagen der Hamburger Hochbahn), C. Wolff. Zeit. des Vereines deutscher Ingenieur, vol. 68, no. 37, Sept. 13, 1924, pp. 970-975, 11 figs. Application of Thullen (American) safety system in which a train automatically indicates a section is clear as soon as it has left it.

Sleeping Cars. Sleep Via Traction. Elec. Traction, vol. 20, no. 9, Sept. 1924, pp. 413-414, 1 fig. Describes De Luxe sleeping cars for service between Indianapolis and Louisville.

Spain. Progress of Electric Traction in Spain, F. A. Shepley. Elec. Traction, vol. 20, no. 1; Jan. 1924, pp. 16-17, 4 figs. Also notes on some opportunities for American manufacturers.

Storage-Battery Traction. Storage-Battery Railway Traction (Traction électrique par accumulateurs sur les voies ferrées d'intérêt général), A. Ferrand. Revue Générale des Chemins de Fer, vol. 43, no. 5, Nov. 1924, pp. 343-367, 7 figs. Development of storage-battery traction; application in Germany, Austria, Alsace-Lorraine, United States, Switzerland and Italy, especially for motor cars; alkaline and lead batteries; concludes that for passenger and freight traffic battery traction is limited to light trains and small gradients.

Substations. See SUBSTATIONS.

Switzerland-Italy. Domodossola to Locarno, via the Centovalli. Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, p. 415, 2 figs. New electric mountain railway of narrow gage, 51 km. long.

Track. See ELECTRIC RAILWAYS, Track.

Traction Exhibit, Erie, Pa. Electric Traction Exhibit Held at Erie, Pa. Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1267-1269, 5 figs. Demonstration includes 3000-volt d.c. multiple-unit train for suburban service; current-collection tests; otheograph for recording action on rails of each

separate wheel of locomotive or motor car; locomotive tests.

Trolley-Wire Manufacture. See WIRE, Trolley, Manufacture.

Welded Rail Joints. See RAILS, Joints.

ELECTRIC RAILWAYS, TRACK

Construction and Maintenance. Track Construction and Maintenance, P. Goetz. Elec. Ry & Tramway Jl., vol. 51, no. 1259, Oct. 10, 1924, pp. 211-212. Report based on replies to questionnaire by 91 firms, of which 42 are German; contains information of width of gage used; superstructure material; grooved rails; built-up sections in curves; joint construction; standardization of points and crossings; curves. (Abstract.) Report to Int. Strassenbahn u. Kleinbahn Congress.

Joints. Experience with Bolted Joints in San Francisco. Elec. Ry. Jl., vol. 64, no. 25, Dec. 20, 1924, pp. 1028-1029, 10 figs. Among 16,000 joints of this type installed by Market St. Ry. during past 13 years only failures have been a few broken rail ends; redwood ties on rock ballast are used with concrete stringers under rails.

ELECTRIC RESISTANCE

Alloys. See ALLOYS, Electrical Resistance.

Contact. Contact Resistance (Der elektrische Uebergangswiderstand von Kontakten), W. Schälchlin. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 3, Mar. 1924, pp. 106-110, 20 figs. Derives relation between contact resistance and contact pressure for various metals, and gives results in ohms per lb.; investigates permanent or bolted contacts and movable or switch contacts; data for latter are of particular interest because they give valuable hints for proper design of switches; points out that copper upon copper gives best performance.

Low, Measurement of. Measurement of Low Resistance by Means of the Wheatstone Bridge, F. Wenner and A. Smith. U. S. Bur. Standards —Scientific Papers, no. 481, Jan. 11, 1924, pp. 297-305, 1 fig. Shows that measurements of conductors having a resistance as low as 0.01 ohm or even 0.001 ohm may be made to a fairly high accuracy by means of Wheatstone bridge with usual accessory apparatus.

Metals. Study of the Resistance of Metallurgical Products (Recherches sur la résistivité des produits métallurgiques), L. Guillet. Société Française des Electriciens—Bul., vol. 3, no. 30, Dec. 1923, pp. 641-662. Tests to determine conductance of commercial aluminum and influence of impurities and treatments; deoxidation of copper and casting of copper products.

Quarzilite Materials. "Quarzilite" Resistances (Eigenschaften und Anwendung des Quarzilit-Widerstandsmaterials), Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 10, Oct. 1924, pp. 510-517, 8 figs. By combining quartz and carbon according to new process a resistance material can be obtained which lends itself readily to being shaped while in its plastic state into almost any desired form; material is intended primarily as protective resistance for current transformers, relays, radio receivers, telegraph and telephone apparatus, etc.; resistance is in inverse proportion to voltage; material can be stressed as high as 60 watts per cu. cm. for 1 sec.

Wires Carrying High-Frequency A.C. Resistances of Wires for High-Frequency Alternating Currents (Ueber eine neue Methode zur Messung von Drahtwiderständen bei sehr schnellen Schwingungen), G. Wuckel. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 427-456, 15 figs. Measurement of a.c. resistances of wires for oscillations of wavelength varying from 4 to 5 m.; describes device by which falling off in energy along wires is measured, and resistance is calculated; results are given for wires of different metals.

ELECTRIC SPARKS

Formation. Formation of Electric Sparks in Gas Works Operation (Elektrische Funkenbildung in Gaswerksbetrieben), L. Rodde. Gas u. Wasserfach, vol. 67, no. 45, Nov. 8, 1924, pp. 679-680. Discusses formation of sparks due to static electricity, frictional or atmospheric, d.c. and a.c. switch sparks, and gap sparks, and gives various instances of spark formation due to friction in gases.

ELECTRIC SWITCHES

[See also CIRCUIT BREAKERS.]

Disconnecting. Disconnecting Switches for High Currents and Voltages (Trennschalter für hohe Stromstärken und Spannungen bis 35 KV), W. Nagel. Siemens-Zeit., vol. 4, no. 2, Feb. 1924, pp. 42-46, 7 figs. Development of design of modern types for use in large generating plants where currents of several thousand amperes combined with voltages up to 35 kv. have to be handled with safety; description of different types; tendency of disconnecting switches to open under heavy short circuit can be overcome by avoiding asymmetric field formation; general development and improvements of these switches is clearly demonstrated in illustrations.

Latches and Operating Sticks for Disconnecting Switches, H. J. Crabbs. Elec. Jl., vol. 21, no. 10, Oct. 1924, pp. 478-480, 9 figs. Gives characteristics of single-pole indoor switches, outdoor switches and operating sticks.

High-Voltage. High Voltage Switches by Voigt & Haeffner, A.-G. (Die Hochleistungsschalter der Firma Voigt & Haeffner A.-G.), M. Vogelsang. Elektrotechnische Zeit., vol. 45, no. 30, July 24, 1924, pp. 799-802, 8 figs. Discusses principles of design and describes constructional improvements, especially mechanism for rapid switching, and their action in overload or overvoltage.

Meter-Service. Facts Versus Fancies in the Meter-Service Switch Question, Jos. Sachs. Elec. World, vol. 84, no. 20, Nov. 15, 1924, pp. 1049-1054, 8 figs. Fundamental requisites of meter-service switch; safety comparisons; service essentials; economic considerations.

Oil. Single-Pole Oil Switches for a Tension of 4000 Volts and a Current of 1200 Amperes, Type FF. SS. (Interruttori unipolari automatici in olio per una tensione di 4000 Volt e una corrente di 1200 Amperes tipo FF. SS.), De Regibus. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 6, Dec. 15, 1923, pp. 221-228, 12 figs. partly on supp. plates. Description with photographic views and detail drawings of apparatus and connections.

Oils for. See TRANSFORMERS, Oils.

Selection and Maintenance. See ELECTRIC FUSES.

Truck-Type Equipments. Truck-Type Switching Equipments, M. Cornelius. Elec. Jl., vol. 21, no. 5, May 1924, pp. 225-228, 9 figs. Design and advantages.

ELECTRIC TRANSMISSION LINES

Alternating-Current. Current and Voltage Conditions in Intermeshed Rotary-Current Systems in Permanent Short-Circuit (Strom- und Spannungsverhältnisse in vermaschten Drehstromnetzen beim Dauerkurzschluss), B. Koetzold. Elektrotechnische Zeit., vol. 45, no. 28, July 10, 1924, pp. 740-742, 19 figs. By way of example explains calculation of current and voltage at individual points of such system, which hitherto could only be done experimentally.

Influence of Iron Protection on the Loss in Voltage and on the Effective Resistance of Alter-

nating-Current Lines (Järnarmeringens inverkan på spänningsfall och effektivt motstånd hos växelströmsledningar), H. Svensson. Teknisk Tidskrift, vol. 54, no. 27, July 5, 1924, p. 124 (Elektrotechnik), 2 figs. Theoretical analysis is corroborated by experiments, permitting determination of coefficients used in formulas. Importance of laying cables close together to decrease self-induction is pointed out.

Cables. See CABLES, ELECTRIC.

Calculation. A Simple Method for the Calculation of Long High-Tension Lines (Eine einfache Methode zur Berechnung langer Hochspannungsleitungen), Wm. Rung. Elektrotechnische Zeit., vol. 45, no. 43, Oct. 23, 1924, pp. 1147-1148. Method of calculating no-load tension and short-circuit impedance.

A Vector Treatment of Long Transmission Lines, S. Holmes. Instn. Elec. Engrs.—Jl., vol. 62, no. 329, May 1924, pp. 471-476, 2 figs. Equations of transmission line; calculation for 250-mi., 110,000-volt transmission line; calculation for constant-voltage transmission, and of circle diagram. Bibliography.

Calculation of Electric Network with Minimum Material as a Network (Zur Frage über die Berechnung elektrischer Netze unter der Bedingung eines Minimums von Material), W. Chrustschoff. Archiv für Elektrotechnik, vol. 13, no. 2, May 31, 1924, pp. 109-123, 11 figs. Discusses determination of cross-section in closed network, including use of minimum of material, especially definite voltage drop, maximum uniformity of cross-sections, and little heating of line.

Chart for the Calculation of Characteristic Constants of Overhead High-Tension Transmission Lines (Abaque pour le calcul des constantes caractéristiques des lignes de transmission aérienne à haute tension), A. Blondel. Académie des Science —Comptes Rendus, vol. 178, no. 15, Apr. 7, 1924, pp. 1239-1244, 1 fig. Presents chart for direct determination of value of constants of characteristic impedance and propagation.

Graphs for Calculating the Distributing Systems of Electric Energy (Abaques pour le calcul des réseaux de distribution d'énergie électrique), M. Porchet. Revue Générale de l'Électricité, vol. 16, no. 3, July 19, 1924, pp. 105-115, 7 figs. Simplifies present methods of calculating conductors by construction of curves, and explains their application.

The Hyperbolic Method of Transmission Line Solution, H. Waddicor. World Power, vol. 2, nos. 8 and 9, Aug. and Sept. 1924, pp. 97-102 and 173-176, 7 figs. Aug.: Deals with mathematical solution for terminal conditions and includes fundamental line equations, giving numerical examples of hyperbolic method of solution; graphical solution for various terminal conditions; comparison of localized admittance methods. Sept.: Electrical conditions at intermediate points.

Conductors. See ELECTRIC CONDUCTORS.

Construction. Line Construction in Rough Country, J. D. Roberts. Elec. Light & Power, vol. 2, no. 7, July 1924, pp. 15-16, 41-45 and 69, 31 figs. Describes type of towers, tower foundations, erection of towers, stringing of conductors, and right of way.

Machine Building of Transmission Line, H. Cole. Elec. Wld., vol. 84, no. 13, Sept. 27, 1924, pp. 670-673, 7 figs. Description of methods pursued by Detroit Edison Co. in building 150 miles of 120-kv. double-circuit steel-tower transmission lines.

Report of A.R.E.A. Committee on Electricity. Ry. Elec. Engr., vol. 15, no. 4, Apr. 1924, pp. 123-125. Report presented at 25th annual convention giving specifications for electric power transmission and distribution pole lines.

Construction Cost Keeping. Line Construction Cost Keeping, F. H. Miller and F. W. Fackle. Elec. World, vol. 84, no. 26, Dec. 27, 1924, pp. 1349-1351, 4 figs. Simplified records determine continuous status of work under progress; foremen's reports constitute bases of accounting system followed by auditor serving with the force in the field.

Costs, Construction and Equipment. Actual Costs of Transmission Line and Substation. Elec. World, vol. 83, no. 26, June 28, 1924, pp. 1324-1327, 8 figs. Comprehensive data on 132-kv. system in Middle West; unit cost of line $8830 per mi.; details of towers and settings.

Corona. See CORONA.

Design. Electric Pole Lines. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 131-135, 10 figs. Design and construction of overhead transmission lines, with special reference to smaller industrial lines.

Overhead Electric Power Transmission, W. T. Taylor. Elec. Rev., vol. 94, nos. 2422 and 2423, Apr. 25 and May 2, 1924, pp. 646-647 and 721-722. Elements of design and economics.

Proper Transmission Lines: Aspects of Their Design, Wm. T. Taylor. Elec. Rev., vol. 94, nos. 2425, 2428, and 2429, May 16, June 6, and June 13, 1924, pp. 780-782, 907-909, and 979-981, 3 figs., and vol. 95, nos. 2444, 2445, 2446, 2449, 2450, and 2456, Sept. 26, Oct. 3, 10 and 31, Nov. 7, and Dec. 19, 1924, pp. 462-463, 515-517, 551-552, 647-648, 711-713, and 949-952, 6 figs. Economic requirements of design; physical and construction data; loading data; electrical and mechanical features; calculations for length and size of supports; first cost of construction.

Direct-Current. High Voltage Electricity Transmission, J. S. and W. E. Highfield. Engineer, vol. 136, no. 3576, July 11, 1924, p. 54, 4 figs. Advantages of direct-current transmission from point of view of lines and cables. Abstract of paper read at World Power Conference.

Earth-Current Control. Experimental Control of Traction Earth Currents (Il controllo sperimentale delle correnti vaganti), G. Revessi. Elettroteonica, vol. 11, no. 12, Apr. 25, 1924, pp. 271-273, 5 figs. Present methods of control by measurement of voltage drop between different points of system are claimed to be inadequate; author's proposed method is to take two connections not far apart on trolley line, two corresponding connections on track below, and to connect these four points together as double Thomson bridge.

Efficiency Diagrams. Current and Output Diagram as Basis for Construction and Operation of Large Transcontinental Power Plants (Strom- und Leistungsbild als Grundlage für den Bau und Betrieb grosser Fernkraftanlagen), C. Lommel. Elektrische Betrieb, vol. 22, no. 15, Aug. 10, 1924, pp. 142-147, 5 figs. Discusses control from central point of output of number of connected power stations with which it is connected by telephone.

Electrostatic Disturbances. On the Electrostatic Disturbance of Aerial Line, F. Shin. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 424, Nov. 1923, pp. 914-918, 3 figs. Results of investigations, in both theory and experiment, to ascertain whether or not electrostatic disturbances of aerial lines can be anticipated from change of capacities between lines. (In Japanese.)

German State Railway. Overhead Lines for the Electric Traction of the German State Railway (Die Fahrleitung für den elektrischen Zugbetrieb der deutschen Reichsbahn), Schieb. Elektro-Jl., vol. 4, no. 1, Jan. 1924, pp. 19-26, 15 figs. Dis-

cusses former types and development of new unit overhead line

Ground Protection. Ground Protection of High-Voltage Networks (Schutz von Hochspannungsnetzen gegen die Folgen von Erdschlüssen), J. Jonas. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, nos. 1 and 2, Jan. and Feb. 1924, pp 29-34 and 41-58, 11 figs. Discusses and compares features of three methods of protection of high-voltage networks against ground troubles, viz., direct grounding of Y-point, inductive grounding of Y-point, and phase grounding over artificial neutral; concludes that direct grounding is of advantage only for lines of more than 80 kv.; inductive grounding may be recommended regardless of voltage; phase grounding is best suitable for systems where number of lines to be protected radiate from station; comparative costs of three systems.

Grounded or Insulated Neutral. Insulation or Ground of the Neutral of a Three-Phase System (Isolement ou mise à la terre du neutre d'un système triphasé), A. Maudit. Revue Générale de l'Electricité, vol. 15, no. 10, Mar. 8, 1924, pp. 429-436, 8 figs. Study of two cases in which neutral is grounded directly in earth entirely insulated from sun, or connected with earth by intermediate of a resistance or inductance.

Grounding of Neutral. Indirect Grounding of Neutral (Mise indirecte du neutre à la terre), A. Maudit. Revue Générale de l'Electricité, vol. 16, no. 18, Nov. 1, 1924, pp. 693-701, 6 figs. Discusses operations of three-phase installations with neutral grounded indirectly through a resistance or an inductance; Petersen coil; etc.

Harmonics. See HARMONICS, Electric Transmission Lines.

Height Above Ground. Overhead Lines With Supports of Different Heights (Freileitungen an verschieden hohen Stützpunkten), A. Sengel. Elektrotechnische Zeit., vol. 45, no. 10, Mar. 6, 1924, pp. 185-186, 4 figs. Works out with help of diagrams relations which hold when poles or towers supporting line differ in height, and when ground between them is on a slope; effect of change of temperature considered and least height above ground worked out.

High-Tension. Calculation of Spans over Inclined Ground and Guyed Spans (Beitrag zur Berechnung von schiefen Einzelspannfeldern und von Spannfeldern mit Abspannketten), L. Truxa. Elektrotechnik u. Maschinenbau, vol. 42, no. 33, Aug. 17, 1924, pp. 501-507, 6 figs. Discusses calculation of crossing fields of high-tension lines crossing streets, railways and telephone lines.

High-tension Transmission Lines, E. V. Pannell. Engineer, vol. 137, nos. 3559, 3560, 3561, 3562, 3563, and 3564, Mar. 14, 21, 28, Apr. 4, 11, and 18, 1924, pp. 272-273, 300-302, 328-331, 352-354, 378-379, and 418-419, 26 figs. Study of engineering elements of modern transmission lines, grouped under following heads: conductors, insulators, supports; study of general subject of mechanical design; survey of construction economy.

Manufacture of Apparatus for Very High Voltages (La fabrication de l'appareillage à très haute tension), C. Chareyron. Houille Blanche, vol. 23, no. 89-90, May-June 1924, pp. 76-82, 11 figs. Discusses problems of high voltage engineer and describes apparatus built by Ateliers de Constructions Electriques de Delle, including insulators, oil testing and treating apparatus, oil circuit breakers, automatic releases, etc.

Modern High-Tension Power Transmission Lines, W. Dreyer. Eng. News-Rec., vol. 92, no. 1, Jan. 3, 1924, pp. 8-10, 3 figs. Problems in design of towers; economy of transmission at high voltage offsets greater construction costs; loads, spacing of towers, and costs of transmission lines.

The H. T. Transmission Lines and Track Equipment of M. G. E. So. African Power Engr., vol. 9, no. 75, July 1924, pp. 34-35, 3 figs. Discusses 88,000 volt transmission; imported galvanized steel structures; So. African steel for track work; big cable contracts.

See also Calculation; Direct-Current; 110,000-Volt; 135,000-Volt; 220,000-Volt.

Impact Waves. Measuring the Gradient of Impact Waves (Messung der Steilheit von Wanderwellen), E. Marx. Elektrotechnische Zeit., vol. 45, no. 41, Oct. 9, 1924, pp. 1083-1084, 2 figs. Describes a method which allows of approximate calculation of excess tension due to sparking in connection with insulators for high-tension transmission

Impedance. See Calculation.

Inductive Interference. Effect of Power Lines upon Telephone Lines [Beeinflussung von Fernmeldeleitungen (FM) durch Hochspannungsanlagen (H)], Jäger. Elektrotechnische Zeit., vol. 45, no. 18, May 1, 1924, pp. 417-428, 32 figs. Author investigates various kinds of coupling, such as capacity, induction and galvanic coupling for single-phase (railway), 3-phase, and rectifier systems; study of interferences between signal and power lines for perfect condition of latter and for ground faults; shows large number of oscillograms, giving examples of disturbances actually observed on telephone and telegraph lines; discusses protective devices for connection to signal lines and those for power lines.

Effect on Low-Tension Lines of High-Tension Lines Running Parallel to Them (Beeinflussung von Schwachstromleitungen durch parallel geführte Starkstromleitungen), A. Zastrow. Siemens-Zeit., vol. 4, nos. 9 and 10, Sept. and Oct. 1924, pp. 296-302 and 344-350, 5 figs. Extent of interference, galvanic, electric, and magnetic; and review of protective measures; advocates moving low-tension lines to a distance, or providing them with lead sheaths like cables.

Electrostatic Influence of Faulty Three-Phase Lines on Low-Tension Lines (Zur elektrostatischen Beeinflussung der Schwachstromleitungen durch gestörte Drehstromleitungen), E. Nather. Elektrotechnik u. Maschinenbau, vol. 42, nos. 24 and 40, June 15 and Oct. 5, 1924, pp. 380-383 and 590-594, 25 figs. June 15: Discusses effect of three-phase line with simple ground on parallel low-tension lines. Oct. 5: Approximate calculation of low-frequency no-load voltage and its ratio to terminal three-phase voltage.

Inductive Co-ordination as a Practical Problem, J. L. Clarke. Eng. Jl., vol. 7, no. 9, Sept. 1924, pp. 591-598, 7 figs. Review of subject of inductive interference. Coördinated transposition schemes; elimination of harmonics; residual voltages; effects produced by extraneous currents in communication circuits.

Inductive Interference with Communication Circuits, A. Russell. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 941-946. Discusses interference between power circuits and telegraph and telephone circuits; distinction is made between radiation and induction; experiment shows that in radio work approximate solutions can be obtained by assuming that earth is non-conductor and its inductivity is unity; thus it is shown that intensity of radiation field in simple cases falls off inversely as distance and inversely as wave length.

The Influence on a Lighting System of an A. C. Railway Line (Beeinflussung eines Lichtnetzes durch Wechselstrombahnbetrieb), Jäger. Elektrotechnische Zeit., vol. 45, no. 15, Apr. 10, 1924, pp. 329-331, 5 figs. Inductive interferences occurred in a d.c. lighting system in neighborhood of railway section electrified with alternating cur-

rent; investigation showed that disturbances occur only with grounded neutral.

Insulators. See INSULATORS, ELECTRIC.

Italy. Electric Lines in Sardinia (Le linee elettriche in Sardegna), L. Passerini. Elettrotecnica, vol. 11, no. 29, Oct. 15, 1924, pp. 718-723, 10 figs. Discusses line poles of wood on reinforced-concrete foundations; insulators; protection against excess voltage; etc.

Lightning. Lightning and Other Transients on Transmission Lines, F. W. Peek, Jr. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 697-709, 13 figs. Coördinates researches and observations on lightning with view to determining various types and order of magnitude of predatory voltages to which transmission lines are subject.

Lightning Arresters. See LIGHTNING ARRESTERS.

Line Losses Reduction. Reducing Line Losses in Long-Distance Transmission Lines (Hvorledes kan overföringstabene ved oplandscentraler formindskes?), W. Rung. Teknisk Tidskrift, vol. 54, no. 18, May 3, 1924, pp. 84-88 (Elektroteknik), 3 figs. Shows that about 75 per cent of losses in power systems in Denmark are due to wattless current. Shows that proper correction of power factor can be obtained by condensers connected to low-tension side of transformers. Computes most advantageous value of correcting current for different conditions.

Load and Sag Calculation. Calculation of Load and Sag of Overhead Lines on Stretching Chain Insulators (Berechnung der Beanspruchung und des Durchhanges von Freileitungen an schweren Abspannisolatorenketten), A. Robitschek. Elektrotechnik u. Maschinenbau, vol. 42, no. 38, Sept. 21, 1924, pp. 565-568, 1 fig. A new and simpler method giving same accurate results as longer methods used hitherto, and examples to show application.

Computing Tension in Transmission Lines, E. S. Thayer. Elec. Wld., vol. 84, no. 2, July 12, 1924, pp. 72-73, 1 fig. Describes method having correct mathematical and physical basis and giving results that are accurate to within one per cent.

Figuring Safe Line Loads, J. M. Walshe. Telephone Engr., vol. 28, no. 10, Oct. 1924, pp. 19-22. Concrete figures for determining safe pole-line loads; computations for seven typical arrangements of lines. Decay and poor alignment effects.

Long. The Limitations of Output of a Power System Involving Long Transmission Lines, E. B. Shand. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 219-229, 12 figs. Discusses conditions of stability of system and points out that degree of voltage regulation as determined by load conditions is important factor in determination of limit of output; proposes type of combined diagram whereby this factor and other characteristics of load may be included; considers numerical example of 300-mi. line and presents various characteristic curves.

Long-Distance. See Superpower System.

Long-Spans. A 900-Meter Span in a 130,000-Volt Transmission Line (Una campata di 900 metri in una linea a 130,000 volt), R. Norsa. Elettrotecnica, vol. 11, no. 7, Mar. 5, 1924, pp. 142-145, 3 figs. Particulars of steel towers 220 ft. long, made with mixed copper and "copper river Po at Piacenza, Italy, a span of 2500 ft.

Long Span on Cheat River, C. F. Sheakley. Elec. World, vol. 83, no. 25, June 21, 1924, pp. 1277-1278, 3 figs. West Virginia-Maryland Power Co. has strung at Gorge a 5-conductor span 4317 ft. long, made with mixed copper and "copper weld" conductors; details of towers and installation.

Maximum Output, Determination. Maximum Output of Transmission Systems, R. D. Evans and R. C. Bergvall. Elec. World, vol. 83, no. 23, June 7, 1924, pp. 1171-1173, 5 figs. Simple graphical method for determining maximum output of any given system; determination of maximum permissible load is difficult problem, but estimates may be made.

Mutual Induction of. Mutual Electromagnetic Induction in Case of Unsymmetrically-Arranged Three-Phase Long-Distance Power Transmissions (Om den gjesidige elektromagnetiske induktion ved usymmetrisk oplagte trefase fjernledninger), O. Strand. Elektroteknisk Tidsskrift, vol. 37, nos. 16 and 17, June 7 and 16, 1924, pp. 123-125 and 131-133. Theoretical deductions and their application to practical example.

100,000-Volt System, Saxony. A 100-Kv. 3-Phase Transmission System in Saxony (The 100-Kv. Netz der sächsischen Landesversorgung), A. Rachel. Elektrotechnische Zeit., vol. 45, nos. 2 and 4, Jan. 10 and 24, 1924, pp. 21-25 and 53-59, 18 figs. System 200 mi. in extent, tying together number of power plants, serves general electrification of Saxony; explains layout of outstanding transforming stations with complete plan drawings; all stations are completely housed in for both high-voltage and low-voltage side; principles governing layout of stations; shows how total cost of a 30,000-kva. substation is segregated; examples of very long spans with 100-kv. lines over rivers and valleys are shown on scale drawings; details of line construction with valuable operating experiences are given.

110-000-Volt. Design for 110-000-Volt Line, H. T. Pierce. Elec. Wld., vol. 84, no. 11, Sept. 13, 1924, pp. 506-510, 12 figs. Describes new transmission line of New England Power Co. which connects distant hydro plants and large industrial centers, particularly adapted to withstand severe periodic sleet storms.

120,000-Volt. 120,000-Volt Transmission in the Louron Valley (Le transport de force à 120,000 volts de la vallée du Louron), R. Sivoine. Electricien, vol. 55, nos. 1342 and 1343, Feb. 15 and Mar. 1, 1924, pp. 73-79 and 97-102, 17 figs. Describes hydroelectric plants of Bordère and Londenvielle, including pressure conduits and turbines; details of electrical equipment.

132,000-Volt. Design, Construction, and Operation Problems of a 132,000-Volt Transmission Line, R. E. Moody. Wis. Engr., vol. 29, no. 1, Oct. 1924, pp. 1-2, 16 and 18, 3 figs. Describes new steel tower transmission line from North Milwaukee to Plymouth, designed and built in 1923 by Milwaukee Elec. Ry. & Light Co.

135,000-Volt. 135,000-Volt Transmission Line Recently Constructed in Italy (Su di una linea a 135,000 volt recentemente costruita in Italia a grande al tezza sul livello del mare), F. Manfredi. Elettrotecnica, vol. 11, no. 3, Jan. 25, 1924, pp. 50-53, 7 figs. Particulars of a three-conductor copper line 90 km. long, from Carone to Cislago, and from 350 to 1685 m. above sea level; discusses variation of corona effect with altitude; critical voltage for conductors suspended 5 m. apart.

Overhead. A New Method for Calculating Overhead Lines (Eine neue Methode zur Berechnung von Freileitungen), E. Regli. Schweiz. Elektrotechnische Verein Bul., vol. 15, no. 6, June 1924, pp. 283-293, 5 figs. Details of new method based on fact that all catenaries are similar and can be used especially for extreme cases where two points of suspension have big difference in level.

Comparative Costs of Tower Line, H. S. Brubaker. Elec. Light & Power, vol. 2, no. 8, Aug. 1924, pp. 19-21, 41-46 and 58, 28 figs. Details of construction by three different methods: piece-by-piece method; towers built prone and later

up-ended into place; replacing concrete anchor by grillage type anchor; and their application in construction of Penn Power Co.

Electric Transmission Lines and Their Steel Masts, G. J. Gumersall. Colliery Engr., vol. 1, no. 3, May 1924, pp. 117-120, 4 figs. Modern practice in overhead-line work and design of steel masts for this purpose.

Overhead Lines on Suspended Insulators (Freileitungen an Hängeisolatoren), G. Markt. Elektrotechnische Zeit., vol. 45, no. 24, June 12, 1924, pp. 620-622, 7 figs. Discusses temperature changes and unequal distribution of load due to spans of unequal lengths.

Overvoltages. See OVERVOLTAGES.

Parellel Lines, Protection. Selective Protective Systems for Three or More Parallel Lines (Selektive Schutzsysteme für drei oder mehr parallele Leitungen), H. Giesbers. Elektrischer Betrieb, vol. 22, no. 7, Apr. 10, 1924, pp. 53-55, 7 figs. Critical investigation of different systems.

Poles. See POLES.

Power Limitations. Experimental Analysis of Stability and Power Limitations, R. D. Evans and R. C. Bergvall. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 329-340, 30 figs. Method of determining power limit of transmission system, taking into account characteristics of synchronous condensers and load in conjunction with those of transmission line: tests on voltage stability, hunting, and effect of short-circuits causing system to pull out of synchronism. (Abridged.)

Power Limitations of Transmission Systems, R. D. Evans and H. K. Sels. Am. Inst. Elec. Engrs. —Jl., vol. 43, no. 1, Jan. 1924, pp. 45-51, 8 figs. Discussion of methods of calculation, maximum power limits, and practical operating limit; analytical development upon which discussion is based.

Problems. Some Theoretical Considerations of Power Transmission, C. L. Fortescue and C. F. Wagner. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 106-113, 8 figs. Following points are developed: Proof of circle diagram maintaining therein idea of angle between generator and receiver voltages; it is shown how characteristics of synchronous condenser limit maximum power that can be transmitted over line; effect of character of load on stability; comparison of 500-mi. line with condenser at midpoint.

Protection. Horn-Shaped Conductors (Betrachtungen über den Hörnerableiter), F. Kesselring. Elektrotechnische Zeit., vol. 45, no. 31, July 31, 1924, pp. 819-824, 12 figs. Discusses protective value of horns, their drawbacks; describes Bendmann device, suitable for extinguishing ground arcs.

Protection Against Overload and Excess Current in High-Tension Installations (Beiträge zur Frage des Schutzes gegen Ueberspannungen und Ueberströme in Hochspannungsanlagen), A. Roth. Elektrotechnik u. Maschinenbau, vol. 42, nos. 31 and 32, Aug. 3 and 10, 1924, pp. 477-480 and 492-498, 17 figs. For protection of maximum voltage systems advocates direct zero point ground, ground cable, bridging of transformers and relays, etc.; protection of low-tension lines and against short-circuit currents.

Protection of Alternating Current Lines Against Over Voltage (Beiträge zur Frage des Schutzes von Wechselstrom-Anlagen gegen Ueberspannungen,) A. Roth. Schweiz. Elektrotechnische Verein Bul., vol. 15, no. 7, July 1924, pp. 348-361, 12 figs. Discusses damages to lines often wrongly attributed to overvoltage; explains causes of overvoltage and gives examples of application of rules established by Swiss Electrotechnic Union.

Rises in Pressure and Protection of Alternating-Current Circuits, G. W. Partridge. Elec. Rev., vol. 94, no. 2430, June 20, 1924, pp. 992-994, 5 figs. Describes system of actual prevention and protection from rises in pressure installed on an a.c. system after careful observations and experiments over a period of some five years.

Selective Protection and the System of Automatic Unloading of Line (Der Selektrivschutz und das System der selbsttätigen Entlastung), M. Schleicher. Elektrotechnik u. Maschinénbau, vol. 42, no. 29, July 20, 1924, pp. 453-458, 9 figs. Discusses principle of automatic unloading (German patent) of line under excessive load and gives examples of its application.

Selective Protection of High-Tension Three-Phase Transmission Lines (Problème de la protection sélective des lignes de transmission triphasées à très haute tension), J. Sarolea. Revue Générale de l'Electricité, vol. 16, no. 20, Nov. 15, 1924, pp. 779-789, 12 figs. Application of selective relays and principles on which relays should be constructed. Examples of application.

The Ium Selector and Its Applications in Electric Plants (Il selettore "ium" e le sue applicazioni negli impianti elettrici), A. C. Piva. Elettrotecnica, vol. 11, no. 7, Mar. 5, 1924, pp. 145-149, 5 figs. Particulars of a newly introduced apparatus for affording protection not obtainable by use of existing relays.

See also LIGHTNING ARRESTERS.

Relay Protection. Relay Protection as Applied to Large Transmission Network, R. Wilkins. Elec. Wld., vol. 84, no. 21, Nov. 22, 1924, pp. 1101-1106, 11 figs. System used by Pac. Gas & Elec. Co. shows 95 per cent correct operations out of more than 1500; scheme is based on separation of smallest practicable section of network.

Relaying. Operating Experiences with the Relaying of the Duquesne Ring, (Pittsburgh), H. P. Sleeper. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1158-1165, 6 figs. Gives partial log of relay operations on ring for first 11 months' service, showing that every case of trouble on lines has been cleared by proper relays.

Resonance in Ungrounded Networks. Resonance Phenomena in Ungrounded Networks (Spannungsresonanzerscheinungen in ungeerdeten Netzen), E. Cramer. Elektrotechnische Zeit., vol. 45, no. 3, Jan. 17, 1924, p. 44. In small factory supply system, operating at 500-volt, 3-phase current with underground cables, excess voltages of 940 volts against ground were observed, which were traced to small 500/110-volt single-phase transformer supplying lamps on traveling crane; resonance conditions were set up between this transformer and net; trouble was remedied by providing artificial neutral point and connecting this point solidly to ground; for all low-voltage systems grounding of artificial neutral point is recommended for safety.

Right-of-Way, Acquiring and Preparing. Acquiring and Preparing Right-of-Way, M. H. Wagner. Elec. World, vol. 84, no. 20, Nov. 15, 1924, pp. 1044-1046, 1 fig. Suggestions which experience has shown are worth heeding in selecting transmission-line route, surveying and marking for line supports, and establishing coöperation between right-of-way man and construction superintendent.

Rural. Cost Data on a 6,600-Volt Rural Line, J. C. Robinson. Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 730-733, 6 figs. Cost data of line running from Lincoln Water & Light Co.'s plant at Lincoln, Ill., to Atlanta, Ill., 12.25 miles. Aluminum conductors with 250-ft. spans used, expense averaging $1215 per mile. Notes on construction of outdoor substation at Atlanta, which was built at a total expenditure of $4,940.48.

Economic Rural Power Transmission by Means of Galvanized Iron or Copper Lines with Ground Return (Distributions rurals économiques d'energie par lignes en fer galvanisé ou en cuivre avec retour par la terre), G. Viel. Industrie Électrique, vol. 33, no. 770, July 25, 1924, pp. 277-283, 6 figs. Discusses rural power production; single phase high tension galvanized iron or copper lines; comparison with three phase copper lines as to cost, precautions necessary for lines with ground return.

Safety-Factor. Uniform Coefficient of Safety for High-Voltage Lines (Contribution à la détermination d'un coefficient de sécurité mécanique à appliquer aux divers éléments constitutifs d'un réseau de distribution d'énergie électrique à haute tension), C. van Gastel. Revue Générale de l'Electricité, vol. 15, no. 3, Jan. 19, 1924, pp. 89-97. Gives and compares experiences and established standards of mechanical loads upon overhead high-voltage lines used in different countries; suggests that international mechanical safety factor be standardized for all overhead lines; rulings of United States and principal countries of Europe are considered and tabulated.

Sag. Measurement of Sag (Misura delle frecce), G. Rebora. Elettrotecnica, vol. 11, no. 3, Jan. 25, 1924, pp. 49-50, 5 figs. Describes simple method of determining sag that a conductor should have when being suspended.

Photometric Method for the Determination of Sag of Overhead Lines (Photometrische Methode zur Bestimmung des Durchhanges von Freileitungen), M. F. Dahl. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 3, Mar. 1924, pp. 116-119, 2 figs. Describes photographic method of recording or examining cable sags, which can be carried out during operation.

Sag of Overhead Lines (Durchhang von Freileitungen an schweren Abspannisolatorenketten), A. Sengel. Elektrotechnische Zeit., vol. 45, no. 17, Apr. 24, 1924, pp. 394-397, 4 figs. Gives method of calculation of stress and sag which is said to be simpler than other heretofore used methods having equal degree of accuracy.

The Calculation of Sag and Tension in High-Tension Overhead Lines (Beitrag zur Zustandsberechnung und Seilmontage in Einzelspannfeldern von Hochspannungsfreileitungen), R. Planner. Elektrotechnik u. Maschinenbau, vol. 42, no. 15, Apr. 13, 1924, pp. 225-230, 3 figs. Describes method which has advantages of rapid and simple determination of coefficients of state which make it possible to carry out very accurate stringing of cable.

See also Load and Sag Calculation.

Sectionalizing High-Voltage. Sectionalizing of High-Voltage Lines, Geo. H. Middlemiss. Elec. World, vol. 84, no. 26, Dec. 27, 1924, pp. 1363-1365, 5 figs. Describes automatic apparatus developed by Ala. Power Co.; switch has several unusual design features.

Self-Induction and Resistance Determination. An Alternating-Current Bridge Method to Determine the Self-Induction and Resistance of Short Lines (Eine Wechselstrombrücke zur Messung der Selbstinduktion und des Wirkwiderstandes an kurzen Leitungsstücken), U. Meyer. Elektrische Nachrichten-Technik, vol. 1, no. 1, July 1924, pp. 29-36, 4 figs. Theoretical analysis of subject followed by an example of its application to a practical case. Communication from Government Telegraph Dept.

Short-Circuit Currents, Calculating. Equivalent Single-Phase Networks, R. A. Shetzline. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1014-1020, 9 figs. For calculating short-circuit currents due to grounds on 3-phase star grounded systems.

Short-Circuits. Short-Circuit Calculating Board, L. G. Smith. Elec. Wld., vol. 84, no. 7, Aug. 16, 1924, pp. 308-311, 3 figs. Baltimore Co. designs table for two interconnected systems of 210,000 kw.; arrangements for metering, method of applying voltages, operation and use of board discussed.

Sinusoidal Currents. The Building-up of Sinusoidal Currents in Long Periodically Loaded Lines, J. R. Carson. Bell System Technical Jl., vol. 3, no. 4, Oct. 1924, pp. 558-566, 2 figs. Discusses general formulas and curves which describe building-up phenomena, as a function of line characteristics and frequency of applied electromotive force, in extremely important case of long periodically loaded lines.

Sleet Formation. Sleet Formation on Trolley and Transmission Lines, G. E. Luke. Elec. Traction, vol. 20, no. 1, Jan. 1924, pp. 18-19, 1 fig. Dangers due to ice or sleet coatings on overhead lines; means for preventing or removing ice; experimental data resulting from tests on trolley and transmission lines.

Stability. Transmission Line Stability, C. L. Fortescue. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 373-376, Analytic deduction of condition for stable operation for transmission lines. Supplement to paper by Fortescue and Wayne, entitled Some Theoretical Considerations of Power Transmission.

Stringing Conductors. Stringing Transmission Cable, O. Davidson. Elec. World, vol. 83, no. 17, Apr. 26, 1924, pp. 819-821, 7 figs. Nature of preliminary study, special equipment and methods employed on Indiana Elec. Corpn.'s 74-mo., 132-kv. line between Terre Haute and Indianapolis.

Superpower Systems. Superpower Transmission, P. H. Thomas. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 3-17, 6 figs. Economies and limitations of transmission system of extraordinary length.

Surveys and Field Engineering. Transmission Line Surveys and Field Engineering, O. Davidson. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, pp. 808-809. Preliminary paper location; instrument surveys, records and mapping; two parallel profiles; office and field location of towers; work of engineers on construction of new 75-mi. high-tension transmission line from Terre Haute to Indianapolis.

System Relay Committee. System Relay Committee, M. T. Crawford. Elec. World, vol. 83, no. 9, Mar. 1, 1924, pp. 420-422, 3 figs. How power system of Puget Sound Power & Light Co. has improved service reliability by forming coordinating committee to study troubles; details of work and organization.

33,000-Volt. 33,000-Volt Supply Scheme for Gorseinon. Engineering, vol. 117, nos. 3035 and 3036, Feb. 29 and Mar. 7, 1924, pp. 260-262 and 295-299, 25 figs., partly on p. 306. Describes scheme put into operation in South Wales as interesting example of bulk supply of electricity by overhead mains at high voltage.

Three-Phase. A Simple Method for Finding the Zero Voltage in Three-Phase Star Connections (Ein einfaches Verfahren zur Auffindung des Spannungsnullpunktes bei Drehstrom-Sternschaltung), W. Lehmann. Elektrotechnische Zeit., vol. 45, no. 41, Oct. 9, 1924, pp. 1086-1087, 6 figs. Details of a construction which gives position of zero voltage with simple means; examples.

Defective Currents and Ground in a Three-Phase Line; Influence of Receiving Transformer (Courants de défaut et courants à la terre dans un réseau triphasé: influence du transformateur récepteur), A. Mauduit. Revue Générale de l'Électricité, vol. 16, nos. 6 and 7, Aug. 9 and 16, 1924, pp. 227-233 and 259-262. Discusses variation in

distribution of currents to ground with nature and mode of connections of transformers, in line with neutral to ground at generating and receiving station.

The Electric Field in the Neighborhood of a Three-Phase Line (Le champ électrique au voisinage d'une ligne triphasée), L.-J. Collet. Annales des Postes Télégraphes et Téléphones, vol. 13, no. 7, July 1924, pp. 743-767. Discusses formulas of Maxwell, calculation of coefficient of potential and of coefficient of capacity.

Unbalanced Three Phase Lines of Four Wires (Déséquilibrage des lignes triphasées à quatre fils), M. Marre. Electricien, vol. 40, no. 1355, Sept. 1, 1924, pp. 385-389, 6 figs. Discusses three phase lines with neutral wire and develops formulas for calculations.

See also Voltage Drop.

Three-Phase Artificial. Design, Construction and Preliminary Test of the Three Phase Artificial Transmission Line, S. Pekku. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 424, Nov. 1923, pp. 893-913, 15 figs., partly on supp. plate. Describes fully line built at Electrochemical Laboratory. Discusses electrostatic and electromagnetic requirements to represent three-phase transmission line; line capable of working at 5200 volts continuously at 50 cycles; describes preliminary test performed on flat inductance coils; actual cost. (In Japanese.)

Towers. Comparative Data on Towers for High Tension Transmission, W. Dreyer. Eng. News-Rec., vol. 92, no. 5, Jan. 31, 1924, pp. 188-189, 3 figs. Single-circuit and double-circuit towers for 220-kv. and 110-kv. lines; towers for special problems.

Erecting Towers Assembled on Ground. Elec. World, vol. 83, no. 8, Feb. 23, 1924, pp. 369-372, 8 figs. Entire steelwork assembled on ground and tower erected by shear leg carried and operated by caterpillar tractor; arrangements for receiving and distributing steel, handling work of assembly and erection.

See also Construction; High-Tension; POLES, CONCRETE.

Transients on. See Lightning.

220,000-Volt. Transmission at 220 Kv. on the Southern California Edison System. Am. Inst. Elec. Engrs.—Jl., vol. 43, nos. 10 and 11, Oct. and Nov. 1924, pp. 901-908 and 1025-1030, 20 figs. Symposium with following contributions: Description of System and Operating Experiences, H. Michener; Automatic Protection—Balanced Relays and Flashover Control, E. R. Stauffacher; Economic Studies of Transmission Line Design with Particular Reference to Mechanical Features, C. B. Carlson; Economic Studies of Transmission Line Design with Particular Reference to Electrical Features, W. D. Shaw; Vibration of Conductors and Overhead Ground Wires, J. M. Gaylord; Location and Right of Way, V. D. Elliott.

Transmission at 220,000 Volts, H. A. Barre. Elec. World, vol. 83, no. 11, Mar. 15, 1924, pp. 515-518, 4 figs. Factors which led Southern Cal. Edison Co. to operate at this tension; line insulation; handling charging current and flashovers; new bus design; switching problem.

Underground. See CABLES, ELECTRIC, Underground.

Vector Diagrams for. Vector Diagrams for Long Lines, E. A. Loew. Elec. World, vol. 83, no. 10, Mar. 8, 1924, pp. 477-480, 3 figs. Graphical solution for transmission problems which is both accurate and easy to comprehend; gives current, voltage, power factor, power regulation, etc., for line of any length with or without phase control.

Voltage Drop. The Voltage Drop in a Three-Phase Transmission Line with Unsymmetrically Arranged Conductors, H. Cotton. World Power, vol. 1, no. 4, Apr. 1924, pp. 211-215, 5 figs. Calculation of drop due to resistance and inductance.

Voltage Regulation. Exact Calculation of the Voltage Regulation of Long-Distance Power Transmission Lines (Exakt beräkning av spänningsregleringen hos långa kraftledningar), E. Velander. Teknisk Tidskrift, vol. 54, no. 40, Oct. 4, 1924, pp. 166-171 (Elektroteknik), 13 figs. Theoretical solutions of problems involved, tables, diagrams, and comparisons with other methods of exact calculation of said regulation.

Regulator Settings for Long Lines, L. F. Woodruff. Elec. Wld., vol. 84, nos. 9 and 10, Aug. 30, and Sept. 6, 1924, pp. 411-412 and 460-464, 6 figs. Automatic voltage regulator can be used to arrive at desired operating characteristics. Describes use of power-circle diagrams, theory of performance, example of application, and analysis of requirements.

See also VOLTAGE REGULATION.

Voltage Surges Recording Instrument. A New Instrument for Recording Voltage Surges on Transmission Lines. Coal Trade Bul., vol. 50, no. 11, May 1, 1924, pp. 483-484, 7 figs. See also Universal Engr., vol. 40, no. 5, Nov. 1924, pp. 29-30, 7 figs. Describes instrument known as Klydonograph, developed by J. F. Peters of Westinghouse Elec. & Mfg. Co., with which graphic record of voltage surges of extremely short duration can be obtained, giving their polarity, magnitude, steepness of application, etc.

Klydonograph Records Voltage Surges on Transmission Lines. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 728-729, 4 figs. Instrument developed by J. F. Peters, of Westinghouse Elec. & Mfg. Co., is simple device for recording abnormal voltages.

Wave Propagation. Velocity of Propagation of Migratory Waves in Electric Lines (Die Fortpflanzungsgeschwindigkeit der Wanderwellen in elektrischen Leitungen), H. Fassbender. Archiv für Elektrotechnik, vol. 13, no. 5, Aug. 22, 1924, pp. 392-395, 2 figs. Method by means of which high-frequency migratory waves may also be proved in low-voltage lines.

Waves. Waves of Rigid Front (Ondes à front raide), P. Bunet. Industrie Electrique, vol. 33, no. 777, Nov. 10, 1924, pp. 447-453, 7 figs. Discusses theory and form of rigid and parasitic waves and their action along line.

Wooden Poles for Long Spans. Wooden Pole Towers for Long-Span Construction, K. B. Ayers. Elec. Wld., vol. 83, no. 3, July 19, 1924, pp. 114-115, 3 figs. Details of installation of two spans more than 3000 ft. long. How installation was made. Steel wires used.

ELECTRIC WAVES

Biologic Action of Radiation. Biologic Action of Electric Waves (Rayonnements microbiens et oscillation cellulaire), Geo. Lakhovsky. Radioélectricité, vol. 5, no. 7, Oct. 25, 1924, pp. 397-399, 2 figs. Author has found that electric waves of very high frequency affect in unmistakable way the life of microörganisms such as microbes; number of systematic tests have proved author's theories; results of experiments on plants inoculated with tumor-producing bacteria; author maintains that his method may ultimately be perfected to act in similar way on certain bacteriological diseases of animal and human body.

ELECTRIC WELDING

Boiler Construction and Repair. Electric Welding for Boiler Construction and Repairs. Eng. &

Boiler House Rev., vol. 37, no. 7, Feb. 1924, pp. 238-240, 2 figs. Extent to which electric welding is applicable to boilers of all types; information regarding work already carried out.

See also AUTOGENOUS WELDING, Boilers.

Boiler Tubes. The Repair of Boiler Tubes by Electric Welding (Réparation des tubes à fumée), Renaud. Revue Générale des Chemins de Fer & des Tramways, vol. 43, no. 5, May 1924, pp. 341-347, 7 figs. Methods and machinery employed at shops of Sotteville-les-Rouen, France.

Dynamo for. Development of Electric Welding Dynamo (Die Entwicklung der Schweissdynamo). Elektrotechnischer Anzeiger, vol. 41, no. 122-123, July 31, 1924, p. 650. Details of design and operation of dynamo for producing alternating current for welding in place of direct current.

Machines. The A. I. Electric Welders. Engineering, vol. 118, nos. 3075 and 3077, Dec. 5 and 19, 1924, pp. 764-765 and 827-829, 14 figs. Describes electric welder for stator windings, and types of spot, butt, and seam welders manufactured by A. I. Elec. Welding Appliances Co., London.

Oil Tanks. Electric Welding of Large Storage Tanks, H. C. Price. Am. Inst. Min. & Met. Engrs. —Trans., no. 1345-P, June 1924, 11 pp., 12 figs. Describes construction of welded roofs and bottoms and gives their advantages over riveted construction; data and conclusions obtained from observations made during welding of tanks by Welding Eng. Co., Texas City, Tex., and Tonkawa and Burbank, Okla.

Electrically Welded Repairs to Oil Storage Tank Bottoms, L. F. Champion. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 493-494, 1 fig. Description of work in placing welded bottom in 55,000-bbl. tank of Pac. Oil Co.

Precision. One More Step in Electric Welding Progress, S. W. Mann. Am. Welding Soc.—Jl., vol. 3, no. 1, Jan. 1924, pp. 18-23, 2 figs. Discusses precision welding, describing process of repairing a crankshaft, which was accomplished at very great saving.

Resistance. See ELECTRIC WELDING, RESISTANCE.

Spot. See ELECTRIC WELDING, RESISTANCE, Spot.

Types and Applications. Modern Welding (Neuzeitliches Schweissen), H. Neese. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 636-638, 7 figs. Types of welding, use of welding wire, types of butt and lap welding and riveting plates; results of welding tests.

ELECTRIC WELDING, ARC

Alternating-Current. Electric Welding with A. C. Arc (Die elektrische Schweissung mit dem Wechselstrom-Lichtbogen), F. Wörtmann. Elektrischer Betrieb, vol. 22, no. 9, May 10, 1924, pp. 73-77, 12 figs. Investigations carried out in laboratory for electric plants and railways of Technical High School of Hanover.

Electric Welding With A. C. Arc (Die elektrische Schweissung mit dem Wechselstromlichtbogen), Franz. Dinglers Polytechnisches Jl., vol. 339, no. 22, Nov. 1924, pp. 224-225. Advantages of a.c. welding and how to overcome its drawbacks.

Cast Iron. Arc Welding Cast Iron. Welding Engr., vol. 9, no. 4, Apr. 1924, pp. 22-23, 3 figs. How to use monel-metal electrode.

Castings. Arc Welding of Castings (Lichtbogenschweissung von Gussstücken), Achenbach. Giesserei-Zeitung, vol. 21, no. 19, Oct. 1, 1924, pp. 417-422 and (discussion) 422-423, 12 figs. See also Wärme, vol. 47, no. 43, Oct. 24, 1924, pp. 507-512, 12 figs. Influence of Si, Mn, C, P, S and O on welding; heat conditions; changes of structure; different welding methods.

Copper. Summary of Information on Arc Welding of Copper, Brass and Bronze in the Literature Up to March, 1923. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 9-15. Digest of literature made by subcommittee of Electric Arc Welding Committee of Am. Bur. Welding.

Direct-Current. Electric Direct-Current Arc Welding (Elektrische Gleichstrom-Lichtbogenschweissung), G. Hafergut. Elektrotechnik u. Maschinenbau, vol. 42, no. 26, June 29, 1924, pp. 178-180, 8 figs. Gives examples of application including work on station, transformers, machines, etc.

Galvanized Tanks. The Sheathed Electrode and An Example of Its Application to the Automatic Welding of Galvanized Tanks, B. C. Tracey. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 772-773, 3 figs. Outstanding features of sheathed electrode. Describes welding of galvanized iron tank by use of automatic arc-welding machine; savings effected by electric welding.

Gate-Valve Reclamation. An Interesting Arc Welding Operation. West. Machy. Wld., vol. 15, no. 4, Apr. 1924, pp. 125-126, 2 figs. Methods used by ReQua-Weart Co. of San Francisco, in reclamation of a 48-in. gate valve for a Nevada power company.

Heavy Plate. Arc Welding Heavy Plate, H. P. Eagan. Welding Engr., vol. 9, no. 9, Sept. 1924, pp. 20-21, 3 figs. Arc welding of heavy plate can be successfully done if correct methods are used; three fundamental principles must be followed.

Locomotive Repairs. Electric Arc Welding on the Steam Locomotive, W. W. M. Brady. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 687-697, 26 figs. Superior economy and utility of electric arc welding for quickly making reliable repairs and building up worn surfaces.

Low-Carbon Steel. Electric Welding (Ueber elektrische Schweissung), H. Neese. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 43, Oct. 25, 1924, pp. 1125-1132, 19 figs. Notes on arc welding of low-carbon steel. Metallurgy of low-carbon-steel welding; chemical composition and structure; influence of strength of current; strength of different welds; experimental results of welds with d.c. and a.c.; performance tests; useful possibilities of welding and costs.

Manganese Steel. Correct Welding Procedure Retains Qualities of Manganese Steel, H. H. George. Elec. Ry. Jl., vol. 63, no. 16, Apr. 19, 1924, pp. 611-613. By use of arc welding in the field, life of manganese steel special work can be increased one to five years. Type of welding rod, technique employed, and speed of cooling affect physical characteristics of welded material.

Motor-Generator Sets. See MOTOR-GENERATORS, Arc-Welding.

Oil-Well Casings. See OIL WELLS, Casings, Welding.

Optical Projection of. Optical Projection of Arc Welding, F. Davis. Am. Welding Soc.—Jl., vol. 3, no. 11, Nov. 1924, pp. 18-20, 2 figs. Describes machine built in order to more clearly bring out details of arc welding and to make it possible for large audience to witness a demonstration; used in connection with any stereopticon or moving-picture screen, only other apparatus needed being outfit for semi-automatic welding or hand welding.

Precision. Precision Welding, S. W. Mann. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 57-60, 3 figs. Describes process and method of repairing crankshaft known as neutralized precision weld.

The Electric Arc in Precision Welding, S. W. Mann. Forging-Stamping-Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 68-71, 3 figs. Flexibility of electric arc welding makes it possible to repair a broken shaft or casting to same degree of strength and accuracy as before failure.

Problems and Uses. Electric Arc Welding (Aus der Werkstatt des Lichtbogenschweissers), A. Hochstimm. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 6, Feb. 9, 1924, pp. 129-132, 18 figs. Discusses useful field of arc welding; peculiarities of d.c. and a.c. arc welding; training of welders; and results obtained.

Rail Bonds. How a Copper-to-Steel Bond Is Made, with Tests Proving Its Efficiency and Endurance, J. B. Austin. Coal Age, vol. 26, no. 10, Sept. 4, 1924, pp. 330-334, 8 figs. Describes process for directly welding all-copper bond terminals to rail with copper, providing high electrical conductivity; mold confines heat to terminal while bond is being formed; copper sleeve protects strands of cable against breakage.

Rail Joints. Improvements in Arc-Welded Rail Joints, R. B. Fehr. Elec. Ry. Jl., vol. 63, no. 20, May 17, 1924, pp. 783-785. Recent developments in method of welding joint plates by means of carbon arc process, and tests on several types of joints.

Rail Welding in Connecticut. Elec. Ry. Jl., vol. 63, no. 14, Apr. 5, 1924, pp. 537-539, 2 figs. Improvements in carbon arc welded rail joints adopted by Connecticut Co.; tilted joint plate and base plate adapted to 23 different rail sections; precautions adopted to secure good welds.

Safety Precautions. Using the Arc With Safety, D. H. Devoe. Welding Engr., vol. 9, no. 7, July 1924, pp. 28-29. Methods of protecting eyes and bodies of electric arc welding operators; safeguarding apparatus.

Sheet-Metal Parts. Arc Welding Sheet-Metal Parts, A. R. Luechinger. Am. Mach., vol. 60, no. 12, Mar. 20, 1924, pp. 425-427, 6 figs. What constitutes good welding; proper methods of welding different kinds of seams; how operators should be trained; use of fixtures in production welding.

Ship Construction. Applications of Arc Welding to Ship Construction, E. H. Ewertz. Mar. Eng. & Shipg. Age, vol. 29, nos. 1 and 2, Jan. and Feb. 1924, pp. 47-54 and 114-121 and 124, 4 figs. Jan.: Results of tests to determine strength of welded joints; attitude of classification societies toward application of electric welding. Feb.: Lloyd's rules and regulations for application of electric arc welding to ship construction; corrosion; bibliography.

Metal Arc Welded Ships, J. W. Owens. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 19-22 and 24, 6 figs. Residual stress and other fundamentals in design of metal arc-welded ships and welded structures in general.

Residual Stress and Other Fundamentals in the Design of Metal Arc Welded Ships and Welded Structures in General, J. W. Owens. Mar. Eng. & Shipg. Age, vol. 29, no. 8, Aug. 1924, pp. 487-491, 6 figs. Discusses selection of joints, value of residual stress in joint, form of welding, carbon content of base metal, dangerous types of joint in ship structures, mechanical properties of joint, ease of assembly, butt joints and facility of welding.

Structural Steel. Use of Electric Arc for Welding Structural Steel, R. E. Kinkead. Am. Welding Soc.—Jl., vol. 3, no. 10, Oct. 1924, pp. 20-23. Considers fundamentals which enter into problem of determining what makes a perfect rivet work loose; reasons why rivets are not perfect; limitations of welded joint.

Welding as a Method of Fabricating Large Structures, H. Goldmark, W. Spraragen and W. L. Warner. Am. Welding Soc.—Jl., vol. 3, no. 10, Oct. 1924, pp. 27-69, 25 figs. Welding versus riveting in structural work; use of welding as a substitute method for fabrication; results of English tests; results obtained on a large steel box for Electric Welding Committee of Emergency Fleet Corpn.; tests on arc welded roof truss; shearing strength of welds; joints specifically designed for welding; welding of lockgates and caissons; cost data; examples of welded structures; corrosion. Appendices containing following papers: Design for a Riveted Steel Truss for Static Loads, E. P. McKibben, and Welded Truss, W. L. Warner.

Systems. "Electrical System of Welding," C. N. O. Dutton. So. African Inst. Elec. Engrs.—Trans., vol. 15, part 4, Apr. 1924, pp. 364-374, 18 figs. Gives short description illustrating the advantages for metals to be welded or treated by Bernados system, metallic arc system, spot and butt welding, and metallic tipping or depositing by electric arc.

Theory. Theoretical Considerations on Electric Arc Welding (Considérations théoriques sur la soudure électrique à l'arc), M. Lebrun. Revue de Métallurgie, vol. 21, no. 8, Aug. 1924, pp. 484-495, 20 figs. Electric characteristics of a welding arc; effect of kind of current and of covering of electrodes; characteristics of electrodes.

Uses. Arc Welder and Its Uses. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 28-29. Electrical circuit; electric arc; utility for welding purposes; electrodes for arc welding.

Welders, Training of. Training Course for Electric Arc Welders. Am. Welding Soc.—Jl., vol. 3, no. 2, Feb. 1924, pp. 15-47. Analysis of work of an arc welder; qualifications for welders; some of the fundamentals in arc welding; together with a detailed statement of material classified under type welding jobs arranged in order of difficulty from standpoint of teaching.

ELECTRIC WELDING, RESISTANCE

Application. See OXY-ACETYLENE WELDING, Application.

Machines and Processes. Recent Developments of Electric Welding Machines (Die neuere Entwicklung der elektrischen Schweissmaschinen), A. Neuburger. Elektrotechnik u. Maschinenbau, vol. 42, nos. 14 and 15, Apr. 6 and 13, 1924, pp. 214-219 and 230-235, 20 figs. Description of modern processes and machines, with special reference to resistance welding.

Seam Welders. Various Types of Electric Seam Welders, J. R. Brueckner. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 107-109. Discusses development of automatic spot welder, continuous seam welder, roll-step method of seam welding, and seam welding using interrupted current, and merits of each method.

Spot. A Krupp Spot Welding Machine (Eine Kruppsche Punktschweissmaschine), J. Pfretzschner. Kruppsche Monatshefte, vol. 5, July 1924, pp. 122-126, 7 figs. Details of an electric spot-welding machine using Krupp non-rusting steel, and its many applications.

Electric Spot Welding (Rückwirking des Schweissgutes auf die Strom- und Spannungsverhältnisse der Punktschweissmaschine), F. H. Hellmuth. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 657-658, 3 figs. Inductive effect upon circuit of metal object to be welded is studied by means of vector diagrams; investigation reveals presence of additional flux, magnitude and phase of which are determined; from this, explanation is given of apparently irregular

behavior of cos ϕ between supply voltage and supply current on short circuit.

Electric Spot Welding Aluminum or Duralumin, J. W. Meadowcroft. Am. Welding Soc.—Jl., vol. 3, no. 9, Sept. 1924, pp. 10-11. Author finds that best results are obtained by using steel as resistance material and by interposing superposed pieces of aluminum or duralumin between sheets of steel.

Spot Welding, G. A. Hughes. Iron & Steel Engr., vol. 1, no. 11, Nov. 1924, pp. 597-604, 15 figs. Reviews various forms of electric welding for riveting of steel plates.

Spot Welding, W. Remington. Am. Welding Soc.—Jl., vol. 3, no. 9, Sept. 1924, pp. 23-26. Report of the resistance welding committee of Am. Bur. Welding.

Spot Welding for Pressed Steel Parts, R. Trautschold. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 265-266. Discusses reasons for employing a.c. supply, contact points and control of temperature distribution area, preparation of stock for spot welding, deep depression welding, and seam welding. Is a practical and highly efficient method of joining light metal parts.

Uses of Spot Welding in the Structural Field, H. A. Woofter. Am. Welding Soc.—Jl., vol. 3, no. 10, Oct. 1924, pp. 11-19, 14 figs. Results of tests; different applications; principal reasons why spot welding formerly had not been employed in large structural work such as steel building frames, bridges and ships.

ELECTRIC WIRING

Conduit Threading Machine. Conduit Threading Machines. Iron Age, vol. 113, no. 26, June 26, 1924, p. 1855, 3 figs. Both ends of 2400 ten-foot lengths or 4800 ends of ½-in. material threaded per hour in machine called Roto-Matic.

Use of Bare Neutral is Suggested. Elec. News, vol. 33, no. 2, Jan. 15, 1924, pp. 37-38, 1 fig. Describes proposed system of conduit wiring placed before Hydro-Elec. Power Commission of Ontario; employs bare neutral in three wire circuits; advantages and comparative merits claimed for it.

Fire Hazard. Electrical Wiring and Fire Damage. Am. Architect, vol. 125, no. 2437, Jan. 16, 1924, pp. 69-73, 11 figs. Suggestions for reducing fires due to defective wiring; actual cost of knob and tube, and armored cable types of wiring.

ELECTRICAL APPARATUS

Developments. Review of Developments in Electrical Apparatus. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 649-652, 8 figs. (Abstract.) 1924 report of Electrical Apparatus Committee of Nat. Elec. Light Assn.

Stationary, Altitude Effects. Temperature Rise of Stationary Electrical Apparatus as Influenced by Radiation, Convection and Altitude, V. M. Montsinger and W. H. Cooney. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 803-812, 9 figs. Discusses temperature rise of various shaped surfaces as influenced by radiation and free convection for a given altitude, giving results of tests made on a large plate to determine formula for free convection, also results of tests and discussion on effect of different colored cases on temperature rise of transformers in shade and sunshine; and effect of altitude on temperature rise of transformers having different shapes of tank surfaces, of rheostats, bus bars, reactors, etc.

ELECTRICAL EQUIPMENT

British Empire Exhibition. Electrical Material. Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 541-546, 14 figs., partly on supp. plates. Describes 30,000-hp. twin-wheel impulse turbines for Behira power station of Tata Co. in India, and 25,000-hp. reaction turbine for South America; constructed by English Elec. Co.; also describes some of smaller electrical exhibits, including photometer, switchgear, telephone apparatus, etc., at Brit. Empire Exhibition.

Electrical Plant at Wembley. Electrician, vol. 92, no. 2393, Mar. 28, 1924, pp. 390-396, 12 figs. Preliminary survey of electrical exhibits at British Empire Exhibition, Wembley, Eng.; biggest display on record of work of British manufacturers.

Development, 1923. Electrical Developments During 1923. Iron Age, vol. 113, no. 3, Jan. 17, 1924, pp. 223-224. Increased size of units a feature; transportation problems; high-pressure turbines mark progress.

Recent Electrical Equipment, A. J. Whitcomb. Indus. Engr., vol. 82, no. 2, Feb. 1924, pp. 69-80 and 104-106, 18 figs. Describes new equipment for industrial use brought out during 1923, with new applications of standard types of particular interest to men responsible for plant operation from production and maintenance standpoints, including industrial motors and motor drives, electric control equipment, substation equipment, industrial, heating, and repair shop tools and supplies.

French Exposition. Electrical Exhibits at the Exposition of Physics and Radiotelegraphy (L'électricité à l'Exposition de Physique et de T. S. F.), A. Curchod. Serial article in Revue Générale de l'Electricité, vol. 15, beginning Feb. 9 and ending June 28, 1924. Feb. 9: Equipment for installations of very high tension. Feb. 16: Wires and cables. Feb. 23: Electrical apparatus: circuit breakers, switches, controlling and regulating devices. Mar. 1: Cells and storage batteries. Mar. 8: Non-electrical equipment for electric generating stations, such as boilers and furnaces, compressors, boiler accessories, etc. Mar. 15: Electrotechnical materials, such as electrolytic iron, magnetic steel, insulating materials. Mar. 22: Generating machines and transformers, such as commutators, converters, and generators, and different types of rectifiers. Mar. 29: Transmission-line equipment. Apr. 5: Electric motors. Apr. 12: Appliances for different mechanical applications, such as railway signaling, etc. Apr. 19: Telegraphic equipment. Apr. 26: Telephonic equipment. May 3: Domestic electrical appliances. May 10: Electric lighting: arc and incandescent lamps; reflectors and projectors; mercury-arc lamps. May 17: Electrotherapeutic apparatus. May 24: Electric heating and welding equipment; electrometallurgical and electrochemical products. May 31: Measuring instruments. June 7: Experimental devices; research and demonstrating apparatus. June 21: Receiving radioelectric waves, sending apparatus, three electrode lamps, radioelectric accessories. June 28: Laboratories, schools, books, and reviews.

Improvements, 1923. Electrical Engineering in 1923. Engineer, vol. 137, no. 3549, June 4, 1924, pp. 20-22, 6 figs. on supp. plate. Developments in turbogenerators; converting plant; mercury vapor rectifiers; switchgear; electric-railway equipment; electricity in mines; rolling mills; motors; wireless communication.

Leipzig Fair. Electrical Exhibits at the Leipzig Spring Fair 1924 (Die Elektrotechnik auf der Leipziger Frühjahrsmesse 1924), W. Kraska. Elektrotechnische Zeit., vol. 45, no. 15, Apr. 10, 1924, pp. 321-329, 35 figs. Electrical machinery; drives; apparatus; installation materials; heating; lighting; measuring instruments; wiring; insulating material and insulators; weak-current installations; radiotelegraphy.

Maintenance. Modern Maintenance of Plant and Equipment, Wm. G. Ziegler. Indus. Mgmt. (N. Y.), vol. 67, no. 4, Apr. 1924, pp. 224-229, 5 figs. Maintenance of electric power and heating equipment.

Maintenance Shop Practice. Discussion: Developments in Electric Maintenance Shop Practice. Iron & Steel Engr., vol. 1, no. 11, Nov. 1924, pp. 579-596 and 605. Discussion of armature repair practice; shafts, journals and keyways; commutators, bearings, coils, winding practice, controllers; shop cleaning, etc.

Protection. Protection of Electrical Equipment, V. H. Todd. Power Plant Eng., vol. 28, nos. 4, 7 and 9, Feb. 15, Apr. 1, and May 1, 1924, pp. 235-238, 12 figs., 384-387, 7 figs., and 452-454, 4 figs. Feb. 15: Protection of transformers against heating overloads, internal shorts and static stresses. Apr. 1: Protection of apparatus from line disturbances. May 1: Protection of electric motors.

Zinc Plant. Electric Equipment, Consolidated Mining and Smelting Company's Zinc Plant, Trail, B. C., Canada, R. N. Lockyer. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 531-544, 25 figs. Power supply; electrical equipment in distributing station; generator rooms; motor-generator sets; ventilation; switchboards; load characteristics; air compressors; industrial motors; water supply.

ELECTRICAL INDUSTRY

Czechoslovakia. Electric Industry, Power and Radio in Czechoslovakia (Elektroindustrie, Energiewirtschaft und Funkwesen in der Tschechoslowakei), Elektrotechnische Zeit., vol. 45, no. 45, Nov. 6, 1924, pp. 1208-1212, 2 figs. Discusses existing and projected hydroelectric and central heating plants, electrification of railways and industries, use of wind power, radiotelephony and radiotelegraphy, and formation of a German Electrotechnical Association.

Developments in 1923. Some Developments in the Electrical Industry During 1923, J. Liston. Gen. Elec. Rev., vol. 27, no. 1, Jan. 1924, pp. 9-60, 94 figs. See also Nat. Elec. Light Assn.—Bul., vol. 11, no. 1, Jan. 1924, pp. 13-19. Includes turbines and supercharger, electric propulsion, electric railways, automatic stations, water-wheel generators, frequency converters, industrial motors and their control, motor applications, steel mills, electric welding, induction furnaces, industrial heating, battery chargers, transformers, induction voltage regulators, lightning generator, lightning arresters, reactors, X-ray tubes, photo-electric cell, conductor cable, high-voltage d.c. cable testing sets, electrically-operated flow meters, radio, carrier current, switching apparatus, and lighting.

Germany. German Electrical Industry, A. J. Gray. Trade Information Bul. (Supp. to Commerce Reports), no. 187, Feb. 11, 1924, 16 pp. Observations at Leipzig Fall Fair of 1923.

Poland. Poland Building an Electrical Industry. Elec. Wld., vol. 84, no. 13, Sept. 27, 1924, pp. 675-677, 1 fig. Many projects for erecting generating stations, both steam and hydro; developments in manufacturing; electrifying industry and railways; foreign capital being invested, with government going into partnership.

Russia. Electrification Schemes in Russia, B. L. Metcalf and O. Morduch. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 932-935, 4 figs. Discusses importance of foreign markets for electrical industry of Great Britain and characteristics of Russia as prospective market for electrical goods; possibilities of electrification in Russia, and projects of various electrification schemes; results achieved and work done.

ELECTRICAL MACHINERY

A. C. Windings, Losses in. Eddy Losses in Alternating-Current Windings in Electrical Machinery (Tillsatsförluster i växelströmslindningar i maskiner), J. Wennerberg. Teknisk Tidskrift, vol. 54, nos. 23 and 27, June 7 and July 5, 1924, pp. 110-112 and 120-124 (Electroteknik), 9 figs. Approximate method for determination of eddy losses, occurring in copper conductors of alternating-current machinery, due to magnetic induction of leakage fields in armature slots.

Ball and Roller Bearings for. See BEARINGS, BALL, Electrical Machinery.

Breakdowns, Protection from. How to Minimize Breakdowns of Electrical Machinery, C. H. S. Tupholme. Coal Age, vol. 25, no. 1, Jan. 3, 1924, pp. 5-6. Importance of cleanliness and regular lubrication; bearings should be kept cool and renewed promptly.

British Empire Exhibition. Electrical Engineering Exhibits. Engineer, vol. 137, nos. 3568, 3569, and 3570, May 16, 23, and 30, 1924, pp. 533-536, 11 figs., 558-563, 13 figs, and 589-591, 6 figs. May 16: Exhibits of English Elec. Co. at Brit. Empire Exhibition, including 3-phase 50-cycle transformer and 2000-kw. electric transverter. May 23: Exhibits by Electromotors, Mather & Platt, Brit. Elec. Transformer Co., and Brit. Lighting & Ignition Co. (Vickers), includes description of 1875-kva. single-phase transformer. May 30: 12,000-kw. tandem turbo-generator exhibited by C. A. Parsons & Co. at Brit. Empire Exhibition; transformers exhibited by Brush Elec. Eng. Co.; other exhibits.

Brown-Boveri. Progress in Brown Boveri Design During Recent Years, K. Sachs and P. Faber. Brown Boveri Rev., vol. 11, no. 8, Aug. 1924, pp. 147-187, 84 figs. Discusses electrical machinery and apparatus, induction motors, direct-current machines, transformers, mercury-arc power rectifiers, high-tension switchgear, electrical apparatus, selective protection and electric furnaces.

Calculation. Operating Resistances in Direct-Current Series Machines with Frequent Starting and Stopping (Widerstandauslegungen für im scharf aussetzenden Betriebe arbeitende Gleichstrom-Hauptschlussmaschinen), H. Winkler. Elektrotechnische Zeit., vol. 45, no. 28, July 10, 1924, pp. 737-740, 7 figs. Discusses simple method of calculating proper ohm values, especially of braking resistances, and shows unsuitability of present method.

Design. Dynamo and Motor Design, F. Creedy. Electrician, vol. 93, no. 2415, 2416, and 2418, Aug. 29, Sept. 5 and 19, 1924, pp. 226-228, 252-253, and 312-313, 10 figs. Recent developments in electrical machinery.

Engine Stop Failures. Methods of Averting Engine Stop Failures, W. Greenwood. Power House, vol. 17, no. 13, July 5, 1924, pp. 32-34 and 46, 2 figs. Proper construction, installation and operation practically insure reliability of control equipment in power house; standardization advocated as important factor.

Frequency Changes. Effect of Frequency Changes on Electric Machines and Apparatus, H. Maruyama and S. Momota. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 435, Oct. 1924, pp. 901-912. How characteristics of machines will change by changes of cycles and whether they can be remodeled to suit changed frequency; treats these two problems on alternator, induction motor and transformer; gives probable figures when 60-cycle machines are operated at 55 and 50 cycles and also 50-cycle machines when operated at 55 and 60 cycles. (In Japanese.)

Grounding. Grounding of Electric Machinery, W. Hilleary. Power, vol. 59, no. 23, June 3,

1924, pp. 905-906. Discusses grounding of electrical-equipment frames, including motors, dynamos, transformers, and other equipment.

How to Ground Electrical Mining Machinery, Chas. M. Means. Coal Age, vol. 25, no. 26, June 26, 1924, pp. 947-948. Ground connection should be given same care as feeders; stops on heavily sanded rail should be avoided; surges make alternating current dangerous.

The Grounding of Electrical Mining Machinery, C. M. Means. Coal Trade Bul, vol. 51, no. 3, July 1, 1924, pp. 123-124. All safety rules require grounding frames, bed plates and all metallic non-current carrying parts of stationary electrical equipment and underground equipment. Rules for grounding should be strictly adhered to for all power equipment regardless of voltage of circuit to which such equipment is connected.

Influence and Electromagnetic Machines. Analogy Between Electromagnetic Machines and Influence Machines (Die Analogie zwischen elektromagnetischen Maschinen und Influenzmaschinen), F. Ollendorff. Elektrotechnische Zeit., vol. 45, no. 11, Mar. 13, 1924, pp. 210-213, 4 figs. Refers to work by author published in Archiv für Elektrotechnik on influence machines, and compares laws developed therein with well-known laws governing electromagnetic machines, showing close relationship between these two groups; discusses properties of influence transformers, synchronous and commutator machines.

Installation. Preparing Electrical Machinery for Installation. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, p. 1062. Extracts from instruction book of Elec. Power Club, containing valuable suggestions.

Insulating Materials for. See INSULATING MATERIALS, ELECTRIC, Electrical Machinery.

Iron Losses. Measuring Iron Losses by a Bridge Method (Eisenverlustmessungen nach einer Brückenmethode), J. Goldstein. Elektrotechnische Zeit., vol. 45, no. 47, Nov. 20, 1924, pp. 1270-1272, 4 figs. Examines a bridge connection proposed by Biermann for measuring iron losses. Develops formulas for calculation.

Pole Cores, Excitation of Non-Salient. Excitation of Non-Salient Pole Cores, N. B. Hill. Electricien, vol. 92, no. 2381, Jan. 4, 1924, pp. 6-7, 4 figs. A method of estimating requirements in special cases.

Protection. Some Aspects of Protective Apparatus for Electrical Machinery, C. J. Monk and N. D. Penney. S. African Inst. Elec. Engrs.—Trans., vol. 15, part 7, July 1924, pp. 415-426 and (discussion), 426-429, 5 figs. See also (discussion), by V. Pickles, in part 8, Aug. 1924, pp. 439-442. Improvements in protection, and reasons for further improvements; directions in which it is possible to effect improvements; faults between phases; failure of d.c. supply; faults to earth on stator; functions of protective relays.

Pulsations in Power. Pulsations in Power Due to Synchronous Motor Driven Compressors, Q. Graham. Elec. Jl., vol. 21, no. 2, Feb. 1924, pp. 70-71, 5 figs. Discusses causes of pulsations of power which result from use of synchronous motors with reciprocating compressors, or similar machinery, and its effects.

Regulation, Automatic. Automatic Regulation of the Power of an Electric Plant (Sur le réglage automatique de la puissance d'une installation électrique), M. Doloukhanoff. Académie des Sciences—Comptes Rendus, vol. 179, no. 22, Dec. 1, 1924, pp. 1260-1263. Particulars of a method of grouping machines by mathematical combination and putting these groups into service so that at any moment power produced is practically equal to demand.

Regulations, German. Most Important Changes in the Association Rules Regarding Machinery and Transformers (Ueber die wichtigsten Aenderungen der Verbandsbestimmungen betreffend Maschinen und Transformatoren), G. Dettmar. Elektrische Betrieb, vol. 22, no. 19, Oct. 10, 1924, pp. 193-197. Development of "Rules for Testing Electric Machinery" by Verband Deutscher Elektrotechniker (V. D. E.) and their latest re-drafting.

Rotating-Armature Temperature Measurement. The Measurement of Temperature in a Rotating Armature by Means of Thermocouples, B. G. Churcher. Jl. Sci. Instruments, vol. 1, no. 10, July 1924, pp. 310-314, 1 fig. Describes measurement by means of thermocouples of rate of change of temperature of a conductor mounted in a slot of a rotating armature, which was found necessary in course of an investigation on energy loss arising from eddy currents flowing in armature conductors of electrical machines.

Rotating, Tooth Pulsation in. Tooth Pulsation in Rotating Machines, T. Spooner. A. I. E. E.—Jl., vol. 43, no. 7, July 1924, pp. 646-650, 12 figs. Presents experimental method of checking magnitude of flux pulsations in teeth of rotating machines where both members are slotted. Test results compared with pulsation amplitudes as calculated by two methods.

Shaft Dimensions. Dimensioning Shafts for Electric Machinery (Die Bemessung der Wellen elektrischer Maschinen), E. Lasswitz. Elektrotechnische Zeit., vol. 45, no. 45, Nov. 6, 1924, pp. 1205-1208, 4 figs. Discusses determination of shafts with reference to deflection and critical number of revolutions, with special reference to wear of bearings, resulting one-sided magnetic pull, etc., by means of alignment charts.

Shaft Whipping. Shaft Whipping, B. L. Newkirk. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 169-178, 13 figs. Analysis of vibrations and shaft whipping and means and ways of prevention.

Speed Determination. Photographic Method of Determining Machine Speeds, R. F. Mundorff. Machy. (N. Y.), vol. 30, no. 10, June 1924, p. 782, 1 fig. See also Machy. (Lond.), vol. 24, no. 609, May 29, 1924, p. 271, 1 fig. Method of determining retardation of machine speeds which eliminates personal equation and possibility of error that exists when successive speed readings are taken in usual way.

Standardization. Electrical Machinery Committee. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 974-978. Committee consideration of standardization matters in their initial stages; service conditions; application recommendations.

Standards. New Text of V. D. E. Regulations for Erection and Operation (Die neue Fassung der Errichtungs- und Betriebsvorschriften des V. D. E.), G. Dettmar. Elektrische Betrieb, vol. 22, no. 20, Oct. 24, 1924, pp. 212-213. Main changes relating to grounding, distinguishing third wire in three-phase systems, cooling of machines and transformers, switching and distributing plants, high-tension insulation, etc.

Practical Application of Standards in the A. E. G. (Die praktische Durchführung der Normen in der AEG.), E. Lasswitz. Fördertechnik u. Frachtverkehr, vol. 17, no. 12, June 18, 1924, pp. 162-166, 11 figs. Explains introduction of standards in A. E. G. factories and savings effected.

Temperature Indicators. Switchboard Type Temperature Indicators, D. M. Carswell. Gen. Elec. Rev., vol. 27, no. 7, July 1924, pp. 425-429, 10 figs. Describes equipments for a.c. generators and motors, thermocouple indicator equipment, and equipment for transformer windings.

Temperature Measurement. Measuring Temperature in Electric Machinery, I. M. Stein. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1209-1211, 2 figs. Modern methods.

Temperature Rise and Distribution. The Rise and Distribution of Temperature in Small Electrical Machines, E. Hughes. Instn. Elec. Engrs.—Jl., vol. 62, no. 331, July 1924, pp. 628-648, 21 figs. Factors influencing shape of heating and cooling curves of coils and electrical machines. Calculation of thermal conductivity of insulation; effects of different temperature-rises and different air velocities upon thermal conductivity and temperature-rise per watt. New arrangement for measuring mean temperature-rise of field windings. Deduces temperature-rise of field windings in terms involving speed and armature loss for different machines, and compares temperature-rise as measured by resistance and by thermometer.

Testing. Making Electrical-Machinery Tests in Industrial Plants, J. E. Housley. Power, vol. 60, no. 23, Dec. 2, 1924, pp. 890-891, 1 fig. Reasons for making tests; examples of conditions discovered by tests; forms on which to record motor-test data; selection of instruments best suited to making tests.

Testing of Electric Machines (Die Prüfung elektrischer Maschinen), F. Hillebrand. Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1124-1127, 5 figs. Testing after finishing machines; determination and elimination of electrical and mechanical defects, noting possible improvements; testing laboratory and equipment.

Ventilation. Ventilating Electrical Machinery. Iron Trade Rev., vol. 75, no. 22, Nov. 27, 1924, pp. 1443-1446, 6 figs. Rolling-mill motors and auxiliary apparatus are cooled by washed air under pressure; efficiency and capacity of electrical equipment depend upon operating temperature.

Vibration Absorbers. Vibration Absorbers for Large Single-Phase Machines, C. R. Soderberg. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 383-387, 8 figs. Discusses elimination of excessive vibrations or of condition of resonance by means of spring-mounted stators, elastic properties of foundations, etc.

Vibrations. See VIBRATIONS, Machinery.

Voltage Regulation. Some Observations on Voltage Regulation (Alcune osservazioni intorno alla regolazione della tensione), F. Neri. Elettrotecnica, vol. 11, no. 28, Oct. 5, 1924, pp. 689-695, 11 figs. Discusses asynchronous and synchronous machines, transformers, and induction regulators in connection with voltage regulation.

ELECTRICAL MEASUREMENTS

Alternating Current at Telephonic Frequencies. A. C. Measurements at Telephonic Frequencies (Les mesures des grandeurs électriques sous courant alternatif de fréquence musicale), L. Cahen and J. Carvallo. Jl. de Physique & le Radium, vol. 5, no. 4, Apr. 1924, 113-125, 15 figs. Useful descriptive summary of apparatus and methods used in making a.c. measurements at telephonic frequencies; apparatus required; describes several a.c. bridges of Wheatstone type, with their particular uses and experimental procedure adopted in each case; uses of inter-bridge transformers and Wagner earth connection; describes a.c. potentiometer.

Capacity. A Method for Measuring Very Small Capacities, L. Hartshorn. Physical Soc. Lond.—Proc., vol. 36, part 5, Aug. 15, 1924, pp. 399-404, 3 figs. Describes a bridge arrangement suitable for measurement of capacities of order of 1 micro-microfarad and less at telephonic frequencies.

On the Measurement of Very Small Changes of Capacity, R. Gunn. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 48, no. 283, July 1924, pp. 224-226, 6 figs. Describes new method sensitive enough to give change of one microampere for capacity change of 10-15 farad.

The Measurement of Capacity by Analogy, Wm. Cramp. World Power, vol. 2, no. 11, Nov. 1924, pp. 267-273, 4 figs. Develops method of measurement by analogy, to show that it is capable of giving very accurate results, that it can be applied to all condensers, and that it calls for no more equipment than a source of direct current, a voltmeter, ammeter, and a standard that is easily made.

Dimmer Bridge. Technical Application of Dimmer Relays [Eine technische Anwendung des Glimmrelais (Glimmbrücke)], H. Geffcken and H. Richter. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 511-514, 6 figs. Discusses use of dimmer generators for measuring purposes and describes dimmer bridge enabling measurement of capacities of 10 to 10^7 cm. and resistances of 10^3 to 10^8 ohms very rapidly to an accuracy of 1 per cent.

Energy in A. C. Circuits. The Measurement of Electrical Energy in A. C. Circuits, G. W. Stubbings. World Power, vol. 1, no. 3, Mar. 1924, pp. 164-170, 5 figs. Reviews method of metering energy in high-power circuits, examining more particularly difficulties introduced by use of instrument transformers; considers methods of metering energy in 3-phase circuits.

High-Frequency. Refined High-Frequency Measuring for Technical Purposes [Verfeinerte Hochfrequenzmessung zu technischen Zwecken (Torkontrolle)], H. Geffcken and H. Richter. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 493-495, 2 figs. Describes a high-frequency method by means of which small pieces of metals carried by persons may be traced acoustically.

Induction and Capacity. Using Alternating Current for the Measurement of Coefficients of Induction and of Capacities (Emploi du courant alternatif pour la mesure des coefficients d'induction et des capacités), O. De Bast. Association des Ingénieurs Electriciens Sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, no. 8-9, Aug.-Sept. 1924, pp. 281-292, 8 figs. Discusses Maxwell, De Sauty, Anderson, Foster, Vaschy, and Touanne methods.

Output and Consumption. Measurements of Apparent Output and Consumption (Ueber Blindleistungs- und Blindverbrauchsmessungen), R. Scheld. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 49-58, 4 figs. Investigation by means of measurements and calculations of faults in artificial connections through asymmetry of voltage triangle.

Self-Induction and Resistance. See ELECTRIC CONDUCTORS, Self-Induction and Resistance Measurement.

ELECTRICITY

Applications of. See ELECTRICITY, APPLICATIONS OF.

Atmospheric, Free Balloons and. See BALLOONS, Atmospheric Electricity and.

Atmospheric, Measurement of. Measuring Electric Potential From Airplanes (Die Messung elektrischer Spannungen vom Motorluftfahrzeug aus), A. Wigand and T. Schlomka. Annalen der Physik, vol. 75, no. 19, Sept. 1924, pp. 279-325, 6 figs. Details of suitable method for measurement of atmospheric potential from airplanes or airships. Measurements in airplanes in motion show considerable positive auto-charge of engine, depending on its capacity, and negative charge of exhaust gases.

Contact. Studies on Contact Electricity: Bubbling Effect in Liquid Metals (Studien zur Berührungselektrizität: Ueber den Aprudeleffekt an flüssigen Metallen), A. Coehn and Em. Duhme. Zeit. für Physik, vol. 27, no. 5-6, 1924, pp. 358-383, 18 figs. Shows that gases passing through pure mercury carry away positive charge and leave metal charged negatively; addition of sodium, zinc, and cadmium reverses signs, addition of tin, copper, silver, and gold.

Studies on Contact Electricity: Charging Metals Against Dielectrics (Studien zur Berührungselektrizität: Die Ladung von Metallen gegen Dielektrika), A. Coehn and A. Curs. Zeit. für Physik, vol. 29, no. 3-4, 1924, pp. 186-195, 4 figs. Concludes that charging metals in high vacuum depends on nature of metal, its tendency to give off electrons, nature of dielectric, and its capacity to absorb positive metal ions.

Development. Fifty Years in Retrospect. Elec. Wld., vol. 84, no. 12, Sept. 20, 1924, pp. 570-640, 70 figs. A number of articles by different authors briefly reviewing developments in telephony, electric railways, radio, electric lighting and illumination, frequency selection and standardization, hydroelectric engineering, power transmission, protection against lightning, electric motor control, etc.

Electrometric Measurement. The Significance of Labilization in the Electrometric Measurement of Small Quantities of Electricity (Ueber die Bedeutung der Labilisierung bei der elektrometrischen Messung kleiner Elektrizitätsmengen), G. Hoffmann. Physikalische Zeit., vol. 25, no. 1, Jan. 1, 1924, pp. 6-8, 3 figs. Considers charge and deflection of electrometer in two stages: (a) potential change during charging of stationary instrument; (b) oscillations and equilibrium position; comparison between thread and quadrant electrometers with respect to measurement of small charges; advantage is taken of instability factors (labilization) to improve sensitiveness which constitutes new development in electrometric measurement technique.

Heaviside's Operators. Heaviside's Operators in Engineering and Physics, E. J. Berg. Franklin Inst.—Jl., vol. 198, no. 5, Nov. 1924, pp. 647-702, 34 figs. Mathematical definitions, and solutions of various problems; derivation of expansion theorem; author points out that, if with present accepted definitions of functions, derivatives, etc., it had been possible to reconcile Heaviside's operators to conventional mathematics, a great contribution would have been made, but it can never be done.

Propagation of, Velocity. Velocity of Propagation of Electricity (La vitesse de propagation de l'électricité), C. Gutton. Annales des Postes Télégraphes et Téléphones, vol. 13, no. 9, Sept. 1924, pp. 949-966, 6 figs. Discusses successive experiments and theories leading to a solution of essential points of problem.

Supply. See ELECTRICITY SUPPLY.

ELECTRICITY, APPLICATIONS OF

Agriculture. Application of Electricity to Agricultural Machinery (Les applications de l'électricité aux appareils agricoles), M. Mousset. Société Française des Electriciens—Bul., vol. 4, no. 36, June 1924, pp. 515-531. See also Société des Ingénieurs Civils de France—Memoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 279-297, 12 figs. on supp. plate. Cooperation between state, electricians and farmers; educational rôle of electric centrals; agricultural implements and machinery, their classification, uses and power requirements; electric plants on farms.

Electric Fodder Installations (Elektrofutteranlagen), H. Osten. Elektro-Journal, vol. 4, no. 3, Mar. 1924, pp. 82-85, 1 fig. Report on present status of introduction of electric fodder installations and present opinions on subject. Sterilization of fodder by electricity saves about 25 per cent of feed value. Economic importance of subject is emphasized.

Electric Tillage (Le labourage électrique), M. Guedeney. Société Française des Electriciens—Bul., vol. 4, no. 36, June 1924, pp. 533-545, 4 figs. See also Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 314-323, 4 figs., partly on supp. plate. Discusses results obtained with electric tillage, operation of electric plows and other implements, use of movable transformer stations, etc.

Electricity in Agriculture Abroad, R. A. Lundquist. Agricultural Eng., vol. 5, no. 7, July 1924, pp. 151-154. Discusses progress made in Sweden, bases of charges for service, use of fuel-burning plants in Germany, slow progress in France, high cost of service in England, use of mechanical power on farms of New Zealand; most progress has been made by Sweden and New Zealand.

Electrification of Farms in Sweden, T. Holmgren. Elec. Wld., vol. 83, no. 4, Jan. 26, 1924, pp. 178-182, 5 figs. Most economical system of distribution found to be dependent on density of population. Formation of farmers' organizations and details of equipment best suited to farmers' needs.

French Rural Electrification, H. A. Carney. Elecn., vol. 93, no. 2426, Nov. 14, 1924, pp. 550-551 and 555, 5 figs. Applications of electricity to farming and rural industry shown at Exhibition and Congress at Lyons.

Notes on Progress of Farm Electrification. Nat. Elec. Light Assn.—Bul., vol. 11, no. 1, Jan. 1924, pp. 23-25, 1 fig. Comparison of rural line financing in Ontario and Minnesota; farm electrification survey; criticism of alleged attitude of light and power companies regarding individual plants; present status of electrical machinery for rural purposes.

Progress in Rural Service Study, A. M. Perry. Elec. World, vol. 84, nos. 24 and 25, Dec. 13 and 20, 1924, pp. 1253-1257 and 1297-1301, 11 figs. Twelve states have embarked on economic investigation, and seven more are expected to organize; what Minnesota has already accomplished.

Some Research Features of the Application of Electricity to Agriculture, R. W. Trullinger. Agricultural Eng., vol. 5, nos. 8 and 9, Aug. and Sept. 1924, pp. 180-185 and 203-208. Analyzes in a preliminary manner some of the more important research features involved in a proposed development, having for its ultimate objective exclusive use of electricity in all agricultural processes requiring a tangible source of energy. Bibliography.

The French Electro-Farming Congress and Exhibition, R. Borlase Matthews. Elec. Rev., vol. 95, nos. 2450 and 2451, Nov. 7 and 14, 1924, pp. 686-687 and 724-725, 9 figs. Review of papers and exhibits.

Use of Electricity in Agriculture (L'emploi de l'électricité dans l'agriculture). Electricien, vol. 55, no. 1358, Oct. 15, 1924, pp. 459-464, 12 figs. Discusses motor application, transmission masts, transformers and line equipment, and gives list of agricultural implements and their power consumption.

Canada. Utilization of Power. Eng. Jl., vol. 7, no. 7, July 1924. Group of papers read at World Power Conference. Introductory Statement to Symposium, P. T. Davies, pp. 447-451; Electricity

in the Canadian Home, F. A. Gaby, pp. 451-458, 8 figs.; Electrical Service for Rural Districts, F. A. Gaby, pp. 458-472, 19 figs.; Utilization of Power in the Pulp and Paper Industry, R. W. Leeper, pp. 473-476, 6 figs.; Use of Power in the Mineral Industries of Canada, H. E. M. Kensit, pp. 477-483, 6 figs.; Use of Electric Power in the Cement Industry of Canada, W. G. H. Cam, pp. 484-485, 3 figs.; Use of Power for Port Facilities, M. T. S. Casey, pp. 486-488, 2 figs.; Power Requirements in the Lumbering Industry in British Columbia, A. M. Smith, pp. 488-492, 5 figs.; Application of Compressed Air in Industry, F. A. McLean, pp. 492-498, 5 figs.; Electro-Chemical and Electro-Metallurgical Uses of Power, L. E. Westman, pp. 498-501, 3 figs.; Power in Transport, D. E. Blair, pp. 502-522, 32 figs.; Illumination, W. H. Woods, pp. 522-526, 11 figs.; Recent Developments in Electric Lamps, J. T. Scott, pp. 526-527.

Ceramic Industries. Electricity in the Ceramic Industries, A. B. Searle. World Power, vol. 2, no. 10, Oct. 1924, pp. 226-231, 7 figs. Discusses its use as source of power, light and heat, as means for purifying ceramic materials, and for operating instruments for controlling temperature or processes of manufacture.

Development. A Hundred Years of Electrical Engineering, G. W. O. Howe. Engineer, vol. 138, no. 3580, Aug. 8, 1924, pp. 166-168. Traces development during last hundred years of some of the principal applications of electricity to service of mankind.

Farm Machinery. See FARM MACHINERY, Electricity Applications.

Lumber Mills. Electric Power Application in Pacific Northwest Fir Mills, J. L. Wright. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1117-1123, 9 figs. Application to logging, sawmilling, and planing mill or finishing plant; type of electrical equipment; head saws; power-factor correction. (Abridgment.)

Medical and Surgical. Medical and Surgical Applications of Electricity (Applicazioni dell' electtricita alla medicina e chirurgia), G. Panbianco. Elettrotecnica, vol. 10, no. 32, Nov. 15, 1923, pp. 766-770, 9 figs. Description of the various electrical applications for medical and surgical purposes; discusses especially radiology; comparison between Röntgen and Coolidge tubes, and discussion of progress made by latter.

Power. Fields for Power Sales Development, E. W. Lloyd. Elec. Wld., vol. 84, no. 11, Sept. 13, 1924, pp. 518-520, 4 figs. Describes importance of improving load factor and gives outline of methods of power sales department with which author is connected. Promotion of use of electricity for heat treating and industrial baking processes strongly recommended. Opportunities in electric vehicle load.

Switzerland. Applications of Electric Energy (Ueber Verwertung der elektrischen Energie im Inland), E. Boder. Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 9, Sept. 1924, pp. 461-470, 9 figs. Reviews the various uses of electric energy in Switzerland as heat for domestic and industrial purposes, including new forms of application; coöperation of producers and consumers; etc.

Textile Industry. Electricity in the Textile Industry, W. Muhlens. Electrician, vol. 93, no. 2416, Sept. 5, 1924, p. 261. Gives notes on conditions in Germany. Abstract from article translated from Elektrotechnische Zeit.

ELECTRICITY SUPPLY

Analysis. Electricity Supply Analysed, C. H. Merz. Electrician, vol. 93, no. 2416, Sept. 5, 1924, pp. 254-255. Discusses transmission and distribution of electrical energy. Abstract of paper read before First World Power Conference.

British Empire Exhibition. Electricity Supply at Wembley. Electrician, vol. 92, no. 2393, Mar. 28, 1924, pp. 386-388, 5 figs. Electricity for lighting, power, and amusement demands of British Empire Exhibition.

Carolinas. The Power Supply of Southern Industry, R. G. Macy. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 663-668, 7 figs. The Piedmont section of the Carolinas; demand for power; steam-power plants; portable substations.

Central Station vs. Private-Plant. See CENTRAL STATIONS, Private Plant vs.

Christiania. Electricity Supply in Christiania. Electrician, vol. 93, no. 2414, Aug. 22, 1924, pp. 200-202, 4 figs. Describes changing from bulk supply; forming electricity district.

Consumption Limitation. Development of Electricity Application by Forfeiture Rates (Le développement des applications de l'électricité favorisé par la tarification à forfait), M. Jorgensen. Revue Générale de l'Electricité, vol. 16, no. 22, Nov. 29, 1924, pp. 875-878, 2 figs. Discusses system of forfeiture rates based solely on maximum power consumer can use, and describes Jacobsen apparatus for current limiting, i.e., shutting off of current supply when consumer uses more than he is entitled to.

Costs, Britain. Fuel Consumption and Power Supply Economics, H. Quigley. World Power, vol. 2, no. 10, Oct. 1924, pp. 210--217, 4 figs. Shows present status of power costs in Britain with special reference to municipal undertakings.

Farming Communities. Electricity Supply of Farming Communities From Small Generating Stations, U. V. Skobalzyn. Electritchestvo, no. 4, Apr. 1924, pp. 209-220, 6 figs. An article based to some extent on German practice and also on some Russian practice. Includes Russian statistics. (In Russian.)

Government Ownership of Plants. See ELECTRIC POWER, Government Ownership of Plants.

Great Britain. British Electric Power Supply, H. D. Butler. Elec. World, vol. 84, no. 16, Oct. 18, 1924, pp. 841-842. Progress made in reorganization of electricity undertakings in United Kingdom; coördinating present systems.

Interconnection and Farm Service. Interconnection and Service to the Farm, Gifford Pinchot. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1095-1096. Points out that hope of rural electric service lies in regulated private industry with pooling of power for large-area use; state lines should interpose no obstacle to extension of interconnection for good of all.

Leningrad, Russia. Electricity Supply of Leningrad, I. A. Skanavi. Electritchestvo, no. 4, Apr. 1924, pp. 176-190, 8 figs. Critical description of system, together with extensive statistical data, including production per workman and rates. (In Russian.)

London. Electricity in the Region of London, D. Heineman. World Power, vol. 2, no. 9, Sept. 1924, pp. 138-145. Notes on production of electric current; invested capital; utilization of plant; citing notable examples in Europe and America; transport.

New England. New England's Power Needs. Elec. World, vol. 83, no. 18, May 3, 1924, pp. 877-881, 8 figs. See also Power, vol. 59, no. 19, May 6, 1924, pp. 725-728, 3 figs. Claims that growth of public-utility energy supply through expansion and interconnection of steam and hydroelectric systems will meet major requirements of Northeast for many years; Canadian power expected to find profitable future market.

Rates. Fundamentals of Public Utility Power Rates, E. Douglas. Nat. Engr., vol. 28, no. 4, Apr. 1924, pp. 151-154, 1 fig. Simple explanation of the different charges in public utility power

rates; how to figure current charges to determine amount paid per kilowatt-hour; load factors and their effect on central-station rates.

The Theory of Rate-Making for Electrical Supply, K. Baba. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 433, Aug. 1924, pp. 725-760, 6 figs. Author gives general and fundamental theory which should be applied in order to fix reasonable rate for electric services; criticism of cost-of-service and value-of-service theories as rate bases; general method of rate making based on cost of service; methods of simplifying rate system. (In Japanese with abstract in English.)

South Australia. Electricity Supply at Adelaide, F. W. H. Wheadon. Elec. Rev., vol. 95, nos. 2441 and 2442, Sept. 5 and 12, 1924, pp. 361-365 and 397-401, 31 figs. Design, construction and equipment of Osborne generating station; transmission and distribution systems.

ELECTRIFICATION

Coal Mines. See COAL MINES, Electrification.

Railways. See RAILWAY ELECTRIFICATION.

ELECTROCHEMICAL INDUSTRY

Developments. Development of Electrochemical Industry Between 1913 and 1923 (Die Entwicklung der elektrochemischen Industrie in den Jahren 1913-1923), N. L. Müller. Elektrotechnik u. Maschinenbau, vol. 42, nos. 28 and 29, July 13 and 20, 1924, pp. 437-442 and 458-463. Deals with electrolysis of aqueous solutions, production of copper, etc.; electro-osmosis, production of aluminum and magnesium; electrothermic processes, including calcium carbide, iron and steels, graphite, nitrogen fixation, dust precipitation, etc.

Economic Importance of Electrochemistry (Die weltwirtschaftliche Bedeutung der Elektrochemie), W. Kundt. Technik u. Wirtschaft, vol. 17, no. 7, July 1924, pp. 155-159, 1 fig. Survey of distribution of chemical industry over world shows that electrochemical processes were adopted in countries which lacked necessary conditions for thermic and mechanic processes. Electrolytic process enables mineral exploitation impossible under older methods.

ELECTROCHEMISTRY

Developments. See ELECTROMETALLURGY, Developments.

ELECTRODEPOSITION

Antimony. Electrodeposition of Antimony, J. C. Ghosh and A. N. Kappana. Jl. Physical Chem., vol. 28, no. 2, Feb. 1924, pp. 149-160, 4 figs. Describes experiments and results obtained.

Base-Metal Structure, Influence of. Some Relations Between the Microstructure of Metal Surfaces and Electrodeposition Made Thereon, A. K. Graham. Brass World, vol. 20, no. 1, Jan. 1924, pp. 3-7, 7 figs. Further evidence of influence of structure of base metal on electrodeposits.

Deposits, Structure of. Structure of Electrochemical Deposits (La structure des dépôts électro-chimiques), R. Audibert. Revue de Métallurgie, vol. 21, no. 10, Oct. 1924, pp. 567-584, 22 figs. Discusses crystallization and electrodeposition, classification of crystals, adherence of deposit, and effect of different factors on structure of deposits, including nature of electrolyte, colloids, addition of extraneous substances, current density, temperature, base metal, etc.

Dry. See METALS, Electrodeposition.

Fescol Process. Cheating the Scrap Heap. Motor Transport (Lond.), vol. 39, no. 1030, Nov. 24, 1924, pp. 620-621, 7 figs. Describes electrochemical metal-depositing process developed by Fescol, Ltd., Lond., Eng., for reconditioning worn machinery parts and for prevention of corrosion. Applications of process.

Iron. The Introduction of Carbonaceous Matter in Electrodeposited Iron and Nickel, P. K. Frölich. Am. Electrochem. Soc.—Advance paper no. 12, for meeting Oct. 2-4, 1924, pp. 171-187, 6 figs. on supp. plates. Details of investigation carried out to study significance of colloidal reactions in processes leading to contamination of iron and nickel, when organic materials were dissolved in electrolyte from which deposition occurred.

See also IRON, Electrodeposition.

Metal Parts, Building Up. The Fescol Electrodeposition Process. Chem. Age. (Lond.), vol. 10, no. 262, June 21, 1924, pp. 647-648, 3 figs. Process for building up worn metal parts. Describes results obtained and method used to achieve them.

Metals. See METALS, Electrodeposition.

Nickel. Throwing Power, Cathode Potentials and Efficiencies in Nickel Deposition, H. E. Haring. Am. Electrochem. Soc.—Advance Paper no. 15, for meeting Oct. 2-4, 1924, pp. 209-231, 5 figs. Results of study made to determine throwing power of nickel and to measure cathode potentials and efficiencies during nickel deposition. Results show that chief factor in throwing power in nickel deposition is cathode efficiency. Pub. by permission U. S. Bur. Standards.

Patents. Electrolysis (Including Electrodeposition and Electroplating. Abridgments of Specifications, Class 41, Period 1916-1920, 1924, 83 pp. Patents for inventions in connection with apparatus, cells, diaphragms, electrodes, processes, etc.

Polarization and Structure. The Relation Between Polarization and Structure in the Electrodeposition of Metals, V. Kohlschutter. Am. Electrotechem. Soc.—Advance Paper, No. 5, for meeting, Apr. 24-26, 1924, pp. 63-74. Close relationship is shown to exist between abnormal cathode potential in nickel deposition and certain physical properties of deposit; summary of those parts of author's investigations which bear upon polarization and structure.

Use in Patternmaking. See PATTERNMAKING, Electrodeposition in.

Zinc, Corrosion Resistance of. Corrosion Resistance of Electroplated Coatings of Zinc and Zinc-Mercury Alloys, C. J. Wernlund. Am. Electrochem. Soc.—Paper no. 31, presented at meeting Apr. 24-26, 1924, pp. 403-409. Study of relative rates of corrosion of different kinds of zinc electrodeposits on mild steel. Deposits containing 2 per cent of mercury were more resistant than deposits of pure zinc obtained from either sulphate or standard cyanide baths.

ELECTRODES

Carbon. Burning of Carbon Electrodes (Das Brennen von Kohlen-Elektroden), G. Schuchardt. Chemiker-Zeitung, vol. 48, no. 89, July 24, 1924, pp. 517-518, 3 figs. Discusses care used in preparation of electrodes, Meiser Annual furnace, Söderberg process, coking process, etc.

Contact Potential. On the Contact Potential, S. Takegami. Kyoto Imperial Univ., College of Sci.—Memoirs, vol. 7, no. 2, Feb. 1924, pp. 45-67, 6 figs. Details of experiments.

Electric-Furnace. See ELECTRIC FURNACES, Electrodes.

Electromotive Force. Electromotive Force Produced by the Action of Light on Metals Immersed in Solutions of Their Salts (Forces électromotrices produites par la lumière sur des métaux plongés dans des solutions de leurs sels), G. Athanasiu. Académie des Sciences—Comptes

Rendus, vol. 178, no. 4, Jan. 21, 1924, pp. 386-388. Author has extended his work on mercury electrodes to electrodes of silver, copper, nickel, cadmium, and zinc; e.m.f. produced depends on time of standing and is due to formation of deposit on surface of electrode by chemical reaction.

Platinum, Influence of Light on. Influence of Light and Röntgen Rays on Anodic Polarized Platinum Electrodes (Ueber den Einfluss von Licht- und Röntgenstrahlen auf anodisch polarisierte Platinelektroden), G. Grube and L. Baumeister. Zeit. für Elektrochemie, vol. 30, no. 13-14, July 1924, pp. 322-332, 4 figs. Influence of Röntgen rays on potential of oxidized platinum electrodes is similar to that of ordinary light, and potential of oxygen electrode is affected by alternating current in same way as by light; results are discussed in their relation to Baur's theory of photolysis.

Spherical. Initial Voltage and Rupturing Field Intensity of Spherical Electrodes with D. C. Voltage (Anfangsspannung und Durchbruchfeldstärke von Kugelelektroden bei Gleichspannung), A. Klemm. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 553-592, 32 figs. Purpose of work was to establish experimental fundamentals for rupturing field intensity in air with high-tension direct current: (1) between two equal spheres and (2) between sphere and plane. See also article by W. O. Schumann, entitled The Minimum Rupturing Field Intensity in Spherical Electrodes (Ueber das Minimum der Durchbruchfeldstärke bei Kugelelektroden), pp. 593-608, 4 figs.

ELECTROLYSIS

Brines, Anode Material for. Insoluble Anodes for Electrolysis of Brine. The Lead-Silver Series, C. G. Fink and L. C. Pan. Am. Electrochem. Soc.—Advance Paper no. 8, for meeting Oct. 2-4, 1924, pp. 129-135, 2 figs. Presents anodic corrosion tests for alloys of system silver-lead, and shows that corrosion loss in brine drops very abruptly upon addition of small percentages of silver to lead, or vice versa. Voltage curve is similar to corrosion loss curve.

Currents in Soil, Measurement of. Measuring Electrolytic Currents in Soil, B. A. Williamson. Elec. Ry. Jl., vol. 63, no. 13, Mar. 22, 1924, pp. 503-505, 4 figs. Two new methods of measurement proposed, one based on substitution of known resistance and other on balancing current to give zero galvanometer reading; latter method eliminates calculation of earth resistance; useful in quantitative electrolysis tests.

Electrolytic Cells. Modern Electrolytic Cells, A. J. Hale. Chem. & Industry, vol. 43, nos. 50, 51, and 52, Dec. 12, 19, and 26, 1924, pp. 1224-1233, 1250-1255, and 1291-1294, 37 figs. Deals with cells for winning and refining of metals, production of industrial gases, and for production of various inorganic and organic compounds; types of cells.

Fused Salts. Electrolysis of Fused Salts (Ueber Schmelzelektrolyte), R. Lorenz. Zeit. für Elektrochemie, vol. 30, no. 8, Aug. 1924, pp. 371-375. General notes on subject with special regard to equilibrium between metal and salt in melts; formula developed by author, based on Duhem-Margules vapor-tension isothermal is found to be applicable only to fused lead and cadmium and their chlorides; problem can be solved, however, with aid of van Laar's thermodynamic potentials.

Hypochlorite Solution. The Electrolysis of Hypochlorite Solution, F. Foerster. Am. Elektrochem. Soc.—Advance Paper no. 7, for meeting Oct. 2-4, 1924, pp. 101-128. Careful survey of subject. Shows that it is simply potential at which anions of hypohalogenites are acted upon by current, as compared with discharge potentials or corresponding halogen ions, which determines course of electrolysis of alkali halogenides; and that all details and apparent peculiarities in phenomena attending these electrolytic processes may be investigated and satisfactorily explained with aid of these potentials.

Mercury Cathode. Electrolysis with Cathode of Drops of Mercury (Sur l'électrolyse avec la cathode à gouttes de mercure), J. Heyrovsky. Académie des Sciences—Comptes Rendus, vol. 179, no. 20, Nov. 17, 1924, pp. 1044-1046, 2 figs. Studies commencement of electrolysis with anode of mercury layer and cathode of mercury drops issuing from a capillary, amalgam on drops forming with N potassium salt at -1.883 volts, with 1/10 N at 1.937 volts, with 1/100 N at 2000 volts.

ELECTROLYTES

Dielectric Constants of Solutions. Present Knowledge of Dielectric Constants of Electrolytic Solutions (Der heutige Stand unserer Kenntnisse von den Dielektrizitätskonstanten der wässerigen und nichtwässerigen Elektrolytlösungen), P. Walden and H. Ulich. Zeit. für physikalische Chemie, vol. 110, 1924, pp. 43-56. In estimating most probable result of work on aqueous solutions, authors would give special weight to values obtained by Drude, using method of measurement of wave length, and assume that dielectric constants of dilute aqueous solutions of strong electrolytes are somewhat lower than that of solvent; authors consider it certain that dielectric constants of solutions of salts in poorly dissociating media is higher than that of pure solvent.

Fused, Conductivity of. Fused Electrolytes (Ueber einige Schmelzelektrolyte), W. Biltz and W. Klemm. Zeit. für Physikalische Chemie, vol. 110, 1924, pp. 318-342, 3 figs. Conditions are investigated for obtaining accurate measurements of conductivity of fused metal chlorides; influence is determined on conductivity values of fused salts of varying capacity of cell and form of electrodes, whether of disk, cylindrical, or spherical shape; values for specific conductivities are classified according to periodic system of elements; results are plotted for change of specific conductivity with temperature.

Solubility of Salts, Effect on. Theory of the Effect of Strong Electrolytes on the Solubility of Salts (Theorie der Löslichkeitsbeeinflussung bei starken Elektrolyten), O. Schärer. Physikalische Zeit., vol. 25, no. 7, Apr. 1, 1924, pp. 145-159, 16 figs. It is concluded that classical theory of dissociation of strong electrolytes does not give satisfactory explanation of known facts, as result of critical survey of experimental data; author assumes that solubility effect depends upon electrical forces between ions, electrolytes being completely dissociated; discusses nature and extent of deviations of experimental results from requirements of theories at stronger concentrations.

Theory. Laws of Dilution and Distribution of Strong Electrolytes According to the Theory of Debye (Ueber Verdünnungsgesetze und Verteilung starker Elektrolyte nach der Theorie von Debye), P. Gross and O. Halpern. Physikalische Zeit., vol. 25, no. 16, Aug. 15, 1924, pp. 393-397. Experiments to examine distribution of electrolytes between two immiscible solvents.

ELECTROLYTIC CELLS

Electric Field. Theoretical and Experimental Study of the Electric Field in an Electrolytic Cell, A. A. Ahmed. Instn. Elec. Engrs.—Jl., vol. 62, no. 328, Apr. 1924, pp. 301-317, 19 figs. Investigation of electric field produced when current flows in electrolytic cell having plane parallel electrodes; method of measuring current density

at any point in interior of electrolytic medium; calculation of geometric conductance of electrolytic cell having plane parallel electrodes.

Types. Electrolytic Caustic Soda, C. Elliott. Serial article in Chem. Trade Jl., vol. 75, beginning July 11 and ending Dec. 5, 1924, 19 figs. A comparative study of cell design and efficiency. July 11: General and theoretical consideration. July 18, 25, Aug. 1 and 8: Cells of diaphragm, mercury, and fused-salt types. Aug. 22 and 29: Main features in choice of a cell. Sept. 19, Oct. 3 and 31: Design of a diaphragm-cell plant. Dec. 5: Evaporation of cell effluent.

ELECTROMAGNETIC FIELDS

Constants. Ferromagnetic Constants for Low A. C. Fields (Die ferromagnetischen Konstanten für schwache Wechselfelder), H. Jordan. Elektrische Nachrichten-Technik, vol. 1, no. 1, July 1924, pp. 7-29, 10 figs. Discusses ferromagnet after-effect and hysteresis in weak fields; determination of ferromagnetic constants for weak fields by means of a.c. measurements, etc.

Produced at Great Distance. Calculation of Field Produced at Great Distance by a High-Frequency Current in Any Straight Conductor (Calcul du champ produit à grande distance par un courant à haute frequence circulant dans un conducteur rectiligne de longueur quelconque), J. Bethenod. Revue Générale de l'Electricité, vol. 16, no. 12, Sept. 20, 1924, pp. 451-452, 1 fig. Shows an easy way of finding field from length of oscillator becoming comparable to length of wave used.

ELECTROMAGNETIC WAVES

Plane. Transformation of Electric and Magnetic Forces in a Plane Wave, in a Plane Normal to the Direction of Relative Motion of Two Observers, V. Karapetoff. Jl. Optical Soc. Am. & Rev. of Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 239-244, 2 figs. Two observers are assumed to move along X axis and to measure components of electric intensity E (E_1, E_2, E_3) and magnetic intensity H (H_1, H_2, H_3) of a plane electromagnetic wave propagated at an arbitrary angle to X axis.

Propagation. Distortion of an Electromagnetic Disturbance Passing Along an Insulated Conductor Line (Sur la distorsion d'une perturbation électromagnétique se propageant le long d'une ligne conductrice isolée), A. Dufour. Académie des Sciences—Comptes Rendus, vol. 179, no. 22, Dec. 1, 1924, pp. 1255-1257. Discusses skin effect, i. e., damping of wave due to non-uniform distribution of current in cross section of conductor, and method for directly recording it.

Experimental Research on the Propagation of Electromagnetic Waves Along Wires (Recherches expérimentales sur la propagation des ondes électromagnétiques le long des fils), G. Laville. Annales de Physique, vol. 2, series 10, Sept.-Oct. 1924, pp. 328-404, 14 figs. Discusses propagation of sinusoidal periodic oscillations along two parallel metal wires and compares results with theory of Heavyside, Vaschy, Poincaré and Mie. using copper, bronze, aluminum, iron, and nickel wire.

New Research on Propagation of Electromagnetic Waves (Neue Untersuchungen über die Ausbreitung der elektromagnetischen Wellen), M. Bäumler. Elektrische Nachrichten-Technik, vol. 1, no. 2, Aug. 1924, pp. 50-64, 18 figs. Details of extensive quantitative measurements of American radio stations WQK and WSO for examining wave propagation; weakening of waves at separating planes of atmospheric layers of unequal density; agreement of L. W. Fuller absorption factor with measuring results. Bibliography.

Propagation of Electric Waves Along Perfectly Insulated Iron Lines, Taking Into Consideration the Skin Effect (De la propagation des ondes électriques le long des lignes en fer parfaitement isolées, en tenant compte de l'effect pelliculaire), A. Leaute. Académie des Sciences—Comptes Rendus, vol. 179, no. 13, Sept. 29, 1924, pp. 597-600. Discusses effect of skin on damping of harmonics which becomes more marked as harmonics become higher in pitch.

Propagation of Electric Waves Over the Earth (Die Ausbreitung der elektrischen Wellen über die Erde), A. Meissner. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 485-488, 5 figs. Concludes that there is no Heaviside layer; recommends radiation antennas for long-distance operation at night with short waves.

Theory. The Electromagnetic Wave in Technics (Die elektromagnetische Welle in der Technik), K. W. Wagner. Elektrische Nachrichten-Technik, vol. 1, no. 1, July 1924, pp. 1-7, 3 figs. Discusses work of Hertz, Faraday, Maxwell, Marconi, etc., resulting in present radio development.

ELECTROMAGNETISM

Laws. Examination of Carl Hering's Ideas on the Necessity of a Revision of the Laws of Electromagnetism (Examen des idées de M. Carl Hering sur la nécessité d'une revision des lois de l'électromagnétisme), A. Lienard. Revue Générale de l'Electricité, vol. 16, nos. 21 and 22, Nov. 22 and 29, 1924, pp. 811-819 and 851-859, 18 figs. Concludes that classic laws on induction and electrodynamics explain all his points, that Hering does not propose any suitable substitute laws, but shows necessity for more precision in instructing students.

Formulation of Electromagnetic Laws, P. Florensky. Russian Elec. Jl. (Elektrichestvo), no. 11, Nov. 1923, pp. 537-544, 9 figs. Author criticises common expressions of laws of electric and magnetic phenomena and emphasizes fact that separate magnetic masses are unknown, as well as magnetic conductivity; takes up law of mutual action of two currents and claims that it is not currents that attract or repel each other, but conductors with currents, which means that this attraction or repulsion is either result of stresses in ether or of action between matter and matter and not between electrons composing currents.

ELECTROMAGNETS

Telegraph and Telephone. See TELEGRAPHY, Electromagnets.

Telegraphic. Construction and Operation of Electromagnets Employed in Telegraphy (Étude sur la construction et le fonctionnement des électro-aimants employés en télégraphie), J. H. Gosselin. Annales des Postes Télégraphes et Téléphones, vol. 13, no. 6, June 1924, pp. 612-627, 10 figs. Develops theory as to most suitable cross-section of pole pieces and gives results of experimental verification.

Telephone Relays. Design Characteristics of Eletromagnets for Telephone Relays, D. D. Miller. Bell System Technical Jl., vol. 3, no. 2, Apr. 1924, pp. 206-231, 18 figs. Electromagnets described are confined to relays, but principles involved apply as well to selector magnets, clutch magnets, and electromagnets in general. Treatment from viewpoint of telephone engineer of important considerations which determine design of magnetic parts of relays and economics of winding dimensions.

ELECTROMETALLURGY

Applications. Electro-Metallurgical Applications, J. L. McK. Yardley. Blast Furnace & Steel Plant, vol. 12, no. 12, Dec. 1924, pp. 532-535, 1 fig., and vol. 13, no. 1, 1925, pp. 20-25 and 30, 11 figs. Discussion of electric-power utilization developments which are based on fundamental principles of physical chemistry and electrochem-

istry; deals only with metals which are ordinarily employed in construction or manufacture and in production of which large quantities of electric power are employed; compares smelting and electrolytic methods; data and illustrations on plants and equipment for production of iron, zinc, copper, nickel, aluminum, etc.

Developments. Recent Developments in Electrochemistry and Electrometallurgy (L'électrochimie et l'électrométallurgique d'apres les brevets récents), L. Jumau. Revue Générale de l'Electricité, vol. 15, nos. 16 and 17, Apr. 19 and 26, 1924, pp. 695-708 and 749-766, 35 figs. Study of recent improvements in electrolysis and electric furnaces. Apr. 19: Deals with electrolytes, electrodes, diaphragms, electrolysis of water and alkaline chlorides, preparation of chemical, mineral and organic products, etc. Apr. 26: Arc, resistance, and induction furnaces and their fittings; melting and reheating of metals; melting of glass; manufacture of lime, cement, and brick; manufacture of aluminum and carbide of calcium; treatment of minerals; manufacture of iron and its derivatives; fixation of nitrogen, etc.

Review of Electrochemistry and Electrometallurgy Between 1914 and 1923 (Aperçu sur l'Electrochimie et l'Electrométallurgie de 1914 à 1923), G. Flusin. Houille Blanche, vol. 23, no. 89-90, May-June 1924, pp. 71-75. Discusses electric furnaces and electrodes, electrolytic electrochemistry and electrometallurgy, electrothermic electrochemistry and electrometallurgy and advancement in their activities.

ELECTROMETERS

High-Frequency Measurement. The Use of Electrometers for the Measurement of High Frequency (Emploi de l'électromètre dans les mesures à haute frequence), M. V. Ylostalo. Annales des Postes Télégraphes & Téléphones, vol. 13, no. 1, Jan. 1924, pp. 37-47, 3 figs. Application to measurement of resistances and of coefficients of self-induction.

Idostatic. See LIQUIDS, Dielectric Constants, Measurement of.

Improved Form. A New Form of Electrometer, F. A. and A. F. Lindemann and T. C. Keeley. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 279, May 1924, pp. 577-583. New electrometer is capable of sensitivity as great as that of any existing electrometer, although its period is less than 1 sec. and its capacity less than 2 cm.; useful for many laboratory purposes even where independence of zero and sensitivity to tilt is not essential.

Quadrant. A New Type of Electrometer (Sur un nouveau type d'électromètre), M. B. Szilard. Académie des Sciences—Comptes Rendus des Séances, vol. 178, no. 23, June 2, 1924, pp. 1887-1890, 1 fig. See also Génie Civil, vol. 84, no. 25, June 21, 1924, p. 604. Describes transportable apparatus which is stronger than usual galvanometers and electrometers and permits electrometer measurements without use of constant-voltage battery.

ELECTROMETRY

Lamps with Several Electrodes. Lamps with Several Electrodes in Electrometry (Sur l'emploi des lampes à plusieurs electrodes en electrométrie), P. Lejay. Académie des Sciences—Comptes Rendus, vol. 178, no. 26, June 23, 1924, pp. 2171-2173. Development of method previously described; aim has been to ascertain whether it was possible to make radium capsules, ordinarily used as collectors, to act directly upon electrodes of lamp without modifying potential of these capsules; it was found possible with considerable accuracy.

ELECTRON METAL. See MAGNESIUM ALLOYS, Electron.

ELECTRON TUBES

Amplifiers. Electron Tube Amplifiers in Alternating Current Circuit (Der Elektronenröhrenverstärker im Wechselstromkreise), F. Ollendorff. Archiv für Elektrotechnik, vol. 13, no. 4, July 31, 1924, pp. 274-291, 14 figs. Discusses deduction of general equations for quantitative relation between total currents and tensions in amplifier; behavior of amplifiers in low and in high frequency, etc.

Calculation. Electron Tubes for Radiotelegraphy (Progetto di tubi elettronici per radiotelegrafia), C. Matteini. Elettrotecnica, vol. 11, no. 26, Sept. 15, 1924, pp. 621-629, 13 figs. Methods adopted for determining dimensions of principal parts at Italian Marine Laboratory. Characteristics and calculation of filaments; temperature distribution along filament; calculation of dimensions of receiving triodes and transmitting triodes, and of two-electrode tubes.

Capacities. Capacities of Electron Tubes (Ueber Kapazitäten in Elektronenröhren), E. Schrader. Jahrbuch der drahtlosen Telegraphie u. Telephone, vol. 24, no. 2, 1924, pp. 27-38, 29 figs. Discusses calculation of apparent tube capacities from Möller's tube data, measurement, deviations and their explanation; comparison of formulas with experimental results; practical application; measuring high-frequency amplifiers; etc.

Curve-Drawing Apparatus. Curve Drawing Apparatus for Electron Tubes (Ein selbsttätiger Kennlinienschreiber für Elektronenröhren), H. Stahl. Elektrotechnische Zeit., vol. 45, no. 48, Nov. 27, 1924, pp. 1313-1315, 7 figs. Principles and description of a semi-automatic apparatus devised by author with aid of which characteristic curves (curves of the various electrical data of a particular tube) can be plotted mechanically by unskilled operators in a routine way.

D. C. Motor Speed Regulation. Speed Regulation of D. C. Motors with Electron Tubes (Regelung der Drehzahl von Gleichstrommotoren mittels Glühkathodenröhren), W. Taeger. Elektrotechnische Zeit., vol. 45, no. 6, Feb. 7, 1924, pp. 96-98, 3 figs. To maintain constant speed of d.c. motor, or to secure constant potential on generators, author describes successful use of electron tubes; machine to be regulated carries auxiliary field winding, which acts in opposition to main field; through auxiliary winding current from small tachometer dynamo, connected rigidly to main machine, is passed over two or more electron tubes in parallel; not every kind of tube is suitable for this purpose; mathematical means of determining resistance of auxiliary winding and number of tubes required, are given in general terms, with practical example.

High-Tension Relays. Electron Tubes as High Tension Relays (Die Elektronenröhre als Hochspannungsrelais), A. Imhof. Schweiz. Elektrotechnische Verein Bul., vol. 15, no. 7, July 1924, pp. 361-363, 3 figs. Discusses application as relays for signaling in high-tension lines, especially for distance indication of voltage conditions.

High-Vacuum. Technics of High Vacua for Electron Tubes (Sulla tecnica degli alti vuoti per tubi elettronici), G. Montefinale. Elettrotecnica, vol. 11, no. 26, Sept. 15, 1924, pp. 618-621. Discusses effects of internal ionization, occlusions, quality of glass, heat treatment of electrodes and glass, vacuum pumps, liquid vacuum pumps, liquid air for vacuum production, etc.

Oscillations. A Singular Case of Electron Tube Oscillations, G. Breit. Franklin Inst.—Jl., vol. 197, no. 3, Mar. 1924, pp. 355-358. Describes singular oscillation of apparently new type

observed while trying to reproduce oscillations described by Barkhausen and Kurz.

Secondary Radiation. Rôle of Secondary Radiation in Electron Tubes (Ueber die Rolle der Sekundärstrahlung in Elektronenröhren), H. Salinger. Zeit. für Technische Physik, vol. 5, no. 3, 1924, pp. 96-99, 4 figs. Details of measurements on double grid tubes and conclusions to be drawn from them for electron tube phenomena generally.

ELECTRONS

Capture by Alpha Particles. The Capture and Loss of Electrons by α Particles, E. Rutherford. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 277-303, 4 figs. Author seeks to verify conclusion of Henderson by scintillation method where energy of particles can be estimated by brightness of scintillations and their number determined by direct counting; and tests whether methods could be devised for determining frequency of capture and loss of electrons by α particles and its variation with velocity of α particles.

Emission from Hot Bodies. On the Law and Mechanism of the Emission of Electrons from Hot Bodies, S. Chandra Roy. Lond., Edinburg & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 279, May 1924, pp. 561-569. In author's opinion, it seems that photoelectrons and electrons emitted by heat must be identical in nature in whatever way they may exist in metals relative to atomic nuclei.

Emission, Thermodynamics of. Thermodynamics of Electron Emission, O. W. Richardson. Roy. Soc.—Proc., vol. 105, no. A732, Apr. 1, 1924, pp. 387-405. Deals with applications of thermodynamics to electron atmospheres in equilibrium with matter.

Kinetic Energy. The Kinetic Energy of Electrons Emitted from a Hot Tungsten Filament in an Atmosphere of Argon and of Hydrogen, J. F. Congdon. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 458-465, 3 figs. Average energy of electrons emitted from hot tungsten filament in vacuo is shown to be in close agreement with requirements of Maxwell's distribution law; presence of argon over wide range of pressures has no effect on measured average energy; presence of hydrogen, even at low pressures, appears to increase measured average energy considerably.

Mobilities, Variable. The Effect of Variable Electron Mobilities on the Formation of Negative Ions in Air, L. B. Loeb. Franklin Inst.—Jl., vol. 197, no. 1, Jan. 1924, pp. 45-46, 6 figs. Equation is deduced which is given in form originally worked out by Dr. M. Mooney, but later modified by writer to fit experiments.

Motion in Neon. The Motion of Electrons in Neon, V. A. Bailey. Lon., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 379-384, 3 figs. Investigation of behavior of electrons in neon; experimental results are given in tabular form.

ELECTROPLATING

[See also ELECTRODEPOSITION.]

Addition Agents. Studies on Electro-Plating, W. E. Hughes. Metal Industry (Lond.), vol. 24, nos. 15, 16, 17, and 18, and vol. 25, nos. 2, 3, 4, 5, and 12, Apr. 11, 18, 25, May 2, July 11, 18, 25, Aug. 1, and Sept. 19, 1924, pp. 345-347, 369-372, 393-395, 417-419, 25-27, 49-53, 73-75, 103-104, and 269-273, 6 figs. Addition agents, their use in practice and theoretical principles and explanations concerning function and action of such agents; effects of acid and gelatin on structure of electrodeposited zinc.

Anodes, Functions and Dissolution. Studies on Electro-Plating, W. E. Hughes. Metal Industry (Lond.), vol. 25, nos. 21, 22, 23, and 24, Nov. 21, 28, Dec. 5 and 12, 1924, pp. 491-493 and 496, 519-521, 543-546, and 567-568, 1 fig. Functions and dissolution of anodes.

Chromium Plating of Steel. Chromium Plating Steel Using Chromium Anodes, K. W. Schwartz. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 85-88. Results of experiments on effect of chromium sulphate on concentration at various current densities, effect of hydrogen ion concentration, effect on deposit of substituting chromium anodes in place of lead and of platinum anodes, and extent of passivity of chromium anodes after prolonged electrolysis.

Cleaning Solutions. The Value of Trisodium Phosphate as an Alkali Cleaner, R. P. Fulkerson. Brass Wld., vol. 20, no. 7, July 1924, pp. 237-239. Notes on emulsification method, which involves use of an alkali solution, for removal of oils from surfaces, in industrial processes such as electroplating, painting, and japanning. Details of tests made to determine cleaning power of solutions.

Developments. Recent Progress in Electroplating and Electroforming, W. Blum. Am. Electrochem. Soc.—Advance Paper No. 9, for meeting Apr. 24-26, 1924, pp. 129-134. Brief review of developments during post-war period, pointing out relations and possible significance of work completed or in progress.

Electron Theory and. Studies on Electro-Plating, W. E. Hughes. Metal Industry (Lond.), vol. 24, nos. 3 and 4, Jan. 18 and 25, 1924, pp. 49-52 and 73-76. The electron theory and electroplating. Jan. 18: Electron and electrolytic ion; electron theory applied to plating bath. Jan. 25: Phenomena of discharge at anode and cathode.

Machine-Gun Barrels, Relining. Electroplating Worn Machine Gun Barrels, W. W. de Sveshnikoff and H. E. Haring. Army Ordnance, vol. 5, no. 26, Sept.-Oct. 1924, pp. 503-504 and 544, 5 figs. Details of experiments conducted by authors in 1921 to determine whether a plating process could be used to reline machine-gun barrels. Results indicate that with information and methods then available process was not practicable. Pub. by permission U. S. Bur. Standards.

Nickel. See NICKEL PLATING.

Phonograph Matrices. The Manufacture of Phonograph Matrices, S. Wein. Metal Industry (Lond.), vol. 25, no. 19, Nov. 7, 1924, pp. 447-448. Describes technique of specific methods commonly used in two plants.

Research Department. Plating Research of the Bridgeport Brass Company, J. L. Christie. Metal Industry (N. Y.), vol. 22, no. 12, Dec. 1924, pp. 485-487, 1 fig. How research department helps plating department to increase and improve production.

Silver. See SILVER PLATING.

Silver Sheet Anodes, Blackening of. The Blackening of Silver Sheet Anodes, T. B. L. Cain. Metal Industry (Lond.), vol. 24, no. 25, June 20, 1924, pp. 593-594. Points out that there is much reason for belief that sulphur, as impurity in cyanide, is largely, if not wholly, responsible for this trouble of blackening of silver sheet anodes. Describes process of a simple preliminary treatment of cyanide, by means of which suitable purification is obtained.

Solutions. Studies on Electro-Plating, W. E. Hughes. Metal Industry (Lond.), vol. 24, nos. 7, 8, 9, and 10, Feb. 15, 22, 29, and Mar. 7, 1924, pp. 145-147 and 158, 169-170, 194-196, and 218-220. Composition of plating solutions.

Tungsten on Iron. An Attempt to Electroplate Tungsten on Iron, C. A. Mann and H. O. Hal-

vorsen. Am. Electrochem. Soc.—Advance Paper no. 2, for meeting Apr. 24-26, 1924, pp. 13-27, 1 fig. Investigation made to produce satisfactory electroplate of tungsten on iron and to study behavior of tungsten under different electrolysis conditions.

Zinc. See ZINC PLATING.

ELECTROSTATICS

Analytical Treatment of Problems. The Analytical treatment of the Fundamental Problems of Electrostatics (Die analytische Behandlung der Fundamentalprobleme der Elektrostatik), K. Hilebrand. Physikalische Zeit., vol. 25, no. 1, Jan. 1, 1924, pp. 8-13. Proposals of C. Neumann of so-termed element considerations and element potentials and their applications by him to plane curves, are now shown to afford, on rational application to three-dimensional space, possibility of solving in general manner fundamental problems of electrostatics, i. e., equilibrium distributions upon conductors of any given form; paper is mathematical throughout.

ELEMENTS

Atomic Concentration. Relations between the Atomic Concentration and the Mechanical, Thermal and Optical Constants of the Elements (Sur des relations entre la concentration atomique et des constantes mécaniques thermiques et optiques des éléments), P. Lasareff. Academie des Sciences—Comptes Rendus, vol. 178, no. 21, Mar. 19, 1924, pp. 1716-1718. Gives relations for a number of metals.

Chemical. The Systematic Detection of the Rarer Chemical Elements, A. A. Noyes and W. C. Bray. Chem. Revs., vol. 1, no. 3, Oct. 1924, pp. 277-291. A systematic, universally applicable scheme of qualitative analysis which includes as nearly as practicable all metal-forming elements, and which makes possible their detection when present in small quantity, even in association with large quantities of any other elements.

Disintegration of. See ATOMS, Structure of.

Metallic. See METALS.

Non-Metallic. The Non-Metallic Elements. Connexions between their Dielectric and other Physical Properties, G. L. Addenbrooke. Lond. Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 945-965, 1 fig. Consideration of two actions taking place when dielectric is placed in electric field; relation of attraction to energy reversibly stored; comparison of relative electric values found with relative values of other physical properties; comparison of electric actions with absolute melting points and with absolute boiling points; relation of relative molecular electric actions to heat of vaporization; relations with surface tensions; comparison with capillarity, etc.

Spectra, Ultra-Violet. On the Ultra-Violet Spark-Spectra of some of the Elements, R. J. Lang. Roy. Soc. Lond.—Philosophical Trans., vol. 224, no. A624, 1924, pp. 371-419, 4 figs. partly on supp. plates. Details of investigation on extreme ultra-violet spectra of a number of elements. and results obtained.

Study of. See ATOMS, Structure.

ELEVATED RAILWAYS

Car-Truck Repair. Repairing Motor Trucks for Subway and Elevated Railways, F. H. Colvin. Am. Mach., vol. 61, no. 22, Nov. 27, 1924, pp. 843-845, 5 figs. Methods employed at repair shop of N. Y. Rapid Transit Corpn. in Brooklyn; running truck under raised cars by their own power; special clamps for lifting trucks by wheels.

Cars. Passenger Comfort the Feature of the New Chicago "L" Cars. Elec. Ry. Jl., vol. 63, no. 2, Jan. 12, 1924, pp. 55-59, 6 figs. Describes steel motor cars recently put in service by Chicago Elevated R. R.; low first cost and maintenance; plush seats, liberal ventilation, and insulation against noise and cold; wood roof necessary for overhead trolley.

Germany. Remarkable Construction Work in the Berlin and Hamburg Elevated Railways (Bemerkenswerte Bauausführungen bei der Berliner und Hamburger Hochbahn), M. Kress. Bautechnik, vol. 2, no. 37, Aug. 29, 1924, pp. 408-412, 11 figs. Reinforced concrete construction, tunneling under houses and rivers, etc.

Subways, Surface Lines and. Elevated Railways. Ry. Engr., vol. 45, no. 537, Oct., 1924, pp. 359-363, 10 figs. Comparison between surface lines, elevated railways and subways. Elevated railway in Philadelphia.

ELEVATORS

Construction. Progress in Elevator Construction (Fortschritte im Aufzugsbau), Braun. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 21, Nov. 15, 1924, pp. 199-200. Discusses increased speed in operation and safety, steel for elevator guides, compressed-air for braking, safety devices, etc.

Drum-Type Machine. Operation of Electric Elevator Machines—Drum-Type Equipment, F. A. Annett. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 609-612, 5 figs. Describes different classes of elevator machines in use and operation of drum-type machine both for overhead and basement installations.

Electric. The New Regulations of the Swiss Society of Engineers and Architects for Elevators and Lifts (Quel est le but des nouvelles prescriptions de la S. I. A. concernant les installations d'ascenseurs et de monte-charges?), A. Bernheim. Bulletin Technique de la Suisse Romande, vol. 50, no. 14, July 5, 1924, pp. 176-179, 1 fig. Critical review of new regulations showing their shortcomings and suggesting improvements.

Electric, Operation of. Operation of Electric Elevator Machines—General Principles, F. A. Annett. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 414-416, 6 figs. Explains operation of semi-magnetic controlled elevators, describes the different automatic stopping devices, and tells how to adjust terminal landing limits.

Gearless Traction Motor and Brake. Mechanical Features of the Gearless Traction Elevator Motor and Brake, J. J. Matson. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 390-394, 7 figs. Shows how manufacturer's engineers have made thorough study of each part and developed a capable elevator hoist.

Grain. See GRAIN ELEVATORS.

Hand and Power. The Design and Construction of Hand and Power Elevators. Mech. Wld., vol. 75, nos. 1932, 1934, 1937, and 1939, Jan. 11, 25, Feb. 15, and 29, 1924, pp. 24-25, 49-51, 98-100, and 129-130, 13 figs. Deals with elevators for raising or lowering goods of solid form between basement and intervening floors of a building or factory.

Passenger. Electric Passenger Lifts, H. Marrayat. Instn. Elec. Engrs.—Jl., vol. 62, no. 328, Apr. 1924, pp. 325-341, and (discussion) 341-349, 12 figs. Plea for British investigation and design in order to produce elevator more especially suitable to conditions in England than is possible by following American practice too closely; outlines methods employed by author in calculating elevator capacity required in building; comparison between drum and sheave driving; refers to new system of control, called auto-pilot; safety devices.

Passenger, Time-Velocity Characteristics. Time-velocity Characteristics of the High-speed Passenger Elevator, Bassett Jones. Gen. Elec. Rev., vol.

27, no. 2, Feb. 1924, pp. 111-120, 5 figs. Discusses psychology of elevator passenger, physiological effect of acceleration and retardation on him, possible improvements in service through increased car velocity, quicker gate and door operation, better signal systems, and use of automatic stops; discusses velocity and advances method of analyzing time-velocity relations assisting in designing high-grade high-speed elevator installations.

Standardization. Elevators Are Being Standardized, A. G. McLaughlin. Contract Rec., vol. 38, no. 47, Nov. 19, 1924, pp. 1147-1149. Manufacturers are developing machines adapted to every condition of building construction. Entire equipment is being made to conform to standards. Typical elevator arrangements.

Standards. Purpose of the S. I. A. Regulations for Construction and Operation of Elevators (Was bezwecken die S. I. A.-Vorschriften für Einrichtung und Betrieb von Aufzügen?), A. Bernheim, Jr. Schweizerische Bauzeitung, vol. 83, no. 24, June 14, 1924, pp. 280-284, 1 fig. Review of standards by S. I. A. commission, suggesting further improvements and more stringent regulations.

Swinging-Cradle Type. Swing- or Finger-tray Elevator for Handling Fresh Fruit in Crates, Barrels and Cases, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 16, Oct. 1924, pp. 445-447, 3 figs. Describes swinging-cradle type of elevator, great size of which is necessary in order to accommodate largest crates and barrels in which fruit is imported; consists of five parts, viz., main steel structure, two endless chains, cradles, feeding-on and delivering-off gear.

Variable-Voltage Control. Variable Voltage Control Systems as Applied to Electric Elevators, E. M. Bouton. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 52-63, 16 figs., and (discussion) in no. 11, Nov. 1924, pp. 1070-1081, 11 figs. Conclusions in favor of variable-voltage over rheostatic-control system, with regard to speed, acceleration and retardation, speed control and regulation, efficiency and economy of power consumption, maintenance, and safety.

Winding-Machine Manufacture. Building Electric Elevator Winding Machines, H. P. Armson. Can. Machy., vol. 31, no. 12, Mar. 20, 1924, pp. 15-18, 5 figs. Machine shop practice utilized in speeding production at plant of Turnbull Elevator Co., Toronto, Can., in manufacturing electric geared traction elevator equipment.

EMERY

Peekskill, N. Y. Peekskill District Now Supplies American Emery Ore Exclusively. Abrasive Industry, vol. 5, no. 3, Mar. 1, 1924, pp. 65-66, 1 fig. Analysis of Peekskill (N. Y.) emery and notes on method of working.

EMPLOYEES

Compensation. See WORKMEN'S COMPENSATION.

Individual Differences of. What Makes Employees Differ? D. A. Laird. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 184-190, 5 figs. Discusses from point of view of present-day science factors connected with individual differences with which empolyer should be familiar.

Inventions of. See INVENTION; INVENTIONS.

Ownership, Economics of. Broad Economics of Employee Ownership, T. N. Carver. Elec. Ry. Jl., vol. 64, no. 15, Oct. 11, 1924, pp. 613-616. Points out that employee ownership is especially desirable with public utilities; modern business improves by increasing rather than by decreasing supply of capital. Abstract.) Paper read before Am. Elec. Ry. Assn.

Rating Scales. Personal Opinion Records and Rating Scales, Henry C. Link. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 78-80, 1 fig. Suggestions for simple rating system; points out value of system of recording personal opinions as substitute for or supplement to more objective production records.

Recording Worker's Personality. Recording the Worker's Personality, D. A. Laird. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 307-314, 13 figs. Going beyond working record in promoting employees, that is, supplementing records of employee's work with records which will furnish key to his personality.

Relations with. See INDUSTRIAL RELATIONS.

Representation. See EMPLOYEES' REPRESENTATION.

Vacation Plans for. Vacation Plans for Wage Workers. Iron Age, vol. 114, no. 23, Dec. 4, 1924, pp. 1471 and 1517-1518. Information obtained from large number of manufacturers in 26 states and Canada; various methods adopted. Compiled by Indus. Relations Staff, Curtis, Fosdick & Belknap, Attorneys, New York.

EMPLOYEES' REPRESENTATION

Czechoslovakia. Operation of Works Committees in Czechoslovakia, 1922. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 44-47. New law on German model applying to establishments of at least 30 employees does not find much favor. Translated from Soziale Praxis and Archiv für Volkswohlfahrt.

Examples of. Discussion on Employee Representation, A. H. Young. Iron Age, vol. 114, no. 12, Sept. 18, 1924, pp. 689-691. Some facts and factors which measure its success. Examples taken from periods of strife.

Railways. Employee Representation on the Railroads, H. C. Metcalf. Ry. Age, vol. 77, no. 24, Dec. 13, 1924, pp. 1062-1065. Suggestions for coöperation between employers and employees; forces shaping employee representation; relation between employee representation and trade unions; essentials of employee representation.

Work Councils. Shop Councils Develop Practical Co-operation. Ry. Age, vol. 77, no. 4, July 26, 1924, pp. 153-155, 1 fig. Particulars of plan of Union Pacific System which meets with approval of officers and men alike.

EMPLOYEES, TRAINING OF

Coöperative Education. Training the Future Employee Through Cooperative Education, H. H. Bliss. Jl. of Electricity, vol. 52, no. 6, Mar. 15, 1924, pp. 205-206. Describes plan which is being widely adopted in the West, in which firms cooperate with college in training future leaders of industry; includes alternate monthly periods of study and employment, coördinated so that work serves practically as laboratory part of a unified course of training.

Evening School. Helping the Worker by Education, S. W. Ashe. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 524-525. How evening school at Pittsfield Works of Gen. Elec. Co. provides educational opportunities for employees.

Foremen. A Successful Experiment in Industrial Education, D. J. Roach. Chem. & Met. Eng., vol. 31, no. 7, Aug. 18, 1924, pp. 272-273. How one large company is training its foremen and operating bosses in economics, mathematics, and technology of its industry.

See also FOREMEN, Training.

Locomotive Drivers. Note on the Reorganisation of Technical Instructions for Enginemen on the Belgian State Railways, N. Rulot and E. Hennig. Int. Ry. Congress Assn.—Bul., vol. 6, no. 4, Apr. 1924, pp. 247-268, 11 figs. Reorgan-

ization comprises a series of measures tending to: arrange for classes to be sufficiently frequent and continuous, working at same time to a plan; as far as possible to specialize as regards instructors; and improve, complete, and make uniform apparatus used in class rooms.

Railway, in Air-Brake Equipment. Instructing Railway Employes in Air Brake Equipment, J. P. Stewart. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1131-1132. Methods of interesting and instructing employees in operation and maintenance of air-brake equipment; value of instruction cars and instruction rooms; class construction preferred. (Abstract.) Paper read before Air Brake Assn.

Railway-Shop. See RAILWAY SHOPS, Training of Forces.

EMPLOYMENT MANAGEMENT

Apprentices, Placing of. Connection Between Suitability Tests and Observation of Capability in Apprentices in the Metal Industry (Zusammenhänge zwischen Eignungsprüfung und Leistungsbeobachtung in der Praxis bei Lehrlingen der Metallindustrie), R. Bolt. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 450-454, 5 figs. Discusses practice at Siemens Schuckert Works for placing apprentices according to ability.

Central Stations. Power Plant Personnel, K. W. Stillman. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 633-636, 5 figs. Selection, training, and promotion of steam-power-station employees.

Employee Specifications. Employee Specifications, P. M. Atkins. Indus. Mgmt. (N. Y.), vol. 68, no. 2, Aug. 1924, pp. 115-118. Establishing standards similar to those used in purchase of materials.

Employee's Industrial Past. The Employee's Past, D. A. Laird. Indus. Mgmt. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 152-160, 11 figs. Value of dispassionate records in employment work.

Labor Distribution. The Decimal Method of Labor Distribution, Jos. M. Schappert. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, p. 98. Advantages of decimal system over common fraction method; outline of decimal system which may be established to betterment of labor costs in almost any organization.

Labor Policy. Work of the Industrial Executive, B. A. Franklin. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 611-614. Practical points on labor policy.

Labor Turnover. See LABOR TURNOVER.

Personal-Interview Method. Pitfalls of the Employment Interview, D. A. Laird. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 58-62, 4 figs. Pitfalls of personal interview employment procedure, and suggestions for eliminating them.

Physiological Examination. Functions of Physiology in the Science of Work (Die Aufgaben der Physiologie in der Arbeitswissenschaft), E. Atzler. Technik u. Wirtschaft, vol. 17, no. 8, Aug. 1924, pp. 173-180, 7 figs. Discusses physiological, in addition to medical, examination to determine suitability of work and rational work, and gives examples of turning cranks and lifting weights.

Practical Psychology. Psychology Dons Overalls, D. A. Laird. Indus. Mgmt. (N Y), vol. 67, no. 4, Apr. 1924, pp. 204-211, 4 figs. Economic value of practical psychology in industry; insight into practical workings of economic psychology, stripped of its all too often encountered charlatan trappings.

Promotion Methods. Methods of Promoting Industrial Employees, P. F. Gemmill. Indus. Mgmt. (N. Y.), vol. 67, no. 4, Apr. 1924, pp. 235-247. Research into and analysis of methods of 130 representative industrial concerns.

Promotion Policy. Reducing Labor Turnover by Promotion, K. H. Condit. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 539-541, 2 figs. Seventh article in Gilbreth series describing personnel policy; doing away with blind-alley jobs; helping employee to reach highest position he can hold.

Psychological Tests. See PSYCHOLOGICAL TESTS.

Railways. Inspection of Periodic Examinations of Physical and Psychical Faculties of Operators (Surveillance des examens périodiques des facultés physiques et psychiques des agents), L. Bacqueyrisse. Industrie des Tramways, vol. 18, no. 215, Nov. 1924, pp. 448-476, 13 figs. Report presented to Int. Congress in Paris. Deals with conditions of employment from points of view of age, sex, and physical conditions; alcoholism and how to reduce its effects.

See also RAILWAY OPERATION, Personnel Work.

Rating Shop Employees. A Practical System for Rating Shop Employees, A. H. Rodrick. Factory, vol. 32, no. 1, Jan. 1924, p. 32, 1 fig. Describes system of marking efficiency of shop employees used in shops of Naval Torpedo Station.

Selecting Employees. Picking Competent Molders, R. J. Waldo. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 307-309, 3 figs. Exacting methods for determining applicant's fitness to fulfill position recognized as desirable; trade test method of interviewing prospective employees successful in choosing men for foundry work.

The Industrial Psychology of Individual Differences, D. A. Laird. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 71-77, 14 figs. Discusses basic facts for selecting workers.

Service Department. Organizing Personnel Work in a Textile Mill, E. C. Gould. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 280-282. Describes plan of service department of a Lowell textile mill, designed to give mill executives responsibility for initiating and carrying out ideals of satisfactory industrial relations.

EMULSIFICATION

Theory of. The Theory of Emulsification, P. Finkle, H. D. Draper and J. H. Hildebrand. Leather Chemists Assn.—Jl., vol. 19, no. 4, Apr. 1924, pp. 197-207. Present status of theory of emulsification; types and relative stabilities of emulsions formed by aid of various soaps explained by aid of theory of orientation of soap molecules in interface; experimental data upon type and relative stabilities of emulsions of various liquids with water.

EMULSIONS

Oil, Methods of Destroying. Methods of Destroying Oil Emulsions, L. A. Gurvic. Petroleum & Oil-Shale Industry, vol. 5, no. 11-12, Nov.-Dec. 1923, pp. 613-619. Enumerates chief methods employed and considers them theoretically, namely, mechanical, physical, and physico-chemical methods; concludes that no one method is universally applicable, different emulsions requiring different treatment; proposed establishing central experimental station for determining best method to be employed in every given case. (In Russian, with brief abstract in English.)

Separators. The "Metan" Crude Oil Emulsion Separator (Rohölemulsion-Abscheider "Metan"), L. Burek. Petroleum, vol. 20, no. 34, Dec. 1, 1924, pp. 1887-1891, 3 figs. Details of process and apparatus for separating crude oil and emulsion, in which crude is fed continuously under pressure through a preheating system with a vertical tank, where emulsion particles remain long enough for separation of phases to be carried out.

ENAMELING

Automobiles. Low-Bake Automobile Body Enamels, C. R. Bragdon. Automotive Mfr., vol. 66, no. 5, Aug. 1924, pp. 8-9. Discusses advantages of this form over others; durability, economy, simplicity of operation plus beauty and color variety equal to paint and varnish. Abstract of paper read before Detroit Body Builders' Convention.

Process of and Equipment for Fender and Body Enameling, G. Lefebvre. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 195-208, 26 figs. Improvements in mechanical equipment and processes employed in various car-assembling plants of large automobile building company, with special attention to processes for enameling fenders and sheet-metal parts and such small parts as various stampings, forgings and malleables.

Cast-Iron Ware. European Practice in the Manufacture of Enameled Cast Iron Ware, J. Grunwald. Am. Ceramic Soc.—Jl., vol. 7, no. 2, Feb. 1924, pp. 118-121. Review of European practice, particularly as employed in Austria and Germany.

Cooking Utensils, Manufacture. Manufacturing Enameled Ware Utensils, F. G. White. Blast Furnace & Steel Plant, vol. 12, no. 2, Feb. 1924, pp. 124-126, 4 figs. See also Forging—Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 43-45, 4 figs. Methods employed at Granite City factory of Nat. Enameling & Stamping Co.; quality of steel and careful annealing and pickling are essential to successful enameling of cooking utensils; removal of die lubricant.

Electric Furnaces for. Enameling Cast-Iron Ware In Electric Furnaces, H. E. Kennedy. Chem. & Met. Eng., vol. 30, no. 5, Feb. 4, 1924, pp. 219-221, 5 figs. Advances in construction and disposition of metallic resistors have simplified use of electricity for this purpose.

Electric Ovens for. Electric Japanning, H. Allen. Am. Electrochem. Soc.—Advance Paper, for meeting Oct. 2-4, 1924, pp. 443-450. Review of development of electrically heated enameling ovens and progress made in art of enameling automobile parts at Dodge motor-car plant.

Fish Scaling in. Principles of Enameling, H. F. Staley. Ceramist, vol. 4, no. 6, Sept. 1924, pp. 351-362. Fish scaling in enamels on sheet steel and iron.

Furnaces. See ELECTRIC FURNACES, Enameling.

Principles. Principles of Enameling, H. F. Staley. Ceramist, vol. 4, nos. 1, 2, 3, 4, and 6, and vol. 5, nos. 1 and 2, Apr., May, June, July, Sept., Oct., and Nov. 1924, pp. 6-14, 87-98, 167-178, 229-236, 351-362, 29-35, and 96-104, 1 fig. Apr.: Calculation of melted weight, percentage loss on melting and coefficient of expansion of enamels without use of chemical symbols. May: Feldspar problem in enamel making. June: Specifications for feldspar. July: Calculation of percentage composition of melted enamels without use of chemical symbols. Sept.: Fish scaling in enamels on sheet steel and iron. Oct.: Effect of size of grain of feldspar on melting of enamels. Nov.: Relative accuracy of Schott, and English and Turner factors for coefficients of thermal expansion of enamels.

Sheet-Iron and Steel Warpage. Factors Affecting the Warpage of Sheet Iron and Steel in Enameling, R. R. Danielson, T. D. Hartshorn and W. N. Harrison. Am. Ceramic Soc.—Jl., vol. 7, no. 5, May 1924, pp. 326-341, 7 figs. Effects upon warpage of different methods of cleaning metal, duration of firing periods, scaling practices, gages of metal, types of enamel, etc., are studied.

Sheet Metal for Vitreous. The Development of Sheet Metal for Vitreous Enameling, Jas. A. Aupperle and How. E. Brooks. Ceramist, vol. 4, no. 5, Aug. 1924, pp. 294-303, 8 figs. Discusses use of Armco ingot iron in vitreous-enameling industry.

Smelters. Types of Enamel Smelters, J. E. Hansen. Fuels & Furnaces, vol. 2, no. 2, Feb. 1924, pp. 141-144, 2 figs. Reverberatory and rotary smelters; experimental types.

Steel Cleaning. Cleaning Steel For Enameling. Fuels & Furnaces, vol. 2, no. 4, Apr. 1924, pp. 383-384. Tank versus scaling methods for removing greases and oils in enameling plants.

ENAMELS

Automobile Bodies. See AUTOMOBILES, Bodies, Finishing.

Firing. The Effect of Furnace Atmosphere on the Firing of Enamel, R. D. Cooke. Am. Ceramic Soc.—Jl., vol. 7, no. 4, Apr. 1924, pp. 277-281. Fragmentary data on firing of enamel, including reactions involved, relation of furnace space to area of enameling surface, etc.

Sheet-Steel. Effect of Zirconia in Enamels for Sheet Steel, H. G. Wolfram. Am. Ceramic Soc.—Jl., vol. 7, no. 1, Jan. 1924, pp. 1-13, 5 figs. Investigation concerned with essential properties of kitchen ware enamels. Results obtained from additions of zirconia to raw smelter batch of both ground and cover enamels, also from substitution of zirconia for tin oxide in mill batch.

ENERGY

Conservation. New Ways of Conserving Energy (Neue Wege der Energiewirtschaft), Löffler. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 8, Feb. 23, 1924, pp. 161-169, 18 figs. Present-day utilization of fuel energy; examples from mining and metallurgical, chemical and automotive industries; saving effected through high speed, high pressure and temperature drops; control of state of heat, especially through cooling; Diesel engines for trucks; electrical and mechanical power transmission in automobiles; gas and oil turbines; high-pressure steam turbines and boilers; use of high pressure and high temperature in chemical industry—refinement of fuel, liquefaction of coal; principles of modern high-pressure design and operation.

The Conservation of Energy (Energiewirtschaft) R. Reischle. Serial article in Zeit. des Bayerischen Revisions-Vereins, vol. 27, beginning June 30, and ending Dec. 31, 1923. Notes on different sources of energy and their utilization, with special consideration of conditions in Germany.

Transforming and Distributing. The Value of Efficiency in Transforming and Distributing Energy, Chas. E. Lucke. Mech. Eng., vol. 46, nos. 6 and 7, June and July 1924, pp. 317-324 and 380-385, 10 figs. Importance of energy costs; estimates of costs for primary energy and for its power-plant transformation into electrical energy through appropriate steps.

Utilization of Natural Sources. Contribution to the Theory of the Utilization of Natural Power Sources (Beitrag zur Theorie der Ausnützung von Naturkräften), Rob. I. Novotny. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 5, Feb. 2, 1924, pp. 101-106, 11 figs. Influence of working time and idleness of power plant on utilization of energy contained in a natural power source; improving power utilization and increasing efficiency by use of energy storage; comparison of cost of power generation with and without storage of energy.

ENGINEERING

Chemical Industry. Chemical Engineering in Industry, H. C. Parmelee. Chem. & Met. Eng., vol. 31, no. 6, Aug. 11, 1924, pp. 218-222. Review of development of profession, estimate of its present status and its responsibilities and extrapolation to future.

Electrical. A Hundred Years of Electrical Engineering, G. W. O. Howe. Engineering, vol. 118, no. 3058, Aug. 8, 1924, pp. 193-195. Briefly reviews developments and present position from Faraday's electro-motor. Abstract of paper read before Eng. Sec., British Assn. at Toronto.

Human Factor in. The Human Factor in Engineering, S. C. Godfrey. Military Engr., vol. 16, no. 87, May-June 1924, pp. 180-183, 1 fig. Discusses "human engineering" or treatment of human tools with as much consideration as materials; including workers' councils, etc.

Literature. Engineering Literature, D. McNicol. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 131-135. Critical review of tendencies in technical literature, with statement of some of problems of publication.

Mechanical, in Military Service. The Progress of Mechanical Engineering in the Military Service, G. LeQ. Martel. Instn. Mech. Engrs.—Proc., no. 2, Jan. 1924, pp. 101-138, 9 figs. Brief historical survey of work of mechanical engineer in army up to outbreak of world war; how work of mechanical engineer was organized and carried out during war and progress made since war; account of work in connection with repair of munitions of every kind in field.

ENGINEERING FOUNDATION

Activities. Some Work Done by Engineering Foundation, Alfred D. Flinn. Boston Soc. Civ. Engrs.—Jl., vol. 11, no. 8, Oct. 1924, pp. 376-379. Facts of its activities.

ENGINEERING SOCIETIES

American Engineering Council. The Work of the American Engineering Council, L. W. Wallace. La. Eng. Soc.—Proc., vol. 10, no. 4, Aug. 1925, pp. 203-213. Purpose of organization is to be agency through which engineering profession may render an essential public service; what Council has been doing; classification and compensation of government employees; government reorganization.

ENGINEERS

Compensation of. Compensation of Practicing Engineers: A Critical Study, C. L. Bogert. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1103-1105. Merits and disadvantages of various systems of payment for service. Per diem basis for purely consulting practice and bonus and penalty for other independent work recommended.

Coal Mining. See COAL MINES, Engineers, Opportunities for.

Consulting. The Costs of a Consulting Engineering Practice. Engineer, vol. 137, no. 3553, Feb. 1, 1924, pp. 113-114, 2 figs. Author points out importance of having accurate knowledge of costs of consulting-engineering practice and gives results of his own experience.

Ethics Code. Advances in Engineering Ethics, C. E. Drayer. Professional Engr., vol. 9, no. 10, Oct. 1924, pp. 13-15. Code of ethics drafted by national technical societies; case method of engineers' applied ethics; specific principles of good professional conduct; relations of engineers to employees and to other engineers.

Highway, Training of. Technical Training for Highway Engineers, R. DeL. French. Can. Engr., vol. 47, no. 2, July 7, 1924, pp. 141-142. Shows why highway engineer needs thorough and careful training; natural qualities necessary in student; three divisions of highway engineering course are technical, financial, and economical.

Low Salaries, Cause of. What Is the Matter with Engineering? G. M. Butler. Professional Engr., vol. 9, no. 12, Dec. 1924, pp. 10-12 and 18. Refers to low engineering salaries paid to experienced engineers, and to misleading and vicious advertising.

Mathematics and. See MATHEMATICS, Engineering.

Public Obligations. The Engineer: His Abilities and His Public Obligations, John L. Harrington. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 31-34. Need of engineer in Government; shortcomings of present educational system; engineer and transportation problems; engineer and public business; licensing and status of engineering profession.

Refrigerating, Relation to Employer. Relation of the Engineer to His Employer, W. S. Vivian. Ice & Refrigeration, vol. 66, no. 1, Jan. 1924, pp. 12-16. Qualifications of engineer.

Relation to Finance. The Engineer's Relation to Finance, L. W. Mayer. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 163-167. Why engineering profession does not rank higher; confidence in engineer held by banker; points out that there are more failures owing to poor financing than to poor engineering, and that financier underestimates degree of engineer's assistance.

Responsibility of. The Engineer's Responsibility, M. Knowles. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 4, May 1924, pp. 143-158 and (discussion) 159-162. Definition of engineer; public influence of engineering work; distribution of responsibility; what engineer can do for himself; directing public opinion; etc.

Social Challenge to. The Social Challenge to the Engineer, Geo. A. Horne. Refrig. Eng., vol. 11, no. 6, Dec. 1924, pp. 200-201 and 207. Points out that social needs of humanity should constitute challenge to all groups, and that engineer by training and by occupation is peculiarly adapted to accept this social challenge as one in which he can play important part in bringing to pass the desired result; he can interpret findings of science and translate them into practical ways of usefulness for benefit of mankind.

Tasks and Future. The Imperfect Art of Enginering, F. C. Wright. Cornell Civ. Engr., vol. 32, no. 8, May 1924, pp. 107-110. Popular misconception of engineer and his work; tasks of engineer; points to stress in learning profession.

Training. The Training of Works Students (Praktikantenausbildung), J. Hanner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 569-573. Length of training course; training in and outside of shop.

ENGINEHOUSES

[See also TERMINALS, LOCOMOTIVE.]

Concrete Rectangular. England's First Reinforced Enginehouse, D. R. Lamb. Ry. Age, vol. 76, no. 5, Feb. 2, 1923, pp. 327-340, 8 figs. Southern Railway completes rectangular structure of novel design at Feltham, England.

Lighting. Roundhouse Lighting on the Elgin, Joliet & Eastern, A. W. Ryan. Ry. Elec. Engr., vol. 15, no. 7, July 1924, pp. 222-224, 6 figs. All conduit for lighting placed in concrete pillars or floor; single lead-covered conductor for welding distribution.

See also RAILWAY SHOPS, Lighting.

Turntables. A Remarkable Record in a Turntable Renewal, Ry. Age, vol. 76, no. 37, June 21, 1924, pp. 1759-1761, 5 figs. Southern Pacific

bridge crews replace 70-ft. structure with 100-ft. in 1 hr. 46 min.

New Turntable Installed in Record Time. Ry. Rev., vol. 74, no. 26, June 28, 1924, pp. 1241-1244, 7 figs. Southern Pacific Co. bridge and building forces replace old 35-ton, 70-ft. deck girder turntable by 90-ton, 100-ft. steel truss table in 1 hr. 46 min.

The Bethlehem Twin-Span Turntable. Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, pp. 357-359, 4 figs. Describes adaptation of rigid fulcrum to purposes of turntable.

Types of Turntable Developed for Heavier Locomotives. Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 964-967, 6 figs. Continuous and 2-span tables replace cantilever type; larger and heavier locomotives introduce problems not present with light power; lower maintenance cost and quicker operation.

Unusually Quick Installation of Longer Turntable, H. S. Clarke. Ry. Rev., vol. 74, no. 14, Apr. 5, 1924, pp. 644-649, 9 figs. Delaware & Hudson Co. replaces balanced turntable with longer twin span table in remarkably short time.

Wiring and Lighting. Enginehouse Wiring and Lighting on the Santa Fe. Ry. Elec. Engr., vol. 15, no. 1, Jan. 1924, pp. 13-16, 4 figs. Wires carried in lead-coated wrought-iron water pipe, and both wall and overhead types reflectors used; threads and fittings lead coated by wiremen.

ENGRAVING MACHINES

Design. Design of Engraving Machines, L. Braren. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 663-668, 13 figs. Principles underlying operation of different designs of engraving machines; describes various forms of pantographic mechanisms; different types of cutters and machines employed in European practice.

Engraving Machines (Graviermaschinen), L. Braren. Werkstattstechnik, vol. 18, no. 3, Feb. 1, 1924, pp. 47-51, 15 figs. Study of construction elements peculiar to such machines and information on a number of new solutions of problems involved.

ENTROPY

Absolute-Value Calculation. Calculation of Absolute Value of Entropy by Means of Third Law of Thermodynamics (Die Berechnung des absoluten Wertes der Entropie mit Hilfe des 3. Wärmesatzes), Schmolke. Wärme, vol. 47, no. 40, Oct. 3, 1924, pp. 465-468, 1 fig. Shows under what conditions third law may be used for determination of entropy.

Diagram for Ammonia. See AMMONIA, Temperature-Entropy Chart.

Diagram for Internal-Combustion Engine. See INTERNAL-COMBUSTION ENGINES, Temperature-Entropy Diagram.

EOTVOS TORSION BALANCE. See PROSPECTING, Electrical.

ESCALATORS

Italy. Escalators for the Urban Station in Naples of the Direct Rome-Naples Line (Scale mobili per il tratto urbano in Napoli della linea direttissima Roma-Napoli), E. D'Andrea. Rivista Tecnica delle Ferrovie Italiane, vol. 25, nos. 5 and 6, May 15 and June 15, 1924, pp. 159-170 and 208-212, 8 figs. Details of design of escalators at stations of Montesanto and Piazza Cavour, also escalators in London stations.

ETHER

Theory. On the Subject of Ether (Au sujet de l'éther). G. Moressée. Revue Universelle des Mines, vol. 3, no. 2, series 7, July 15, 1924, pp. 62-104, 11 figs. Discusses mechanism of waves, calculation and laws of very short waves, solar energy, calorific waves, effect of longitude.

ETHICS

Engineers' Code. See ENGINEERS, Ethics Code.

ETHYL CHLORIDE. See REFRIGERANTS, Ethyl Chloride.

EVAPORATION

Air-Current. The Effect of a Current of Air on the Rate of Evaporation of Water Below the Boiling Point, G. W. Himus and J. W. Hinchley. Chem. & Industry, vol. 43, no. 34, Aug. 22, 1924, pp. 840-845, 11 figs. Deals with certain aspects of evaporation of water in currents of air and treats of evaporation from water surfaces at different temperatures under varying conditions of draft.

Compression Method. Evaporation by Compression (Druckverdampfung), K. Tschaskalik. Wärme- u. Kälte-Technik, vol. 26, nos. 20, 21, and 23, Oct. 15, Nov. 1, and Dec. 1, 1924, pp. 187-189, 194-195, and 218-219, 5 figs. Discusses three-stage evaporation without condenser and its application in sugar industry.

Heat of. Heat of Vaporization, A Function of the Temperature, M. M. Green. Am. Chem. Soc.—Jl., vol. 46, no. 3, Mar. 1924, pp. 544-545. Calculation devised to show that if heat of vaporization is assumed to be function of temperature alone, the same function is to be used for all substances but differing in constants involved; conclusion is arrived at which indicates approximate limits of accuracy of such relation.

The Heat of Vaporization and the Pressure of Saturated Vapor at Very Low Temperatures (Ueber die Verdampfungswärme und den Druck gesättigter Dämpfe bei sehr niedrigen Temperaturen), A. Brandt. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 406-408, 3 figs. Discussion of theorem of Nernst, Clapeyron's equation, and deduction thereof by E. Ariès.

See also LIQUIDS, Heat of Evaporation.

Liquids. See LIQUIDS, Evaporation.

Water. Evaporation of Small Drops of Water (Die Verdampfung kleiner Wassertropfen), N. Gudris and L. Kulikowa. Zeit. für Physik, vol. 25, no. 2, July 2, 1924, pp. 121-132, 6 figs. Experiments with drops of 10^4 to 10^5 cm. diameter show that with increasing difference of $p_k - p_0$, velocity of evaporation increases; by reducing tension above drop the evaporation process may be retarded or even reversed so that drop will increase in volume.

EVAPORATORS

Chemical Plants. Heating an Evaporator with the Exhaust from Condensing Engines, F. H. Nickle. Chem. & Met. Eng., vol. 31, no. 6, Aug. 11, 1924, pp. 226-228, 3 figs. Device designed to act as condenser for multi-expansion engines and evaporator for chemical plant service at same time.

Continuous-Flow. The Continuous Flow Evaporator, M. C. Stuart. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 55-65, 7 figs. Describes new evaporator, design of which embodies novel features improving purity, capacity, economy and operation.

Heat Balance, Adaptation to. Adapting Evaporators to Heat Balance, E. H. Chapin. Power Plant Eng., vol. 28, nos. 10 and 11, May 15 and June 1, 1924, pp. 534-536 and 588-591, 18 figs. May 15: Vital features of evaporator design.

June 1: Heat balance of cycles in which evaporation is accomplished with steam extracted from main turbine.

Heat Transmission from. See HEAT TRANSMISSION, Evaporators.

Low-Pressure. Low-Pressure Evaporators, E. Ellsberg. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 3, Aug. 1924, pp. 434-465, 5 figs. Deals with submerged-coil type. Based on author's experience as planning and drafting superintendent at Navy Yard, Boston, in design, installation, and operation of low-pressure evaporators on several vessels of the Navy.

Multiple-Effect. Designing an Efficient Evaporator, H. K. More. Chem. & Met. Eng., vol. 30, no. 7, Feb. 18, 1924, pp. 274-278, 7 figs. Example of how fundamental principles underlying multiple-effect evaporation can be applied on commercial scale to industrial materials.

Refrigerants. Evaporating Systems for Refrigerants, W. F. Davis. Power Plant Eng., vol. 28, no. 4, Feb. 15, 1924, pp. 250-251. Points out that evaporators should have in a measure all general qualities of good steam boiler. (Abstract.) Paper read before Nat. Assn. Practical Engrs.

Steam-Jacketed, Heat Transfer in. Heat Transfer in Steam-Jacketed Evaporators, H. L. Olin, M. H. Dowell and C. M. Toynbee. Chem. & Met. Eng., vol. 31, no. 3, July 21, 1924, pp. 116-119, 3 figs. Determining overall transmission and film coefficients as well as operating efficiencies on plant equipment over a wide range of industrial conditions.

Sugar-Factory. Principles of Evaporation and Sugar Factory Evaporators, J. O. Frazier. Nat. Engr., vol. 28, no. 5, May 1924, pp. 204-208, 1 fig. Comments and historical data on development of evaporating apparatus for various purposes. Principles of multiple-effect evaporators. Temperature and pressure relations. Description of a standard multiple-effect evaporator and its operation.

See also SUGAR, Evaporators.

Types. An Economic Study of Evaporators, T. Fuwa. Chem. & Met. Eng., vol. 31, no. 5, Aug. 4, 1924, pp. 185-188, 2 figs. Cost of installation and operation of five general classes of evaporators and discussion of variable factors.

Evaporating and Drying Plant, S. G. Ure. Chem. & Industry, vol. 43, nos. 12, 14 and 15, Mar. 21, Apr. 4 and 11, 1924, pp. 294-303, 350-354, and 374-379, 22 figs. Types of evaporators; heat transference; single- and multiple-effect evaporators; thermo-compression; chemical action; adsorption; addition or removal of heat; discontinuous and continuous dryers.

Evaporators Furnish Distilled Make-Up Water. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 485-488, 6 figs. Essential features of evaporators of different makes.

Vacuum. Calculation of Heating Surface for Vacuum Evaporators (Calcul des surfaces de chauffe dans les appareils d'évaporation sous le vide), Dessin. Arts et Métiers, vol. 77, no. 47, Aug. 1924, pp. 287-302, 8 figs. Principle of multiple-effect vacuum evaporators; determination of heating surface and coefficient of evaporation; temperature drop; apparatus of single, triple, and quadruple effect.

EXCAVATING MACHINERY. See CONSTRUCTION WORK, Machinery for; EXCAVATORS.

EXCAVATION

Drainage Ditches. See DRAINAGE, Ditches.

Earth. Large Scale Getting and Conveying in Earth Works (Massengewinnung und Förderung bei Erdbewegungen), G. Garbotz. Bauingenieur, vol. 5, no. 12 and 13, June 30 and July 15, 1924, pp. 371-376 and 397-401, 16 figs. Discusses machinery and methods for moving masses of earth, including dredges, excavators, track-moving machines. July 15: Tipping cars, automatic unloaders, etc.

Shovels. See SHOVELS.

Soil Characteristics. Characteristics of Quicksand and Other Soils Met in Ordinary Excavation, C. R. Gow. Boston Soc. Civ. Engrs.—Jl., vol. 11, no. 2, Feb. 1924, pp. 53-69 and (discussion) 69-79. Types of soil encountered and their characteristics.

Trenching Machines. See GAS MAINS, Trenching Equipment.

EXCAVATORS

Dragline. An Economic Study of Dragline Excavator Operation, C. W. Ullom. Eng. News-Rec., vol. 92, nos. 22 and 23, May 29 and June 5, 1924, pp. 932-934 and 976-979. Performance, operating practices, and costs determined by 13 million yards of excavation for Miami Valley flood-protection works. May 29: Output and cost records. June 5: Operating methods and costs.

200-Ton Dragline Excavator for the Sudan. Engineering, vol. 117, no. 3046, May 16, 1924, p. 636, 2 figs. on supp. plate. Excavator has bucket of 5 cu. yd. capacity and is mounted on 4 trucks of equalizing type, so that at times when wheels are on uneven surface frame still remains horizontal.

Electrically Operated. Electrically-Operated Navvy for the Morwell Power Scheme. Engineering, vol. 118, no. 3061, Aug. 29, 1924, p. 299, 2 figs. on p. 292. Brief description of exceptionally large and powerful navvy constructed by Ruston and Hornsby, Ltd., Eng., for State Elec. Commission of Victoria, Australia, which will be used for excavating brown coal for use in connection with Morwell power scheme for supplying electrical energy to Melbourne. Is of crane-navvy type; capable of making cut 75 ft. deep and 60 ft. wide.

Marl. Development of Marl Excavating Equipment, H. H. Musselman. Agricultural Eng., vol. 5, no. 12, Dec. 1924, pp. 273-274, 3 figs. Special agitator was developed consisting of rotating propeller-like cutter surrounded by large hood attached to end of suction pipe; hood was allowed to sink into marl which was agitated, mixed with water and pumped; tractor and 4-in. centrifugal pump were used for pumping.

Types. Excavators as Building Machines, E. Emmerich. Eng. Progress, vol. 5, no. 11, Nov. 1924, pp. 233-236, 3 figs. Machines for moving large masses of soil; bucket excavators; grab excavators; cable and dragline excavators.

EXECUTIVES

Clubs. See INDUSTRIAL MANAGEMENT, Executives' Clubs.

Control by. See INDUSTRIAL MANAGEMENT, Executive Control.

Cost Accounting for. See COST ACCOUNTING, Executives.

Mistakes Made by. Mistakes That Executives Make, C. E. Knoeppel. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 377-382. Deals with common, simple, yet disastrous, mistakes made in managing or organizing industrial plant.

Principles Governing. The Man and the Job, P. A. Fellows. Soc. Indus. Engrs.—Bul., vol. 6, no. 12, Dec. 1924, pp. 7-9. Principles governing the executive; points out that sense of perception and ability to make intelligent analysis of conditions are essential qualities of executive.

EXHAUST STEAM

Cost Calculation. How Shall We Calculate the Cost of Exhaust Steam? T. Fuwa. Chem. & Met. Eng., vol. 31, no. 4, July 28, 1924, p. 150. Comparison of four possible bases of evaluating exhaust steam and a discussion of advantages of each.

Utilization. Possibility and Advantages of Connecting Power and Heat in Industrial and Municipal Plants (Möglichkeiten und Vorteile der Kraft-Wärme-Kupplung in industriellen und öffentlichen Betrieben). Wärme, vol. 47, no. 17, Apr. 25, 1924, pp. 179-181. Discusses increased use of exhaust steam for heating and other purposes and gives examples of installations built on these lines.

See also STEAM, Power and Process Work, Use for; WASTE HEAT, Utilization.

EXPLOSIONS

Acetylene. See ACETYLENE, Accident Prevention in Use of.

Anthracite Stoves. Report on Explosions in Anthracite Stoves, S. R. Illingworth, C. A. Seyler and R. V. Wheeler. Fuel, vol. 3, no. 5, May 1924, pp. 170-173, 6 figs. Results of experiments made to determine possibility of explosive gaseous mixtures being formed within anthracite stoves under abnormal conditions of operation.

Report on Explosions in Anthracite Stoves, S. R. Illingworth, C. A. Seyler and R. V. Wheeler. Fuel, vol. 3, no. 3, Mar. 1924, pp. 83-92. Result of investigations carried out for S. Wales & Monmouthshire Coal Owners' Assn.; includes list of explosions investigated up to Mar. 1923.

Bleaching Powder. See BLEACHING POWDER, Explosions.

Chemical Plant, Oppau, Germany. Conclusion of the Investigation of the Oppauer Disaster (Der Abschluss der Untersuchung des Oppauer Unglücks), H. Kast. Chemiker-Zeitung, vol. 48, nos. 32 and 35, Mar. 13 and 20, 1924, pp. 133-135 and 158-160. See English abstract in Chem. & Met. Eng., vol. 30, no. 17, Apr. 28, 1924, p. 666, and editorial comment in Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 501-502. Final conclusions based on results of investigation of special committee appointed by German Parliament to determine cause of explosion at plant of the Badische Anilin & Soda Fabrik at Oppau in 1921.

Coal-Dust. See COAL DUST, Explosions.

Coal Mines. See COAL MINES, Explosions.

Dust. See DUST, Explosions.

Grain Elevators. See GRAIN ELEVATORS, Explosions.

Hazard in Industry. The Explosion Hazard in Industry, R. Furness. Chem. Age (Lond.), vol. 11, no. 271, Aug. 23, 1924, pp. 184-186. Reviews problem of preventing explosions in industry, not only when dealing with inflammable materials, but when substances normally regarded as being safe are being handled in finely divided state which may render them liable to "dust" explosions.

Lignone Dust. A Lignone Dust Explosion, P. W. Edwards. Paper Trade Jl., vol. 78, no. 3, Jan. 17, 1924, pp. 47-49, 3 figs. Account of explosion which occurred recently in a large Eastern paper mill in manufacture of lignone, a product from waste sulphite coking liquor, and its probable cause.

Mine. See MINES, Explosions.

Nitrogen-Fixation Plant. Explosion in a Nitrogen-Fixation Installation at Bodio (Ueber die Explosion in Bodio), E. Berl. Zeit. für angewandte Chemie, vol. 37, no. 12, Mar. 20, 1924, pp. 164-165. Experimental evidence does not support Schaarschmidt's conclusion (given in previous issue of same journal, 1923, pp. 533 and 565) that unsaturated constituents of benzine used caused explosion.

Starch Dust. Starch Dust Explosions, G. E. Chamberlain. Chem. Age (N. Y.), vol. 32, no. 2, Feb. 1924, pp. 95-97. Reduction of the hazard; method of conveying starch; storage of starch; decreasing amount of dust produced is best accomplished by humidity; static electricity; isolated buildings for certain operations.

Starch Dust Explosion at Pekin, Illinois, D. J. Price, H. R. Brown and P. W. Edwards. Chem. & Met. Eng., vol. 30, no. 15, Apr. 14, 1924, pp. 579-584, 10 figs. See also Nat. Fire Protection Assn. Quarterly, vol. 17, no. 4, Apr. 1924, pp. 354-359, 4 figs., and Sugar, vol. 26, no. 5, May 1924, pp. 234-237. Official report on explosion at plant of Corn Products Refining Co., by experts of Bur. of Chem. points way of further measures of precaution where dust hazards exist.

The Starch Dust Explosion at Pekin, Illinois, D. J. Price. West. Soc. of Engrs.—Jl., vol. 29, no. 8, Aug. 1924, pp. 305-320, 4 figs. Analysis of facts in connection with explosion at starch factory with loss of 42 lives; indicates precautions to be taken to prevent or minimize damage.

Sugar Dust. Dust Explosions (Die Staubexplosionen), B. Block. Zeit. des Vereins der Deutschen Zucker-Industrie, no. 810, Jan.-Feb. 1924, pp. 37-64. Discusses subject under following captions: occurrence of most explosions directly after resumption of operation; mechanical-thermal causes; hot running of a bearing; friction of machinery parts as cause of explosion; influence of preheating; effect of foreign bodies and sparks; static electricity as cause of explosion; effect of ozone; possible danger of air-delivery installations; warding off of oxygen by use of inert gases; dust removal; etc.

Wave Propagation. The Propagation of Explosion Waves (Sur la propagation des ondes explosives), Th. Vautier. Académie des Sciences —Comptes Rendus, vol. 179, no. 4, July 28, 1924, pp. 256-259, 1 fig. Formation of waves produced in long pipe (1600 m.) of large diam. (1 m.) by explosion of gunpowder and of mercury fulminate is registered and measured by interference method; mercury fulminate produces very short wave, whereas gunpowder produces long wave and shows no discontinuity.

EXPLOSIVES

Acid Economy in Manufacture of. Acid Economy in the Explosives Industry (Säurewirtschaft in der Sprengstoff-Industrie), W. Busching. Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 19, no. 6, June 1924, pp. 81-83, 3 figs. Problem of treating enormous quantities of waste acids produced in German explosives factories during war was solved chiefly by application of processes devised by Pauling, which are described.

Ammonium Nitrate. See AMMONIUM NITRATE.

Ammonium Perchlorate. Ammonium Perchlorate (Ueber Ammonperchlorat), Ph. Naoum and R. Aufschläger. Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 19, no. 8, Aug. 1924, pp. 121-123. Temperatures of explosion are 1084 and 1308 deg.; salt decomposes slowly and quietly and cannot be detonated by heat alone; ammonium chlorate is not nearly so stable, for it may be exploded with even the feeblest detonator, developing temperature of 1700 deg.

Consumption. Explosives Used in December, 1923, W. W. Adams. U. S. Bur. Mines—Reports of Investigations, no. 2573, Feb. 1924, 4 pp.

Statistics on explosives sold during Dec. 1923 for use in United States.

Deflagration. Velocity of Deflagration (Sur le célérité des déflagrations), M. E. Jouguet, Académie des Sciences—Comptes rendus des séances, vol. 179, no. 9, Sept. 1, 1924, pp. 454-457. Discusses equations based on assumption that velocity of deflagration is proportional to absolute temperature, above temperature of flammability.

Detonation. An Electrical Method of Determining the Velocity of Detonation of Explosives, J. E. P. Wagstaff. Roy. Soc.—Proc., vol. 105, no. A731, Mar. 1, 1924, pp. 282-298, 9 figs. Develops method, depending on rate of discharge of condenser, for measurement of time intervals of order of 10^{-4} sec.; method is tested by finding time of impact of steel balls; method is applied to measurements of rates of detonation of high explosives; spurious electrical effects occurring in circut passing through explosive and methods of elimination.

Concerning the Nature of Detonation, F. Olsen. Army Ordnance, vol. 5, no. 26, Sept.-Oct. 1924, pp. 515-517 and 544, 3 figs. Endeavors to explain detonation on basis of electronic configuration of atoms, to measure relative sensitiveness of explosives to detonation on this basis, and to measure velocity of electrons produced by detonations.

Experimental Investigation on Detonation Limit of Gaseous Mixtures (Experimentelle Untersuchungen zur Detonationsgrenze gasförmiger Gemische), R. Wendlandt. Zeit. für Physikalische Chemie, vol. 109, June 25, 1924, pp. 637-655, 4 figs. Examines hydrogen and carbon monoxide mixed with air, monoxide mixed with oxygen.

Velocity of Detonation of Various Types of Explosives, W. H. Ward. Du Pont Explosives Service Bul., no. 7, Feb. 1924, 2 pp. Effect of confinement upon velocity as affecting choice and loading of explosives.

Detonation Transmission to a Distance. The Transmission of Detonation at a Distance, E. Audibert. Quarry & Surveyors' & Contractors' Jl., vol. 29, no. 324, Feb. 1924, pp. 41-43. See also Colliery Guardian, vol. 127, no. 3290, Jan. 18, 1924, p. 153, 2 figs. Factors influencing transmission of detonation; tests carried out to make sure that method adopted at Montluçon Experimental Station for determining aptitude of an explosive for transmitting detonation to a distance is accurate. From Annales des Mines.

Development and Use. Development and Use of Industrial Explosives, A. La Motte. Min. & Metallurgy, vol. 5, no. 213, Sept. 1924, pp. 428-432. Discusses history and characteristics of dynamite, development of new types, strength of expdosives, velocity of detonation, improvements in safety and efficiency, methods of using, etc.

Dynamite. Proofs That Dynamite Acts Equally in All Directions, J. E. Crawshaw. Eng. & Contracting (Railways), vol. 61, no. 2, Feb. 20, 1924, pp. 417-419, 3 figs. Shows error of belief that dynamite acts principally downward.

Explosibility. Explosibility, A Marshall. Chem. & Industry, vol. 43, no. 24, June 13, 1924, pp. 616-618. Discusses causes for differences in behavior of explosives.

German. German High Explosives in the World War, G. C. Hale. Army Ordnance, vol. 5, no. 26, Sept.-Oct. 1924, pp. 523-525, 1 fig. Brief discussion of principal high explosives and substitutes used by Germans, indicating complexity of their problem with regard to high explosives.

H.M.T.D. H.M.T.D.—A New Detonating Explosive, C. A. Taylor and W. H. Rinkenbach. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 463-466. Preparation and properties of hexamethylenetriperoxidediamine (H.M.T.D.).

Handling. See CABLEWAYS, Explosives Handling.

Liquid Gases. Blasting with Liquid Gases (Sprengen mit verflüssigten Gasen). Zeit. für das gesamte Schiess- u. Sprengstoffwesen, vol. 18, no. 11-12, Nov.-Dec. 1923, pp. 109-115. Compilation of German State patents.

Liquid Oxygen. Liquid Oxygen as a Substitute for Dynamite, F. W. O'Neil. Contract Rec., vol. 38, no. 40, Oct. 1, 1924, pp. 968-972, 10 figs. At large-scale demonstration of use of this explosive, cost per ton of rock broken was 1.28 cents against estimated cost of 3 cents with dynamite.

Liquid-Oxygen Explosives Tried Out in Rock Quarry, F. W. O'Neil. Rock Products, vol. 27, no. 14, July 12, 1924, pp. 30-33, 8 figs. Account of demonstration of power of new explosive given during a blast at Myerstown, Lebanon County, Pennsylvania, on property of Calcite Quarry Co., conducted in accordance with usual procedure followed by company.

Properties of Liquid-oxygen Explosives, G. St. J. Perrott. Am. Inst. Min. & Met. Engrs.—Trans., no. 1388-A, Dec. 1924, 27 pp., 14 figs. Study of certain fundamental characteristics; factors affecting life of cartridge and relation between explosive strength and oxygen content; experimental determination of explosive properties of L.O.X. cartridges packed with variety of lampblacks, gas blacks, and other materials by means of ballistic pendulum, Bichel gage, and measurement of rate of detonation.

Mine. Explosives in Mining, W. Cullen. Colliery Guardian, vol. 128, no. 3338, Dec. 19, 1924, pp. 1567-1568. Discusses uses of explosives in mines; notes on manufacture, testing, gases from explosives, and energy produced by explosives. Abstract of paper read before Manchester Geol. & Min. Soc.

The Evolution of Ammonium-Nitrate Explosives: Their Use and Abuse in Practice, J. Smith. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 158-164. Résumé of evolution of present-day explosives from original one produced by Carl Lamb.

See also MINES, Permissible Equipment and Supplies.

Mine, Extinction of Flame from. The Extinction of Flame from Mining Explosives, W. G. Hiscock. Iron & Coal Trades Rev., vol. 108, no. 2916, Jan. 18, 1924, pp. 90-94 (includes discussion), 39 figs. See discussion in nos. 2925 and 2926, Mar. 21 and 28, 1924, pp. 467-408 and 516-517. Historical survey of previous work; Nobel Research Dept. investigations. Bibliography.

Nitroglycerin. See NITROGLYCERIN.

Nitroglycerin Substitutes. Substitutes for Nitroglycerine in Explosives Manufacture, Chas. L. Reese. Chem. Age (N. Y.), vol. 32, no. 12, Dec. 1924, pp. 481-483. Notes on ammonium nitrate—sugar; nitrostarch; trinitrotoluene; trinitrozylene; nitroglycerine; synthesis of glycerine; miscellaneous nitro bodies.

Permissibles in Coal Mines. Progress in the Use of Permissibles, S. C. Jones. Coal Industry, vol. 7, no. 2, Feb. 1924, pp. 92-94, 2 figs. Future progress, it is claimed, depends largely on selecting proper explosive and knowing how to use it efficiently.

Progress in. Twenty-Five Years' Progress in Explosives, Chas. L. Reese. Franklin Inst.—Jl., vol. 198, no. 6, Dec. 1924, pp. 745-768, 4 figs. Deals particularly with developments in America; progress in black powder; dynamite; nitroglycerine; separation of nitroglycerine; low-freezing

and non-freezing explosives; permissible explosives; substitutes for nitroglycerines.

Research and Manufacture. Exhibits Showing Progress in Explosives, Research and Manufacture, 1900-1924. Chem. News, vol. 128, no. 3344, May 16, 1924, pp. 309-314. Descriptions of exhibits.

Selection and Use. Commercial Explosives—Their Selection and Use, Douglas P. Allison. Eng. & Min. Jl.-Press, vol. 117, no. 5, Feb. 2, 1924, pp. 197-201, 5 figs. Conditions which have been responsible for manufacture of the different kinds of dynamite, and which govern its uses; discussion of the various kinds of explosives.

Specific Heats. The Specific Heats of Trinitrotoluene, Tetryl, Picric Acid and Their Molecular Complexes, C. A. Taylor and W. H. Rinkenbach. Am. Chem. Soc.—Jl., vol. 46, no. 6, June 1924, pp. 1504-1510. Specific heats of tetryl, picric acid, trinitrotoluene, tetryl:picric acid, tetryl:trinitrotoluene, have been measured over a range of temperature from 0 deg. to 60 deg. to 125 deg. Values obtained indicate that Kopp's law does not hold for trinitrotoluene, tetryl or picric acid.

Thermits and. Explosives and Thermits, A. Marshall. Chem. & Industry, vol. 43, no. 13, Mar. 28, 1924, p. 326. Thermit is defined as substance or mixture capable of undergoing endothermal reaction with sufficient velocity to prevent reaction dying out, without giving off sufficient gaseous products to scatter material; if velocity of reaction be of same order as that of explosive and material be not specially pure, it will in most cases behave as explosive and not as thermit.

T.N.T., Purification of. The Purification of TNT, H, Muraour. Army Ordnance, vol. 5, no. 26, Sept.-Oct. 1924, pp. 507-511. Describes process of American origin utilized in France, consisting in treatment of trinitrotoluene, in the cold, with a dilute solution of sodium sulphite. Results obtained in treatment of industrial TNT; analytical utilization of sulphite reaction; causes of errors in application of method. Translated from Bul. de la Société Chimique de France, Mar. 1924, pp. 367-379.

EXPORT TRADE

Machine Tools. See MACHINE-TOOL INDUSTRY, Export Problem, U. S.

EXTRUSION OF METALS

Brass Rods. The Extrusion of Brass Rod By the Inverted Process, R. Genders. Inst. of Metals—Advance Paper no. 6, for meeting Sept. 8-11, 1924, 11 pp., 6 figs. partly on supp. plate. Method of overcoming formation of coring defect favored by author consists in completely altering direction of flow in receiver by inverting process, so that die is pressed into billet, rod being extruded through a hollow plunger. Describes experiments carried out on a manufacturing scale with a press designed to extrude by new method.

The Extrusion and Drawing of Brass Rod, J. Williams. Am. Mach., vol. 66, no. 14, Apr. 3, 1924, pp. 497-498, 3 figs. Process of cold-drawing of brass rods as practiced by Bridgeport Brass Co., in production of commercial rods.

FABRICS

Aircraft. See AIRCRAFT CONSTRUCTION MATERIALS, Dopes; Fabrics.

Patents. Fabrics, Treating Otherwise Than by Finishing and Dressing. Abridgments of Specifications (Lond.), Class 42 (II). Abridgment of British Patents between 1916-1920, no. 100,001-155,800, class 42 (II) covering fabrics, felt and felt substitutes, flock, measuring continuous lengths of materials, rollers or cylinders.

Wear-Testing Machine. A Machine for Investigating the Resistance of Fabrics to Abrasion ("Wear"), Rob. P. Ethridge. Testing, vol. 1, no. 2, Feb. 1924, pp. 156-159, 2 figs. Principle of design of cloth wear-testing machine.

FACTORIES

[See also INDUSTRIAL PLANTS.]

Automobile. See AUTOMOBILE MANUFACTURING PLANTS.

Building Improvements. The New Competition and Your Building, Geo. C. Nimmons and W. E. Ballinger. Indus. Mgmt. (N. Y.), vol. 77, nos. 1, 2, 3, 4, 5, and 6, Jan., Feb., Mar., Apr., May, and June, 1924, pp. 3-7, 4 figs.; 91-97, 7 figs.; 140-144, 5 figs.; 250-254, 4 figs.; 297-302, 7 figs.; and 356-362, 9 figs. Jan.: Part played by building in increasing volume and lowering cost of production. Feb.: Planning structure. Mar.: Economic aspects of building operations. Apr.: Daylight and modern building construction. May: Roofs for industrial buildings. June: Increasing use of concrete in factory construction, by H. C. Campbell.

Conveyors. See CONVEYORS, Factory.

Design and Maintenance. Design and Maintenance of Factory Buildings, H. Pearman. Indus. Mgmt. (Lond.), vol. 11, nos. 2, 4, 6, 8, 10, and 13, Jan. 24, Feb. 21, Mar. 20, Apr. 17, May 15, and July, pp. 38-40, 95-97, 153-154, 211-212, 267-268, and 349-350, 2 figs. Jan. 24: Transport and general service facilities in relation to a works, and selection and installation of plant. Feb. 21: System of grouping manufacturing sections. Mar. 20: Problems relating to losses due to faulty economy in internal layout of factory. Apr. 17: Economy in road construction. May 15: Schedule of buildings. July: Choice and location of factory site.

Equipment Maintenance. Maintenance of Plant Equipment, W. L. Hitt. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 43-45, 1 fig. Maintenance of plant equipment at East Pittsburgh plant of Westinghouse Elec. & Mfg. Co. Describes organization of maintenance department, doors and windows, cleaning electric-light globes and reflectors, upkeep of fire equipment, and care of belting.

Floors. See FLOORS, Factory.

Heating. See HEATING, ELECTRIC, Industrial Buildings.

Heating and Ventilating. See HEATING AND VENTILATION, Factories.

Inspection. Factory Inspection in Greece in 1921. Int. Labour Rev., vol. 10, no. 1, July 1924, pp. 136-155. Details of factory inspection in Greece, Czechoslovakia, Belgium, India, and Switzerland.

Some Problems of Factory Inspection. Int. Labour Rev., vol. 9, no. 3, Mar. 1924, pp. 372-386. Brief account of main lines of development of factory inspection, both in theory and practice, taking as basis reports prepared by Int. Labor Office.

Lighting. See LIGHTING, Factories.

Location of. How Would You Pick a Factory Location? M. G. Farrell. Factory, vol. 33, no. 3, Sept. 1924, pp. 336-338, 438 and 440-445, 1 fig. Discusses importance of studying thoroughly the various districts when searching for a manufacturing location, when it is profitable to locate in a segregated district, why it is necessary to study labor conditions in district surrounding proposed location, etc.

Management. See INDUSTRIAL MANAGEMENT.

Materials Handling in. See MATERIALS HANDLING, Factories.

Power and Heating Plant. Investigation of Advisability of Installing, in a Large or Medium-Sized Factory, Its Own Power and Heating Plant (Untersuchungen betr. Errichtung einer eigenen Stromerzeugungs- und Heizungs-Anlage für einen grösseren Fabrikbetrieb), R. Stetefeld. Wärme- u. Kälte-Technik, vol. 26, no. 18, Sept. 15, 1924, pp. 156-159. Detailed figures and calculations showing that with own power and current central a saving of over $26,000 per year results in a given factory.

Produced Gas for Power and Heating. See PRODUCER GAS, Factory Power and Heating.

Storeroom Shelves and Racks. Modern Practice in the Use of Shelves and Racks in Industrial Storerooms, F. E. Gooding. Indus. Engr., vol. 82, no. 12, Dec. 1924, pp. 571-573 and 602-603, 17 figs. For storing miscellaneous repair and maintenance parts and supplies as well as material both before and after manufacture and between operations during work in process.

FACTORY MANAGEMENT. See INDUSTRIAL MANAGEMENT.

FANS

Centrifugal. Application and Operation of Centrifugal Fans, R. E. Cramer. Combustion, vol. 11, no. 3, Sept. 1924, pp. 199-201, 3 figs. Analysis of conditions surrounding application and operation of centrifugal fans in boiler plants from viewpoint of influence of fan and its method of control upon capacity and overall economy of plant.

Centrifugal Fans and Their Characteristics, R. T. Livingston. Power Plant Eng., vol. 28, nos. 21, 22, and 24, Nov. 1, 15, and Dec. 15, 1924, pp. 1105-1106, 1159-1161, and 1262-1263, 11 figs. Nov. 1: Principles of centrifugal fans, types and service requirements. Nov. 15: Study of characteristics of fans and their adaptability for various services. Dec. 15: Application of fan principles toward selection of fans for various purposes.

Experiments on the Distribution of Air in Centrifugal Fans and on Re-Entry Phenomena, H. Briggs and J. N. Williamson. Instn. Min. Engr.—Trans., vol. 67, part 1, Mar. 1924, pp. 84-94 and (discussion) 94-99, 21 figs. Also Colliery Guardian, vol. 127, no. 3295, Feb. 22, 1924, pp. 465-466, 21 figs. Experiments made at Heriot-Watt College, Edinburgh, and at Wellesley Colliery, Fife, bearing upon manner in which centrifugal fan of drum type deals with air it discharges; shows how uneven is distribution of air passing through wheel, and directs attention to the different forms of re-entry of air.

See also Selection and Operation.

"Cindervane." See BOILER PLANTS, Flue-Dust Separator.

Design and Application. Some Common Faults in Fan Design and Application, F. G. Whipp. Domestic Eng. (Lond.), vol. 43, no. 12, Dec. 1923, and vol. 44, no. 1, Jan. 1924, pp. 253-259 and 17-19, 6 figs. Discusses speed of a fan, bearings, and methods of arranging fan drives.

Electrically Driven. How to Choose Motors for Driving Industrial Fans, R. H. Rogers. Chem. & Met. Eng., vol. 30, no. 6, Feb. 11, 1924, pp. 231-233, 9 figs. Notes on utility of various types of motors and control devices that are available for fan service.

Motor Drives for Mine Fans, F. W. Cramer. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 8-11, 4 figs. Comparison of various types of motors which may be used to drive mine fans from standpoint of efficiency, speed control, initial cost, and power factor.

Selecting the Best Type of Motor for Driving a Mine Fan at Variable Speed, B. W. Chadbourne. Coal Age, vol. 25, no. 20, May 15, 1924, pp. 722-725, 7 figs. Large first cost justified when energy charge is high; motor should operate at high efficiency and slow speed; results of tests to compare various systems.

The Argument for the Slow-Speed Direct-Connected D.C. Motor for Ventilating Fan Drive, J. L. McK. Yardley. Heat. & Vent. Mag., vol. 21, no. 4, Apr. 1924, pp. 43-46, 10 figs. How motor ratings have increased; limit reached in reductions of speed of a.c. motors; transforming a.c. to d.c.

Exhaust. Things to Know About Fan Application, H. W. Pfeffer. Sheet Metal Worker, vol. 15, no. 8, May 9, 1924, pp. 283-285 and 309, 3 figs. Important truths essential to a complete understanding of how to lay out a successful exhaust system; capacities to figure on; air velocities needed; pipe sizes; general suggestions.

Installation. Auxiliary Equipment for Blast and Ventilating Fans, D. L. Hubbard. Mech. Wld., vol. 76, no. 1961, Aug. 1, 1924, pp. 70-72, 6 figs. Discusses proper foundations and supports, absorption of vibrations, preferably by means of cork slab; fan and motor noises; fan drives by steam engine and turbine; push-button control.

Mine. Explanation of Fan in Electrical Terms; Increasing Efficiency with New Drive, J. F. MacWilliams. Coal Age, vol. 25, no. 2, Jan. 10, 1924, pp. 53-54, 1 fig. Account of tests made on number of fans scattered throughout coal region.

Mine Fans and Mine Ventilation, W. J. Montgomery. Modern Min., vol. 1, no. 5, Dec. 1924, pp. 135-141, 9 figs. Advantages and disadvantages of exhaust and blowing fans; size of fan; size of air ways; ventilating formulas for mine fans.

Principles of the Design of Mine Fans. Colliery Engr., vol. 1, nos. 4 and 5, June and July 1924, pp. 163-166 and 231-233, 11 figs. Study of fans suited to British colliery conditions. Principal features and functions of exhaustive ventilator, the typical kind of ventilator employed in British mines.

Some Features of Ventilating Fans at 164 Coal and Metal Mines, D. Harrington and M. W. von Bernewitz. U. S. Bur. Mines—Reports of Investigations, no. 2637, Sept. 1924, 5 pp. Discusses various features of fan installations at mines where disasters have been studied, and handling of air currents at time of and after disasters, and includes also loss of life and number of men injured.

The Change of Air Supply in Mine Fans, A Latsinsky. Russian Min. Jl., vol. 100, no. 1, Jan. 1924, pp. 31-34. (In Russian.)

See also Centrifugal.

Selection and Operation. Selection and Operation of Centrifugal Fans, Chas. L. Hubbard. Power Plant Eng., vol. 28, no. 4, Feb. 15, 1924, pp.

242-244, 2 figs. Proportioning fan to its load is vital factor in securing economy; principles of fan operation; resistances and outlet velocities.

Support and Drive. Auxiliary Equipment for Blast and Ventilating Fans, Chas. L. Hubbard. Power, vol. 59, no. 9, Feb. 26, 1924, pp. 318-321, 6 figs. Methods of supporting fan and drive to meet various conditions; preventing vibration; air velocities; engine and turbine drives; d.c. and a.c. motor drives; speed regulation with motor drive.

Testing. Testing of Mine Fans, D. W. Rees. Colliery Eng., vol. 1, no. 8, Oct. 1924, pp. 393-394. States that considerable reform of present methods is desirable, and discusses points requiring attention.

Ventilators and Exhausters. Ventilators and Exhausters (Ventilatoren und Exhaustoren), H. R. Karg. Praktischer Maschinen-Konstrukteur, vol. 56, nos. 46-47 and 50-51, Nov. 27 and Dec. 24, 1923, and vol. 57, nos. 1-2 and 5, Jan. 8, and Feb. 5, 1924, 13 pp., 8 figs. Nov. 27: Critical discussion and recommendations. Dec. 24: Openings and admission velocities. Jan. 8: Determination of inside and outside blade angles. Feb. 5: Determination of speed of admission of gases in vane wheel.

FARM MACHINERY

Agricultural Show, England. The Royal Agricultural Society's Show, Leicester. Engineer, vol. 138, nos. 3575, 3576, and 3577, July 4, 11, and 18, 1924, pp. 11-12, 50-52, and 80-82, 19 figs. See also Engineering, vol. 118, nos. 3053 and 3054, July 4 and 11, 1924, pp. 20-23 and 59-61, 12 figs. Description of exhibits, including gas engines, oil engines, electric lighting sets, tillers, tractors, road rollers, thrashing machines, Blackstone cold-starting crude oil engine, front-action side-delivery combined rake and swather, grinding mill for cement concrete, fire pumps, etc.

The Smithfield Club Show. Engineer, vol. 138, no. 3598, Dec. 12, 1924, pp. 666-667, 4 figs. Details of more interesting exhibits at Agricultural Hall, Islington, including Sentinel portable engine, 3-way tipping steam wagon, 7½-ton steam tractor, thrashing machines, etc.

Electricity Applications. Electricity at the Paris Agricultural Machinery Show, R. B. Matthews. Elec. Rev., vol. 94, no. 2414, Feb. 29, 1924, pp. 326-327, 7 figs. Review of exhibits at show, indicating considerable attention paid to electric driving of farming machinery.

See also ELECTRICITY, APPLICATIONS OF, Agriculture.

Gas and Oil Engines. The Royal Agricultural Show. Gas & Oil Power, vol. 19, no. 226, July 3, 1924, pp. 187-189, 5 figs. Describes some of exhibits of gas and oil engines.

German Show. Agricultural Machines at the Exhibition in Hamburg (Landwirtschaftliche Maschinen auf der Wanderausstellung in Hamburg), G. Fischer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 52, Dec. 27, 1924, pp. 1329-1335, 15 figs. Tendencies toward standardization; improvements in various types of tilling, sowing, harvesting, and threshing machines, steam plows and road engines.

Mechanical Grain Sowing. The Problem of Mechanical Sowing of Grain (Das Problem der maschinellen Einzelkornsaat), Geo. Kühne. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 6, Feb. 9, 1924, pp. 113-118, 19 figs. Deals with different methods and machinery in Germany for sowing of single seeds of grain.

Motor Plows. See MOTOR PLOWS.

Patents. Cultivating Implements and Systems. Abridgments of Specifications (Lond.), Class 6 (i), 1924, Period 1916-20, 196 pp. Patents for inventions, including agricultural implements and machines for working soil, manure distributors, seed sowers, planting machines, machines for depositing powdered and other discrete materials on or in land, on crops or roads and ways, and in mines, rollers, etc.

Plows. See PLOWS.

Rollers. A Roller for Use on Peat Land, J. T. Stewart. Am. Peat Soc.-Jl., vol. 17, no. 2, Apr. 1924, pp. 57-69, 9 figs. Discusses design and construction of heavy roller consisting of metallic shell and filled with concrete for passing over surface of peat soils to increase crop yields.

Threshing Machines. Economies of Electric Threshing Operations (Die Wirtschaftlichkeit des elektrischen Dreschbetriebes), H. Holm. Elektrische Betrieb, vol. 22, no. 16, Aug. 24, 1924, pp. 157-159. Details of cost of equipment and available current; comparison with oil and steam operations show marked advantage of electricity.

FATHOMETER See SOUND RANGING, Submarine Ship Detectors.

FATIGUE

Industrial. Fatigue a Vital Consideration of Forge Shop Management, Jos. Thompson. Forging—Stamping—Heat Treating, vol. 10, no. 11, Nov. 1924, pp. 409-412. Consideration of well being of employes furnishes basis for coöperation; lack of sympathetic understanding cause of industrial unrest.

Metals. See METALS, Fatigue of; STEEL, Fatigue Tests.

FATS

Colloid Chemistry of. See OILS, Colloid Chemistry of.

Petroleum as Source. See OIL, Fats, Production from.

FEEDWATER HEATERS

Design. Feedwater Heaters in Evaporation Plants (Du timbre et de l'emplacement des réchauffeurs d'eau dans les groupes évaporatoires), M. Emanaud. Revue Industrielle, vol. 54, no. 3184, Nov. 1924, pp. 366-370, 3 figs. Compares old and new methods of boiler construction and operation; modern evaporating systems; quantity of heat absorbed, heat transmission, etc.

Locomotive. Analysis of Feed Water Heating Devices, E. P. Gangewere. Ry. Mech. Engr., vol. 98, no. 7, July 1924, p. 409. Feedwater heaters with pumps take more heat from exhaust than exhaust-steam injector type.

Feed-Water Heaters Difficult to Machine. Iron Age, vol. 114, no. 25, Dec. 18, 1924, pp. 1605-1607, 5 figs. Cost-saving practices of Worthington Pump & Machy. Corpn. in manufacture of locomotive feedwater heaters and pumps.

Locomotive Feed Water Heating, J. M. Lammedee. St. Louis Ry. Club—Official Proc., vol. 29, no. 6, Oct. 10, 1924, pp. 87-110, 8 figs.; and (abstract) in Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, pp. 361-364; also Ry. Rev., vol. 75, no. 22, Nov. 29, 1924, pp. 869-873, 8 figs. Review of developments; general principles underlying feed-heating process and prevailing methods of putting these principles into practice, both in America and abroad.

FELDSPAR

Mining. Feldspar's Many Uses, A. S. Taylor. Cement, Mill & Quarry, vol. 25, no. 7, Oct. 5, 1924, pp. 30-34, 15 figs. Mentions in a general way industrial uses of feldspar. Describes activities of Crown Point Spar Co. in mining feldspar which outcrops on crest of Breed mountain, about a mile to south of village of Crown Point,

northern New York, and in preparing it for various market purposes.

Sweden. Future of Swedish Feldspar (Den svenska Fältspatens framtid), E. Bohr. Teknisk Tidskrift, vol. 54, no. 37, Sept. 13, 1924, pp. 341-343 (Allmänna Avdelningen), 3 figs. On account of limited existing quantities of pure Swedish feldspar a policy of conservation of national resources is urged.

United States Production. Feldspar in 1922, F. J. Katz. U. S. Geol. Surv., no. II:27, 1924, pp. 251-259, 1 fig. Production statistics, and prices.

Uses. Feldspar a Mineral Having Many Uses, A. S. Taylor. Compressed Air Mag., vol. 29, no. 9, Sept. 1924, pp. 985-988, 14 figs. Describes activities of Crown Point Star Co. in mining feldspar; mineral has been used in manufacture of glass, white pottery and enameled metal wares, also scouring soaps, fertilizers, etc.

FERRIES

Electric Propulsion. Ferry Transportation. Jl. Pacific Ry. Club—Proc., vol. 8, no. 4, July 1924. Contains following papers: Electric Ship Propulsion, by M. Rhine, pp. 5, 7, 9, 11 and (discussion) 11, 13, 15, 17 and 19, discussing development of electric drive for ship propulsion in America, dealing also with ferries; Ferry Steamer Operation, by C. F. Heath, pp. 19-26, describing how ferry system of Southern Pacific Co. is handled and operated; and remarks by D. W. Dickie, pp. 26-27.

Oil-Engine-Driven. An Oil-Engine Driven Ferryboat, Wm. H. Hoffman. Power, vol. 59, no. 2, Jan. 8, 1924, pp. 53-54, 2 figs. Details of only direct-connected, oil-engine-driven, double-ended ferryboat in United States or abroad; operated on Hudson River.

Oil-Engine-Driven Ferryboat of Exceptional Merits, R. G. Skerrett. Compressed Air Mag., vol. 29, no. 1, Jan. 1924, pp. 739-743, 19 figs. General characteristics of Hudson-Athens; overall length, 115 ft.; maximum beam over guards, 44 ft.; loaded draft, 7½ ft.; details of engine.

Train. Cradles for a Train Ferry Service Service in Nigeria. Engineer, vol. 138, no. 3581, Aug. 15, 1924, pp. 182-184, 6 figs. partly on p. 186. Particulars of installation at Benue River, which consists generally of two inclined slipways connected with railway, one on each bank, up and down which rolling stock is shunted; two traveling cradles, one for each slipway, to receive wagons from slipways and to enable them to be transferred to and from decks of ferry steamers; a timber guide pier along down-stream side of each slipway; and two ferry steamers.

Mississippi Car-Transfer Steamer for Gulf Coast Lines. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1064-1065, 2 figs. Particulars of new side-wheel car-transfer or car-ferry steamer; three tracks provide capacity for 11 passenger cars or 23 freight cars; two geared engines operate paddle wheels independently; deadweight about 1500 tons, and maximum speed about 12 m.p.h. with full load and in still water; length overall, 346 ft.; width over deck, 91½ ft.; depth of hull, 11 ft.; loaded draft, 6 ft.

The Harwich-Zeebrugge Train-Ferry. Ry. Gaz., vol. 40, no. 14, Apr. 4, 1924, pp. 507-509, 2 figs. Particulars of service that will enable traffic to pass without transhipment between continental countries and Great Britain. Describes plant and equipment at Harwich and Zeebrugge.

The Japanese Train-Ferry Turbine Steamer "Shoho-Maru." Engineering, vol. 118, no. 3074, Nov. 28, 1924, p. 735, 10 figs. on supp. plate. Constructed by Uraga Dock Co., Japan, for cross-channel service.

Twin-Screw Train Ferries for Lake Michigan. Shipbldg. & Shipg. Rec., vol. 24, no. 19, Nov. 6, 1924, pp. 540-543, 7 figs. Notes on Pere Marquette 21 and Pere Marquette 22, built and engined by Manitowoc Shipbldg. Corpn. for Pere Marquette Ry. Co.; length overall, 360 ft.; breadth molded, 56 ft.; depth to main deck, molded, 21 ft. 6 in.

FERROALLOYS

Analysis. Analysis of Grey Iron Foundry Alloys. Foundry Trade Jl., vol. 30, nos. 430 and 431, Nov. 13 and 20, 1924, p. 416 and 445-447. Sulphur in ferrosilicon and silico-spiegel; phosphorus; spiegeleisen and ferromanganese; standard permanganate solutions.

Carbon Content. See STEEL, Carbon-Content Determination.

Developments, 1923. Ferroalloy Developments in the Past Year, Rob. J. Anderson. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 94-97. Market conditions and results of metallurgical research; growing field of special alloys.

Ferrochromium. See CHROMIUM, Uses and Alloys.

Ferrophosphorus. See FERROPHOSPHORUS.

Ferrosilicon. See FERROSILICON.

Uses. Ferro-Alloys, Fr. M. Becket. Chem. & Met. Eng., vol. 30, nos. 5, 8 and 10, Feb. 4, 25, and Mar. 10, 1924, pp. 186-188, 316-318, and 391-393. Feb. 4; Story and uses of ferrosilicon; status of industry; metallic silicon. Feb. 25: Developments and utility of ferrochromium. Mar. 10: Ferroalloys of tungsten and vanadium.

FERROCHROMIUM.

See CHROMIUM, Uses and Alloys.

FERROCONCRETE.

See CONCRETE CONSTRUCTION, REINFORCED, Marine Shelters.

FERROCRETE.

See CEMENT, PORTLAND, Rapid-Hardening.

FERROMAGNETISM

Theoretical Study. Ferromagnetism and Its Dependence upon Chemical, Thermal and Mechanical Conditions, L. W. McKeehan. Franklin Inst. —Jl., vol. 197, nos. 5 and 6, May and June 1924, pp. 583-601 and 757-786, 28 figs. Review of experimental work and survey of existing state of knowledge in regard to magnetism; review of magnetic properties of known ferromagnetics, and principal agents which vary these properties. Bibliography.

FERROPHOSPHORUS

Electric-Furnace Production. Production of Ferrophosphorus in the Electric Furnace, Th. Swann. Am. Inst. Min. & Met. Engrs.—Trans., no. 1383-S, Oct. 1924, 3 pp. In ordinary operation of electric furnace in production of ferrophosphorus, alloy may be produced containing 26 per cent phosphorus, which is said to be the limit.

Manufacture. Manufacture of Ferrophosphorus at Rockdale, Tenn. Am. Inst. Min. & Met. Engrs. —Trans., no. 1360-M, Oct. 1924, 5 pp. 1 fig. Points out that process of manufacturing ferrophosphorus lies not alone in smelting mixture of phosphates, silica, iron ore, with coke as fuel, but upon smelting this mixture with coke and air as chemical agents as well as heat producers and in conjunction with extraordinary procedures and manipulations making process continuous and profitable; conditions for best results.

FERROSILICON

Silicon Determination in. Determination of Silicon in Ferrosilicon (Bestimmung der Kiesel-

säure im Ferrosilicium), H. Dubovitz. Zeit. für angewandte Chemie, vol. 37, no. 1, Jan. 3, 1924, p. 13. Ferrosilicon can be dissolved by warming with 40 per cent potassium or sodium hydroxide; by using this method a nickel crucible can be used in place of platinum one required for fusion with sodium hydroxide and magnesia, and repetition of this troublesome process avoided.

FERTILIZERS

Acid Phosphate Production. Fertilizer Industry Conquering Corrosion. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 50-51, 1 fig. Survey of industrial practice in production of acid phosphate, largest constituent of commercial fertilizer.

Activated Sludge. Activated Sludge as a Fertilizer, V. H. Kadish and O. J. Noer. Pub. Wks., vol. 55, no. 10, Oct. 1924, pp. 311-312. Milwaukee sewerage commission plans to produce a fertilizer attractive in form as well as valuable for farms, golf courses and lawns. Condensed from paper before Am. Soc. for Mun. Improvements.

See also SEWAGE DISPOSAL, Activated Sludge.

Calcined Phosphate. The Preparation and Chemical Nature of Calcined Phosphate, E. W. Guernsey and J. Y. Yee. Indus. & Eng. Chem., vol 16, no. 3, Mar. 1924, pp. 228-232, 4 figs. Describes series of experiments with small rotary kiln made to determine optimum conditions for preparation of material; it appears probable that manufacture of calcined phosphate is commercially feasible.

Hair and Leather, Manufacture from. Utilization of Hair and Leather in the Manufacture of Commercial Fertilizers, J. A. Skooglund. Am. Leather Chemists Assn.—Jl., vol. 19, no. 1, Jan. 1924, pp. 11-14. Describes standard process for conversion of two by-products into suitable plant food.

Nitrogenous. Available Nitrogen in Fertilizers, Jas. W. Kellogg. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 371-372. Need of new method for its determination.

Form of Nitrogen Most Favorable for Higher Plants (Sur la forme de l'azote la plus favorable aux plantes supérieures), G. Truffaut and N. Bezssonoff. Académie des Sciences—Comptes Rendus, vol. 178, no. 8, Feb. 18, 1924, pp. 723-725. Investigation of various nitrogenous fertilizers on growth of commoner crops; describes types of mixtures which have enabled percentage of nitrogen in fertilizer to be reduced from 3 to 2 per cent, while yield of crop is at same time increased.

The New Nitrogenous Fertilisers, E. J. Russell. Chem. Trade Jl., vol. 74, no. 1913, Jan. 18, 1924, pp. 64-65. Notes on nitrate of lime, nitrate of ammonia, urea, and ammonium chloride. From Int. Rev. of Sci. & Practice of Agriculture, Oct.-Dec. 1923. See also Am. Fertilizer, vol. 60, no. 3, Feb. 9, 1924, pp. 30-32.

Phosphate Plant. A Modern British Superphosphate Plant. Chem. Age (Lond.), vol. 11, no. 272, Aug. 30, 1924, pp. 212-213, 4 figs. Design and construction of factory equipped with mechanical handling devices.

Phosphatic. Importance for Germany of a Supply of Artificial Fertilizers, Especially Phosphatic Fertilizers (Die Bedeutung der Versorgung Deutschlands mit künstlichen Düngemitteln, insbesondere mit Phosphorsäuredüngern, für die Volksernährung), O. Lemmermann. Zeit. für angewandte Chemie, vol. 37, no. 7, Feb. 14, 1924, pp. 81-84. Author calculates that at least 450,000 tons of phosphoric acid are required; deficiency of phosphoric acid can be made good, however, by addition of silicic acid, preferably in colloidal form, and this applies not only to cereals but to all crops hitherto investigated.

Phosphatic Fertilisers: Some Recent Problems Discussed. Chem. Age (Lond.), vol. 10, no. 241, Jan. 26, 1924, pp. 84-86. Discusses some of the theories which have been put forward to explain phenomena of absorption of phosphates by plants, and influence of other chemicals present in, or added to, soil.

Potash. The Effects and Uses of Potash Fertilisers, G. A. Cowie. Chem. Age (Lond.), vol. 10, no. 241, Jan. 26, 1924, pp. 87-88. Emphasizes pressing need of coördination of both experimental schemes and of research plant, and indicates practical problems awaiting investigation from both points of view.

Pulverizing Ingredients. Pulverizing Fertilizer Ingredients, L. H. Sturtevant. Chem. & Met. Eng., vol. 30, no. 5, Feb. 4, 1924, pp. 193-195, 4 figs. Practical discussion of grinding problems which are encountered by all types of plants in fertilizer industry.

Sewage Sludge as. Fertilizing Value of Activated Sludge. Public Wks., vol. 55, no. 1, Jan. 1924, pp. 23-24. Progress report of investigations made by Sewerage Commission of city of Milwaukee. Economic value as fertilizer greater than that of any other nitrogen-producing material.

Hygienic Aspects of Use of Sewage Sludge as Fertilizer, A. Wolman. Eng. News-Rec., vol. 92, no. 5, Jan. 31, 1924, pp. 198-202. Foreign and American regulations more rigid than most recent and reliable laboratory data which indicate that well-digested sludge will not cause vegetable-borne disease. Special report of State Board of Health of Md.

World Supply. Fertilizers: The World Supply, H. A. Curtis. Am. Fertilizer, vol. 60, no. 6, Mar. 22, 1924, pp. 25-30. Potash, phosphorus, and nitrogen resources; main sources of inorganic nitrogen; growth of air-nitrogen industry; cyanamid process; future of fertilizer industry. Reprinted from Foreign Affairs, Mar. 15, 1924.

FILAMENTS

Metallic, Drawing. See WIRE DRAWING, Filaments.

FILES

Manufacture. Machinery and Methods in Modern File Making, H. P. Armson. Can. Machy., vol. 31, no. 27, July 3, 1924, pp. 19-23 and 44-45, 4 figs. Describes machinery and methods employed in plant of Nicholson File Co., at Port Hope, Ont.; 1200 doz. per day produced; 500 different sizes made. Forging, annealing, cutting, hardening, and tempering all essential features.

FILTER PRESSES

Chamber and Frame Types. Industrial Filtration, S. G. Ure. Chem. & Industry, vol. 43, no. 6, Feb. 8, 1924, pp. 136-141, 9 figs. British chamber and frame presses.

FILTERS

Apparatus for Ultra-Filtration. Apparatus for Ultrafiltration (Neue Ultrafiltergeräte), H. Bechhold and L. Gutlohn. Zeit. für angewandte Chemie, vol. 37, no. 29, July 17, 1924, pp. 494-497, 1 fig. Crucibles, dishes, etc., made of porous earthenware, are coated inside with membrane of collodion or the like, and are placed on rubber ring on filter flask, which is connected to a water pump; porous material is resistant to red heat, at which membrane burns away quietly and without ash; apparatus can be used with advantage in analytical work, for filtering fine precipitates or colloidal solutions.

Installation and Operation Costs. Cost of Filtration Equipment and Operation, W. G. Whitman

and T. Fuwa. Chem. & Met. Eng., vol. 30, no. 9, Mar. 1, 1924, pp. 355-359, 4 figs. Analysis and comparison of factors that determine cost of installation and operation of three principal types of filters.

Sand. See FILTERS, SAND.

Sand for. See SAND, Filter.

Selection. What Is the Most Suitable Filter?, D. R. Sperry. Chem. & Met. Eng., vol. 31, no. 11, Sept. 15, 1924, pp. 422-428, 8 figs. Factors that enter into intelligent selection of a filter. Deals with filters in which solids are separated from liquids, six principal kinds being considered. Includes critical discussion of article.

Sewage-Sprinkler Nozzles. A Method for Comparing Sprinkler Nozzle Performance, M. J. Zucrow. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 999-1001, 4 figs. Application of data obtained by testing circular sewage sprinkler nozzles under constant heads to any conditions of variable-head operation.

Trickling, Dosing Control of. Butterfly Valve Dosing Control for Trickling Filters, H. R. King. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1049-1050, 2 figs. Suggests for trial a method for operating trickling filters so that a good sewage distribution may be maintained, and if possible, filter bed capacities thereby increased. Sliding cam to control valve on outlets to the several filter dosing areas.

FILTERS, SAND

Cleaning. Cleaning Filter Sand, C. H. Capen. Pub. Works, vol. 55, no. 7, July 1924, pp. 216-218, 1 fig. Method employed at Salem, N. J., using causting soda and soda ash for cleaning badly clogged filters, consists of aeration, coagulation, rapid sand filtration, and chlorination.

Method of Cleaning Filter Sand Without Removal, C. H. Carpen. Eng. & Contracting (Water Works), vol. 61, no. 6, June 11, 1924, pp. 1283-1285, 1 fig. How combination of caustic soda and soda ash was employed at Salem, N. J., for washing sand. From Pub. Health News.

Sand-Bed Studies. Sand-Bed Studies at Montebello Water Filters, Baltimore, J. R. Baylis. Eng. News-Rec., vol. 92, nos. 13 and 14, Mar. 27 and Apr. 3, 1924, pp. 516-522 and 563-568, 9 figs. Observation of individual sand grains discloses gelatinous coating, thickness of which affects efficiencies; jet action from perforated pipes near surface controls films. Apr. 3: Discussion of article and reply by author.

Slow. Operation of Slow Sand Water Filters at Hartford, Conn., C. M. Saville. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 508-509, 3 figs. Stored surface water filtered at rates averaging 4.54 m.g.d. in 1923 with maximum of 20 m.g.d. and at average operating cost of $4.61. Color removal 41.7 per cent for 1922 and 1923.

FILTRATION

Process of. Studies on the Process of Filtration (Studien über den Filtrationsvorgang), K. Schaum. Kolloid-Zeit., vol. 34, no. 1, Jan. 1924, pp. 1-12, 4 figs. Points out that retardation of filtration is mainly due to formation of cakes of filtered material and to stopping of pores; retardation may be prevented or reduced by stirring during filtration, or by scraping off cake of material as it is formed, but in this case there must be no closing of pores; filtration after sedimentation, where latter takes place slowly, is very efficient method; filtration by means of immersion filters gave good results in all cases examined.

Suspended Particles from Gases. A Special Case of Filtration (Sur un cas particulier de la filtration), C. Dosios. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1175-1177. Mathematical reasoning is adduced to show that when gas carrying ultramicroscopic particles in suspension is passed through pores of filter, walls of which exercise positive adsorption on suspended particles, selective action takes place, in that particles of certain dimensions will pass, while those which are smaller or larger will be retained.

FILTRATION PLANTS

Buffalo, N. Y. Buffalo's New Filtration Plant, G. C. Andrews. Pub. Wks., vol. 55, nos. 9 and 10, Sept. and Oct. 1924, pp. 271-274 and 304-308, 9 figs. Largest rapid-sand-filter plant in world; built on land reclaimed from lake; foundations 20 ft. below lake level; features of plans; designing and construction of concrete structures; excavation and materials of construction handled by cableways spanning entire work; connections to intake and other tunnels.

Conical-Bottom Steel Tanks. Remodeled Plant Solves Mud Problem, C. R. Knowles. Ry. Eng. & Maintenance, vol. 20, no. 1, Jan. 1924, pp. 4-5, 3 figs. Conical bottom tanks provide additional settling capacity required in filtering Mississippi River water.

Decatur, Ill. Effect of the New Impounding Reservoir on Filter Plant Operation at Decatur, W. E. Stanley and E. E. Ruthrauff. Am. Water Wks. Assn.—Jl., vol. 12, no. 1, Sept. 1924, pp. 110-126, 8 figs. Details of gravity type rapid mechanical filtration plant; process involves coagulation with alum, sedimentation, filtration, and sterilization with chlorine; operating records; capacity and loadings; character of river water.

Germany. Rapid Filtering Plant of 30,000 Cubic Meters Daily Capacity for the Neckar Water Works of Stuttgart (Schnellfilteranlage von 30,000 m^3 Tagesleistung für das Neckarwasserwerk Berg der Stadt Stuttgart), E. Link. Gas- u. Wasserfach, vol. 67, nos. 40, 41, and 42, Oct. 4, 11, and 16, 1924, pp. 593-596, 612-616, and 631-632, 18 figs. Water supply; construction of more slow filters, and of a rapid filtration plant at Berg, consisting of settling filtration and chlorination plants; design of rapid plant; tests of new plant.

Hartford, Conn. See FILTERS, SAND, Slow.

Industrial. Industrial Filtration, S. G. Ure. Chem. & Industry, vol. 43, nos. 27 and 40, July 4, and Oct. 3, 1924, pp. 678-686, 14 figs., and 975-983, 13 figs. July 4: Filtration of factory water supply by sand; porous plate filters, bag filters; suction and pressure leaf filters; continuous filters; describes apparatus. Oct. 3: Centrifugal machines; extractors; separators; electrical precipitation.

Levis, Canada. Mechanical Filtration Plant, Levis, Que., E. Hamel. Can. Engr., vol. 47, no. 15, Oct. 7, 1924, pp. 391-393, 5 figs. Old plant replaced by two low lift and four motor-driven high lift centrifugal pumps. New mechanical filter plant has a total capacity of 2¼ million gallons per day with provision for 3 million gallons.

Operation. "Tricks of the Trade" in Filter Plant Operation. Eng. & Contracting (Water, Works), vol. 62, no. 4, Oct. 8, 1924, pp. 783-789, 3 figs. Some of the ordinary practice employed by filtration superintendents in Ohio in conduct of their plants.

Richmond, Va. Features of New Water Filtration Plant at Richmond, Va., W. Donaldson. Eng. News-Rec., vol. 93, no. 16, Oct. 16, 1924, p. 623, 2 figs. Plant built in old coagulating basins provides for mixing and coagulation, mechanical filtration and aeration.

Sacramento, Cal. An Up-to-Date Filtration Plant, A. Givan. Fire & Water Eng., vol. 75, no. 4, Jan. 23, 1924, pp. 161-162 and 176-178, 7 figs. New system installed at Sacramento, Cal.; simple and efficient method of control of filters; lighting plant.

FIRE ALARMS. See ALARM SIGNALING.

FIRE DEPARTMENTS

Machine Shops. See MACHINE SHOPS, Fire-Department.

FIRE ENGINES

British. Fire Protection Service at the British Empire Exhibition. Engineering, vol. 118, nos. 3057, 3063, and 3064, Aug. 1, Sept. 12, and 19, 1924, pp. 153-156, 383-386, and 426-428, 30 figs. Details of fire engines and other fire-fighting equipment on exhibition at Wembley.

Design. Fire-Engine Construction, H. C. Jones. Jr. Instn. Engrs., vol. 35, part 3, Dec. 1924, pp. 111-126, 7 figs. Historical review of fire engine, describing early and modern types.

French. Fire-Protection Systems in France and the United States (Les services de défense contre l'incendie en France et aux Etats-Unis), G. Delanghe. Génie Civil, vol. 84, no. 21, May 24, 1924, pp. 489-494, 11 figs. Describes fire-brigade service in Paris and in American cities, and gives details of high-power fire engine with sedan body constructed by Société SOMUA.

Pumps. See PUMPS, CENTRIFUGAL, Fire.

FIRE EXTINGUISHERS

[See also FIRE FIGHTING, Appliances.]

Carbon Dioxide. Carbon Dioxide in Fire Extinguishing, C. L. Jones. Nat. Fire Protection Assn—Quarterly, vol. 18, no. 2, Oct. 1924, pp. 144-165, 9 figs. Present extent of use of carbon dioxide in fire protection and possible avenues of future development.

Foam. Foam as a Fire Protection (Schuim als brandbluschmiddel), I. J. F. Reydon. Ingenieur, vol. 39, no. 48, Nov. 29, 1924, pp. 951-955, 9 figs. Describes plants built for fire protection of Dutch oil wells in India by means of foam. Experience proves value of method.

Testing of Foam for Use on Fires, C. K. Swift. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 580-582, 1 fig. Describes desirable characteristics of foams and foam solutions; analytical methods applicable to solutions, and methods for comparing fire resistance and other physical characteristics of foams.

See also FIRE FIGHTING, Foam Method.

Sprinkler Heads Assembly Machine. Assembling Sprinkler Heads. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 603-604, 3 figs. Describes automatic machine for expediting assembly of sprinkler heads used in fire-extinguisher systems, and operations performed by the machine.

Types and Proper Uses. Fire Extinguishers and Their Proper Uses, H. L. Pagett. Fire & Water Eng., vol. 75, no. 2, Jan. 9, 1924, pp. 59-60 and 86-88. Classification of various types as to fires they are best suited to extinguish; arranged in three general classes of fires.

First Aid Fire Appliances, Chas. R. D'Olive. Coal Mine Mgmt., vol. 3, no. 1, Jan. 1924, pp. 32-36 and 63. Describes various types of fire extinguishers.

U. S. Specifications. United States Government Master Specification for Fire-Extinguishing Liquid (Carbon Tetrachloride Base). U. S. Bur. Standards—Circular no. 134, June 1, 1924, 6 pp. Specifications adopted July 3, 1924, for fire-extinguishing liquid (carbon tetrachloride base), covering material and workmanship, inspection and testing, packing and marking, etc.

FIRE FIGHTING

Appliances. Merryweather Fire Appliances at the British Empire Exhibition. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 530-531, 3 figs. Describes modern machines for fire fighting, including suds-producing apparatus, portable fire extinguisher, fire and salvage pumps, etc.

Chemical Fires. Chemical Fires and How They Should Be Handled. Fire & Water Eng., vol. 75, no. 11, Mar. 12, 1924, pp. 493-494 and 520. Hazards due to chemicals; prevention of such fires; storage of chemicals; fighting chemical fires; poisonous gases. Report of Committee of Indiana Sec., Am. Chem. Soc.

Equipment. Fire Apparatus Other Countries Are Using. Fire & Water Eng., vol. 75, no. 17, Apr. 23, 1924, pp. 841 and 879-882, 6 figs. Conditions prevailing in foreign countries as regards matter of fire-fighting and facilities which they have for this purpose. How American apparatus are regarded.

Fire-Fighting Equipment for Chemical Works, H. Seymour. Chem. Age (Lond.), vol. 11, no. 276; Sept. 27, 1924, pp. 320-321. Review of steps which may be taken to control and extinguish fires in manufacturing plant, particularly urging necessity of attacking fire at outset.

Fire-Escape Ladder. A New Motor Turntable Fire Escape. Motor Transport (Lond.), vol. 38, no. 995, Mar. 24, 1924, pp. 353-354, 5 figs. Describes ladder, all movements of which are controlled by hydraulic power; mounted on a Merryweather standard 65-hp. chain-driven chassis and embodying latest design of Merryweather escape ladder and trussing.

Foam Method. Fighting Fires by Means of the Foam Method (Feuerbekämpfung vermittels des Schaumlöschverfahrens), B. Müller. Gesundheits-Ingenieur, vol. 47, no. 32, Aug. 9, 1924, pp. 351-352, 1 fig. Details of system in which objects on fire are covered by a foam containing carbonic acid which forms a protective crust. Stationary plants for protection of liquids, also portable apparatus.

Lignite Mines. See LIGNITE, Fires in Mines.

FIRE-HOSE COUPLINGS

Screw Threads for. See SCREW THREADS, Standards.

FIRE PREVENTION

Industrial Plants. Modern Maintenance of Plant and Equipment, W. G. Ziegler. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 6-13, 14 figs. Fire and accident prevention in industrial plants.

Methods. Development of Fire Prevention in Industry (Die Entwicklung des Feuerschutzes in der Industrie). Braunkohle, vol. 23, no. 20, Aug. 16, 1924, pp. 392-400. Discusses means for preventing or controlling fires, fire alarms, fire-brigade activity, fire extinguishers, etc.

Oil Fields. See OIL FIELDS, Fire Prevention.

Oil Tanks. See OIL TANKS, Fire Prevention.

FIRE PROTECTION

[See also FIRE FIGHTING.]

Alarm System. The "Gravity" Fire Alarm System. Colliery Guardian, vol. 128, no. 3326, Sept. 26, 1924, p. 811, 3 figs. Describes automatic fire-alarm system, dependent solely upon gravity for its motive power.

Building Design. Fire Protection in Building Design, E. A. Barrier and J. O. Taber. Boston Soc. Civ. Engrs.—Jl., vol. 11, no. 3, Mar. 1924, pp. 85-106 and (discussion) 106-108, 3 figs. By E. A. Barrier: Early types of construction; interior construction; laboratory tests; vertical openings, partitions and fire walls; protection against outside exposure. By J. O. Taber: Exposure from external fires; design within building; ideal fire protection; Boston fire department.

Dyestuff Plants. Causes of Fire in Dyestuff Plants, Wm. D. Milne. Chem. & Met. Eng., vol. 30, no. 10, Mar. 10, 1924, pp. 388-390. Chem. & Met. Eng., vol. 30, no. 10, Mar. 10, 1924, pp. 388-390. Analysis of 134 such fires indicates what precautions are necessary in avoiding disaster.

Fire Engines. See FIRE ENGINES.

Fire Extinguishers. See FIRE EXTINGUISHERS.

Marine Terminals. See TERMINALS, MARINE, Fire Protection.

Metal Lath as. See BUILDING CONSTRUCTION, Metal Lath for Fire.

Piers. See PIERS, Fire Protection.

Principles. Principles of Fire Protection, R. S. Newell. Tech. Eng. News, vol. 4, no. 9, Mar. 1924, pp. 358-359, 374 and 376, 2 figs. Deals with vertical openings, concealed spaces, and unprotected wall openings; chemical extinguishers, standpipes and hose, automatic sprinkler protection, etc.

Sprinklers. How the Fire Chief Regards Automatic Sprinklers, I. G. Hoagland. Fire & Water Eng., vol. 76, no. 6, Aug. 6, 1924, pp. 253-254 and 278-279. Replies to questionnaire asking for facts as to use chiefs make of this device; opinion as to its usefulness.

Some Things to Know About a Sprinkler System, C. C. Brown. Fire & Water Eng., vol. 75, nos. 3 and 5, Jan. 16 and 30, 1924, pp. 113-114, 118-119 and 134-135; and 209-210 and 232. Discusses all phases connected with proper installation and maintenance of automatic sprinklers.

See also MACHINE TOOLS, Sprinkler-Head Assembly Machine.

Theaters. See THEATERS, Fire Protection.

Timber-Treating Plants. Securing Proper Fire Protection for Timber Treating Plants. Ry. Eng. & Maintenance, vol. 20, no. 12, Dec. 1924, pp. 487-489. Discusses recommended practices and equipment necessary to prevent losses.

Water Curtain. The Water Curtain as a Protection Against Conflagration, M. W. McIntyre. Fire & Water Eng., vol. 75, no. 1, Jan. 2, 1924, pp. 15-16 and 34, 5 figs. Describes system in use in large building in Cincinnati, Ohio, and method employed in testing system's efficiency.

Water-Distribution-System Requirements. Fire Protection Requirements in Distribution System Design, V. B. Siems and D. B. Biser. Am. Water Wks. Assn.—Jl., vol. 11, no. 1, Jan. 1924, pp. 17-37, 8 figs. Flow test on fire hydrants for judging ability of a water system to furnish territory it supplies with adequate fire protection. Factors of distribution efficiency.

Water Supply for. See WATER SUPPLY, Fire-Protection.

FIREBRICK

Checker Brick, Characteristics. Investigating Firebrick for Use in Gas Manufacture, Claude C. Brown. Gas Age-Rec., vol. 54, no. 14, Oct. 4, 1924, pp. 459-462, 6 figs. Composition and its influence; softening point; analysis of various bricks; properties of checker brick; heat-storage capacity.

Ground. See BOILER FURNACES, Ground Firebrick for Repair.

Heat Transmission Through. The Influence of Texture on the Transmission of Heat through Firebricks, A. T. Green. Ceramic Soc.—Trans., vol. 23, part 3, 1923-24, pp. 253-279, 11 figs. Details of experiments made with object of testing suggestion that rate of heat transmission through certain refractory materials is dependent, in some degree, on temperature and texture of material, in a manner contrary to a general expectation. Reprinted by permission of Brit. Refractories Research Assn., from Bul. no. 6, Apr. 1924.

Manufacture, Refractory-Clay Preparation. Preparation of Refractory Clay for Fireproof Bricks and Hollowware (Die Aufbereitung der Schamottemasse für feuerfeste Steine, Kapseln, Muffeln und Glashäfen), H. Hecht. Tonindustrie-Zeitung, vol. 48, no. 51, June 25, 1924, pp. 557-559, 6 figs. Discusses crushing and sorting plants, mixing machines, etc.

Materials, Softening Temperature Under Load. Influence of the Grain Sizes on the Softening Temperature of Firebrick Materials Under Load (Ueber die Abhängigkeit der Erweichungstemperatur von Schamottematerialien unter Belastung von der Korngrösse der verwendeten Schamotte), H. Navratiel. Berichte der Deutschen Keramischen Gesellschaft, vol. 4, nos. 5-6, Apr. 1924, pp. 192-196. Tests prove that finer grains will increase temperature under which "fireproof" materials soften when subjected to load.

Porosity. Determination of Porosity of Firebrick (Porositätsbestimmungen an feuerfesten Steinen), E. Steinhoff and M. Mell. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 44, Apr. 4, 1924, 6 pp., 3 figs. Examines six processes. Advantages of mercury displacement process. Describes new apparatus for its application.

Properties. The Thermal Conductivity and some other Properties of two Commercial, Heat-Insulating Bricks used in Kiln Construction, A. T. Green. Ceramic Soc.—Trans., vol. 23, part 3, 1923-24, pp. 271-276, 1 fig. Results of experiments with two batches of commercial heat-insulating material, undertaken to determine thermal conductivity and a few other properties of a practical significance. Reprinted by permission Brit. Refractories Research Assn., from Bul. no. 5, Dec. 1923.

Sizing Machine. New Process Sizes Fire Brick. Brick & Clay Rec., vol. 64, no. 9, Apr. 29, 1924, p. 649, 2 figs. Machine and method developed by Ashland (Ky.) Fire Brick Co. for producing brick of uniform thickness.

Tests. High Temperature Load and Fusion Tests of Fire Brick from the Pacific Northwest in Comparison with Other Well-Known Fire Brick, H. Wilson. Am. Ceramic Soc.—Jl., vol. 7, no. 1, Jan. 1924, pp. 34-51, 10 figs. Results of tests made on 17 samples of fireclay brick from Pacific Northwest with 27 other commercial brands of fireclay, silica, magnesia, chromite, zirconia, diaspore, silicon carbide and crystalline alumina, as well as china clay and crystalline sillimanite products made at Univ. of Wash.

FIRECLAYS

Analysis. Fireclays. Foundry Trade Jl., vol. 30, no. 426, Oct. 16, 1924, p. 342. Method of analysis.

Properties. The Properties of Fireclay. Foundry Trade Jl., vol. 30, no. 420, Sept. 4, 1924, pp. 195-199, 1 fig. Abstracts of portions of book "Refractory Materials: Fireclays, Analyses and Physical Tests," written as a special report on mineral resources of Great Britain by F. R. Ennos and A. Scott. Deals with mineralogical composition, changes during firing, effect of impurities on properties, refractoriness in relation to chemical composition, influence of chemical analyses on refractoriness, etc.

Reversible Thermal Expansion. Note on the Influence of Rapid Cooling on the Reversible Expansion of Fireclay, H. S. Houldsworth. Soc. Glass Technology—Jl., vol. 8, no. 29, Mar. 1924, pp. 30-36 and (discussion) 36-38, 4 figs. Details of tests made.

FIREDAMP

Detectors. Firedamp Detectors. Iron & Coal Trades Rev., vol. 109, nos. 2946, 2947, 2948, and 2949, Aug. 15, 22, 29, and Sept. 5, 1924, pp. 267-268, 312-314, 351-352, and 403, 24 figs. Discusses formation of gas cap, devices based on increase in size of flame, apparatus based on explosion, apparatus based on vacuum after combustion, combustion by catalysers, detecting methane by its low density, dynamic detectors, optical detectors, acoustic detectors, electrical indicators, detection of firedamp through its irrespirability and detection of methane by its other less-known properties.

Ignition. Ignition of Firedamp by Lamps and Explosives, E. Lemaire. Colliery Guardian, vol. 128, no. 3318, Aug. 1, 1924, pp. 287-288, 3 figs. Covers ignition of firedamp by explosives and safety lamps, flame photographs of explosives, shots fired in free air, temperature of detonation. Translated from Annales des Mines de Belgique.

The Ignition of Firedamp by the Filaments of 2 Volt Electric Lamps. Colliery Guardian, vol. 128, no. 3314, July 4, 1924, p. 28. Experiments being carried out to determine with greater accuracy factors upon which ignition of mixtures of methane and air by hot wires depends.

The Ignition of Firedamp by Lamps and Explosives (Inflammation du grisou par les lampes et les explosifs), Lemaire. Annales des Mines de Belgique, vol. 25, no. 1, 1924, pp. 3-21, 18 figs. Experimental work; photographs of explosive flames; tests made in firing in free air; temperature of detonation; ignition by safety lamps; etc.

Indicators. Firedamp Indicator (Schlagwetteranzeiger), H. Schultze-Rhonhof. Glückauf, vol. 60, nos. 21, 22, and 23, May 24, 31, and June 7, 1924, pp. 415-420, 444-447, and 468-472, 26 figs. Summary description of all methods suggested to determine presence of methane in mines, depending on (1) proof of presence by capacity of methane to combine with oxygen and giving off heat; (2) proof by the smaller density of firedamp; numerous methods under each.

Firedamp Indicators. Colliery Eng., vol. 1, no. 7, Sept. 1924, pp. 334-337, 5 figs. Review of methods devised for detection of firedamp and carbon dioxide in mines.

Measuring. The Delbrouck Apparatus. Colliery Engr., vol. 1, no. 5, July 1924, pp. 209-210. Details of apparatus based on reduction in pressure following on combustion of mixture of methane and air in closed vessel, satisfactorily operating in Charbonnage de Wèrister, near Liège.

Testing for. Testing for Firedamp. Colliery Guardian, vol. 127, nos. 3292, 3293, 3294, 3295, and 3296, Feb. 1, 8, 15, 22, and 29, 1924, pp. 275, 342-343, 421, 471-472, and 556-557, 10 figs. Report of Miners' Lamps Committee. Deals with various methods of estimating presence of firedamp, and discusses experiments carried out with different flame lamps under varying conditions.

See also Indicators.

FIRES

Loss Statistics. Fire Loss Statistics for 1923. Fire & Water Eng., vol. 75, no. 25, June 18, 1924, pp. 1315-1317, 1319-1320, 1322-1323, and 1351. Tabulation showing number of alarms, number of fires in various types of buildings, how controlled, property values, losses, etc.

FISHING BOATS

Gas-Powered. Gas-Powered Fishing Boats (Les bateaux de pêche à moteurs). Bul. Technique du Bureau Veritas, vol. 5, nos. 9 and 10, Sept. and Oct. 1923, pp. 173-180 and 196-199, 17 figs. Notes on dimensions and tonnage of boats used in France, Great Britain, Holland, Norway, Denmark, and Sweden, with particulars regarding types of engines installed.

FITS

British Standards. German Locomotive Works Uses British Limits and Fits (Masznahmen einer deutschen Lokomotivfabrik zur Anwendung der englischen Passungsnormen), T. Damm. Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 481-484, 6 figs. Details of limits and fits of British Eng. Standards Assn. and interchangeable parts adopted by Hannover Machine Works.

Press, Design of. The Design of Safe Press Fits, Jos. K. Wood. Am. Mach., vol. 61, no. 25, Dec. 18, 1924, pp. 943-946, 2 figs. Limiting values of fit stresses for various fit allowances for cast and forged steel; definite conclusions concerning radial, tangential, and combined shearing stresses.

Shrink. See LOCOMOTIVES, Tires, Shrink Fits.

FIXTURES

Assembling. See AUTOMOBILE ENGINES, Assembling Fixtures.

FLAME PROPAGATION

Spark Intensity. Flame Speed and Spark Intensity, D. W. Randolph and F. B. Silsbee. U. S. Nat. Advisory Committee for Aeronautics—Report no. 187, 1924, 14 pp. 7 figs. Describes series of experiments undertaken to determine whether or not electrical characteristics of igniting spark have any effect on rapidity of flame spread in explosive gas mixture which it ignites. Results show that no such effect exists. Flame velocity in carbon-monoxide-oxygen, acteylene-oxygen, and gasoline-air mixtures was found to be unaffected by changes in spark intensity ranging from sparks which were barely able to ignite mixture up to intense condenser-discharge sparks having 50 times this energy.

FLAMES

Jet. Jet Flames, W. Payman. Fuel, vol. 3, no. 11, Nov. 1924, pp. 403-406, 1 fig. Study of flames produced by gases issuing from jets without primary aeration.

Speed of Nitrogen Dilution and. The Influence of Nitrogen Dilution on the Speed of Flame, C. Campbell and O. C. de C. Ellis. Chem. Soc.—Jl., vol. 125, Sept. 1924, pp. 1957-1963, 4 figs. Results of experiments.

FLANGING MACHINES. See BOILERMAKING, Flanging Machine; LOCOMOTIVE BOILERS, Boiler-Sheet Flanging Machine.

FLAX

Retting. An Experimental Study of Flax Retting, J. V. Eyre and C. R. Nodder. Textile Inst. —Jl., vol. 15, no. 5, May 1924, pp. T237-T272, 24 figs. Development of acidity during retting of flax: its interpretation and technical significance.

FLIGHT

[See also AVIATION.]

Curvilinear. Airplanes in Horizontal Curvilinear Flight, H. Kann. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 174, Jan. 1924, 25 pp., 12 figs. Gives simple method of calculation, and indicates method for determining area

of aileron and rudder surfaces. Translated from Technische Berichte, vol. 3, no. 7

Curvilinear Flight of Airplanes, E. Salkowski. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 176, Jan. 1924, 21 pp., 6 figs. on supp. pages. Results of investigation by Hoff, Hopf, and writer. Describes method of calculation without any assumption in regard to variation of engine power with altitude and only with assumption that this relation is, in fact, empirically known from measurements taken in altitude tests. Translated from Technische Berichte, vol. 3, no. 7, pp. 267-274.

Elements of, Calculation. General Method and Chart for Calculating Elements of Airplane Flight (Méthode générale et abaque pour calculer les elements du vol d'un avion), G. Delanghe. Génie Civil, vol. 84, no. 2169, Mar. 8, 1924, pp. 222-216, 8 figs. Describes new method developed by author.

Fuel Economy in. Fuel Economy in Flight, H. T. Tizard. Roy. Aeronautical Soc.—Jl., vol. 28, no. 166, Oct. 1924, pp. 604-624, 7 figs. Author discusses following questions into which he divides problem: (1) What are principles governing most economical use of airplane in flight, having regard to weather conditions; (2) What are principles underlying design of airplanes to secure maximum efficiency of operation?
